(R. CORNEYIN) KÖY, the word in western Turkish (e.g. in Ottoman and Crimean Tetar of, Radloff, Versuch eines Worterbuches der Türk-Dialecte, il, 1216) for village, it is the form in which Turkish has borrowed the Persian gay (cf. Bittner, Der Einfluss der Arabischen und Persischen auf das Türkische, in III Ah. Wies, exili, No. 3, 103), iii perhaps more correctly kdy (Vullers, Laxicon; Burhān-i kāļis, 750) meaning originally path, street. In the toponomastic of the Ottoman empire we find many placecompounded with key, like Boghaz Key, Ermeni Köy, etc. It seems that these names are not found before the end of the Saldjük period; the word does not occur, for instance, in Käshghart. Köy in the sense of an open village is opposed to hasaba meaning a small town. In eastern Turkish placemames we always find the word hend (Itself a loanword from Soghdian) used for a village. Sometimes this last word seems to have been replaced by Ady (cf. e.g. Ritter, Erdhunds, xi, 221 ff.; Kadi Kend, al-Mawsil, becomes Kādi Köy).

(J. H. KEAMERS*)

KÖY ENSTITÜLER! (T. "village institutes"), a

Turkish educational institution of 1940-54, founded to combat the high illiteracy in rural areas by training and equipping village boys and girls for the special requirements of each region and using them as teachers in distant or under-developed where city-born teachers have been reluctant to work. They were the brain-child of Ismail Hakki Tonguo [q.v.] a prominent educator, and were put into operation by Hasan Ali Yücel [q.v.] the reformist Minister of Education [1938-46] under President Ismet Inönü [see '19MET PASSA INÖNÜ in Suppl.].

From the early years of the Republic the problem

of mass education, particularly that of village children, was of great concern to Mustafa Kemai (Atatürk) and Turkish educators. During this period, nearly 80% of the population of over 13 million (1022 census) lived in some 40,000 villages unevenly scattered throughout war-devastated Anatolia and Eastern Thrace. Less than 20% of village children (mostly boys) attended for the most part inadequate schools, where the majority of teachers had had little in no proper training. Early experiments in setting up village teachers' training colleges, first under the young pioneer minister of education Mustafā Nediāti (1804-1920), and later during attempt at collaboration between the Ministries of Education and Agriculture, failed owing to poor planning and inadequate funds. In 1916, during the ministry of Saffet Arikan (2035-8), a new project was developed. A selected number of villagers who had served in the army as corporals and sergeants were sent to special courses called elitmen hurzu (clitmen "instructor, educator" from the newly-coined neologisms efilmek "to educate" and efilim "education"), trained in teachers and appointed to village schools. To facilitate their settlement there, the shitment were given land, agricultural equipment, tools, seeds, young plants, etc. In the meantime, 1. H. Tongue had been appointed Director-General of Primary Education in Ministry (1036). In 1037 the idea III village-teachers' training colleges was revived, and three colleges were III up in the famir. Enkisehir and Kastamonu areas (in Kreilcullu, Mahmudiye and Gölköy respectively). The new minister, Hasan Ali Yücel, gave Tongue full authority, and the latter was able III put into practice extensively his long-cherished project, elaborated in his many works (particularly in Canlanderslacak hoy). Istanbul 1947], On 17 April 1940 the law No. 3803 on Village Institutes was passed, and with the law No. 4274 on 19 June 1942 they were fully organised (for the texts of these laws, see Dustur, uçuncu tertib, uxi Ankara 1940, 692-7 and axil, 1942, 1575-6 respectively). The Institutes were put under the direct control of Tongue and after a survey of local conditions and requirements, 20 of them were set up in the following regions of Turkey (the nearest provincial centre is shown in brackets): South-East: Dicle (Diyarbakr); East: Pulur (Erzurum), Cilavuz (Kars), Akcadaž (Malatva): Eastern Black Sea: Besikdūzū (Trabson), Akpinar (Samsun); Western Black Sea: Gölköy (Kastamonu); Marmara and Thrace: Kepirtope (Kirklareli), Arifiye (Izmit), Savaştepe (Balıkesir); Aegean: Kızılçullu (İzmir), Ortaklar (Aydın); Mediterranean: Aksu (Antalya), Düziçi (Adana), Gönen (Isparta); Central Anatolia: Hasanoğlan (Ankara), Pamukpinar (Sivas), Pasarören (Kayseri), Cliteler (Eskischir), Lyriz (Konya).

The village Institutes were co-educational, admitting students with five years' village schooling (or three years' village schooling with two years' extra training) and giving a five-year course of instruction. The syllabus, which allowed great freedom of variety according to local conditions and requirements, consisted mainly of "cultural subjects" (Turkish, history, geography, civics, mathematics, physics, chemistry, a foreign language, military science and art) for 22 hours per week; agricultural subjects (farming, gardening, fruit growing, poultry farming, bee-keeping, fishing, etc.) for 11 hours per week; and technical subjects (metal working, curpentry, building, tailoring and dress-making, etc.) for m hours a week. The curriculum was mainly functional and me mill on the essentially concrete and practical, with special emphasis — skills needed in the peasants' daily lives in — particular region. The aim was not merely to train viltage school teachers, but also to equip them to participate in the leadership of the community by developing their sense of personal responsibility and their ability to cooperate with villagers (specific aims which — far most city-born and trained teachers had been unable to realise). In 1943 — special teachers' training college was set up in Hasanoglan near Ankara (Hasanoglan Yühsek Köy Enstities!) with a three years' training programme. Up to the school year 1946-7 these Institutes trained more than 5,000 village teachers and 500 health officers.

With the ending of the single party regime (1945) and the authoritarian rule of the Republican Peoples Party (RPP, see DJUMBURITYET EQUALS PARTIES), the Village Institutes began to be subjected to violent attacks both by the conservative wing of the RPP and the newly-founded (January 1946) liberal Democrat Party (DP, see DEMOKRAT PARTI). They were accused of fostering an unruly, subversive, antitraditional generation and being the hotbeds of Marxist Indoctrination. This campaign was waged mainly by the great landowners in and outside Parliament, and their mouthpieces in the press. The campaign reached such dimensions that President Inone replaced the Minister of Education, H. A. Yücel with the conservative Resat Semsettin Sirer (1946), who in turn removed I. H. Tongue, the brain behind the Institutes, from office, closed the Hasanoglan Teachers' Training College and changed most of the staff of the Institutes. Under the ministry of Tahsin Banguoğlu (1948-50), the gradual liquidation of the Institutes continued and was completed by Tovfik Heri (1951-61), the second Minister of Education (appointed August 1950) of the Democrat Party, which to power in the general election of May 1950. Heri put m end to the co-educational system in the Institutes (1931) and reformed their curriculum to bring it into line with classical teachers' training colleges of the cities. Their abolition was officially registered when their eventually (1954) changed to lik Ofsetmen Okullars ["Primary Teachers" Training Colleges"). The heated controversy over village Institutes continued and still (1076) continues without abating between their supporters and accusers, and is a strong social, political, economic and emotional issue. In spite of the rapid industrialisation of Turkey since 1950 and subsequent migration of great numbers of villagers to the cities, which has considerably altered the rural and urban scene, leading intellectuals, particularly noted writers with Village Institute backgrounds, such as Mahmut Makal (b. 1930), Fakir Baykurt (b. 1919), Talip Apaydin (b. 1926), Dursun Akçam (b. 1930) and Mehmet Başaran (b. 1926), celebrate each year the date of April 17, the anniversary of the founding of these lustitutes, and demand their re-opening.

The only notable objection to the conception of Village Institutes among non-conservatives was raised by Kemai Tahir [q.v.] in his novel Borkerdaks cekirdek ("The Seed in the Steppe", Istanbul 1967), who maintained that the Institutes were planned to train a conformist generation in rural areas in order to postpone a real social revolution.

KOYL, KOIL, a town of northern India situated 75 miles south-east of Dihll and coming within the United Provinces in British India, now Uttar Pradesh in the Indian Union. The more modern town of 'Aligaih (e.v.) has expanded out of a suburb of Koyl. In 590/1194 the commander of the Gharids, Ruth al-Din Aybak [q.v.], captured Koyl on a raid from Dibli, and henceforth there were usually Muslim governors over local Radiput rulers, such as Kučuk 'All under Babur (932/1526) (Babur-nama, tr. Beveridge, 176). Ibn Battuta visited Koyl on his way southwards from Dibli to the Deccan and Malaber, and speaks also of a noted shaykh of Kuwii (as he writes the name), one Shams al-Din b. Tagj at- Arifin, whom Sultan Muhammad b. Tughluk did to death (Ribla, iii, 307-9, tr. Gibb, iii, 704-5, and iv, 6-7). The minaret of Koyl (now destroyed) had on it an inscription of the Slave King Nasir al-Din Mahmud Shah from 652/1254 (see G. Yandani, The inscriptions of the Turk Sulfans of Delki . . . , in Epigraphia Indo-Moslemics [1913-14], 22-3). Koyl is listed in the A'in-i Albari, tr. Blochmann and Jarrett', Calcutta 1939-48, ii, 197, as a sarker in the Agra suba of the Mughal empire, with a revenue of 55 million dams.

In cs. 1737 Koyl was captured by the Jhat leader Suradi Mal and then in 1759 by the Aighans, its strategic position on the Dibh-Agra road giving it importance. It was re-named 'Aligath ''the high fortress" by Nadjat Khān in 1776, when he rebuilt the citadel. All the upper Doab passed into British hands in 1803, but with Koyl-'Aligath only captured from the Marāthàs after a prolonged siege. Native troops there mutinied in May 1857, but order was restored in August by a British force after internal strile between the Jhāts and Rādiputs. For the town's

subsequent history, ALIGARM.

Bibliography: Imperial gazetter of India', v, 209-11, xv, 354; and obean, ghaven, in Suppl. (C. E. Bosworth)

KOYLU HISAR (KOVUNLU HISAR), modern Koyulhisar, centre of an ilçe of the province (il) of Swas in the valley of the Keikit River along the old route from Niksar to Shabin Karahisar and Erzurum in the so-colled "left wing" (sol kol) of Anatolia within the framework of the Ottoman road and poetal system. The site has changed a few times because of earthquakes (most recently in 1939).

The town and fortress were lost by the Byzantines after the battle of Manzikert (Malazgirt). After direct Saldiakid rule, it became part of the amirate of Eretna [q.v.], then possession of the semi-independent Turcoman ruler of Kara Hişār-i Sharkī (= Shābīn Karahisar). In co. 763/1381 it was part of the dominions of Kadi Burhan al-Din [q.v.] of Sivas, whose government succeeded by that of the Alc-Koyunlu [q.v.]. Uzun Hasan [q.v.] lost the place to Sultan Mehemmed II in 865/1462, upon which it became part of the evillet of Erzurum = a subdivision of Kara Hisar-i Sharki. In 1864 its status became that of a kada' in the wildyet of Sivas. In the roth century its population - only half Muslim, and V. Cuinet (La Turquie d'Asie, Paris 1892, 1, 237, 793) enumerated a population of 1,809, of whom 905 were Muslims, 604 Greeks and 300 Armenians. In 1927 the census indicated a total Muslim-Turkish population of 1,800. In 1970 the town numbered 3,524, with 28,887 in the iles.

KOYUN BABA, lit "father of sheep", m Turkish saint. He is thought to have been a contemporary of Hadidil Bekta-h (see nektasutyval and is said to have received his name from the fact that he did not speak, but only bleated like a sheep five times a day the periods for prayer. Sultan Bayerid II, called Walf, built a splendid tomb and dervish monastery on the site of his alleged grave 🔳 'Othmandilk (near Amasya, in Anatolia) which was one of the finest and richest in the Ottoman empire. Ewliya Celebi in his Travels (Seyáhel-náme, II, 180 fl.) describes very fully the great Bektāshi monastery there, at which he was cured of a malady of the eye and was initiated into the order (cf. J. von Hammer, GOR, I, 608, on Ewilya's pilgrimage to the tomb of Koyun Baba). Nothing in known regarding the life of this remarkable saint, nor even whether he really existed. That he is represented as a disciple and contemporary of Bàdidil Bektäsh means nothing, as almost all early Ottoman saints credited with having enjoyed this privilege. The sanctuary itself does not to have been examined; but see Maercker in ZGE, xxiv (1899), 376.

Bibliography: Hadidis Khalifa, Dilkin-nund, 625 (brief mention of the tomb); Ewilya, Seydhet-name, il. 180 ff.; cf. also J. von Hammer, GOR, i, 230, 608 (extracts from Ewilya). (F. Babinger)

KOZAN, (1) a town in southern Turkey, formerly the Armenian town of ■ [q.u.], and now administrative centre of Közân district (kans) in the province of Adana.

(2) in Ottoman times, that portion of the Taurus Mountains comprising the present districts of Kadirti, Kozan, Feke and Saimbeyli. This name originated with the Kozan-oghlu derebeys [see below] who controlled the area during the 18th and much of the 19th centuries.

The origin of the Közän-oghlu dynasty and its is uncertain. According to Ahmad Diewdet Pasha, the family came from the Arik tribe, and of the Warsak (Farsah) tribes which settled the Taurus Mountains in the 13th century A.D., and its originated with an ancestor from the village of Közán near 'Ayntáb (Tedkökir, ill, 108-9). The family had gained leadership of the tribe by 1689 (Abmet Refik [Altmay], Anadolu'da türk aşiretleri, 89) and went on to control the entire area and exercise the functions of government in virtual independence of Istanbul. Only in 1865 were the Ottomans able to defeat, capture and exile the develops, settling the tribes on which their power had depended and establishing normal administration. Kôtán was of once again in 1878 when Kösän-oghlu Ahmad Pasha tried to re-establish his centrol, but with his defeat the area ceased to be of special importance.

Bibliography: The most detailed accounts M Kôzān and the Kôzān-oghļu are those of Ahmad Djewdet Pasha in $Ma^{i}rdddt$, in TTEM, x (87), 278-82 and *Teghākir*, iii, ed. Cavid Baysun, Ankara 1963, 107-15, 117-19. A general description of the It was in 1890 is given in V. Cuinet, La Turquie d'Asie, il, Paris 1892, 90-7. Selected documents concerning the Közän-oghlu - found ■ Abnet Relik (Altmay), Anadolu'da türk aşiraleri: 066-1200, Istanbul 1930. On the Warsak tribes, see Faruk Sümer, Çukurova tarihine dair araştırmalar (Fetiklen XVI yilsyılın ikinci yarısına hadar), in AUDTCFD, i, 70-93. The most recent study of this area in the nineteenth century is A. G. Gould, Pathas and brigands: Ottoman provincial reform and its impact un the nomade of Southern Anatolia, 2840-1885, Ph.D. thesis, University of California, Los Angeles 1973, unpublished.

(A. G. Gould)

KÖZÄN-OGHULLARÎ, a family of derebya

[g.v.] in Ottoman southern Anatolia, with their centre

of power in the 19th century in the sandjat of Közän

[g.v.] (i.e. western Közhn) and the sandjat of Közän

(i.e. east Közän), in the pledmont area where the

Taurus Mountains come down to the Cilician Flain

or Cukurova. They were thus in a good position,

during the 19th century, together with other local

darabays, to dominate the plain and at times to exert

influence in Adama itself.

The Kézán-oghullari claimed descent from a Türkmen tribe which had entered Cilicia in Saldifük times, and which is certainly heard of in historical sources for the 17th century. From the beginning of the roth century cowards, they were able to beat off several military attacks by the Porte in Istanbul and to act as virtually independent local rulers, levying taxes, but acting nominally as officials, Ad'immahama or middirs, of the Ottoman government. Their position locally was strengthened by an informal alliance with the Armenian clergy and notables of Közán (the Armenian Catholicos = Patriarch had his seat in a monastery at Sis in the Közán district, the ancient capital of mediaeval Little Armenia (see V. F. Büchner, art, Sir, in EII), who were also concerned lest the Sultan's direct influence be extended into the region. The Közanoghlu family was, however, rent by internal rivaldes in the middle years of set 19th century. In 1865 the central government sum able to reduce the power of the Cilician derebeys by the despatch of the military "Reform Division" (Firka-yi Islahiyya) to Iskenderim; various members of the Kôzān-oghullari went over to the government side, and after mean attemps at resistance, the family finally submitted. Several of them may given official posts in the Ottoman administration, and others brought to honourable exile in Istanbul; after a final local rising in 1878 just after the Russo-Turkish War, the region of Körlin may substantially pacified.

Bibliography: ••• A. G. Gould, Lords or bandiss? The develops of Cilicia, in IJMES, vii (1976), 491-505, with references to the sources, and a kinship table of the family as it was in 1865 at p. 492.

(Ed.)

KRĀN [see sikka]. KRĪM [see kirin].

KRIZ (Russian designation, Krizl [from the swi Krizl], a small Caucasian ethnic group, forming with the Khaput [q.v.] and Dzhek the Dzhek subdivision of the Samurian group (Lezghin, Agul, Rutul, Tsakhur, Tabasaran, Budukh, Dzhek), of the north-eastern Ibero-Caucasian language family.

According to the 1926 Soviet census, ethnically there === 5 Kriz, and linguistically 4.348 (including speakers of Dzhek and Khaput dialects). According to a 1954 estimate, there were some hundreds of Kriz Ilving in m single sail, that of Kriz, located in the basin of the upper Kudlalchay, in the Shakhdagh area (Konakhkend district, Azerbaidjan SSR). The Kriz are Sunni Muslims of the Shaff rite. The traditional economy of the Kriz was based on sedentary animal husbandry, agriculture, and horticulture.

The Kriz language is only wariant of Dzhek (as is Khaput), which is a purely vernacular language; Aseri is used as the literary language. The Kriz me being culturally and linguistically assimilated by the Azeris.

RRUJE, a town in northern Albania, lying around the toot of a precipitous rock, a spur of the steep Kruje Range, with the fertile plain of the Ishm river to the south and west.

Under the Ottoman administration the town was officially known as Ak Hisar [e.u.]. It was the chief administrative centre of the wildyet and after 1466 of the hede? of this name. For most of the second half of the 19th century the kadd' was part of the wildyet and of the sandjag of Skutari (cf. Th. Ippen, Beitedge zur inneren Geschichte Albanient im XIX. Jahrhundert, in L. von Thalloczy, Illyrisch-Alba-nische Forschungen, Munich-Leipzig 1916, i, 363). The hada' comprised a nahiye, an area north of the river Mat, known as Oheri i vogël (cf. F. Seiner, Die Gliederung der albanischen Stämme, Graz 1922, 6), which was inhabited by the Kthella tribe (cf. Detailbeschreibung von Albanien, r. Theil: Nord-albanien mit den angranzenden Theilen Dalmatiens und Montenegres, Vienna 1900, 110 ff., 130 ff.). At the time of the Austro-Hungarian occupation of Northern Albania in 1916, the hadd' of Kruje functioned as part of the sandjak of Kruje, together with the hadd's of Mutja and Oheri (cf. F. Seiner, Ergebnicse der Volkszählung in Albanien im dem mm den örtere.ungarischen Truppen 2926-1928 bezetzten Gebiete, Vienna-Leipzig 1922, 14). In the independent Albanian state the area of Kruje became a sub-prefecture of the prefecture of Dürres (cf. Albania, Geographical Handbook Series, Naval Intelligence Division, Oxford 1945, 146). After 1949, the position of the town was affected by various administrative changes; cf. Dis Vermalismeseinstellung und die Entwichlung der Bevölkerung im Albanien, Wissenschaftlicher Dienst Südostauropa (München: Südost Institut), iii, No. 10 (1934), 211-16, passim. In present-day Albania the district (trethe) of Kruje covers an area of 607 sq. km., and had a population of 70,700 in 1971 (cl. Vjeleri statistikor i R.P.SH.-1971 dhe 1972, Tiranë 1973, 24). The number of inhabitants of the town itself, which is known for the characteristic architecture of its buildings (cl. Koco Zheku, Le Kulle (manoir) de Kruje, in Deuxilme Conférence des Etudes Albanologiques, ii, Tirana 1970, 263-8 (text), 269-89 (illustrations)), amounted to about 7,000 souls (cl. Zheku, bid., 263).

Accounts of these events well of the revolts against local landfords belonging to the Toptan family, within which the office of sandjab-beg [q.v.] had become a hereditary position, and preserved in local oral tradition and were collected, studied and analysed by G. Komnino, Expedite folklorike & Krujës, in Buletin për shkencat shoqërore, ili (1955), 235-61. During the general insurrection of 1912, which fed to the proclamation of Albanian independence, the region of Krujë was one of the major centres of anti-Ottoman activity (cf. P. Bartl, Die Albanischen Muslime Zeil der Nationalen Unabhängigheitsbenegung (1878-1972), Wiesbaden 1968, 180, and for more detailed account, L. Bajo, Mbi keyengriffen e përgjithshma të vitit 1922 në rrethin ë Krufës, 🔳 Studime Historike, viii (1971), i, 131-54); and in 1914 it was the centre of the Essadist movement, which was partly pro-Turkish and directed against the Albanian sovereign Wilhelm von Wied. The town captured by anti-Essadist troops Mati tribesmen under Ahmet Zogu (cf. C. A. Dako, Zogu the First, King of the Albanians, Thrana 1937, 61).

The population of the hadd' me predominantly Muslim and IIII town of Krujë was inhabited by Muslims exclusively (cf. Seiner, Volkszählung, 14). The majority of its inhabitants belonged to the Bektäshi order (see anktäshivva) which had several sanctuaries in and around the town and a tokke in the plain below Krujë (Fushë e Krujës), which was visited and described by F. Babinger in 1928 (F. Babinger, Bei den Derwischen 🚃 Kruja, in Mitteilungen der Deutsch-Türkischen Vereinigung, ix [1928], Helt 8/9, 148-9; Helt 10, 164-5; and idem, With the Dervishes of Krooya, in The Sphere, exvli [1929], no. 1525, 63. For photographs of the tekke, see E. Rossi, Credenze ed usi dei Bektasci, in Studi z materiali di storia delle religions, aviil [1942], 60-80). Until 1967, the takke was the sol a gjysh (grandfather) who had under his jurisdiction the prefectures of Tirana, Durres and Shkodër. These constituted one of the six man into which Albania had been subdivided by the order for administrative purposes (cf. S. Skendi, Albania, New York 1958, 294).

KUBAĞI, self-designation, Urbugh; Russian, Knbačintsi; Arabic and Persian, Zirihgarān), a people of the eastern Caucasus. The Kubači inhabit the single and of Kubači, located in Dakhadaev rayon, Dāghistān. They are a Caucasic people whose language belongs with Kaytak and Dargin to the Dargino-Lak (Lak-Dargwa) group of the Ibero-Caucasian language family. Kubači is now regarded as a dialect of the Dargin language, and they are considered in the Soviet Union as a sub-group of Dargina rather than as a distinct ethnic group. The Kubači the Dargin literary language, and they being assimilated by the Dargins. In 1926, according to the Soviet census, there were 2,322 Kubači.

The first mention of the Kubači appears in Arable of the 4th/roth century from Darhand [see sås al-abwås]. Although the Kubači maintained patriarchal clan divisions and had a strong self-ruling free society, they paid tribute both to the Shamkhāl of Kāzikumukh (4th-8th/roth-r4th centuries) and the Utsmiat of Kaytāk (9th-roth/r5th-r6th centuries). The aul of Kubači was part of the Gapsh free society, a division of the Utsmi-Dargwa, a Dargin federation. The Kubači was summa Muslims of the Shāifi school. They, along with the Dargins, accepted Islam in the 6th/reth century.

Since the middle Ages, Kubači artisans have been renowned as gold, silver, and coppersmiths, and as makers of fine jewelry and weapons. So famed were they as makers of daggers, sabres, and chain-mail that they were, and are, called Zirihgarān ("makers of mail") by the Arabs and Persians. Even under the Soviets today, the Kubači masters are still famous for their fine jewelry, gold and silver smithing.

KUBĀDĀRĀD, a residence of the Rūm

Saldjūk 'Alā' al-Dīn Kaykubād I (626-34/x22-37)

[g.v.] on the west bank of the Lake Beyonir, earoo km. south-west of Konya. On the spur of the
Gülfüce Dağları, probably in 624/1227 chosen by

Kaykubād I as a site for its scenic qualities, a palacecity was countructed under the direction of Sa'd

al-Dīn Köpek, his Court Architect and Master of the

Royal Hunt (antie-i shihde I mounds). The first palace is said to have been erected in the presence of the ruler according to his detailed indications. But it may have taken longer to erect the buildings of the area. which measures co. 430 × 200 m. and which until now there can BE identified the rules of 15 constructions, as well as the outline of a quay and a fenced enclosure perhaps to be identified as an enclosure for animals. Unambiguous evidence for continued building activity is provided by an inscription, dated 639/1236, commemorating the foundation of a mosque by Badr al-Din Sutash, governor (wall) of Kubadabad, later transferred to the mosque at Kürtler Kövü. at a distance of ca. 3 km. to the south. The palacecity was inhabited temporarily by Chivath al-Din Kaykhusraw II (614-44/1230-46) too and finally also by 'lzz al-Din Kaykā'da II [g.v.] (during his second reign 655-0/1257-61), but its importance must have declined sharply after the occupation of Anatolia by the Mongols (641/1243).

The ruins man identified in 1949 by M. Zeki Oral. who made limited, trial excavations up to 1951. The systematic excavations in 1965 and 1966 by Katharina Otto-Dorn and Mehmet Onder included a topographical survey of the area, but remained restricted to clearing the two main buildings located = the lake shore. Both buildings are characteristic palaces with central double rooms; a raised IIIIn, probably throne-room, preceded by a barrel-vaulted entrance hall. The smaller building of 30 × 20 m. of dressed stone, by a quay and associated with a dockyard, is probably the older one of the two palaces. This is indicated by the blocks of the perch, which have been excavated; with its simple, angular, interlacing bands it points to the early years of the reign of Kaykuhad I. The greater palace of 50 H 35 m., erected probably only slightly later in an isolated position on the northern side of the building area, is a rubble construction clearly less pretentious as far as masonry is concerned. It is, however, distinguished by an outer court and a terrace which border upon the shore of the lake.

The rubble walls of the greater palace, not very notable by themselves, were originally richly decorated. Up to a height of 1.75 m., the inner walls of the main rooms bore - revetment of underglazepainted tiles mostly arranged in an alf-over star and cross pattern, the eight-pointed with bearing figural subjects and the crosses florate ornaments. The tiles, datable ca. 627/1230 or a little later, show a variety of iconographic themes side-by-side, apparently reflecting the multiple functions of the building, as a Royal residence and as a hunting lodge; on the one hand, there are symbols of power like the sovereign enthroned, eagles bearing the inscription al-suifan on their breasts or lions; and on the other, astrological symbols and fabulous creatures, or trees of which may well be allusions to paradise. Finally there are stylised animal figures, with falcons or horses together with game animals like foxes, hares, deer, bears, etc. Tile fragments proved that the smaller palace was also covered with tiles, bearing similar iconographic themes. This revetment, however, is possibly datable to a later phase of decoration.

In addition to these considerable series of tiles, which are particularly important in one of the earliest known examples in architecture of tile-decoration with figural subjects, there were excavated in the greater palace fragments of window-falence, in well as vestiges of moulded stucco, decorated with peacocks and riders, and important stone reliefs. Together in numer-

ous smaller finds, which included fine glazed pottery and in particular, a glass dish bearing the names and titles of Chiyāth al-Din Kaykhusraw II, the son of the imperial founder of the site, the richly-decorated palaces of Kubādābād represent impressive evidence for the artistic splendour of the court of the Ram Saldiūlis which reached its zenith under Kaykubād I.

Kuwāparvās, in mediasval Islamic times a small province situated on the right bank of the upper Oxus, and also a town, the chief settlement of the province. The latter comprised essentially the basin of the Kuhāchiyān (modern Kaiirnihan) River, which ran down from the Buttamān Mountains and joined the Oxus at the fording-place of Awwadi or Awzadi (modern Ayvadi); accordingly, it lay between in provinces of Caghānlyān [q.e.] on the west in Wakhah and Khutial [q.v.] in the east. Administratively, it was most often attached to Khuttal. It now falls substantially within the Tadshikstan SSR.

The name Kubadhiyan/Kuwadhiyan to appear in the Chinese Buddhist pilgrim Hiuen-Tsang's travel account - Kio-ho-yen-na, according to Marquart, Erdniahr, 226, 233. The ath/roth century geographers describe it amongst the upper Oxus provinces of Transoxania, Its chef-lieu was the town of Kubadhiyan itself (modern Kabadian), also called in Ibn Hawkal Fazz, but in Mukaddasi B.v.z. (?): this was a strongly-fortified town on the Kubadhiyan River, smaller however than Tirmidh [q.v.]. in the north, on the upper course of the river, lay the fortresses of Washgird and Shuman, frontier posts against such predatory peoples of the Buttaman Mountains as Kumldils [q.v.]; indeed, the whole province was well-supplied with made and defensive posts. According to Ibn Hawkal, the Sākib-Barld or postmaster and intelligence agent [see saxip] for the Samanids in Kubadhiyan received the salary for each three months (Schrinivya) of 200 dishams. The chief products for exports from the province were saffron in the north and madder in the south, the latter being a crop whose marketing was strictly controlled by the Samanid government (see Ibn Hawkai, ed. Kramers, il, 454, 470, 474-7, tr. Kramers and Wiet, ii, 439, 459, 456-9; Mukaskiasi, 284, 289-90; Hudud aldlam, tr. Minorsky, 114-25, § 25; R. B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, 102-3). Sam and, K. al-Ansab. f. 440b, gives "al-Kubadhiyanf" as the best-attested form of the nisba, and accounts Kubadhiyan as belonging administratively (in the Saldjuk period?) to Balkh.

In Islamic history, we hear little of Kubàdhiyan under this very name. It was a dependency of the Samanid empire, passing with Khuttal and Caghāniyan to a Gharnawide in the early 5th/11th century (whence several mentions of it in Bayhaki's Ta'vibhi Mas'46), and then to the Saldiüks; in Timurid times it was often controlled by the rulers of Harāt. See further for the historical aspect, čaghāniyān and Khuttalin.

(C. E. BOSWOETH)

EUBAFOLO or BAFILO, the centre of the administrative region of Northern Togo, situated in lat. 8° 40° N. and long. 1° 30° E., 73 km. north of Sokodé. It seem its origin to the unforeseen halting of a column of Genja warriors led by Mama, ruler ■ Pambi, and which was returning from a campaign against Djougou at the beginning of the 19th century. They stopped at Séméré (now in the People's Republic of Benin], and ■ group settled there. The warriors were tired by a long march through the mountain regions, but did not dare to ask their chief to stop; however, the latter's horse stopped to urinate, and the warriors seized the opportunity to halt. Finding

the spot pleasant, they set up an encampment which they named Gobangafol (from banga "horse" and wbofol "urine"). These Gouang warriors settling there married Tem women and adopted the Tem language. The traditions vary concerning this expedition; according to Goody, it was probably commanded by Soumalla Ndewura Jakpa, king of Pembi, and according to others, by Mama, with Séméré and Bafilo being founded by rebellious dissidents rather than by disciplined soldiers.

At present, representatives of the main class are to be found at Bafilo; the Touré, originating from the Niger banks under the leadership of a certain Boukari; the Folana, descended from Sabani (of the royal family of Fada N'Curma); the Keita of Kabara; and the Taraore. The Peuls who said is have arrived in Nigeria between 1840 and 1875 (the Sakara and Dabo clans) allegedly initiated the Temba into stock-raising. When the Germans arrived, there were already several mosones. Islamisation has continued. and the present time, there are 27 mosques in the town, divided between its two component quarters, r8 in the Agodadé one and 9 in the Central one. The chief mosque # 25 years old; a Kurlan school with three grades is attached to it, with a Libyan teacher giving instruction there since 1977. About 100 miles and some to women have made the Pilgrimage to Mecca. Until the Second World War wasted small minority of the Kādiriyya order, but with the death of the last Alfa then, these adherents have rallied to the Tidianiyya. Baille is an important centre for the spread of Islam, since several of the Muslim missionaries in Toro have received their religious education there.

KUBAN (called in Noghay Turkish, Kuman, in Carkes, Pagaiz), one of the four great rivers of the Caucasus (Rion, Kura, Terek and Kuban). It is about 450 miles long. It rises near Mount Elburg at a height of 13,930 feet. Its three constituents (Khurzuk, Ulu-Kam, Uč-Kulan) join together before reaching the defile through which the Kuban enters the plains (at a height of 2,075 feet). The Kuban at first through the wooded outer spurs of the mountains and then, taking westerly direction. flows through the plains with forests on either bank. Its left bank tributaries are the Da'ut, Teberda, Zelenčuk, Urup, Laba, Bčlaia, Pahlah, Paekupa, Alipa, Adagum, etc. Its lower coarse breaks into two branches, me of which (Protoka) flows into the Sea of Azov and the other (the main one) into the Black Sea (although it also sends off a change) to the Sea of Azov). The lower course of the river frequently changes its bed. As late as the 15th century for example, it discharged the bulk of its waters into the Sea of Azov. The Kuban with its tributaries drains an area of 20,000 sq. miles.

The administrative district of the Kuban—before 1918 the province (oblast) of the Kuban Cossacks—also included the valleys, further north of the Baisugh, Celbasi, Sasika and the left bank of the Yeya, all flowing towards the Sea of Azov or ending in lakes and marshes. This territory between the chain of the Caucasus and the sea stretched to the north as far as the province of the Don Cossacks and to the east as far as that of the Terek Cossacks. The area of this

288 KUBAN

great province, which is divided into ? districts (Yeya, Tamriik, Kawkarski, Ekaterinodar, Maykop [in Turkish: "much oil"], Laba, Baţţālpashinsk), was

estimated at about 32,000 sq. miles.

Klaproth, Tableau du Caucass, Paris 1827, 89. estimated the tribes of the Kuban at about 100,000 families. According to the Russian Encyclopaedia, the native population in about 186z was 200,000 men (?), but as a result of expatriations masse, this number had fallen to 90,471 by about 1883. Russian colonisation, which was begun by the Cossacks in about 1861, had reached 1,500,000 by 1804. In 1016, official statistics put the whole population of the province at ____ 3,000,000. The number of "highlanders" and "Sunnis" included in this total had also increased and reached 139,000. The native elements indicated by these official terms, which lack precision, included the remainder of the Cerkes and Abaz tribes [q.v.] (related to the Abkhāz, q.v.) and Turks of Kara-Cay. The latter (about 15,000 in 1900) lived in the villages (swi) of Kart-Djurt, Uc-Kulan and Khurzuk, etc. in the upper waters of the Kuban and spoke a northern Turkish dialect (Noghay). They were at one time under the Cerkes princes of Kabarda and in 1822 submitted to the Russians.

After 1920, the territory of Kuban was re-organised on methnic basis; besides the Kabarda-Balkar region (on the Terak) (now an Autonomous SSR) mantonemous (within the Soviet system) areas were created on the Kuban: first, the Kara-Cay-Cerkes, east of Urup with its capital Battāl-pashinsk; it has about 150,000 inhabitants of whom 45% are Turks, 25% Cerkes and 13% Cossacks; and second, the Adighe, a strip of territory along the Kuban and Laba; its capital is Tokhtamukay and it contains about 70,000 Cerkes. Both these are now Autonomous

Regions.

The basin of the Kuban has been inhabited since the bronze age. The oldest tombs in Maykop in back to the second (according to Rostovizeft, to the third) millenium B.C. Scythian tombs of lime 4th-5th centuries B.C. are very numerous (Kelsmes, Voronezz-kais) and Sarmatian tombs from the and century B.C. to the 1st A.D. The Greeks called the Kuban Hypanis, Vardanes and Anticites. In Byzantine authors we find Koupeg, Koupig (Marquart, Ostenrophische Streifzige, 32). The spread of Christianity among the Adighe (Cerkes), according to local legends, dates from the emperor Justinian (527-63); cf. Shora Nogmov, Istoria adigheickago marada, Tillis 1861, 43.

The Arabs were not well acquainted with the district. According to a bold conjecture of Marquart. ibid., 37, 161, 164, Kuban III to be read for Düba (*Kühâ), which according to Gardiel (quoting Diayhani, ca. 301/914) formed the southern boundary of Madiar (Magyars) and to the south of which (on the left bank) lived (Ibn Rusta, 139) the Twills, probably ... Alan (q.v.) tribe (cf. the southern Ossets tribe of Tual-t2 and the name of the Alāns: Ās). On the other hand, Mas'udi (Muridi el-dachab, ii, 45-6) says that the immediate neighbours of the Alan were the Kasak living between the Caucasus and the Black Sea. The Kashak (a parallel form is al-Kāsakiyya, Mas'adi, Tanbih, 157) are the Cerkes, whom the Russian chronicles call Kasogi with whom the Russian principality of Tmutarakan (on the peninsula of Tamas in the 9th to the 11th century) had continuous relations.

The later history of the territory of Kuban is at first the story of the struggle between the Russians and Ottomans, and more particularly the Khāns of the Crimes, for the possession of the fertile plains southeast of the Sea of Azov and later of the struggle of the Russians with the warlike tribes of the left bank of the Kuban.

In the 16th century, Moscow's interest in the northern Caucasus stimulated by the marriage of Ivan the Terribic with the Kabardian princess, Maria Temriticovna, in 1561. Soon afterwards Sultan Selim II sent Kasim Pasha to Astrakhan, and Dewist-Giray of the Crimea invaded Kabarda.

In 1589 the Cossacks appeared before Azov. a former Venetian and Genoese colony, which the Ottomans had taken in 880/1475. A long series of struggles began for the possession of Azov [cf. AZAK] and the Cerkes principality of Kabarda (to the east of the Kuban on both sides of the middle course of the Terek). Down to the beginning of the 18th century the Khans of the Crimea had the upper hand, and by about 1717 the Cerkes had been converted to Islam (Nogmov). By the Russo-Turkish treaty of 1730 the two Kabardas were proclaimed independent to constitute a buffer state between the two powers. By the treaty of Kücük-Kaynardif [q.v.] in 1774, Great and Little Kabards were placed under the suzerainty of the Khan of the Crimes, whose independence was recognised. In 1782 the Turks occupied Taman, but by the edict of April 1783, Catherine II proclaimed the annexation by Russia of the Crimea, Taman and the "Tatars of Kuban", On 28 December 1783, the Porte recognised the course of the Kuban as the frontier. Between 1787 and 1791. the movement in the western Caucasus led by the religious leader Shaykh Mansur caused the Russians considerable trouble, but the Russo-Turkish treaty of Yassi (2 town which owes its name to the As = Alan; cf. Tomaschek, in Pauly-Wissowa⁴, i, 1282-4) confirmed the trustier of 1783. The treaty of 1829 moved southwards to the roadstead of St. Nicolas (between Poti and Batum), but the territory within these bounds was only effectively occupied 32 years later after a stubborn | heroic resistance by tribes of the Kuban.

The line of defences of the Caucasus will bean planned under the Empress Anna (1730-40). In 1777. the line started from Asov and went by Stavropol, Georgievsk to Ekuterinograd (on the Terek). In 1792, it began | Bughaz (north of Anapa) and following the Kuban for a while, left it to go to Georgievsk (1794) and then 1798 to Ekaterinograd (cf. the map in the Ahil kank. arkheoge. kommissii, Tiflis 1868, i). In 1834 General Veliaminov established a military cordon on the last bank of the Kuban as far as Gelendiik on the Black Sea. In 1838 Novorossisk (Tsemes) was founded on the site of the old Turkish fortress of Sudjuk-Kal'a. After risings provoked by the operations of the aliles in the Crimean War, General Yevdokimov in 1862 carried out an enveloping manoeuvre with the object of making the highlanders descend into the plains and of driving the rebels towards the coast to force them to migrate to Turkey. According to native sources (H. Baramate, in the Revue Politique Internationale, Nov. Dec. 1918), 75,000 (?) refugees left the Cancagos in 2864; Russian give the number of emigrants at 23,586 from 1871 till 84. In 1864, the Russians reached the passes of the chain of the Western Caucasus-

(V. Minorsky*)

EUBBA, the Arabic name used throughout the
whole Muslim world for a tomb surmounted by
a dome.

Purpose and significance. The term is applied to the thousands of simple local domed tombs of skaykks and saints made by the people as well as to great mausoleums. The term bubbs became established as a pare pro toto abbreviation for the domes of tombs, for which it is exclusively reserved. All the special names for sepulchral buildings, which vary with country and language as well as with the style of building and person interred, come under the generic name i hubba. The classical word turbs was driven out of use by \$4000 until it am again popularised by the Turks. Just as we have gunbid for kubbs, so we occasionally have turbat for turbs in Iran. Tombs of saints which, along with tombs of princes, are almost the only material with which the history of art has to deal, have different names in different countries, and these usually also indicate different grades. The highest is the mashhad, which according to its etymology means a place where a shahid is buried. "As a rule a maskkad is found only as the tomb of martyr held in particular esteem, indeed of a saint endued with a semblance of divinity; but then the mashkad is not only a grave, but a memorial in the wider sense, which me a place of pilgrimage (mass) attracts numerous visitors and has certain rites associated with it, is to say, it is not a burial-place for any Muslim, but a tomb and also a place of worship for saints" (M. van Berchem, in E. Diez, Churasanische Baudenkmäler [to be quoted as Ch. Bakm.], 89). The general term in Shift lands for the tomb of a saint is imdm-zāde or shāh-sāde. In lands where Arabic is spoken, these domed tombs are called marbilf, shayhh, walf, nahf, and as places of pilgrimage, makām.

Form, evolution and embellishment. The original form of the kubbs is a square building covered by a dome, which evolved from the domed house of the peoples of the desert and became stereotyped as a monumental form. In the process, the very low-lying vaniting of the dwellinghouse, which is only a flat

calotte rising from the cube of masonry, was raised. This evolution of a rounded vault into a found dome required the insertion of an octagonal intermediate story, the drum, and led in the interior that development of the transitions from the square to the round dome which constitute the constructive and decorative charm of all Muslim domed chambers (pictures of round vaulting in Diez, Kunst der islamischen Volker1, Berlin 1915, 79). This development began with primitive corbelling, then passed to simple spherical corner arcades or niches and in the end took its own way in West and East, as will be deaft with under the separate countries. Alongside of this typical orthodox normal form of kubba, which is iound from the Maghrib to the eastern Asiatic steppes and India, special forms, which are described under the different countries, arose in the lands conquered by the Turkish peoples, such as northern Iran, Mäzandarân, the lands of the Caucasus, Anatolia and Central Asia. The ornamentation of the buildings depended on the material and the systems of decorations in vogue in the different countries. So far and so long as brick predominated, we find also the primitive, probably almost always coloured, stucco covering, with which in Iran, and exceptionally also in Anatolia, is associated glaze, which gradually took the place of stucco. The stone buildings of the Ayyilbid and Mamlük periods in Egypt and Syria, as well us in Anatolia and the Caucasus, attained their effects through alternating layers of colour and decoration in relief. The stone domes of the Cairo subbas covered with geometrical patterns and acrolls rival the brightly decorated glazed domes of Iran.

We shall now deal with the form and development of the habba in the various lands.

Maghrib. The hubbas or marabilis of the Maghrib are usually of uncertain age. Even the period of introduction of the different types is often difficult to determine. Comparisons with the architectural forms, especially with the decoration of the great dated mosques, sometimes afford a clue. The types of the different countries have their origins in old forms of the sepulchres of the people. Tunisian type A has derived its octagonal drum from the monumental style; the Algerian type B shows the combination of the original domed circular structure with the later rectangle, with the addition of the pinnacles indigenous to Afrinative architecture; the western type C also found in Spain conceals the dome under the pyramld roof, which comes from building in wood and thus points to mountain valleys rich in wood and is a parallel phenomenon to the tomb of similar form in Mazandaran on the south shore of the Caspian Sea. Type D is found among the nomads of the high Algerian plateau and follows the local style of building in clay of the nomad territory, with the egg-shaped dome and the usually taporing lower structure.

In view of this undoubtedly popular origin of the &abba, we can hardly agree with the common assumption that the open type of &ubba—a dome on four pillars—as represented in the Cubola in Palermo, is the oldest in the Maghrib (Marçais, op. cit., 332). Several &ubbas of the cemetery of Kayrawin might, according to Marçais, date from the same time as the domes of the Great Mosque (cf. Marçais, op. cit., fig. 17). To the same group also appears to belong the fubba of Sidi el-Mazeri in Monastir which can be duted to the 6th/12th century.

In al-'Uhbād al-Sufii ("the Lower") near Tismeen, Algeria, there are still several pro-Marinid hubbas (i.e. KUBBA

before 591/1195) built of brick and pisé on four pillars with horse-shoe arches and semi-niche pendentives as arcades and octagonal domes (Marçais, op. cit., fig. 310). The walls were either crowned with wreaths of pinnacles or with corner pinnacles, in [11] old cemetery of Sidi Ya'kub outside Tlemcen is the "Tomb of the Sultana", the rounded arches in nine sections of which piercing the eight sides of the lower drum make a date in the early 7th/13th century certain. The octagonal drum made the arcades superfluous here. The Khibat Beni Merin ("Tombs of the Marinids") in Shalla (Chella) near Rabat link up with the preceding type from Tlenscen. Here from 763-801/ 1361-98 were buried four successors of Abu 'l-Hasan All. One of these kubbes has a quadrangular drum, pierced by four horse-shoe arches, and a dome with twelve sections. The arcades have again the form of semi-pendentives. The mausoleum of Abu 'l-Hasan there, the most splendid of the Marinid tombs, has also a square drum with slightly deformed horse-shoe windows in three sides (H. Basset and E. Lévi-Provençal, Chella, une nécropole mérinide, in Hespérie [2922]; Marçais, op. oit., 497). Next to these open kubbas just mentioned the closed kubba is by far the most frequent. These buildings have only one door, but within, three similarly formed blind-niches. This is the form of the kubbas of Sidi Bu Medyen, the famous Spanish mystic, in Tlemcen which was already in existence in the 6th/14th century and restored at the end of the 18th century. The dome is divided inside by painting with intertwining bands into twelve sectors. The kubba in Tlemcen now called Sidi Brahim was built by Sidi Abû Hammû Mûsâ II (753-88/1352-86). The interior walls with the usual blind-niches still possess their socies ornamented with glazes and their painted stucco relief. The dome divided into eight parts rests on Maghribl arcades in the form of semi-pendentives. These two last-named subbas have pillared outer halls for the pilgrims. As eisewhere, in the Maghrib, particularly in Tunis, mosques and madrasas were rendered particularly sacred by the inclusion of a kubba (Marçais, op. cit., 860).

Egypt. The oldest buildings of the subbe type in Cairo belong to the Fatimid period. The oldest is the mashad built by Badr al-Diaman, the builder of the second wall and its gates, and by his son al-Aidalthe maskind of al-Djuy0shl on the Mukattam hills. Amir al-diagram, commander-in-chief of the army, was Badr's title. The date of the inscription was read as 478/1085 by van Berchem, Notes d'archéologie arabe, I., in JA (1891), 478-9 - Opera minora, Geneva 1978, 144-5. The building consists III a rectangular chamber, roofed by a high aroaded raised octagonal drum and five cross-vaults, which opens into a little court with three arcades on which a minaret is built (picture in Glück-Diez, Die Kunst des Islam, Propythen Kunstgeschichte, 159; M. S. Briggs, Muhammadan architectura in Egypt and Palestine, Oxford 1924, figs. 35-8). The tomb chamber, left of the cupola, encloses the tomb of m unknown saint, whom the natives call Sldi Diuyushi, and which pilgrimage is made - certain days; van Berchem raises the question whether this is the tomb of Badr himself (Notes, 487-8 - Opera minora, 153-4) ldem. Une mosquée du temps des Fatimides, in Mêms. de l'Inst. egyptien, ii [1888], 605-19). In the domed chapel is a finely painted stucco milirab. The transftion from square to octagon is done with Persian single areades which survive in Cairo down to the Ayyübid period. Directly below the Djami' al-Dinyushi at the foot of the Mukattam hills in the

Karafa is a building similar in plan and construction to the Mashbad on the Mukatjam, Didne's Ithmat Sidned Ysterf. It has no court in minaret. The arches here again have the Persian profile characteristic of the Fatimid period as well as the cupola. This building again is well in mosque but in \$abba. There we four small \$abbas of this period in the Karafa with \$abbas of Sidi 'Ukba called by people except's bends' "the seven daughters" (van Berchem, Noise, loc. oil.). These we small square buildings with octagonal drum and cupolas, originally seven, already mentioned by Mahrist.

A Aubba with tombs of 'Abbasid caliphs situated behind the renovated mausoleum of Sayyida Nafisa in the south of Cairo shows the characteristic forms of the transition to the Ayyübid style (van Berchem, Notes, II., in JA [2892], repr., 20 If.). A date 640/2243 in an inscription gives the terminus ante, which in view of the style of writing cannot be earlier than the beginning of the Ayyubid period. Here the transition from square to octagonal drum is also produced through two series of muharnes [q.v.] niches which shows Turkish influence. This embos, however, still follows Patingid tradition as a brick building and in Its stucco decoration. The profile of the cupota still retains its Persian form, indeed according to van Berchem, it is the only cupola of Cairo which still rotains this cupola in completely characteristic fashion (Notes, II., 21). From the Ayyubid period also date the subbas of Sultan Salih Nadim al-Din Ayyab of 647-8/1249-30 and of his widow Shadlarat al-Durr of 648/1250. These are rectangular buildings of stone with octagonal drum and a thin, eggshaped cupols with eight rectangular windows shooting up from it. Three keel-arched windows arranged in a triangle pierce each of the four principal sides of the drum. The façades of this kubbs - ornamented with keel-arched flat niches and lozenge-shaped and circular shields decorated in stucco in the style of the Akmar mosque (519/1125) and other Fatimid buildings. In the interior, the transitions from the rectangular to the octagon are made with squinches and mukarnas, the midrabs were decorated with rich ornament and framed above with keel-arched mukernes in the form of a fan (pictures in the volumes of the Comité de Conservation . . . , in R. L. Devonshire, Some Cairo mosques and their founders, London 1922, fig. 32 and Briggs, Muhammodan architecture, figs. 72-5).

With the Bahri Mamfüks (1250-1390) there began an increase in the height of the cupola by raising the drum, as could is seen in the ruins still standing in the early 20th century of the bubbas of the family in Sultan Kalawûn (678-89/1279-90) (Diez, Kunst d. isl. Völker, figs. 187 and 153). The two kubbas, which were associated with madrasas, had rectangular substructures 🔳 stone with 🖿 octagonal drum of brick like those of the great mausoleums of Kalawim and al-Nāşir Muhammad. The two domes feil in and one was renovated. The interior of the drum had stepped recess niches with pillars from ancient buildings, but was otherwise bare. The substructures had windows of brick with pointed arches set into the stone walls, the fluted frames of which were decorated with stucco. The Syrian stone and the local brick technique here encountered one another. With these ruins the last remnants of the hubbs of the Bahri Maminks disappeared. The subba of Kalawan himself is exception; he had it built after the model of the Kubbat al-Sakhra [q.v.] in Jerusalem, and therefore it is outside of the regular line of development. It also fell in, and was given a wooden cupola. In the

Rahrt period, the melon cupola also appears in Calco. The Aubba of Zavn al-Din Yusuf, a Suff shayka of the line of the Bann Umayva, of 607/1208, is one of the most heartiful kubbas of Cairo, unfortunately much damaged in the interior by fire. The outside shows polygonal bevelling of the squinch area, a drum full of windows with a richly decorated ralligraphic frieze about it, and a melon dome divided into numerous compartments. All the compartments and windows - framed in bands of stucco. The interior of the drum zone is broken up into richly ornamented, formerly painted, muharnas (picture in Briggs, op. cit., 73). On this rests a dome of 28 segments, the ribs of which are decorated with sprigs of leaves in relief and it is beautifully adorned at too and bottom by inscriptions (picture in Devonshire, op. cit., 42). If the influence of the Central Asian style was already seen in the moion cupola of the kubba inst considered, it became and more powerful in the raising of the cupola, the drums of which were no longer borne by Persian squinches and the cellwork evolved from it, but by Turkish triangular consoles and their numerous interruptions and combinations with mukarnes honeycomb. The internal transition by means of such stereometric structures is henceforth shown outside also in triangular hevellings of the corners of the drum storey. The dome is in the shape of a helmet and is placed like a helmet - the drum. The external decoration of these domes with network patterns of all kinds in high relief carved in glazed stone is one of the neculiarities of Cairo. The older so-called "Tombs of the Maminks" and the later so-called "Tombs of the caliphs" all belong to the second Mamlük period and are similar.

Lists of the hubbas of Cairo are given in K. A. C. Creswell, A brief thronology, in BIFAO, xvi, and Devonshire, op. cit., x23-7.

Syria. According to Wulzinger's list, there are still in Damascus and its neighbourhood over a hundred kubbas, which are there called turba and walt and usually connected with small madrasas or diami's. The general form is the same as everywhere else: a quadrangular-cubic building with a squinch storey. a window storey and dome. Nothing has survived from the Umayyad period. It was only under the Zangids and their successors the Avyübids that architecture began to flourish again. As, however, the sepulchral dome over the Núriyya madrasa, with its clusters of cells shows, architecture in the larger scale under Nür al-Din b. Zangi was still dependent on other lands, and in this case imitated the Mesopotamian form (F. K. Wulzinger and C. Watzinger, Damaskus, die untike und die islamische Stadt, Berlin 1921-4, ii, pl. 4b). Saladin's kubbu above the 'Aziziyya madrasa has a rather too small dome above the heavy substructure.

From the period of the Bahri Mamlûks, 1250-1390, many turbos still exist which are described by Wulzinger and Walzinger. Through the Crusaders, the Syrians learned to work in a way suitable to dressed stone. "A touch of Gothic, even in so far me the artistic side, the idea, the aesthetic norm is concerned, becomes perceptible me the time of Baybars, indeed half meentury earlier, just me in Egypt. The dome now rises with still greater vigour, the dram becomes higher and the silhouette steeper... In particular, the portal niche now becomes high and steep" (Wulzinger and Watzinger, 7). In keeping with this towering tendency, the turbo of Rukn al-Dia of 621/1224, which has a massifid associated with it, has already two transitional stories on maquare gul-

structure, one octatonal with Persian concave seninches and the other 16-sided with windows, and a melon-shaped dome above (Wulzinger and Watzinger, fig. 42, pl. 8c and ob). Very similar is the turba Taz al-Din of 626/1228-0 and several others (Wulzinger and Watzinger, pl. 9a, figs. 34, 35; pl. 7b, ol. roal. A more modest type is represented by Kilidiivva turba of 645/1247 built along with a medrasa for Sayf al-Din Killidi al-Nürl. As frequently in Syria, there were originally here two domes separated by a gateway, but of the western one nothing has survived. Here one souinch-area was sufficient, since with the help of pendentive consoles the transition was made direct from the quadrilateral to the duodecagon, and then by twelve triangular consoles, which are placed in the spandrels of the twelve pointed drum windows, the round base of the dome was reached (Wulzinger and Watzinger, figs. 10-12; cf. also (ig. 47). Open hubbas with four great gate arches are also found in the 7th/13th century (Wuizinger and Watsinger, pl. 7c). As an example of rich inner decoration with stucco-relief may be mentioned the al-Salihivva lurbs of the othlighth century (Wulzinger and Watzinger, pl. 12).

As In Egypt, so also in Syria under the Chroassian Mamiliks, the architectural form rapidly lost vigour, and was replaced by a fondness for decorative detail (Wulzinger and Watzinger, 10). The exterior was brightened, as in Cairo, by the use of stones of many colours, which were also arranged in ornamental patterns. The dome shows a further tendency to increase in height. The Tawasiyya of 784/1382 betrays. marked stackening in creative power by its two window-storeys directly opposite and externally exactly like one another (Wulzinger and Watzinger, pl. 22b). As the al-Turizi kubba of 828/1424-5 shows, there are no further changes internally in the transition from square to octagon and sixteen-sided figure (Wulzinger and Watzinger, pl. 28a). The rich dome mukarnes of Egypt is not to be found in Syria, and it remained here confined to the niches of the gateway. Outside of Damascus we may mention the double dome of Khayrbek in Aleppo, also known as the kubba of Shaykh 'All and Ka'it-Bay, of 924/1518 (Gluck-Diez, op. cit., 189 and Devonshire, op. cit., 106).

The Ottoman turbes from 1517 A.D. offer, in Egypt, little of interest and little variety. They are, as the turbe of Darwish Pasha of 987/1579 shows, mainly octagonal with two drum stores in the lower of which the corners are still decoratively rounded off with niches, although they are now functionally superfucous (Wulzinger and Watkinger, pl. 55).

Asia Minor and Armenia. In Saldink Anatolia more than in other countries, the association of madrasas with the sepulchral domes of the founders was the rule. In Konya and the towns under its influence, such as Aksaray, in find in the open madrasas, as in those with domes courts, at each side of the sible-feds in the main axis behind the court a domed chamber, one of which is usually used as a tomb, the other as a lecture room; exceptionally both and tombs (india Minareli; cf. MASDID, Architecture). in Konya the transition to the dome is made partly still by fanshaped trihedral consoles and partly by satient and re-entrant friezes of trihedral consoles (Kara Taris, 649/1251-2), Indie Minareli, 650-684/ 1252-85, Sirdjeli Medrese, 641/1243-4). The earliest, still clumsy, tribedral console triezes shrink in the course of development to narrower, ornamental friezes. This abstract stereometric rounding-off of the angles was brought by Turkish architects from Central Asia where they had developed it in wood-

work. In the more eastern Anatolian towns like Nigde, Kaysariyya etc., the system of transition with arcades, most used in Iran and Syria, predominates. In addition to those already mentioned, attention may be called in Konya to the terba of Fakhr al-Din *Alt (666-82/1267-83) which was also built as a madrata with two domed sepulchral chambers (cf. F. Sarre, Konia, reprinted from Persische Baudenhmaler). The independent habba, usually called turba or gunbda, also minareli, forms in Anatolia and Armenia a uniform group of tent-like buildings, mainly of stone, polygonal in Asis Minor, round in Agmenia, with pyramidal or conical roofs.

A list of the more important furbas, in far as they have been published, follows. In Kayşariyya: Cifte Günbed, 645/1247; Döner Günbed, 675/1276; Sirdjeli Gimbed, 750/1349; 'All Dja'far, 750/1349; Amir 'All, 751/1350, of stone, octagonal with pyramidal roof. except the last named which is square (cf. A. Gabriel, Monuments tures & Anatolie). The transition from the polygon iii the round dome is here usually effected through rows of pointed arches. The Kösh-Madrasa in the same town (740/1339-40) has an octagonal surbs standing in its court. The mosque of Lala Pasha. has me octagonal turbs of the 8th/x4th century built on to it. In Nigde the mosque of Sunkur Bey has an octagonal hares of the year 620/1223 added to it. Outside of the town stands the octagonal suring of Khudābanda (712/1312-13); there are also several undated twibes in the vicinity (Gabriel, op. sit.). In Stwas is the octagonal turba of Husayn b. Diafar of 629/1231-2) and the square and of Shaykh Hasan Beg (Guduk Minare) of 748/1347 (cf. van Berchem, Maidriaux pour un Corpus . . . , Asie Mineure, 1, 17 and 39, pl. ii). In Diwrigi - the octagons of Amir Kamāl al-Dīn, 520/1134-5 and of Amīr Shāhānshāh (Sayyida Malik), 529/1134-5, also an anonymous turba (van Berchem, op. cil., 94, pl. xli). In Tekke, williage near Zara-Diwrlgi, is the undated hurbs of Shaykh Marzubān. In Beyshehir the Ashraf Rüm Djāmi' has a square turbs attached to it with a conical roof, the inner dome of which is decorated with unglased mosaic such - we occasionally find in Konya. These stone furbus are usually decorated me the outside with bands of relief and in the entrance doorway with mukarnes lunettes. Of the furbas in Akshehir, Sarre mentions that of Sayyid Mahmud, 621/2224 (Kleinarien, 22; Cl. Huart, Epigraphie arabe d'Asie Mingues, in Rooms semitique [2894-5]).

In Armania there are several furbas of structural interest by Lake Van. They are cylindrical, like most northern Iranian sepulchral towers, with cement walls faced with hewn stone in the Armenian tradition, and occupy a special position in view ill their subterranean tombs. The latter are vaulted on a square base and have concealed entrances. The interior chambers vaulted with pointed arched domes - therefore above the level of the ground, reached by steps and used as chapels. These sepulchral towers have further four entrances facing the four quarters with mukernes lunettes. The exterior is decorated with arcades in relief and Armenian two-sided niches with friezes of muharnas at the top. The combination of Turco-Islamic and Armenian traditions of structure constitutes their particular charm. The three great furbes in Akhlat date from the end of the 7th/13th century, the small one from 862/1457-8, the furbs in Voctan from 736/1334-5 (cf. W. Bachmann, Kirchen und Moscheen in Armenien und Kurditten, 1913; Dies, Kunst d. isl. Völker, fig. 156 f., 118 f.).

Ottoman Turkey. The building of horbes continued under the rule of the Ottomans without, however,

types of artistic interest being created. The polygonal shape continues. The buildings show a stereometrically clear articulation of the laçades, with triads of windows with pointed arther framed by straight lines. The often are large number of windows and the glazing of the windows make these furbas are a rule took plain and practical, in addition, the inner chambers lose in atmosphere by being too well lit and overfilled with sarcophagi. To give a list of the monuments by name amount hardly worth while here, in view of their large number and uniformity, as well as their lack of significance in the history of art; see on them G. Goodwin, A history of Ottoman architecture, London 1972.

Trak, Iran and Contral Asia. In Trak and Iran the normal type of hubbs was preceded by indigenous tomb-buildings. In Irik these are the polygonal tombs with madernes domes above them, of which the best known example is the tomb of Sayyida Zubayda Baghdad. Others are al-Nadimi, al-Asiba, Imām Dūr, Imāmzāde Tuil, etc. This type was also taken to Küm (figs. in Sarre-Hersfeld, Archaologische Reise im Euphrat- und Tigris-Gebiet, Berlin 1911-20; Sarre, Persische Baudonkmåler; Diex, Kunel d. isl. Völker, 100-202; m p. 20, 72-74 and MUHARNAS). Kum [q.v.], as one of the holy places of Iran since an early date, still offers, with its 16 subbas still standing, the most fruitful source for the study of this type in Iran. They are almost | octagonal with | inner dome, which is covered over by a polygonal tent mof. With one exception, they are built of red brick and have roofs of blue glaze. They date from the 6th/rath to the 10th/16th centuries. They - Shahzade Ibrahim, - octagonal domed building with eight high deep niches, a Saldiuk (?) precursor of the similar Şafawid type (Khōdia Rabī'); Shāhzāde Ibrahim near the Kashan Gate of 721/1321 and restored in 805/1402; Shahzade Imna91 776/1374; 'All b. Diaffar 740/1339; 'All b. Abl 'l-Mafall near the Kashan Gate 761/1359; Khôdia Imad al-Din near the Käshän Gate 792/1389; Khōdja Djamāl al-Din near the Kāshān Gate; Shāh Sayyid 'Alt outside the Rayy Gate; Shāhzāde Ahmad outside the Rayy Gate; Shahar Imam-zade outside the Rayy Gate; Shāhzāde Djaffar 707/1307; Shāhzāde Abmad (Khāk-i Faradi); Shāhzāde Ahmad Kāsim; Čihil Akhtarān 905/1499; Shāhzāde Hamza; Shāhzāde Abd Allah [A. U. Pope, Preliminary report on the tombs of the saints at Quann, in Bull. of the Amer. Inst. for Persian Art and Archaeology, [v/1 [1935]). The Imám-záde Karrár in Buzún dated 528/1134 east of Isfahan was published by M. B. Smith and E. Herzfeld (Arch. Mitt. aux Iran, vii [1935]). It contains splendid stucco decoration. In northern Iran along the Elburz chain, much more frequently than the normal bubbs we find in the period of the 4th/20th to the 7th/13th conturies cylindrical sepulchral towers of brick, usually called mil or gumbad: Djurdjān, Rayy, Radkān, Dāmghān, Demāwend, Kishmar, Waramin, Nakhčewan, Maragha, Bistam, etc. (ligs. in Sarre, op. cit.; Diez, Chur. Balon. and Kunst d. isl. Volker, etc.).

The type is found with variations beyond Iran as far as Kh arazm (Old Urgendi), although the norm in Central Asia is the domed suble. These towers are mediaeval descendants of the very anciant Central Anian tombs, which were built by the sometimes normadic, sometimes settled peoples of set steppes for their tribal chiefs and leaders. In form they are to be interpreted as a rendering of the prince's tent of the normadic peoples in monumental form and sometimes they copy its textile character (cf. Disz, Persien,

izlamizzke Baukunst in Churesan, 1923, 52-5, 73 ff.; R. Hillenbrand, The tomb towers of Ivan to 1550, Oxford III Phil. thesis 1974, unpublished). A particthat type which is closer to that of the normal subba developed in the province of Mazandsran on the southern shore of the Caspian Sea. These are quadrangular and polygonal brick buildings, with pyramidal tower-roofs mainly belonging to the 7th-8th/ 13th-14th centuries and are undoubtedly descendants of an older native type of wooden building (figs. in Surre, Persische Baudenhmaller; Dioz, Kunst d. ist. Völker, figs. 98, 99 = 73.) The hubbs proper was already latent in the old square building of stone with squinch dome, with which, however, it has nothing genetically to do. The few Sasanid domed buildings of this kind that have survived are simply monumental examples of a much older Iranian type of house (cf. the eastern Iranian, Sasanid domed building Ribat Sefld in Diez, Persien, fig. 1). Domed buildings of the bubbs were probably already in use as fire-temples in the pre-Islamic period.

The oldest bubbs in 'Irāk is, if Herzfeld's ascription is correct, the Kubbat al-Sulaybiyya in Sāmarrā, which deserves our attention as the domed sepulchre the caliph al-Muntasir, in which al-Mu'tuzz and al-Muhtadi were perhaps also buried, as three graves were found: a domed building quadrangular in the interior, while outside the corners were cut off by the corridor-like octagonal pathway round it. The transition to the (now destroyed) dome was made by an octagonal series of squinches with niches, of which only fragments survive. There are four gates at the ends of the axes. The building followed the Kubbat al-Sakhra in Jerusalem and its Christian predecessors (cf. E. Herzfeld, Erster Bericht ... von Samarra, Berlin 1912, 28-31; Sarre-Herzfeld, Arch. Roise im

Euphrat- u. Tigrisgebiet, i, 83-6). The oldest remaining kubbas in Central Asia and Iran date from the 3rd/oth century, and in contrast to Sāsānid domes, show an innovation in construction which opened up possibilities of development: the corners are bridged over with keel arches instead of with the clumsy, funnel-shaped squinches proper. These, in smaller buildings, as in the bubbs in Singbast, might be closed up with a filling of bricks arranged in a pattern, in larger buildings left open 🖿 the gallery passage behind, whoreby the intramural passage which already existed in the great Sasanid domes in Fars in the squinch storey was now made visible for the first time and given m aesthetic function for the inner articulation of the chamber and the external articulation of the façades. The oldest šubba still preserved is the tomb of Isma'li b. Ahmad Sămăni in Bukhārā of 296/907; the most celebrated and largest # the turbs-as Yākût calls it-of the Saldjük Sultan Sandjar (511-52/1117-57) in Marw. The building is of colossal dimensions. The square lower part, with walls zo feet thick and sides 🚃 feet long, is 45 feet high and is crowned outside by a gallery 17 feet high, behind which rises the drum with the dome, originally covered with blue glaze, to a height of about 100 feet. The drum shows signs of its original concealment by a wall of niches, in the empty niches of which only the Buddhist idols are lacking complete the resemblance to the stupes of similar structure-for example in Balkh which is not far away. The direct connection between this decoration of the exterior of the hubba and the equally imposing stupas is undoubted. The gallery is ornamented with reliefs in brick and stucco. The interior walls painted with ornamental designs, and have a frieze in Kofic script around the top. The keel arches bridging the corners connect the chamber with the gallery. Similar windows pierce the walls in the central axea. The spandrals between these eight windows in the zone of transition are decorated with muchanas. The vaulting of the dome which towers above this is adorned with ribbed arches arranged in fan-shaped and criss-cross patterns in plaster, a method of giving the dome mapheroidal shape, which in later buildings came to be painted and filled in with tendril patterns (Diez, Persian, etc., 93 f.; E. Cohn-Wiener, Das Mausoleum des Sullan Sandjar, in Jb. d. As. Kunst, xifs, 925; idem, Turan, Islamische Bauhunst in Mittelasien, Berlin 1990.

In Old Sarakhs on the Harl Rud in the modern Turkmenistan S.S.R. is a kubba similar in construction, but me more modest scale (V. Zhukovskii, Rasuslini Starago Merva, fig. 33). Two others in the region of the Murghab and Zarafshan cases are Talkhatan Bābā and Mazār Sultān Ismā'll in Bukhārā, both of the 6th/12th century (Zhukovskii, op. cit., (igs. 30-2). Their squinches are still junnelshaped like the Sāsānid ones and without a gallery. Like the tomb of Sandjur, they me distinguished by their brick ornamentation and are evidence of native pure brick style of a vigorous character in the Marw oasis area, of which Cohn-Wiener gives examples in his book. The small hubba with its richly decorated Interior belonging to the former Ribat of Sängbäst in Mashhad is probably an outlier of this style on the Iranian highlands (Diez, Churatanische Baudenkmäler, 52 f., pls. 14-18; Glüeck and Diez, Die Kunst des Islam, 292-3). The bubbs of Sandjar opens the important series of Central Asian-Iranian mausoleum hubbas of the 7th-auth/13th-17th centuries. If the emancipation of the squinches from the body of the dome and their becoming independent in an intermediate storey was the first step in this development, the second is the emancipation of the gallery storey from the squinch area. We me the process completed in the bubbs of New Sarakhs on the Persian side of the Harf Rud, which was restored in the 8th/14th century, but probably dates from the beginning of the 7th/13th century (Diez, Chur. lidkm., 62 ff., pls. 20-2; Glüeck and Diez, op. oik, 291). Here the gallery is included in the lower structure which makes the latter, and also the dome, higher. The dome is still resting on a square substructure with m octagonal drum formed by corner arches. This intermediate storey, however, no longer plays 🖿 important part in the articulation. It has already disappeared in the \$1000s of The almost contemporary with that of Sarakhs (Diez, Chur. Bdkm., 55, pls. 19-20; iden, Kunst d. isi, Volker, coloured plate; idem, Persien, Bank, in Chur., fig. 40; Glüeck and Diez, op. cit., 291). In Tis the four interior niches of the square main course have become broader, and these now become broader still. They were also made higher than before and linked up by a common framework with the niches above (cf. Chur. Bdkm., fig. 26, section). The four corner arches rising out of the squinches which make the transition from the square to the octagon are now initial included by a common framework in the main body of the building, m that they m longer form as before a separate intermediate storey but bring about the change from square to octagon within the main storey. Formally, this is a fusion with combined effect, i.e. m step towards the decorative Islamisation of the interior, The development of the gallery as a factor in shaping the interior was thus more or less brought to an end. As Tus is not dated (8th/s4th contury?), we cannot fix the time relation of this subba with the Western

Persian one of Sultan Muhammad Öldjeytü Khudabanda (703-16/1304-16) in Sultaniyya. In the interval, a variant had established itself there, the object of which was to transfer the gallery to the outside, an aim latent since the kubba of Sandjar. We really have here a type of building of a different, namely octagonal, shape which, as Texter has already pointed out, was an Indian variant imitated in Iran. The interior gallery with corridor has here become a series of separate windows which resemble in shape and size the eight doorways below, so that two stories of equal size are created within, which gives the interior an effect of massive calm. On the other hand, a staircase within the wall leads up to a gallery above the window storey, which opens to the outside only and can no longer be regarded as an interior gallery. Equally peculiar me the eight mineret-like pillars which are placed at the corners of the roof terrace to buttress the dome [cl. the illustrations in Kunst d. isl. Völker and Diculatoy and Sarre's sketches in Pers. Bakm.). We shall return to this type of kubba in the section on India. Another bubbs, the only one of its kind in Iran, is the Djabal-i Sang near Kirman, ... octagonal building of cement with dome and drum of brick, which resembles the Syrian mebas (Diex, Parsien, etc., 97 and fig. at p. 79; Creswell, Parsian domes before \$400 A.D., in Burlington Magazine, 22th [1915], 208, pl. 2). With the sepulchral dome of Öldjeytü, the ¿sabba in Iran reached the considerable height of 165 feet.

Alongside of this line of development in construction, there was a second which began probably as early in the Saldjuk, but certainly in the Timurid period; this aimed at the same object, the raising of the height of the dome, and attained it by other means, namely by a drum and double-shelled dome. In both cases, the aim is not so much to raise the height of the interior chamber as to give a towering effect to the exterior. For the inner shall of the dome makes the interior much lower than would appear from the outer shell. The Kubba-yi Sabz in Kirman is the oldest-at latest dating from the middle of the 7th/13th century-sepulchral tomb of this kind (Diez, Kunst d. isl. Völker, fig. 115). The models for these towered domes may possibly be found in the equally towerlike stupes of Afghanistan and the Tarim basin, with domes built one above the other and chambers between them. Timur's hubba, the Gur-i Mir in Samarkand of \$08/1405, the dome of which structurally resembles the Kubba-yi Saba, is the next monument of this style still standing; after it come the subbas of the Timurids at Shah Zinda near Samarkand will others in Herat and Turkestan (Diez, Kunst d. isl. Völker, fig. 116, 119; J. M. Rogers, ts., V. V. Barthold's article O pogrebenii Timura ("The burnal of Timbe"), in Iran, Jual. of the BIPS, zii (1974), 65-87). Gür-i Mir has, it is true, a gallery, but this no longer opens on to the interior by open niches, piercing **mi** wall, but only through grilles, which are in the plane of the wall, is it possible from the passage within the wall III get a glimpse of the interior, an innovation of decisive importance in the layout of the latter. In and around Herat there were once many subbes, of which only two still exist (Niedermayer-Diez, Afghanistan, figs. 163, 164); others east of Herat (figs. 181-4).

The last phase of evolution in Iran was reached in the Salawid period. The very similar memorial buildings of <u>Knodia</u> Rabl' of 1030/1621 mm Mashhaf and Kadam-gáh of 2031/1680 east of Nishāpūr (Chur. Bdkm., pls. 23, 39) mm octagonal šubbas with galleries, which open to the outside in four great corner.

niches. These buildings seem to have their origin in the Persian garden pavilion, as a comparison with the Hasht Biblight in Isfahān shows. But the idea of using garden pavilions as memorial buildings again comes from India. We may here mention also the habbs of Shaykh Diām which has a court mosque and madrass adjoining in Turbat-i Shaykh Diām near the Afghān frontier, as an example of a maide on a large scale (Diez. Cher. Biblin., 78 ff., pls. 35-7). The largest place of pilgrimage of this kind is the sanctuary of the Imām Ridā in Maghhad, with the domed sepulchre of the Imām (Diez. Persien, etc., figs. 44-56). In Afghānistān, the maidrs of Khōdja Akashi in Balkh and Mazār-i Sharlf, with domed tombs, may be mentioned (O. Niedermayer-Diez, Afghanistan, 64 ff.).

India. The first Muslim dynasty to reign exclusively in India was descended from Ruth al-Din Aybak [g.e.], a former slave of Muhammad Ghürl who was installed by his master as viceroy in Dihit and on the latter's death declared himself independent (602/ (206). It is only with this dynasty of the "Slave Kings" or Sultans of Dibli that monumental Muslim architecture begins in India. Nothing has survived of earlier buildings, which were probably built of perishable material. From the 7th/13th century, however, the building of tombs in the Muslim regions of India becomes important, and in keeping with the great expansion of Islam over the vast peninsula there are still in India far more bubbos than in the other lands of Islam. The influences interacting within the peninsula were very varied; the main genetic principle in the style of the \$ubbe, as for all Indian Muslim architecture, can therefore only said to be the combination of foreign and native Arabo-Turkish-Persian and Indian, traditions. The amalgamation of these two traditions, which found expression in material, technique, shape and form, resulted in the manifold variations 🔳 the Indian types of hubba.

In the course of the general development, we 🚃 distinguish some ten different phases of style, in local styles (and when we use the word "local" we must remember the great scale of India). Sir Alexander Cunningham distinguished the following styles (Archaeological survey of India, Reports, iii, iv) (1. The Indo Turkish, which began with the Slave Kings dynasty, with pointed or overlapping arches of curhelled horizontal layers, i.e. still using the old Indian technique of vaulting, and with rich decoration in relief in stone: tomb of Sultan Iltutmish in Dibli (Kunst d. isl. Völker, fig. 228, 187). 2. The style of the Khaldils of the second dynasty (689-720/1290-1320), or decorated Turkish style with horseshoe arches of radiating layers and rich orpamentation. 3. The Tughlukid, called after the third Turkish dynasty (720-817/1320-1414), with sloping, very thick walls and cusped horseshoe arches. The domes will on low drums and the walls of red limestone are panelled with white marble frames: \$2000 of Tughluk Shāh in Tughlukābād (op. ed., lig. 226, \$58); also brick buildings inlaid with glazed bricks: sepulchral dome of Rukn al-Dawla in Multhn. Later, we have still thicker walls without arches and inlay but with a covering of stucco, which was probably decorated and painted: Aubbs of Firus Shah in Firezabad. 4. The Aighan style, called after the Afghan dynasties (Sayyids, Lodls and Suris) (817-96z/x4x4-x555) with perpendicular walls; mostly octagonal mausoleums with arcades; tomb of Shër Shāh (op. vit., fig. 224, 173); decorated with coloured stucco m with strips of glaze: hubbs of Bahlül Lödt mear Cirak-Dihli; the octagonal mausoleums of

Sikandar in Old Khayrpur and others in Mubarakpur-Kotila and Khayrpur. Later, a coating of different coloured stones was preferred to the covering of stucco: mausoleums of Sher Shah and Husayn Khan in Sahsaram, 5. The Turkish style in Bengal, an independent provincial style; squat buildings of brick sometimes decorated with minute falence work: tombs in Hadrat Pandua (769/1368) and Gawr with curved brick roofs, 6. The Turkish style of the Sharkids in Djawnpûr (706-883/1304-1470) a provincial style similar to (1) and (2): tombs in Diawnpur. 2. The early Mughal style comprises the buildings of the reigns of Akbar and Djahängis (963-1037/1556-1628). With the tomb of Humayun, finished in 980/ 1472, the Persian style established itself. In Akbar's tomb it again makes way for the Indian (here the old vihāra type) to reappear in Djahāngīr's tomb in Labore-in the falence which decorates it, at least (ca. 1030/1630). Red sandstone is the material preferred. 6. The late Mughal style under Shah Djahan (2037-68(1628-57) finds its most brilliant manifestation in the Tadi Mahall, which shows the Indian and Persian traditions in perfect union.

To this list may be added: 9. The Deccan style, which covers the numerous sepulchral domes and around the old capital on the plateau of the Deccan, although they show as many varieties as localities and are only variations of the north Indian sepulchral domes of the Turkish dynasties who founded Muslim rule in the Deccan. 'Ala' al-Dio Muhammad Shah of Dibli was the first to establish himself here in 693/ 1204. Half a century later the Bahmanids succeeded in bringing the northern half of the Deccan under their rule (748-934/1347-1517). Their capital was Gulbarga (q.v.). At the end of the 9th/15th century began the division of the Deccan under five dynasties: the 'Imad Shahs in Berar (890-980/1485-1572), the Nizani Shahs (897-1028/1492-1619) in Bidar, the Adil Shahs (895-1097/1490-1586) in Bldiapur and the Kuth Shahs (918-1098/1512-1687) in Golkond4. The most important sites for the study of the architecture are Gulbarga, the oldest capital, then Bidjapür, Bidar and Golkonda; Bidjapür, "the Palmyra of the Decean", stands out from all for the richness and size of the buildings. The shape common to all demed tombs is here as in northern India a square building with a dome. Some of them, like the Ibrahlm Rawda, the mausoleum of Ibrahim II (987-1036/1579-1626), and the incomplete 'Alt II Rawda of the last Adil Shah in Bidiapur, are enclosed by long terraced arcades. Almost all the old buildings in the Deccan are built of hewn stone; in Bidjapur and elsewhere also we frequently find a reddish-brown basalt. The transition from the square to the dome was here again effected from the transition zone with corner urches to a kind of folding of the wall by seems of crossing pendentive-like arches which led direct to the round of the dome without an intervening course. By far the largest of these tombs, indeed the largest switte in the world, is that of Muhammad 'Adli Shah (1036-70/1626-60), the celebrated Gul Gumbad in Bidiápür (pictures in Kunst d. isl. Völker, 223 and 171; Die Kunst des Islam, 319 and many other works); a square building with m interior diameter of 150 feet, i.e. larger than the interior of the Pantheon (tro feet). The interior narrows towards the top through a system of intersecting pendentives to circular basis of about 105 feet in diameter on which rises the dome-leaving an inner gallery open-about 130 feet in diameter; the interior height is nearly 200 feet and the exterior 220 feet. The weight presses lawards through the pendentives, but is counteracted by the weight of the dome, so that it was not necessary to counteract any outward pressure by massive walls.

In Gulbarga, which was the capital of the Bahmanids (748-920/1347-1514), still stand the simple kubbas of the early rulers of this dynasty, among them the tomb-here reproduced-of its founder Hasan Gangu "Ala" al-Din (748-50/1347-58). The kubbus of the later Bahmanids from Abraad Shah Wall onwards (825-30/ 1422-36) at Bidar and are already much larger and sometimes richly decorated, especially the mausoleum of Ahmad Shah. The square building is transformed to the round by keel arches at the corners. The interior walls are brought into rhythm by three flat niches on each, of which the central ones the north-south axis are opened andoors. The central niche on the west is deepened to form a pentagonal militab. The niches | flanked with Indian pilasters. The painting of the interior is undoubtedly of later origin, but the old designs may survive in places. The painting of the dome resembles that of Khodia Rabif (in Khurāsān; ma above), as does the frieze of inscription. Almost as large as that just mentioned, but without decoration in the interior, is the kubbs of Mahmad Shah II (887-924) 1482-1518). To this group also belongs an octagonal tomb without dome, obviously unfinished, which resembles the mausoleum of Khudabanda Shah in Sultaniyya (Persia) and man built for Shah Khalil Allah Husayn, the iconoclast and saint, son of the tutor of Ahmad Shah Bahman. The tombs of the Baridis who followed the Bahmanids are open subbas standing on pillars.

The fine city of tombs of the Kuth Shahls of Golkonda lies outside the town in marge wailed garden, the kubbas of the last rulers of the dynasty, 'Abd Allah (1045-83/1635-72) and of Abu 'l-Hasan (ro83-98/1672-87), who died in Mughal captivity, built only up to the dome, outside the walls. The cubic buildings are sometimes surrounded by galleries of arcades as in Bldjapür. The bulbous domes tise out of a lotus pattern (see the illustrations). In the country around are hubbas of prominent families and saints, like the Cahar Gumbad reproduced here. They belong to the same type. The last great group to be mentioned is: 10. The style of Gudjarat, with Ahmadabad as its capital, founded by the second ruler of the sultans of Gudiarat, Abmad Shah I (824-46/1411-42); his descendants ruled till 991/1583. Ahmed Shah's bubba or rawda in the centre of the town beside the Diami' Masslid, a square building with sides 90 feet long, consists of a domed chamber 35 feet high and four corner chambers connected by pillared halls. The preference for rich, pointed ornamentation peculiar to this style finds expression in the marble cenotaphs and fillings of the windows, In hubbas outside the city, as in the mausoleum of Daryā Khān of ca. 857/1453, we again find the Turco-Persian transition storeys with corner arches and gallery with a dome above built of horizontal layers (Kunst d. isl. Volker, fig. 214, and 182).

The most important groups have been mentioned. For the most notable Mughal tombs, which are only briefly mentioned above, — HIND, vii. Architecture, and MUGHALS, Architecture.

Finally, it should be noted that bubbs "cover" occurs m a technical term in the construction of scales and balances, where the housing for the pointer (listin), often used also as a carrying handle (cf. Fedro de Alcala: clibbs = manifa del peso), was called the bubbs. See J. D. Latham, The interpretation of m passage on scales (mawazin) in an Andalusian hinha manual, in JSS, xxiii (1978), 285-7.

(E. Dinz*)

KUBBA (now Kuba), a district in the eastern Caucasus between Baku and Derbend [q.eu.]. The district of Kubbs, with an area of 2,300 sq. miles, is bounded on the north by a large river, the Samur, which flows into the Caspian, me the west by the "district" of Samur which belongs to Daghistan [q.v.], on the south by the southern slopes of the Caucasian range (peaks: Shah-Dagh, 13,951 feet high, Bābā Dagh, 11,900) which separate ljubba from Shamakha (cf. the article shinwan), on the southeast by the district of Baku and on the east by the Caspian. The area between the mountains will the tlat coast land is called Diai (Vullers, i, 499; diaf, "ad venerationem principis destinatum nemus"). The plain between the rivers Yalama and Belbele is called Muskur; Shabarun lies further south (cf. SHIRWAN). The other cantons - Barmak (so-called after a member of the Barmaki family, who sought refuge here in the reign of Harun al-Rashid), Shishpāra, Tip, Khinalugh, Budugh, Yukhari-bash, Sirt, Anakh-dara, and (sometimes) Kabistan (Akii, iv. 650).

The population in 1896 was 175,000; 16.7% Tht [q.v.], speaking the Tranian dialect of Tatl; 25.5% of Adharbaydiani Turks; 24% of highlanders of the Kura group (the Kurin [q.v.]); and 8% highlanders of the group (southeastern Daghistan group) formed of Khinalugh (q.c.), Dick, Kriz [q.v.] and Budugh, to whom the Udi of Shekki [q.v.] seem to be related. Muslims form 94% of the population (76.5% Sunnis, and 17.5% Shiffs). Jews, Russians and Armenians together number several thousands. The town of Kubba (16,300 inhabitants), only founded in about 1750, lies on the right bank of the river Kudiāl; on the left bank is the Jewish quarter of the town. Near the mouth of the Kudial is the readstead of Nisabad (called Nizovaia by the Russians) which played an important part in Russian military operations in Transcaucasia.

The history of the district of Kubba, which at first must have formed part of the aucient Caucasian Albania, is mixed up with that of Shirwan; Shabaran (mow a ruined site at the river Kulhan, Russian Gikhin) had been an important centre inhabited by Christians (Mukaddasi, 376) before Shamakha became the capital of Shirwan. On the banks of the river Kulhan may still be a ruins with a wall running

from the sea to Baba Dagh. Near the town of Kubba is the tomb of the Shirwan-Shah Kawiis b. Kaykubad (d. 774/1373).

It was only in the 18th century that Kubba enjoyed a period of independence. In the time of Shah Sulayman Şafawl, a member of the family of the esmi of Kaytak (cf. DADHISTAR) called Husaya Khan arrived at the court of Islahan. He became a Shirl and gained the favour of the Shah, who appointed him Khān of Kubba and of Sāliyān (at the mouth of the Kura). Husayn Khan built the castle of Khudad. His grandson Husayn 'All b. Ahmad, with the help of Peter the Great, regained the ancestral estates of the sisms, but his position was threatened by the alliance of Surkhay, prince of the Kazi-Kumükh, with Hādidil Dāwad, religious chief of Muskur, who with the help of Turkey played a considerable part in Däghistan from 1722. Nådir Shåh restored Saliyan to Husaya 'All. After the death of Nadir, local dynasties arose everywhere. At this time Husayn 'Ali moved his capital from Khudad to Kubba where he built a town and annexed Shabaran and Kulhan. He died in 1171/1758. His son Fath 'All Khan who succeeded him sought the help of the empress Catherine II, who in 1189/1775 sent General de Medern to Derbend, under a pretext of avenging the death of the academician Gmelin, who had died on 27 June 1774 in captivity with the asset of Kayak. With the help of the Russians, Fath 'All re-established his authority over what he could regard as his hereditary fief (Dăghistăn, Kubba, Săliyan). He also took Shirwan, and the Khan of Baku appointed him his son's guardian. The influence of Fath 'All Khia gradually extended beyond the bounds of the district, In 1193/1778 he sent 9,000 man to Gilân to restore Hidayat Khan, who had been driven out by the Kūdjārs [q.v.]. In 1202/1788 he seized Ardabil, whereupon the Shah-sewan [q.v.] recognised his authority, The Khans of Kara-Dagh and of Tabris sought his support. Fath 'All is credited with ambitious designs on Adharbaydjan. To reconcile his plans with those of the king Irakli of Georgia, Path 'All met the latter at <u>Shamkür (Shamkhor)</u> but soon afterwards fell ill and died in 1203/1789.

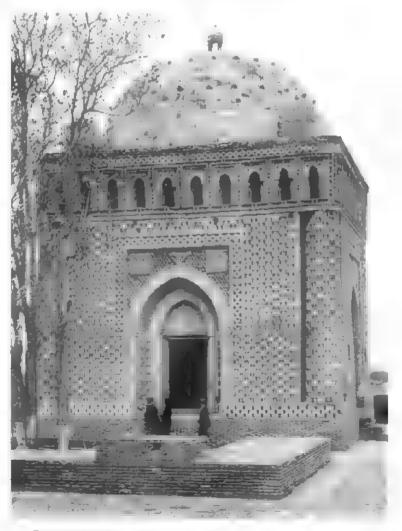

The political and military work of Fath 'All Khan crumbled away under his successors. His young son Shaykh 'All Âghā (succeeded in 1791) had a very adventurous career. This young Khan relied on the support of the Kadjars, but Count Zubov took Derbend on 4 May 1796, and entrusted the government to his sister Peri-Diahan Khanum. Taken prisoner by the Russians, Shaykh 'All Agha escaped and renewed the struggle. On the accession of the emperor Paul, Russian policy suddenly changed and the Russian troops were withdrawn. Shaykh 'All returned to Derbend. In 1801 be and the other Khans sent a delegation to Alexander I, but by 1805 we again find Shaykh 'All rebelling against the Russians to whom he caused continual trouble till 1226/1811. The khanate of Kubba was occupied by the Russians in 1806, and by the treaty of 1813 Persia renounced her claim to the eastern Caucasus. From its incorporation in the Russian empire, Kubba formed "gouvernement" of Shirwan (later of Baků). Since 1919 Kubba has been part of the republic of Adharbāydjān, at first independent and then a Soviet SSR.

Bibliography: cf. the articles DAGHISTAN, DERBEND, SHEKKI and SHEWAN. See especially the work of the local historian 'Abbās Kuli Āgḥā Bāki-Khānov (a descendant of the Khāns of Bākū, who related to Fath 'All Khān), the Gillistān-i Isam, of which Russian version by the author

himself (1794-1846) was published at Bākū in 1926 (Travana 🔳 la société scientisique de l'Azerbaidjan, part 4). The principal documents are in the col-Section by A. Bergé, Tillie 1866 ff., i-xii, index under Derbend-Kubba.

(V. MINORSKY) AL-KUBBA, RUBBAT AL-TALAM, K. AL-ARD, K. ARIN "the dome of the world, of the earth, of Arin", expressions used by the Islamic geographers and astronomers to denote the geographical centre of the earth (wasafal-ard)at the zenith of which exists the kubbat al-sama? or wosat al-sama?; the kubbat alard, defined as being equidistant from the four cardinal points or djibal (see e.g. 1bn Rustih, 8, tr. Wiet, 7), is theoretically me be found at 90° from each of the poles and meridians of longitude zero and z80°, passing through the two extremities of the inhabited world (whether the longitudes are calculated starting from the east or the west). It is thus situated on the equator, and, for those authorities who followed Ptolemy, at 90° to the east of the meridian of the Fortunate Isles (see AL-DIAIA R AL-EBALIDAT) taken as the starting point. Now, if the theoretical position of the anaba causes no problems, its localisation in practice does in fact pose an interesting one.

The author of the Hudad al-Slam (tr. Minorsky, 58, § 4. No. 13) echoes a tradition which places the centre of the inhabited world in an Island called Nara (read as Bara by Minorsky) at a longitude of 90° east, and he adds that the astronomical tables and the position of the planets and fixed stars were calculated in relation to this equinoxial island (isting) al-lay! we "I-nahār; cf. Ibn Rustih, 84 tr. 92, "l'ile équatoriale"]. However, al-Birani in his al-Kanan al-Mastadi, whilst noting the fact that this island is mentioned by M-Faziri and Vackab b. Tarik, places it at 190° 50' longitude east, i.e. at 50' to the east of Yamakoli/ Diamakat/Diamagod, which marked the extreme eastern boundary of the inhabited world, and he states that there are some more or less unknown places there. In his India, 137, tr. i, 303.4, al-Biruni notes that the name Yamakofi is reminiscent of Kankdiz/Gangdiz, which Abū Ma'shar al-Balkhl took as the starting-place for the longitudes, calculated from east to west and no longer from west to east (cl. D. Pingree, The thousands of Abu Maishar, London 1968, 4r and index). Al-Mas'adl, Muridi, E. 131 - \$ 555, recording an ancient transan tradition, attributes to Kay Khusraw the foundation of Kankdiz, and he notes specifically that certain authorities equate it with Yang-ch'eou; he further adds that several Chinese kings made it their capital. Al-Biruni, loc. cit., mentions Kay Kawus or Dilm/ Diamshid as lounder of this legendary town which was to remain, at least theoretically, as the extreme limit of the known world for later scholars. Abû Ma'shar likewise places it to the most China and at 90° from the kubbat al-ard, but he identifies it with Ozayn, which is a dangerous =

The Indians used to calculate the longitudes from Lanka (Ceylon), whose southern tip in not very far from the equator, but they were led to displace the original meridian westwards and to adopt instead that of Udidiayn [q.v.], which is near to the Tropic of Cancer but not at all near to the Equator. The name of this town, which has indeed a genuine geographical existence, was written in Arabic script cf. Ibn Rustih, 22, tr. 29 أزين/أوزين Uzayn/Uzayn) and n. 6, with bibl.; al-Masfudi, Tanbib, ed. Sawi, Cairo 1357/1937, 192), and then, by means of a wrong reading, Arlu رين; it is under this latter form that this toponym appears in later works, that

it is transcribed in the mediaeval Latin translations, and that it appears even in French lexica (Arine). Being unaware of the exact position of Udidjayn, some authors tended to consider it as an island in the Indian Ocean (cf. Hudild al-falam, tr. 190), or at least to place it quite naturally on the equator, totally unaware of their (thus Ibn Rustib, loc. cit., or al-Mastadi, Tanbih, loc. cit.). In this way, subbat Arin and subbat allard became synonymous; an astronomer 🖿 recent as al-Rūdānī correctly defines the kubbat al-ard or al-calam as the point of intersection of the equator and the da'irai nisf al-nakâr and still calls it the kubbal Arin, but he probably saw only there a traditional name without any direct connection with the town of Udidjayn,

Finally, it may be noted that the use of the word hubbs to denote the geographical centre of the earth has given rise to the idea that a particularly high point of the earth is involved here. The Indian tradition which makes the zero meridian go through Ceylon, where Adam's Peak rises, may conceivably be influenced by this conception, which al-Bironl attacked in his Kanan (cf. A. Bausani, in Studies on Islam, Amsterdam-London 1974, 28-9).

Bibliography: In addition to the sources already mentioned, see above III the Hudid al-'alam, comm. 189, 245, 335-6; M. Reinaud, Introd. générale à la géographie des Orientaux, Paris 1848, pp. cexxxix ff.; Battani, Opus astronomicum, ed. Nallino, Milan 1899-1907, passim; art. DIUCE-RĀFIYA. (CH. PELLAT)

KUBBAT AL-HAWA?, "the Dome of the Winds" popular appellation for isolated monuments situated me rocky spurs, for example, the (undated) domed tomb of a skeykk on the west bank of the Nile (cf. Murray's Handbook for travellers in Upper and Lower Egypt, 9th edition, ed. Mary Brodrick, London 1896, 920) above Aswan. This presumably postdates the destruction of an adjacent Coptic monastery, attested by a grafflto, in Shams al-Dawla's Nubian expedition of 1173, though the monasteries of the area, to judge from desecratory Muslim visitation inscriptions in Arabic dated, inter alia, 6941 1294-5, in the neighbouring monastery of "St. Simeon" (not mentioned in U. Monneret de Villard, Description générale du monastère de Sat. Siméon à Asada, Milan 1927), survived for a further century

The mills celebrated edifice of the mills no longer exists. This is recorded by al-Kindl (Fada'il Misr, ed. Guest, 147, Il. 14-15; cf. al-Makeizi, Khitet, il, Büläk 1853, 201, l. 21; 202, ll. 3-31) as a palace built by Hatim b. Harthama, governor III Egypt in 194-5/ 809-11 on a spur of the Mukattam hills. This was deliberately destroyed on the fall of the Tülünid dynasty and no trace of it exists. The exact site has been disputed, but its total disappearance makes it more probable that it was on the site later occupied by the Ayyubid Citadel of Cairo (K. A. C. Creswell, The Muslim architecture of Egypt, ii, Oxford 1959, 6, and references) than higher on the Mukattam hills in the neighbourhood of the Fatimid mashhad, generally known as the Mashhad al-Diuyushi. The site of this Kubbat al-Hawa' was subsequently converted into a cemetery, and various mosques, which have equally disappeared without trace, were erected there (P. Casanova, Histoire et description de la Citadelle du Caire [= MMAFC VI], Paris 1894, 557-61).

Though the possibility that the Cairene Kubbat al-Hawa' may be identified with the presumed Fatimid observatory on the Mukattam hills must be

discounted (cf. A. Sayılı, The observatory in Islam and its place in the general history of the observatory, Ankara 1960, 130-56), the sense of the term Kubbat al-Hama' suggests the persistence into Islamic tradition of some reminiscence of the Athenian Tower of the Winds, described as an horologism by Varro (De re rustice, 3-5-17) and dated accordingly pre-37 B.C., but also representing the winds on its eight facets (H. S. Robinson, The Tower of the Winds and the Roman market place, in American Journal of Archaeology, xlvii [1943], 292-305; J. V. Noble and D. J. de Solla Price, The water clock in the Tower of the Winds, in ibid., lxii [1968], 345-55]. The term Kubbat al-Hawa? may thus have been used in Islam for structures associated with time-keeping or meteorology, though the evidence for this in the standard authorities is lacking. The reasons, incidentally, for the use, in the 28th century A.D., of the Tower of the Winds in Athens as a same? hidae of the Kadir! dervishes (Hasluck, Christianity and Islam under the Sultans, Oxford 1928, i, rz et passim) have still to be elucidated.

Bibliography: given in the article.

(J. M. ROGERS)

KUBBAT AL-SAKHRA, the Dome of the Rock, at times called the Mosque of Umar, is the oldest remaining monument of Islamic architecture, and probably the first conscious work of art of Islamic civilisation.

Location and description. The Dome of the Rock is becated — an artificial platform, roughly but not exactly in the centre of the Haram al-Sharif [q.v.] in Jerusalem. The shape and emplacement of the platform were probably determined by the ruined state of the old Jewish Temple area, together with whatever Roman constructions may have been left; it is also possible that there were pious and historical or legendary associations with parts of this area of the Haram, but these are difficult to demonstrate (see below).

A celebrated inscription, in which al-Ma3mun replaced 'Abd al-Malik's name with his own, dates the construction of the Dome (kuôba in the inscription) to 72/691-2. It has been superbly described in all details by K. A. C. Creswell, and recent repairs have only confirmed most of his reconstruction of the original monument. It consists of a dome (20.44 m. in diameter and 30 m. in height) surrounded by two octagonal ambulatories, each side of the outer one being around 20.50 m. Interior supports consisted of piers and columns; the dome was a high drum and probably was from the very beginning a wooden double dome. There were fifty-six windows in the drum and the octagons, a parapet on the outside, and simple porches. Two important architectural characteristics of the Dome of the Rock must be noted. One is the superb geometry of its layout, based on the extension of two squares inscribed in the circle of the rotunda. It is this geometry which provides the monument with its harmonious airiness and which makes it possible to perceive the whole building at a glance. The second characteristic is that, from the point of view of its plan and composition, the Dome of the Rock belongs to a high tradition of Byzantine architecture represented by monuments found in Ravenna, Syria (St. Simeon, Bosrā), and Jerusalem (Holy Sepuichre, Church of the Ascension). It is almost certain that its builders and planners were Christians from Syria or Palestine.

The Dome of the Rock was lavishly decorated with marble, mosalcs, and gilt bronze plaques. The cupola was gilded on the outside and the outer walls were

in large part covered with mosaics. Most of the exterior decoration has disappeared, but, in spite of numerous restaurations, the interior still approximates to its original appearance of silittering sheathing of mosaics. Almost every part of the walls was covered with vegetal and geometric designs, and these included the very unusual motif of royal crowns and jewels. A fairly complete description of all these themes has been provided by Marguerite van Berchem in Creswell's Early Muslim architecture. Although there is some debute about the origins of the mosaicists (Syrian or Byzantine), there is little disagreement about the stylistic origins of the decoration. Most of it derives from the rich vocabulary of Late Antique and early Byzantine art, but there are also definite transan elements. Together with the important absence of any tigural representations, this mixture of sources indicates that a conscious new Muslim taste affected the decoration of the Dome of the Rock far more than its architecture. We shall raturn later to the interpretation which could be given to these mosaics, since it a closely related to the problem of the meaning of the whole monument. As we shall see, a key document for whatever interpretation is given lies in the long inscription in gold mosaic cubes which runs along both sides of the octagonal areades. In addition to providing the date of the building, this inscription contains numerous Kur'anic passages which range from statements of the faith of Islam (exif; xxxiii, 54; xvii, xxx, etc.) to the major Christological passages in the Holy Book (especially iv, 169-71 and xix, 34-7). These are our earliest dated fragments from the Kur'an, and C. Kessler has shown recently that many letters were already provided with clear discritical marks (see Bibl.).

Although the Dome of the Rock has been amazingly well preserved, it was affected by many alterations and repairs over the centuries. The exact chronology of all these changes is difficult to establish. The cupola was redone in Fatimid times and under the Ottomans: the roof of the octagons was repaired in 'Abbasid times; and their cettings transformed under the Mamiliks. The Crusaders added a handsome from screen around the Rock, which has now been removed, but it was the Ottomans who in the roth/roth century covered the building's exterior walls with some of the best known examples of Turkish ceramics. Between 1956 and 1964 a Restoration Committee under the leadership of Egyptian and Jordanian architects and authorities undertook a complete restoration of the monument. Some part, such as the dome, were totally redone, others, the mosaics for instance, cleaned and repaired. The guiding principle of this work was to put every part of the building back in its earliest documented shape. Although future research may quibble at some of the decisions taken. (for instance, it is likely that the beams of the ambulatory's roof were visible, since painted ones were found there), it has been - of the most successful jobs of restoration known anywhere, and it is hoped that its carefully-kept records will soon be published.

Significance. The Dome of the Rock has excited more acholarly concern than any other Islamic monument, and this for several remsons. It is a unique building which was rarely copied for we shape (a few later mausoloums like the Sulaybiyya in Sămarra or Kaliwun's tomb in Calro may have used it as model), and never for its functions. It does not fit into any architectural series. Also it we located on the site of the fewith Temple, in the holy city of

Christianity, without showing obvious traces of impact from the two older monotheratic faiths. It does not look like mosque, and the Akṣā nearby fulfilled the congregational needs of the Muslim community. Finally, literary sources on the Dome of the Rock are confused and contradictory, even though the inscription on the building indicates that it was a major effort of the Umayyad dynasty.

The many explanations which exist can be divided into three broad groups. The first one is the traditional pious Muslim view, which interprets the Rock as the place whence the Prophet went on his celebrated Journey into Heaven (miradi [q.v.]). That such became eventually the holy meaning of the Dome of the Rock is undisputable, since the whole Haram became the Masdiid al-Akrā of Kur'an, XYII, I. But, while the association between the Rock and the Prophet's Journey may have been made quite early, there is no trace of it in the most authentic document about the monument, so, its long inscription.

The second explanation is concretely historical, and goes back to passage from al-Ya'kabi. This explanation holds that, during the struggle of the Umayyads with Ibn al-Zubayr, 'Abd al-Malik attempted to create in Jerusalem a shrine which would compete with the Ka'ba and the ollgrimage to Mecca. Recently, W. Caskel revived the theory by pointing out that the Umayyads as a dynasty did seek a cultic center in Syria or Palestine, and that Jerusalem was the only one which fulfilled the necessary conditions. The main objection to this theory is that, even though there are several literary indications of a special Umayyad attachment to Palestine, there is some doubt as to whether such a basic Islamic requirement as the pilgrimage to Mecca could be altered. Furthermore, al-Ya'kūbī was a violently anti-Umayyad polemicist, whose interpretations are open to criticism.

The third explanation is cultural-historical. Starting with the evidence of the inscriptions and of the mosaics, it proposes to see in the Dome of the Rock a monument proclaiming the new faith and empire in the city of the older two religions. It sanctified anew a Jewish sanctuary and slowly incorporated within itself the memories of Abraham and Joseph, among others. It set up the crowns of Byzantine and Persian kings like an offering around the centre of the monuments, and put up its own Christology above the crowns. It was a missionary monument of victory, built at a time when 'Abd al-Malik concerned with Christian enmity, but especially when he sought to problaim Islamic uniqueness within a common religious tradition, as, for instance, in his coinage. As the specific need of maintaining the cohesion of the community of faithful waned, pious associations grew up and eventually transformed the Dome of the Rock into the unique sanctuary it is today.

While this third explanation to us to reflect better than the first two the evidence of contemporary sources and of the spirit of the time, it is only fair to say that the debate is not yet closed. However it may be eventually resolved, two conclusions pertinent. One is that, both a work of art and cultural and pious document, the Dome of the Rock is a unique monument of Islamic culture in almost repects. The second one is that it is a monument with a history, for, whatever its initial purpose may have been, it developed more and more complicated associations as time went on. It may indeed be a instance of a sanctuary whose holy

meaning grew after it had been built. But, a work of art, it is one of the most telling documents about the gradual transformation of alocal Syro-Palestinian Christian art into Islamic art.

Bibliography: All earlier works are listed and discussed in K. A. C. Creswell, Early Muslim architecture, i, Oxford 1969. Of particular importance are O. Grabar, The Umayyad Dome of the Rock, in Ars Orientalis, iii (1957), and C. Kessler, Above the ceiling of . . . the Dome of the Rock, in JRAS (1964). Since 1969, one should see Grabar, The formation of Islamic art, New Haven 1973; Kessler, 'Abd al-Malih's inscription, in JRAS (1970); M. Ecochard, A propos du Dôme du Rocker, in BEO, xxv (1972); W. Caskel, Der Felsendom und die Wallfahrt nach Jerusalem, Cologne 1963.

(O. GRABAR)

KUBBE WEZIRI (r.) "vizier of the dome" was the name given, under the Ottomans, to the members of the imperial Diwān (dwān-i hūmāyān [q.v.]) who came together on several mornings each week around the Grand Vizier in the chamber of the Topkapi Palace called Kubbe alti because it was crowned by a dome. The kubbe wexirlers were the kādi-'askers [q.v.] of Rumelia and Anatolla, the kādi of Istanbul, the deficedar [see Daftardar], the nishāndii [q.v.], the aghas of the Janissaries, the commander of the cavalry and, when he happened to be in the capital, the kapudan pasha [q.v.]. This institution was abandoned under Ahmed III [q.v.].

KÜBCÜR (in Central Asia), the most important of the taxes and impositions of Mongol origin in the Cingizhāmid period. It was originally a tax on flocks and herds, payable by the Mongols to their ruler. Such a levy was made by Cingiz-Khān early in his career for the support of his ally and patron the Ong-Khān of the Kereyts (Histoire secrète des Mongols, ed. L. Ligeti, Budapest 1971, 107; Rashid al-Din, Shorwik letopisci, ed. Berezin, xiii, 178). In the formative years of the Mongol Empire, \$abcar was levied at a rate of an animal out of every 100 (Ljuwayni, iii, 79; Rashid al-Din, Djami el-Tenarikh, ed. Biochet, 42). At this stage it seems to have been paid only by the nomads.

In 650/1252 the Greak Khan Möngke introduced among other reforms a new method of taxation. Following the model that had been established in Transoxania by the governor Mahmud Valawac, he imposed on the Empire a poll-tax, levied according to the wealth of the individual taxpayer = a sliding scale from ten dinars down to one. Other rates are also mentioned. This tax was to be called kubdur, and was to be paid by the subject population (Djuwayni, i, 253-4). Such a tax inevitably involved periodical censuses of the conquered population (Djuwayni, i, 25; cf. Grigor of Akance, History of the Nation of the Archers, ed. and tr. Blake and Frye, Cambridge, Mass. 1954, 57). On the basis of a new census, kabéur was reassessed in 656/1258 on a scale ranging from 500 dinars to one. Thereafter the imposition of census and "pol)-tax" kabbar seems to have become a regular procedure, at least in the west, as new territory submitted to the Mongols of was conquered by them (see e.g. Rashid al-Din, Histoire des Mongols de la Perse, ed. and tr. Quatremère, 256-7). It became something of a byword for Mongol oppression (see Minorsky, Pir-i Baha and his poems, in Iranica, Tchran 1964, 299).

The original "animal-levy" #ilber continued to

be paid by the Mongols—in Persia until the reign of Ghāzān, who aboliahed it {Rashid al-Din, Geachitate Gāzān-gādn's, ed. Jahn, 300]. The sources consequently sometimes the term \(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde{\pi}\)\(\tilde

[D. O. MORGAN]

KUBILAY, Mongol Great Khan (1260-04), the brother and successor of Möngke [q.v.], was born in 1225. In 1251 Möngke entrusted him with the administration of Northern China, and he took part in the subsequent which his brother launched against the Sung rulers of the South. The conquest of the Sung was finally completed only during his own reign (1279), when the whole of China was again united under one ruler for the first time since the tenth century. Already in 1260 he had transferred the capital of the Empire from Karakorum (q.v.) to Peking, in Mongol Khān-Ballgh [q.v.], i.e. "Khān's Town", and in 1272 he proclaimed the foundation of the Yuan Dynasty, the twentieth of the Chinese Official Dynasties. His right to the Khanate was at first disputed by his younger brother Arleh Böke, who pechaps had the stronger claim and who finally surrendered only in 1264; the struggle was then taken up by Kaydu [q.v.], who remained a thorn in Kubilay's side during the whole of his long reign. Nor was Kubilay successful in his campaigns against the Japanese and the Indo-Chinese or in an attempt to gain a foothold on the island of Java. In China he encouraged the propagation of Tibetan Buckhism, but, like most of the Great Khans, me favourably disposed to Islam and the Muslims; only for a time (during the years 1282-9), as a result of the events connected with the assassination of the minister Ahmad, did the Muslims fall into disfavour with blm. He was described by a European observer, who had travelled widely within his territories, the Venetian Marco Polo, as "the most puissant of men, in subjects, lands, and treasures, that there is me earth or ever was, from the time of our first father Adam to this day"

KUBRA, Shayke Abu 'L-Diannie Armad B. 'Umar Nagim al-Dian, eponymous founder of the Kubrawi Şûfi order, who of the major orders of the Mongol period in Central Asia and Khurasan, from which stem numerous derivative initiatic lines. The sobriquet of Kubra is an abbreviation of the Kuranic expression al-fammal al-habra, "the major disaster", a nickname Nadjun al-Dian earned through his formidable talent in polemic and disputation.

Born in Kh *Araum in 540/1145, he began his career as a scholar of hadily and halden, travelling

extensively in the cultivation of these disciplines. His interest in Süfism was awakened in Egypt, where he became a murid of Shaykh Rüzbihan al-Wazzan al-Misrl, = initiate of the Suhrawardl order. After a number of years in Egypt, he went to Tabriz to pursue his studies of haldm, but came instead under the influence of a certain Baba Faradi Tabrizi, who persuaded him definitively to abandon his concern with the external religious sciences and to devote himself fully to the Sufl path. He then spent some time in the company of two other preceptors, 'Ammar b. Yasir al-Bidlist and Isma'll al-Kusrl, from both of whom he received the ritual thirtes, before returning to <u>Shaykh</u> Rûzbihau in Egypt. By then, Rüzbihan evidently regarded Kubra as fully mature, for in about 540/1145 he sent him back to Kh "arazm with full authority to train and mitiate disciples. Kubrā swiftly gathered a large following, including a remarkable number of individuals who attained prominence in their own right as gnostics and writers on Suffsm; he is, in fact, frequently designated wali-twask, the "manufacturer of saints". Among his foremost disciples were Medid al-Din Baghdadi (d. 616/1219), Nadim al-Din Dâya Rizi (d. 654/1256; author of the celebrated SQfI compendium Mirsåd al-libåd, ed. Amin Riyahi, Tehran 1352/1972; Eng. tr. Hamid Algar, The path of God's bandsmen from origin to return, forthcoming). Sa^cd al-Din Hamûya (d. 650/1252), 📰 Kamêl Djandi, Sayl al-Din Hakharzi (d. 658/1260; cf. Sa9d Natisi, Soyf al-Din Bakharri, in Madjalla-y Danishhada i Adabiyydt, ii/4 [Tir 1334/October 1955], 1-15, and Izadi Afshar, Sargudhasht-i Sayf al-Din Bāhharsi, Tehran 1341/1962), and Radi al-Din 'All Lala (d. 642/1244). Kubrā died during the Mongol conquest of Kh"arazm in 617/1220; according to the traditional accounts, he refused an invitation by the Mongols to leave the city before they proceeded with their massacre of the inhabitants, and died at the head of a band of followers while engaged in hand-to-hand combat. He is reputed to have been buried in the site of his Manadah outside the city, and his tomb, located in what subsequently became known | Köhne-Urgent [see GURGANDI], became a centre of plous visitation, retaining this function even under Soviet rule (cf. G. P. Snesarev, Relikti domusul'manski<u>kh</u> perovanji i obr<u>vo</u>đav u Usbekov Khoresma, Moscow 1969, 269, 433).

Kubeā left behind a number of brief but important works dominated by a concern with the analysis of the visionary experience. He discussed in them, for example, the various significances of dreams and visions; the degrees of luminous spiphany that are manifested to the mystic; the different classes of concept and image (hhavrifir) that engage his attention; and the nature and interrelations of man's "subtle centres" (lastinif), Most important of Kubra's treatises are Faud'ih al-djamal wa-faudish al-djalal (edited with an exhaustive introduction on the life and work of Kubra by F. Meler, Wiesbaden 1957), al-Usal al-'ashara and will al-kha'if al-ha'im min lawmat al-id'im (edited, together with other lesser treatises, by M. Molé under the title of Traités mineurs, in Annales Islamologiques (Cairo), lv [1963], t-78). In addition in these short works on the path, Kubrā also embarked on a Suff commentary on the Kur'an that he was unable to complete but was continued after his death first by his murid Nadim al Din Razi and then by another Kubrawi, 'Alla' al-Din Simnani (cf. H. Corbin, En Islam éconion, Paris 1972, iii, 175-6, 276 m 90, and Süleyman Ates,

Isers tefair okulu, Ankara 1974, 139-60).

The line of Kubra was perpetuated by several of his disciples. Sayl al-Can Bakharzi established a well-endowed khanakak in Bukhara. Wakf documents relating to this khanajah have been published by C. D. Čekhović, Buklarskie dokumenil XIV Tashkent 1965); it me there that Berke Khan, fifth ruler of the Golden Horde, proclaimed his acceptance of Islam (). Richard, La conversion de Berke et les débuts de l'islamisation de la Horde d'Or, la REI. xxxv [1967], 173-9). Badr al-Din Samarkandt, a murid of Bakhard, travelled to India and established there a branch of the Kubrawiyya that came to be known as the Firdawsiyya; its most important figure was Ahmad Yahyā Manéri (d. 772/1371), author of widely-read Maktubát (publ. Lucknew 1911). Sa'd al-Din Hamáva established a khánakák at Bahrábád in Khurasan, the direction of which was assumed by his son, Sadr al-Din Ibrahim, who in 694/1295 presided over the conversion to Islam of Chazan Khan, the Ilkbanid ruler of Iran (cf. Rashid al-Din Fadl Allah, To'righ-i Mubarak-i Ghanani, ed. K. Jahn, London 1940, 76-80). Another murid of Sa'd al-Din Hamûya was 'Azîz al-Din Nasafî (d. 661/1263), author of several important treatises (published by Molé under the title Kütab al-Insan al-kâmil. Tehran and Paris 1962).

The most long-lived and prolific initiate line deriving from Nadim al-Din Kubra was probably that descending by way of Radi al-Din Ali Lata and two further links of the chain to 'Ala' al-Dawla Simnani. Simnani further elaborated the analysis of the last'if and also formulated a critique of Ibn 'Arabi's doctrine of waldet al-wudjud that - to have much influence on Indian Nakshbandi circles (see H. Landolt's introduction to Mukātabāt-i 'Abd al-Rahman Isfarabini wa 'Ald' al-Dawla Simnani, Tehran and Paris 1972, for a copious bibliography on Simuani). 'All Hamadani, a sureld successively of two of Simnani's followers, Taki al-Din Akhi and Mahmud Mazdakani, introduced the Kubrawi order to Badakhshan and Kashmir. He died in 786/1385, and is variously reputed to have been buried in Khuttalân (present-day Kulab, Tadzhik SSR) (see KHUTTALAN] and Sringgar (J. K. Toufel, Eine Lebensbeschreibung des Scheichs 'All-i Humadant, Leiden 1962; Sayyida Ashraf Zafac, Amir-i Kabir Savvid "All Hamadani, Labore 1972). He designated himself = a "second 'All", and although the branch of the Kubrawl order he introduced to Kashmir remains purely Sunal to the present day, it is not surprising that various descendents of Hamadani came to adopt Shi'ism. Ishak al-Khuttalani, successor of 'Ali Hamadani, was murdered by emissaries of the Timurid ruler Shahrukh in about 826/1423, but before dying appointed as his successor Muhammad Nürbakhsh. The majority of Khuttaläni's followers accepted Nurbakhsh, but a minority gave their loyalty to 'Abd Allah Barzishabadi instead. This schism gave rise to two separate derivatives of the Kubrawiyya, each with its own name, but having in common an adoption of Shiffism. One was the Nürbakhshiyya, that survived in Iran into the Safawid period; the other come to acquire, at a date and in a fashion unknown, the designation of Dhahabbiyya, and has survived down to the present in Iran, where its chief centre is Shiraz [cf. R. Gramlich. Die schiftischen Derwischorden Persieus, in AfKM, xxvi/x [1965], 14-26).

The latter history of the Kubrawiyya in its Central Asian homeland in not well-known. It is probable that it is almost universally displaced, even in Khwarazm, by the Nakahbandiyya from the early

9th/15th century onwards. The small town of Saktari near Bukhara remained, however, an active centre of the Kubrawiyya until at least the early 11th/17th century (for a list of works produced by the shayks of Saktari, see A. A. Semenov, Sobranie vostočnikh eukopisci Akademii Nauk Urbskskoi SSR, Tashkent 1955, iii, 327-8); and at some point the Kubrawiyya apread eastwards from Central Asia into the Muslim regions of China (cf. Muhammad Tawadu', cf-Islām wa 'f-Sin, Cairo 1364/1945, 112).

Finally, there are traces of the Kubrawiyya in Turkey—a Kubrawi shayhh by the following of Mustafa Dede is recorded to have fought in the ranks of the army that conquered Istanbul (Ayvānšarā, Hadikat Al-djeudini', Istanbul 1281/1861, il, 261)—but no lasting implantation of the order appears to have taken place either in Turkey that Arab lands. Only a nominal existence of the Kubrawiyya persisted in the western Islamic world as one of the multiple secondary affiliations professed by Nakshbandls of the Mudjaddidi-Shālidl line (cf. Muhammad As'ad al-Irbill, al-Risāla al-as'adiyya fi 'I-larika al-'aliyya, Istanbul 1341/2944, 29).

Bibliography: (in addition to that contained in the text): Meier's introduction to his edition of the Familib al-diamal contains a comprehensive listing of all sources - the life and work of Kubra. Trimingham, The Sufi orders in Islam, Oxford 1971, 55-8.

(H. ALGAR) KUBRUS, modern Turkish Kibris, Greek Kupros (etymologically derived probably from the word for "copper"), in western languages Cyprus, is the largest island in the Eastern Mediterranean, with a surface area of 9,251 km. The nearest distance to the mainland is from Cape Kormakiti in the north to Anamur on the southern coast of Turkey, 71 km. The distance to the Syrian coast between Cape Andreas and Ra's ibn Khan north of al-Ladhikiyya [q.v.] is 98 km. The distance to Crete (Arabic Lightish [q.u.] is about 553 km. The island consists of two mountain ranges, Kyrenia-Karpass rising to 1,010 m. altitude in the north, and Troodos rising up to 7.952 m. in the south-west. In between lies a plain, the Mesaoria (Turkish Mesarya, Mesalya), which supports most of the island's agriculture, aithough its rainfall is marginal and the percentage of irrigated land is not large. Against ture continues to be the mainstay of the economy. Copper has been mined since before 3,000 B.C., but its known veins, like those of other minerals (from pyrites), are near exhaustion. Non-metal minerals are available in exportable quantities, e.g. asbestos. Refining of salt is still revenue-producing; it is being extracted from salt lakes in the low lands near Limassol and Larnaca. (old names Les Salines, Turkish Tuzia).

The geopolitical situation of Cyprus within the spheres of the ancient civilisations of the Near East explains why the island has always played a certain

role in history, although its importance has sometimes been overrated. Lying on the main sea routes of the Levant, within striking distance of the maintand, the island has always been in a dependent position to any of the surrounding big powers; political independence has rarely been attained (see below, Lussignes period).

2. Byzantium and Islam (632-2292).

Cyprus' history in antiquity will not me dealt with here. When the expansion of Islam began, the island was a province of the Byzantine Empire, with its capital at Constantia, ancient Salamis. Since 431 (Council of Ephesus) the Orthodox Church III Cyprus has been autocephalous under - archbishop who ranks immediately behind the four great patriarchs. The church has moulded the island into a social, religious and cultural unit. The old and strong links between clergy and people have created of social solidarity, which has remained characteristic for the history of the Orthodox Greek population of the island during the succession periods of foreign dominations. Cyprus's important cities at this time were: Salamis-Constantia, Citium (near Larnaca), Curium (near Episkopi), Tamassus (Nea) Paphos, Neapolis (Nemeson) (= Limassol), Amathos, Arsinoe (Marium) (- Chrysokhou), Lapithos, Karpasia (Near Rhizo karpaso), Chytri (# Kythrea), Tremithus, Soli, Kerynia and Ledrae or Leukosia (= Nicosia).

It was after the reign of Heraclius (610-41) that Cyprus began to be invaded by the Arabs. According to # Greek writer, a raiding party under the caliph Abb Bakr appeared on the island in 632, which is not very probable, in 647 (648, 649?) Mu'āwiya, governor of Syria, organised an expedition against the island, which was in fact the first large-scale maritime enterprise of the Arabs in the Mediterranean (cf. Baladhurl, tr. Hitti, i. 235 ff., 43r f.). His fleet of 17,000 sail, commanded by 'Abd Allah b. Kays, landed the Arab forces at Constantia. The city was besieged, surrendered and tacked. The whole island was overrun. Cyprus was compelled to pay a tribute of 7,000-7,200 goldpieces, to be paid annually to the governor at Demascus, a sum equal to the island's tribute to the Hyzantine treasury, This seems to indicate a form of joint-rule over the Island by the Emperor and the caliph. It was during this raid that Umm Haram, wife of 'Ubada b. al-Samit, relation of the Prophet, died and buried near Larnaca. On that site was to be erected the most venerated shrine of the Muslims of Cyprus, the Håla Sultan Tekke. A second raid was organised by Mu'awiya in 33/653-4 led by Abu 'l-Anwar, Laplthos was sacked, and a force of 12,000 occupied the island permanently till the caliph Yazid (680-3) withdrew it. The tributary relationship with the caliph I Damascus lasted till the time of caliph al-Mansur (754-75), it seems

The peace treaty concluded between Constantine IV and 'Abd al-Malik in 685 and renewed in 688-9 with Justinian II provided for the division of the revenues of Armenia, Iberia and Cyprus. The lastmentioned emperor decided to transplant the Orthodox population of Cyprus to the south coast of the sea of Marmara near ancient Cyzicus, where the city of Nova Justiniana (Justinianopolis) was founded for the archbishop of Cyprus and his flock. (This town's name still figures in the title of the head of the church of Cyprus. This exile of the Cypriots lasted till 698, when the Island became resettled by its old inhabitants, and also by those who had gone to

Muslim Syria.) For two-and-a-half centuries longer, there persisted the intermediate status of Cyprus between the Roman Emperor and the caliph. The island was normally used as II base for Arab maritime actions against Asia Minor.

in 747 a fleet from Alexandria and destroyed by a Byzantine force commanded by the admiral of the Cibyrrhaeote Theme. Raids attacks followed each other in 772, 790 and 806 under command of 'Abbasid governor in Syria, Humayd. The island nevertheless remained a part of the Byzantine Empire, and the Emperor Basil I (867-86) reorganised its administration temporarily into a theme, the general Alexius being governor. The tribute to the caliph continued (cf. Constantine Perphyrogenitus, De Thematibus, Bonn ed., 40). Cyprus served as a base during the campaign of Himerius against the Araba in Crete [see 1KRITISH] in 902. In 921-12 an Arab force under Dinyana occupied the island for four months. Pyzantine authority was restored after the recovery of Crete in 963. After ca. 963, Cyprus was hardly ever more troubled by Arab invasions, and was able to restore its economy. Evidence for the island's renewed florescence is the new foundation of the main cities, old sites on the sea coast being abandoned. I 1042-3 and in 1002 revolts against the Emperor Alexius Connenus occurred.

Towards the end of that century, Cyrpus became a base for operations of Byzantine land and sea forces, sometimes in combination with those of the Crusaders (in particular, Raymond de St. Gilles, Count of Toulouse, and his successors at Tripoli). Scanty evidence for the interior history of Cyprus in this period points to maladministration and the economic draining of the island's resources by the Byzantine government. The source of Nicolas Mouzalon, one-time archbishop of Cyprus, must, however, be considered suspect because of prejudice against the emperor. The first half of the rath century left Cyprus in peace. Pilgrim traffic passed through it musual, and relations with Muslim powers were correct. The amir of Beirut and many inhabitants of that city found refuge on Cyprus when Baldwin, king of Jerusalem, captured it = 13 May 1110. The first Maronites probably settled **the** island around this time. Inhabitants of Tell Hamdun in Little Armenia were removed to Cyprus by the Emperor John II Commenus (Caloicannes) (Ibn al-Kalanisi, tr. H. A. R. Gibb, The Domasous chroniole of the Crusades, London 1932, 241). In 1148 Manual Compenus extended the commercial privileges of the Venetians to Crete and Cyprus. This marked the beginning of the Latin penetration.

In 1155 or 1156 the Crusader Renaud of Chatillon, in co-operation with Thoros II (1145-68) of Little Armeno (Armeno-Cificia), launched an expedition against Cyprus and put the Byzantine authorities (the Duke John Comnenus) out of action. Cyprus suffered badly, and had to pay ransom for hostages from among principal members of the clergy and

the lay population.

In 553/2158 a fleet from Egypt raided Cyprus, and in 1162 pirates equipped by Raymond III of Antioch, Count of Tripoli, raided Cyprus and the coast of Cilicia. The last period of Bysantine dominion over Cyprus was the rule of Isaac Ducas Commenus, the self-styled Emperor of Cyprus from 1183 to 1292, who was able with support of the Norman King William II to defeat an expedition sent by the Emperor Isaac II Angelus against him and to rule till he was dethroned by Richard the Lion Heart in 1191.

King Richard's fleet ran into heavy weather on its way to the Holy Land. The ship corrying his sister Joanna and IIII bride Berengaria, daughter of King of Navarre, sought shelter in the port of Limassol. Isaac tried to take the ladies hostage, but Richard appeared on II May 1191 and landed in force on Cyprus. Having been joined by Crusader lords from Syria, among whom were Guy de Lusignas, a claimant to the crown of Jerusalem, Richard, after failure of a peaceful settlement, opened war against Isaac and defeated his forces. Isaac surrendered at the end of May 1191. The people of Cyprus delivered half of their possessions to the King of England, who confirmed the laws and institutions as granted to Cyprus by the Emperor Manuel Comnenus, Frankish garrisons took the place of the Greek ones, and two English gentlemen were appointed as justiciars and sheriffs to administer the island. It was to the base to provision the Crusaders in Syria, and the island became essential for the operations of the Franks in the Holy Land during the next century, after Saladin had almost destroyed the Latin's position there at Hattin (1187).

2. The Frankish period (1192-1571)

(a) The rule of the House of Lusignan (1192-1489). —The King of England sold the island in July 1191 to the Knights of the Temple. During their rule, a rebellion broke out which was suppressed at great cost. In May 1192 King Richard resold Cyprus to Guy de Lusignan, husband to the heiress of the crown of Jerusalem. The Byzantine Emperor could only raise ■ protest on the diplomatic level.

Aimery de Lusignan succeeded his brother as lord of Cyprus (1194-1205). He continued the foudal organisation, granting fiefs to many Latin nobles and founding an extensive private domain. The state acquired its administrative institutions, and the castles of St. Hilarion ("Dieu d'amour"), Kyrenia (Cérines) and Buffavento were built. By Papal bulls of 20 February and 13 December 1196 a Latin hierarchy installed under the archdiocese of Nicosia, with three suffragans, as a parallel to the Latin feudal institution. In 1197 Aimery acquired the title of King, holding his dominion from the Emperor Henry VI with Papal assent. In the same year, the Syrian Crusader barons elected him King of Jerusalem in Acre. This personal union was restored under King Hugh III (1267-84) of Lusignan in 1269, to remain as a honoritic title of the Kings of Cyprus after 1201. A third royal title was collected by the Lusignans, that of Armenia in 1368—again 🖮 empty title without land.

The new kingdom kept the peace with the Muslim powers in Syria till the 5th Crusade (1228-0). The Cypriots also participated in the expedition to Damietta of 1219-21. During the Seventh Crusade, the King of France, St. Louis, used the island as his support base in the campaign against Egypt, when Damietta was again taken in 1249, and both Kings entered the town triumphantly together. The Kings of Cyprus remained involved in the Crusaders' wartill the end. In 1269 Hugh III became King of Jerusalem, but could not establish his authority over the unruly Crusader barons of Syria, Cyprus and the maritime republics of Italy. He withdrew from Acre in 1276, and when that town fell to the Mamiluks in 1292, Cyprus became the last refuge for the Christians fleeing from Syria. This position in the Levant was of advantage to Cyprus.

The 14th century was the great period of the king-

dom of the Lusignan "Kings of Cyprus and Jerusalem". Its legal foundation was the purest feural constitution ever to come about in mediaeval times, involving elected monarchy controlled by the feudal nobility. The latter had as instruments of their policy the Haute Cour (Cour des Liges) with all executive, legislative and judicial power, as the only organ entitled to establish the rightful succession to the throne. The King was its president, and he had to convene the Haute Cour, but the continuity of the dynasty ensured the strong and dominating position of the monarch versus the Latin nobility.

The royal administration directed by the sénéchal, chambellan, chancellier and Grand Bailli for civil affairs, and the countitable, martchal, Grand Turcoplier (commander of light cavalry) and an admiral for military affairs. The two main cities of Nicosia and Famagusta were administered by 2 viscounts assisted by mactasibs (mahteseps).

The King, together with the Crusader aristocracy of baronial families of French origin (d'Ibelin, de Norès, etc.) and manualer group of Frankish citizens, formed a small ruling class. The second element of Cyprus society formed the foreign merchants communities living in privileged, extraterritorial fondachi, Italians from Genoa and Venice, Catalans and Provençals.

The native Orthodox Greek-speaking people formed on the whole melass of subjects, ruled and exploited like slaves and seris, parici and perperiaris. Personally free were the Greek lefteri or Francomati. The division between native Greeks and foreign Franks became strengthened by the existence of two churches. In 1196 King Aimery installed a Roman Catholic ("Latin") hierarchy at the side of the Orthodox one. By 1260 Pope Alexander IV issued the Constitutio Cypria confirming the supremacy of the Latins over the Greeks. The Latin archbishop solely remained as metropolitan of both hierarchies, Howaver, the Orthodox clergy managed to subsist as methodox organisation conserving the Greek ethnicity of its flock.

The Lusignan period was the first in which the island's produce and taxation became spent in and for the land itself. This alone must ill considered a major cause of its economic growth. Next to that was the island's position as it transit trading station for the East-West trade, the échelle du Levant par excellence after the disappearance of the Crusader states. Famagusta developed into a commercial centre connecting Genoa, Venice, Pisa, Florence, Barcelona and Montpellier with Alexandria, Damascus, Aleppo, and through to the Persian Gulf, with South and East Asia.

King Henry II (1285-1324) had to direct the influx of the refugees from Syria and Palestine after the fall of Acre (1291) and the settlement of the Syrian Crusader barons and merchants. In 1343 a Holy League between the Pope, Venice, the Knights of St. John at Rhodes and Cyprus was instituted against the emerging sea power of the amirs of Aydin (q.v.) in Anatolia. Smyrna was occupied on 28 October 1344. Otherwise, peaceful commercial relations were maintained with Mamlük Egypt and the southern Anatolian coastlands. King Peter I (1359-69) revived the ideal of m crusade against Islam. In 1361 Gorbigos (Kızkalesi) was annexed and Antalya [q.v.] was captured from the Turkman Amir Hamidoghlu Mehmed Bey, A European tour of the King, now styled athleta Christi by Pope Urban V, prepared for a Crusade: Venice, Cyprus and the Knights of St. John collected 10,000 troops transported in a fleet of 115 sail at Rhodes.

In October 1365 Alexandria was temporarily occupied, but the commercial interests of Venice and Genoa stopped any further confrontation with Mamlük power. These merchant republics were to dominate Cyprus's politics in the last century of its independent existence. At first, it was Genoa which gained the upper hand in the competition with Venice. In 1372 the Genoese Podestà (in Famagusta) defeated the Venetian Bailo, whose party received support from the Greek Cypriots. A Genoese force invaded Famagusta and Nicosia. In October 1374, a treaty was concluded which assured Genoa complete. economic hegemony on Cyprus for 90 years. The Maona Cypri was the private mercantile organisation of Genoese bankers established Famagusta. The King of Cyprus had to cede the town = guarantee for the payment of reparations amounting to 2,145,400 florins and the yearly tribute to Genoa of 40,000 florins.

The next blow to Cyprus's independence was an invasion by the Mamiluk Sultan Barsbay [q.v.]. On 7 July 1426, King Janus (1398-1432) and his army were defeated near Khirokitia, and Nicosia was plundered. The King was set free on the condition of becoming a vassal, paving 200,000 florins' ransom and m yearly tribute of 8,000 florins. After this invasion, the island's economy began to decline. Social unrest within the Greek population worsened the situation. In 1448 Gorhigos fell under control of the Karamān amilrate [see Karamān ogmullari]. Cyprus lost her last continental interest.

When in 1458 Charlotte, the daughter of King John II, to the throne, her half-brother James the Bastard (1440-73) disputed the succession. He applied to the Mamilik sultan for support. In 1460, with the aid of Mamilik auxiliaries, James II defeated the legitimist opposition and took the last stronghold of the Queen, Kyrenia, and the Genoese held Famagusta in 1464. To defend himself against a Genoese counter-attack, James II enlisted Venice as an ally, and chose a Venetian subject, Caterina Comaro (d. 1510) as his Queen = 1472; after his death (1473), she was to rule as the last monarch of independent Cyprus till 1489. During her reign, Venice installed a virtual protectorate. A Venetian garrison and two Venetian counsellors to the Queen were not considered enough by the Venetian government to safeguard the island from the Ottoman Turks' expansion. In 1488 an Ottoman Beet appeared before Famagusta. On 26 February 1489, Queen Caterina ab-dicated in Famagusta, and the Venetian Capitan Generale da Mar, Francesco Priuli, took over the government of the island.

Thus it was Christian Venice that ended will last of the Crusader states in the East. The Signory of Venice duly notified and offered justification of the take-over to the Sultan Kā'it Bāy [q.v.] in Cairo, and the envey carried with him presents and 16,000 ducats, being the tribute for 2 years. The Sultan thereupon agreed to the transfer of the Kingdom of

Cyprus to Venice (February 1490).

(b) Vanetian rule (1489-1571). — With the acquisition of Cyprus, the commercial "colonial" empire of Venice reached its greatest dimensions. The new possession was reorganised. The centralised government, the Rettori, consisted of the Luogatements and two counsellors. Venetian nobles elected for a two years' tenure, controlled the linances and administration, and resided ■ Nicosia. A quadrennial courses was instituted, the first reliable population data of Cyprus's history. The governor of Farnagusta, the Capitan dal Regno di Cipro, acted

mecommander-in-chief of the army and the fortresses in peace-time, and had a share in the civil administration. In time of me intenace, proveditor-general was elected for two years to command. From the period of the Lusignan rule, two offices me retained only, the viscounties of Famagusta and Nicosia being reserved for Cypriots. A Great Council replaced the Haute Cour, but did not leave any real power to the Frankish baronage, by now a commingling of military adventurers from all over the Mediterranean world.

On the whole, Venetian administration was inefficient and corrupt. It estranged the local Latin ruling class and did not manage m gain the loyalty of the Greek population. The island remained a colony and a military base only for the Venetians, and inadequately manned at that. The economy continued its decline, aggravated by natural disasters in the course of the century. The burden of the tribute to the Mamilik sultans remained till 1517, when it became payable to the Ottoman sultan at Istanbul. The monopolistic exploitation of the island's minimum did not encourage local enterprise. Apart from salt and grain, cotton, cultivated since the early 14th century, now became the major source of revenue, replacing sugar cane. Various forms of taxation pressed hard upon the labouring population. A conspiracy against Venice in 1562, led by a Greek, one Jacob Diassorin, was suppressed. Its dangerous aspect was that the rebels had made contact with the Ottomans. The Venetians now modernised the island's defences, and three fortresses, those of Kyrenia, Nicosia and Famagusta, were to be the sole defensible places; old fortifications like St. Hilarion, Buffavento and Kantara were dismantled by 1362.

The Ottoman threat bovered over Cyprus during the rule of Venice, and in the years following the Ottoman-Venetian peace treaty of \$550 (cf. texts ed. by Bonelli, Lehmann and Bombaci), pressure increased. The admiral Piyâle Pagha promoted the continuation of a naval policy aimed at annexing the Latin-held islands in the Levant seas on the routes of Ottoman communications; Chios and Cyprus, the principal among them, were both already tributary to the Porte. In the end, the pro-Venetian peace party at the Porte, Sokollu Behmed Pagha's, gave in to the war party, and the attack on Cyprus was decided for the early spring \$570. Joseph Nasi, alias Don Juan Micas, seems to have been im-

plicated here.

On 3 July 2570 the Ottoman fleet appeared before Larmaca (Les Salines). A Holy League created by Pope Pius V, Spain and Venice failed to organise a timely counterattack. The Venetian commander, the Luogoteneste Nicolo Dandolo, had to limit himself to the defence of the fortress towns. On 25 July 2570 the siege of Nicosia began, and ended on p September when the city was taken by storm. Kyrenia capitulated without a fight 5 days later. The population

in the countryside seems not to have opposed the invaders at all. The fortress city of Famagusta still held out. The Ottomans began the siege in September 1570. The fleet of the Holy League never came nearer than Castelorizo island, and only small Venetian reinforcements reached Famagusta in January 1571. The new season of war began in the middle of April 1571, when work on the siege trenches and mines was begun in earnest. Heavy bombardments, mining and ensuing man-to-man fighting exacted a heavy tell (50-80,000 m the Turkish side, out of a force totalling 250,000 or more). Marc Antonio Bragadin surrendered on a August upon condition of a free withdrawal of troops with their dependents. Lala Musiafa Pasha did not, however, keep to the treaty of surrender in the end, and the Venetian commander and many of his staff were massacred.

3. Ottoman Rule (1571-1878).

By a treaty of 7 March 1573 Venice formally ceded Cyprus to the Ottoman Sultan and agreed to pay a war indemnity of 300,000 dicats.

Already, by an imperial order of September issued by the serder Lala Mustala Pasha after the capture of Nicosia, Cyprus had been made an evalut or baglerbegilik, with Musafiar Pasha as the first Ottoman governor. Next to the beglerbegs were appointed, as usual, a chief hadi of the province and a defeerdar. The new province comprised eight sandjaks: merkes or Nicosia (Lelkosha), and on the mainland 1cct, Sis, 'Alā'iyye (Alanya), Tarsūs, Tarāblus and Shām (till 1573) (all with the timār system), and Kyrenia, Paphos (Baf) and Famagusta (Magosha) (with sālyāns [q.v.]). Apart from the main towns, there were, according to the 1372 lairir, 905 inhabited and 76 desolate villages.

Population numbers of Ottoman Cyprus fluctuated greatly; from the 18th century many observers indicated ± 80,000, but must observers 200,000, both figures contrasting with the result of 1572 which produced ± 85,000 taxable heads of family (khānc). Ewliya Čelebi indicated 30,000 Moslems and 150,000 infidels in around 1670-5. Probably the reports of the depletion of the island in the first centuries of Ottoman rufe have been exaggerated. The first census after the British occupation in 1881 showed a total population of 185,630.

The organisation of the new province was based on a new survey of population and revenue, tabrir, ordered by a ferman of 19 Djumada II 979/9 October 1573 to the newly-appointed beglerbegi Sinan Pasha. This survey is recorded in the defter-i mujaysal-i Kibrus dated 18 October 1572 (Ankara tapu ve kadastro arsivi, Old records No. 506/64). Government was to be according to Islamic and Ottoman law. A major change was the grant of miri lands in usufract to the native farmers, who were freed from seridom, the feudal system being abolished. The amount of djirya (= kharādi) [q.v.] was == gold piece per head of family. In the other forms of taxation, the Ottoman government also exercised moderation and preduced a favourable change in respect to Venetian and Lusignan policy.

The abolition of the mile du sel, for instance, resulted in a sharp decrease of revenue, though production of salt was not reduced (Inakok, Ottoman policy ... [see Bibl.], 60 f.). Forced labour was abolished in practice as well. From 45 % to 67 % of taxes were levied in kind, as elsewhere in the Ottoman provinces; disys and ispendis [q.vv.] were paid in cash.

A squadron of galleys was stationed at Famagusta

and Kyrenia. Ottoman troops garrisoned on the island numbered 3,779 including 1,000 Janissaries, established in Nicosia, Limasol, Paphos, Famagusta and Kyrenia. A great number of Anatolian Turks from the regions of Konya, Karaman, Nigde, Icel, Alanya, Antalya, Menteshe and Dehizil were settled on the Island = so-called surgün (cf. Barkan, in IFM, xi [1949-50], xv [1953], formán of Djumádá I 980/21 September 1571 to the Kadis of Karaman, Anadolu and Dhulkadriyye; 🗪 Multinime defteri, 19, pp. 334-7, no. 669, publ. in ibid., 552-3). In total, 1689 families immigrated by 1572, mainly farmers. In 1581 8,000 families were registered as immigrants (MD 43, cf. C. Orhonlu, art. in Kibris tethikleri kongressi (see Bibl.), 99-103).Conversion 🕮 Latin 📰 Greek Christians added little to the number of Muslim "Turkish" population, amounting 🔳 only about 400.

A major contribution to the welfare of the native Greek population was the Ottoman decision to abolish the Roman Catholic hierarchy and to restore the Orthodox Church of Cyprus under its archbishop. This prelate was made representative of his community vis-à-vis the Oltoman government as the Ethnarch or head of the Greek community, It meant an increasing degree of autonomy for the Orthodox Greek population under its own chosen leaders, and the relatively unhindered development of its own cultural tradition into modern times. This privileged status of the Greek population, together with the new dominating but smaller group of Turkish Muslims on Cyprus, was to form the basic situation of the Cypriots down modern times. The Latin element entirely lost its former status. It survived only in small numbers, profiting from diplomatic protection within the framework of the Capitulations system [see INTIVAZĀT).

Ottoman possession of the island was not seriously threatened after 1571. The Grand Duke of Tuscany organised a raid on Famagusta in 1507 at the time of his grand oriental scheme involving Fakhr al-Din (q.v.), amir of the Druzes, and the rebel Djanbulat 'All Pasha [q.v.]. The Veneto-Ottoman war of Candia (1643-69) did not have any great effect on Cyprus. In the 17th and 18th centuries, Cyprus was still an important centre of Levant trade, cotton and salt being valuable commodities. Consuls of Venice, France, of the Dutch Republic (since 1613) and of England resided at Larnaca, the factory (iskels [q.v. in Suppl.]) of the island. The consuls and their national groups of foreign residents sometimes played an important political as well as a commercial role on the island, especially in times of rebellion.

The importance of Cyprus decreased after the conquest of Crete was completed in 1669. At that time, the beglerbegilik me incorporated into the province of the Kapudan Pasha, who seat a deputygovernor, the musellim. The role of the Orthodox hierarchy in the administration increased at the same time. Strife among the Ottoman notables of Nicosia led to armed conflict, which in its turn caused the Porte to interfere by sending troops repeatedly. Clfutoghlu Ahmod Pasha = last succeeded in deleating the rebels and executing their leader Boyadil Mehmed Agha in ca. 1690. In 1703 Cyprus was transformed into a Adds; domain of the Grand Visier. The government was now exercised by a muhassil (taksildar) in the name of the latter, who was a farmer of taxes at the same time. The frequent change of these functionaries, melsewhere, led to overburdening by taxation. In 1745 Cyprus once

again became an independent province under its own passe for a few years. Abû Bekir Passa (1746-6) exercised his charge satisfactorily, bequeathing to the island me aqueduct serving Larnaca, the harbour and passing ships (makfiyya of me Rabi* [1161/ 12 March 1748, in Luke, Cyprus, 69-74).

In 1754 # hhaff-i humâyûn man issued at the request of the Archbishop and suffragans to fix the amount of the kharadi together with the ma'isket and mustil taxes at 214 plastres per head on 10,066 assessments. The bishops acquired the status of Kodjabashi (Gr. demogeron), responsible for the peace and the payment of taxes by the Greek subject population. In 1764 Cil Othman Agha, muhasyll of the Grand Vizier and a militarim, doubled the bharddi on Christians and Muslims alike, who rose in revolt and killed him. The revolt lested till August 1766. Cyprus suffered the depredations of the Russian fleet after the destruction of the Ottoman one (Coshme 5-7 July 1770) till 1774. From 1777 to 1783 Hādidil 'Abd ul-Baki Agha was muhassil. By this time, the actual administration and levying of taxes was shared between the Ottoman administrator and the Archbishop and bishops, who employed the Greek "Dragotnan of the Saray" - their agent also. In 1804 a revolt of the Turkish troops broke out against the Archbishop and the dragoman Hadidii Georgiakis Kornesios (executed in 1809), and this lasted till 1805.

The Greek Cypriots contributed little to the Greek War of Independence (1821-9). The little involvement there was (1821) gave the müsellim the pretext for, firstly, a general disarmament of all Christians. Then the leading personalities were arrested and put to death in July 1821, among them the Archbishop Kyprianos (1820-21) and three bishops. After the massacre there followed a partial confiscation of the possessions of the victims and of the churches and monasteries on the islands, although much was restored later. The Christians living within the fortresses of Nicosia, Famagusta and other towns were ordered to remove themselves to the outside, a situation which has remained. The archbishops never recovered their powerful pre-1822 position. The Greek Kingdom was recognised by IIII Porte in 1829, and this caused the beginning of nationalist aspirations of enoris amongst the Greek Cypriots. The overtaxation of the island's resources continued to frustrate a fundamental improvement of its economy, and revolts by both groups of the population ocourred in 1833.

In 1838 the era of the Tampimal [q.v.] set in. By 1849 Cyprus was reformed as a sangiak of the province of the Islands of the Aegean Sea, Disad'ir-i bahr-i sefid [q.v.] and administered by a militesorry, assisted by a diagn or council where Christians and Muslims were represented. Governors followed each other in quick succession. In 1861 Cyprus became an independent sangiak (Hill, iv, 239). The second taugimát decree of 1856 was applied in Cyprus, and the effects of reform were becoming noticeable during the last decades of the Ottoman administration (1856-78), when courts came into being. The population increased from ra. 100,000 in 1840 to 200,000 in 1862. The island's economy progressed moderately, and Larnaca remained the principal port. The administrative status of Cyprus was however reduced again in 1868 to a sandjub in the wildyes of the Islands, but restored in 1870.

4. The British Occupation 1878-1959.

A few days before the Congress of Berlin, Great Britain concluded with Sultan 'Abd ill-Hamid II [q.v.] a secret Convention of Defensive Alliance in which she promised help medelend his empire against Russian encroachment. The sultan ceded Cyprus for occupation and administration as a "place d'armes". In an annexe of a July 1878 it was provided that the annual surplus revenue of Cyprus, assessed from the average of the previous 5 years, was to continue to be paid to the Sultan. The so-called "tribute" in fact never reached the Sultan, but we diverted to the creditors of the Ottoman Debt instead, and this arrangement remained in force till Sir second Stores' administration in 1927. The Sultan retained his sovereign rights to the island and continued appointing its mufti and kadis. This status gave little incentive to the British government to develop Cyprus, but elementary reforms and ameliorations effected. With the outbreak of the First World War in 1914, Great Britain annexed the island. A representative régime was instituted (1922), with a council of 18 members, comprising 9 Greeks, 3 Turks and I British officials. Any proposal for union with Greece, enosis, could thus be deadlocked by the Turco-British bloc. The repeated refusal of enosis created tension between Greek Cypriots and the British. At the Peace of Lausanne (1923), Turkey formally renounced all claims to Cyprus. In 1925

Cyprus became a British crown colony.

A small number of Turks, however, opted for the Turkish nationality and left. The first great conflict between Greeks and British broke in 1931 during Sir Ronald Storrs' tenure as governor. A state of emergency was proclaimed. Military government remained till after World War II. Already in 1941, however, political parties were permitted again: & communist party A.K.E.L., a Greek nationalist party K.E.K., and a Turkish party. Trade Unions came about mainly under communist leadership. Municipal elections were held in 1943. After 1945 the British government did not consider any change of status for Cyprus, In 1950 Greek Cypriot nationalists organised a plebiscite among Greek Cypriots, and 96 % voted for enoxis. The young Bishop of Kitlen, Michael Mouskos, was the organiser of this demonstration. On 18 October 1950 III was elected the "Most Blessed and Most Reverend Archbishop of New Justiniana and all Cyprus" under the warm Makarlos III (1919-77). In 1954 a Cyprus-born Greek officer, George Grivas, began organising an anti-British guerrilla organisation, E.O.K.A. The British government devised a new constitution for the colony without giving any hopes for independence. In early 1955 the first discussion of the Cyprus problem in the U.N.O. failed to have a pro-Greek result. Soon afterwards guerrilla warfare by E.O.K.A. began. In July 1955 the British Premier Sir Anthony Eden held the first tripartite talks on the question, with Greece and Turkey, the latter also invited to have say me an ally of N.A.T.O. Turkey's point of view was maintenance of the slatus quo as a guaranten against enosis. The leader of the Greek Cypriots, Archbishop Makarios III, protested against discussion of the interests of Cyprus without the presence of its own people, meaning only the Greek Cypriots. E.O.K.A. stepped up its activities. Field-Marshal Sir John Harding was appointed governor. opened talks with Makarios upon the base of "a wide measure of self government". This was acceptable for the Turks and nearly so for Makarios. The talks were unexpectedly broken off by order of the London government, and Makarion deported to the Seychelles Islands (9 March 1956).

E.O.K.A. terrorism came into full fury. The

British began to recruit Turkish Cypriots as policemen, who consequently also fell victim to Greek bullets; the beginning of inter-communal violence dates back from this time. A Turkish militant organisation grew up, and a Turkish Cypriot leader emerged, Dr. Fazil Küçük. At the U.N.O. meeting in February 1957, neither exerts nor its Turkish answer taksim (division of Cyprus into two parts) got sufficient support. The new British Prime Minister, Harold Macmillan, decided to release Makarios, who me not, however, allowed to return to his island, and Sir Hugh Foot was appointed governor. The Menderes government in Ankara protested against this liberal figure succeeding the Field-Marshal, and blocked the plans for self-government of Cyprus, the return of the Archbishop and talks with all Cypriot leaders. A revised Foot-Macmillan constitutional proposal contained many elements later used in the London-Zürich treaties of 1050. At the time of its announcement, Cyprus experienced the worst terrorist fighting between the two communities, between E.O.K.A. and T.M.T., the Turkish National Defence Organisation, with 200 dead in two months. At this time there were 20,000 British troops on the Island.

Civil war suddenly came to an end in july 1958. although E.O.K.A. continued its fight against the British. Makarios, fearing an Anglo-Turkish cooperation to divide Cyprus, came forward in September with a proposal for independence under auspices of the U.N.O. Grives did not support it, and enosis remained his only aim. Great Britain did not consider it either, but began to change its position: 28,000 troops on Cyprus became too heavy a burden, and a Greco-Turkish conflict would harm N.A.T.O. Sovereign base areas in Cyprus would be sufficient for Britain's strategic needs. Athens wanted to prevent laksim; but Ankara could accept any compromise which prevented enosis. The U.S.A. made it clear that it would not continue supporting Great Britain in the Middle East. Any Greco-Turkish solution must III accepted.

In December 1958, the first talks between Greece and Turkey (by Averoff-Tossizza and Zorin respectively) were held. In February 1959 the prime ministers and foreign secretaries reached agreements in Zürich. At a second meeting in London these and a draft constitution with submitted to the British government. The Cypriots had not taken part officially before, but the Cypriot leaders Makarios and Küçük were invited to accept the agreements. Makarios was put under heavy pressure by Greece. In London, at Lancaster House on 19 February 1959, three treaties were signed by all parties:

(s) a "Treaty of establishment", Britain declaring Cyprus independent, with the reservation of two soversign base areas.

(a) a "Treaty of guarantee": the 3 powers guarantee the independence of Cyprus and its status as defined in a number of fundamental articles of its Constitution. Enosis and takeim are forbidden, and in case of violation, all three powers together, or if not feasible, each separately, may take action to restore the status foederis.

(3) a "Treaty of alliance" between Cyprus, Greece and Turkey, a military alliance with headquarters at Nicosia, where 950 Greek and 650 Turkish soldiers will be stationed, was laid down as an extra guarantee for the other treaties.

Furthermore,

Constitution

laid down which came into force on 16 August 1960. The independent Republic of Cyprus, with a presidential regime and

Greek and Turkish as official languages, has an executive of one President and one Vice-President, a Greek and a Turk respectively, elected by their communities. There is council of to ministers, comprising 7 Greeks and 3 Turks, deciding with a majority vote. Its decisions are subject to a veto of President and/or Vice-President. There is a Parliament of 30 (35 plus 13), with a Greek speaker and a Turkish deputy speaker, deciding with majority vote, except in electoral municipal and fiscal legislation, when separate communal majorities are needed. (Full text in: Conference on Cyprus. Documents signed and initialled at Lancaster House on February 19, 1959. Cmnd. 679, London [H.M.S.O.]

5. Індеренденсе 1960.

After the transitory period from 19 February 1959 to 15 August 1960. Cyprus became an independent state on 16 August 1960. Its population in about 1968 was estimated at 621,500 (last official census of 1960: 557,615, with 442,521 Greeks, 104,350 Turks, 3,628 Armenians, 2,708 Maronites, 3,351 British, 2,796 Latins and 18,261 others). Reliable estimates are that in 1970 the Greeks made up 78 % and Turks 18 %, which

The application of the detailed and imposed constitution caused serious difficulties. The first opposition came from Grivas, who with his followers continued to insist on suoris. The formation of army caused insurmountable difficulties; the Turks wanted separate communal units and Kücük in the end used his veto against Makarios. Appointments of civil servants became problematical because the Turks could not fill all the 30 % of posts due to them. The most serious conflict was caused by the separation of municipalities, no longer desired by the Greeks. The Turks took this point a test case for the loyal application of the constitution. When the Turks proposed to continue with it in the end of 1962, Makarios blocked it. Both parties were considered be wrong by the constitutional court. whose members ("neutral" German lawyers) left the country not long after for fear of their lives.

On the # January 1963 Makarlos came forward with # proposal to amend 13 points of the constitution, which was ## longer functioning. The idea was to install a more unified state, with guarantees for the Turkish Cypriots, Makarios and Küçük being co-presidents.

The Ankara government declined these proposals. The intercommunal deadlock led to civil war. On 4 March 1964 a United Nations peace force was organised and a U.N. mediator was appointed. Violence continued. Makeries introduced military service, and could thus mobilise a Greek National Guard to control the extremist bands directed by Grivas from Athens. The situation worsened in the course of the year. The U.S. President Lyndon Johnson warned the Prime Minister Inonti la June that Turkey would not be protected by N.A.T.O. in case of a Russian attack after Turkish unilateral action. All over the island the Turkish Cypriots withdrew inside fortified enclaves surrounded by Greek Cypriot guerrilias and men of the National Guard. This meant a definitive change of the old settlement pattern of 120 all-Turkish and 106 mixed villages. There was a relocation to Turkish-dominated areas of at least 25,000 Turkish refugees. In 1960. 115,189 Turk refugees still remained unsettled. A precarious balance was maintained by the U.N.

Porce in Cyprus (U.N.F.I.C.Y.P.). Greek Cypriots dominated the greater part of the Republic. A U.N. mediator, Galo Piaza, began his work in March 1965. Makarios and Küçük and together any more, nor did the cabinet or parliament. Melarios kept on insisting that the imposed constitution was impracticable. Rüçük maintained that a limitation of independence was necessary for the survival of the Turkish community, which must never be treated in minority, and proposed taksim. Neither of the two Cypriot parties was able to make concessions.

Greco-Turkish talks in 1966 led to no results. In the autumn of 1967, violence flared 🚃 again after Greek Cypriot provocation. The Ankara government threatened intervention. The Athens Junta government gave in, and withdrew Grives from the island. Makarios's position had now become the stronger one. Kuçük proclaimed a separate transitional government for all Turkish sectors in December 1967. On 25 February 1968, presidential elections held which resulted in a 95.4 % vote for Makarios and his independence policy. Concessions were granted to the Turks. R. Denktas was allowed to return and me elected president of the Turkish Communal Chamber. He conducted intercommunal talks with G. Clerides in June, July and autumn of 1963 and in the spring of 1969. On March 1970, attack made on President Makarios, probably by Greek ex-E.O.K.A. members. Parliamentary elections wheld in July 1970 separately by both communities.

The year 1971 saw talks on Cyprus by the governments of Athens and Ankara in Lisbon (by Foreign Ministers Olçay and Xanthopoulos-Palamas). The communal talks between Denktas and Clerides were also continued. In September, General Grivas 🚥 turned secretly to organise mew E.O.K.A. terrorist (1972) movement, mainly directed against Makarios' position, but also menace to Turkish Cypriots. In March 1972 Grivas, assisted by the Bishops of Paphos, Kitium and Kyrenia, staged a coup to defrock the President-Archbishop and followed it up with raids and killings among Makerios's party which continued during 1973. Grivas died on 27 January 1974. Makarlos's conflict with the Athens Junta led to the overthrow by Greek army officers of his government on 15 July 1974.

Led by an E.O.K.A. terrorist, Nikos Sampson, the coup seemed to aim at caosis. The Turkish government invoked the Treaty of Guarantee and intervened unilaterally. On . July massive Turkish troop landings were effected near Kyrenia and elsewhere. A short was cosued between the Turkish army units and the Greek Cypriot National Guard, which led to a lasting division of the island along the cease-fire fine, stretching from the East, south of Famingusta to the West, Lefka including the Turkish zone of Nicosia. Massive relocation of the population was result, with at least 200,000 displaced persons. In December 1974 Makarlos returned to Cyprus as President. His authority was now, however, less. The new leaders of the two communities are G. Clerides and R. Denktag, both lawyers by profession. Intercommunal talks were continued by them in 1975 without significant results, and on 13 February 1975 Denktas announced the formation of a separate Turkish state in the northern half of Cyprus. The intercommunal talks resumed in Vienna in April under the auspices of U.N. Secretary-General K. Waldbeim.

On 3 August 1977, President Archbishop Makarios

III died aged 63. S. Kyprianou succeeded him as President, and Bishop Chrysostomes of Paphos was elected head of the Orthodox Church of Cyprus in the course of the year. Intercommunal talks were resumed in January 1978 under auspices of the U.N.O. Secretary General between Kyprianou and Denktag.

The Cyprus Question, one of the last remnants of the Eastern Question, remains to be solved on the

both national and international levels.

KUBU, sub-district (Accamatan) of the regency (Rabupaten) of Pontianak, situated in the south of the delta of the Great Kapuas river, in Indonesian province of Western Kalimantan in Borneo [q.v. in Suppl.]. In 1974 it had 16,031 inhabitants, among them 643 foreigners, most of them Chinese. The scattered population is mainly of mixed Arab, Buginese, or Malay origin, besides the Chinese and few Dayaks. Since 1955, the Indonesian government has tried to open some areas for Javanese immigrants.

The tamily which ruled this area until 1958 was of Arab descent originating from Hadramawt. The founder of the kingdom was Sayyid (according to others Shartf) Idrus al-Idrus, who settled not far from the mouth of the river Terentang with a few Arab, Buginese and Malay followers in ca. 1780. soon after his brother-in-law, the Arab adventurer Sharif 'Abd al-Rahman al-Kadri, had formded the sultanate of Pontianak. The capital and kingdom received its trom tentrenchment (Malay know) thrown up m a defence against raids by pirates. He put himself under the protection of the Dutch East India Company, who recognised him as a ruler with the title man (lord). One of his sons, "Alawi bin ldrus, because of his opposition against the Dutch and favour of the British, left Kubu in 1823 and finally settled in Sarawak; some of his descendants have had a certain political influence there, especially since independence (1963).

In 1910, the Dutch introduced a bestuur comité in Kubu, consisting of three notables, each of whom was allotted a certain territory as appanage. The last king, Hasan bin Zayn, was appointed as head of the bestuur comité by the Japanese in 1943, before he was elected head of the self-governing kingdom in 1949. In 1958, the monarchy was abolished and Kubu was transformed into its present administrative position as a kecamatan. The predominant religion is Islam, but this is mixed with animistic beliefs.

(W. H. RASSERS - [O. SCHUMANN]) KÜCAR KHÂN DJANGALÎ, Mîrză, known also as Shaykh Yunus (1880-1921). Persian revolutionary and the first person to declare a republican régime in Iran. He was born into a lower middle class family of Rasht, in the north of Iran, and studied Arabic and other religious subjects in the traditional schools in his region. He then moved to Tehran, continuing his studies in a religious school called the madrasa-yi mahmadiyya. His early traluing in traditional schools, together with his association with the Russian revolutionaries in Titlis and Baku in 1008, ofus his close co-operation with the militant Iranians involved in the Persian Constitutional Revolution of 1005-11, developed in Kūčak Khān a strong sense both of revolutionary patriotism and also of devotion to Islam. We therefore see him occasionally consulting the Kur'an well wetting up sessions for reciting the heroid poetry - Firdawsi [q.v.] (Ibrāhīm Fakhrā'i, Sardār-i Diangal Mirza Kalak Khan, Tehran 1965, 37-8). In 1909 Küčak joined the revolutionary group of Glian aimed at overthrowing the then despotic Shah. Muhammad 'All (reigned 1007-0). The GlianBakhtiyari forces moved on Tehran victoriously in July 1999 while Kūčak Khān was suffering a more back injury caused by carrying a heavy gun during the expedition.

After this short-lived victory on the part of the constitutionalists, Muhammad 'Alt Shāh fied Russia, where he made attempt regain his throne. A year or so later he entered Iran and, with the help of some Turkoman supporters, he moved towards Tehran. At this time (1911) Kūčak Khān joined the government troops in Māzandarān and "took many heroic actions" against the former Shāh's forces (Ahmad Rasravl, Ta'rihh-i hidjdahsdlarii Adharhdydjān, Tehran 1961, 181). In this expedition, Kūčak Khān was wounded. After his recovery, he was denied residence in Rasht by the then Consul-Goneral of Tsarist Russia; hence he moved to Tehran, suffering extreme poverty.

While in Tehran, Kūćak Khān took an active interest in the idea of Pan-Islamism which was then (1913) being propagated by the Ottomans and which enjoyed a considerable following in Tehran and elsewhere. Kūčak Khān had a series of meetings and discussions with religious and political personalities concerned about the future of Iran, and finally decided to undertake armed struggles against the British-backed government of Iran. In 1914, therefore, he went to Gūān and rose against the government and, with the help of some German and Ottoman advisers, organised his Pan-Islamic group, with the newspaper Diangal m its official organ, the latter first appearing in 1917.

After the Soviet Revolution, the termination of Tsarist claims on Iran and the conclusion of the Anglo-Persian Agreement of 1919 which established British control over the Persian army, customs, and financial affairs, Kûtak Khân, like other revolutionary leaders such as Khiyābāni (g.v.) and Muhammad Taki Khân Pisyān, intensitied his campalgn against the British. He established friendship with the Russian Bolshevik régime and in the name of the liberation of Iran, in May 1910, he proclaimed the Socialist Republic of Gilân.

To Kūčak Khān's revolution was, of course, opposed the British-backed government of Tehran; a number of clashes therefore took place between the

Diangalls and the opposing British and Persian troops. There were also internecine fights between Kucak Khan on the one hand and other Diangall leaders, such = ibsan Allah Khan and Khala Kurban and a number of the 'Adalat Party members, who held extremist communist views. These conflicts finally resulted in the murder of a prominent revolutionary, Haydar Khan 'Amu Ughli [q.v. in Suppl.]. In the meantime, the pro-British Savvid Diva? al-Din Tabatabal set up the Zarganda Committee, which we joined by a number of the large landowners of Gilan such = Fath Allah Khan Sardar Mansur. At the same time the Soviets decided to establish friendship with the British and the government of Tehran, culminating in the Soviet-Persian Agreement of 1921, the basis III which the Soviet Ambassador to Tehran, M. Rothstein, wrote | long letter to Kûčak Khân urging him to put an end his revolutionary activities. Thus abandoned, Kūčak Chan took refuge in the forests of Gilan, and shortly afterwards his frozen corpse was found and his head was taken to the authorities.

Kūčak Khān's writings and manifestos suggest that he was aiming m a united Iran without any foreign interference, including that of the Soviets. He believed in land reform and in compulsory education, and during his short control over Gilân, he did carry out some land reform and founded a number of public primary schools in Sawma'asarā, Shaft, Kasmā, and Māsūla.

The evaluation of the revolutionary activities of Kūčak Khān has caused controversy, and many contradictory accounts have also been given concerning the factual history of the Djangall movement. He has been called a "willing puppet" of the Soviets (George Lenczowski, Russia and the West in Iran, 1918-1948, Ithaca 1949, 60). On the other hand, Soviet writers (The borderlands of Soviet Central Asia, Central Asian Review, iv [1956], 287-331), as well as the Iranian revolutionary groups (S. 'Awn Allahi, Inkiláb-i habir-i süsiyálisti-yi uhtubr va nahdat-i humunisti va kärgari-yi Iran, and Takt Mūsawi, Inhilab-i uhtubr va nașdat-i Gilan, both in Inhilab-i uktubr va Iran, ed. Hizb i Tüda-yi İran, 1967, 241-62, 263-74; Djunbish-i kumunisti-yi Iran, in Tuda: Urgan-i sazman-i inkilabi-yi Hich-i Tuda-yi Iran dor khāridi-i as kishwar, No. 15, 1969, 22 lf.) do not seem III have paid enough attention to the eventual Soviet abandonment of the Diangall movement; this latter question has constituted the point of emphasis of a number of other writers (Mustafa Shufaft, Nigāki bi ramābij-i shūramt va nahdat-i inķilābi-yi Diangal, Tehran 1968) who have considered Kitcak Khan to be a national hero. A third group of the accounts are hostile to the movement, expressing openly the attitude of the big landowners of Iran, particularly of those of Glian; the best example of this group of literature is the anonymously-written book Ta'rikhća-yi Diangaliyan, Tehran 1918.

(ABDUL-HADI HAIRI) KOCAN, modern form of the mediaeval Islamic Khabūshān/Khūdiān, a town of northern Khurasan on the main highway connecting Tehran and Mashhad. It lies at an altitude of 4,060 feet in the fertile and populous Atrek River-Kashai Rud corridors, an the headwaters of the Atrek and between the parallel mountain ranges of the Küh-i Hazâr Masgiid m the north and the Küh-i Shāh Djahān and Küh-i Binklud on the south; the modern town lies several miles upstream, sc. to the east-south-east, of the mediacval town.

Khabashan was apparently the earliest Islamic form of the town's name, although nothing is known about it during the period of the Arab conquests and the ensuing two m three centuries. But already in the 4th/toth and early 5th/11th centuries, such writers as Ibn Hawkal; ed. Kramers, 433, tr. Kramers-Wiet, 429, Mukaddasī, 3x8-19, the author of the Hudad al-Glam, tr. Minorsky, 103, § 23, and Bayhaki, Ta'rikh-i Mas'iidi, ed. Ghani and Payyadi, 604, 607, tr. Arends 1, 735, 739, spell its name ... Khūdian. Sam'ani (who had personally visited the town), Ausāb, ed. Hyderabad, v. 223-4, repeated in Yākūt, ed. Beirut, il, 399-400, says that the locals pronounced Khadidian. The geographers and others describe it as the chef-lieu (kasaba) of the rich and flourishing rural district (rustak) of Ustuwa (the 'Ασταυηνή of Greek sources), which was administratively a dependency of Nishāpūr and comprised 93 villages. It constituted the granary of Nishapur, growing corn and fruits in both rain-watered fields (mabākhis) and in those irrigated by kanāts [q.v.]. cf. Busworth, The Ghamavids, their empire in Afghunistan and eastern Iran 994-2040, 153-4. Cotton was also grown and textiles produced. Concerning the religious complexion of the district, we learn that in the early 5th/11th century the doctrines of the Shāfi'i madkhab were promoted in Khūdiān and Ustawa by the fatih Abū 'Amr Fatabl (Muhammad b. al-Munawwar, Asrdr al-tawhid fi mahamat al-Shayah Abi Sa'id, ed. Dhabib Allah Sala, Tehran 1332/1953, 24); at this time, the famous Shafin scholaz Abu 'i-Hasan 'Aft al-Māwardi [q.v.] served for a while as \$64i of Ustuwa before moving to Baghdad (cl. H. Halm, Die Ausbreitung des saffilisschen Rocktsschule von den Anfängen bis zum 8./14. Jahrhundert, Wiesbarten 1974, 96). By the II-Khanid period, the name Ustuwa was going out of use, though still used in the tax-registers, according to Harnd Allah Mustawii, Nuzha, 150, tr. 149.

Kūčin makes sporadic appearances in the mediaeval Islamic chronicles, since it lay on the principal route from Gurgan and the Caspian provinces to Tus and Nighapur, and because the pasture grounds of the upper Atrek valley were especially attractive to powers with nomadic followings, such = the Saldluks, the Mongols and the Il-Khanids. It played a part in the manoeuvrings of Mas'ud of Ghazna and the Sakhiuks under Toghril Beg during the struggle for Khurisân (Bayhaki, loc. cil.). În 55x/1156 it was the meeting-place of the Khwarasm-Shah Atsiz [q.v.] and the Karākhānid Mahmūd Khān, after the latter had invited the Shah into Khurasan to combat the Oghuz captors of Sultan Sandjar, and it in Köčan that Atsiz died shortly afterwards (Barthold, Turkesian down to the Mongol invasion !, 330-1). The town suffered badly during Cingiz Khāzi's attack on Khurasan, According to Djuwaynh, the Mongol general Subetey wrought great claughter at Khabūshān, Islara'in (q.v.) and (?) Adkan, and for nearly 40 years the town lay devastated and depopulated. Then in 654/1256, Diuwayni-who had with considerable acumen purchased a quarter of the town from its inhabitants-himself persuaded Hülegü to rebuild it. The latter issued a yarligh for the repair of the sandts and the rebuilding of the houses and markets, all mis own expense, and the amis Sayi al-Din Aka expended 3,000 dindra on reconstructing and restoring the Friday mosque and cemetery (Diuwaynt-Boyle, I, 146, ii, 617, cf. Boyle,

in Cambridge history of Iran, v. 342).

Kūčan thus enjoyed a recovery of prosperity under the later Mongo's and II-Khānids. Rashid al-Din mentions that there was in imperial workshop (hārhhāna) there (Petrushevsky, in ibid., v. 513). If also that Ghāzān, when governor of Khurāsān and himself still a Buddhist, built in Buddhist temple in the town for those devotees within the Mongol court entourage and official classes (Didmi' altandrikh, ed. Alizade, iii, Baku 1957, 373, cf. D'Ohsson, Histoire des Mongols, The Hague 1634-5, iv, 147-8). However, Kūčān had at impoint of time also acquired an imāmudde or saint's tomb of some importance, in that of Ibrāhīm, son of the Eighth Imām of the Shī'a, 'Ali ai-Ridā.

The whole Airek-Kashaf Rad corridor lay in the front line of Persian defences against the Özbegs during the Safawid period. Hence Shah 'Abbas I settled Kurdish tribesmen in northern Khurasan, the number, it is said, of 15,000 families, and subsequently, what were in effect a string of Rurdish tribal principalities grew up along the frontier, with bereditary chieftains and exemption from taxation in return for maintaining armed cavalrymen against incursions from Central Asia. Kūćān within the of the Zaffaranic Kurds, whose hereditary leaders had the title of Ilhhani bestowed upon them. Nadir Shah had mespecially consistent policy of resettling peoples in frontier regions for strategic purposes, and during his reign (1148-60/1736-47) there were considerable further implantations in northern Khurasan, including the Kückn district (see on all these population movements, J. R. Perry, Forced migration in Iran during the seventeenth and eighteenth centuries, in Iranian studies, Inal. of the Society for Iranian Studies, viii/4 (New York, Autumn 1975], 205 ff.).

The local chiefs of Kūčān were nevertheless frequently in revolt against the Persian central government. Nädir Shah was killed in 2150/2747 whilst engaged in the subjugation of the town, and a nearby hill is still called Nadir Tepe. In the reign of the Kādjār Fath 'All Shah, the libhant Rida Kult Khan (who entertained the British traveller], B. Fraser in Küdan in 1822) revolted against his overlord, so that the Shah's wall fald or heir, Abhas Mirzā [q.v.], and suppressed the outbreak, razing the town's walls and causing much destruction within it. Severe earthquakes in 1852, 1871, 1893 and 1895 increased the devastation, and Curzon, who was there in 1889, found many ruinous houses there, estimating the population | less than 12,000. With the pushing-forward in the later 19th century of the Russian frontier in Central Asia up to the natural frontier of the Kopei Dägh-Küh-i Hazar Masdid range and the subjection to Imperial Russian rule of the formerly predatory Türkmens, the three Kurdish principalities of northern Khurasan, Kucan, Budjnurd [q.v.] and Darreh Gaz, lost much of their military and strategic raisons d'être, and Curzon noted that the power and prestige of the then Ilkhani, Shudja' al-Dawla Hugayn Khan b. Rida Kuli Khan, bad diminished (G. N. Curzon, Persia and the Persian question, London 1892, 1, 94-112).

In the present century, Kūčān has remained the centre of an important wheat-growing area, supplying much of the rest of Persia; these crops are grown, = = mediaeval times, both on hanāt-irrigated land and on daymi, dry-farmed (cf. Admirally handbook, Persia London 1945, 40, 43 439, 453). Administratively, Kūčān is now the chef-lieu of shahrastān or district of the 9th astān or province of Khurāsān; the population of the shahrastān in

1950 was ca. ttt,000 (cf. Farkang-i dinghrafiya-yi Iran, ix. 207).

Bibliography: In addition to sources given in the article, see Le Strange, The lands of the Eastern Caliphate, 393, and for the accounts of European travellers who visited Kūčan, see A. Gabriel, Die Erforschung Persiens, Vienna 1952, 157-61, 221-3, 252. (C. E. Bosworth)

KUCUR KAYNARDJA (modern Thish. Küçük Kaynarca, "little hot spring", ■ village in northeastern Bulgaria, ≥5 km. south-east of Sillstre, noteworthy ■ the place at which was concluded between the Ottoman and Russian Empires on 12 Diamādā I 1188/"/n July 1774 one of the most famous and important treaties in the history of diplomacy. The Treaty of Kücük Kaynardia, which brought to an end a disastrous war over the partition of Poland on which the Porte had irresponsibly embarked six years previously, contained terms which were uniformly regrettable in their consequences for the Ottoman state and, in particular, for the khānate of the Crimea.

The treaty, which consisted of a6 articles and a separate secret convention of two articles, was the final outcome || protracted negotiations for a truce which had been conducted by the two sides since 1186/1772. Only in the campaign of 1188/1774, with Russian forces strongly entreached south of the Danube and with the strong fortress of Shumon (Shumla, Shumni), which commanded the passage of the Balkan range, abandoned by the Ottomans, were negotiations pushed rapidly a conclusion. The Ottoman field commander (seedle-) elecen), the Grand Vizier Muhsinzāde Mehmed Pasha, nominated plenipotentiaries his hākyā-begi Nishāndil/Tewkiq Ahmed Resmi Efendi and the then re'is efendi Ibrāhim Munib (Münip) Efendi; the chief Russian negotiator, under the nego in the Russian commander-in-chief, Fleid-Marshal Count Pyotr Aleksandrevič Rumyantsev, was Prince Nikolai Reonin. who had served as Russian ambassador at the Porte prior to the outbreak of hostilities.

Negotiations were begun and rapidly concluded in the Russian camp before Shumen on 8 Diumida I 1188/4/1. July 1774; the actual date and place of signing were stipulated by the Russians for their historical significance. The controlling text of the treaty was drawn up in Italian; Russian and Turkish versions were also signed by the respective plenipotentiaries. Contrary to m widely-held belief, there were only minor textual variations between the Russian and Turkish versions.

The consequences of the Treaty of Kücük Kaynardia were most unfortunate for the khanate of the Crimea. Although by the terms of art. 3 Russian forces were to evacuate its territory with the exception of the strong points of Kerč and Yehi Kal'e, the Ottomans were obliged to relinquish their suzerainty was the khanate, and to concede to the Crimean Tatars a specious and unlooked-for "Independence" (serbesti yyıt). Religious supremacy over the Muslim inhabitants of the khanate was reserved to the Ottoman sultan as rightful calipb ("Supremo Califfo Maomettano"), a concept entirely alien to Islamic law, and one which was to cause endless diplomatic confusion, in part corrected by the convention explicative of Aynall Kavak (3 Rabis I 1193/14/11 March 1779). The "independence" of the Crimea proved in fact to be merely a prelude to its absorption by Russia, on the pretext of misgovernment, in 1783 [see further, Klain].

For the Ottomans, the consequences, in strategic

terms, of the treaty were equally ominous. Through her possession of the fortresses of Kliburun (Kinburun) (a.v.) (art. 18); Kerd and Yeni Kal'e (a.vv.) (arts. 3 and 19); Azak (Azov) [q.v.] (art. 20) and Greater and Lesser Kabarda [see MABARDS] (art. 21), and despite restitution to the Ottomans of Ozii (Ochakov) and Bessarabia, including, inter alia, the fortresses of Ak Kerman, Kili, Isma'il, Bender and Khotin [qq.v.]. Russia gained a secure and permanent strategic foothold on the northern shores of the Black Sea, thus bringing to an end its four centuries' history as - Ottoman "lake". This new position of strength Russia was able immediately to exploit through further concessions (art. 11) which gave her unrestricted commercial privileges in the Black Sea and through the Straits into the Mediterranean, and the right to establish consulates and vice-consulates at will on Ottoman territory and to maintain a permanent embassy at Istenbul. A further detailed clause afforded Russia m privileged position with regard to the Christian population and the semi-autonomous hospodars of Moldavia and Wallachia (Boghdan and Efläk [q.vv.]) [art. 16], while by art, 13 the Porte was obliged to concede to Catherine II and her successors the title of padishah (tamamon Rusyalarinin padishahi, i.e. "Empress/Emperor of all the Russians").

Two articles in particular (arts. 7 and 14) of the treaty have given rise to much subsequent misunderstanding. Art. 7, which in fact specifically recognised the protection of the Ottoman government over its own Christian subjects, permitted Russia only to make representations on behalf of a single church building-an Orthodox church in Ghalata [q.r. in Suppl.], separate from the Russian embassy chapel, where services were to be held according to the Russian rite - and those who served in it. Art. 14, which actually gave to Russia the right to establish a church in Ghalata to serve the Russian community resident there "on the example of the other Powers"-i.e., France and Austria-had already been proposed in the negotiations of 1772-3. From these articles, or possibly from those which related M Moldavia and Wallachia, or to the Archipelago (still under the occupation of the Russian fleet: art. 17) or to Georgia and Mingrelia (art. 23), but more probably from a general claim to guardianship over the Orthodox in the Ottoman Empire which was put forward by Catherine II in 1775. there derived the widely held but erroneous befiel that by the terms of the Treaty of Kücük Kaynardja Russia had acquired an "ill-defined 'right'" to exercise protection ____ the largely Orthodox Christian subjects of the Sultan which neight serve = a basis for subsequent diplomatic claims against the Ottoman state.

Two separate secret articles provided for the evacuation at unspecified date of the Russian fleet from the Archipelago and for the payment by the Porte of a war indemnity of 15,000 purses (kese), i.e. 7.5 million kurusk.

The largely factitious "rights" in arts. 7 and 14 apart, the gains which were made by Russia as a consequence of the Treaty of Küčük Kaynardja were considerable, and the losses in territory and prestige in which the Ottoman state was obliged to acquiesce were correspondingly severe. For the khānate of the Crimea its consequences were sombre in the extreme. To Catherine II, Küčük Kaynardja was a treaty "the like of which Russia [had] never had before"; a recent historian has correctly characterised it "a major step, possibly the greatest

single step prior to 1955, by Russia into the Near East".

Bibliography: No satisfactory edition of the three versions of the Treaty of Kücük Kaynardia exists. The original of the Italian and Russianlanguage treaty seems to be lost; the Russian text printed in Drutinina, cited below, 149-60, does not derive from it (for references to other published Russian versions, see Davison, below, 460, n. 22). The original of the Turkish and Russian version has not yet been found in the Basbakanlık Arsivi, Istanbul, A register book copy exists there (Ecnebl Defterler), 83/1, 138-49), which may be the source for the various printed versions (e.g. Medimufat mufakedess, vols., Istanbul 1204-8/ 1877-8 to 1880-1, iii, 454-75; Djewdet (Cevdet), Ta'rikhi. Istanbul 1301-9/1883-4 to 1891-2, I, 285-95; Mustafa Nuri Pasha, Neta'idi al-wuhu'di. Istanbul 1294-1327/1877-1909, ili, 56-64). The Italian text is reproduced (from a version published in the Storia del Anno for 1774) in G. Fr. Martens. Recueil des principaux traités de l'Europei, 7 vols., Göttingen 1791-1801, iv, 606 36; and edn. 8 vals., Göttingen 1817-35, ji, 286-322; no other version appears to exist. A French version (of no legal standing but widely regarded = authoritative in the 19th century) is most conveniently accessible in Gabriel Efendi, Noradounghlan, Requeil d'actes internationaux de l'Empire Ottoman, i. Paris 1807. 319-34, and in Treaties. . between Turkey and Foreign Powers, London 1855, 462 ff.

The sole monograph devoted to the Treaty of Kücük Kaynardia is E. I. Družinina, Kyučuk-Kaynardžiiski mir 1774 goda, Moscow 1955; collection of essays of unequal value by Soviet and East European historians (N. Todorov, E. I. Družinina and others) is contained in Etudes Balkaniques (Sofia), 1975/2, 74-127. For the effect of the treaty on the khanate of the Crimea, see A. W. Pisher, The Russian annexation of the Crimes 1772-1783, Cambridge 1970; for a more extended treatment from the Ottoman side, cf. Cemal Tukin, Küçük Kaynarea, in İA, vi, 1064-71. The most recent study is R. H. Davison, "Russian skill and Turkish imbevility": the treaty of Kuchuk Kainardji reconsidered, in Slavic Review, xxxv (1976), 463-83. All these works contain supplementary bibliographies and further references to sources in the relevant languages.

(C. J. HEYWOOD) KUCUK SA'ID PASHA (1838-1914), 19th century Ottoman statesman, seven times Grand Vizier under Sultan 'Abd al Hamid II, and twice in the Young Turk era. Born in Erzurum, Sand received a traditional Muslim education until his father's death in 1853 forced him to seek an administrative career. Trained largely as an apprentice rather than in the new secular schools being established by the Tanzimāt (q.v.), he served first as secretary to the governor of Erzurum Province (1853-7) and secretary to the Anadolu Ordusu (1857-9) before entering the central bureaucracy in Istanbul. He served for some time secretary in the Medilis-i Wald (1859-63), rising to various high positions in and out of Istanbul before becoming director of the Imperial Press (Matha's - i 'Amire) and editor of the official government newspaper Takwim-i Wekdyit (1863-8). He continued to rise in the secretarial service, becoming director of a department in the Council of State (Shard-yd Desolet) in 1868, and of the Courts Department of the Diman-i Ahkam-l 'Adlivys in 1871, rising to become Chief Secretary of the Ministry of

Trade (Tidjāret Nepāreti) in 1874 and Chief Secretary of the Grand Vizier a year later.

It was during these later years that Sa'id Riendi came into contact with Prince 'Abd al-Hamid, advising him on administrative matters, m that one of the latter's first acts after his accession to the sultanate was to raise him to the rank of Pagha and appoint him as Chief Secretary (1876-8), at which time he acquired the nickname $K\bar{u}^{\bar{c}}\bar{u}k$ ("the small one") to distinguish him from Ingiliz Sa'id Pasha, who also advised the sultan for a time until he was dismissed due to implication in the 'Ali Su'awi affair.

Kücük Sa'ld now became the Sultan's chief instrument in the Ottoman cahinet. As minister of justice (1878-0), he worked to modernise the Nizderivve secular court system, introducing the institution of public defender, and also securing promulgation of new commercial and criminal codes of law. In seven terms as Grand Vizier (1870-80, 1880-2, 1882, 1882-5, 1895, 1001-3, 1008), he faithfully carried out the sultan's reform programs, also taking the initiative to introduce important reforms. He developed a program to centralise government control of the provinces, modernised the financial system, increased tax collections and balanced the budgets. negotiated the settlement with the empire's foreign creditors that led to the creation of the Public Debt Commission (1881), established the Istanbul Chamber of Commerce to develop native trade and industry, modernised and expanded the system of secular schools on the elementary and higher technical levels in particular, reorganised and modernised the regular police, and made the secular courts fully independent of government interference so they could administer justice without fear of intervention. He played a major role in modernising the bureaucratic hierarchy, introducing examinations for appointment and promotion and establishing a pension system so that aged officials could retire without fear of poverty.

As the sultan became increasingly withdrawn subject to the influence of his palace coterie, 5a9d Pasha became more and more fearful of his master. At the same time, his rivalry with Mehmed Kamil Pasha became so intense that he at times feared for his life, and at one point refused the sultan's we to resume the Grand Vizierate. As a result, Sa9d Pasha was not included in the disfavour of the Young Turks for most of the sultan's advisers following the Young Turk Revolution (108), and in fact served twice more an grand visier during the Constitutional period which followed, in 1911 and 1912, with the support of the Committee of Union and Progress, leading its fight against He Liberal Union Party, and directing the government's efforts against the Italian invasions of Libys and of the Dodecanese islands. In the face of strong military pressure in support of the Liberal Union, however, Sa'd Pasha resigned for the final time (17 July 1912), so that the hero of the Russo-Turkish war, Ahmed Mukhtar Pasha, could establish a non-party government to resolve the crisis. Said Pasha then served as chairman of the upper house of the legislature, the Council of Notables (1913-14) until he retired shortly before his death.

(S. I. SHAW) KUČUM KHĀN, a Tatar Khān of Siberia, in whose reign this country was conquered by the Russians. Abu 'l Ghazi (ed. Desmaisons, 177), is the only authority to give information regarding his origin and his genealogical relation to the other descendants of Cingiz Khan. According to this source, he reigned for forty years in "Taran", lost his eyesight towards the end of his life, was driven from his kingdom by the Russians in 1003/2504-5. took refuge with the Manghit (Nogay) and died among them. References to Kucum are also found in the work of the Ottoman Turk Sayff, said to have been written in 990/1382 [Leiden MS., No. 197; tr. without a reference to the MS, by Ch. Scheler as an appendix to his translation of the history of Contral Asia. Histoire de l'Asis Contrale, by 'Abd al-Karlin Bukhari, Paris 1876, 303 ff.). Kucum's kingdom and its capital - there called "Tura"; the Russians had taken this town during Kucum's absence. Kućum afterwards returned and drove out the Russians after a long siege (one to two years), but the latter carried off his son a prisoner to Moscow. These stories seem to show that Savil's work was probably composed later than the year given in the title (Scheler, loc. cit., Preface, p. iv, even gives the year 990 A.H. as date of death of the author).

The of "Isker" for the capital of Kucum (near the confluence of the Tobol and Irtish) seems to be found only in Russian sources; it is only from the latter also that the principal events of his reign can be chronologically arranged. Kucum did not inherit his kingdom from his father but had expelled his predecessor Yadigar; in 1563 Yadigar is still mentioned m king of Siberia, while in 1569 m find Kucum, in 1581 Isker was conquered by Russian Cossacks under Yermak; the Cossacks owed their victory to the see of fire-arms, then still unknown in Siberia. Kučum's son Makhmet-Kul (Muhammad Kulf) was sent a prisoner to Moscow. It men not till Yermak fell in an unexpected attack (1586 m 1585) that laker was vacated by the Russians; but by the year 1587 m lind troops, who had just arrived, building the Russian town of Tobolsk near this town. Kudum did not suffer his last defeat at the hands of the Russians till 20 August 1598. He is said to have been slain by the Nogay, with whom he had taken refuge, out of revenge for his father's raids on them. The document used by Radfolf (Aut Sibirien2, Leipzig 1893, 146 ff.) dealing with an embassy from Kucum to Bukhara and the order by 'Abd Allah Khan to his governor in Khwarazm to send teachers of religion to Siberia, cannot m genuine. Khwarazm was at this date an independent kingdom and not under the rule of the Khan of Bukhara. The form "Közüm" adopted by Radloff is also not to be found in any historical sources.

RUDAGA

KUDA'A, a group of Arab tribes of obscure origin. The opinions of the genealogists about their origin contradictory. Some of them assert that they were descendants of Ma'add, others say that they were from Himyar. Both parties had recourse to traditions and utterances attributed to the Prophet, in which he is said either to have declared that Mafadd's kunya was Abū Kudāfa, or to have stated explicitly that Kuda's is a descendant of Himyar. Harmonising traditions reported that the mother of Kuda'a was the wife of Malik b. 'Arm b. Murra b. Malik b. Himyar and later married Ma'add, bringing with her Kuda'a, her son from the first marriage: Kudā'a was therefore later called Kudā'a b. Ma'add. A contradictory tradition of this kind claimed that Kuda'a was the son of Ma'add; later his mother married Mälik b. 'Amr al-Himyarl, who adopted the child, Kuda'a, and thus he was called Kuda'a al Himyari (see M. J. Kister and M. Plessner, Notes on Cashel's Gamharat an-nasab, in Oriens, xxv-xxvi [1976], 56-7, and references in notes 43-51; also Nftr al-Din al-Haythami, Madima' al-sawd'id, repr. Behrut 1967, i, 194-5; Aghānt, vii, 77-8; al-Hamdani, al-Ikili, ed. Muhammad al-Akwat al-Hiwali, Cairo 1383/1963, i, 180-90). Some traditions say explicitly that the Kuda's tribes related themselves Ma'add, but turned to the Himyari Basab under Musawiya's pressure and bribes (see e.g. Kister and Plessner, op. cit., notes 51-7; Nür al-Din al-Haythami, op. cit., i, 194; Aghani, loc. cit.; Ibsan Nass, al Asabiyya al-habaliyya wa-atharuka fi I shi'r al-umawi, Beirut 1954, 340 3; and see al-Kutāmi, Diado, ed. Ibrāhim al-Sāmarrāh and Ahmad Matlüb, Beirut 1960, 34, 145, 147, 149; al-Kumayt, Shir, ed. Dawud Sallum, Baghdad 1969, nos 162, vv. ta-13, 469 vv. 1-7, 509 vv. 1-4, 523 v. 2, 550 v. 1, 606 v. t). The name Kuda'a is mearly one and can be traced in fragments of the old Arab poetry. The tribes recorded as Kudā'ī were: Kaib [q.v.], Djuhayna, Balf, Bahta' [q.v.], Khawlan [q.v.]. Mahra, Khushayn, Diarm, 'Udhra [q.e.], Balkaya [see AL-KAYN], Tanükh [q.v.] and Salih; the attribution of some of these tribes to Kuda's (like Tanûkh, Khawian and Mahra) was the subject of dispute among genealogists. Several of the clans of Kudara joined other tribes, adopting their pedigree and changing their tribal identity.

Among the prominent divisions of Kudá'a one may particularly refer here to Djuhayna and Ball.

1. The vast territory of Diuhayna, controlling the coastal route of the caravans between Syria and Mecca, included the localities of Şafrā?, Şufayna, al Marwa, al Hawra' and Yanbu'; to them belonged the mountains of Radwa ({q.v.}; and see M. von Oppenheim, Die Bedwinen, Leipzig 1943, il. 361, on the legendary story of the hidden Imam living in Radwa), Adjrad, Ashfar and 'Aswer and the widis of Idam and al-ils (see e.g. al-Bakri, Muidiam mā sta diam, ed. Mustaiā al-Sakā, Cairo 1364/1965; Yākūt, s.v. Radwa; 'Arram, Asma' djibāl Tihama wa-sukkānihā, in 'Abd al-Salām Hārun's Nauadir al-makhjufāt, Cairo 1375/1956, il, 8. 396-8 and indices; cf. Hamed al-Dianir, Bilad Yanhu', Riyad n.d., passim, and me up, the supplement: bil4d diukayna wa-mandziluha 'l kadima, 156-7). Djuhayna seems to have had a clear perception of tribal identity, as **to be gauged from a collection of tribal war** poetry, the ayyam Dinkayna; me fragments of this poetry recorded as late the 4th/roth century (see al-Tayalisi, al-Mukathara find almudhākara, ed. Muhammad at-Tandil, in Şarkiyat Mecmuass, i [Ankara 1956], 37-9; == on Bughayt: al-Amidi, al-Mu'talif wa'' mukhtalif, ed. Krenkow, Cairo 1354, 57-8; and on Salāma b. al-Ya'būb, ibid., 53, 165; on the compilation of war poerry of the Kudā'' tribe of Balkayn, ash'as Bani'' Kayn, see ibid., 23-4).

According to a tradition recorded by Ibn al-Kalbl, a Djuhani, 'Abd al-Dar b, Hudayb (or Kudhayl in another version), intended to build a sanctuary in one of the centres of Djuhayna, Kawdam, to rival the Kaba of Mecca; however, he encountered opposition in the part of his people who were reluctant to aid him in carrying out his plan [Ibn al-Kalbl, al-Asnām, ed. Ahmad Zaki Pasha, Cairo 1343/1924, 45; Yākūt, s.v. Kawdam). This report may give us melue for assessing the attitude of some other tribal groups of Kuda'a. Ibn Hisham records a tradition according to which al-Ghuwth, who was in charge of certain pilgrimage practices - Mecca, used to announce during one of the services, "O God I am following the example of others; if there is a sin it is Kudā'a's" (Ibn Hishām, Sira, ed. al-Saķā, al-Abyari, Shalabi, Cairo 1355/1936, i, 126, l. 1; Guillaume's translation, The life of Muhammad, Karachi 1967, 50, of the second hemistich "If that is wrong, the fault in Quda'a's" is inaccurate). It is evident that this declaration points to certain sections within Kuda'a who were rejuctant to acknowledge the authority of Mecca and the sanctity of the Ka'ba.

The relations of Djuhayna with the Aws and Khazradi seem to have been quite close; some Djuhants are recorded as allies of the Medinan families or clans (see e.g. Ibn Hazm, Djamharat ansāb al-Sarab, ed. Abd al-Salam Harun, Cairo 1962, 444). It is noteworthy that among the Ansari group who gave the Prophet the oath of allegiance at the 'Akaba was ally of the Banû Salima of Kalbī extraction, who joined Diphayna and stayed with them, 'Abd Allah b. Unays; he gained the honourable titles of al-muhddjirt, al-anzārt, al-salamt, al-djuhant al-'agabi (see e.g. Ibn Hisham, ii, 106 sup.; Ibn al-Kalbi, Djamhara, Ms. Br. Mus., Add. 22346, f. 73a; lbn Hadjar, at-Isaba, ed. 'All al-Bidjawi, Cairo 1389/1970, Iv. 15-17, no. 4553; Ibn Kudama al-Makedist, al-Istibsär fi nasab al-sakaba min al-ansär, ed. 'All Nuwayhid, Beirut 1392/1972, 166-8; Ibn 'Abd al-Barr, al-Isti'ab, ed. al-Bidjawi, Cairo 1380/ 1960, 869-70, no. 1477; al-Balādhuri, Ansāb alashraf, ed. Muhammad Hamidullah, Cairo 1959, i. 249). It was 'Abd Allah b. Unays who asked the Prophet which night he should come to Medina from his abode in al-A rai during Ramadan, and the Prophet bade him come in the night of 27 Ramadan; this night is therefore named "The Night of the Diuhanl". It refers, of course, to the laylat al-hadr (see e.g. al-Aghānī, xvii, 133; Ibn 'Abd al-Barr, op. eil., 870).

On the Day of Bu'ath [q.v.], Djuhayan fought on the side of the Khazradi (Aghdal, xv. 162-3; Ibn Khaidun, al-'Ibar, Beirut 1936, ii, 602), but on the eve of the encounter of Badr al-man'id they were said in have hurried to Medina (together with Ball) as allies of the Aws (al-Wāḥidi, Maghāri, ed. Marsden Lance Orley and a sailes of the Aws (al-Wāḥidi, Maghāri, ed. Marsden Lance Orley and a sailes of the Aws (al-Wāḥidi, Maghāri, ed. Jones, Oxford 1966, 385, f. rr).

When the Prophet settled in Medina, he was, of course, concerned to establish peaceful relations with its neighbours, Djuhayna. Djuhayna, making a careful assessment of the fundamental change in the situation in Medina with the advent of the Prophet, were eager to secure their position in the new structure of power. According a some traditions, a delegation of Djuhayna came to the Prophet in Medina, pointed out that the Prophet alighted

"among them" (bayes askurind, i.e. in the area controlled by them) and requested little to conclude with them an agreement of mutual security (/s-awthik land halld na'manakd wa-ta'manand). This treaty was indeed agreed upon between the Prophet and Djuhayna. A peculiar aspect of this treaty was the tacit agreement by the Prophet for Djuhayna not to convert to Islam; this is clearly indicated in the account about the treaty, wa-law yuslimit. The implementation of the treaty occurred a short time after its conclusion; the Prophet sent a troop of less than hundred warriors to raid a tribal group of Kinana which dwelt in the neighbourhood of Diuhayna. When the Muslim warriors realised that the Kinānis outnumbered them, they retreated asking refuge with Djuhayna. When the Djuhanls interrogated them in to why they had gone out fighting in the holy month of Radiab, they justified their deed by mentioning that they were driven out from the Haram (of Mecca) during the holy month. The account further tells about dissension among the Muslim warriors: a group of them wanted to remain in the place where they were staying, whilst another planned to return to the Prophet to obtain a decision from him. When this group met the Prophet, he expressed his anger about the division that had occurred within the expedition, which having left in unity returned divided. He then appointed 'Abd Allah b. Diahsh = the commander of the troop; 'Abd Allah b. Djahsh was thus the first appointed amir in Islam (Ibn Abi Shayba, Tabridh, Ma. Berlin. 9409 - Sprenger 104, ff. 28b-30a; cf. Nûr al-Dîn al-Haythami, Madime' al-sawe'id, vi, 66-7, with an essential variant, that the Diuhauis converted to Islam after the conclusion of the treaty; and al-Baybaki, Dala'il al-nubunun, ed. 'Abd al-Rabman 'Ulhman, Calro 1389/1969, ii, 304-5 [the commander of the first troop, dispatched by the Prophet, was Sa'd b. Abi Wakkas]; Ibn Djunghul, Ta'rika, Ms. Br. Mus., Or. 5912, 1, 229b).

The reports about the first cases of co-operation between Diuhants and the nasoent Muslim community at Medina, though sometimes divergent or even contradictory, point clearly to the period preceding the battle of Badr and are connected with the earliest attempts of the Prophet at impeding the free traffic of the Kurashi caravans. The detachments dispatched by the Prophet were relatively small and served a twofold purpose: that of reconnoitring in case I greater force of the enemy made an appearance, and of an attacking troop in case they met with a smaller division of the enemy. It mess essential in such a situation to have at their disposal a territory with a friendly population both for military enterprises and as a resort to which the force could retreat in safety. The treaty with the Djuhants was indeed successful, and enabled the Prophet to launch his first attacks against some Kinant alites of Kuraysh; the expeditions operated indeed in **t**erritory controlled by <u>Djuhayna</u>.

Furthermore, some Djuhanls carried out certain subtle and responsible duties for the Prophet's troops: Basbas b. 'Amr and 'Adt b. Abi 'I-Zaghbā' (both allies of the Angārī clans) served as spies for the Muslim treops (see e.g. Ibn Hazm, Djaudmis al-sira, ed. Ihsān 'Abbās, Nāṣir ai-Din al-Asad, Ahmad Shākir, Cairo n.d., 120: Ibn Highām, index; Ibn al-Athle, Usd al-ghāba, Cairo 1280, i, 178 ult.-179; Ibn Hadjar, al-Isāba, i, 283, no. 640, iv, 474, no. 5486; al-Wākldī, 40-1; al-Balādhurī, Ansāb, i, 289). Another Djuhanl, Kaṣhad, granted shelter to two other spies of the Prophet, Talha b. 'Ubayd Allāh and Sa'd b.

Zayd; he misled the men of the Kurashī caravan who inquired about the spies sent by the Prophet. After the departure of the Kurashi caravan, Kashad accompanied the two spies to Turban, where he met the Prophet; the Prophet wanted to grant him Yanbût (as an ibjat or fief), but Kashad advised the Prophet to grant it to one of his relatives (see e.g. al-Wākidī, 29-20; Ibn Hadjar, v, 590, no. 7409; Ibn al-Athir, Usd, iv. 239; al-Makrizī, Imtā' al-armā', od. Mahmud Shakir, Cairo 1942, i. 62), Another Diuhani. Madidi b. 'Amr, performed an even more complicated service for the Muslim detachment; he interposed between the small Muslim force under the command of Hamza b. 'Abd al-Muttalib and the Kurasht caravan escorted by 300 Kurashi riders under the command of Abû Djahl (see e.g. al-Wâķidī, 9-10, 40-1; al-Bayhaki, Dald'il al-muhuwwa, ed. 'Abd al-Rahman Muhammad 'Ujhman, Cairo 1389/1969, ft, 302; Ibn Hazm. Diamhara, 446; idem, Diawami', tot, cf. 110; al-Makrizi, Imias, i, 51-2; Ibn Hisham, ii, 245, 269). Madjdi succeeded in accomplishing his task as he was an ally (halif, munidif) of both parties (i.e. of the Muslim party and the Kurashis). It is noteworthy for the assessment of the personality of Madidl and the reliability of the traditions that reports state that III and not convert to Islam (see e.g. al-Zurițăni, Sharh al-mawähib al-ladunniyya, Calro 1345, i, 390).

The reports about the participation of Diuhanis in the first encounters of the Prophet with Kuraysh seem to be sound, and are confirmed by a tradition recorded by al-Tabarani, stating that the first tribe to fight on the side of the Prophet with Diuhayna (al-Tabarani, al-Ambil, Ms. Br. Mus., Or. 1530, f. 196b).

Some factors which motivated Djuhayna in concluding the treaty with the Prophet can be deduced from preport recorded by al-Samhudi and al-Fayruxabadi; the Prophet alighted at Dhu 'l-Marwa; Djubani people assembled at the place from the mountains and the plains and complained of being pressed by alien people, who meet trying by force to get hold of their wells. Then the Prophet granted the people of Dinhayna the lands of Dhu 'l-Marwa, forbade them me be treated with iniquity and me nounced that the angel Dibril ordered him to consider Djuhayna as his allies (al-Sambūd), Wajd' al-wafa, ed. Muhammad Muhyi 'l-Din 'Abd al-Hamid, Cairo 1374/1955, 1305-5; al-Fayrūzābādi, al-Magādnim al-mujāba fī ma'dlim jāba, ed. Hatnad al-Diāsit, Riyad 1389/1969, 379). It is plausible that this utterance of the Prophet confirmed Djuhayna's rights to their landed property and formed a warning for tribal groups to refrain from transgressing on the wells (sc. wells and other property) of Diuhayas, they were the allies of the Prophet and their rights would be defended by the Prophet. The lands of Dhu 'l-Marwa were in fact granted by the Prophet to a man from Djuhayna (see Ibn Sa'd, Tabakai, Beirut 1380/1960, l, 271; see on 'Awsadja b. Harmala, Ibn al-Kalbi-Caskei, Gamharas an-nasab, ii, 216; Ibn Hadiar, al-Isaba, iv, 739, no. 6093; on Dhu 'l-Marwa see al-Bakri, Mu'diam, s.v. Marwa).

The Prophet concluded several treaties with the various tribal groups of Djuhayna. Some of these treaties can be traced to the very early period of the Prophet's stay at Medina; they do not contain any stipulation as to conversion to Islam. There are, however, some treaties which may be attributed to a later period, when conversion to Islam became obligatory, and include instructions concerning the religious duties in the performed (cf. Ibn Sa'd, i.

270-1). A tradition recorded by Ibn Safd (i, 333) says that a delegation of Djuhayna embraced Islam at the advent of the Prophet to Medina; this story may, however, refer to a unit of Djuhayna, and certainly not to the whole tribe.

The early conversion of several groups of Djuhayna and another Kuda'l group, the Asiam, is reflected in some traditions attributed to the Prophet, in which Dluhayna a counted among the tribal groups surpassing (in virtues) the great tribes of Asad, Ghatafan, Tamim and 'Amir b. Sa'sa'a (see e.g. al-Humaydi, Musmad, ed. Habib al-Rahman al-A'zamī, Beirut-Cairo 1381, il, no. 1048; 'Abd al-Razzāķ, al-Muşanna/, ed. al-A'zami, Beirut 1392/ 1971, xi, 47, no. 19877; al-Tabarani, al-Mu'diam al-saghir, ed. 'Abd al-Rahman 'Uthman, Cairo 1388/ 1968, i, 54, ii, 151). Only few and opposition by some units of Djubsyna against the Muslim commonwealth of Medina we known (see e.g. al-Wakidl, 774-5; al-Tabari, Tabikh, ed. Muhammad Abu I-Fadl Ibrahim, Cairo 1969, iti, 32, about the expedition of Abū 'Ubayda). When the Prophet set out for al-Hudaybiya, men nomad Djuhanis were disinclined to respond to his summons and to join him, fearing that 📰 Muslims might be defeated by the Kurashi forces (see e.g. Mudjähid, Taftir, ed. 'Abd al-Rahman al-Tahir al-Sürati, Beirut n.d., for inf.; Mukātil, Tafsir, Ms. Ahmet II, 74/II, ff. 160b, 166b; ai-Wakidi, 574, 619; al-Nawawi al-Djawi, Marah labid, Cairo 1305, il. 305 inf.; al-Kurtuhl, Tafsir, Cairo 1387/1967, xvi, 268, 348; al-Suyūti, al-Duer almanthur, Cairo 1314, vi. 72-73).

Diuhayna appeared a strong force of 800 warriors and riders (or 1400 warriors according to Tabart, Ta'thh, iii, 65 sup.) on the expedition for the conquest of Macca; lour banners were borne by its leaders (see e.g. al-Wakidl, 799, 820, 896; al-Muttaki al-Hindi, Kans al-anamid, Hyderabad 1290/1970, xvii, 78, no. 199; and see Ibn Hadiar, al-tshno, ii, 445, no. 2549, ii, 604 sup., no. 2897, vi, 165, no. 8098; Ibn al-Athle, Usd, iii, 124; Ibn Abd al-Bart, al-Isti'60, 87x-2). The Djuhani Rafi' b. Makith was appointed by the Prophet as tax-collector (musaddik) of his tribe (al-Wakidl, 1073). A number of Djuhanis emigrated to Medina; the Prophet himself fixed the place of the tribal mosque of Djuhayna in Medina (Ibn Sa'd, i, 333).

Djuhayna remained faithful to Islam after the death of the Prophet (of al-Wakidi, 1722) and favourable utterances attributed to the Prophet emphasized their virtues. The Prophet is said to have considered Djuhayna among his maudii (see e.g. al-'Aynī, 'Umdat al-kārī, Cairo 1348, xvi, 75-6; al-Munawi, Fayd al-badir, Beirut 1391/1972, iv. 516, no. 6122). The Prophet is said to have recommended seeking refuge in the mountains of Diuhayna during the periods of strife, files (see e.g. al-Bakel. 154; Hamad al-Diāsir, Aba All al-Hadiari, Riyad 1388/1968, 192; and see the utterance of the Prophet in Ibn Sa'd, i, 333). In an alleged utterance, the Prophet is said to have recommended marrying Djubani - (Ibn Hibban, Kitab al-Madiruhin, od. 'Azīz Beg al-Nakshbandi, Hyderabad 1390/1970. ii, 10). A peculiar tradition attributed to the Prophet forbids anyone to harm Diuhayna, saying "he who harms Dinhayna harms me, and he who harms harms God"; this utterance was instantly denied when transmitted to Mu'awiya (al-Amidi, al-Mu'talif, 60, no. 1471.

Diuhayna participated, together with other groups of Kudā'a, in the conquest of Egypt; some of them settled in Fustât (cf. Ibn 'Abd al-Hakam, Fut2)

Misr, ed. Torrey, New Haven 1922, index). Diuhanta lived in Manfalut and Asyut. After clashes with other tribal groups, Djuhayna migrated to Upper Egypt and settled in the region of Ikhmim during the Fatimid period; they became one of the powerful Arab tribes of Egypt (see Makrizi, al-Rayan wa Livab camma fi and Mise min al-a rab, ed. Abd al-Madifd 'Abidin, Cairo 1961; and see the researches of Abidin, in ibid., 77-8). Groups of Diuhayna penetrated in the 8th/14th century into the Christian kingdom of Nubia and got mastery over it. From Nubia, Diubayna continued to push forward into the Sudan and mixed with the native tribes (see C. H. Becker, Zur Geschichte des östlichen Sudan, in Ist., I, 153-77; idem, EI1 art. Djuhaina; F. C. Thomas It., The Juhaina Arabs of Chad, in MEJ [1959], 142-55; von Oppenheim, op. cil., il, 359). In the Diuhani territories of the Arab peninsula, the different sections of that tribe became controlled by the descendants of 'All, who succeeded in acquiring a great deal of landed property in these regions. Nevertheless, the various branches of Djuhayna succeeded in keeping their identity during the centuries. Although wavering at the beginning of the First World War, the majority of the tribe followed of the Sharif Husayn; later, they changed attitude and became loyal subjects of the Sa'adi dynasty (see von Oppenheim, ii, 360). In recent times, they have been exerting themselves in developing their region (see Hamad al-Djasir, Bilad Yanbus, passim).

2. To the north of the territory of Dinhayna the region of Ball, another branch of Kuda'a. Starting Wadi Idam, their usual habitations extended far to the north, including the places of Shaghab, Bada and Tayma' (cl. Ibn Khaldun, 'Ibar, il, 516; von Oppenheim, il, 315, 352-3). The Kuda¶ tribal groups of Ball, Diuhayna and 'Udhra migrated, according to tradition, to the Wadl 'l-Kura in which Jewish settlers cultivated the soil, dug the wells and planted palm-trees. According to magreement between the Jewish settlers and these Kuda's groups, the Jews undertook to give them a certain payment; in return Balt, Djuhayna and Udhra were under obligation to give protection to the Jewish settlements against the Bedouin tribes, including other Kudā'l units (see Yākūt, a.v. al-Kurā; al-Bakrī, Maidiam, i. 43). The stipulations of this agreement remained valid until the advent of Islam; then the Udhri Diamra b. al-Nu'man visited the Prophet and were given by him a grant of land. The Jewish settlers of the family of 'Urayd (or 'Arld) were allowed by the Prophet to stay in their places; they were granted by the Prophet the privilege of receiving a certain annual payment (see Ibn Sa'd, i, 279; al-Bakri, l, 44; ct. W. M. Watt, Muhammad ... Medina, Oxford 1956, 107-8). Some clans of got involved in internal fighting; one of the fighting groups, the Bank Hishna, was compelled to seek refuge with the Jewish settlers of Tayma', and at their demand converted to Judaiam. Some of these refugees left later for Medina and embraced Islam. at the advent of the Prophet (see al-Bakri, i, 29), A corroborating report counts among the Jewish tribal groups at Medina three groups from Ball (see the Khaldun, op. cit., ii, 596; and cf. al-Sambudt, Wafa' al-wafa, ed. Muhammad Muhyi 'l-Dio 'Abd al-Hamid, Cairo 1374/1955, i, 162-3, 194, 200, 223). Some traditions, in reporting of the migration of the Balawi clans to Medina, remark that they became allies (hulafa?) of the Aws and Kharradi (see e.g. al-Bakri, i, 28; Ibn 'Abd al-Barr, al-Inbak 'ald

habā'il al-ruwāt, Nadjaf 1386/1986, 128). The position of Ball at Medina and their status can be gauged from the accounts about the 'Akaba meeting, reporting that seven members out of the seventy Ansari group of delegates, who gave the Prophet the eath of allegiance, were of Balawi descent ('Uwaym b. Sa'ida [on whom see al-Baladhuri, Ansac, i, 241; "Abd al-Barr, al-Isti ab, 1248, no. 2012; Ibn al-Athir, Usd, iv, 158; cf. Ibn Hadjar, al-Isaba, iv, 745 inf., m 6rr6], Ma'n b. 'Adl [on whom see Baladhuri, Ansab, i, sar; Ibn Kudama, al-Intibjar, 297; Ibn al-Athir, Usd, iv, 401], Khadidi b. Uwaya [on whom al-Baladhurl, i, 249; Ibn Higham, ii, 206], Abu 'l-Haytham b. al-Tayyihan (see on him: al Baladhuri, i, 240; Ibn Kudama, op. cit., 228], Aba Burda b. Niyar [on whom see Ibn Higham, il, 198; al-Baladhuri, i, 241; al-Bakri, Mufdiam, I, 28 inf.), al-Nu'man b. Amr for b. 'Isr, on whom see Ibn al Athle, Usd, v, 27; Ibn Haam, Diamhara, 443], Yazid b. Tha'laba (on whom see al-Baladhuri, i, 251; Ibn Kudama, 202; al-Samhūdī, i, 228; Ibn Hadiar, al-Isaba, vi. 650]. However, the Balawi descent of seem of these persons is put in question in some of the sources). Balawl tribesmen took part in the battles between the Prophet and Kuraysh on the side of the Prophet, and manus of Balawi warriors can be found in the lists of those who were killed in the encounters. The traditions mention a peculiar letter of IIII Prophet sent III a Balawi group, the Banti Diu'ayl. According to this letter, the Prophet granted to them the privileges of being taxed no more than once a year and of not having to gather with their live stock in the tax-collection centres (lá yuhpharán wa-lá yu pharán; this explanation given by Ibn Sa'd me however to be uncertain; there are interpretations commenting that haskr and faskr refer to exemption from being levied and taxed); they were also appointed by the Prophet as tax-collectors of some other tribes. They were given the status of Kurashis, as they were allies of the 'Abd Manai (see Ibn Sa'd, i, 270-1; Watt, Muhammad at Medina, 111). The favourable conditions granted to the Band Diu ayl were probably intended to gain the loyalty of a tribal group allied with Kuraysh, securing their control over other tribal groups for the benefit of the Muslim community.

The expedition against the Ball sent in 8 AH was Intended to gain their allegiance and their succour for the Muslim community; it was essential for the latter to secure the co-operation of the Ball who dwelt in the northern regions of the peninsula, who controlled the road to Medina and Mecca, and of whom some members were in the service of the Byzantine army; the commander of the troop which fought the Muslim force at Mu'ta was a Balawl (see al-Wākidī, 760). It was a shrewd decision of the Prophet to appoint 'Amr b. al-'As, whose mother was from Ball, as commander of the Muslim force (ibid., 770); the expedition was also directed at the Mahra and Balkayn, two Kuda'l tribes sojourning in the region of Balt. In a A.H. the Prophet met the delegation of Ball, who embraced Islam (see e.g. Ibn Sa'd, I. 330; al-Zurkant, Shara al-mandhib, iv. 57-8; Kayyim al-Diawziyya, Zād al-ma'ād, Beirut p.d., iii, 49}.

The forces of played important role in the conquest of Egypt; 'Amr b. al-'As fought under beaner of im (see thn 'Abd al-Hakam, i, 62). 'Umar established the pay of Ball warriors as equal to that of Mudar, Kalb and Tayyi', sc. 300-400 dishams; it is lower than that of the Yement tribes because they important to the places of

migration (see al-Djābis, al-Uthmāniyya, ed. 'Abd al-Salam Harun, Cairo 1374/1955, 212). When Umar was informed that mean from Ball summoned his people in Syria by the battle-cry ya Kuda'a, he ordered a third of Kuda's ■ be removed to Egypt; Ball formed a third part of Kuda'a, they were indeed transferred to Egypt (Ibn 'Abd al-flakam, 116; al-Makrist, al-Baydn, 291. It was a Balawi, 'Abd al-Rahman b. 'Udays, a Companion of the Prophet, who was at the head of a troop of riders in revolt against 'Uthman. He was later imprisoned by Mu'awiya, and was killed on his flight from the prison (see al-Sam'ani, al-Ansab, Hyderabad 1963, il, 324, Ibn al Athir, Ued, iil, 309-10; Ibn Hadiar, al loaba, iv, 334, no. 5166; Mubammad b. Yahya al Ash'art al-Maliki, al-Tamhid wa 'l-bayan fi makial al-shahid 'Uthman, ed. Mahmûd Yûsuf Zâyid, Beirut 1964, index).

Ball sattlements are mentioned in the regions of Akhmim, Asyût and Ushmûn; they were expelled by Fâțimid troops and compelled to move to the south. In the 8th/r4th century the Ball entered together with Djuhayna, the Sudān and contributed considerably to the islamisation and arabisation of the native tribes of the Bedja and the Bakkāra [4.22]; the Arabic language is known among the Bedja aven today as "Balawiyyat", i.e. the language of Ball.

In the Arabian peninsula, the Ball played during the First World War an important role in the conflict between IIII Sharif Husayn and the Turkish authorities, finally (in 1918) following the IIIII of the sons of the Sharif Husayn.

Some groups of Ball joined the me régime in the Hidjas in 1925 and became loyal subjects of Sa'ûdî Arabia; but some sebellious units of Ball took refuge in the kingdom of Trans-Jordan. They crossed the borders at 'Akaba and raided, together with other rebels, the northern districts of Sa'ûdî Arabia in 1932, but me defeated by the Sa'ûdî forces (cf. von Oppenheim, ii, 354).

In Spain descendants of the Ball tribe lived in the region of Cordova or Kurtuba and it was reported that they excelled in hospitality. They unable to speak Romance [al-lastiniyya], and spoke only Arabic, according to Ibn Hazm, Diamhara, 443.

Bibliography: given in the article essentially, but see also W. Robertson Smith, Kinship and marriage in sarly Arabia, Cambridge 2885, 8-9, 155, 246-9, and H. Lammens, El¹mrt. s.v.

(M. J. Kister)

KUDAMA B. Dia Par at Kate at Bachaft,
Abu 't-Faragi, philologist, historian, and one of
the first scholars to introduce the systematic
study of the figures of speech in Arabic literature. The date of his birth is nowhere mentioned and
may have been as early as around the year 260/873-4.
He died at m uncertain date which is variously given
as "during the reign of ai-Muktadir" (i.e. not later
than 320/932), 328/939-40, and 337/948. The dates
"shortly after 300" and 320 cannot be correct (see
below).

Almost every aspect of Kudāma's biography, his work, and his personality as a scholar raises delicate problems which cannot be fully discussed, let alone answered, in the context of this article. The only data which are certain, at least have not been questioned, are (a) that he converted from Christianity to Islam during the reign of al-Muktafi (289-95) 902-8); (b) that he held unimportant positions in various dimens of the central administration in Baghdad till he won a appointment in Shawwäi

297/910, or shortly thereafter, to the madjits al-zimam in the dipon al-mashrift when Abu 'l-Hasan b. al-Furāt [].v.] appointed [] son, al-Muhassin, as head of that office (thus according W Yakut, vi. 205, whose account however contradicts reports that al-Muhassin in charge the diada al-machrib); (c) that he was alive in 320/932; and (d) that he was author of a Kitab al-Kharadi, which has survived in part. Moreover, there can be little doubt that the famous and often-quoted Kit4b Nakd al-ski'r was written by Kudāma, iii al-Muţartizi [q.v.] in his commentary on the Makdmat of al-Hatiri (quoted in the introduction to sedition of Kudama's Diami-Air, 13), who lived three centuries later, is the only author to mention that the Nadd was sometimes attributed to Kudama's father.

The Ta³ri<u>kh</u> Baghdad does not have a biography of Kudama. It only mentions (vil, 205) one Diafar b. Kudāma b. Ziyād whom the Khatīb describes as a learned and distinguished secretary. The Khatib also mentions that Diaffar wrote books dealing with the secretarial art as well as other subjects, that he was often quoted an authority by Abu 'l-Faradi al-lefahant, the author of the Aghant, and was himself a pupil of, among others, Hammad, the son of the famous Ishāk b. Ibrāhim al-Mawsill. Ibn al-Nadhn (Fibrist, 130) states that Kudama's father, Diafar, was a man without scholarly distinction, and this statement is repeated by Yākūt, who clearly borrowed it from Ibn al-Nadim. Since Yakût [ii, 412-15) also has a fairly elaborate biography of Dia far b. Kudāma b. Ziyād al-Kātib (he adds the kunya Abu 'l-Kāsim, cf. Aghāni'. x, 281, l. 7) he apparently did not believe that this Diaftar b. Kudama was the father of our author, since otherwise he would have noticed the discrepancy between the facts as they appear from this biography and the characterisation of Kudāma's father as a man without learning (if the "poet-secretary", Dia for b. Kudama, mentioned in the Fibrist, 168, 1. 7, is identical with the scholar mentioned in the Tarikh Baghdad and in Yākūt, Ibn al-Nadim must have held the same view). Yākūt's contemporary, al-Mutarrizī does not, however, hesitate to identify the scholar mentioned in the Tarrick Baghdad as the father of Kudama. The question is of considerable interest, since, according to the Aghani' (x, 280-5, xii, 52), Dja'far b. Kudāma [b. Ziyād al-Kātib in several places in the Aghani was a close (riend of 1bn al-Mu^etazz [q.v.], the author of the Kitab al-Badis. Yet Kudama is reported to have written a book to refute Ibn al-Muftazz (according to the version of the title of the book in Yakût, is order to refute Ibn al-Mu'tazz's views in the poet Abû Tammani) and makes in mention of his predecessor in the Naka, even though some of the subject matter is the same and may even have been borrowed by Kudama from the Kitab at-Badt' (see Nahd, introd., 29-30). Kudāma also fails to use the term badt', but here the explanation may 🖿 that, unlike 1bn al-Muftazz, Kudama was not concerned with the identification of the figures of speech to which this term applicable, and that the practice of using the term as a collective for figures of speech had not yet been established (cf. Kitab al-Badi', ed. I. Kratchkovsky, London 1935, 57, I. 15-58, I. 3, and S. Bonebakker, Ibn Abi 'l-Isba's text of the Kitab al-Badi', in Israel Oriental Studies, ii [1972], 89-90). One could also suggest that the Nated was written shortly after the abortive attempt to bring Ibn al-Mustarz to the throne and that Kudama thought it wiser we to make any reference to the unfortunate "one-day caliph". His attack on Ibn al-Mu'tazz could have been written in the period an attempt to dissociate himself from his famous predecessor. Still, the possibility remains that there were two personalities by the one of Diafar b. Kudana who could easily he confused. The first would have been a member of a Christian family and a professional secretary who occupied a minor position in the central administration, in which he was succeeded by his son. Kudāma; the second a Muslim official who enjoyed a considerable reputation **= scholar**, distinguished himself as a poet, and the favour of lbn al-Mustazz, of Ibn al-Mustazz's champion, the vizier 'All b. Isi (see below), and later of 'All b. 'Isi's rival, the vizier Abu 'l-Hasan b. al-Furât (see Hill) al-Şābi², Tuḥfat al-umarā² fī ta²ri<u>kk</u> al-musarā², ed. H. F. Amedroz, Beirut 1904, 211-12; Yākūt, li, 424, Il. 9-20). It is curious that the Aghani nowhere mentions that Dia far b. Kudama was a Christian, and even suggests in two places that his name we Djaffar b. Muhammad b. Kudāma (*x, 131, note and xxiii, 115). That both this Diaffar and Kudama acquainted with members of the Ibn al-Furât family and with the vizier 'Ali b. 'Isa [q.v.] may be due to the fact that both of them pursued the same type of official career (for 'All b. 'Isa and Dja'far, see Yakut. B, 413, H, 16-18, and for 'All b. 'Isa and Kudama, see below). Similarly, the fact that Diaffar and Kudānia distinguished themselves as men of letters would account for their reliance on www sources: Kudāma, in his Kitāb al-Kharādi, used the same sources as Ibn Khurradādhbih [q.v.] (see Goeje's ed., introd., kxii). Diaffar was acquainted with the same Ibn Khurradadhbih, as is shown by an isnad in the Aghini, xxii, 201, l. 6. It appears certain that Kudama knew a definition of the ishara [q.v.] by Ishak b. Ibrahim al-Mawsili and a definition of the taksim by the same scholar (see Bonebakker, Notes on the Kitab Nagrat al-Ighrid, Istanbul 1968, 18-19; idem, Materials for the History of Arabic Rhetoric, in AIUON, Suppl. no. 4 = vol. xxxv [1975], 36, 45, 48-50; cf. also Nakd, introd., 26, Il. 17-21). Djaffar was a pupil of Ithak's son, Hammad. Less likely to be coincidental—and therefore to be considered == argument in favour of al-Mutarrizi's identificationis the acquaintance of the two authors with the family of the Tähitids (see Materials, 36-7; Aghduff, v, 390, xi, 337, xviii, 128). Finally there is strong evidence that the author of the Aghani, who related many traditions from Diafar, also knew Kudama's work and may even have met him in person (see Notes, 17-18, 27-9: Materials, 39, 51). If al-Mutarrizi is correct, one could suggest that Ibn al-Nadim had wrongly identified a certain Aba Kudama = the father of our author. This Abû Kudâma appears in al-Marzubánl's al-Mussaskslað (Cairo 1385/1965, 572) as a kātib who composed bad verse (cf. also an 🚃 dote on a certain Ibn Kudāma whom Yākūt, it. 414-5 is apparently unable to identify, and al-Salf, Kilāb al-Aurāķ: Akhbār al-Rēdi wa-'l-Muttaķi, ed. Heyworth Dunne, Cairo 1354/1935, 212-13).

The date \$37/948 for Kudama's death which is reported by Ibn al-Diawzi (al-Mantagam, vi, \$63) and repeated by others, is rejected by Yākût (vi, 204). Yākût also rejects a statement by m unnamed commentator on the Makamāt of al-Harini who makes Kudāma m secretary of the Buwayhids. He argues that Kudāma was a contemporary of Tha'lab (adraka samana Tha'labin), al-Mubarrad, Abūt Sa'id al-Sukkarī, Ibn Kutayha, and other scholars of the same generation. Ibn Taghribirdi, Nudièm (Cairo 1348, iii, 297-8) goes further and says

KUDĂMA

explicitly that Kudama was a pupil of al-Mubarrad, and according to Ibn al-Djawzi, he consulted Thadlab; but in the Nakd there is evidence only of a personal acquaintance between Kudama and Thaflab (d. 291/904) (Nakd, text, 35, 44, 45, 102, 115, 117, introd., 23-9). If Kudāma was indeed a pupil of Abū Sa'id al-Sukkari (d. at the latest 275/868), this would mean that he we born around 260, which would not necessarily conflict with the date reported by Ibn al-Diawzl. Yakut offers the year 320/932 as the only reliable terminus post quem. Abu Hayyan al-Tawhidi, to whom Yakut refers, mentions that in that year Abū 'Amr (sic; read Abū 'Umar wa-?) Kudama b. Dja far attended a famous disputation between Abu Saild al-Sirail and Abu Bighr Matta b. Yunus in the presence of Abu 'l-Fath al-Fadl b. DjaHar b. al-Furāt (in 326 according to Abū Ḥayyān's Imtă¹, Cairo 1373/1953, î, 108, 🔤 cf. î, 129, î. 1; in 320 according to his Muhābasāt, Cairo 1347/1929, 69, and Yākūt, iii, 106 and vi, 204, see also JRAS [1905], 82, 84-5). According to a second report by Abū Hayyan al-Tawbidī (/mta', ii, 145-6), Kudama showed (Sarada) his Kitáb al-Kharādi to the Vizier 'All b. Isa in that year.

The two other dates for Kudāma's death, "during the reign of al-Muktadir" and 328, appear respectively in al-Suyūṭṭ, Ta'rīḥḥ al-ḥhula/4' (Cairo 1351, 256 — Cairo 1383/1964, 386) and in the <u>Dhayi ta'riḥḥ Bachādā</u> of Ibn al-Nadidiār [q.v.] = quoted in an unedited section of the Wafi bi 'l-Wafayat of

al-Şafadī (see Tabāna, 4 and 71).

Finally, mention should be made of de Slane's assertion that Kudāma belonged to a Christian family from Başra, possibly based on a statement by al-Idrial, who mentions one Kudāma al-Başra among the sources which he used in compiling his meaning geography (Opus geographicum, i, Naples-Rome 1970, 5).

It is not easy to determine the range of Kudāma's scholarly interests on the basis of the titles of his works. So much seems certain that he was competent as m philosopher and commentator on Aristotle, as well as a historian, a philologist, and an expert an administration. To the list in the Fibrist, 130, 250, we should add a Zakr al-rabl' fi 'l-akhbar montioned by al-Mas'adt (Murndi, ed. Ch. Pellat, i, 15-6) and Yakut, and an al-Hayawandi (Djawabdi, Djawabdi)?) listed by Abu Hayyan al-Tawhidi (al-Başa'ir ara 'I-thakha'ar, Cairo 1373/1953, 6). Lists of titles given by later authors are probably unreliable (see below). Only three works have survived: (a) | Kidb al-Kharadi. The full title of this work is no doubt Kitāb al-Kharādi wa-sinā'ai (or şan'ai) al-kitāba. Not only is this the form in which the title appears in the unique manuscript of this work in the Köprilla Library (the manuscript in Paris is a late copy), but it also agrees with the contents of the work as far as they are known (Tabana, 81-4; the Sindiat al-kuliāb quoted by al-Kalkashandl, Şubk al-a'shā, vi, 481, must be ■ work by Abû Diaffar al-Nabbās quoted by al-Kaikashandi elsewhere in the Subb). Only the second half of the Kitab at Kharadi (the 5th to the 8th mansila) have survived. They deal not only with a wide range of technical matters, sc. the various departments which constitute the central government, taxation and its historical, geographical and legal foundations, etc., but also give attention to linguistic usage, literary traditions, and the proper forms for conducting official correspondence. The first half had a section (the 3rd manuila) especially devoted to literary thetoric (see Bonebakker, A Fatimid manual for secretaries, in AIUON, xxxvii

[1977], 328], on which 'All b. Isi (quoted in the I mid') had imm interesting observations. Some prose examples quoted on Kudāma's authority may go back to this section, and its fame may have earned Kudāma his proverbial reputation in a master of eloquence (see al-Hariri, Makamat, ed. de Sacy, 9; al-Kalkashandi, Subh, xi, 306; al-Makkari, Nafh al-Tib, ed. Ibsan 'Abbas, Beirut 1388/1968, ii, 670). There is no satisfactory explanation for the statement of the Fikrist (repeated by others) that the book consisted of eight mandril, to which Kudama himself added m ninth (Tabina, 93). This statement conflicts with the testimony of al-Mutarrizi, who had read the work and found that it had only seven. A note in the Chester Beatty manuscript of the Fibrist (quoted on p. 144 of the Tehran ad. of 1391) 1971) lends support to al-Mutarrix!'s assertion and suggests that the 8th mansila did not originally belong to the Kitab al-Kharadi, though it may have been identical with a Kitab al-Siyara by Kudama which is also listed in the Fibrist. This 8th manuila is the only extent section that remains unedited (apart from the historical outline in the 7th manrila, which merely copies al-Baladhuri, cf. de Goeje's ed. of the Kharddi, xxiii). It is characterised by Rosenthal as a systematic presentation of social and political science and = Fürstenspiegel. De Gooje believes that the Kitāb al-Kharādi was written between 316 and 320.

(b) There is no reason to question the authenticity of the Kitāb al-Alfāş or Diawāhir al-alfāş, even though al-Muţarrizt is the only author ■ mention this work (see Naḥā, introd., 7-8, xz-5, 47 note, and the abovementioned article in AIUON, 328-9, 336-7 and notes 34-5, 43). Nor is there any reason to suggest that it was originally perhaps part of the Kitāb al-Kharādi. The Diawāhir al-alfāz ists synonyms and phrases ■ sadi^c for ■ by oraton and writers of artistic prose, and offers a short introduction on

the figures of speech.

(c) The Kildb Nakd al-ahi'r is intended, as its title says, as a guide for the literary critic. Disregarding the treatise by Ibn al-Mu'tazz and the Introduction to the Kitab al-Shi'r an 'I-shu'ara' of Ibn Kutayba [g.v.], Kudāma claims that m book has ever been written that would enable people to distinguish between good and bad poetry. He defines poetry as "metrical, thymed speech expressing a meaning" (macnā). This definition in itself cannot be used to distinguish good poetry from bad, but it is possible to set standards for the use of the four constituent elements of poetry implicit in this definition, sc. the maind (content), the last (verbal expression of this content, wording), the meet (metre), and the safiye (thyme) [q.v.], and the combination of these elements two by two (the combination of the warn with the hafiya need not be considered, since the èdfiya is part of the laft and as such already subject to the metre). In passing, he reminds his readers that the distinction between good and bad poetry does not rest on the moral quality of the theme or on the question whether me not the poet is consistent in the sentiments he expresses, but rather on his skill in the use of the four constituent elements separately and in combination. The success of the poems thus depends on the ratio between good qualities (nu'sl') and defects (suyub) specifically related to these elements or to combinations of these elements. Kudāma lists these nucet and cuyab in separate sections. In the first section he begins by discussing the four elements separately. Speaking of the mains, he admits that there are an unlimited number of materi, i.e. concepts, ideas, that may come to the

poet's mind. He will therefore limit himself to the principal "aims" (aghred), i.e. subjects or themes which can be associated with these marded and to which the matani should correspond; panegyric, satire, elegy, simile, description, and the nasib [o.p.] which he sees = an erotic theme. The various figures of speech which come next are interpreted as ments pertaining to the ma'ne or as successful combinations of the four constituent elements. In the classification of these figures Kudama shows much ingenuity. He has to recognise, however, that there are no figures of speech that can be classified as combinations of loft with warn and maina with musn: all technically good poetry that adequately expresses the poet's intentions illustrates these two combinations. Specimens of bad poetry are therefore the only illustrations of the principles involved. The section on the defects in poetry follows the arrangement of the section on the good qualities: Kudama examines the faults resulting from a wrong we of the four constituent elements and classifies certain errors under these four elements or the combinations of these elements two by two. He also shows how the figures of speech are sometimes handled incorrectly. In both sections the discussion follows the pattern of term-definition-example found in the Kildb al-Badis and the Kawasid al-shift of Thaslab [q.v.]; but whereas the two earlier treatises usually do not comment on the examples, Kudama often analyses

his examples in detail. There are some further points in Kudāma's presentation that deserve to be mentioned. The following are perhaps the most important; (a) his interest III Greek philosophy which appears, for instance, in his analysis of the function of the four cardinal virtues, 'akl, shadid's, 'adl, and 'iffa in panegyric, elegy, and satire (he goes on to list other virtues as deriving either from these cardinal virtues themselves or from combinations of these cardinal virtues two by two), from a quotation from Galen's Περί †θῶν in the chapter = satire, and from arguments based Aristotle's Categories (further details in Nakd, introd., 36-44 and the recent studies cited in the Bibliography). There is no clear evidence, however, that he was influenced by the Poetics and the Rhetoric of Aristotle; (b) his defence of the hyperbole (ghuluws). Kudāma quotes an unidentified connoisseur of poetry as saying: "The best poetry is the least truthful" (ahsanu 'l-shi'ri ahdhabuhu). He linds that the "Greek philosophers" support this view, but does not attribute the maxim itself to the Greeks (an antecedent of this famous maxim in L. Zolondek, Dibil b. All, Lexington, Kentucky 1961, 128b, 133; ef. also al- \underline{D}_i ābiz, $Bu\underline{khala}^2$, Cairo 1958, 26-7). Kudāma does not go in far that he accepts every form of hyperbole: there must be a link with reality which can be established by using the verb kāda, "to be almost ... " in m paraphrase of the statement, e.g. "You inspire the infidels with fear so that even the seed [of these infidels] fears you before it becomes a creature [in the womb]" can be paraphrased "... so that it is almost as though the seed of the enemy fears you . . .", but a prayer to grant immortality 🔳 a ruler cannot be justified, since immortality in man is inconceivable (laysa fl fibă'i 'l-insâni; he illustrates this rule more clearly when he points out that describing the noise of battle as being so strong that it can be heard as far as a two days' journey is an exaggeration, though it is possib's in principle that this should happen); (c) his lack of interest in the early Abbasid poets (muhdathun). This tendency appears clearly from the above-mentioned list of the "principai aims" from which genres like the love lyrin (**pazat*), the wine poem (**pazat*), and the hunting poem (**pazat*) are conspicuously absent. Kudăma nowhere expresses a categorical judgment. One could suggest therefore that his choice reflects a belief, which was perhaps not uncommon in his days, that "Abbāsid poetry did not represent a real break with ancient, that is classical, tradition. Consequently he may not have telt that there was a need to justify his choice. The same may was of the examples, most of which are taken from ancient poetry, though Kudāma occasionally discusses examples by later poets (see Naķā, text, 80-1, 83; for a list of **maḥāaṭām*) poets quoted in the Naād, see p. 72 of the article by Kratahkovsky cited in the Bibl.).

Kudāma may have been more dependent on his predecessors than is apparent at first sight (see Nakd, introd., 22-36). He may have followed Ibn Kutayba and Ibn al-Mu'tazz respectively when he discussed the lass and the mains as independent constituent elements and distinguished between the proper and the erroneous use of the figures of speech. He may have depended on Ibn al-Mu'tazz and on earlier critics for the choice of his ferminology and examples. Yet the theory which he based the framework of his thesis, as well as many aspects of the elaboration of this theory, appear to be unique. However, his system did not provide ■ sound basis for m theory of literature and quickly fell into oblivion: the four-element scheme was rarely taken over and never in its complete form. The same is true of the distinction between musil and 'mynb and the system of cardinal virtues. By contrast, those aspects of his work that conformed closely to the system of Ibn al-Mustazz and the and and 3rd century scholars who preceded him were readily accepted, in particular his terminology and definitions of the figures of speech. Kudama's figures were combined with those of Ibn al-Mutazz and came to be known collectively m bedit. The exact extent of Kudama's influence is not, however, always easy to determine, since direct references to Kudāma are far exceeded by instances of unacknowledged borrowing (NoAd, introd., 44-60). In other cases it is clear that scholars used not only the Nakd, but also the Kharādi (ibid., 57 and 47 note). There is a third category of borrowings where we find scholars borrowing from Kudama without having any direct knowledge of the text they are quoting (ibid., 58; Bonebakker, Notes, 15-17 and the above-mentioned article in AIUON, 309-10). Parallel to this we find that biographers after the time of Yaküt copy out their predecessors or offer erroneous information on the author and his work (see, for instance, al-SharishI, Shark Makamit al-Hariri, Cairo 1372/1952, 1, 20).

Kudâma's Nahd was the subject of relutations and commentaries, none of which appear m have survived. A complex system of division into sections, chapters, and paragraphs introduced by Hamza al-Isfahān! [q.v.] recently discovered in a manuscript in Tunis (see Bouebakker in a forthcoming article in RSO, which also offers minor corrections to the text of his ed.). A work with the title Nakd al-nathr, erronsously attributed to Kudama, was identified in 1949 in the Kādb al-Burhān fī wujuk al-bayds of Abu 'l-Husayn Ishāk b. Ibrāhīm b. Sulayman b. Wahb al-Kātib (ed. A. Matjūb and Kh. al-Hadithi, Baghdad 1387/1967), though it is occasionally still quoted by its me title [see TBN WARB in Suppl.]. The Shi'l bias of this last work may have prompted Agha Buzurg al-Tihrani to include Kudāma in his Tabahāt atlām al-shita (al-Karn alrābit, Beirut 1390/1971, 221). The attribution to Kudāma existed as early as the 6th/12th century (see Nata, introd., 15-20, 60-1; Bonebakker, Some early definitions of the Tauriya, The Hague 1966,

48-9 pote).

(S. A. BONEBAKKER)
AL-KUDS, the most common Arabic name
for Jerusalem.

A. HISTORY

r. The Islamic history of Jerusalem clearly falls into three periods. During the first six hundred years, the possession of the city was contested between Islam and Christianity and between many Islamic princes and factions. After the bloodless and poorly-recorded delivery of the town into the hands of an inconspicuous tribal commander, the history of the period was solemnly inaugurated by the erection of the marvellous Dome of the Rock, the majestic testimony

to the Islamic presence in the Holy City; it culminated in the vicksitudes of the Crusades and was concluded by the devastations of the first half of the 7th/13th century, which, with the exclusion of the buildings on the Temple area and the Holy Sepulchre,

left Jerusalem a heap of ruins.

The subsequent six hundred years were comparatively uneventful. Jerusalem mostly lived the life of an out-of-the-way provincial town, delivered to the exactions of rapacious officials and notables, often also in tribulations at the hands of seditious fellahin in nomads. But, in conformity with the religious policy of the Mainlinks and Ottomans, and with the general spirit of the age, Jerusalem greatly benefited by its holy character. The many Mainlink buildings still decorating the old city and Sultan Sulayman's wall encircling it manifest this trend to the present-day visitor.

modern history of Jerusalem begins with its conquest by Ibrahim Pasha in 1831. The reforms started by the son of Muhammad 'Ali could not be ignored by the Ottomans, to whose control the city reverted III 1840. The restrictions imposed on the non-Muslims were alleviated. Many important Christian buildings and institutions were erected both inside and outside the old city. The improved living conditions (albeit still very hard) induced many religious persons to settle in Jerusalem. By about 1880 Jews formed the majority of the population. Jerusalem became the capital of a mulasarrifile, whose governor was directly responsible to the government in Istanbul, and by 1920 it was the capital of mandatory Palestine. In December 1949 the State of Israel made it its capital and seat of government (a step not recognised internationally), Fortunately, the war of 1967 and the events following it have not changed the historical character of the old city, while the new city has immensely expanded in every respect and direction. Jerusalem will always live on its past, but at present one feels in it the pulse of an active and vigorous community.

Mudilr al-Din al-Ulaymi, the excellent historian of Jerusalem, who wrote his book al-tine al-dialit bi-ta'righ al-Keds wa 'l-Khalli in 900/2494-5, rightly observes (p. 6) that besides material of the type of the fada'il ("Praises of the excellence of the city"), ""Umar's conquest" and stories about the Dome of the Rock and scholars visiting Jerusalem, little useful about the history of the city had been written before him. He explains this deficiency partly by the interruption of the Muslim tradition by the Christian conquest (232, 262, etc.) and mentions the symbolic fact that Abu 'l-Kasın el-Makki, who had compiled a book on the subject, was killed by the Crusaders before completing it (264). The intrinsic manner for the absence of coherent information was, of course, the character of Jerusalem = sholy city which lived on the care lavished in it from outside, rather than being itself of political, administrative or cultural significance. Consequently, the presentation of its history must be one of highlights rather than a continuous account.

I. The first six bundred years

2. Names. In early Islam the full name of Jerusalem was Iliyā' madinat bayt al-mahdis, "Aelia, the city of the Temple" (Tabari, I, 2360, I. 13). In practice, Iliyā', or, more commonly, baytal-mahdis, were used. Iliyā' (pronounced in three different ways, Bakri, Iliyā' (pronounced in three different ways, Bakri, Iliyā' (pronounced in three different ways, Bakri, Iliyā', ed. 1945, I, 134, I. 5; 217), is the Roman Aelia, but since this origin was unknown to the Muslim scholars, they suggested various other ex-

planations, such as the sanctuary of Elijah (Mutahhar b. Tähir, al-Bad' we 'l-ta'rith, ed. Huart, iv, 87, l. 8; from Hebrew, since the Kur'linic form of the is Ilyisi, or "the Honse of God" (Yih as name of God is mentioned by Mutahhar). Bayl al-makdis is Aramaic bith makd'sha, "Temple", and was used in this sense by Muslims, e.g. 'Ihd al-farid, 1321, iii, 290, l. 20: "In the prayer of Erra this is found: Oh God, from all places you have chosen Iliyà" and from Iliyà"—bayl al-makdis". Soon, however, the term (pronounced also bayl al-makadas, imbelow) was transferred to the city, while the Temple area was designated by the Arabic equivalent of bayl al-makdis, sc. al-baram.

The common name of Jerusalem, al-Kuds, still unknown to Ibn Said, Balashuri, Tabari, the Aghani, the 'Ind at farid and other classics of the ard/9th century, underwent a similar development. Mutahhar, himself a native of Jerusalem, writing in 355/966, mentions the term only once (vi, gr, perhaps a later change), but al-Mukaddesl, writing ca. 375/ 985, uses it frequently. Nasir-i Khuaraw (439/1047) states that al-Kuds was used by the local people. Al-Kuds is Aramaic kudaha, which, in the term farta de-kudsha (e.g. Isaiah, xlviii, z) was understood not as "city of holiness", but as "city of the sanctuary". This is borne out by the usage of Karaite scholars writing in Jerusalem early in the roth century, who call the city bayt al-maldis, but the Temple area al-kuds (see the lengthy quotation in]. Mann, Texts and studies, Philadelphia 1935, ii, 18; cl. also the Geniza [q.v.] fragment in S. Assaf, Texts and studies, Jerusalem 1946, 21, l. 13). Similarly, in a version of the often-quoted tradition to which the Jewish convert Kab al-Abbar tries to induce the callph 'Umar to pray north of the Holy Rock, be says to him: "Then the entire al-kuds, that is, almasajid al-hannm (1) will be before you (Suyuti, Ithaf al-ahhissa?, Ms. Heb. Univ. Library, icl. Bra. 1. 8). It should be noted that, in letters from the 5th/11th century, when Hebrew had replaced Aramaic, Jerusalem was commonly called 4r hak-kildash, to be understood as "city of the sanctuary".

In accordance with the principle that "the multitude of proves the excellence of their bearer", Ithal al-akhissa?, it. 90-100, enumerates seventeen Arabic names of Jerusalem (Midrash Tehillim, ed. S. Schechter, 1896, 8-9, has "seventy"). Suyüti's list does not include here the Kur'anic expressions taken by the Muslim commentators as denoting Jerusalem, such as al-masgiid al-aksā (see below), or mubanneā sidh, "the safe abode" (X, 93, cl. neve sedek, Jeremiah xxxi, 22). Al-arā al-makaddasa (V, 21), "the Holy Land", also was understood as denoting Jerusalem (Ithāl, foi. 1886, l. 9), which is in conformity with Jewish and Christian usage, which often expands the name of the city the country. This explanation might have influenced the pronunciation of bayi al-makdis as bayi al-makaddas.

Various Arabic versions of Hebr. shallm (Ps. lxxvi, 3) and Aram. Urishem (Arabicised urshallm) are found in the sources and even in ancient Arabic poetry (Sallam, al-A*shā, al-Bakri, 144, l. 22, 812, l. 17; Salim, Ithāf, f. 10a). Whether die al-salam, "abode of peace" (S. Assaf, Texts, 108-10, corresponding to Heb. We hash-shallom, Gottheil-Worzel, Geniza fragments from the Free Collection, New York 1926, 26), found in Geniza letters of the 11th century, was used also by Muslims has not yet been ascertained.

3. Jorusalem in the Kur'an. Jerusalem is not mentioned expressly in the Kur'an. But "the city of

the sanctuary" certainly was known to the Prophet. Sura XVII, significantly named both al-Isra' and Bana Isra'il, in vv. 2-8 clearly refers to the destruction of the first and second temples (called masdid in V, 7) as crucial events in the history of the Banu Isra'll. Al-masdid al-aksd in the opening verse of the Sura is taken by the prevailing Muslim tradition referring to the sanctuary of Jerusalem. Against this, it has been argued that there was me building on the site of the Temple at the time of the Prophet, that the Holy Land is called in the Kur'an the "nearest" (XXX, 2) and not the farthest (XVII, 1), and that, in general, the verse makes the impression (and is taken thus by Islamic tradition) of an account of a nightly ascension to a heavenly sanctuary (details in the articles of Bevan, Schricks and Horovitz, cited in Mt RADI). But knowledge of the state of the site of the Temple or consistency in geographical definition were outside the interests of the Prophet. It may be concluded with reasonable certainty that, = the time when XVII, t, was combined with XVII, 2-8, the tradition identifying at maselid at aksa as the Temple of Jerusalem was already dominant, and that the original meaning of the verse as that of a visionary experience was connected with it in one way or another (cf. "The Jerusalem above", St. Paul's Epistle to the Galatians, iv. 26].

The situation is similar with regard to the hible, or direction of prayer (H, 136-8). Again, Jerusalem is not mentioned expressly, but the Islamic tradition that it was intended by "the first Sibla" is no doubt genuine; since the new kibla, which satisfied the Prophet's heart, was to the direction of the sanctuary of his native city, it stands to mason that the original one also was oriented to a holy city, and there was none for monotheists except Jerusalem. No "political" reasons, however, should be assumed for this change ("trying to win the Jews", "breaking with the Jews"). One prayed towards Jerusalem because this was the direction of the People of the Book as was known in Medina. It simply was the proper thing to do. When Islam became a separate religion with Mecca as its central sanctuary, the change was natural and religiously cogent.

. The Conquest. The battle of Adjundayn [q.v.] in the summer of 13/634 opened southern Palestine 📰 the conquering Muslims. No siege was laid on Jerusalem, but already in his and on Christmas night 634 the aged patriarch Sophronius expressed his grief that it was impossible to proceed from Jerusalem. to Bethlehem is usual because of the marauding Arabs. A few days later, in his sermon on Epiphany, he mourned over the bloodshed, the destruction of the monasteries, the plunder of the cities and the huming of the villages by the Saracens, "who boast they would conquer the entire world". Still, four years passed from the Arab invasion of Palestine to the fall of Jerusalem. It came about early in the year 538 (end of 16, or beginning of 27 A.N.), after the decisive battle of the Yarmük [q.v.] (Rediab 15/ Aug. 636).

The stories about the fall of Jerusalem can be divided into three groups. The ancient and most trustworthy tradition simply reports that the capitulation was arranged with Khālid b. Thābit al-Fahmi, a little-known tribal commander, under the condition that the open country belonged to the Muslims, while the city would not be touched as long as its inhabitants paid the tribute imposed on them (Balādhuri, Futih, 139, Il. 4-9). No treaty is mentioned yet. The second type, represented, e.g. by Ya'kūbi, il, 167, and Eutychius, Annales, il, 17, reproduces I treaty,

but the treaty is very succinct and does not differ much from Baladhurt's version. Later, conditions similar to those made with the Byzantine authorities in Egypt were added and some (but not all) Christian authors added the condition "that no Jew should live with them in Jerusalem". This condition is found also in Tabart, i, 2405, from where several later Muslim writers have copied it. But Tabari's bere was Sayf b. Umar, whose fathemiess unreliability has been proved in detail long time ago (J. Wellhausen, Skizzen und Vorarbeiten, vi, 3-7) and who tells us, e.g. here, Tabari, i, 2404, about the conquest of Ramla, a city founded by the crown prince Sufayman b. 'Abd al-Malik eighty years later. A mere look at the treaty produced by Sayf, its wrong date and fantastic witnesses, shows its worthlessness. It is natural, however, that in times of tension, as in 879/1474, when the Mamiluk sultan ordered the rebuilding of a synagogue in Jerusalem, or as from 1929, this treaty served a purpose. From the Christian point of view, it is understandable that some writers wished to preserve Jerusalem as a Christlan city, as it was in Byzantine times, but this was hardly in the interests of the Muslims, and their actions proved that such a stipulation never existed.

In addition to these three comparatively old versions, a later one, represented among many others by Uns, 225, adds several conditions of the legendary "Covenant of Umar", in which the Christians undertake, inter alia, not to speak Arabic. Even more fantastic is Ibn 'Asakir, ii, 323 (pseudo-Wāķidī), where the treaty is made with twenty Jews headed by Yūsuf (a scribal error (m Yūsha') b. Nūn. This is a "harmonising" legend; a Jew, bearing the same name as the Jewish conqueror of the Holy Land,

delivers it into the hands of the Muslims.

5. The beginnings of Islamisation. Tabari, 1, 2408, IL. and many later Muslim and Christian sources, tell about a visit to Jerusalem by the caliph Umar, but all we have about it are legends whose easily recognisable tendencies betray their worthlessness. According to one school, the caliph was accompanied by Jews who showed him the true site of the Temple, which was concealed by rubble purposely heaped on it by Christians. When the place we cleared and the ubiquitous Ka'b al-Ahbar [q.v.] suggested to 'Umar to pray behind the Holy Rock so that the two kibles should be in front of him (see | z, above), the caliph refused, since the Muslims should was towards the Kaba alone. This is, of course, one of the many traditions against the bid's of the overrating of the sanctity of Jerusalem (see § 11, below). According to Christian sources, the callph visited the churches, but declined pray in one of them in order to preclude any claims on it by later Muslim generations. This legend was a pious wish which originated at a time when the encroachments of the Muslims, which later became a reality, still were only a menace, see § 7, below. Since the conditions of the surrender safeguarded to the Christians the use of their churches, it is likely that the Temple area, which was largely or entirely unoccupied, served as a place of prayer to the Muslims from the very beginning, and there is no reason to doubt that this was done on order of the ruling callph 'Umar.

As far as the ancient sources go, it appears that the early Muslim settlers in Jerusalem people from Medina, such as Aws, the nephew of the Prophet's court poet Hassan b. Habit. Aws was a disciple of Ka'o al-Abbār and himself a pietist, Ibn Sa'd, vii/2, x24; his temb was still known at the time of Muditr al-Din, Urs., 233. Several other Medinese are listed

as settlers in Jerusalem by Rm Sa'd, iii/3, 37; vii/2, 129, l. 13, etc. Among them the famous "companion" Ubāda b. al-Ṣāmit, the first Muslim judge in the city (al-Dhahabi, Duwal al-Islām, 1364, i, 14] is to be noted. The Anṣār were accounted at Yaman; thus it was natural that the Yemeni suxiliary corps, almadad min ahl al-Yaman, also was stationed there (lun Sa'd, vii/2, 140, l. 14). Simeon, the father of Muhammad's Jewish concubine Rayhāna, settled in Jerusalem and delivered sermons in the Muslim place of worship on the Temple area. He, too, of course, was from Medina (Uns., 235).

The strange hadith running timmin bayt al-maldis hardb yathrib, "The building of Jerusalem is the destruction of Medina", might have been originally a bon mot on this exoclus from the capital of the Hidjaz bon mot on this exoclus from the capital of the Hidjaz frickle); but became standing element in the maldim literature. (Its continuation: na-hardb yathrib hhurudi al-malhama, "and the destruction of Medina is the beginning of the war of the End of the Days". Musuad Ahmad b. Harbel, v, 232, 245; Abû Dawûd, Maldhim, 3; Djabiz, Bayan, ed. Sandûbî, li, 28; Ibn Kathi, Nihâyat al-bidâya, i, 79; Sanhūdī, Wafā', 1955, i, 120; al-Sirādi al-munīt, li, 460, where are further soutces).

Mukaddasi, 171, i. 11 and others report that the caliph 'Uthman, whose rule began only eight years after the Islamic conquest of Jerusalem, dedicated the revenue from the rich vegetable gardens of Siloam (which, in accordance with the peace settlement, belonged to the Muslims) to the poor of the city. Unim al-Darda', the wife of the wise kādi of Damascus, spent every year six months in Jerusalem, where "she sat among the poor" (Uns. 254). These and similar reports am not necessarily spurious, but may

betray early Christian influence.

The Islamic conquest threw the Christian community of the city into complete disarray. The aged patriarch Sophronius died shortly afterwards and no new one was appointed until 706. The further history of the patriarchate of Jerusalem in early Islamic times is almost mobscure as that of the Jewish spiritual leadership in the country during that period. But Jerusalem retained largely its Christian character. As al-Mukaddasi tells us (182, I. 16 ff.), the Christian holidays regulated the rhythm of the year also for the Muslim population, and through Jerusalem and the hermits populating the mountains in its environment, pious Muslims became acquainted with the ways of Christian ascetism (S. D. Goitein, Studies in Islamic history, 141, 146).

6. The Umayyads (19-232/640-750). About two years after the tall of Jerusalem, the Umayyad Mu'awiya was appointed commander of the army operating in Palestine and Syria. He governed these countries for forty years, first m governor, and later as caliph. Jerusalem was the scene of two decisive events in his In 38/658, Mu'awiya and 'Amr b. al-'As, the conqueror of Egypt, concluded there - pact of cooperation, which decided the contest between 'All and Mufawiya in the latter's favour (Ibn Sa'd, iv/2, 2, I. 22 ff.; the text of the agreement seems to be genuine). In Safar-Rabi* I 40/July 660 homage was paid to Mu'awiya as caliph in Jerusalem. A Syriac source, giving this date, reports also that Mu'awiya prayed on this occasion - Golgotha, Gethsemane and the Tomb of Maria (T. Nöldake, in ZDMG, xxix, 95). This was hardly mere politics (ibid., 85), but a manifestation of the chiliastic state of mind of the time, sc. Islam entering into its inheritance of the preceding monotheistic religions.

During the long rule of Mu'awiya, the Muslim place of worship on the Temple area, approximately described by hishop Arculfus in ca. 680 (see L. Bieler, Corbus Christianorum, Series Latina, clxxv, Itineraria etc., Turnhout 1965, 177), must have taken shape. Mutahhar b. Tahir, iv, 87, l. 11, expressly states that Mufawiya built the Muslim sanctuary there "after "Umar". It stands also to reason that the plan for the exection of the Dome of the Rock, which needed impreparations, was already made during the protracted and orderly rule of Mu'awiya. The inscription in the dome bears the year 72/691-2, but the beginning of 'Abd al-Malik's reign (65-86/685-205) was extremely turbulent. 'Abd al-Malik had good reasons to make efforts towards the completion of the building, which would show him as the great champion of Islam, but the early years of his caliphate were hardly suited for both conceiving such an enormous undertaking and carrying it out to its very end during a comparatively short period. Contrariwise, Musawiya is known also by his extensive buying and building activities in Mecca (in order to provide shelter for pilgrims and mudidwirdn), in which he was not followed by later Umayyads, see M. J. Kister, Some reports concerning Mecce, in JESHO, xv (1972), 84-91-

Goldziher, Muk. St., il. 35.7, Eag. tr. ii, 44-6, expounded the theory that 'Abd al-Malik, by erecting the Dome of the Rock, tried to divert the Pilgrimage from Mecca, then the capital of his rival 'Abd Allah b. Zubayr, to Jerusalem, and that the many "traditions" in the name of the Prophet in favour or against the sanctity of Jerusalem reflect this political contest for the caliphate. This thesis was generally accepted and has found its way into the textbooks Islamic history. It cannot be maintained, however, None of the great Muslim historians of the 3rd/9th century who describe the conflict between 'Abd al-Malik and Ibn Zubayr in utinost detail, nor any of the older geographers, including al-Mukaddasi, a native of Jerusalem, makes the slightest allusion to such an intention of the Umayyad caliph. On the contrary, for the year 68/687-8, Tabari, il, 781-3 and others, report expressly that the soldiers of 'Abd al-Malik's expeditionary force participated in the hadjdj. They wished to do so even during the very siege of Mecca, a request which Ibn Zubayr naturally had to refuse, Baladhuri, Ansab, v. 360. Moreover, it is obvious that 'Abd al-Malik would not have strengthened, but endangered his position by trying to divert the hadidi from the holy sites expressly mentioned in the Kur'an, and this after the kible had been emphatically turned away from Jerusalem. By abolishing one of the five pillars of Islam, he would have made himself a hiffer, against whom the dilaid was obligatory. The two older sources that mention the allegation that 'Abd al-Malik, by constructing the Dome of the Rock, tried to attract the hadidi I Jerusalem, sc. Ya'kubi, ii, 311, and Eutychius, i, 39, invalidate their statements by others, obviously untrue, connected with them. They have the Umayyads forbid the Pilgrimage to Mecca, which is in flagrant contradiction to trustworthy reports that Umayyad caliphs made the pilgrimage themselves.

Nasir-i Khusraw, who visited Jerusalem in 439/ 1047, reports that people in Palestine who were unable to make the hadidi, assembled in Jerusalem washi-mawkif bi-istand, "and performed the wakiff", the standing in the presence of God which was the main ceremony at the sacred mountain of 'Arafat [q.v.]. This statement, which has sometimes been adduced as a corroboration of Goldaiber's thesis,

must be understood in a wider Islamic context. Such a substitute for the pilgrimage is attested also for the main cities of other provinces, such as Başra and Fusţāţ; it even had a special name, lafvif, derived from 'Arafst, Ibn Taghribirdl, i, 207, But, like the individual sacrifices, it manifested a participation in the hadidi, celebrated on the same day in Arabia, not its replacement by a local pilgrimage.

The real urgs for the erection of the Dome of the Rock on the site where it stands and in the form which it has, was religious, in addition, of course, to the natural acculturation of the Arabs to an environment, where magnificent edifices were the eloquent witnesses of a triumphant Church and of great rulers. Rajā' b. Haywa [q.v.] of Baysan, who was in charge of the building operations (Uns., 241, and others; probably only the financial aspect, while the manie Yazld b. Salam supervised the actual work) was the most prominent traditionist of Sha'm, a pictist and ascetic, (Ibn Hadjar, Takthlb, iii, 166), and he and people of his ilk might have been the spiritual originators of the undertaking. By choosing the site, Islam manifested itself as the exclusive heir 📰 the older religious. The gorgeous mosaics, representing jewels and ornaments of the greatest variety, were in chiliastic fulfillment of the prophetic descriptions of the future Jerusalem (Isaiah, liv, 12, etc.), which had become known to the Muslims (Ibn al-Fakth, BGA. v, 97. L zz-13) and were incorporated by them in the legendary descriptions of Solomon's Temple (ibid., 99, l. 10). The detailed inscriptions in the Dome betray a spirit of Islamic mission, specifically to the Christians, since the "prophethood" of Jesus is emphatically stressed and his sonship dealed with equal fervour. Details in the articles of Goitein, Grabar and Caskel: Bibliography.

Muslim and Jewish sources report that Jews were employed as servants of the sanctuary on the Temple area, its cleaning and illumination (including the making of the glass lamps). If true at all, these reports can refer only to an early and very short period. On the other hand, the contribution of oil for the diumination of the Temple area seems to have been regarded by both Christians and Jews as a pious deed, widely observed. Al-Khassaf (d. 261/874-5) in his book on walf, 341, says: "If a Christian or Jew dedicates his land or house to the repairs of I Bay! al-makdis or for the purchase of oil for its illumination, it is permissible to accept this from him, for this is an act of piety both with regard to Muslims and to them". Previously, the author had explained that it was not permitted to accept from non-Muslims a walf for specific Muslim purposes). An Italian Jew of the 10th century, who was of great munificence, also contributed oil "to the sanctuary on the Western Wall, namely to the altar (clearly an expression for a non-Jewish building) which is inside" (Ahima'a's chronicle, ed. B. Klar, Jerusalem 1944, 47).

Besides the erection of the Dome of the Rock, the Umayyad period contributed to Jerusalem other great architectural achievements, the massfid al-aged and the dår al-imars, == section B. New gates were added (Ibn Kathir, xi, 226, repeating the anecdote that the gate with the inscription of al-Hadidjädi, at that time governor of Filastin, remained intact, while that bearing the name of 'Abd al-Malik collapsed' and the road to Jerusalem was repaired (mentioned also in a Jewish source), its milestones receiving Arab inscriptions (RCEA, no. 15). It = evident that such comprehensive building operations must have had a considerable impact on the composition of Jerusalem's population.

The extensive foundations of Umayyad buildings laid bare the south and south west of the A&& mosque during the recent excavations of B. Mazar (1968-76) suggest that the Muslims planned to do in Palestine what they had done in IfrIkiya, Egypt and Syria, sc. to replace the Byzantine capital situated on the seashore (Caesarea) by an inland administrative centre. In view of the lack of written sources on the subject, we cannot know why Jerusalem finally did not acquire this status. For the then available of transportation, Jerusalem perhaps too far away from the main lines of international traffic.

The foundation of Randa [q.v.] as capital city of the province of Filastin by the mean prince Sulayman was in the first place a blow for neighbouring Lod or Lydda, but in the long run men detrimental to Jerusalem. According to later traditions, Sulayman himself received homage in Jerusalem and intended to stay there (Ibn Kathir, ix, 274; cf. also E. Sivan, in Israel Or. Stud., i, 270, p. 33), but he took Ramla as his permanent residence and the town became the administrative and economic centre of the country. The inhabitants of Jerusalem were well aware of this fact, as Mutahhar b. Tāhir, one of them, observes (iv, 72, Il. 2-3); bays al-makdis min sawid al-ramin ba'd mi danat dar al-mulk fi ayyam Sulayman wa-Dawad, "Jerusalem is a provincial town attached M Ramla after having been the seat of the government in the days of Solomon and David".

7. The Abidaud Period (131-358/750-969). The end of Umayyad rule was for Jerusalezn, as for Palestine and Syria in general, a period of great tribulations. In the wake of a rebellion against the last Umayyad Marwan II, the walls of Jerusalem were pulled down and its inhabitants punished. Earthquakes aggravated the situation. At the beginning, the new dynasty paid special tribute to the boly character of the city. This manifested by the first visit of al-Manşûr, who set out for Jerusalem immediately after returning to Baghdad from the pilgrimage to Mecca of the year 140/758 (Tabari, iii, 129). He did in order to fulfill a vow (Mas Odi, vi, 212, l. 9), made perhaps because a hundred hmar years had passed since Muckwiya had received homage in the Holy City in 19/40. A second visit of the 'Abbasid caliph, in 154/771 (Tab. iii, 371) was made in conmeetion with a great rising in the Maghrib; al-Mansur accompanied as far as Jerusalem the large army assembled by him for the quelling of the revolt (Baladhuri, Futuh, 233, Il. 4-5, Ibn al-Athir, v. 467). His son al-Mahdī also visited Jerusalem and prayed there (Tab. iii, 500), but Hārûn al-Rashīd, who made the hadidi almost every second year and frequented Syria because of the Holy War against Byzantium, never came to Jerusalem. Not did his son al-Ma'mun, although he sofourned in Syria and even in Egypt, or any other later 'Abbasid caliph. This change of attitude probably reflected the new trend of Islamic plety, which abhorred the bid'as, the foreign elements and "innovations", in the legends about Jerusalem.

Theophanes, Chronographia, 1, 446, reports that al-Manyür, on the occasion of his visit to Jerusalem, ordered the Christians and Hebrews to tattoo their on their hands (so that they could not escape the poil tax), whereupon many Christians fled to "Romanis" via the sea. Such measures been taken earlier in Islam; their adoption with regard to Jerusalem obviously that at that time both the Muslim and the non-Muslim population of the

city must have become quite numerous and the mutual assimilation of the various elements comparatively progressed. This increase must have been due to religious incentive, for the ancient hadith assuring the Muslims that God permanently guaranteed sustenance to the inhabitants of Jerusalem (Iba al-Fahlh, BGA, v. 94, l. 12, and others) proves that life there never the easy. The legendary biographies of most of the early Sulfs, especially those of franian origin, contain the detail that they stayed in Jerusalem one time or another (JAOS, lxx, 107), and well-founded sources prove a considerable Muslim influx from Iran, see § 9, below.

The Christians of Jerusalem received a mighty aplift by the interest shown for the Holy City by the rulers and the pious of Western Europe. Whattruth about the embassies exchanged between Haran al-Rashtd and Charlemagne, and the delivery to the latter of the key and the standard of Jerusaiem (received by him in Rome in the year 800, at the time of his coronation as Emperor), there can be me doubt that many new buildings destined for the religious and material needs of pilgrims and newcomers were erected in Jerusalem by the emperor and his successors (a list in T. Tobler, Hierosolymitana, i, 314). Charlemagne's me and successor Louis ordered each estate in his empire to contribute and denarius for the needs of Christian Jerusalem. It is evident that most of the money needed for the payment of the poll tax and other impositions on the Christians of the city men from abroad. The composition of the Christian population may be gauged from a list of the hermits living in cells on the Mount of Olives, of whom eleven said their psalmodies in Greek, six in Syriac, five in Latin, four in Georgian, two in Armenian, and one in Arabic (Tobler, op. sit., i, 302).

headed by the Gaon (corresponding to the Christian patriarch), moved from Tiberias to Jerusalem. His authority was soon challenged by the Karaites [q.v.] a dissident Jewish sect, which made Jerusalem its centre. The Karaite disponsation, which mainly developed on Iranian soil, is to be understood in the Islamic context = s branch of the Shucubiyya [[.v.], emphasising the return to the Bible, the revival of Hebrew, and the settling in the Holy Land. As is natural, the movement originated preponderantly in circles near to the Arabs, Jewish government officials or otherwise prominent people. Consequently, the Karaite settlers in Jerusalem easily got the upper hand. Jerusalem became indeed their main spiritual centre. In the ensuing controversies, which, during the turbulent 3rd/9th century, were brought before the Muslim authorities, one Gaon mi his life and two others with difficulty escaped a similar fate (J. Mann, Jours in Egypt and Palestine under the Fatimids, repr. 1970, i. 57). In the course of time, the

Ca. 800, the Jewish High Council, the yashiva,

Berkeley and Los Angeles 1971, 5 ft.).

During the reign of al-Ma'mûn (198-218/813-33),
Jerusalem suffered by a famine and became depleted
of its Muslims, an opportunity used by the patriarch
to execute repairs in the building of the Holy Sepulchre (Eutychius, ii, 55-57). More serious was a
great revolt of felicities, which broke out at the end
of the reign of his successor al-Mu'taşim (218-27/
833-42). The revolt was led by one Abû Harb al-

two denominations learned to co-exist and to co-

operate, but in Jerusalem rather less than, e.g., in

Egypt. The Pățimids recognised the Gaon of Jeruta-

lem as the head of the Rabbanite Jews in their empire (see Goitein, A Mediterranean society, ii,

Muharka" ("veiled one"--as former impostors had been) and soon encompassed the whole of Syria. Its leader assumed the role of the Sufyani, or messiah of Umayyad stock, reduced the poll tax and made other promises to the population. But soon he changed his ways. When he entered Jerusalem, its entire populace, Muslims, Christians and Jews, fled and all the places of worship were pillaged. Only a large contribution by the patriarch prevented him from burning the Holy Sepulchre. It was a typical peasants' revolt, which was unable to make a stand against the regular army sent to subdue it by al-Muctasim's successor (Ibn al-Athir, vi. 375-2, who does not mention Jerusalem; Michael Syrus, ii, 541).

In 256/869-70 Syria and Palestine received for the first time a Turk as governor (Amadjur, Ibn al-Athir, vii, 165, Il. 3-7), but this did not change the ways of the 'Abbasid régime, which had long before assumed the character of a bureaucracy based largely on foreign hirelings. Precisely at that time, the patriarch Theodosius of Jerusalem praised the Saraceus for permitting the Christians to build churches and to live in accordance with their religion without oppressing them. (J. D. Mansi, Conciliorum collectio, repr. 1960, xvi, 26), and Bernard the monk expressed his admiration for the safety of the roads in the

country (Tobler, Itiners, 319).

Ahmad b. Tulun, who had made himself lord of Egypt 🔳 254/868, conquered Palestine in 264/878, but in the wars between the Tülünids and later the Ikhshidids [q.v.], the rulers of Egypt, and their overlords, the 'Abbasid caliphs, Jerusalem played no role. But a new turn in the concepts about the holy character of Jerusalem must have taken place. The belief that it would be the scene of the Last Judgement and the gate to Paradise (Ibn al-Faķīh, BGA, v, 94, etc.), must have gained ground, whence people who could afford it arranged for their burial there. Tabari, i, 486, l. 12, and others report that the Jews from all countries, following the example of Moses, who carried the coffin of Joseph with him from Egypt, used to bring their dead to the Holy Land. This custom, as is proved by many Geniza documents, was indeed widespread, even among people of limited means. It went back to Roman times, when "Himyarite" Jews buried their dead in the Beth-Sha'arayim necropolis near Haifa. In the 4th/10th century it must have become popular among Muslims. Isā b. Mūsā al-Nūsharī, the first Abbāsid governor of Egypt after the overthrow of the Tülünide, was buried in Jerusalem in 296/909; the founder of the Ikhshidid dynasty, the Turk Muhammad b. Tughdi, happened to die in Damascus in 334/946, but he and several other members of his family and retinue, including the famous black cuntich Käfür, of the able rulers of Egypt, were interred in Jerusalem.

Tabari, iii, 2128, I. 18, and others report under the year 891 that the esoteric sect of the Karmatians (g.v.) turned towards Jerusalem in their prayers. But he notes also that they kept Monday instead of Friday as their weekly day of worship and celebrated it (in the Jewish lashion) as a day of rest. Such oddities (if they really existed) were of no general significance for Islam. In their devastating raids, the Karmatians reached also Palestine, but Jerusalem is not mentioned at that time in connection with their exploits.

The absence of a strong central government during

the 3rd/9th century and perhaps also other circumstances, such in the Byzantine offensive against Islamic territories (culminating in the boasting

threat of the emperor Nicephorus II Phocas in 964 that he would take Jerusalem) caused friction between the various religious communities. Half of the outer court of the Holy Sepulchre was taken away and a mosque erected on it (later called masajid Umar, probably in order to emphasise, against Christian claims (above, | 4), that the caliph had prayed there). Shortly afterwards, on Palm Sunday 938, the Christian procession was attacked and the Holy Sepulchre damaged by fire. Even worse, and characteristic for the period, were the events of 355/966. The patriarch of Jerusalem had sought the intervention of Käfür, the black viceroy of Egypt, against the overreaching Berber governor of Jerusalem who had imposed excessive financial demands on the Christians. Kafur sent a Turkish officer for the protection of the Christlans. But the governor did not budge. When, on Peatecost, the patriarch refused to pay more than the tribute usually delivered on that holiday, the Berber incited 📰 mob; the Holy Sepulchre and other churches man pillaged and set on fire, the patriarch was murdered and his body burnt. Yahya b. Sa'ld al-Antākī, 125, who tells this story, adds that the Jews outdid the Muslims in damaging the sacred buildings. This sounds strange, considering the weak position of the Jews in Jerusalem, but perhaps finds its explanation in a cryptic remark by a contemporary Karaite scholar about dangerous Christian machinations against the Jews in the city (J. Mann, Texts and studies, ii, 18-19) and in complaints about Jews in letters sent from Jerusalem and Venice to Henry I the Fowler in 922 (M.G.H. Const., 1, 4-7).

8. Fāļimids, Turkomāns and Saldjūks (358-498/969-1009). Shortly after the conquest of Egypt by the Fățimids (q.v.), Palestine with Jerusalem came under their domination, but participated only comparatively little in the economic efflorescence of the first hundred years of their rule. Palestine was incessantly harrassed by Karmatians and bedouins, first allies, but soon (as from 363/974) separately. For about seventy years the Bana Djarrah chieftains tried to get a hold of the country including Jerusalem (Ibn Athir, x, 308, l. 17), sometimes supported by the Byzantine emperors. The rozos were particularly harrowing. The outrages perpetrated by the bedouins "were unlike anything experienced in the countries of Islam since its inception" (Geniza letter, J. Mann, Jows in Egypt, li, 181, l. 22). The details reported in

the Geniza letters are revolting.

The unceasing local tribulations were temporarily overshadowed by the general persecution of Christians and Jews ordered by the caliph al-Hakim (386-4xx/996-ross). It culminated in the destruction of the Holy Sepulchre on 28 September 1009. This extraordinary measure cannot be explained by special circumstances alone, such as the abnormal state of mind of the caliph or the Muslims' auger over the plous fraud of the holy fire (M. Canard, La destruction de l'Église de la Résurrection . . . et . . . la descente du fou sacré, in Byzantion, xxv (1965), 16-43, where the literature on the event is surveyed). The persecution was a prolonged process; that of the Jews began only in 402/1012, at a time when the Christians of Jerusalem, with the help or connivance of the bedouin chieftain Mufarridi b. al-Diarrah already tried to restore the Holy Sepulchre. Most likely, in inner turn-about of the religious policy of the Isma 98 leadership was the main cause | the persecution. Anyhow, it left Jerusalem, which had consisted largely of Christian buildings, a shambles. The earthquake of 407/1016, in which the dome of the 328 AL-ĶUDS

Sakhra collapsed, made things worse (according to medical letter, the collapse occurred on the 21 July, at 4 p.m., J. Mann, Tests and stadies, 4, 313). The persecution petered out, but the Jews and Christians were much too impoverished to be able to undo the destruction. It took almost forty years until the restoration of the Holy Sepulchre was completed.

Around the middle of the 5th/11th century, Terusalem began to take the place of Ramla 2s the main city of the country. Ramla had suffered by the earthquakes of 424/1033 and 460/1068 and by the endless depredations of the bedonins more extensively than had ferusalem (cf. Yahvā b. Sa'ld al-Antākī, ii, 201). Contrariwise, the stream of pilgrims from Europe to Jerusalem became ever stronger, the great caravan of 12,000 pilgrims from southern Germany and Holland arriving # 1065, so lively described by Lambert of Hersfeld, being one of its best known examples. It may also be that the techniques of warfare and fortifications had changed, making Jerusalem more easily defendable than a city in a flat country like Ramla. The audacity of the Banu Diarrab and other bedouin bordes forced the Fatimids to strengthen the walls of Jerusalem in 424/1033 and again in 455/1063. In the last third of the 5th/11th century, Jerusalem and not Ramia in the centre of military events.

The Saldjuk invasions set into motion motley crowds of soldiers of fortune from many nations, led by ruthless condottieri. One of these was the Turkoman Atsla b. Uvak [q.v.], whom the Fatimid government, paralysed by famine, plague and complete anarchy in Egypt, called in against the unculy bedouins in Palestine. But Atsiz turned against the Fâtimids and took Jerusalem in 463/1071 after a prolonged siege. Emboldened by his successes, he attacked Egypt itself, but there order had been restored by the Armenian convert Badr al-Diámáli [g.r.], and Atsiz was forced to retreat (469/1077). In a long Hebrew poem celebrating the Fatimid victory, a Jewish digultary from Palestine describes in detail the sufferings of Jerusalem, and in particular the devastation of its environment with its vineyards and orchards by Atsiz's hordes (ed. J. Greenstone, repr. from AJSLL [1906], 1-34). The local population rose against the barbarian conquerors and Atsiz had to take Jerusalem a second time, putting the inhabitants to sword, even those who had fled into the al-Aksa mosque. Only those who had taken refuge in the Dome of the Rock were spared. Atsiz was soon liquidated by the brother of the Saldjük Sultan Malik Shāh, Tutush, who theu was governor of Damasous (470/1078). Thus Jorusalem was incorporated in the great Saldink empire, the borders of which henceforth were given as stretching "from Käshghar to Jerusalem" (Yāfi'i, Mir'at al-dianan, iii, 139). Tutush assigned Jerusalem to Artuk [q.v.], the founder of the Mesopotamian dynasty called after him. It is not sure when exactly Artuk took possession of the city; it was III his hands in 479/1086 (Ibn al-Athir, x, 96), and given by him to two of his sons in 484/2001. In Sha'ban 491/July 2008 (Ihn Muyassar, ed. Massé, 38), that is, when the Crusaders were already on their march to Jerusalem, al-Aidal, the Fățimid viceroy of Egypt, laid siege on the city, "bombarding it from forty catapults during forty days" (Ibn Khaldun, Thur, v, 184). The two brothers surrendered, but were released unharmed by al-Afdal. How unaware the Muslims were of the magnitude of the Crusader menace can be gauged from the fact that another Saldjük, Ridwäe, a son of Turush, set out from Damascus via Nābulus to wrest Jerusalem from the Pāṭimids. But he was no match for al-Afdal's army; the viceroy returned to Egypt, leaving a small sarrison in Jerusalem.

9. Life in Jerusalem in the 4th/10th and 5th/11th centuries. Copious references in the works of Muslim authors and over a hundred Geniza letters from Jerusalem written during the 5th/11th century enable us in form a fairly substantial idea about life in Jerusalem during the two centuries preceding its capture by the Crusaders. This is particularly true with regard in the last third of the 4th/10th century, when al-Mutahnar b. Tahir and al-Mukaddast wrote, and the second third of the 5th/11th, when Nasir-i Khusraw visited the city and when the country had a short respite of comparatively normal times, reflected in the Geniza letters, between the atrocities of the bedouins and the devastations of the Turkomaus.

The Muslim geographers naturally dedicated most of their attention to the seared buildings and the fortifications, see section B. Al-Mukaddasl, a keen observer (see e.g. his remark about a bath near the Bab al-Asbat (St. Stephen's gate), which was built half in the local tradition, and half according to the Persian fashion, 440, l. 15) again and again praises the unique beauty of Jerusalem (e.g. 33, l. 16; 166, l. 2; 167, n.n.), its clean and well-stocked markets and public bathhouses, and does not forget to mention the latrines near the mosques and in the bazaars (18z, 1, 9). During the 4th/10th century, it seems, Muskin religious instruction in Jerusalem was mainly concentrated in the mosques of the Haram (comparable to what happened in other Islamic cities; see also below). In the wake of al-Hakim's persecution, some Christlan buildings might have become available for the sawives mentioned by Mudify al-Din, 264. The Persian religious group of the Karramiyya (q.v.), which had first settled in Jerusalem already around the middle of the 3rd/9th century, erected khanakahs for the needs of its members. By the middle of the 5th/11th century, the Christian quarter in the north-western part of the city, that is, around the Holy Sepulchre and other age-old churches, the Armenian quarter near St. James cathedral in the south, as well as two Jewish enclaves, one near the Western Wall, where people prayed, and one near the Damascus gate, were well-established. The synagogues referred to by Mutalihar, Nasir-i Khusraw and Kalanisi, might have been identical with the midrashs or houses of learning mentioned in a Genira letter as places where prayers were held. The Karaites lived in a separate quarter in the south of the city, called harat al-masharika, the quarter of the Easterners, since most of them had come from Persia and 'Irak.

It is difficult to form a judgment about the size of the population. Nasir-i Khusraw's 20,000 betrays only the mysterious and widely-diffused predilection for the number 20. He gives 20,000 also for Tripoli in Lebanon, and for the number of people assembling in Jerusalem during the 'id al-hurban, but Ibn Athir. xi, 20, assigns that number to the membership of the Karramiyya settled in Jerusalem alone. Al-Mukaddasi is more helpful when he says that Jerusalem was smaller than Meoca, but larger than Medina (167, l. 9), or more populous than many a provincial capital (165, l. 12). The repeatedlymentioned number of 70,000 persons killed by the Crusaders in 492/1099 can by no means 📰 used as indication of the number of the inhabitants. Many people fled into the city before the approaching

invaders, and in general, m such occasions numbers are grossly exaggerated and worthless. If the al-Aksā mosque was indeed reduced from fourteen to seven alsies after the earthquake of 424/1033 and others, the population must have considerably shrunk, possibly an outcome of the catastrophic tribulations by the bedouins in the 1020s.

The most characteristic trait of life in Jerusolem was, of course, that "no day passed without foreigners" (Mukaddasi, 166, l. 6). Pilgrims from all regions filled the city (ibid., 167, n. 12). The usage of pious Muslims to enter the state of thram [q.v.] for the pilgrimage I Mecca in Jerusalem had the consequence that the city was frequented by Muslims from distant countries, in particular from the Maghrib (ibid., 243, l. 12). Similarly, many a Jew from the Maghrib and Spain, visiting Jerusalem either = hadidi (i.e. on the holidays prescribed for the pilgrimage) or as the ud'ir (on another occasion) has left letters in Geniza. The religious ceremonies of the various communities were not always confined to the houses of worship or even the walls of the city. We have detailed descriptions of these processions and assemblies. They must have conveyed to Jerusalem a festive appearance during many days of the year.

As to the government of the city, Mukaddasi, 167, I. 7, complains that "the oppressed has no helper". But he makes similar remarks concerning other places, e.g. 448, and the Geniza letters show that the situation was not quite so hopeless. Justice was done, provided that there was someone strong and interested enough to take care of the case. Since Ramla was the capital of the province, everything had to be dealt with there, and in more serious cases appeals had to be made to Cairo. A dignitary from Jerusalem would appeal to a notable in Ramia such as "the chief physician of the dysentery department in the hospital", and ask him to bring the case of the wronged person or institution before the governor or chief kidd there, - the matter required, whereupon the latter would instruct their subordinates in Jerusalem to settle the dispute properly. In public affairs, the system worked the same way, as the edicts of the Fatimid caliphs for and against the Karaites of Palestine and the correspondence connected with these matters prove (see S. M. Stern, Fățimiă decress, London 1964; idem, A petition to the Fatimid caliph al-Mustansur, in REJ, exxviii [1969], 203-22).

Ramla was also the economic centre of the country, as many references prove. Sujiadias, or bankers cheques, for persons in Jerusalem were converted into cash in Ramia, which then was forwarded to Jerusalem, though we find also a banker, with a Persian name, in Jerusalem who issued suftadjas on Cairo. The money mostly used in Jerusalem around the middle of the 5th/tith century was the "Rumi" (i.e. Southern Italian) and Muslim quarter- dinds of the West, presumably because the pilgrims coming from those parts and from western Europe formed the majority of the customers. Oil, cheese, cotton and fruits are mentioned by the Muslim geographers and in the Geniza letters as main exports from Jerusalem. A letter from Tyre speaks of yarn sent from Jerusalem sufficient for the weaving of a thousand robes, thanb, of the bazaar type and even more of the home-made class. Since every mediaeval traveller tried also to do some business, we find in Jerusalem transit trade too, especially with Persians, bringing the heavy ibrizim silk from Khurasan (to be re-exported to Egypt), and taking with them Mediterranean goods such as coral. Jerusalem, as

becoming a holy city, affected some austerity in clothing, "Here", a silk merchant writes in a letter to Fustat, "black and sky-blue silk is worn, not crimson as in Ramla and Ascalon". Wool traders, sawmä, clothiers and tidjirs are mentioned as the prominent types of businessmen in the city. The well-developed commercial mail service connecting Jerusalem with Cairo, which was carried on by Muslims, shows that the city must have had some economic importance (Goitein, A Mediterranean society, i, 292-4).

Those newcomers who could afford it bought houses and stores and lived on the income from their rents. Others tried to do business, but complaints such = "there is no livelihood in Jerusalem", "when one exerts oneself here, the exertion works against him", m "many bave come here rich and have been reduced to poverty", are frequent. As many letters show, the town was too far away from the main stream of international commerce. Another unfavourable factor was the crushing impositions non-Muslims (or perhaps on foreigners in general). The Jewish community was almost permanently in debt to Muslim creditors, paying them exorbitant interest, because it had to deliver the yearly tributes to the authorities and others, e.g. the Ahdālh [q.c.], whether the expected numbers of pilgrims arrived or not. To a large extent, the city was m refuge for the poor, of whom their respective religious communities abroad took care in many different ways (about which social service the Geniza is again very specific, cf. Goitein, op. cit., ii, 96-7 and passim).

Jerusalem's mostly unsatisfactory economic situation might have been responsible for another negative aspect of its life during this period; despite its holiness for the three monotheistic religions, it did not become for any of them a great spiritual centre with a characteristic contribution of its own (smaller groups, such as Armenians and Georgians in the Christian side and the Karaites among the Jews, perhaps excepted). Many Muslim scholars came there to teach or to study, cf. Yakût, I, 516, 859, 887, etc.; Ibn 'Asakir, I, 397, l. 26; ii, 54, l. 3; 161, 24; iv, 153, l. 16; 154, l. 2, etc. But it is characteristic that in Yakut's Dictionary of learned men Başra occurs 170 times, Damascus 100, but Jerusalem only and in passing; in the K. al-Aghani it is not menzioned at all. Al-Mukaddasi's complaint, 167: "The mosque (that is, the house of study, see above) is empty, there are no scholars and no savants, no disputations and no instruction", was certainly an exaggeration, inspired by the deep love of the writer for his native city, as was his famous censure that Christians and Jews had there the upper hand, but Jarusalem certainly could not boast of excellence in the winner of Islam or any other fields. The creat al-Ghazali sojourned there = 488/1095 not in order to make contacts, but mim the intention to locking himself up and of seeking solitude.

The city had some importance a refuge or place of banishment for persons with unorthodox views and ways of life. This trend began already in Umayyad times (Tabari, i, 1920, l. 10; Ibn Sa'd, vii/2, 156-7). Thawr b. Yazid had leave Damescus because of his Kadari [q.r.] views and died in Jerusalem ca. 153/770 (Ibn 'Asākir, i, 68, l. 21; iii, 383-84). Tekin, the Turkish governor of Egypt (who, at his request was buried in Jerusalem in 321/933) banished thither the Sāff Abu 'I-Hasan al-Dinawari (Suyūti, flunn al-muḥūdava, i, 294). In Mamlūk times forced retirement in Jerusalem became almost customary, see | 12, below,

Jerusalem was a town of copyists, the occupation of the pious who were both learned and poor. Christian Arabic manuscripts written in the monastery of Mar Sābā near Jerusalem in the second half of the 3rd/9th century and in Jerusalem at the beginning of the 4th/20th are still extant, and marmentan colophon from Jerusalem from the year \$70 is known (J. Blau, A grammar of Christian Arabic, Louvain 1966, 1, 24, 25, 33; E. Stone, The manuscript library of the Armenian Patriaschale in Jerusalem, in Tarbiz, xii (1972), 158). Jewish copyists active in Jerusalem during the 5th/21th century give us many details about their work.

330

According to Mudis al-Dia, 263-5, the main local madhhab in the town, even before the Crusades, was Shaii'i, with a sprinkling of the Hanball, introduced by the Porsian Abu 'i-Faradj al-Shirazi, while a Hanail Turk was the \$4di, a situation similar to that of much later times.

There was a marked difference between the spirit of the late 4th/roth century and the 5th/17th one. The former was characterised by three highly interesting Jerusalemites of Persian origin and of wide humanistic interests; the great traveller al-Mukaddasi, one of the finest personalities produced by Islamic civilisation; at-Mutahhar b. Tahle, a keen and remarkably unbiased student of religions, writing in Bust, eastern Persia; and Abii Sulayman Muhammad b. Macshar al-Kudst al-Bustt, who, according to Abū Sulayman al-Mantiki, was the author of the rasabil of the 1khwan al-Safab [a.v.]. The subsequent century witnessed a narrowing down to the more specifically Islamic branches of knowledge. A typical representative of the age was Abu 'l-Fadl b. Tahir al-Kaysarani, active in Arabic language study, kadith, and, especially, mysticism; he made his extensive travels on foot, carrying his books on his back and finally settled in Hamadhan, continuing the longstanding connection between Jerusalem and Persia. Al-Musharraf b. Muradidia', the author of a book on the Fada'il al-Kuds (see | 11, below) lived in the same century. The leading scholar of Jerusalem, "the shayah of the Shafifts in the whole of Syrie", Abu T-Fath Nasr b. Ibrahim, left the city for Tyre (Yāti⁴, Mir²āt, iii, 152-3). The Jewish Gaon did the (cs. 1071). This, as well as many Geniza letters, shows that the situation in Jerusalem had become unbearable long before the Crusaders temporarily suspended Muslim and Jewish life in the city altogether.

10. Crusaders and A yyabids. The Crusaders laid siego on Jerusalem on June 6, rogg and took it by assault on July 15, penetrating into the city from three different points. The behaviour of the different groups of conquerors, Frenchmen, Flemings, Provençals and Normans from Sicily, was not entirely uniform. Tancred, the leader of the Normans, granted safe-conduct to the Fatimid commander of the citadel (the "Tower of David") and to his men. A Geniza letter reports that the Jews in the entourage of the commander were included in the safe-conduct. Thus, no doubt, the Muslim civilians in the citadel were saved as well. The same letter says also that "the damned ones called Ashkenazim" (convincingly identified by B. Z. Kedar as Normans), "unlike others", did not rape women. The of the Muslims and the Jews in the town was perpetrated out of military and religious considerations alike. The Crusaders did not run berserk, but proceeded systematically, as is shown first by the fact that they took time to collect hundreds of books. which they sold at Ascalon and afterwards. The

Geniza naturally speaks about Hebrew books, but there is no reason to that Muslim books treated differently. The fact that a number of prisoners were sold far beneath the standard price of 33 I/3 diadrs per person does not prove at all that the Crusaders were ignorant of the accepted norms; the situation did not permit the keeping of larger numbers of captives for a protracted period. But prisoners from better families, for whom higher ransoms could be expected, were retained in Antioch for years. All in all, the letters of persons actually involved in the events somehow qualify the accepted notions about the conquest of Terusalem by the Crusaders. There was a gruesome bloodbath, no doubt. But it was not as all-embracing in the summary reports of the chroniclers led us to believe.

Jerusalem became a Christian city, where no Muslim or Jewish cult was permitted and no non-Christian could take residence permanently. The mosques were turned into churches were used secular buildings. The newly-founded kingdom was appropriately called the Kingdom III Terusalem. Regnum Hierusalem, since the conversion of the Holy City into a Christian sanctuary had been the purpose of its erection. As a capital city, Jerusalem soon began to flourish. The court, the administration of the state, the erclesiastical authorities, the monastic and military religious orders were all located here, and thousands of pilgrims visited the city every year, many staying on for longer periods or for good. Besides Eastern Christians, such - Syrians, Copts, Armenians and Georgians, the inhabitants were mostly Europeans, above all French. Smaller European communities, such as Spaniards, Provencals, Germans and Hungarians, lived in compact groups around their churches and public institutions. Many new buildings were erected, of which the enlarged Holy Sepulchre was the most conspicuous. The remarkably spacious and beautiful market hall, erected the foundations of a similar Islamic building, still dominates daily life in the Old City today. Everywhere in Jerusalem the vestiges of Crusaders' activities are visible. When, after the war of 1967, the ruins of the Jewish quarter were oleared away, what is believed to be the remains of St. Mary of the Germans made their appearance.

Less than a decade after the conquest, a letter from Palestine (not from Jerusalem) reports that life in the country had returned to normal also for the non-Christian population. Jerusalem remained closed to Muslims and Jews, but, in the course III time, they were permitted to come there for business and prayer. A famous incident reported in the autobiography of Usama b. Muskidh [g.v.] shows him performing his prayers on the Temple area during a considerable stretch of time ted. P. K. Hitti, Princeton 1930, 134-5). Jewish dyers worked for the King's wardrobe in the vicinity of the palace ca. 1170.

After the decisive victory of Hattin (Rabit II 583/ July 1187). Saladin advanced towards Jerusalem and laid siege on the city. After prolonged negotiations, in which the defenders threatened to kill the Muslim prisoners and all non-combatants (so that they would not be sold into slavery), to burn all the valuables and to destroy the buildings on the Haram al-Sharif, an agreement was reached in Ramadan 583/ November 1187, which permitted the inhabitants to ransom themselves after surrender. Only the Eastern Christians remained, and Jerusalem soon assumed the character ill a predominantly Muslim city. The Muslim shrines were given back to their original destination and many Christian buildings were

dedicated to Muslim purposes. Outstanding examples were the convent of the church of St. Anne, which became the famous Salabhyya madrasa, mealled after its founder Saladin, and the Muristan, a hospital, which originally had been the church at the hostel of the Knights of St. John, The Hoty Sepulchre was left to the Christians, but the pilgrimage to it was temporarily suspended until 102.

There remained the problem of repopulation. In 587/1191 the great port city of Ascalon was dismantled and destroyed at Saladin's command, in order to prevent the Crusaders from turning it into a me base for their operations. The dispossessed inhabitants must have found new homes in the empty houses of Jerusalem, for the Geniza letters from this period repeatedly speak of a community of 'Asabila in the Holy City, and Jews certainly were given no preferential treatment. Another community listed alongside with them was that of the Maghariba-a trend noted already two hundred years before by al-Mukaddasi, see § 9 above. Individuals are described in the same source in haiting from Yaman, Irak, and Egypt. The influx of learned Jews from France attested for the period ca. 1210-15 in both literary texts and Geniza letters proves that Ayyubid rule that time must have had a reputation of an orderly government able to guarantee the safety of foreigners. But life in Jenisalem was hard, and before the 6th/tzth century was out, we already read about newcomers who had left for the greener pastures of Egypt and the port cities of the Eastern Mediterranean.

A new and catastrophic turning point in the history of Jerusalem was the rule of Saladin's nephew al-Mufazzam, the Sultan of Damascus. On the one hand, as his many inscriptions prove, al-Musazzam did much to adorn the Haram, and crected there the Hanafi college called after him, section B: but being afraid of a new encroachment by the Christians. he ordered in 616/1219 the destruction of the city with the exception of the Temple area, the Holy Sepulchre and the citadel. His apprehensions did not materialise, but his brother al-Kamil, the ruler of Egypt, in order to shield himself from the Syrian Ayyūbids, concluded a treaty with the Emperor Frederick II, ceding to him the city for ten years (626/1229). The emperor, being under papal ban, crowned himself there without clarical assistancethe last time that a monarch was crowned in Jerusalem. Again Muslims (and of course, also Jews, as proved by Geniza letter from 1236) were not permitted access to the city with the exception of the Haram al-Sharif, which remained in Muslim hands, but the kādī, the bearer of Muslim authority, had his seat outside Jerusalem (in al-Bira, near Rāmallāh, J. Prawer, Royaume latin, Paris 1970, ii, 199). The subsequent hostilities between the Ayyablds of Egypt and Syria resulted in an agreement between the latter and the Christians, which seemingly removed the Muslims even from the Temple area, m that the commander of the Templars could boast that the city was inhabited solely by Christians (Matthew Paris, Historia major, iv, 290, quoted by B. Z. Kedar, in Tarbis, xli [1971] 88). But this lasted only a very short time. The Egyptian Ayyūbid al-Malik al-Ṣāliḥ Nadim al-Din enlisted the help of the wild Kh "arazmians, who had been driven to the West by the Mongols. The Kh "arazmians overran Syria and Palestine, took Jerusalem in Rabit I 642/August 1244 and plundered and murdered in the town, desecrating the Holy Sepulchre and other

churches. The combined armies of the Kh varazuíans and at-Malik at-Salib Nadim Joined battle with the Syrians and their allles, the Crusaders, and varquished them (Djumådå I 642/October 1224). Consequently, Jerusalem manu under the domination of the rulers of Egypt, under which, after a short interval in 647/1249, when again it was returned to the Sultan of Damascus, it remained until the Ottoman conquest of 922-3/1516-17).

II. The second six hundred years

11. The sunctity of Jerusalem in Islam. Fada'il al-Kuds. The history of Jerusalem during this period was largely influenced by the enhanced religious halo it had acquired through III long struggle between Christians and Muslims. The position of lerusalem in Islam had its ups and downs. It cannot be described yet in full, since important relevant texts, such as the Tafsis of al-Mukatil (d. 150/767), the Musannaf of 'Abd al-Razzāk (d. 221) 827) and the two oldest books of Fadd'il al-Kuds still await publication (see below). An excellent discussion of the literature in the subject and the present stage of research is found in E. Sivan, La caractère de Jérusalem dans l'Islam aux XIIe-XIIIe siècles, in \$1, xxvii (1967), 149-82, and iden, The beginnings of the Fada'il al-Quds literature, in Israel Or. Stud., 1 (1971), 263-71.

It was entirely in the spirit of early Islam that it incorporated the Tewish and Christian notions of the holiness of Jerusalem and made the area of the aucient Jewish Temple into a Muslim place of worship [§§ 4-6, above). The hadiff ranking Jerusalem as the third central sanctuary of Islam after Mecca and Medina, excluding others, was formulated in the course of the first century of Islam and obtained general recognition during the second, after the status of Jerusalem had been vehemently contested as being alien to Islam, whose cradle was the Hidjaz (cf. the saving attributed to 'Abd Allah b. Mas'ad and Hudhayfa: "Even if the distance between me and Jerusalem was only two parasangs, I would not go there", quoted in M. J. Kister, You shall only set out for three mosques, a study of an early tradition, in Le Musdon, 1xxxii [1969], 173-96, where the material about this struggle is assembled [this quotation at 182, n. 39].

Both aspents, the veneration for Jerusalem and the objection to it, deepened with the increasing Influx of foreign ideas on the subject and their development by Islamic popular piety. The notions that Jerusalem was holy as the domicile of the ancient prophets and saints [see ABDAL] and **iii** the scene of Muhammad's Isrd' and Mi'radi [q.v.] (the latter was mentioned in Saladin's letter to Richard Cœur de Lion m the main proof for the Muslims' claim on Jerusalem, Sivan, Caractère sacré, tôs) were accepted by everyone; it was the more exuberant legends woven around those notions and, above all, the belief that Jerusalem would be the scene of Resurrection and of the Last Judgment, and the crude fantasies evolving from these themes, which aroused criticism and suspicion that they were local inventions destined to attract pilgrims and visitors. As Ibn Kathis, Biddya, viti, 280, 1. 4 ff., formulated it: "They (the people of ferusalem) have depicted there the spectacles of the Sirdt (the bridge suspended from the Mount of Olives to the Temple Mount, which will be thinner than a hair etc.), of the gate of the Paradise, of the footprints of the Prophet, and of the valley of Gebenna". As a result, Jerusalem during the 3rd-5th/9th-11th centuries did not com-

mand a paramount position in the religious consciousness of the Islamic world. While many Islamic cities inspired books of fada'il already by the end of the 3rd and throughout the 4th centuries, Jerusalem appears only with two, compiled during the 5th: a tract by Abn Bake al-Wasiti, a hants of the al-Alsa mosque (recently identified by M. J. Kister in the library of the al-Djazzar Pasha mosque of Acre; in the course of publication by Y. Hasson), and another by Abu 'l-Ma'ali al-Musharraf b. Muradidia, a fakth living in Jerusalem (to be edited by E. Sivan). The author of a third compilation, mainly of hadiths. Abu 'l-Kasim al-Makki al-Makdisi, did not complete his work, since he was captured and killed by the Crusaders, see above. It is characteristic that these three authors were inhabitants of Jerusalem. The often-noted astounding fact that the conquest of Jerusalem by the Crusaders and its conversion into an exclusively Christian city did not arouse any strong Muslim reaction for decades also indicates that the veneration for the Holy City had not yet become a spiritual force in Islam.

The situation changed when 'Imad a)-Din Zanki's conquest of Edessa in 539/1144 suggested to an ambitious ruler that territorial aspirations could well be underpinned by religious propaganda. The court poets and secretaries of Zank! and his son Nur al-Din took up the topic of the dishad for Jerusalem. With Saladin, both before and after 583/1187, this propaganda reached its apogee. While = Fadi'il al-Kuds work appeared during the first half of the 6th/x2th century, they became abundant and ubiquitous in the second half and in the subsequent centuries. How much Jerusalem had become = all-Islamic concern might be gauged from the widely diffused protests against al-Mu'azzam's dismantling of the city in 616/1219 and al-Kamil's ceding it to the Emperor Frederick II in 626/1220. Precisely after Jerusalem had ceased to be a military or political issue, sc. during the Mamitik period, the Fada'il al-Kuds multiplied; at least thirty are known from this period, see Sivan, Caractère sacré, 181. The exceptions taken by Ibn Taymiyya [q.v.] in his treatise in the subject were directed against the bid'as disfiguring the cult of Jerusalem; its canonical status as third in rank of the sanctuaries of Islam was never questioned.

To modern Muslims, this position symbolises the universal character of Islam. Sayyid Kuth (d. 1966) writes this in his huge work on the Kur'an with reference to Sūra XVII, 1: "The Isrd' connects the great monotheistic religions from Abraham and Islamael to the Seal of the Prophets. It combines the sites holy to the monotheistic religions with one another and it is as if Muhammad, the last of the prophets, declares by this wondrous night voyage that his message contains those of the prophets preceding him and is connected with theirs" (Fi sald al-Kur'ān, xv. 12, ll. 5-0).

theirs" (Fi salāl al-Kur'ān, xv, 12, ll. 5-9).

12. Jerusalem under the Mamlūks (648-922/1250-1516). At the beginning of this period, Jerusalem was mostly in ruins and deserted. The few Christians who remained or returned there after the sack by the Khwarazmians in 642/1244 and the Buslims and Jewa who had settled there anew, fled in 658/1260 before the onslaught of the Mongols who had reached places in far south of Jerusalem as Hebron and Gaza (latest discussion of the sources: B. Z. Kedar, Tarbis, xli [1971], 89-92). After the victory of the Mamlūks at 'Ayn Djālūt [q v] in Shawwāl 658/September 1260, Jerusalem in delinitely incorporated in their empire and was administered first by the Mamlūk victory

of Damascus. In 778/1376 the Jerusalem district was made a separate administrative unit, whose governor, styled ad'ib, or deputy of the Sultan, was directly responsible to the government in Cairo. The sanctuaries of the Haram (together with that of Hebron) were under the supervision of the "superintendent of the two holy altes", ndpir al-haramayn, who responsible for their upkeep and in charge of their endowments. The history of the period was mainly one of rebuilding the city, me section B. Monuments. While the sultans repaired or adorned the great sanctuaries and carried out works for providing them with water, or erected important institutions such as the Ashraliyya (see section B), so the amirs and princes of the Mamilûk empire, as well as of other Muslim states and private persons erected madrasas, sawiyas, khanakalis, and mausoleums, many of which are still extant, or at least identifiable. Most of these buildings were small, having the appearance of ordinary townhouses, and most probably built with the use of ruins and their materials. But some of these foundations, such = 8th/t4th century Tengiziyya college, were spacious and distinguished.

Because of its relative molation, its proximity of Egypt the absence of strong fortifications or of a garrison of any size, which might III used by a potential insurgent, Jerusalem served as a place of compulsory sojourn for discharged, distribsted, or exiled members of the Mainlük military nobility, the so-called battals. What had been in early Islam an widespread practice of high socio-economic importance. As D. Avalon, in a special study devoted to the subject, has pointed out, the Holy City was the most commonly assigned place of exile in the entire Mamiuk empire (Discharges from service, banishment and imprisonments in Mamluk society, in Israel Or. St., ii [1973], 324-49). To the many reasons for this choice adduced by the author, ibid., 333, it might be added that the authorities intended with this perhaps the repopulation of the city. In any case, these ballals, to whom fixed incomes were assigned by the government and who often possessed means of their own, were in a position to keep fine households and to leave behind them well-constructed mansions.

In the main, Jerusalem of the Mamlük period must be envisaged as a city of Muslim divines living on pious foundations and salaries. The most conspicious aspect of the members of this dominant class of Jarusalem's society was their mobility. They served, often simultaneously, in different occupations and posts, such as professors or "reputitors" in madrasas, as halibs, hadis, mudils, or heads of dervish convents. They rarely stayed | Jerusalem for good, but moved on to Cairo or Damascus or other places, often returning for some time III Jerusalem, and finally concluding their lives somewhere else or back in the Holy City. Their literary output was equally diversified, comprising several or all of the fields of hadlig, fikk (usul and furul), tofsir, stra, occasionally also Arabic language and rhetorics. Arranging and classifying the knowledge they wished to Impart under novel headings, or in the form of commentaries to other works, or in versifications, were favourite of pouring wine into new bottles.

A second characteristic of this class of echolars was the prominence of leading families which divided between themselves the most richly-endowed offices. This was, of course, nothing new in Islam. But in Jerusalem, which lived on endowments from abroad, nepotism was rife, and family rule was not always

to the benefit of scholarship or good administration (we often hear about pious foundations falling into desuctude). The most prominent family of Muslim divines during almost the entire Mamiilk period (and also in early Ottoman times), were the Banu Iba Djama'a [q.r.], who originated in Hama and tohabited in Jerusalem mansion bordering on the north-west corner of the Haram. The biographies of the more prolific authors of this family show, however, that they passed most of their adult lives in the great centres of Islamic scholarship, sc. Cairo and Damascus. In Jerusalem they mostly served Matibs and kadis. One branch of them, the ai-Khatib family, is still extant. (There are other families in Jerusalem, unconnected with them, bearing this name.) An Egyptian family, the Karkashandls, shared with them the prerogative of the office of khafibs in the al-Aksa mosque. The Bann Ghanim, also living - northern edge of the Haram, mostly held the position of heads of the large al-Salibiyya khānakāh. All these were Shāfiffs. The important Hanafi family were the Dayris, natives of Palestine. They served as Hanail judges in Jerusalem and in other cities of Palestine, in well as in Calro, m teachers in the Hanafi al-Mufagzamiyya madrasa, and one of them became nazir al-karamayn. The well-known modern al-Khalidi family (see §§ 13 and 14, below) derives its origin from them.

Besides the great families of divines, there were smaller ones, as well as unaffiliated scholars, local and foreign, who are appointed to teaching of juridical posts, or purchased them (or parts of them; positious were often held in partnershlp). Of the more distinguished scholars who passed considerable parts of their lives in Jerusalem. Ibn al-Hā'im, an expert arithmetic and the science of the division of inheritances [d. 412/1021], and Kamāl al-Dīn Ibn Abi Sharif, a native of Jerusalem and great authority on Musiim law (822-905/1419-1500), both prolific authors, should be noted. Both died in Jerusalem and were buried in the Māmillāh cemetery ['Ārif al-'Ārif, al-Mujassal fā ta'rikk al-Kuds, Jerusalem 1961, 306, 308].

Jerusalem, the city of the poor and the plous, was the proper domicile for Sufis. Muditr al-Din notes about twenty Sull convents representing most of the major orders and several less known ones. E. Ashtor, in his study on Jerusalem in the Mamlük period (the most comprehensive one me the subject, Bibliography) describes the ambivalent relations prevailing in Jerusalem, as elsewhere, between the two classes of Islamic divines, the scholars and the mystics. On the one hand, we read about members of a zawiya studying at a madrasa m about prominent scholars adopting the Suff way of life. On the other hand, the ecstatic practices of seem orders, especially the whirling dances accompanied by instrumental music (prohibited in principle by Islam) were sharply condemned. A collection | fatures in this spirit, written by an Ibn Diama's and copied many years later by a Dayri, has been described by Ashtor.

The Christians, hard pressed in this intensely Islamic atmosphere of Mamlük Jerusalem, were strengthened by the establishment of a Franciscan monastery on Mount Zion in the 1330s. Mount Zion with its many religious associations, the "Tomb of David", the Cenaculum (scene of the Last Supper) and the Dormitio (the place where Mary, the mother of Jeaus, fell into eternal sleep), was the scene of endless contests between Christians and Muslims and Lews, involving the demolition, re-erection

and renewed destruction of buildings down to the very end of the Mamluk period, section B. Other Christian buildings were also objects of attacks. The demolition and restoration in 679/1474 of the synagogue of the then small Jewish community is described in great detail by Mudilr al-Dln, 633-46, by Ibn Iyas, ii, 154-5, and in ■ book especially devoted to this matter by the Shati'l kadi of Jerusalem Ibn 'Ubayya (analysed by Goltein, in Zion, xiii-xiv [1948-9], 18-32). Against orders from Cairo, Ibn 'Ubayya three times decided that the Jewish place of workship me to be closed; it was finally demolished by mobs led by a SON skayld, Upon this, the Sultan took stem measures, Ibu Ubayya and others involved were summoned to the capital, flogged and imprisoned; Ibn 'Ubayya lost his post and ended his days in Damascus, consoling himself with writing poems; the synagogue was restored. These happenings were typical for their time and place. Ibn 'Ubayya - certainly right in asserting that the synagogue was "new", that is, a building erected after the advent of Islam and used as a non-Muslim house of worship, which was against the provisions of Islamic law. But the government, naturally, had to pay attention to the exigencies of life and the preservation of public order.

333

The impressive number of Muslim schools founded Jerusalem in the course of this period ('Ārif al-Aril, Mujassal, 236-57, describes fifty-six) should not be taken as an indication of economic prosperity. The endowments were mostly limited in size and dwindled rapidly. The governors and other officials who had often to buy their offices for considerable sums and frequently also served for only short terms, had to indemnify themselves by heavy impositions, first in the non-Muslims, but on Muslims as well, Jerusalem's only important industry (still flourishing in the 19th century), sc. the manufacture of soap made from the oil produced in the then rich olive groves of its environment, was heavily damaged by the pernicious economic policy of the Mamfak government, which anonopolised production and forced the population to buy quantities not needed by it for exorbitant prices. The constant insecurity inside and, in particular, outside the city added to the hardships of life. Early in the 16th century no one could make the hedidi from Jerusalem for ten years because bedouin anarchy prevented travel between Jerusalem and the Red Sea (L. A. Mayer, A sequel to Mujir al-Din's chronicle, in JPOS, xi [1931], 95-6, Ar. text 11-12). At that time, as travellors' reports show, there were still many unbuilt within the boundaries of the city. But the core of the Old City outside the Haram, as It appears today, we the creation of the Mamilik period.

13. The first Ottoman period (922-2247/2516-2837). The exact date of the entry of the Turks into Jerusalem during the victorious campaign of Selim I against the Mamluks in 1516-17 is not known. His successor Sultan Sulayman Kanûnî left most enduring imprints on the city: the wall, constructed between 944/1537 and 948/1541, as indicated in Its eleven decorative inscriptions, the renovated Doma of the Rock and the four beautiful public fountains, sabil, inside the city and the one men the Sultan's Pool, also created by him, at the foot of Mount Zion. The many was/s made by him and his wife Khurrem [q.v.] further contributed to the welfare of the city during his reign. The soup kitchen, 'imarci, donated by her for the feeding of the poor and of students, naturally does not operate any more, but its caul-

drons, fists of recipients and other impressive remnants can still be seen in the Haram Museum.

The Ottoman archives for the first time provide us with exact demographic, topographic and, to a certain extent, also economic data about Jerusalem. Bernard Lewis analyses the relevant material in Studies in the Ottoman Archives, in BSOAS xvi/3 (1954), 476, and Yerushalayim, it/5, Jerusalem 1953, x27-27 (see ibid., 117, n. x, further publications of his on the subject, and also his Notes and documents from the Turkish archives, Jerusalem 1952). The population movement during Sulaymān's reign is illustrated on p. x2x by lists of taxpayers: (H = Heads of households; = Bachelora; E = Exempt from the duty of paying taxes, such as religious dignitaries and insane persons):

	932/1525-6			940-45/1533-9			961/1553-4		
	H	B	E	H	В	E	H	B	E
Muslims	616	2	Е,	1168	75	34	1987	141	16
Christians	113	-	-	136	26	43	413	25	3
Jews	199	-	-	224	Iĝ	-	344	13	I
Totals	934	2	Z	1528	\$20	76	2724	179	20

Thus at the beginning of the Ottoman period Jerusalem had a population of about 4,000 inhabitants, which tripled during Sulayman's reign, (Lewis points out that the later lists might have been more complete than the first one). The slower increase of the Jewish population, which until the end of the thirtles was more numerous than the Christians, due to the fact that Safad and not Jerusalem, was the main Jewish centre around the mid-century. By far the most important revenue collected in Jerusalem was the toll levied from the visitors of the Holy Sepulchre, which also tripled during this period (from 40,000 aktas in 1525 ■ 120,000 in 1553). It was given by the Sultan = the readers of the Kur'an in the Aksa mosque. The second largest item was the poll tax paid by Christians and Jews (one gold piece per person, the total being about one half of the income derived from the Holy Sepulchre). All taxes derived from economic activities, such licenses (illisab), sales taxes in tolls on export of soap to Egypt, brought far smaller amounts.

Sulayman's wall, though a lasting monument to his munificence, also revealed that the Ottoman government was not able, not willing, to guarantee the safety of Jerusalem by administrative and military means. During almost the entire Turkish period, well into the second half of the 19th century, Jerusalem's development was impeded by this lack security. The safety of the travellers between Ramia and Jerusalem, that is, the bulk of visitors from abroad, was entrusted aiready under Sulayman to the Abu Ghosh, a rural clan after which the picturesque village Karyat al- Anab west of Jerusalem was renamed. Complaints that bedoulds murdered Muslim inhabitants, burnt copies of the Kur²ān **ill** taxed Muslim pilgrims ill their way to Jerusalem um officially noted already in 991/1583 [U. Heyd, Ottoman documents on Palestine 1552-1615, Oxford 1960, no. 43]. An imperial order of 1023/1614 exempts the fiefholders in the sandjob of Jerusalem from participation in military expeditions outside the sandiah, because this was "the border of Arabistan, where rebellious bedouins disturb the peace" (Heyd, ibid., no. 28). By the end of the 18th century Giovanni Mariti, Voyage, Neuwied 1791, ii, 301-3, reports that the Pasha of Jerusalem accompanied the Christian pilgrims under heavy guard to the Jordan, but only after having paid the usual tribute to the bedouins. Shortly afterwards another traveller, W. G. Browne, Transis in Africa, etc., London 1806, writes with regard to 1797 that the whole environment of Jerusalem was dominated by the bedouins (see Amnon Cohen, Palestine in the 18th century, Jerusalem 1973).

The root of this misery was the fact that Jerusalem was not so much administered by Istanbul as given as a source of income, albeit a very modest one. the wdit of Damascus, or sometimes to that III Sidon, or, early in the period, to that of Egypt. The mails was represented in the town by mutasailim, but once a year he himself would appear, accompanied by a detachment of troops and collect taxes (described by 'Arif al-'Arlf, Mufassal, 309-10, for a late a date as 1808). By the 18th century the manual from economic activities had dwindled to next to nothing ione list notes as income from the illisate only 500 hirush, one-twellth of that of Sidon, Cohen, ibid.) and consisted mainly in taxes and tolls on Christians and Jews. A firman by Sellm III (1205) 1791) reducing the toll usually imposed on | Jewish pilgrim entering Jerusalem from between 3 and 4 to the legal to Buruth and freeing him from any payment while leaving the city, shows that arbitrary extortions were common in those matters (M. Macos. Palestine during the Ottoman period, documents from archives and collections in Israel, Jerusalem 1970, 38).

An important source for the socio-economic history of Jerusalem under the Ottomans is contained in the sidjills of the mahhama sharfiya of the city. 'Arif al-'Arif, Mufassal, 241 fl., provides a number of specimens: a detailed list of prices by the hads "in the presence of the two muhasibs" in 970/1563, the inventory of the estate of a Christian veterinary surgeon from the same year, and prices of building lots, houses, rents, salaries and mahrs through three centuries. Other matters, like three letters concerning the revolt of the nabib al-aghidi in 1117/1705 and the demolition of his mansion, or notes about Jewish communal adiairs, also included. Only a systematic study of the entire material will provide historically valid results.

The governor of Jerusalem was a military man (a tentative list of Ottoman governors 1517-1917 in 'Arif al-'Arif, Mulassal, 317-28). The governor, the holders of fiels in the sandjak and the garrison in the town were not normally recruited locally. The hadi was sent from Istanbul and invariably belonged to the Hanafi rite. This preponderance of a foreign ruling class with no roots in the city and often connected with it only for short periods naturally precluded healthy developments. But it had also its advantages. Since few Turks settled permanently in Jerusalem, its Arab character was preserved and germs of local autonomy developed. Popular risings, sometimes deteriorating into riots, occasionally chased a particularly oppressive (or weak) governor from the city. A more constant factor was the rise of families becoming powerful by the holding of well-paid religious offices, tax-farming, the administration of wat/s and by acting as protectors of villages (in which capacity they also mostly succeeded in acquiring large holdings of land). The well-known families of the Khatib, Khalidi (see sec. 12, above) 'Alami, Anşârî, Dadjâni, Husaynî, Nashashibi, Nusayba and others, were formed or gained prominence in this period. The very considerable percentage of fair, blue-eyed, round-headed persons found in these families indicates that the local upper class, during the long centuries of Otto-

man domination, became thoroughly mixed with the many non-Arab elements passing through the city.

An interesting picture of folk life in Jerusalem is preserved in a pamphlet by Abu 'l-Tath al-Dadlani [d. 1660], entitled Diawahir al-bala'id fi fadi almazagiid. It shows the karan al-sharif as the scene of popular leasts and other mundane activities (see M. Perlmann, A sevententh century exhortation concerning al-Aqsi, in Israel Oriental Studies, iii [1973], 261-92, reproducing the Arabic original of the

Djawākir). The 19th century opened for Jerusalem ominously. In x8o8 a fire destroyed most of the western part of the Holy Sepulchre. Sultan Mahmud II granted the Grocks the right to restore the building, but the Janissaries in the town, who were angry that the citadel was garrisoned by other troops, incited the Muslim population to obstruct the repairs. A general revolt ensued. Finally, the wall of Damascus, alerted by the beleaguered mutasallim of Jerusalem, sent a detachment of Maghribi horsemen on a clandestine route, which succeeded in penetrating into the city and to overpower the insurgents. Thirty-eight of the leaders were hanged ('Arif al-'Arif, Mulassal, 356-8, quoting Mikha'li Burayk ai-Dimashki). At the time of the Greek revolt of 1821, the Christians of Jerusalem were charged of conniving with them and were in great danger. But thanks to the quick action of the wall of Damascus and the firm attitude of the bidi of Jerusalem, m harm was done to the Christions. Another will of Damascus was the cause of a revolt of large dimensions and long duration. Townsmen and fellähin alike refused to pay the heavy taxes imposed by him. He came to Jerusalem with a large army in 1823 and raised a fine of 100,000 kirrusk from the rebellious city. But hardly had he turned his back, when the population rose again; the mutasallim, who had been me a punitive expedition to Bethlehem, unable to re-enter Jerusalem; the few soldiers who had remained in the citadel were easily overpowered, and the city and the countryside atike were in full revolt. Even when the Sultan sent a special detachment which laid siege on the city, the inhabitants would not budge. Only when the balls from the canons deployed on the Mount of Olives fell into the city and set some houses of notables on fire was the resistance broken (Neophytos of Cyprus, Annals of Pulestine, 1821-1841, ed. S. N. Spyridon, Jerusalem 1938, 3-4). This time the revolt was terminated without bloodshed. But is showed that the spirit of resistance to tyranny, fully ablaze in Hellas, was not entirely absent from the Holy City

III. Modern times

14. 1831-1917. A time of radical changes. Before one half of this short period was over, Jerusalem had become preponderantly Christian and Jewish, while the Muslim population, too, had made visible progress. The unprecedented expansion of the Christians was caused by the increasing dependence of Ottoman Turkey on developments in Europe, with its rivalling states and churches, and by the upsurge of political, religious, humanitarian and scientific interest in the Holy Land manifest in many Christian countries. The ateep increase in the number of Jews, who formed the majority of the population by the end of the seventies, was a corollary of the general improvement; they formed a modest community of devout and mostly poor people.

This development was put into motion by the conquest of Palestine by Ibrahim Pasha, the stepson Muhammad 'All, in 1831. His actions, of particular

significance for Jerusalem, were inspired by his endeavour to create a strong government and to win the friendship of the European powers. He started to disarm the civil population, to break the despotism of urban families and rural factions, to raise a standing army by enforced recruitment and also to enlist the co-operation of the local people by appointments to administrative posts and the formation of consultative bodies. The Christians (and Jews) of Jerusalem were freed from the many special contributions they had to pay to local notables, permitted to repair and erect religious buildings and to work in the government. All this burt many vested interests and aroused the ire of the Muslim population in general. The fellahin, supported by the leading urban families, rose in arms and drove the Egyptian garrison from the town (1834-5). But Ibrahim Pagha quelled the revolt and vigorously pursued his aims. The establishment of the British consulate in Jerusalem in 1838 was a sign of the time.

When European intervention forced Ibrahlm Pasha to give up his conquests, the Sultan, who had just promised equality all his subjects (1839), could not turn the clock back. The trend of western penetration was strengthened by the Crimean war. in which Turkey was saved by England and France from Russian aggression. France, Austria, Prussla, Russia, Sandinia, Spain and the United States opened consulates in Jerusalem. The flags of Christian powers were now raised in the Holy City on Sundays and Holidays, the birthdays of their sovereigns were honoured by 21-canon salvoes (an honour, formerly reserved in Jerusalem for Muslim holidays and the birthday of the Prophet), and bells began to chime from the churches. At first, the Muslims in Jerusalem tried to stop these innovations by force. But such attempts were quickly suppressed and the immense material and spiritual advantages derived by the local population from the foreign activities

became evident. Naturally, the local Christians were

the first to benefit; it was in this period that certain Christian families of Jerusalem became rich and

influential.

The Latin patriarchate of Jerusalem, which had been abolished in 1291 as a result of the Crusades (being represented by merely titular patriarchs who lived in Rome), was revived # 1847 and became # powerful factor in the city. The Greek Patriarch moved from Istanbul to Jerusalem. An Anglican bishopric was established in 1841 (functioning for some decades in co-operation with Prussia). In the same year the Jewish community of Jerusalem received by imperial firmin a hikham bashi, or chief rabbi, who was sent from Istanbul and had access to the central government. The gift by 'Abd al-Medjid of the Şalābiyya madrasa (see § 10, above), the ancient convent of St. Anne, to the French emperor Napoleon III in 1856 (resulting in its restitution to its original use) and the presentation of m part of the Müristân area [see § 10, above) to Prussia, which used it for the erection of a Protestant church, palpably illustrate the new situation.

Slowly the central government was able to assert its authority over the unruly city and the anarchic countryside. At mid-century, the bedouins still plundered travellers under the very walls of Jerusalem and inside the town Christians and Jews were still exposed to arbitrary extortions by notables and officials. But administrative and military reforms, the interventions by the consulates and improved means of communications brought relief. By 1865 Jerusalem was connected with the outer

At-KUDS

world by telegraph, and in 1868 the first road between ferusalem and laffa usable by wheeled vehicles was completed. The railway followed only In 1802, and the French company building it had to insure its safety and that of its station-buildings (even that of Jerusalem) by arrangements with the heads of the villages adjacent to it. Postal services were provided by Austrian, French and other foreign agencies. There were many changes in the administration of the Jerusalem district (details in Abd al-Aziz 'Iwad, Mutasarrifi vvat al-Kuds awakhir al-Sahd al-SUthmani, in Palestine Affairs, tv [Beirut 2071], 126-41). In ■ letter to the German consul. dated # January 1872, the Pasha of Jerusalem calls himself "gouverneur de la Palestine" (M. Ma'oz, Palestine during the Ottoman period, 25), but the Terusalem administrative unit never comprised more than the southern part of the country. As from 1874 (as several times before) Jerusalem was an independen: mutagariffit directly responsible to letanbul an was headed by a rather ramified administration. having besides departments for general administration, finance, tabil (land register), wak/, security, agriculture, commerce and education, - for foreign affairs. a speciality necessitated by the many consulates and foreign nationals in the town, in the consultative bodies, both of the district and the city, Christians and Tows were represented, albeit less than warranted by their numbers.

336

The pf Jerusalem, its physical appearance and the size and composition of its population totally changed during this period. Cathedrals and churches, some new mosques, synagogues and yeshivas (rabbinical colleges), palaces of patriarchs, convents, hospices, schools (first schools for girls, Jewish 1864; Arab, a German foundation, 1868), scientific institutions, hospitals, clinics, orphanages and other charitable foundations were erected in and outside the Old City, me section B. As from 1860, the inhabitants of the Old City began to establish quarters outside, with the Jews, who were particularly closely crammed, taking the lead. For | further twenty years, the gates remained closed chiring the nights, which was not conducive to the security of the suburbs. The Muslims preferred to settle in the south (Abu Tor) and in particular north of the city, in Wadī Djóz and the hills west of it; the Greek Orthodox centred mostly in the vicinity of St. Simon, the aummer residence of their patriarch (the Katamon quarter), and the Jews founded about sixty suburbs mostly in the west. The "German colony" of the Templars in the south-west, and the "American colony" in the north, largely inhabited by Swedes, renowned as particularly roomy. Selma Lageriot's famous novel Jerusalem (1901-2) depicts, besides the religious and personal plights of Swedish pilgrims, also local representatives of Islamic mysticism, inspired probably by the imam of the Shaykh Distrah mosque near the American colony, who was a leading Sufi.

The events of the Young Turkish revolution of 1906, the disappointment following it and of World War I, with its terrible sufferings by an oppressive military dictatorship, famine and epidemics and the subsequent shrinking of the population-all these belong to the general history of the country. An often-reproduced photograph shows the British general Allenby entering the Holy City on 11 December 1917 on foot, displaying Christian humility.

15. After 1917. The military government of the British occupation army was replaced by civil administration on 1 July 1920. Jerusalem, m the

seat of the Mandatory government, of the executives of the lewish world organisations for Palestine of the national council of the Jews of Palestine, of the Muslim Supreme Council (created in 1921), the vari-Christian church authorities and other local and foreign bodies, recovered, affect slowly, from the effects of World War 1. According = the census of 1931, the population comprised 90,503 souls, of Whom 51,222 were Jews, 19,894 Muslims, 19,335 Christians and 52 others. It increased to about 150,000 at the beginning of World War II.

During the Mandatory period, important public buildings were erected, such as Government House (later the headquarters of the U.N. Truce Supervision Organisation), the Hebrew University campus and the Hadassah Hospital compound on Mount Scopus, the Pontifical Biblical Institute and the Rockeleller Archaeological Museum, the YMCA and several new churches, and a great number of schools. New suburbs were founded, some of which pulckly developed into populous centres.

The composition of the municipal corporation council experienced many changes, but always a Muslim mayor was appointed, although the vast majority of the population, and especially of the taxpayers, was Jewish. When, after the death of a Muslim mayor in 1944, the Jowish acting mayor demanded to be appointed officially, the council was dissolved and replaced by commission composed exclusively of British officials.

The Pro-Terusalem Society, whose committee comprised leading religious dignituries, prominent scholars and other outstanding Jerusalem personalities, was indicative of the hopes for co-operation prevailing in the years immediately following the arrival of the British; its subsequent dissolution manifested the change of hearts and conditions. An interconfessional meeting place of longer duration was the Palestine Oriental Society, which had its seat in Jerusalem and in which local, British, American, French and other scholars joined efforts. The newly founded Hebrew University (opened 1925), the British, French, American and Pontifical institutes for archaeological and biblical studies and the ever-increasing number of writers (a.g. S. Y. Agnon, Nobel Prize winner) and artists of all descriptions created a lively intellectual atmosphere. The Government Arab College, led by the jovial savant Ahmad Samih al-Khālidi, laid the foundations for the rise of a new generation of Arab intellectuals in the country. Younger writers connected with the Government Department of Education, such as Ishak Müsä al-Husaynl and A. L. Tibawl, published the first fruits of their pens. Jerusalem authors, such as Is'af al-Na<u>shash</u>ibi, <u>Khalil al-Sakākini and Khalil</u> Baydas, enjoyed good standing in the world of Arabic letters. Alongside with all these developments much of the traditional life of the various communities and their subsections continued almost unchanged.

The clash of the autional aspirations of Arabs and lews affected the destinies of Jerusalem more than that of any other city in Palestine. The first bloody events occurred in Jerusalem in April 1920 with several Jews and Arabs killed and many wounded. Al-Hādidi Amin al-Ḥusayni, who had been condemned to death by a military court main instigator of the disturbances and exempted from the amnesty granted by the new High Commissioner Sir Herbert Samuel when he took office, was appointed by soon afterwards as mufti of Terusalam and then elected head of the Supreme Muslim Council

created by the government (1921). For the next seventeen years al-Hådidi Amin strove for unrestricted leadership of the Palestine Arabs, which brought him into conflict with other leaders, especially the mayor of Jerusalem, Raghib al-Nashaahībī and the amir (since 1946 king) 'Abd Allāh of Transfordan. The Western Wall - Burāk [q.v.] affair, which led to the shocking events of August 1929 (when, however, Jerusalem suffered less than Safad and Hebron) greatly enhanced al-Hādidi Amīn's prestige, and m did his coffections in India and elsewhere for repairs on the Haram and the organisation of the Muslim Conference convened in Jerusalem in 1931. The burial in the same year of the Indian leader Muhammad 'All in the western portico of the Haram was another significant step in arousing the interest of the Muslim world.

The mass immigration of Jewish refugees in 1933 and after led to a general uprising of the Arab population and ferocious fighting. Internecine warfare between the followers of al-Hådidi Amin and his adversaries accreated the situation. Among the many victims were the Brilish archaeologist J. L. Starkey, famous as discoverer of the Lachish ostraca, and two fine Arabists, Levi Billig of the Hebrew University and Avinoam Yellin of the Government Department of Education, known to many students of Arabic authors of a useful classical Arabic reader.

The Peel Royal Commission, sent out in 1936 to investigate the situation, for the first time mended the creation of an Arah and a Jewish state and the conversion of Jerusalem, together with Bethlehem, into separate unit remaining under British mandate. But neither this nor any other of the subsequent attempts of the mandatory government to find a solution led to results. On 29 November 1947, the General Assembly of the United Nations adopted Resolution 189 (II) calling for the division of Palestine into two states, but united by decommic union. Jerusalem was in "internationalised".

Immediately after this decision the country was in flames. Jerusalem in particular suffered great losses in lives and property even before 15 May 1948, the official end of the British mandate. An Egyptian detachment took position in the Bethlehem area, while the Transjordanian Arab Legion attacked the Jewish quarter in the Old City. It was left by its Jewish population = 27 May and subsequently demokshed, including its old Sefaradi synagogues and the two large Ashkenazi synagogues, the Hurva (dedicated 1865) and Nisan Bak (1872), whose cupolas had been tandmarks of Jerusalem.

The ceasefire divided Jerusalem by mine slightly west of the western wall of the Old City. This left a number of predominantly non-Jewish quarters within the Israeli sector, while Mount Scopus with its University and Hadassah Hospital compounds formed an Israeli enclave, which soon became useless, since the free access to it, envisaged in the armistice agreement with Transjordan of 3 April 1949, was never granted. East Jerusalem and cut off from its electricity and water supply and from it direct routes to the West and the South. Both parties had to work hard before a semblance of normality was restored.

On 13 December 1948 the Transjordanian parilament resolved the annexation of the areas of Palestina occupied by the Arab Legion. Israel followed suit by transferring its parliament from Tel Aviv to Jerusalem in February 1949 and proclaiming Jerusalem its capital on 13 December 1949. Both actions

were in contradiction of the U.N. resolution of November 1947, which had foreseen Jerusalem as a corpus separatum. The matter came up repeatedly in the U.N. until 1952, when it was left dormant, matil the war of 1967 created an entirely new situation.

The history of the Israeli sector of Jerusalum during the years 1948-1967 lies outside the scope of this article. Suffice it to say that during this period it received most of the administrative and cultural edifices modern society nords. The eastern sector had lost its status m part of a capital, but still was the main city of the West Bank and developed also a centre of tourism. It expanded greatly towards the north, engulfing Shaffat and other villages. Important public buildings, founded by both local and foreign authorities, were erected and stately new hotels were built to cope with the developing tourist trade. 'Arif al-'Arif, a former senior official of the Mandatory regime and meritorious author of books | Jerusalem and on the Beersheba district and its tribes, became mayor of Jerusalem. The last Jordanian mayor was Rühi al-Khatib (Rouhl III Khatib) of a Hebron family, thus personifying the considerable influx of Hebronites into Jerusalem during its Jordanian period. The ups and downs of inner-Arab politics with regard to the legal status of Jerusalem and Jordan's rights on it belong to history, Jordan's rule left a permanent imprint by the restoration work carried out in the haram al-sharif, in particular, the golden dome and the ceramic inscriptions on the Dome of the Rock. The murder of King Abd Allah while proceeding from the Aksa mosque on 21 July 1951 did not have the far-reaching consequences expected by his assassins. Fires broke out during this period both in the Holy Sepulchre and the Aksa mosque, but did not give rise to any demonstrations or diplomatic moves. The visit of Pope Paul VI in January 1964 to both sectors of Jerusalem showed his deep concern for the Holy City.

The war of 1967, which lasted in Jerusalem only three days (Monday-Wednesday 5-7 June) caused loss of precious lives, but comparatively little damage. The Jordanians had occupied the U.N. headquarters and tried to encircle the new city from the south, but this attempt feiled. The main fighting was in the north. After baving taken the positions on the north-eastern hills, the Israeli forces entered the Old City from the St. Stephen's (Lions) Gate, Båb al-Asbåt, finding but little resistance. The barriers between the two sectors of the city were removed, the eastern sector was immediately connected with the Israeli water system and received other municipal services and on 28 June 1967 the inhabitants of the two sectors were permitted to move freely throughout the town.

Naturally, this sudden turn of events at first had a stunning effect on the population of East Jerusalem. There were also great socio-economic difficulties. The middle class, especially the circles connected with the Jordanian administration and courts, was particularly affected. But the enormous expansion of the city in the subsequent years, which provided work and income for almost everyone, greatly alloviated the economic situation and brought about many contacts between the two parts of Jerusalem, But this by means solve the political problem. Strikes and acts of terror were not uncommon, but under the leadership of Teddy Koliek, mayor of the united city, the policy devised and implemented was one of non-intervention in the daily life and communal institutions of the Muslim population. The most conspicuous expression of this policy was to be found in the exclusive control which the Muslim religious institutions retained on the mosques of man Temple Mount and in the continued independent activities of the Muslim Wahf and religious courts.

The declarations and actions of the Israeli authoritles aiming at the "reunification" of Jerusalem were immediately followed by resolutions of the General Assembly and the Security Council of the U.N. calling for a return to the status quo prior to the war, as well by protests on the side of Muslim bodies all over the world. The creation of a huge square in front of Western Wall and of secure approaches to the inner city involved the demolition of a considerable number of Arab dwellings. Although such measures had been envisaged already in Ottoman times and although the inhabitants were indemnified, these were, of course, grave actions. Relevant complaints were submitted by Jordan to U.N., as from June 1967 but were described by Israel as grossly exaggerated. The fire damage caused to the Aksh mosque on 22 August 1950 by m deranged Christian tourist from Australia made great stirrings in the Muslim world and it took some time until the truth penetrated.

About a year after the fire, the Muslim Council began repairing the damage caused by the fire. The repairs took several years and are practically completed. During the process of the work many parts of the mosque were built anew, including areas which were not damaged during the fire. With the funds of the Muslim Wah several ancient drinking fountains and the market of the cotton merchants were restored, existing mosques were repaired, and two new

mosques built.

Besides the monuments described in part B. and the vibrant folklife in the Old City, Jerusalem offers much of interest to the Islamist. The Palestine ("Rockefeller") Museum contains unique exhibits from Khirbat al-Maidiar [q.v.] other treasures of Islamic art and archaeology. The Khalidiyya library in the Old City possesses valuable manuscripts, including some not listed in the Barnamadi al-makiaba al-Khālidiyya, Jerusalem 2318, and so does the library of the Hebrew University. The Oriental reading room of the University library is an exceptionally good working library for Islamic studies. The Institute of Asian and African Studies of the Hebrew University harbours, among other collections, a Concordance of Pre-Islamic and Early Islamic Poetry, comprising at present over a millionand-half index cards, while the newly created L. A. Mayer Memorial Institute III Islamic Art (officially opened on # October 1974) can boast of exquisite examples of Islamic art and workmanship,

B. MONUMENTS.

The Islamic monuments of Jerusalem reflect at the same time the unique character of the Holy City itself with its complex memories translated into major works of architecture or into mystical and liturgical associations and the pecularities of the Muslim rule of the city as it has been outlined in the historical section A of this article. With the Dome of the Rock, Jerusalem possesses the first consciously-created musterpiece of Islamic art, while the city remains unique among almost all Muslim citles in the time in which its Muslim monuments aimost entirely concentrated in one part of the city,

or near the Haram al-Sharif (a.g.). The first feature reflects the singular position of Jerusalem in early Umayyad times, while the second one is a direct result of the city's unique character. Any understanding of Jerusalem's monumental history requires, therefore, both an awareness of the city's archaeology, i.e. of its own peculiar relationship between complicated topography and remains from former civilisations, and a knowledge of the types of official, religious, emotional, and financial investments which Muslim culture put into it various times. As has been shown in the historical pact, the latter changed considerably over the conturies and the changes affected the growth and the meaning of monuments in a way which is totally unique in Islamic history. While the presentation which follows is primarily historical, it should be borne in mind that eventually a similar survey could and should be made quarter by quarter, or else from the point of view of the type of political or pictistic associations which have surrounded the Muslim monuments of ferusalem.

There is no complete study of Jexusalem's Islamic monuments as whole. The most thorough investigation is that of Max van Berchem, which utilizes simultaneously inscriptions, architectural remains. and written sources, especially the invaluable guidebook of Mudile al-Din. Since his time a number of monographs have modified our understanding of the two main buildings on the Haram (we will use the term for convenience's sake, even though it did not become common until the Ottomans, see al-HARAM AL-SHARIF), the Dome of the Rock and the Aksa mosque, while recent and still unfinished excavations to the south and southwest of the Haram have introduced a large number of new elements in any understanding of the city in early Islamic times. A survey of Jerusalem's Ayyūbid and Mamlûk remains has only recently been initiated and very little has been published in far. The bibliography which follows this essay gives idea of the considerable amount of information we possess about Jerusalem. but this very abundance identifies the main problem. faced by the investigator of the city's monuments. which is to determine what in them is typical of Islamic culture as a whole and what is unique to a unique city. We shall return to this question at the end of our survey. In the meantime, I has seemed preferable to describe the city's growth chronologically and to identify in it four major periods of development: (1) early Islamic up to the middle of the 4th/10th century; (2) from the middle of the 4th/roth century to the Crasades (492/1099); (3) Ayyubid and Mamluk periods, from the time of the reconquest at the end of the 6th/12th century to ea. 1500; (4) Ottoman period. No mention is made of the city's development after its awakening to the modern world in the 19th century, for by then we are no longer dealing with an Islamic city in the traditional sense but with a modern town searching for ways to accommodate its own unique spiritual and emotional values with the pressures of contemporary life. Much thought has been given to these problems in Jerusalem since the first reports sponsored by British mandatory authorities and by various ecclesiastical groups. Their investigation and discussion belongs, however, to modern urbanism rather than to the understanding of a Muslim city.

1. Early Islamic, until the middle of the 4th/20th century.

All later developments in the monumental history of Jerusalem were affected by the ______ of the

city's conquest and by the circumstances surrounding its (irst Muslim settlements. However uncertainly known the actual events of the conquest may have been, one key archaeological point is clear: the huge Herodian setting for the Jewish Temple on the eastern side of the city was standing in ruins; many courses of its magnificent masonry, most of its gates, possible fragments of its towers could still be recognised, and its surface as well as the surrounding areas were littered with easily-accessible stones from its constructions. For scriptural reasons, the Christians had left the Herodian space unused except for a small and comparatively late memorial church to St. James in the south-western corner. South of the Temple there were Christian hostels and monasteries, but apparently no major living areas, for the Christian city was concentrated in the western side of the town, around the hills of Zion and Golgotha, with the Holy Sepulchre and its attendant constructions as focal points. Whether or not there was a Byzantine wall enclosing the whole of Zion hill and the spur of Mount Moriah which overlooks Sileam from the north (the so-called wall of Eudocia) is still a most question, but seems likely.

Almost as soon as the formal take-over had been completed, the Muslims appropriated for themselves the Herodian Temple area for their own administrative and religious purposes. The reasons for this act were many. It was a large empty space in a city in which by treaty the conquerors me not allowed to expropriate Christian buildings; the early Muslims were under the influence of Jewish converts with presumed knowledge of the area's boly significance; the Muslims may have wanted to show their opposition to the Christian belief that the area must stay empty; and, finally, the Muslims themselves may have had a spiritual attachment to Jerusalem before conquering it, though the possibility is difficult to demonstrate. But regardless of the reasons, the key point ill that m huge space became available to the new sulture in a striking location overlooking most of the city. It me furthermore be deduced from variety of later developments that the earliest settlements by Muslims took place in the sparsely populated area south and south-west of the Temple,

There began then a monumental and ideological lalamisation of an ancient site, for which we possess a rather remarkable series of documents, even though all of III concrete modalities in still far from being clear. What occurred in effect is that the flustims provided new and highly individual meanings to an existing space with different meanings. The following chronological scheme can be provided for this unusual development, although, in will be seen, much in it is still hypothetical.

First small "rudely built . . . quadrangular place of prayer" (as described by the western pilgrim Arculfus as, 680) was erected. It was mostly in wood and set somewhere in the midst of the Herodian ruins. Nothing is known of its internal arrangements, but it was probably a typically early Islamic hypostyle mosque. Its exact location is also unknown, although it is likely but by no means certain that it was not far from the place of the present Aksā mosque. This building probably remained until the first decade of the 8th century, but, as will be seen below, there is a possibility that already under 'Abd al-Malik a new building was begun. There is no textual or archaeological information as to whether any of the newly found buildings south and south-west of the Haram belong to this very first period, but the possibility cannot be excluded.

The second step in the development of the Herodian site coincided with the rule of 'Abd al Malik, Its most remarkable monument is the Dome of the Rock completed in 71/691. Often described and often studied, it consists of two octagonal ambulatories around a dome-covered cylinder, 30.30 m. high and 20.30 m. in diameter. The dome is set over a huge rocky outcrop with an underground chamber. The building is provided with four axial gates preceded by often redone porches. The building is a remarkably thought-out composition whose every detail in plan and in evaluation has been most accurately measured so as to create the most impressive effect. Its conception, and almost every architectural detail in its interior arrangement (piers, columns, capitals, arches, etc.), belong to the architectural reportory of Bysantine art and more specifically to the martyrium tradition of Jerusalem buildings like the Holy Sepuichre in the church of the Ascension. It is from the same tradition that derives its internal decoration of marble panelling and especially of mosaics covering almost all wall surfaces above the capitals and comices of piers and columns. There is both literary and archaeological evidence that the early building was also covered with mosaics on the outside. The subject matter of these mosaics is also derived from earlier artistic traditions, mostly Mediterranean, but also with a few thomes of Iranian origin. These mosaics we often considered as typical examples of a pre-Islamic way of decorating the interior of major buildings. This is true to the extent that a rich variety of vegetal and occasionally geometric motifs, superbly adapted to the shapes provided by the architecture, have any number of models in earlier buildings, were though rarely preserved in such spectacular fashion. But there is quite a bit of originality in these mosaics as well. In subject matter two points - of importance. One is will presence of an imperial jewelry of Byzantine and Iranian origin on all wall faces directed toward the centre of the building. The other one is the absence of any representation of living beings several decades before we become aware of a partial Muslim prohibition of images. A long inscription, however, comprising primarily Kurbanic quotations, has been shown to fulfill an iconographic purpose by its choice of passages, as will be discussed below. Stylistically, the mosaics are perhaps less unique, although their effect as a sort of sheath over the architecture rather than as a series of independent panels emphasising each part of the building may be understood as prefiguring the later use in Islamic art of devoration overwhelming the architectonia values of a monument.

The Dome of the Rock, as it appears today, is not entirely in its original shape. Beyond numerous repairs and restorations carried out over the centuries on basically original elements (particularly under the Fatimids and after the Crusades), there are two areas where later changes have completely obliterated earlier features. Inside, all the ceilings, including the dome, appear in Mamilik or Ottoman garb and the whole exterior has been redone with superb coloured tiles in the roth/16th and 11th/17th centuries. In the 1950s and 1960s the building was virtually taken apart by a team of Egyptian architects and engineers supported with contributions from the whole Muslim world and then put back together and restored in a particularly successful manner. Every part of the building put back in the manner which reflects the earliest information we possess about it.

The most frequently-raised question about the

Dome of the Rock is that of its original purpose. Three explanations are available. One is that it a building commemorating the Prophet's Night Journey and Ascension (isra' and mi'radi); the second one is that it sought to replace the Meccan Ka'ba for Muslim pilgrimage; the third one is that it was a monument celebrating the new faith's presence in the city of Judaism and Christianity and its belonging to the same monotheistic tradition. Too many arguments (see above, section A and articles by Goitein and Grabar) exist against the second explanation maintain its possibility. The first one has the advantage of corresponding to the eventual association which was and still is made by Muslim piety, but there is much doubt about the likelihood of its existence at the time of 'Abd al-Malik. The third explanation agrees with the political and psychological circumstances of the times and with the internal evidence III the decoration (with its royal symbols strung like trophics around the centre of the building) and especially of the inscriptions (which contain the whole Christology of the Kur'an). For the history of art, the Dome of the Rock would then appear as an extraordinary monument which succeeded in providing new meanings to traditional forms.

But the construction of the Dome of Rock raises a number of additional problems which pertain to the archaeological history of the city of Jerusalem. It is on an artificial platform situated excentrically to any other part of the former Temple area. The platform was reached through a series of stairs, some of which must have been there at the time of 'Abd al-Malik. Since we know otherwise that at the time of the Muslim conquest the Temple area was in ruins, we must conclude that by 7t/69r a considerable amount of work had already been accomplished on the walls and pavements of the area as well as on its gates. The nature and extent of this work cannot be determined but, if it is true, as H. Stern believes (contra Creswell and Hamilton) that the earliest Aleşă mosque may have been begun at the time of 'Abd al-Malik, then we must also assume that much of the south walls of the Haram and the Double and Triple gates had been rebuilt, for, as Corbett and Monneret de Villard have suggested, their plans and location may be Herodian but their construction and completion are early Islamic.

Be this it may, the third step in the transformation of the Temple area by the Muslims can be dated to the time of si-Walld (86-96/705-15). It is to him that we owe the first clearly documented Aksā mosque (see, however, the controversies between Stern, Hamilton and Creswell). It was a building consisting of an uncertain number of naves perpendicular to the sible wall with a central nave provided with a dome (following here Stern contra-Creswell). The plan was unusual one for its time. and should probably be explained by the fact that the substructures of the Haram platform which had to be restored by this time consisted of north-south arcades serving as supports for the building above. The Aksa mosque was decorated with mosaics and with marble and was also provided with remarkable carved and painted woodwork, now kept in the Palestine Archaeological Museum and in the Aksa Museum. One last point should be made about the Aksh motque. Although its internal organisation was but a modification of the hypostyle tradition prevalent at the time, it was quite consciously located on the same axis as the earlier Dome of the Rock and thus was part of an architecturally thought-out entemble comprising a congregational and a commemorative building, just as in the complex of the Holy Sepulchre in the western part of Jerusalem. Although their exact chronology is still difficult to establish with any sort of precision, we may also assume that the group of large buildings with courts and with long rooms recently excavated to the south and to the south-west of the Haram had been completed by the time of al-Walld. Whether they were the palaces and administrative buildings (der alimira) mentioned in papyri, whether they were commercial establishments or more simply the residence of whatever Arab families and class moved into the city in early Islamic times, they form a striking monumental ensemble of large constructions along streets and stairs (partly Herodian) leading up to the Double Gate, at the time the main entrance into the Haram at-Sharif, or, we probably must call it, the mashid band al-makdis, the mosque of Jerusalem. It is at this time that we begin to have the first indications of specifically Muslim associations with the Haram, whether strictly new ones pertaining to the life of the Prophet or Muslim versions of the fives of earlier prophets. These developments are, however, very difficult to date properly. What can be ascertained is that by the middle Umsyyad period a uniquely original architectural composition had been created: two major buildings on a partly refurbished enormous space luberited from earlier times which, tullike the Roman temple in Damascus, was too large to be transformed into a single building for new Muslim functions, but which therefore ended up by acquiring particularly

The following two centuries are the least documented in the monumental history of Jerusalem. Yet their importance || considerable, not so much by their contribution to the architecture of the city (consisting mostly of repairs and restorations, including major reconstructions of the Aksa mosque under al-Mansitr and al-Mahdi) as by the indications they provide of the continuing and of the Muslim community at large for its sanctuary in Jerusalem. Part of this concern is purely practical; walls are built up or repaired after earthquakes; the area of the Haram is officially measured and apparently surveyed, as appears from inscriptions which are ---main for this aspect of Muslim activities on the Haram. Each gate was provided with a wooden porch ordered by the mother of al-Muktadir, who also paid for the repairs of the Dome of the Rock's cupola. A portico was built on the western and northern sides of the Haram, thus providing a formal frame to the sanctuary; some of the minarets may be of that time.

But another concern is far more interesting. It consists in the growth of plous associations. The latter certainly translated into buildings, although ____ of the latter are known to have survived information is entirely through the testimony of geographers like Ibn at-Fakth or at-Mukaddasl or through littérateurs like Ibn 'Abd Rabbih. Three themes appear in these associations which will remain constantly in the religious and architectural history of the Haram: the Night Journey of the Prophet commemorated through a score of makama and of gubbas, ancient prophets commemorated either through gates or through mibrabs, and eschatology commemorated by the new interpretations given to the strange Kubba al-Silsila (Dome of the Chain, probably the Treasury of Umayyad times, wan Berchem) as the place of Judgement, by a subbs of

the Trumpet, or by the appearance of a new name to the Golden Gate, the Gate of Mercy. The theme of eschatology should probably be related to the development of the Muslim cemetery to the east of the Haram into something more than just a local cemetery, for even the rulers of likebidid Egypt wanted to be buried there. But it is also true that funerary cults grew at that time in many parts of Mi Muslim world, although Jerusalem, the town of the Prophets and of Resurrection, played a unique part in this growth.

Altogether, then, if one takes the time of al-Mukaddasi (ca. 385/985) as the terminal point of the first period in the monumental history III Jerusalem, one can clearly see that its most remarkable achievement was the transformation of Herod's ruined Temple into a unique Muslim sanctuary, by then aiready accepted as the third most important sanctuary of the faith. Dominated by the Dome of the Rock, high above the whole city, comprising a large mosque with a cupola, full of new commemorative buildings of varying sizes, partly surrounded by a portico, with almost all of its gates underground leading to the Muslim quarters to the south and possibly also to the west, the Haram must have been a very impressive sight, a fitting tribute to the Umayyad princes who initiated the transformation of an empty space full of memories into a Muslim holy place. But beyond such conclusions as can be drawn from the buildings of Jerusalem in early Islamic times for religious and cultural history, they also lead to a number of important conclusions for the historian of art. For, on the one hand, they illustrate the ways in which pre-Islamic themes have been transformed into Islamic ones and, on the other, they are our best examples of what may be called an imperial Islamic style initiated by the Umayyad dynasty.

Little is known about Islamic constructions outside the Haram area. From an inscription analysed by van Berchem and from a passage in the Christian chronicler Eutychius (Mattriaux, Ville, no. 24), it appears that in the early 4th/toth century a mosque was built within the compound of the Holy Sepulchre in contradiction to the early treaties between Muslims and Christians. Nothing is known of its shape.

1. From m 338/950 to the Crusaders.

In many ways, the second period is nothing but a continuation of the first one. Repairs and restorations are recorded in texts and in inscriptions as buildings deteriorated or at they were damaged by man or by nature. But two phenotnens identified primarily with the Fatimid dynasty appear to indicate more significant changes.

The first of these affected the whole city of jerusalem. It is that under the caliph al-Zähir, probably around 421-4/1030-3, the walls of the city were rebuilt and, min importantly, shortened on the south side of the city to approximately their present position. What this meant is that the traditional Muslim quarter to the south of the Haram was abandoned and that the underground gates found there were blocked. The main entrances into the sanctuary were shifted to the west and possibly to the north. This involved certain changes in the names of gates (cf. Haram), but it also involved a major building-up of the western gate, the present Bāb al-Silsila, and Nāsir-i Khusraw, who we there in 438/1047, describes the brilliance of its mosaics, apparently similar to those of the Aksa mosque which we Făținuld (cf. below). It is also from we

Persian traveller that me min infer that the commercial centre of the city had by then shifted to the area west of the sanctuaries, probably to where it is now.

The second phenomenon is the rebuilding of the Aksa mosque also under al-Zähir. Probably as a reflection of a depopulation in the city, the mosque diminished in size to approximately its present dimensions, but the most remarkable feature of the Fățimid mosque consists in its mosaic decoration. studied by Henri Stern who showed, among other things, that the Fatimids used Umayyad models in their decoration. If one considers that a number of additional buildings were built on the Haram-for instance a mosque near the Golden Gate-and that the imperial mosaic inscription on the triumphal arch of the Akså is the first one in Jerusalem to begin with Kur'an, xvii, 1, the isra' verse, one may propose the hypothesis that there had been a formal attempt by the dynasty to build up the holiness of Jerusalem's sanctuaries. This development, which was cut short in the second half of the 5th/12th century by political difficulties, must probably be connected with other Fatimid activities in Palestine, as exemplified for instance in the celebrated minear now in Hebron (G. Wiet, Notes d'épigraphie arabe, in Syria, v [1924], 217 ff.) and even with the earlier destruction of the Holy Sepulchre under al-Häkim. All these matters still require fuller investigation. What is important at this stage is that, even though the city had diminished in size, the Fatimids, probably for religious and political reasons of their own, sought to increase both the splendour and the meaning of the main sanctuaries of Jerusalem.

It should also be pointed out that it is under the Fâțimids that we have our first evidence for the use of the citadel on the western side of the city. The evidence is primarily archaeological.

3. The Ayyubids and Mamiuks.

As in well known, the Crusaders took over the Haram area and transformed it into a palace and eventually into the military and religious centre of the Knights Templar. Since the earlier underground gates had been blocked, the Crusaders made a new gate, the so-called Single Gate leading directly into the Stables of Solomon in the north-eastern part of the sanctuary. In addition, the Crusaders modified the Holy Sepulchre and built many new churches, of which, like the Church of St. Anne, still survive, even though in a slightly remanticised 19th century garb. Much in the city's topography during the time of the Latin Kingdom is not clear, but it does seem that they initiated many buildings in the valley immediately east of the Haram and thus began the process of partial levelling of the Haram's platform with its western surroundings which has continued from that moment onwards. Finally, it should be noted that the Crosaders were very active builders and, even though much of their work was destroyed, it provided an enormous supply of already-carved stones with the result that, in addition to remaining completed units such as the transept of the Akaā mosque, a large number of subsequent Muslim buildings, especially in the area of the Bab al-Silsila or in adjoining streets, contain decorative units taken from Latin constructions.

It is possible to discuss more entity the monuments built in Jerusalem between 1200 and 1500 for two main reasons. One is that the nearly ninety original monuments which remain (not to speak of those mentioned in Mudjir al-Din's chronicle) have

not been studied with as much attention as the earlier ones, and stylistic or functional differentiations which doubtlessly occurred cannot therefore be identified as precisely. The second reason is that, partly because of their number and partly because they in functionally and even stylistically relatable to monuments found in Cairo, Damascus, or Aleppo, these monuments lend themselves more readily than the earlier ones to typological rather than to chronological definition.

One kind of architectural activity which followed the Crusades does, however, escape this general rule. It consisted the task of re-Islamising the city. Churches were destroyed or transformed into mosques and the two main sanctuaries on the Haram were systematically cleansed of as many traces of Christian occupation as possible. This activity was particularly notable in the Akşā mosque, where Saladin put up a new mibrib with a rare mosaic decoration and to which he transported Nür al-Din's celebrated minbar made especially for Jerusalem and which was tragically destroyed in 1969 (cf. the historical section, § 15, above). In addition, Saladin and his immediate followers sought to repair, rebuild, and resanctify all the holy places which had existed on the Haram. As van Berchem showed on several occasions, this task was carried out in some confusion and led to any number of misunderstandings. On the whole, however. It seems that the old sanctuary was returned quite rapidly to its former shape but not necessarily splendour, for, as will be shown presently, a totally new taste affected its western and northern sides.

One can put into the same category of refurbishing the city of Jerusalem the rebuilding of its walls. Inscriptions, texts, and masonries are for the time being quite confusing for the establishment of a coherent chronology of the fortifications from the 7th/13th century until the Ottomans. It is not even certain whether the present walls coincide with those rebuilt under the Ayyūbids, although what differences may have existed were probably minimal. The citadel — the western side of the city, whose use by the Muslims before the Crusades is still uncertainly documented either archaeologically or through literary sources, was entirely redone and remained in —— as a typical late mediaeval kal's until very recent times.

Within a walled city with its restored ancient sanctuary and with a diminished Christian population, menormous building activity took place over three centuries. Its first characteristic is that it was almost entirely concentrated - the Haram proper and its western and northern sides, either alongside the sanctuary itself or along the streets leading it. Only two Muslim buildings are known with certainty in the whole western half of the city. Its second characteristic in that it was a continuous activity. It is true of course that one was recognise and identify certain particularly active moments, such as the twenties and thirties of the 8th/14th century, during the times of the remarkable governor Tenkiz melse the times of Karitbay in the 9th/15th century. But these clusters of activity, which deserve individual monographs, should not hide the fact that buildings were creeted all the time and by an extraordinary broad social spectrum of sponsors.

The functions of the buildings are typical of any place in the Mamfük period: schools, orphanages, libraries, modrasas, baths, hāmahāks, ribāts, hospitals, commercial establishments, caravanserais, public latrines, fountains. The only apparent peculiarity of

Jerusalem when compared to Caire or to Aleppo is the preponderance of purely charitable institutions private mosques, madrasas, and mausoleums, the latter being quite scarce. This latter point obviously reflects the practicality of Muslim piety as well the fact that, a politically provincial city, Jerusalem did not lend itself to the conspicuous consumption inherent in the construction of mausoleums.

Few plans and elevations are available for these buildings but, when they do exist, the plans appear to be variations of the ubiquitous central plan (often covered, either because of the small size of the buildings or because of the impact of another tradition of construction than Cairo's) with one to four twins. The most visible feature of each building was always its façade, and ferusalem is provided with an unusually wide range of Mamiūk portals. There are few variations in their plans, but many in their elevation, especially in the types of vaults used. Superb makarnas series coexist with simple barrel vaults and the zone of transition of the Bab al-Silsila's domes exhibit the remarkable range of models available to local mesons and architects. Of all the buildings the most remarkable are the Tenkiziyya, the Arghūniyya, and the Sük al-Kattanin for the 8th/r4th century and the Ashraflyya or the jewel-like fountain of Ka'itbay on the Haram for the 9th/15th one. The construction is throughout of stone and all monuments exhibit the superb technique of Palestinian masonry: closely jointed courses often of stone of alternating colour, joggled voussoirs, sobriety of decoration consisting usually of mouldings around openings or of inscriptions. While it will eventually be possible to determine a number of stylistic details which will identify a Jerusalem style of architecture, the main impression given by most of these monuments is that they exemplify the consistently high standards of Mamilia architecture all over Syria and Egypt.

The more important aspect of all these constructions lies in the man in which they have transformed the Haram. For instead of being simply an area surrounded by a portice and reached through a number of more or less monumental gates, the northern and western sides of the Haram became a show place of facades to buildings whose function was no longer connected to the Haram but received a certain value or grace from it. Thus the most magnificent gateway on the Haram is not an entrance to it but to the bazaar of cloth merchants. The older, traditional gates with their consecrated in lost their importance. The Haram itself became cluttered with all sorts of new buildings which detract by their very multiplicity from the main sanctuaries, inasmuch many of them were for private or restricted use as places of prayer or for public charity rather than for the formal expression of the faith's beliefs. What seems to be involved is at the same time a different, far practical and more pluralistic piety, and also m different taste, no longer the imperial taste of the Umayyads nor probably that of the Fățimids, but the taste of a wider social order which sought individual salvation through works rather than through the monumental glorification of me faith.

4. The Ottomans.

During the first years of Ottoman rule, earlier practices continued and a madrus like the Risasiyya (947/7540) still follows Mamilik practice and Mamilik ideals. A large number of fountains we even later.

But the main offort of the Ottoman dynasty in its heyday was once again imperial one, and it is therefore not an accident that its two most spectacular achievements are still among the most impressive monuments of the city. One is the tile revetment of the Dome of the Rock and the other one is in the walls and gates of Jerusalem. Both are essentially roth/roth century achievements attributed to Sulayman the Magnificent, and it is important to note that neither one sought to be functionally or spiritually original. For regardless of their effectiveness, which is striking indeed, their main point is that they have managed to capture two consistent themes in the monumental history of Jerusalem: the creation of a new Muslim holy place and the symbolic as well as physical separation of the Holy City from the rest of the world.

After this century, the main activity of the Ottomans consisted in constant repairs of the main sanctuaries of the Haram. The quality of these repairs decreased with the centuries of Ottoman wealth decreased and as Jerusalem declined in population and importance, until the second half of the 19th century brought on new, European-centred, significance and architecture into the city.

In the most recent years, two different types of investigations have been carried out in Islamic Jerusalem. The first one is the continuation and partial publication of excavations to the south and southwest of the Haram. These have by now fully demonstrated that the Umayyads utilised and probably rebuilt the staircases of Herodian origin leading to the sanctuary. See N. Avigad, Archaeological discousries in the Jewish quarter of Jerusalem, Second Temple period, Jerusalem 1976, and Mayer Ben-Dov, Harkiridim min hatihufa hamuslamit hakaduma belasor har kabayit, in Qadmoniot (Jerusalem 1972).

The second group of investigations are the studies of Mainfük monuments by A. Walls and M. Burgoyne, published in vols. Iii (1971) onwards of Levant, Inal. of the British School of Archaeology in Jerusalem, and with a checklist by Burgoyne, The architecture of Islamic Jerusalem, British School of Archaeology in Jerusalem, 1976. In addition to providing accurate plans and elevations of buildings to the west of the Haram, these studies have at times dealt with broader issues and a particularly original note by A. Walk in Levant, viii (1976), 159-61, suggests that the construction of the minarets of Afdal 'All (1465-6) and of the Şalāhiyya (1417) in the western and primarily Christian part of the city served to frame symbolically the domes of the Holy Sepulchro with prototypical Muslim monuments.

Bibliography: The most complete introduction to the monuments of Islanik Jerusalem is by Max van Berchem, Matériaux pour un Corpus inscriptionum arabicarum. It. Syrie du Sud, Jirusalem mille, Jérusalem Marem, vois, kilii-kiv of the Mémoires de l'Institut Français d'Archéologie Orientale (Cairo 2920-3). The most common literary sources are available in G. Le Strange, Palistina under the Mosiems, London 1890, and A.-S. Marmarji, Textes géographiques arabes sur la Palestine, Paris 1931, in addition of course to the indispensable Mudit al-Dia. The new translation of Mukaddasi's chapters on Syria by A. Miquel, Damascus 1963, has important notes.

General considerations on the monuments of Jerusalem in early Islamic times can be found in U. Monneret de Villard, Introducione allo studio dell' archeologia islamica, Venice 1966, especially

181-215; Lucien Golvin, Essai sur l'architecture religiouse musulmane, ii, Paris 1971, and O. Grabar, The formation of Islamic art, New Haven 1973. For the Dome of the Rock, the complete description is by K. A. C. Creswell and Marguerite Berchem, Early Muslim architectures, Oxford 1969. For a different laterpretation, - O. Grabar, The Umayyad Dome of the Rock, in Ars Orientalis, iii (1957). Additional information is in C. Kessler, Above the ceiling ... of the Dome of the Rock, in JRAS (1964), and 'Abd al-Malik's inscription, in JRAS (1970). For the Aksa mosque, the key works R. W. Hamilton, The structural history of the Ages Mosque, Jarusalom 1949, and H. Stern, Recherches = la Mosquée al-Aque, in Ars Orientalis, v (1963). For the Haram gates in Umayyad times, sea S. Corbett, Some observations, in Palestine Exploration Quarterly (1952-3). The first publications of the new excavations are by B. Mazar and M. Ben-Dov, The excavations in the Old City of Jarusalem, Jerusalem 1971.

Much less work has been done on the later periods. See O. Grabar, A new inscription, in Studies in honour of K. A. C. Creswell, Cairo 1965; A. Miquel, Itrusalem arabe, in B. Et. Or., xvi (1961); L. Golvin, Quelques note: sur te Suq al-Qattanin, in B. Et. Or., xx (1967); M. H. Burgoyne, Some Mameluke doorways, in Levant, from in 1971 to present; idem, The architecture of Islamic Jerusalem, British School of Archaeology in Jerusalem 1976. For the citadel, C. H. Johns, The Citadel, in QDAP, xiv (1950).

No understanding of Jarusalem in the Middle Ages can avoid a thorough awareness of pre-Islamic Jerusalem. Among the buge bibliography dealing with the latter, the most convenient works were. L. H. Vincent, Járusalem de l'Ancien Testament, Paris 1954, summarising and revising his older work; J. Simons, Jerusalem, Leiden 1954; and M. Avl-Yonah, The Maduba mosaic, Jerusalem 1954.

Several general books have provided valuable introductions to Islamic Jerusalem, even though many of them still tend to deal primarily with pre-Islamic times. The most accurate ones — Y. Yadin, Jerusalem esteeled, New Haven 1975 and Israel Pocket Library, Jerusalem, Jerusalem 1973. An exception with good photographs is A. Duncan, The Noble Sanctuary, London 1972. An interesting but controversial book about the future is A. Kutcher, The new Jerusalem, Cambridge 1973.

KUDSI, MUHAMMAD DJAN, poet at the Mughal court in India. He was born and raised in Mashhad, from where he performed the pilgrimage to Mecca, and was then engaged in the grocery trade before he went to India. In 1041/1632 he joined the ranks of the Emperor Shah Diahan's poets. Daghistani, the author of the Rivad al-shu'ara', states that Kudsi preceded Kalim poet-laureate to Shah Diahan, but this is not confirmed by contemporary sources. He died in Lahore in 1056/1646-7 and, according to Adhar's Alash-hada, his remains were removed to Khurasan.

Kudsi's poems and distinguished by a felicity of style. Like Kalim, he was also engaged to compose a poetic history of Shāh Djahān's reign. Though less talented than his more famous contemporary, he seems to have been held in high esteem, and was regarded as a leading poet of his day.

AL-KUDORI, ABU 'L-HUSAYN/AL-EASAN

AHMAD MUHAMMAN B. AHMAN B. DIAFAR

B. HAHDAN AL-BACEDADI, HARAII fabih who was
born and who died at Baghdad (302-5 Radiab

428/972-24 April 1037). He was head of the Hanaii
school in 'Irak, and had occasion to lead several
public discussions, in which he defended his own
viewpoint, with his contemporary, the Shāfi't
Abū Hāmid al-Isfarā'nīt, whom he however especially revered. A number of pupils gathered
around him, the most famous of whom

Khatib al-Baghdadi [a.r.].

As well as various works like his K. al-Nihāh on marriage and his K. al-Tadirid on the differences between the Hanafis and Shafi'ss, al-Kudori wrote a Mukhlasar, which had a great scholarly renown and enjoyed a sanctity comparable to the Risala of al-Kayrawani [q,v,] amongst the Mälikis. It is a concise legal manual, but is clearer than the one of the same name by Khalil b. Ishāk [q.v.]; it deals with ritual, contracts, personal status, criminal law and the law of succession, without particular care for logical order. This Mukhtasar inspired many commentaries, including e.g. al-Diawkara al-may yien of Abû Bakr b. 'Ali al-'Abbādī (Istanbul 2301, 1314. 1323, Delhi 1327) and al-Lubāb fi shark al-Kitāb of 'Abd al-Ghant al-Maydant (in the margins of the previous work, and Cairo 1344/1927). Numerous miss, of the Mukhtasar exist, which has been published many times, notably at Delhi in 1847, at Bombay in 1303 with its, in Persian and Pashto, at Istanbul in 1281 with a Turkish paraphrase, and in 1309 also. The chapter - the holy war was edited and translated into Latin by Rosenmiller, in Anaiscta arabica, Leipzig 1825-6, and in French by Ch. Solve, Paris 1829; that on marriage we edited and translated by G. Helmsdörfer, Frankfurt 1832; and recently, G.-H. Bousquet and L. Bercher edited and translated extensive passages in Le statut personel en droit musulman handfite, Tunis n.d.

AL-KOPA, one of the two cities (miss [q.v.]), along with Basra [q.v.], founded in 'Irāk by early Islam. A permanent military establishment of the Arabs in Mesopotamia, Kūfa retained the whole of the 'Irāki Sawād [q.v.] under its control. It participated actively in the Islamic expansion into Iranian territory, and, throughout the 1st/rth century, was a hotbed of intense political ferment. It was there also, as at Basra, that there took place for three centuries the gestation of Arabo-Islamic civilisation and culture. Then Kūfa experienced decline and ruin; today only a few traces remain, mostly of late date mestored.

Kûta was founded in 17/638 by Safd b. Abl Wakkās [q.v.], the victor of al-Kādisiyya [q.v.], after the whole of 'Irak had been wrested from the hands of the Säsänids and notably after the capture of Mada2in-Ctesiphon (16/637), whose climate the Arabs could not endure. But other no less important reasons must be added to this; given the existence of a willingness to settle and immigrate, 'Umar preferred to keep the Arabs grouped together and segregated from the peoples and territory conquered, in a relationship of spatial continuity with Arabia. This presupposes that, very swiftly, these main ideas were issued which set out to dictate the relationship of conquering people-conquered peoples: m dispersal in the Saguid or agricultural settlement, maintenance of the military striking force, the setting-up of a newly-originated fiscal system which would tap the revenues of the 'Iraki territory without direct exploitation on the part of the Arabs, all this resting upon the co-existence of Arab clans very dissimilar in their origin. The role of the new state and the new religion as tutelary power and unifying principle was also implicitly taken into consideration. There is no doubt that Umar wished to make of it the experimental multing-pot of his system, given concrete form by the establishment of the diada between 20 and 23/640-3.

I. The city of Kufe.

Kúfa, a creation ax nihito, was placed at the edge of the Arabian steppe, but on the bank of the principal branch of the middle Euphrates, guarding the passage to Bábil and, from there, Ctesiphon, a few milts to the north-east of ai-Hīra; an excellent position of contact, estricle two worlds, somewhat familiar to the Arab army due to its being situated in the region of al-Kādisiyya. Kūfa, placed on the right bank of the Euphrates, on a tongue (litān) of dry, grey sand mixed with gravel, was slightly above the water level. It escaped floods, well-aupplied with water, and enjoyed a salubrious climate.

We do not know with exactitude the origin of the word Kofa. The Arab historians and geographers, as they were accustomed, made of it a noun designating any surface of rounded sand, but obviously, this appears to be a reconstruction posteriori. Massignon derives it from the Syriac 'Akūla, 345

basing it in particular on Chinese testimony; a text of al-Tabari situates the place 'Akul between the Emphrates and the houses of Keia, probably to the north of the miss. Perhaps it is nearer the truth to see its origin in the Persianised form Küba (Sarkis, in Sumer [1954]). Only a text of Sayl b. 'Umar (al-Tabari, ed. Cairo, iv, 40 ff.) gives some detailed information - the first settlement, - the takhit of the mosque and the palace, and the apportioning of land to the tribes, clans and fragments of tribes, who constituted the army of Mada'in. This has to be rectified and completed in the light of other historical and geographical texts. A public area was if first delimited; this was to include essentially the mosque and the governor's palace, and to become the focal point from which the whole encampment branched out. Fifteen manakidi or avenues separating the tribal lots, each forty cubits wide, radiated from this central area. Along the five manihidi of the north were settled the tribes Sulaym, Thakit, Hamdan, Badjila, Taghlib and Tayın al-Lat; to the south, the Asad, Nakhar, Rinda and Azd; to the east, the Anşir, Muzayna, Tamim and Muharib, Asad and 'Amir: finally, to the west, Badjala, Badila, Djadila and Djuhayna. This picture, it may be seen, contradicts a tradition of al-Sha'bl cited by al-Baladhuri (Futah, 276) according to which all the Yemenis were placed to the east, between the mosque and the Euphrates, and the Nizaris to the west, a tradition which study of the topography of Kufa it appears from the narratives on the great revolts of the rst/7th century does was corroborate. But it is beyond doubt that some alterations were effected by historical evolution in this picture of tribal geography: the Tamim, in particular, migrated from the east to the west with the 'Abs. The problem of the great tribes of Rabi'a, Bakr and 'Abd al-Kays still remains. For the most part, the Bakr migrated to Başra, but a certain number of them settled at Kufa-including the ancient family of Dhu '-Diaddayn. As for 'Abd al-Kays, initially established at Başra, they were possibly moved = 2 large scale to Kūfa at the time of the caliphate of All, to leave it again in 40/660 for Basra. In any event, a certain number of characteristic features of the tribal establishment at Kufa are to 🖿 noted: settlement of the main part-but not the whole-of the Arab mukātila who had to confront the Sasanid armies; heterogeneity of the tribal structure, in contrast to Başra; presence of a majority of Mudarl and Kaysf elements formed either from large Bedouin clans (Tamim, Asad), or from clans of the Hidjan [Dakil, Sulaym, Diuhayna, Musayna), but nevertheless a concentration of a strong Yemeni minority, completely uncustomary elsewhere. It may even be asked if early Kufa did not contain majority of Yemenis, who later became a weaker and weaker minority; certain modern authors have gone as far as to assert that the tobill of Kofa was conceived to shelter these distant migrants, together with those of the Hidiaz, rather than the others (M. Hinds, in IJMES, ii [1971], 346-67). The pure YemenI elements me here massively present (Himyar, Hamdan, Hadramawt, Madhhidi) alongside tribes newly Yemenised (Kinda IIII Badilla in particular, Azd Sarāt and Tayyi'), but the tribe which became the most numerous of the Yemen's and without doubt of all the tribes, that of Hamdan, was not settled at Kufa as early as the Madhbidi, Badilla and Kinda, and it was made up for the most part of recent immigrants (rawadif), who had come under 'Uthman, 'All and perhaps Mu'awiya. It remains a

fact that the Yemenl phenomenon was to determine the political destiny of Küfa as well in the colour of its civilisation. According to Massignon, it in through the influence of the old Yemenl element, city dwellers for a long period, that the sedentarisation of the Arab tribes at Küfa was effected; hence a civilising and urbanising role of the first order may be attributed to it from very early on.

Figures for the total population vary according to the sources and periods. It may be admitted that during the very first phase, there were between 20,000 and 30,000 inhabitants (al-Balachuri, Futah, 276), although Yakut gives the figure of 40,000 (Buldan, iv. 491). A text of Abo Mikhnaf (al-Tabari, v, 79) speaks of the mobilisation by 'All of all the 57,000 muhātila, of whom 40,000 were adults and 17,000 adolescents. Ziyad b. Abl Sufyan, having enlarged the mosque, foresaw it as accommodating 60,000 people, a figure corroborated by a reliable piece of information given by al-Baladhuri (Futah, 345) concerning the people registered in the dividu. So there would have been, around the year 50/670, 60,000 men and 60,000 women and children, that is, 140,000 Arabs of whom a census had been made, which it is reasonable to add the clandestine residents and the non-Arabs, slaves or mandfi. Certainly at the same period the figure for the population of Başra (200,000 registered) rather outnumbered that of Kufa, but the demographic inflation in the space of generation was nevertheless considerable. This may explain the transplantation by Ziyad to Khurasan of 50,000 people, of whom 40,000 were from Başra and to,000 from Küfa. It is probable that after Ziyad and throughout the Umayyad régime, the number of Arabs drawing stipends and registered remained stable or even had a tendency to diminish from al-Hadidiadi (73-95/604-713) onwards, but the number of non-Arabs, uprooted from the land, moundli flocking to the misr, cannot be known for certain. The fact that this last governor took drastic measures to repulse them is clear proof of the existence of this disordered influx, dangerous for the equilibrium of the city. The history of the population of Küfa, in the earliest and Umayyad period, is that of a very swift and essentially Arab expansion in a first phase (17-53/638-73), followed by a stabilisation, at times disrupted by the rural non-Arab immigration.

The topographic framework of Kufa during the 15U7th century evolved while remaining faithful to the original plan. The first Kufa, that of Umar (17-23/638-43) was millitary camp, geometrical, airy and open, where tents quickly raised for an expedition were drawn up in lines. Soon, without doubt after the pacification of the Iranian territories, the need arose for m more permanent settlement, where tents were replaced by huts of reeds, which were abundant in the region. A third stage saw the substitution of houses (day) for huts, in labin or clay dried and cut up in large rectangular blocks, a stage inaugurated under the first governorship of al-Mughfra b. Shuba (22-4/642-4). In fact, all this is information given by Yakut and reproduced by Massignon. Nevertheless, it is contradicted by Sayf, who compresses the stages, stating that the building of Kuta in labin was decided very rapidly, before the takklif itself, in 17/638. Finally, it with Ziyad (50-3/670-3) that the adjus or Mesopotamian fired brick was introduced, at first to construct the cathedral mosque and the governor's palace which adjoined it on the south, later - doubt for the houses of the aristocracy m dir. Considerable exAL-KUFA

penses were incurred to give to the mosque an architectural form; materials brought from al-Ahwāz for the columns, and the calling in of Aramaean mersian masons. Kūla was changed into a well-built city and began to take on, with this governor, the features of its topography which would only really change with the end of the Umayyad period and the beginning of the 'Abbāsid period.

Umayyad Kūfa was not surrounded by rampurts; it may be supposed that its diameter did not exceed two kilometres. The monumental centre was composed of the diamic, of the fortified hase, of the rabba or maydan where various ceremonies took place, and of markets or asseds, constructed under the governorship of Khālid al-Kasri (105-20/723-37) but given a specialised use much earlier. Massignon sees here the prototype of the future eswas of Baghetad, but it is permissible to consider them as the model for the markets of all the Islamic towns of the Middle Ages. by virtue of their vaulted form as well as the structure of their activities, where a special place had to be accorded to the sayárija or moneychangers, at the time bankers of the governors and moneylenders of the ShI'i conspiracies.

From the monumental centre there radiated out the khitas or tribal lots which constituted the main part of the dwellings of Kūfa. Nevertheless, katā'i' ut individual lots were assigned from the earliest period exceptional favours to the Companions and to certain great figures who had their aristocratic houses built there, always situated in the centre. Al-Ya'kubi gives a list of 25 dar, in which are to be noted the names of Talha, al-Zubayr, Sa'd and his son 'Umar, Abb Mūsā al-Ash'arī and his descendants who played an important role in Kūfa before emigrating to Kumm, 'Abd Allah b. Mas'ud, Khalid b. "Urfuta, one of the principal leaders of the army of conquest, 'Adl b. Hatin, Diarir E. 'Abd Allah al-Badiall, al-Ash^cath al-Kindl and Umm Hanl sister of 'All. Other sources speak of the private houses of al-Waild b. Ukba, al-Mukhtar al-Thakafi and 'Ame b. Hurayth.

In addition to the monumental centre, to the collective Mital and the private dur, let us cite as essential elements of the topography of Kûia the manakidi m avenues, the sikak or streets, the sulari (waste pieces of ground? e.g. salvá? al-Bardakht), the kammamat, the masadjid, small mosques of a class or quarter, and especially the diabbded of Kufa. The diabbanal, numbering a dozen, riddling the city everywhere almost certainly from the time of 'All, played the role of tribal cemeteries, but they owed their importance to the fact that they served as places of assembly, mobilisation and taking-up arms. Their name was linked with some major historical episodes, such as the revolt of al-Mukhtur. It may be that we have there a privileged example of the influence of old Yemen on the urban structure of K0fa. Among the principal diabbandt may be cited that of Sabit devolved to the Hamdan, dj. Mikhnaf (Azd), Murad (Madhhidi), Kinda (Kinda and Rabl'a), Şa'idiyyin (Asad), Uthayr ('Abs), etc. Other topographical features, whether in Kula itself in its immediate environs. are often mentioned in the sources and assume a certain importance: the Kunasa, at first a dumpingground situated to the west of the camp-town, having become later, from the Umayyad period, a place of unloading for caravans from Arabia, a market for animals, on occasion a place of execution, and almost all a fair for the poets similar in the Mirbad of Basra: the day ar-risk, the sikkut al-barid, the bib al-fil, the kinjara, all this within the city; hamman A'yan, sak Asad, dayr Hind, dayr Ka'b, dayr al-Diamādjim and basr Mukātil, situated immediately outside but all places intimately involved in the city's existence.

Umayyad Küfa, marked by the attempt at urbanism of Ziyād and Khālid al-Kasrī, evolved, while remaining faithful to the earliest plan, from a Bedouin-style camp to a well-built, articulated, functional city, an evolution which was to be completed in the 'Abbaskl period by the mere fact of the maturing of the Arabo-Muslim civilisation of which Kūfa was precisely and of the two primordial melting pots. Throughout the 1st/7th century, K@fa no doubt remained airy, not yet surrounded by ramparts and open to the Arab steppe, as is witnessed by the traffic of and poetry and the obstinate presence of the Bedouin model. Sedentarisation, a rapid and undeniable success, would have been inexplicable without the maintenance of the umbilical cord with Arabia, but the Arabs of Kūfa were well and truly settled people, almost totally cut off from the nomadic way of life. For it was the first time in their history that the Arabs united III form such a great urban concentration, a melting-pot where specimens of the whole of Arabia to live and dwell together. If we continue to consider the urban sphere, ■ have ■ notice that Kirla was to undergo profound changes during the high 'Abbasid period. The early 'Abbasids considered making it their capital and established themselves there for some time, but the 'Alid presence and sympathies were so strong that they wavered for some time between Küfa, Anhār and the new city of Hashimiyya which we coupled with Kaşr Ihn Hubayra, before al-Mansur founded Baghdad (145-6/761-3) and moved the bayt al-mai and dandwin there from Kufa (al-Baladhuri, Fuluk, 293), which indicates clearly that Kūfa had assumed the role of administrative capital of the empire, even if the caliphs did not always reside there.

During this short period of thirty years (132-46) 750-63), there took place an Iranisation of a part of the Kutan toponymy, following the influx of Khurasănian soldiers: for example, the streets of Labham Derir and Harliciam Antara and the naming of crossroads by the Iranian form of cahirsuds, such = the caharsudi of Badilla (al-Balachuri, Futuh, 280). On the other hand, the early 'Abbasids undertook the building at Kūfa of al-Rusāfa and the castle of Abu 'l-Khasīb; above all, al-Mansūr, after the move to Baghdad, had the city surrounded by ramparts and a most, making the inhabitants bear the of it. It is probable that the enclosure did not surround the Kumasa and some diabbands outside the centre, thus creating a differentiation between . madina and suburbs. The term reading in the sense of a historical urban nucleus, elaborated, closelypacked and protected by walls with gates, makes its appearance for the first time in the account given by al-Tabari with regard to the revolt of Ibn Tabataba (199/814). The same author remarks that the Kundia contained dwelling houses, just m there appears in his writing the idea of a suburb or rabed (vili, 561). Thus we are in the presence of the "process of civilisation" of Rufa in every sense of the term: it became a classical Muslim town after having been an Arab camp-town, and it became a civil centre after having been a military camp. Finally, during the 3rd/9th century, and although it always remained clearly Arab, its population was mixed and the city began to live in osmosis with the Sawadiyyan or people from the Sawad who started to become Muslim. Nevertheless, there is a problem of knowing

whether, at its apogee in a city, in the 3rd/9th century, Kufa entirely lost its character of a spacious town and came to resemble those Islamic cities of a latter age where the madina became an assemblage extremely crowded with houses and almost stiffing. It does not seem so, because the geographers of a later period, such as al-Mukaddasi and much later Ibn Diubayr (though the latter was writing in a period of the city's complete decadence), allow one to catch a gilmpse of the existence of green or garden spaces in the heart of the town. But these same geographers, as the archaeological remains stretching a far as Nadjaf also indicate, testify to the expansion of Kūfa towards the west, far beyond the early boundaries. But then, Kufa was no longer was of the centres from which early Islam, i.e. conquering Arab Islam, radiated, but an important city of 'Irak, the

simple capital of an administrative area. The provincialisation of Kūta, and even its decadence, became mestablished fact in the 4th/roth century. The old structures (the military ardde, the tribal spirit, the financial system) began to break down, because the whole editice of the conquest, inherited from the Arab empire, and of which Kūfa was merely the concrete form, became obsolete, and it is known that ill its beight the caliphate submitted to the tutelage of the Büyids at the same time in the unity of the Muslim world broke up. Because of this, the decadence of Kūfa only one of the manifestations of this profound change which intercontinental commercial activity was unable to sustain and prolong, - Başra for or two centuries. One may speak of a crisis of the Islamic city (Massignon), but in reality we - concerned with a general crisis of early Islam as a state and society, indeed as a civilisation; were more, one might say, with a historical mutation for which a town like Kafa should certainly pay the price. On the concrete level, there was the great Isma'll outbreak at the end of the 3rd/9th century, of which Kūfa was the primordial crucible and of which the Karmatian violence was one of the destructive elements. In 293/905, 322/924 and 315/927. Kūfa underwent the assaults and pillage of the Karmatians. It was never to recover from these. It is this which explains the emergence in 334/945, not far from it, thanks to the protection of the Buyids, of Nadjat - Mashhad 'All = a centre of Shi4 devotion which, since the and/9th century, had become the specifically distinguishing dimension of Kufa. Shifi religious symbolism was concentrated there, but = it happened, the old Arab Küfa which was far from being identified with the ShI's phenomenon vanished. The urbanised tribal structure also collapsed at the same time there arose a "re-bedouinisation" or, at any rate, a growing threat from a new nomad world of the Arabo-Traki steppe. Thus it was in 386/996 that Bahā' al-Dawla ceded Kūfa as an ibfa' to the chief of the 'Ukaylids [g.v.]. The Bank Asad, the Tayyi', of whom a large fringe remained outside the city limits, because undoubtedly living in symbiosis with it, and also the Shammar, newly-come on the scene, dominated Kufa and ruined ill. Thus these same Asad (to differentiate them from the settled Asad), from whom the grammarians of Kūfa derive, by means of a real ethnological effort, all the flavour of their citations, preserving themselves with their very strong identity, came to present themselves as taking part in the rain of Kūfa, the new incarnation of Lagash, Ur and Babylon, and which was soon dead like them. In 495/1101, with the emergence of al-Hills, Kafa lost definitively its importance and

the major part of its inhabitants. Ibn Djubayr (539-614/1144-1217), who visited it a little later (578-81/ 1182-5), speaks of it as a deserted and ruined city but where some inhabitants still survived, subjected to the regular pillages of the tribe of Khafādja (Riela, Beirut 1959, 187, 188). The whole built-up area between the mosque and the Euphrates had been destroyed and was covered now with orchards. He speaks at meet length of the cathedral mosque, still standing, with its high ceilings, its columns leaded on the inside, a prayer hall with five bays, its sacred vestiges where the ShI'll myths were neighbours to the recurring myths of old Babylonia taken over by Islam: the musalla of Ibrahim, the militab of 'All, the tinnaur of Noah and the supposed tomb of Muslim b. Akdl. After the Mongols had conquered Irak, Mustawil Kazwini wrote for the Mongol prince a treatise describing the resources of the country (Nushat al-hulüb, tr. Le Strange, 30, 166, 210), where he speaks of Kūfa as having ramparts with a circumference of 18,000 paces and of its important agricultural role. Pinally, Ibn Battūta (8th/14th century) who, on the subject of Kūfa, reproduces in part Ibn Diubayr but adds some personal elements, it, in a similar way to Mustawii, as a town ruined for the most part, but not yet dead. According to him, of the hasy al-timara, nothing more than the foundations remained, but the markets, still beautiful, survived. He speaks of the diabbana of Rufa as if there were **m** more than one, where the tomb of al-Mukhtar had been repaired and over which a cupela had been erected (Rible, Beirut 1950, 219). In the Ottoman period, Knfa fell to the rank of a nahiya dependent on the kada' of Nadlat, which was dependent in its turn on the sandial of Karbala? Niebuhr visited it and compiled a plan of it. Massignon went there for a first time in 1908 and for a second time in 1934. He spoke of the "now deserted site of the great city which was the most Arab of the Muslim metropolises", of which just a few traces of brildings were marked out: the Diami', the tombe of Hani' b. 'Urwa and Muslim b. 'Akil, the Bayt 'Ali, two guard houses, one III which was built by the English, the small oratory Hannana and the mardiid al-Sahla. He noted that a new quarter had appeared between the mosque and the Euphrates. It still exists, and has even been extended; however, Il is less important than the recent western quarter, towards Nadjaf, which is mainly residential. Some other European archaeological missions went to al-Hira (Talbot Rice in 1931, in particular). Since 1938, the site of Kufa, declared an archaeological site, has become an object of interest to the 'Irald' academic authorities and a first man of excavations was made there at that date. The great mosque, completely and sometimes awkwardly restored, remains the central building; it seems to be raised in comparison with its earlier level and only the ramparts romain. The hair, much larger, has just been mapped out. It is a building now in ruins, though more instructive than the mosque. Let us also note the presence of the mosque of al-Sahla to the west of the site. Various objects in glass and ceramic and some coins of the Umayyad period have been found. Nevertheless, the archaeological exploration of Kūfa may be considered as only in its early stage and, if well handled, as being capable of adding much to our knowledge of the city, still essentially one derived from books.

Politics, Ideology and culture in Küfa.
 While in the 1st/7th century Küfa played a political

role of the first order, as the matrix of a large number of matters of future significance for Islam, in the rad/8th, after the foundation of Baghdád and with the opening-up of the Islamic empire, politics and the struggle for power left Kūfa aside; but, on the other hand, cultural activities developed there and achieved a high level (between 150 to 250/approx.750 to 860). From then there is evidence of a triple Kūfa: a political Kūfa (150-250) and then m purely ideological Kūfa (250-350) which had become m focal point of doctrinal Shl'ism.

The principal episodes which punctuated the political activity of early Kufa were: the participation in the revolt against 'Uthman (34-5/554-5); the support given to 'All for the two great internecine battles of al-Djamal (36/636) and Silfin (37/657); the emergence in its heart of the Kharidil movement; the beginnings of political Shivism with the action, which was suppressed, of Hudir b. 'Adi al-Kind! (31/671). After that, the pro-Shiri revolts succeeded one another, and were just m regularly quelled: the episode of Muslim b. 'Akll and the massacre at Karbala" (60-1/679-80), the march of the Taurriban (65/684), the uprising of al-Mukhtar (66-7/665-6), the preaching of al-Mughira and of Bayan, the revolt of Zayd b. 'All (122/739) and that of 'Abd Allah b. Mu'awiya (227/744). Finally, it was Kufa which was the directing brain behind the 'Abbasid da'wa, and it was at the great mosque of Kūfa that the first caliph of the new dynasty solemnly invested (132/749). But Kufa equally underwent numerous rounds of Kharidji assaults, particularly in 76/695, when it was threatened by Shahib, and more seriously in 127-8/744 5 by al-Dahhak. It participated, in 82-3/701-2, alongside Basra, in the great revolt of Ibn al-Ash'ath which brought the Umayyad regime close to its collapse and which was a revolt of the amsår without ideological content.

This abundance of insurrections, of seditious actions and political events, earned Küfa the reputation of a turbulent, agitated, ambitious city, and, for the later Sht'i consciousness, of a martyr city. Thus on the majority Sunni side, there were some solid prejudices, the other side, whole apocalyptic elaboration in which "accursed Baghdad will be destroyed and Küfa will be queen of the world, after having been a dwelling of exile and waiting for true betievers." According to the kadilh of Salman, "Küfa is the kabba |= royal tent) of Islam; a time will come for the world when there will be no true believer except the who lives there or whose heart sighs for it" (Massignon, Explication du plan de Küfa, repr. in Opera Minora, (ii, 54).

In reality, this constant political effervescence of the ret/7th century resulted from the structure of Kūla itself as well as in historical evolution. As a fundamental component of the system of the amfar at least until 30/650, the date at which Basra outstripped it in the conquest of the Iranian East, Kufa sheltered the conquerors of "Irak from the time of the first wave onwards, that of the Ahl ai-Ayyam until the Akl al-Kadisiyya. The lirst presumed upon the antiquity of their conversion and their faithfulness to Islam, the second had participated in the Ridda, but they were of no less high Arab lineage. Kūfa, on the other hand, drained the major part of the resources of the Sawdd and the leaders of the army managed the ancient royal domains, this becoming later a real apple of discord, while the immigration to Başra, except for that of the Bakr, was that of latecomers, of tribes from the Arabian south-east, newly come to the scene of conquest and arriving in complete, homogenous tribal groups. Within the tribal structure of Kufa, in the conditions which surrounded its genesis, by the attraction exercised over the new immigrants or randdif, and the lack of any immigration control, from the very fact of its supremacy in the high period, some germs of tension took root which were ready to develop. Under the caliphate of 'Umar, the equilibrum was maintained. and the armies of Kufa were occupied in conquering Persia. It is in the caliphate of 'Uthman that the internal conflicts began to appear; the former Islamic élite, raised up by 'Umar, yielded ground to the traditional chiefs who shared in the a'mai and saw their position reinforced by the waves of ramadif of their own tribes (a typical case of opposition is between an Ashtar Nakha'l and an Ash'ath b. Kays). The activism of the Ahl al-Ayyam, disappointed by the new politics, resulted in the murder of 'Uthman in which a number among them were involved, and this ranged them necessarily on the side of 'All. 'All's coming to Kufa highlighted the phenomenon of the supremacy of the amair over Arabia for the definition of the political destiny of the Arabs; for four years, Kufa was to be if not the capital of the empire, seeing that the empire was divided, at least a centre of major decision and the seat of the caliphate. From this privileged episode of its existence, Küfa was to derive its future pretensions, but also a persistent faithfulness to 'Ali and his family. Nevertheless, from its origin, this faithfulness are far from making for unanimity. The Ashrai or traditional chiefs of the tribes, having in general participated at al-Kādislyya, and being enrolled in the sharaf al- 'afa', were lukewarm towards the cause of 'All and consequently also the mass of the inhabitants who, in general, followed them. The activists remained (who may be named as the kurd) [g.v.]], of whom a majority cast in its lot with 'Ali and on whom he showered benefits, but of whom a minority, harder and more intransigent, showed itself reticent and soon hostile with regard to him. After the arbitration, it appeared that 'All could no longer be certain of anyone except his partisans, his shi'a in the political sense of the term, while the intransigent members of the hurra? fell into Kharidjism and the conservative group of the Ashraf abandoned him; whence the dislocation of the coalition which he had constituted, whence also the minority character and powerlessness of the Shi'a for a century. The Umayyads governed indeed with the support of the Ashraf, who did not like them, but found in them a principle of order. They were satisfied with their growing social influence, guaranteed by the Umayyad régime. It is this which explains why the Ashrif ranged themselves on the side of the established power every time that a ShFi insurrection broke out, and why that power gained their collaboration in disarming the Shift troops. In 61/680, they even took part in the murder of Husayn; they mobilised actively against al-Mukhtar, who threatened their privileges; and they regrouped themselves around the governor in order to bring about the failure of Zayd b. 'Alt's action. Only the great revolt of 82-3/ 701-2 was a specifically 'Iraki revolt against the preponderance of the Ahl al-Sham, the tyranny of the governor al-Hadjdjadd and, because of this, it by the Ashrai as well why the kurra? But there followed a large-scale demilitarisation of the miss, and the foundation of Wasit, the settlement of the Syrian army in 'Irak as if in occupied territory.

If, throughout the rst/rth century, the majority of the Ashraf showed themselves hostile to the

350 AL-KOPA

Shiff movement, certain of the Ashraf nevertheless participated actively in it, such as al-Mukhtar himself, Ibrahim b. al-Ashtur and 'Abd al-Rahman b. Shurayh al-Shibāmi, But after al-Mukhtār, it was above all popular elements which supported Shi'll activism, whether from among the Arabs, Yemenis in particular and, more precisely, Yemenls from certain claus of Hamdan (Khārif, Shakir, etc.), or else recruited from among the plebeians of the new immigrant mandli, a mass operation utilised by al-Mukhtār. It is probable that the rallying of the Yemenis in the Shift cause was due to their marginal position in the Arab city, socially well culturally, for there in no doubt that a number iii poor were recruited from the clans | Hamdan felans of rangedif?) and that the call for the rights of the Aid al-flayt found some echoes in the old Yemeni consciousness. It is which explains the populist character of the revolt of al-Mukhtar (66-2/685-6). perhaps the most important Shi'l revolt of the rat/7th century. It succeeded in assuming power at Kūfa for some time; above all, it fashioned the Shift consciousness by giving it a mystique, a language, slogans and were elements of a doctrine. Also, the Kaysaniyya [q.v.], who derived from it, would be, via Abu Hāshim, at the root of the do'es for the Family.

With the 'Abbasid dynasty, there took place an intellectualisation and a deepening of ShI ism, political action becoming intermittent. Hence must wait until the year 195/814 to see a resurgence of an insurrection of the old style, that of Ibn Tabățabă, and the year 250/864 for that of Yahya b. 'Umar, far less dangerous, to break out. But Shi'ism as a faith did not cease to gain ground, so that it veritably became the quasi-unique ideology of the town at the end of the 3rd/9th century and constituted a cultural and religious tradition in the 4th/roth century. Certainly, it was at this moment that the Shifi imagination, re-reading the history of the town, reclassified its sites according to its own standards, dividing quarters and mosques into blessed and cursed ones.

Kufa was able to export its Shift consciousness to the Iranian world, and to Kumm especially. Kumm was indeed a projection of Shift Kufa, - Balkh, Marw and Nisabur were a projection of Basra. Because of this, = a colonising centre, Kūfa showed itself less active than Busra. Each of the two misrs is known to have had its thughte and its mak (g.ev.). The central Iranian territory - practically partitioned: Rayy me the thaghe of Kufa, and Isbahan depended on it, but the man of Kufa, sc. Nihawand, showed itself less active than the nuth of Basra, sc. Dinawar, although several sources speak of Dinawar as the mah of K0fa. But it is especially in the race to the peripheral Iranian territories, from 29/649 onwards, that Başra gained the upper hand, with the conquest of Khurisin, while Kufa had to be content with Adharbaydian, a province of little account, with Kazwin as an extreme thaghr. Nevertheless, over the centuries, the specifically Shiff nature of Kufa imposed itself by a process of slow penetration into the whole Shift consciousness of Islam by way of Baghdad and, by that of Kumm and Mashhad, to the whole modern Iranian lands, while Basca was alone in defining the structures of later Sunni Islam, although it had been a primordial centre bringing the idea of diama's into action. However, the religious and cultural legacy of Kūfa should not be limited to the transmission of the Shift tradition. Far more important can **shown** by analysis to be the participation of Kūfa in the elaboration of the universal Araba-Islamic culture which became rooted in the grant mist of the first two centuries. Bagindad was to be the heir of Kūfa and Başra, these two fundamental matrices which defined the general lines of the culture of Islam, each with its own genius: Kūfa excelled in the recovery of the Arab poetic patrimony, in the exegesis of the Kūr-an, in law and genealogy, whereas Başra, more rationalist and critical, invented Arabic grammar and was the great centre of Mūfazili speculation.

There are two great cultural moments in the history of Kufa: the one oral, of obscure gestation, where the culture, still undifferentiated, was seeking to establish its foundations (17-150/638-767); the other, brilliant, which developed a true classicism and bequeathed to us ____ great works (150-250) 767-864). In both cases, the two fundamental poles around which the new culture expressed itself were Bedouin Arabism and the Islamic message, the influence of the conquered peoples proving negligible. Azabic writing was perfected at Kūfa, undoubtedly with the participation of M Arabs of al-Hira, and Küfic, having become a monumental writing, may be considered the most ancient specimen of post-Islamic Arabic writing, although the type of writing was used on Sasanid dirhams. It is also in very early Kūfa that Ibn Mas'ūd lived and taught, later becoming the eponym whose name crystallised the traditionist current and to whom some disciples were attached: 'Alkama b. Kays, al-Aswad b. Yazid, Masrūk b. al-Adida', 'Ubayda, al-Hamdani and Shurayh. Schacht thought that the founding role of Ibn Mas'6d in lictitious and that some forged traditions were projected in to him between 100 and 130/719-48, establishing the chain Hammad b. Abl Sulayman-Ibrahim al-Nakhafi-Ibn Masfud, but that nevertheless fish, which preceded sadits, were created by the single centre of Kūfa. In fact, it seems clear that three key-personalities, living in the zst/7th century, played a main role in the first glimmerings of law, hadith and exegens: Ibrahim al-Nakha?, Sa'id b. Djubayr and 'Amr b. Sharabbil al-Sha'bl. In the domain of spirituality, there was me personality here comparable to Hasan al-Baszi, but the currents of asceticism and mysticism found their masters in Uways al-Karani and Rabit b. Khuthaym. Let us cite in the sphere of tafsir and akhoar the names of two precursors: Mudialid b. Said and Muhammad al-Kalbī; for the collection of poetry that of Hammad; and for poetic creation, the of Asha Hamdan and al-Kumayt.

The second phase of the cultural history of Kufa, whose beginnings coincide with those of the 'Abbasid dynasty, saw the differentiation of the disciplines and the emergence of the great founders and synthesisers: Abo Hanifa, master of the school of ra'y in man law (d. 156/772); Abu Mikhnai, and of the first great Arah historians (ahhbāriyyün) (d. 157/773); al-Ru'ast, to whom the first work of grammar is attributed, 'Asim b. Bahdala (d. 131/748), and Hamta, who, together with al-Kisan, established three of the seven canonical readings of the Kur'an. Later, the generation of those who died in the years between zBo and 200/796-816 assumed the burden of recording, codifying and totalising the knowledge founded in the preceding period, me that the works which survive today belong to this generation of active disciples and totalisers: Abu Yusuf (d. 182/798) and Muhammad b. al-Hasan al-Shaybani (d. 189/804) in law; Hisham b. Muhammad al-Kalbi (d. 206/821), highly erudite, a genealogist and akhbdei, well-versed in

knowledge of the Arab patrimony which he worked increasingly at collecting and establishing; and finally al-Kisa'l (d. 179/795), who was the supreme master of the grammatical school of Kufa. This school collective opinion still claims to set up = a rival of that of Basra. It is regarded as more deeply rooted in the Arab environment, with passion for anomalies (shawādhdh) and a more acute come of poetry. Nevertheless, on examination, it is revealed m being a particularisation of the fundamental contribution of Basca, i.e. that of al-Khalil, master of everyone, although the role of al-Ru'ast deserves to be clarified. This being granted, al-Kisa'l, like Stbawayh at Basra, engendered a line of grammarians marked out by ai-Farra, who is comparable to al-Akhfash, and by Thatiab, who may be compared with al-Mubarrad, the height of activity of these two fast occurring around 250/864; the two of them achieved the totalisation of the earlier knowledge of the two schools. But already Baghdad, after having gathered to itself the greatest names of Kufa and Basra for two generations, begins to give forth an eclectic tradition in all fields, digesting, surpassing and delivering to the Islamic world the admirable work of two centuries which had been produced in the two mises.

In the intellectual consciousness of contemporary Islam, that which is willingly remembered of the historical evolution of Kfita, that by which it is largely known, is its school of grammar and its role as cradle of Shrism, perhaps because this in what particularises it the most in the fast instance, and laid the foundations for its survival in the other. But the renewal of interest in the political and cultural history of ancient Islam will allow for the growth of a further consciousness of the role it assumed as a place of Arab settlement and immigration, as a centre of great political struggles and as a specifically Arab city which, along with Basra, established the basis and true style of the cultural scheme of Islam.

Bibliography: The most ancient sources on the history of Kula, consisting of monographs written by the akhbariyyan of the 2nd/8th century, have entirely disappeared m such, but some more less important fragments of them are to be found in the great well-known standard works which have derived from them the main part of their information. Let us cite first al-Haytham b. 'Adi, Kildb Khifaj al-Kūfa, K. Wulet al-Kūfa, K. Kudat al-Kafa wa 'l-Bosra, K. Fahle ahl al-Kafa 'ala 'l-Basra; 'Umar b. Shabba al-Basri, Kitāb al-Kūfa, K. Umarā' al-Kūfa; the wellknown monographs of Abu Mikhnaf, resumed by al-Tabari in particular, inform us of the main events but also indirectly of the topography. A manuscript attributed to Aba Mikhnaf exists at Berlin under the classification Spr. 160 and bears the number 9039 in Ahlwardt's catalogue, with the title Kilab Khabar al-Mukhlar wa-bni Ziyad; the present author has examined it and it appears to him apocryphal. Moreover, the later monographs have themselves also disappeared: that of Muhammad b. 'All al-Nadiashl al-Asadl (Kilāb al-Kefa) and that of Muhammad b. Diaffer b. al-Nadidiar (Tabrith al-Kafa),

Great classical works: (a) Principal sources: Balâdhuri, Funik al-buldan and Ansab al-aghai; Tabasi; Ibn Sa'd, Tabasa, vi, devoted to Kūla; Ya'kūbi, Ta'rikā and especially Buldān; Ibn al-Fakil; Mukhusar Kitāb al-Buldān; Yakūt, Mukhusar al-buldān.—(b) ad di-

tional sources: these comprise the greater part of the works of history, geography, adab, law etc. The most useful are, apart from those which have been indicated in the body of the article: Nașr b. Muzahim, Wahtat Siffin; Dinawarl, al-Akhbar al-fineal; Khalifa b. Khayyat, Ta'rikh; anonymous, Ta'rikh al-'Abbas mawaladib, ed. Dürî, and anonymous, Tabibb al-hhulafa', ed. Griyaznevitch; Ibn Hazm, Diamhara; Ibn al-Kalbi, Nasab; Dhababi, To'rikh and Misan al-i'tidal; Islahani, Aghani and Makātil al-Tālibiyyin; Ibn al-Nadīm, Fihrist; Djahiz, Boydn; Ibn Habīb, Muhabbar; al-Khātīb al-Baghdadi, Ta'rikh Baghdad; all the classical works of geography and adab; amongst works of figh, in particular Abu Yusul, Kharadi, but also Abū "Ubayd Ibn Sallam, Kitāb al-Ameāl and Kudāma b. Djactar; the works of Tabaşát and herestography are equally useful; - Sh I'll sources: Ibn Abi Hadid, Shark Nahdi al-balagha; Kulayni, Kitāb al-Kāfi; al-Kashshi, Akhbār alridjāl, Bombay 1317; anonymous, Mukhtar-nāma, lith. Tehran 1351; Tabarsi Nürl, Nafas al-Rahman, lith. 1868, al-Ihtidiādi, Nadiai 1966; al-Baraki, Ta'rich al-Kufa, Nadiaf 1960;-Studies: Nearly all that has been written by modern scholars on early Islam, the Umayyads, the development of Islamic culture, Shī'ism, is relevant to Kūfa. We refer the reader only to the studies relating specifically to Kúla: Le Strange; L. Massignon, Mission en Mésopolamie, i, IFAO, Cairo 1910; idem, Explication du plan de Küfa, in Mélanges Maspero, ili, 337-60 (fundamental); idem, Explitation du plan de Başra, in Westostlicke Abhandlungen R. Tschudi, Wiesbaden 1954, 154-74; P. Pelliot, Des artisans chinois à la capitale abbasside, in Toung Pao (1928-9); R. Guest, A tablet in Kufic from Kūfa, in JRAS (1933); F. Kmietowicz, Un trésor de monnaies configues trouvé en Pologne, in Folia Orientalia, i/2 (1959), 209-30; W. M. Watt, Shillism under the Umayyads, in JRAS (1960), 158-72; Muhammad 'Ali Mustafa, Taktir awwali 'an al-tankib fi 'l-Kufo, in Sumer, x, xii, xiii (1954, 1956, 1957), with Eng. tr. in Sumer, xix (1963); Sălih Ahmad al-'Ali, Dirăsa Tubughrāfiyya li-nāhiyat al-Kūfa, in Sumer, xxi (1965); Mahdi al-Makhzümi, Madrosat al-Küfa wa-mankadjuha fi dirasat al-tugha 📰 "l-nahu. (HICHEM DIAIT) KUPRA, a group of cases in the Eastern

KUPRA, a group of oases in the Eastern Sahara in the Libyan Desert half-way between Cyrenaica and Wadai. For a long time it was known only from Rohlfs' account, who managed to reach it in 1879. Subsequently, Kufra has been visited by two other Europeans, Maréchal des Logis Laplerre (1918) and Mrs. Rosita Forbes (1920-1). Their descriptions have completed and corrected that of Rohlfs.

The name Kufra applies to a number of cases

which stretch from the south-east to the north-west in a line about 300 km. long, between 24" and 26" N. 18° 40' and 21° 40' E. The most southerly easis lies about 1,350 km, south-east of Tripoli and 900 km. south of Benghāzi. There are five in all, and they are separated from each other by sarie, or plains of compressed gravel. The total area of the group amounts to about 17.842 km2. It occupies the bottom of a depression which rises in altitude from 250 m. in the north to 160 m. in the south. The soil is generally formed from overlapping strata of marty sand in the northern area of the dunes which join those of the Libvan desert. In the central and southern parts, the depression is crossed by calcareous mountains which rise above a base of Numidian sandstone: their summits are table-shaped and similar to that of the pur of the South Algerian Sahara.

There are neither springs or running water at Kufra, but everywhere the water-table rises to between one and three metres from the surface. At various points of the landscape the water forms brackish lagoons or even permanent lakes, of which the most imposing is to km. long. They me be regarded as the remains of mearlier situation when the lacustrian nature of the oasis was much more marked than it is to day. The subtegranean water is sufficient to support plentiful and varied vegetation. In the dried-out basins had (cornucala monacantha) and dis grow, which provide excellent food for camels. Although the green belt around the lakes and marsh depressions is often very narrow, cereal crops grown in it-wheat, dhura (sorghum sulgars), vegetables, plantations of fruit trees (olives, figs, oranges and lemons). The main _____ of wealth is the date palm. Among the fauna are gazelles, many species of bird (crow, falcon and stock) and reptiles such in lizards and non-poisonous snakes.

Almost the entire population belongs to the Zawiya tribes, Arabised Berbers who took the place of the Tübu, the previous masters of the cases. Most of them are semi-nomadic and occupy only temporary encampments. The geographical position of Kufra gives it meertain connected importance. It was metopping place on the caravan route leading from Cyrenaica to Wadai and has been in use as such since the beginning of the 19th century. According to Muhammad al-Hasha'ight, there was a market at Diof, where business was conducted by barter. As in all Saharan markets, the chief mast of trade was slaves.

There is very little information on iiii history of Kufra. According to Rohlfs, it could have been inhabited by the Garamantes. Buildings there are comparable with and at Fazzán [q.v.] which Duveyrier pointed out and which seem to go back a considerable period in time. When its history began, the country was occupied by the Tubu, who left many traces of their stay from this period-cemeteries, houses and fortified villages built on the summits of mountains. The population of these places was pagan, and this may explain the origin of the name Kuira (kajara, pl. of hafir, "infidel"), given to the region when they settled there. In about 1730 they were ousted by the Zāwiya and the Hassûna, tribes from Tripolitania, who took were their position. The last of the Tobu to have disappeared at the beginning of the 19th century. In the middle of that century the Sanūsiyya [q.v.] appeared and built the zāmiya of al-Istāt not far from the village of Diof. They appropriated the best ground the richest gardens. At the time of Rohlfs' journey, they already owned a quarter of the paim trees in the oasis and had begun new plantations. The sawiya of al-Istat was already very important at this time, and it became the residence of the Grand Master of the brotherhood from the moment in 1895 when Sidi al-Nahdi, son and successor of Sidi Muhammad al-Sanūsi, the founder of the order, left Djaghbāb [q.v.] to go and take up residence there.

(G. YVER)

AUPS, Arabised form of Persian Külicis, a people inhabiting south eastern Persia, more exactly the Kirmin-western Balüčistän region, in early mediaeval Islamic times.

The name, literally "mountain dwellers", probably stems ultimately from O. Pers. ākaufačiya—(< O. Pers. kaufa-"mountain"), the name of a people in the Daiva inscription of Xerses, who are mentioned together with the mačiya "men III Maka" (= Makrān, the coastal region of Balūčistān?), via N. Pers. kūfiģijkāfič (cf. R. G. Kent, Oid Persian grammar, texts, lexicon³, New Haven 1953, 152, 165). In early Islamic sources, the Kūfičis are frequently linked with the Balūčis in the alliterative phrase Kūč n Balūč, although it in clear that we are dealing here with two separate peoples [for the latter, see malūčistān].

The Arabic and Persian geographical writers of the ath/roth century (Istakhri, Ibn Hawkai, the Hudid al-falam, etc.) mention the region of the Külicis as a mountainous one, lying to the south of the Diabal Bariz in eastern Kirman, where dwelt the Balue. Grosso modo, this region corresponded with the littleknown one of Bashåkard/Bashkardia (q.v. in Suppl.) in modern Persia, sc. the mountainous area lying to the east of Minab and between the Dias Muryan depression on the north and the coastal plain of Makran on the south. Whether the present-day Bashkardis are descendants of the mediaeval Küfičis is unclear and probably impossible to prove or disprove, in view of the dearth of historical, demographic and linguistic information on this remote corner Persia; one can only remark that the two groups of dialects making up Bashkardl form a distinct Iranian language of its own, to be separated from New Persian on the one hand and Balüdi on the other.

The Islamic sources agree on stigmatising the Kūfičis on the 4th-5th/roth-11th centuries as a predatory people, nominally Muslim, but behaving with inhuman cruelty to the travellers and others whom they intercepted within the Dasht-i L0t, into which they raided from their hill fastnesses; there is a classic description of their characteristic savagory in al-Mukaddasi (wrote co. 375/985), 488-90, cf. Schware, Iran im Mittelalter, 263-5. The Buyid amirs Mu'izz al-Dawla and his nephew 'Adud al-Dawla took draconian measures against the Kuficls as they extended their rule eastwards from Fars to Kliman and put amend to the independent power in Kirman of Muhammad b. Ilyās (see ILYĀSIDS). În 324/936 Musizz al-Dawla defeated the "chief of the Kufs and Balüs", 'Al! b. al-Zandii, at Dilfarid in the sardsir or mountainous zone of Kirman, but had to leave him in control of the Kūfičis' mountain baunts.

After the death of Muhammad b. Byts in 356/967, 'Adud al-Dawla invaded Kirman and wrested the province from the former's sons and their allies the Koficls. During 360-1/970-2, two campaigns were launched against the Kūficls, ma result of which Būyid authority was extended m far eastwards as Tiz and Makran, the Kūficl and Balūč lands laid waste, and large numbers of them deported or taken as hostages (for details, see C. E. Bosworth, The Banu Ilyds of Kirman (320-37/932-63), in Iran and Islam, in memory of the late Vladimir Minorsky, ed. Bosworth, Edinburgh 1971, 111-18).

The Küficis did not, of course, disappear after this. They continued to prey on travellers through the Great Desert, although the establishment in the subject the century of the Great Saldjük sultanate and the autonomous Saldjük amfrate in Kirman seems to have reduced their activities to manageable proportions. The amir of Kirman Kawurd [4,4,4] is said to massacred the Küfici chiefs in their strongholds in the Djabal Bariz, and after this, mention of the Küficis as a distinct ethnic element drops out of mention in the histories; presumably they now mingled with the general ethnic stock of southeastern Persla.

Bibliography: The information of the mediaeval geographers is given in Le Strange. The lands of the Castern Caliphate, 316-17, 323-4, and Schwarz, Iran im Mittelalter, 263-6, cf. also Hudud al-Silam, 65, 124, 201, 374-5. The Büyld campaigns are described by Miskawayh in his Tadjärib al-umam, later repeated in Ibn al-Athir; see Boeworth, The Band Ilyás of Kirmán, loc. cst. All these sources are utilised in the detailed study by idem, The Küfichis — Quís in Persian history, — Iran, Jual. of the British Institute of Persian Studies, xiv (1976).

9-17. (C. E. Bosworth) KUH-1 BABA, the mountain massif of ceniral Afghanistan, being the westwards and southwards extension of the Pamirs "knot" and the Hindu Kush [q.v.] of north-eastern Aighanistan. The name Küb-i Bābā is properly given m the east-west chaine magistrale running westwards from Kābul and lying to the south of the upper Herl Rud, with autliers running southwards and westwards through the regions of the Ghôrat and Hazaradiat [see GHÜR and HAZĪRADJĀT in Suppl.] between such river valleys as those of the Helmand, Arghandab and Tarnak. On the northern side of the Hert Rad stretch the Paropamisus Mountains, rising to 3,600 m./11,200 ft., and northwestwards to the Murghab valley and the Russian border, the Küh-i Hisär (4,230 m./13,150 ft.) and its continuation the Band-i Turkistan (3,500 m./10,900 ft.). To the east of Kahul, the Salid Küh stretches to the south of Djalalabad towards the Khyber Pass [see KHAYBAR PASS] and the Pakistan frontier, attaining a height of 4,760 m./ 14,800 ft. The central Kuh-i Baba has as its highest point Shah Fülädi, 5,140 m./16,000 ft. high and covered in perpetual snow. The whole region is thus a gangilon of mountain chains and upland plateaux, across which communication has always been arduous: thus the Unai Pass between the headwaters of the Kabul River and the Helmand lies at 3,300 m./ to, 300 ft., the Shibar Pass between the Kabul valley and northern Aighanistan via the Ghörband lies at 3,000 m./9,400 ft., the Hadjigak Pass from the Unai district northwards to Bamiyan lies at 3,700 m./ 11,550 ft., and the Kirmu Pass connecting the valleys of the upper Heri Rud and the Helmand lies at 3,100 m./9,730 ft.

Pecause of the difficult communications, the

historic routes linking the principal towns of Afghānistān, sc. Kābul, Kandahār and Herāt, have often gone round this central massif southwards or northwards, and today, it remains one of the most thinly-populated and least-known regions of the country. Much field work, archaeological, ethnological and topographical, needs to be done here, and this will certainly throw important light on Afghānistān's past history. Because of the configuration. and the harsh climate, much of the region is totally unpopulated, but on the plateaux and in the villages there is pastoralist transhumance and nomadism and some agriculture. The population of the Ghorat and Hazāradiāt regions is predominantly Tādjik, with vestigal ethnic elements like the Mongols, and with increased penetration on the southern (ringes by Pashtuns. The towns of the region, like Pandiab -Pandjāō, Ghizāō, Uruzgān and Dawlatyār, are smali and have only local importance.

KUH-I NUR (KoH-: NOOR) # diamond, now weighing 1061/16 carats, but originally much larger; the early history of it is obscure, and authorities not agreed as to whether it may identified with the diamond mentioned by Bâbur in his Memoirs (Bābur-nāma, tr. Beveridge, 477, 702); but ca. 1656 it was presented by Mir Djumla [see MURAHMAD sa To] to the Mughai emperor, Shah Djahan, and seen in 1665 by Tavernier in the treasury of Awrangzêb; in 1739 it was carried off to Persia by Nadir Shah, who gave it the name it now bears. Nādir Shāh's grandson, Shāh Rukh, gave it in 1751 to Ahmad Shah Durrani, whose grandson, Shah Shudias, when in exile in Lahore in 1813, had to surrender it to the Sikh Maharadja Randjit Singh, On his death-bed in 1839, Randjit Singh is said to have expressed wish that the diamond should be sent to the temple of Djagannath, in Orissa, but it remained in Lahore until the annexation of the Pandiab in 1849 by the East India Company, who presented it to Queen Victoria. It was subsequently incorporated in the state crown used by Queen Elizabeth, consort of King George VI, at their coronation in 1937.

Beveridge, Bdbur's diamond; was if the Kok-i-nur?, in Imperial and Asiatic Quarterly Review (April 1899); Yule and Burnell, Hobson-Jobson, ed. W. Crooke, London 1903, 491, s.v. Kohinor. (T. W. Arnold) AL-KOHI [see Suppl.]

At-ROHIN, name of a certain number of Moroccan families, of Jawish origin but converts to Islam. One of the best-known III them is the family to which belonged Aso Muyamaan Sama Al-Kadra s. Arman, who towards the end of the 12th/18th century pursued religious studies under the direction of such famous scholars as Ibn al-Hādidi [q.v.], Hamdin, Ibn Sūda [q.v.], Ahmad and Ibn Kirān [q.v. in Suppl.]. Being an immediate discipte of Mawiāy al-Sarbi al-Darkāwi [see Darrawa], he joined the religious order which the latter had recently founded. He made his first pitgrimage, and wrote about this in a Rible apparently lost, then finally settled in Medina where III died in Safar 1254/April-Stay 1838.

Al-Kühin laft behind # Fahrasa [q.v.] called Imdad dhawi "l-isti"dad ila ma'alim al-riwaya wa 'l-isnad {Ms. Rabat, 514, ff. r-20}, two commentaries on al-Bukhari, Minak ildhiyya wa-mawahib ihhtisasiyya 'ala 'l-Diami' al-Sahih (Ms. Rabut, 34) and Namafik al-ward me 'l-'anbar wa 'l-mith al-warl li-skark akhir lardiamat Sahih al-Buhhari (Ms. Rabat, 892 D), and finally. . Munvat al-lakir al-mutadiarrid wa-tamir al-munis al-muniarid, a selective gloss on the Shark al-Adjurgumiyya of Ibn 'Adjiba fa.v.], printed at Istanbul in 1315: "purely grammatical explanations are set aside, and only the allusive character is kept, in which the grammar is used to illustrate the process of the manifestation of divine light" (].- L. Michon, 282, cf. 115-19, where two passages from this work me translated).

One of this mystic's descendants, Hasan b. Muhammad b. Kāsim b. Alimad b. 'Abd al-Kādir (b. 1915 in Cairo) is the author of the Ridd Tabahdi al-Shādhiliyya al-kubrā, published at Cairo in

1347/1938-B).

KUHISTAN (P.) or KUHISTAN is the arabicised form of the Persian name Kühistån meaning mountainous country (derived from kah, "mountain" with the suffix sistan) and corresponds to the Arabic designation al-Diibal. As the Iranian plateau is very mountainous, we find many more less extensive areas in it to which the name Kühistän has been given, as Yakût has already remarked (iv, 204). Many of these names have disappeared in course of time. Thus Kazwini (ed. Wüstenfeld, 228) says that the term Kühistän is used for Media, which other geographers always call al-Djibal. In the Shak-nama of Firdawsl = even find Kühistan used as the old name of Ma ward' al-Nahr (ed. Vullers, 531) but this is probably a case of erroneous identification made by Firdawsi himself (cf. also Vullers, Lexicon, S.v. Kuhl.

The principal districts that are or have been called Kühistän are as follows:

r. Kübistän-i Khurasan. This is the mountainand partially arable region which stretches south of Nishapur as far as Sistun in the south-east. It is surrounded on all sides by the great salt desert of the Central Iranian plateau and consists of scattered groups of oases; one feature of its geographical unity is the fact that no part of it belongs to one of the great centres of civilisation that surround it. These are in the north Nishapur, in the north-east Herât, in the south-east Sistan, in the south-west Kirman with Yazd, and in the west Media. Although Kühistan has always been connected with these by caravan routes and is therefore not absolutely cut off, its isolated position, combined with the relatively low productivity of the soil, has caused it to be littleknown and neglected and its inhabitants have usually been ruled by a member of independent lords. If it has been reckoned a district of Khurasan, is only because Nishāpūr and Herāt are relatively the nearest places to it. Kühistän has therefore never been a very clear-cut geographical term; a modern travelter Curzon, although he describes the different districts, does not even mention its name.

The orography of Kühistän is still little known.

The mountain chains which in the north run more east to west, assume the direction NAV.-S.E. as one moves southwards. These chains, which have passes rising to over 3,000 feet, enclose cultivated areas of which the principal are, beginning in the north: Turshiz and Turbat-i Haydarl [q.v.], now called Turbat-i Shaykh Isbak, and to the east Diam; next comes the district of Diunabad Iformerly Yunabid) and more to the east, that of Khwai [e.v.] with the old town of Zawzan; then comes Tun. with the district of Tabas on the west of it, which later extends so far to the west that in the Middle Ages it was not included in Kühistän; next come to the south of these, Karn and Birdjand, to the south of which there are no more pases of any importance until we reach Sistan by the Nih route. The rivers of the region of little importance; irrigation is done by canals and handts; Mukaddasi, (322, reading of the Istanbul ms.) says that the only running stream he knows in Kühistän is near Tabas; the latter is also the only town which he includes, with the neighbouring district of Kurl, in the district or warm regions.

It is probable that various places in Kühistän have a history going back to pre-Islamic times, but so far we have no information on this period. To realise this, it is sufficient to glance at the second map given by Herfeld in his article Khorasan: Denkmalseographische Studien zur Kulturgeschichte des Islams in Iran, in Itl., xi (1921), 107-74. The journey of this writer in 1925 confirmed his first impression. Moses of Chorene does not mention this region in his Geography. In the period of the early Arab conquests, we find Kühistan under the rule of the Hephthalites. Historiaus say that it was first conquered in the caliphate of Umar by Abd Allah b. Budayl al-Khuzā"; the latter setting out for Kirman took al-Tabasayn-it is by this dual (for Tabas and Kurin, occording to al-Balidhurf) that the Araba always refer to the district of Tabas-later called the "two gates of Khurāsān" (Tabari, i. 2704); a deputation of the inhabitants is said to have concluded a treaty with Umar (Baladhurl, 403). In 31/653, when Ibn 'Amir undertook the conquest of Khurasan, his advance guard under al-Ahnai passed through Kühistän and defeated the Hephthalites there (Tabari, i, 2885, and Baladhuri, 403, who give other traditions also). In the years following, Kühistan was the centre of a great national revolt under a chief called Karin (a village in Kühistan still bears this name), a rising which was put down by Ibo Khäzim (Tabari, i, 2905; Marquart, Erdniche, 135). In 51/671 it was again necessary to reconquer it; this was done by al-Rabl' b. Ziyad from "the Turks" or rather Hephthalites (Tabari, ii, 156). Henceforth Kühistän formed from the administrative point of view a part of Khurasan, and more particularly of the provinces which the Arab geographers still call by the old name of Abarshahr with its capital Nishapitr (cf. particularly Yackubl, Buldan, 278, tr. Wiet, 84, who gives a rather limited definition to Kühistän, for he mentions al-Tabasayn, Diam and Zawzan separately). These remote districts became in the early centuries of Islam the principal reluge of Zoroastrians driven from their homes by the new religion (cf. particularly, Inostrantsev's work quoted in the Bibliography). In the 3rd/9th century the province was under the rule of the Tähirida (Ibn Khurradadhbih, 35) and later of 🔤 Saffarids. The Arab geographers of the 3rd-4th/ oth-roth centuries know it very well. In this period Ka'in was the capital and the commercial centre of

Kühistin, especially for through trade between Kirman and Khurasan. The province was further noted for a very fine linen woven there, which Abū Nuwas mentions under the name Kükiyya (cf. Djāhiz, Bayan, Cairo 1332, l. 79, and R. B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, 95-6); this industry flourished at Tun in particular. Prayer-carpets also were made there. In the year 444/1052, Nāşir-i Khusrāw passed through Kühistan, going from Işfahan. He went by Tabas, Tun, Ka'in and Sarakhs and describes them as large flourishing towns. In the time of the Saldinks. Kühlstan, the old asylum of the Zoroastrians, became a refuge for the Isma'lli heretics, who for this reason were often called al-maidhida al-hahiyya, They built here strongholds on the model of the famous citadel of Alamut; there we still many ruins of these castles which have not yet been fully examined (Herzfeld, Reisebericht, 273; M. G. S. Hodgson, The order of Assasins, The Hague 1955, index; B. Lewis, The Assasins, a radical rect in Islam, London 1967, 44-5; P. R. E. Willey, The Assassins in Quhistan, in Inal. Royal Central Asiatic Soc., ly [1968], 180-3). The Kh "arizmshahs had on several occasions to send military expeditions to punish the maldhida (cf. e.g. Djuwaynī, Taridh-i Dithan-Guzha, il, 47, 49). The coming of the Mongols, who exterminated the Isma'lls, at the same time brought about the ruin of Kühistan. The region lost all importance and the geographers-like Abu 'l-Fida'-only quote their predecessors of several centuries before. It is improbable that this is the district referred to by Marco Polo under the name of Tunocain, which Le Strange, Lands, 352 proposes to identify as Tun-u Ka'in. During the following centuries the region must have very often been in a state of anarchy (of. Idrisi, tr. Jaubert, i, 430) when power me in the hands of chiefs of Arab origin. The Safawids exercised some authority there. but after them, power lay in the hands of the amirs of Tabas and of Karin. At this time, Kübistan inclined towards Alghanistan rather than Persia, until the Kadiars succeeded in bringing it under their sway towards the middle of the 19th century. The chiefs of the ruling families kept their positions as governors for the Shah and received pompous titles from the Persian court. About 1900 the amirs of Ka'in | longer lived | this town but in Birdjand; they claim descent from the Arab tribe of Khuzayma. Some members of this family also ruled Sistan. The rulers of Tabas also governed at this time the district of Diunabad (chief town Diunaya).

The settled population of Kühistän is of a very ancient stock; their houses are also of a very archaic type. Their dialect seems to offer few pecularities. Ivanov distinguishes in Kühistän the dialect groups of Turshiz and Diunabad and that of Karin, Tun and Birdiand. Many villages around Ka'm and Birdjand are inhabited exclusively by saypids, in some places we also find descendants of the Isma This, who recognise the authority of the Agha Khin, e.g. at Ka'in and Birdjand. There also small colonies of Bahars, while the Sunni Afghan element is relatively strong. The nomads are for the most part Arab Sunnis, still speaking Arabic; they live along the main routes, and include the Khuzayma, from whom came the amirs of Karin. A few Turkish tribes are found only in the north as far as Turbat-I Haydarl. Finally, in the south there are Balûčia, who move in summer towards Sistan.

Kühistän has never in its history contained any major urban centres comparable to those of northern and eastern Khurāsān; when Sykes was there in 1900, Karin had only ca. 4,000 inhabitants. This may be one reason why the region (with the exception of the more northerly part, around Zawzan, **KH**WAP) did not in earlier times produce such an abundance of 'wiama' and scholars as the other cities of Khurasan. However, Storey, Persian literature, i., 923, mentions a modern Tadhkira-yi shu'ara? (Kawad by one Diva al-Din Ka'inati on some poets of Ka'inat and Birdiand, and in mediaeval times we find Tha allbi mentioning poets with the nithe of "al-Kā'ini", e.g. the Abū Mansūr Kāsim b. Ibrāhim al-Kàlini in Tatimmal al-yatima, ed. Eghbal, il. 45. Birdhand has in recent times been the most important town, even though it lies in a less fertile situation than the smaller Ka'in. Administratively, much 🔳 Kühlstän falls today within the glabrastan of Birdiand, in the 9th ustan or province of Khurasan, and within this showastan or district there is backsh or sub-district of the same name (pop. in 1950, 43,4009) and a further and of Ka'in (pop. in 1950, 65,000). The products of the region include some cereals, such as wheat and barley, opium, silk and saffron, and there is carpet-weaving and camelraising.

Birjand, Qain, etc.; W. B. Fisher, in Cambridge history of Iran, i, Cambridge 1968, 73-6. For the European travellers through the region, see A. Cabriel, Die Erforschung Persient, Vienna 1950; N. N. Ambraseys and C. P. Melville, The seismicity of Kuhistan, Iran, in Geogr. Inal., cxliii/2 (1977), 179-99. See also EETAP, TABAS and TURSHIZ.

2. The Arab geographers appear to have known two towns of the name Kühistän in the province of Kirmán, One of them was called Kühistän Abl Ghänim and was in the district of Djiruft, between this town and the Djabal al-Kufs (Mukaddasi, 52, 461, 467; Hudūd al-ʿālam, tr. 65, 124, comm. 374-5; Yākūt, iv, 206; Le Strange, 318). The other Kühistän was situated on the road from Sirdjän to Bām, Ilandash from the former town (Ibn Khuradādhbih, 66; Kudāma, 196; Mukaddasi, 473; Le Strange, 311).

3. Kühistän of Käbul in Alphänistän is m district to the north-east of the town of Käbul and includes the districts of Pandishir, Nidjaan, Tagan, etc. The population is composed of an element called Tädilks, who speak Persian and Pashto, and other elements called Kühistäni who speak Pasha'i (a Dardie dialect, see DARDIC and KAYIR LANGUAGES) and Paraci (Iranian) (cf. Imperial gazetteer of India, xiv, 241).

4. The northern part of the native state of Swat in the north-west of India is also called Kühistän, It is the mountainous region around the upper course of the river Swat; it stretches eastwards as far as the Indus and westwards as far as Pandikora. so that a distinction is sometimes made between Kühistän of Swät and Kühistän of Pandjora. The people of the valleys (estimated to number 20,000) have suffered since the 9th/15th century from Afghān invasions. Under the rule of the Afghāns they became very zealous Sunni Muslims; the religious chiefs (dishard) have had an enormous influence in the country. Another consequence of the Aighan invasions has been the expansion of Pashtô all over the country. This language has gained ground at the expense of the old local dialects. The latter-towhich the general name of Kühistäni is given-are very and belong to the Dardk group which, according to the researchs of Morgenstierne, to belong to the Indian group of dialects. The principal dialects are: Garwi (Swat K0h.), Torwall (Swät and Pandikora Küh.) and Mayyā (Indus Küh.).

Report on a linguistic mission to Afghanistan, Oslo 1926, Institutet for summenlignende Kulturforskning, series C, 1-2; idem, in

DARDIC and EAFIR LANGUAGES. 5. Lastly, Kühistän is the name of a barren and mountainous region in the eastern part of the district of Karact. The population in 1901 was

estimated at 12,877 (Imperial gazetteer of India, XV, 353). (J. H. KRAMERS*) AL-KUHL, traditionally translated as antimony

sulphide (stibuite), is synonymous in the Arabic and Persian geographical sources with ithmid and rusma. Its primary least lean, where the following places were noted for its production; in Khurāsān, Tūs (Hudūd al-fālam, ed. M. Sutūda, tr. and W. Minorsky, § 23.11-Surma), and Güzgan (Hudüd a-'dlam, § 23.52-sang-i surma); in Māzandarān, Sāmār near Sārī (Hud4d al-'ālam, § 32.23-serme) and Tabaristan (Ibn Islandiyar, Tarihh-i Tabaristan, tr. E. G. Browne, 33-surma); and in Dibai province, Mt. Damavand (Abu Dulai, al-Risāla al-thāniyya, ed. V. Minorsky, § 51-huhl) and Islahan (Ibn Rusta, al-A'lde al-nafisa, 156ithmid; al-Istakhri, Masdlik al-mamdlik, 203; Ibu Hawkal, Sarat al-ard, ed. Kramers, 372; al-Mukaddasi, Ahran al-lahdsim, 397; al-Tha'alibi, Lahd'if al-ma'arif, ed. de Jong 110, tr. Bosworth, The Book of curious and entertaining information. Edinburgh 1968, 128; al-Diahiz, al-Tabaşşur bi 'l-tidiğra, ed. H. H. Abd al-Wahhab, in RAAD, xii (1932), 345 kuhi; al-Kazwini, "Adja"ib al-makhlukat, ed. Wilstenfeld, il, 210-ithmid). Modern geological surveys record only three meets of antimony in Iran-at Patyar (7 miles east of Anarak), at Turkmani (25 miles south-east of Anarak), and at Shurab (100 miles north-west of Birdjand) (G. Ladame, Les ressources métallistères de l'Iran, in Schweizerische mineralogische und petrographische Mitteilungen, XXV [1945], 189-91; J. V. Harrison, in Cambridge history of Iran, i, Cambridge 1968, 512-13, fig. 119). None of these, it should be noted, are near the sites listed above.

A study of the words al-kuhi, surma and lihmid indicates that the substance was in fact only carely antimony sulphide. Al-kahl man used in two different ways in mediaeval Arabic and Persian texts. First of all, it was used = general term for any eye cosmetic. Such eye cosmetics were prepared from aumerous different substances and would have had quite different colorations, as is made clear for example in the Lapidary of Pseudo-Aristotle (ed. J. Ruska, Das Steinbuch des Aristoteles, §§ 21, 22, 52) where turquoise, lapis lazuli and talitya (zinc oxide) are mentioned as ingredients of attal, and al-Kazwini and al-Dimashki also note a variety of stones and other substances which could be included (e.g. al-Kazwint, ii, 229-34). The word kuhl was still used in this way in the last century-for example, Sanguinetti (Quelques chapitres de médicine et de la therapeutique arabe, in JA [1866], 320-1) gives the constituents of three types of knhl-knhl aghbar, huhl asfar and kuhl fasts, the latter being composed of eleven different substances.

Al-huhl was also used, however, to indicate a particular substance, m for example when al-Istakhri records a mine of al-kuhl at Islahan, and m interesting story in this connection is related by al-Tha alibi (loc, cit.). He writes that al-Hadidiadi is reported to have given an of his special followers the provincial governorship of Islahan with the words, "I make you governor of the area of which the stone is al-kukl", and adds that Islahan was talked of in these terms because the kishl stone there was of such excellent quality. Al-kubl in these instances was something pecific than eye cosmetics in general, i.e. it was a particular substance, mineral or metal.

The equating of ol-huld in this latter sense with ithmid and surma is evident from such passages as al-Kazwini, i, 210, and Abu 'l-Kāsim Kāshāni, 'Arā'is al-djauāhir wa-nafā'is al-atā yib, Tehran 1345/ 1966, 189, and the sources are unanimous in associating the substance with lead. This is the evidence of Pseudo-Aristotle, § 32 and al-Hamdani, Kitáb al-Djewkeratsyn al-fatikatsyn, ed. C. Toll, fols. 212, zza, the latter identifying ithmid with the ore from which silver came i.e. lead ore. Al-Hamdani, it should be noted, had m great deal of first-hand experience of metallurgy. Equally confirmatory is the evidence of al-Kh "arazmi, ed. E. Wiedemann, Beitrage, xxiv, in SPMSE (1911), 93, and Kashani, 190, 344. It therefore seems reasonable to assert that the kuļi mined at Işlabān was a lead mineral (Ibn Rusta, 157, says that Işfahān produced lead as well 🖿 ithmid), and to suggest that where huhl in the literary sources indicates a naturally-occurring substance as opposed to an artificially-made compound, it almost certainly refers to a lead mineral too. In this connection it should be noted that while it had generally been assumed that eye-paint in ancient Egypt had an antimony base, A. Lucas (Ancient Egyptian materials and industries, revised by J. R. Harris, 1962, 195-9) showed by analysis that it in fact consisted of galena, pyrolusite, brown ochre = malachite, and only in minimum instance, of antimony sulphide.

As a cosmetic, al-kuhl was ground m fine as possible and then used by to dye their eyebrows and eyelashes or the edges of the lids. The cosmetic was applied by means of a small probe or stick with a rounded end called a mirmed, and was kept in a small vessel called a mushulo (E. W. Lane, Manners and customs of the modern Egyptians, 1954, 37-8); in mediaeval times, the sticks were commonly

of bronze and the versels of glass, and a special object known in <u>Khurksân</u> as wasma-<u>diffah</u> was used for grinding the substance and pouring it into the narrow-necked vessels (for such an object, see G. Pehérvári, Islamic metalwork is the Keir collection, London 1976, no. 18, and numerous similar pleces electrophere).

Al-kuhl also had a specifically medical function as meye unguent, particulars of which are to be found in Ibn al-Baytar and other such writers. From this function comes the idea of al-kakhdi, ophthalmist [see farm].

Al-kuhi is also the origin of our word alcohol. From a fine powder used to stain the eyelids, it came by extension to mean any fine impalpable powder produced by trituration or sublimation, and hence was applied to fluids of the idea of sublimation—an essence, quintessence = "spirit" obtained by distillation or rectification. Sublimation and the distillation of drugs was known to Khalaf b. Abbas al-Zahrawi (Abulcasis) in the late 4th/roth century, but the more complicated process needed for the production of alcohol was probably introduced into the Islamic world from Europe, where it was first discovered in the 12th century. (For a description of the preparation of arak in 10th/16th century Mughal India, see Abu 'l-Fadl 'Allami, 'A'in-i Asbari, tr. H. Blochmann and E S. Jarrett, Calcutta 1893, i, 69).

Bibliography: the continued publication of previously unknown scientific or semi-scientific texts such as those of al-Hamdani and Abu 'l-Kāsim Kāshānī means that the works cited in the article on al-huld in El1 have become outdated, but - detailed work on al-kahl has since been published. The reader is referred to E. O. Lippmann, Entsiehung und Ausbreitung der Alchemie, Berlin 1929, and to the works of Wiedemann, Beitrage xxiv, 93, 99; xxv, 228-9; xl, 276, 186, in SPMSE, 1911, 1914, and H. E. Stapleton, Chemistry in Trag and Persia in the tenth contury, in Memoirs of the Asiatic Society in Bengal, viii, 6, 352, 372; but is advisable ■ read them in conjunction with all the information now available in the Arabic - Perslan texts cited above. Additional information is to be found in other geographical texts, in works on pharmacology, and in semi-scientific texts such as Nastr al-Din Tust, Tansakh-nama-yi Ilkhani, Tehran 1318/1969. Much material is also to be found in WKAS, i, 73 f.

(E. Wiedemann - [J. W. Allan]) KUHRUD, Arabic form of Persian Köh-rud "mountain river", a village in western Persia on the summer route between Kashan and Islahan [q.vv.]. In mediaeval times it fell within the province of Dilbal, and Hamd Allah Mustawft, Nucleat al-build, tr. 184, places it some 8 farsables from Kashan, sc. 27 miles/45 km. from the latter town; cf. also Schwarz, Iran im Miltelalter, 929 n. 16. Today, Kuhrud falls administratively in the bakksh of Kamsar, in the skehrasian of Kashan, in the second usids or central province of Iran, - Farhang-i diughrāfiyā'-yi Irān, iii, 218-19. It lies in the mountains on the slopes of a cultivated valley, and the agreableness of its climate in summer has been commented upon by numerous European travellers, from Chardin onwards, who have passed through it. E. G. Browne was there in 1888 and collected specimens of the distinctive dialect of the Kuhrud-Natana district, see his A year amongst the Persians, Cambridge 1926, 203-8.

Kuhrtid is apparently unmentioned by the earlier Arab and Persian geographers, until Mustawil (8th/14th century) comments upon it and upon the fact that the river of Kuhrud supplied Kashan with some of its water (op. cit., tr. 72); this river was dammed in Şafawid times by the Band-i Kuhrüd in order to assure a supply for Kashan during the months, see Browne, op. cit., 202-3. Its monuments comprise . Şafawid caravanserai and two 8th/14th century mosques, one apparently the Shift mosque and the other possibly that of the Sunni villagers; for these, see O. Watson, The Masfid-i 'Ali, Quhrild: an architectural and epigraphic survey, in Iran. Inal. of the British Inst. of Persian Studies, xii (1975), 59-74. The mountains of the Kuhrüd district produce lead and cobalt, and the village may accordingly have had connections with the great ceramics centre of Kashan; Hans Wuiff, The traditional crafts of Persia, Cambridge, Mass. 1966, 163.

Bibliography: given in the article.

(C. E. Bosworth) KÜKAWA, or KÜKA, capital of Bornů [q.v.] for much of the 19th century, situated at 12° 55' N. and 13" 35' E. It was founded about 1814 by al-Hadidi Muhammad al-Amin b. Muhammad al-Kanimi [see AL-KANEMI], better known = Shavkh. Shehu, al-Kānimī. He was a Kanembu mallam [q.v.], who had established himself at Ngala, south of Lake Chad. In 1808 or 1809 Fulani forces, linked with the dishid of Usuman dan Fodio [q.v.], occupied and ravaged Birni Gazargamu [q.e.], then the capital of Bornu. The Bornu ruler, or man [q.v.], called upon al-Kanimi's help. The city changed hands several times but, although eventually the Pulani were conclusively expelled, Gazargamu never became the capital again. Mal Dunama wandered about, earning the derisive title "mai of the calabash" (a significant item of luggage) for his much travelling. Al-Känimi received the fiel of Ngornu, northwest of Ngala but still far from Gazargamu, for services rendered. Dunama was deposed by his uncle, Muhammad Ngileruma, who established a me capital, Birni Kafela, very near Ngomu. About 1813 al-Kānimi's power had so much grown that he was able to depose Muhammad, and to reinstate Dunama, keeping however Kafela as the mai's official capital, With Gazargamu ahandoned, Kafela very much in the shadow of al-Kānimī, and al-Kānimī himself what at odds with local leaders in his own fiel of Ngornu, there was no obvious centre of power in Bornů. About 1814 al-Känimi decided to leave Ngornu, and built a new town, Kūka, again a what to the northwest, nine miles from Lake Chad. The name comes from the Kanuri [q.v.] word for baobab (Adansonia digitata) tree, one of which was growing on or near the site of al-Kanimi's future dwelling.

For the next thirty years, an uneasy balance existed between the legitimate dynasty at Kafela, and the shekn's one at Küka. In 1817 (Barth) or 1820 (Brenner) a Bagirmi [q.v.] force invaded Bornü, intending to oust al-Kanimi and restore to the mai his traditional powers; the plan failed and the mai was killed. Schultze (p. 257) mentions a sack of Küka by the invaders m this time, but this is not confirmed in other sources. Al-Kānimī struck his own seal, dated 1819-20, but still continued | preserve ■ figurehead mai. Al-Kanimi died in 1837; the hitherto generally accepted date, 1835, seems almost certainly disproved by manuscript evidence. He was succeeded by his son 'Umar [q.v.], under whom Kuka continued to become increasingly the sol of ali real power. In 1846 Wadai [q.v.] was invaded,

with the intention of removing Shehu 'Umar and re-establishing the mai. Kūka was partially destroyed, and for two months lay almost a desert; but again the plan miscarried. The mai was executed; after his son was killed in battle some months later, no new mai was appointed, 'Umar openly asserting that sovereignty which he and his father had long enjoyed in fact. Kūka was now the official, as well we the actual, capital of Borno.

As, in the period after 1814, power came more and more to centre upon Küka, the essential pattern of government—in essence, through fiels ruled by courtiers-did not change, although there was greater centralisation than in the old days at Gazargamu. The Küka court was characterised by relative informality, lack of splendour, and a certain religious simplicity, in contrast to the elaborate, and increasingly hollow, ceremonial at Kafela. Yosuf b. 'Abd al-Kädir, son of a former imam at Gazargamu, was appointed imem of the Küka mosque, and presided over all religious festivals. Minor legal matters, such as divorce and inheritance, were handled by hadis appointed by al-Kanimi; serious crimes and capital cases were referred to al-Känimi himself, and his six principal companions. After 1846, ceremonial tended to increase, and the number of courtiers and noblemen grew larger. With the challenge from Kafela removed, and with an over-larger number of people competing for wealth and rewards which me no longer expanding sufficiently rapidly, divisive forces appeared within Küka itself; 'Umar, s pious and aimable man, was also irresolute and weak, unable to maintain his father's firm control of the city and the state.

After the Wadai sack in 1846, Küka was rebuilt, but a new town was added to the east, and into this quarter the political leaders moved. The shoke's main palace was in the me town, although that in the west town was refurbished, and the shake visited It from time to time, particularly at religious festivals. The west town, i.e. the original Küka, became the residential proposition of non-titled families, and foreign merchants; it had the larger population. Each town was walled separately. (Kükawa is a plural form: there were in fact two Küka towns). The wall of the eastern town, in 1870, was prenellated, about 🚥 feet high, made of clay and gravel, with terraces - the inner side; during the rains, the upper and thinner part of the wall began to disintegrate, and goats grazed on the terraces. The space between the two towns was almost as densely built up as the towns themselves, and there were in addition many huts, farms and hamlets round about. Nachtigal, who arrived on 6 July 1870, estimated the double town as about a 1/4 miles long and a mile broad. A dendal, or promenade (Barth called it "this high road of ambition"), a standard feature of Kamiri towns but here me a much extended scale, started at the west gate of the west town, and ran straight on, across the intervening space, and two-thirds of the way through the east town, until it were to the sheku's main palace, which was distinguished by mupper storey and towerlike elevations. Before the palace, a little to the north, a low minaret overlocked the boundary wall of a complex of houses and huts, identifying them = a mosque. The usual dwelling consisted of a considerable area, in which were huts of thatch, and cubical earthen buildings usually of one room; much as three-quarters of the total area might be of courtyards and unroofed enclosures, including gardens and stable yards. The general architectural appearance of the city was dispiriting;

the outer walls, at m distance, could hardly be distinguished from the surrounding ground, whilst within, the roads and paths were generally lined by the windowless walls of adjoining compounds. Some trees, and an unusually abundant bird life, refreshed the eye of the visitor.

Daily markets were held in various parts of Kükawa, but the main market took place on Mondays, outside the westernmost gate. Although this was often very crowded, and shopping there difficult because of the press of customers, the people were generally orderly. Among the goods offered for sale were livestock (camels, borses (both riding and draft), cattle, donkeys, goats, sheep and fowls), cloth and clothing of all kinds, foodstuffs (various grains and mests, honey, milk, butter, dried fish, vegetables, truit, natron), cooking and eating utensils, leather goods, basketware, carpentry and metalwork, weapons, even boats, firewood, fodder, charcoal, building materials (mats, poles, etc.), rope, and other commodities. Slaves formed an important element in market transactions, with prices for a sedasi (a boy measuring six spans from the ankle to the top of the head, aged 11 to 15) indicating the general tone of the slave market. Special slaves, such as eunuchs, dwarfs, deaf-mutes and concubines, were generally sold privately, were the best quality horses, and not on the open market. Major imports from Europe and North Africa about 1870 were coins (both cheap and of luxury quality), women's ornaments, resaries, aromatics, tarbushes, paper, guns, swords and sabres (although weapons were also manufactured locally), chain mail, needles, scissors, knives and razors; principal exports northwards were slaves, ivory and ostrich feathers. Barth in 1831 was very critical of the lack of local industry in Kükawa; there seems to have been a considerable improvement by the early 1870s, when also a greater variety of goods is reported me the market, and the use of currency (cowries, strips of cloth, Maria Theresa dollars) seems to have won a wider acceptance. Trade with North Africa was at this time being inconvenienced by the extreme unreliability, in any commercial contracts, of most of the Kükawa nobility. Kükawa did not profit much from modern trade patterns developing to the south. In 1891 Charles MacIntosh, of the Royal Niger Company, visited the city in search of a trade treaty, but the North African community there persuaded the Shehu, Hāshim b. Umar, to refuse his presents and send him away,

The population of Kükawa was probably about 60,000 during its heyday. There were a considerable number of Kur'ānic scholars and teachers, and many blind beggars; <u>hura/d'</u> from Morocco and the haramsyn, pious men from Egypt and Tunis, Timbuktu and Senegal, pilgrims from the western Sahara and the Hausa and Fulani countries, all more or less attracted by the reputation for open-handed generosity which Shehu 'Umar in particular enjoyed.

The downfall of Kūkawa was at the hand of Rābih [q.u.], a man of eastern Sudanese origin. Probably early in 1893, although precise dating of these events is extremely difficult, Rābih and his army, moving westwards, occupied Logone, wassal state under Bornū. In two battles, at Amja and Legarwa, the Bornū forces vainly tried to defeat Rābih; after the second defeat, organised Bornū resistance collapsed. Shehu Hāṣḥim had been present at the second battle, though taking no active part; he fled to Kūkawa, and abandoned it within a few days, at Rābih's approach. Rābih occupied the town, sometime in 1893, without a struggle. What hap-

pened next is uncertain; some authorities report the ruthless pillaging of the capital, with several thousands of people killed as captured, while others argue that the violence was much more restrained. Certainly an immense booty was captured. Readings from the Kur'an were among the festivities celebrating the victory. Shortly after the conquest, Rabih decided to move the capital to Dikwa, an older town of strategic importance, where water supplies were better and grain more accessible. Kükawa was partly demolished, and everything which could not be carried away was burnt. Only the tembs of the Shehus, where Rabih himself had prayed, were respected.

In 1902, the British installed Bukar Garbai, a grandson of 'Umar, as Shehu, first at Mongonu 17 miles south of Kükawa, but with the explicit intention of reoccupying Kükawa. Attempts to revitalise the desolate capital failed, and at the end of 1906 both the British administration and the traditional Bornû administration were definitively established at Malduguri. In 1922 Kükawa was reported to be no more than a mass of ruins, and a small hamlet. By 1975 it had so far recovered as to be ■ thriving little town, and an administrative District Headquarters. The graves of al-Kānimi, 'Umar, and their two immediate successors are still revered, and a baobab tree, said to replace the one from which the town first took its name, is preserved as an historical monument.

Barth, Travels and discoveries in north and central Africa, originally published in five volumes In 1857-8, but the most accessible edition today is probably the complete, three-volume reprint done in London in 1965; G. Rohlfs, Quer durch Afrika, Leipzig 1874: G. Nachtigal, Sahara und Sudan, by far the fullest and most valuable account of Kükawa (originally published in 1879-89; reprinted in 1967; a complete, four-volume English translation, published by Christopher Hurst in London, is in progress); C. Monteil, De Saint Louis à Tripolis par le Tehad, Paris 1894; A. Schultze, The sulfanau of Bornn, tr. from the German with additions and appendices by P. A. Benton, English edn. first published 1913, reprinted London 1968; L. Brenner, The shehus of Kuhawa: a history of the al-Kanemi dynasty of Bornu, Oxford 1973. (H. J. FISHER)

BUL, an old Turkish word which came, in Islamic times, to mean "slave boy, male slave", defined by Mahmid Käshghari, Dimin lughit al-Turk, ed. Kilisli Rif'at Bilge, i, 282, tr. Atalay, i, 326-7, sold. However, the original meaning of bul in Okkhon Turkish was rather "servant, vassal, dependent" (the masculine counterpart of bün "female servant, etc.", the two words being linked in the Kültegin inscription, lext references in Talat Tekln, A grammar of Orkhon Turkish, Bloomington, ind. 1968, 347), since slavery in the Islamic juridical sense did not exist among the ancient Turks.

The word spread through the northern tier of the Islamic world as the Turks became Islamised and entered the Iranian lands and beyond, passing into Persian, Kurdish, Caucasian languages, etc., and used both in religious sense "slave [of God]" and above all in military contexts, since Turks became so omnipresent as military slaves. Under the Ottomans, fuller became the standard designation for the

Janissaries [see veñi čeri], and under the Ottomans and the Persian Safawids alike, the latter with their Turkish, Georgian and other slave troops, we find the little kullar aghas! given to the commander-inchief of the sovereign's slave forces [see GHULAM, Iv and ORDO]. An extension of the religious usage of the word may also be seen in such names, common in Safawid Persia and in neighbouring states influenced by it, with kul m m component, e.g. 'All-kull, Shāh-kull, Yazdān-kull; see further Lakas v.

Hibliography: (in addition to references given in the article): G. Doerfer, Türkische und Mongolische Elemente im Neupersischen, III. Türkische Elemente im Neupersischen, Wiesbaden 1967, 503-5, 556, Nos. 1519, 1572. (C. E. Bosworth)

KUL MUŞTAFA, called KAYİKDJİ, 11th/17th century Turkish folk poet of Janissary origin. His nickname Kaylkdil ("The Boatman") seems to have originated from his association in we youth with the corsair, later admiral, Turghud Relis [q.v.] in Algeria. His narrative or epic poems on contemporary important events became very popular in the army and at court, and his fame lies more in these than in his less attractive lyrics. Among his famous narrative poems, the most notable concern the assasination of Othman II by the Janissaries; Shālı 'Abbās's conquest of Baghdad; Murad IV's siege of Baghdad; the revolt of Abaza Hasan Pasha, the governor of Aleppo; and particularly, the epic of Gendi Otheran, wyoung hero who is drowned in the Tigris during the siege of Baghdad. Kul Mustafa's style and language are in the true tradition of folk poets, and wery little influenced by diada poetry.

KULA, a town in western Anatolia, classical Opsicum. It lies the margin of a fertile plain, a few miles south of the upper course of the Gediz river and to the north of the main Manisa-Uşuk road, in lat. 38°32' north and long. 28°40' east and at ma altitude of 2,r40 feet/652 m. it is in a volcanic area (classical Katakekaumene or Combusta), with the extinct volcano Karadevlit north-east of the town; hence many of the houses are built from dark basalt. There are numerous marble remains from classical times, but the citadel, apparently late mediaeval, is ruinous.

Kula came within the lands of the Turkmen beylik of the Germiyan-oghullari [q.v.], and was conquered by Melimed Germiyan (es. 741-63/1340-61), and after his me Süleyman Shah Celebi (ca. 765-90/1363-98) had given Kütahya and several others of his towns to the Ottoman Bayezid I Ylldleim as dowry for his daughter Dowlet Khatan, he himself went to Kûla to reside and died there. in the Test makfiyys at Kütahya of Yacküb Čelebi b. Silleyman Shah (Bra/rarr), the name of Kula is rendered as کولدی. In Ottoman times, Kola feil within the sandjak of Şarukhān, whose capital was Manisa [q.v.]; Ewliya Calebi mentions there 9 quarters, 2,200 households, 24 mosques, 3 baths, 6 caravanserais and 200 shops. In recent times, carpet-weaving has been a significant local craft, and it is now a centre for wine-making. Cuinet (co. 1890) recorded 6,100 inhabitants, of whom 5,655 were Muslims and 345 Greeks, together with mosques and two Greek Orthodox churches. In 1950, Kūla's population was 8,600, whilst the hara of which it was the chef-lieu had one of 38,242 and was composed of 62 villages. It is now the chef-lieu of an ille (formerly kass) in the il (formerly vilayst) of Manisa. In 1975 the population was 10,807.

(C. E. Bosworth)

EULAM, the name given in mediaeval Arabic geographical and travel literature to the port of Quilon at the southern extremity of the Malabac coast of southwestern peninsular South India, in ancient and modern Kerala (lat. 8° 53′ N. and long. 76°36′ E.).

Quilon early became a centre of the St. Thomas Christians of South India, and is mentioned in a letter of the Nestorian Patriarch Ishaiyab of Adiabene (d. 660) to Simon, Metropolitan of Fars, under the name of Colon and as lacking at that time a settled ministry (Assemanus, Bibliotheca orientalia, iii/2, Rome 1728, 437). The first mention of the place in the Islamic sources appears to be that of the Abbbde al-Şin wa 'l-Hind [q.v. in Suppl.] (237/851), which mentions "Külam of Malay" (this latter component being generally written in later Arabic sources, e.g. fbn Battūta, as "al-Malaybar", yielding the name "Malabar", possibly meaning in the local tongue "billy coastland"). It describes K@am as ■ fortified point where Chinese junks plying towards Arabia had to pay a transit due of 1,000 direams per thip to the local ruler (J. Sauvaget, Relation de la Chine et de l'Inde, Paris 1948, text § 14, comm. 42-3, 69). Zakariyya' b. Muhammad al-Kazwini, in his Athar al-bilad (Beirut 1380/1960, 55, 106), quotes Abu Dulat al-Khazradil [q.v.], so, the latter's First Risôla, Kûlam, and he and other sources mention such exports from it is the Islamic world in locallyproduced porcelain (which was not, however, as fins and translucent as the genuine Chinese porcelain), pepper, cinnamon, ginger, teak, brazil-wood, indigo, etc. In regard to the important export of pepper, we sometimes find Arabic authors (e.g. Abu 'l-Fidā) referring to the whole Malabar coast as Bilad alfulful "Land of peoper". See on the Arab trade to Külam and beyond in general, G. P. Hourani, Arab seafaring in the Indian Ocean in ancient and sarly mediaeval times, Princeton 1951, 70-4.

The Jewish traveller Benjamin of Tudela visited Quilon, as did several western exclesiastical envoys to the Far East in the Mongol period, such as Odoric or Pordenoue (translated in Sir Henry Yule, Cathay and the man thilher*, London 1915-16, ii, 129-30] and John of Monte Corvino; the latter mentions that at that time, i.e. the end of the 13th century, the Chinese, Christian and Jewish traders there were being pushed out by the Muslims. Around this time also, Marco Polo visited what he calk Coilum, desorbing it as an independent city-state (Book iii, ch. 22 — The book of Str Marco Polo, tr. Yule and Cordier, London 1903, ii, 375-82; cf. P. Pelliot, Notes on Marco Polo, i, 399-402).

To Ibn Battūta (Ribla, iv, 99-104, cf. Yule, Cathay and the way thither, iv, 79) we owe an especially valuable account of Külam in the first half of the ath/14th century, with important information about its Muslim mercantile community. Whitst on his visit there, he stayed in the Sūfi zāwiya of Shaykh Fakhr al-Din Kāzarūnī, whose father was shaykh of another zāwiya in nearby Calicut/Kalikat (q.v. in Suppl.). The whole body of Muslim merchants was called Sūliyyūn (sc. Cholia, m term used in South India to

denote either Arab settlers or Muslim converts from the indigenous peoples, see Yule and Burnell, Hobson-Johton, a glossary of Anglo-Indian collequial words and phrases, London 1903, 207, s.v. Chootia), and these eeem to have been largely composed of traders of Persian Shifi origin, the head murchant being 'Ai2' al-Din al-Awadil (i.e. from Awa [q.v.] in northwestern Persia), and the kādi man from Kazwin. The Muslim community was, Ibn Battūta relates, prosperous and highly-respected. Ho means the local ruler m Thewarl, sc. Tiruvati of the indigeman Venad dynasty, and praises his impartial justice and mil tolerance of the Muslims,

From the opening of the 16th century onwards. the history of Quilon is bound up with European economic and political penetration of South India, a process which soon became unfavourable to the earlier Muslim commercial supremacy along the Malabar coast. In December 2500 Pedro Alvarez Cabral was at Cochin, and received friendly delegations from the ruler of Kannanür [q.v.] and from the Queen of Quiloa (Portuguese Coilom), both of these potentates being anxious to secure Portuguese help against the powerful Muslim ruler in Calleut, the Zamorin. In 1502 Vasco da Gama made a treaty with the Queen of Quilon, who promised to load two Portuguese ships per year with pepper, and in the next year Albuquerque secured permission to open a factory there. Muslim opposition was atrenuous; Portuguese ships were prevented from loading, and 1504 the Portuguese factor at Quilon was killed by them. In 1505 Don Francisco 🖿 Almeida was appointed the first Viceroy of All the Indies, and received instructions to erect four fortresses along the Maisbar coast, including one at Quilon. In 1516 and 1520, further treaties me made between the ruler of Quilon and the Portuguese aimed at providing the latter with a monopoly of the export of pepper from there.

In 1651 the Dutch captured the fortress of Quilon from the Portuguese, and in 2659 the Dutch East Indian Company made a treaty with the Queen. In December 1661 the Admiral Rijklof van Goens appeared with a fleet at Quilon, since regained by the Portuguese, and occupied the fortress without opposition; he then proceeded in 1662 to reduce the fortresses of Cranganor and Cochin (see, for the whole of this period of the rise and fall of Portuguese influence at Quilon, F. C. Danvers, The Portuguese in India, being a history of the rise and decline of their eastern empire, Landon 1894, i, 38-9, 114, 118, 121, 336-7, ii, 325). But during the 17th century, the Dutch fortress at Quilon decayed from lack of cash and of profit in the trading operations there, and during the period of warfare between the British and the rulers of Mysore, Haydar 'All and Tipu Sultan [q.vv.], in the later 18th century, these two rulers having in their expansionist phase extended Muslim political control into Malabar, the Dutch fortress of Cochin, together with its dependencies, including Quilon, surrendered to British (roops (October 2795). During the middle years of the 18th century, the principality of Quilon had been absorbed by Travancore, and in British India, Quilon continued to fall within the native state of Travancore. It is now (since 1956) in the component state of Kerala in the Indian Union. According to the Census of India 1962. vii. Kerala, Quilon district had in 1961 a total population of 1,941,228 (Hindu 64 %, Christian 25 %, Muslim 11 %), and Quilon municipality alone 91,018 (1901 figure, 15,961).

AL-KULAY'A (A.), "little cautle", the dimin-

at-KULAY'A (a.), "little castle", the diminutive of al-kal's [q.v.], like this last used, in way or another, as a place-name.

z. Muslim Spain

Students of the history and geography of Muslim Spain are familiar with al-bulay's as the name of a number of small melatively small places whose importance seems to have lain only or primarily in the military purpose they served. In Spanish Umayyad history it occurs the name of at least three different places mentioned in connection with raids and campaigns. One was situated in the Asturian kingdom, another in the neighbourhood of Guadalajara, and yet another to the north-east of Cordova (Lévi-Provençal, Hist. Esp. mus., i, 204; ii, 40, 282, 309 (map), 310). The exact location of the first two remains uncertain, but the third, which still bears its old name in Spanish guise, viz. Alcolea, is situated to km, or so on the main casetward road of Cordova.

As regards the Nasrid kingdom of Granada, two places called al-Kulay's are listed in their appropriate administrative divisions by Ibn al-Khatib [q.v.]. Both are located in what is today Almeria province. One-Alcolea-lies north of Berja on the main road to Laujar. In other parts of the Peninsula, the same hispanised can be found in such compounds as Alcolea de Calatrava (Ciudad Real province), A. del Pinar and A. de las Peñas (Guadala)ara prov.), A. de Cinca (Huesca prov.), A. del Río (Sevilla prov.; (?) Hisn al-Kulay's, Ibn Khaldun, Thar, vii, 196), and A. del Tajo (Toledo prov.). Other Peninsular forms are Alcolecha (Alicante prov.) and Alcoletge (Lerida prov.). In Spanish and other European writings the name appears in various guises (Alcolaya, Alcolya, Alcoleia, Alculeiha, etc.). Finally, in Spain today there - a number of placenames which are most probably literal translations of al-kulay'a (Castilian diminutive: "castilleie"), e.g. Castillejo (Cáceres and Granada provs.). C. 🔳 Injesta (Cuenca prov.), C. de Robledo (Soria prov.), etc.

z. North Africa

1. El-Goléa (the French spelling of al-Kulay'a, reflecting the local pronunciation with the usual voiced été of nomadic vernaculars) is the name of an oasis town situated at the far eastern end of the great western Erg ('irk; see map above, i, 365) of Saharan Algeria and lying, by road, 906 km. almost due south of Algiers on the parallel 30° 31', and 320 km. south of Charddya (2.v.)—air distances are noticeably shorter—at a height of 391 metres. Although the most isolated of Algeria's larger oases,

it is one of the most beautiful. In 1973 the dabins of El-Golda had a population of 16,670.

The place owes its name to an old stronghold (Asar) built on the north side of a gara (Aara, p). Aur), i.e. a small, isolated flat-topped hill. This gara, from which can be seen a vast expanse of desert, sandy to the west and stony to the east, is one of three forming something of a protective semi-circle into which the huge oasis nestles beneath. Below the Asar lies a town that has risen on old and new foundations: the old town, home of an original sedentary population living in mud houses similar in shape and size to the tatas of Mali, and the new, modern town, which its foundation to the French, but its felicitously harmonious architecture to the inspiration supplied by local tradition. The latter's mosque and marketplace are the focal point of social, religious and economic life. From the outset this new town has accommodated administrative buildings. In 1938 it also witnessed the consecration of the first church in the Sahara.

Today the Agar is deserted and in ruins. With the establishment and eventual consolidation of French rule, the need for its use as a stronghold disappeared and gradually it came merely to supply the local nomads' needs for storage. Its last inhabitants dispersed throughout the oasis to form hamlet communities alongside various plantations. The remains of the stronghold's double walls still stand, and among the rains a small, plain mosque can be seen where it has been the custom of local women to gather for Friday prayer. The remains of rock dwellings are also in evidence. Dotted around the foot of the gara on which the Asar stands, as well as about the basis generally, are the bubbas of local holy men, amounting to between forty and fifty in all and of different shapes and sizes.

As a result of improvements in irrigation and drainage techniques first effected by the French, the casis now covers more than 800 hectares and supports around 182,000 date-palms watered from artesian wells dug in the bed of the Wad Seggur. Fruit trees also abound, actably citrous and apricot varieties, and there are winter crops of cereals, beans and many other kinds of vegetable.

The inhabitants and frequenters of the oasis are, in the main, wholly or partly sedentarised nomads of the Sha'anba sub-tribe Mawādhi; traders from the Maab; negroes and harājin (sing. harāni [q.v.]) from Twat (Touat) and Grāra (Gourara). These last two groups account for about half the population and between them work the land in a capacity or another. Formerly there was also a Jewish element.

El-Coléa's early history is lost in legend. The old keer is said to have been founded as Taurirt (Berb. "Bittle castle") by the Zenata in the Middle Ages and to have then been taken by the Touareg. Its mediaeval origin may be well founded: Ihn Khaldûn mentions the existence of a seemingly not too dissimilar desert advance post inhabited by Matghāra Berbers and irequested in intensely hot weather by veiled nomads. It too was a kulay's, viz. Kulay'at Wallan (on European maps Gueléa). Be that as it may, 🌃 Sha'anba in and around El Goléa 📖 said, probably rightly, in have come from the region of the Matliil oasis, near Chardaya, where there is still m branch of the Shafanba, and to have been in the carrying-trade there, to say nothing of brigandage, in the late 16th and early 17th centuries. Drifting south as population pressures grew, they made El-Goléa their centre and doubtless profited from its position on the route from the Mxab to Twat and Tidikelt. In the 17th century, according to al-'Ayyashi, this evidently prosperous place was ruled, through a governor, by the suitan of Wargia. Its first contact with Europe was with Duveytier in 1859. General de Gallifet reached it in 1873, and in 1891 a permanent garrison was installed. The local Sha'anba provided Laperrine with the first detachments of the famous meharistes with whose aid the central Sahara was brought under French control.

On Kulay'at Wällan: Ibn Khaldūn, Berbères, ed. de Slane, i, 241; iv, 501.

2. Koléa, a small town of 35,000 inhabitants lying 46 km., by road, west of Algiers. Situated on the landward side of the Sabil hills at a height of 130 metres, it offers a commanding view of the Mitklia plain. Dating from the Ottoman period, it is said to have been founded by Hasan Pasha, son of the corsair Khayr al-Din (Barbarossa) [g.v.], around 1550. What is certain is that it was peopled by Muslim refugees from Castile, Andalusia, and the kingdom of Valencia, for whom the excellent prospects offered by its fertile cultivable land were the main attraction. In the sources it is therefore referred to as "Col de Mudechares" (Mudechares being the Spanish mudejares from Ar. mudadidjanum). In modern times Koléa's attraction has been the tomb and mosque of a holy man, Sidt Mubarak, who lived in the 17th century. One of his descendants. Ibn 'Allal b. Mubarak (Ben Allal Ben Embarak), who in the cause of the Algerian rebel 'Abd al-Kädir [g.p.] in 1843, is also buried there.

Bibliography: Marmol, Descr. de Affrica, Granada 1573, ii, 214; O. Dapper, Descr. de l'Afrique, Amsterdam 1686; C. Trumelet, Les saints de l'Islam... Les saints du Tell, Paris 1681. (J. D. Latham)

KULAYB B. RABI'A. a chief of the Banu Taghlib of the Islamic period, whose murder by his brother-in-law Djassas b. Murra al-Shaybani was the some of a long bloody war between the two sister-tribes Taghlib and Bakr [q.vv.] which was known as "the war of Basûs" [q.v.]. His genealogy was: Kulayb b. Rabi'a b. al-Harith b. Murra b. Zuhayr b. Djusham (Wüstenfeld, Gencal, Tabellen, c. 22; Ibn al-Kaibl-Caskel, Tab. 164, where Murra is not mentioned). Kufavb's real name is said to have been Wa'il, and the name of Kulayb ("little dog") m have given to him because of his habit of taking a small dog with him and making it back by beating it in all the places which he wished to reserve as his own private property; the people who heard the barking of the dog refrained from using the place. This story, the point of which, however, sludes us, is evidently a later invention: the name Kulayb is frequently met with in Arah nomenclature and does not look like a surname.

Kulayb it represented as having all the characteristic traits of the tyrant, of which the independent and critical spirit of the Bedouins has always had a profound horror; he is said to have been proclaimed "king" (on the use of this title of. Lanumens, Le bercesu de l'Islam, Rome 1914, 210) after the brilliant victory won Markaza over the united Vermenl tribes and to have ruled not only over Taghlib but

also over the Banû Shayban, the most important section of Bakr. After a short time, he is said to have abused his power and to have ususped the rights of hunting and of pasturage in the expense of his subjects (the ususpation of the himā is the regular grievance of the Bedouins against "tyrants"; the same reproach was made against the caliph "Uthmān). Indeed, in was because the she-camel Sarāb, belonging to in Tamimi woman ai-Basûs in to one of her clients of the tribe of Banû Diarm, trespassed upon the private property of Kulayb, that the latter put her to death (or killed its young one and injured the mother), and this act of violence was the sister of ai-Basûs.

The details of the story are given in our sources with some variations, most of which are found as early as the work of Abū 'Ubayda who is, as is well linown, the source of almost all our information on the ayyem al-'Arab (q.v.). Certain features, especially in the K. al-Aghani, have been borrowed from Ibn al-Kalbi, and the account | al-Mutaddal al-Dabbi has also been preserved. It is evident that we are no longer able to ascertain if the history of Kulayb fand in general that of the war against Taghlib and Bakr) contains a nucleus of historical truth along with mass of features undoubtedly legendary. This is a problem which can only be solved in connection with the general question of the historical value of the whole of the traditions of the pre-Islamic period. Considered by Itself, the episode of Kulayb has nothing improbable about it. We might be tempted to recognise in it a fairly clear memory of an attempt to form a political organisation among Taghlib and Bakr of a kind superior to the ordinary Bedouin tribes; the attempts, similar to that which gave the royal crown | the chiefs | the tribe of Kinda, must have been suggested by the example of the kingdom of the Lakhmids of al-Hira, not far from which Taphilb and Bakr have their houses. The story of the tyranny and the death of Kulayb must have taken form at a very remote period; this is evident from the verses of 'Abbas b. Mirdas and of al-Nableha al-Diafdi (both contemporary with the beginning of Islam) given in sources; in that of al-Nabigha in particular, the history of the killing of the carriel is already told in detail. An allusion to the power of Kulayb is found as early as the mufallaga of the Taghlibi 'Anir b. Kulthum (v. 65). We have, moreover, contemporary documentary evidence of the accounts relating to the tate of Kulayb in the numerous allusions contained in the elegies on his death, which were attributed to his brother Muhalhil (one of the earliest Arab poets; cf. Ibn Kutavha, Shi'v, ed. De Goeje, 164-6; Ibn Saliam, Tabakāt al-shu'ard', ed. Rell, 13 lines 11-16 etc.), but naturally their authenticity more than doubtful.

The story of the murder of Kulayb is developed in a quite arbitrary fashion in the romance cycle of the Banu Hilal (cf. Mittwoch, Procha arabasa paganorum, Berlin 1899, 11).

AL-KULAYNI (or al-Kulisi), ABO DJA FAR
MUHAMMAD 2. Ya'göz 2. Isuke al-Razi,
Imami traditionist. He originated from a village
located 38 km. southwest of Rayy in the district of

Pashāpūya whose Peraian name Kolēn, with imāla, was Arabicised as Rulaya and Kulin. His nista is thus variously given in the sources al-Kulayal, al-Kulini. or, erroneously, al-Kalini.

Few facts are known about his life. Since his chief transmitters of Imami traditions were several scholars of Kumm, it is certain that he studied in that town for a prolonged time, most likely during the last decade of the 3rd century A.H. (903-13). He also transmitted from several scholars of Rayy. among them his maternal uncle Muhammad b. 'All al-Kulavni al-Räzi, known = "Alän, and al-Nadjäshi describes him as the shayeh of the Imamiyya in Rayv in his time. It is uncertain if it was in Naysabur or elsewhere that he heard Mubanimad b. Isma'll al-Naysaburi, his transmitter of the traditions and views of the prominent Imami scholar al-Fadl b. Shādhān of Navsābūr, whom he evidently held in high esteem. At an unknown date, perhaps in the first decade of the 4th century A.H. (913-23), he moved to Baghdad where he lived and taught in the Darb al-Silsila near the Bab al-Kûfa on the west bank of the Tigris. Here he completed his voluminous Kitāb al-Kāfi, which he is said to have worked for twenty years. The book, though mostly a collection of traditions of the Imams, was meant to be guide to authoritative lmams doctrine in theology and fikh. Thus is arranged according to subject matter and tends in contain only those traditions which the author considered as reflecting orthodox teaching. Only exceptionally are the views and elaborations of Imamil scholars quoted, such as the elaborations of al-Fadl b. Shadhan on the law of inheritance. The work is divided into the usal. dealing mainly with theology, prophecy, the imamate, and prayers; the furge, dealing with fight; and a final volume, entitled K. al-Randa, containing miscellaneous traditions of mostly edifying or paraenetic character. His other works, all of which lost, included a refutation of the Karamita, a book on transmitters (ridial), a collection of letters of the Imams, anthology of poems about them, and a book on the interpretation of dreams. The date of his death is given = 328/939-40 or 329/940-1. The latter date, mentioned by al-Nadjāshi, is more likely to be correct, since al-Tusi, who in his earlier K. al-Fibrist gives the year 328, in his later K. al-Ridjal specifies Shaban 329/May 941. The funeral prayer was led by the Imarni Hasanid Abû Kirat Muhammad b. Djafar, and he was buried near the Bab al-Kufa.

The reputation of al-Kulayni and his K. al-Kafi appears to have been modest during his lifetime and for a century after his death. Ibn al-Nadlm (writing in 377/987-8) does not even mention him, and Ahmad b. Abdûn (d. 423/1030) observed that his tomb had become obliterated. The K. al-Kaff was evidently not widely used in the Imami communities as an authoritative source of figh. Though the Shaykh al-Mufid (d. 413/1022) in Baghdad referred to it as "of the most important and useful books of the Shf'a", his student the Sharif al-Murtada (d. 436/ 1044) included al-Kulayni in his general censure of the Imami traditionist school of Kumm and accused him of including numerous forged and rationally absurd traditions in the K. al-Kāfi. It to have been largely due to the influence of the Shaykh al-Tust (d. 460/1068), who praised al-Kulaynī and relied extensively on the K. al-Kafi in his fish works, that the latter gained popularity. The favour in which the R. al-Kaft was held by the pro-Muctazili Imami school of Baghdad, in spite of the criticism of al-Murtadā, was partially based 🗪 al-Kulaynī's support

of the theology of the anti-anthropomorphist wing within the school of Kumm which was later represented by Ibn Bābawayh al-Sadūk, the only scholer of Kumm whose works were preserved in large number, evidently because of their author's relative closeness to Mu'tazili theological doctrines. The K. al-Kali soon came to be considered as one of the four canonical collections of traditions on which Imamifikk is to be based, and often as the most authoritative one among them. It reached the peak of its fame in the Safawid and post-Safawid age, when numerous commentaries, interpretations, glosses, studies of various aspects. Persian translations, and an abridgment of it were composed. A tomb of al-Kulayni with a kubba was now shown on the east bank of the Tigris near the modern al-Ma'mun bridge in Baghdad, and has continued to attract large numbers of visitors until the present.

(W. MADELUNG)

KULDAA or GRULDIA, modern Ili or 1-ning, a town in the fertile and mineral-rich upper valley of the III river $\{q,\nu\}$ in Central Asia. For the mediaeval history of the district in which modern

Kuldja lay, see almaligh.

The town of Kuldja ("Old Kuldja") was probably a new foundation in 1762 by the Chinese after their victory over the Kalmucks [see KALMUK] in 1759, and they named it Ning-ydan-chen. Two years later the town of Hoi-youn-chen was founded as the headquarters of the Chinese governor-general (dsandsun) of Chinese Turkestan; this was known as "Great" or "New" Kuldia. The Imperial government resettled in the largely depopulated region, amongst other peoples, 6,000 families of Muslim Turks from Käshgharia, after the devastation of the latter province during the wars with the Kalmucks; these came to be called the Tarancis, "agriculturists". Also in the 18th century were settled there Chinese Muslims (probably, in fact, of mixed Chinese and Uyghur Turkish blood) called the Dungans or T'ung-kan. In 1851 a trade treaty was made at Kuidja between the advancing Russians and the Chinese, opening the upper Ili region to Russian traders, and in 1860 the Treaty of Peking between Russia and China gave both Russia and Britain the right to establish consulates in, amongst other places, Kuldja. In 1862 W. Radlov visited both Old and New Kuldia and described them fully in his Aus Siberien, Leipzig 1893, ii, 305 ff., 336 ff., see also his Das Ili-Thal in Hoch Asien und seine Bewohner, in Petermann's Mittheilungen (1866); a decade or so later, the American traveller E. Schuyler visited Old Kuldja and its hinterland, see his Turkistan, notes of a journey in Russian Turkistan, Khokand, Rukkara, and Khuldja, London 1876, il. 155-201.

Following a Dungan rebellion in Shen-si, which spread to Kan-su [see KANSU] and other Muslim

main of western China proper in 1862, revolt also broke out amongst the Muslim population of northern Chinese Turkestan, sc. in the province of Daungaria, amongst both Tarancis and Dungans, and in 1863 lt spread to the Kuldia After hard fighting between the Chinese authorities and the rebels. New Kuldja - captured in 1863 by the rebels and completchy razed; Schuyler, op, cit., ii, 162-4, found the site utterly deserted apart from the one or two houses of Dungan squatters. The Russian consulate in Kuldja and a Russian factory in the area were destroyed in this strife. The Dungars and Tarancia now began to fight amongst themselves, and after much internecine warfare, power passed in 1867 to a Tarančí leader who styled himself Sultān A'lā Khān or Abu 'l-A9a (in Russian sources, often Abil-Oglya); after savage massacres perpetrated by the Tarančis, some 5,000 Dungans and others fled westwards into Russian territory for refuge. In 1867 also, Ya'kub Beg [q.v.], a Khokandi by birth who had earlier fought against the Russians at the battle of Ak Masdid (see KHOKAND), established his power in Käshgharia, sc. the southern part of Chinese Turkestan, Since Ya'kūb Beg was believed to be anti-Russian and received two diplomatic missions from British India, the appearance of an ostensibly hostile power in Central Asia disturbed Russia, and was a factor in the Russian decision to annex completely in 1875-6 the Khanate of Khokand [q.v.]. It further led to the Russian occupation in 1871 of Kuldia and the upper Ili basin, this being announced as a temporary measure, till China should re-establish her authority in Kashgharla and Dzungaria. The local ruler A la Khan was deported to Russia, lived out his life there as a state pensioner.

The Russians probably assumed that Ya'kub Beg would never be dislodged from power and that the Kuldia district would eventually be permanently unnexed. In fact, Yackub Beg was defeated in 1876-7 by the Chinese forces and died in May 1877; his state collapsed totally and Chinese authority was restored in Eastern Turkestan. In 1879 negotiations began between the Chinese diplomat Chiung-hu and the imperial Russian government, but the Treaty of Lividia made in that year was abortive, and negotiations dragged on for a considerable time, the retrocession of Kuldia being used as a bargaining counter for extracting concessions elsewhere, till in 1881 the Treaty of St. Petersburg was made, and in 1883 Kuldia was finally evacuated by Russia. Russia nevertheless retained trading privileges in the upper Ill valley, received an indemnity of 9 million dollars for the expenses of the Russian occupation, and acquired consulates | Kuldia and Kashghar which in the ensuing decades gave her important influence in Chinese Turkestan, e.g. during the period of the Chinese Revolution 1911-12, when Chinese settlers in the Kuldia region were massacred by the Muslims and the Russian consular defence forces of troops enlarged. Chinese Turkestan was from 1882 onwards organised as a formal province of China under the name of Sin-king "New dominion". The population of [Old] Kuldia was estimated at 7,700 in 1872, of whom 4,100 were Muslims; two m three years later, Schuyler estimated the population of the town at 10,000, over half of whom were Tarančis. These estimates were made at a time when the whole region in a devastated and depopulated condition, and by cs. 1900, the estimated population of Kuldia had risen to 30,000.

When the authority of the Manchu Imperial government in the Sin-kiang capital of Urumchi

crumbled in 1911, a revolutionary government procialmed its independence in the Hi region, but in 1912 the new Chinese governor III the whole province, Yang Teeng-hain (1911-28) managed to conciliate the separatists and secure unification of the ili and Sin-klang regions (see R. Yang, Sinkiang under the administration of governor Yang Tseng-hsin, 1911-1928, in Contral Asiatic Inal., vi [1961], 270-7). Your weathered a further potential crisis in 1926-17. when thousands of Kazakhs fled from Tearlet Russian oppression into the Ili and Kashgharia regions (ibid., 305-8), and under his long tenure of power, the whole of Chinese Turkestan enjoyed an unwonted period of prosperity and firm government. He kept up good relations with Soviet Russia, and even after the Kuomintang's diplomatic break with Russia in 1927, the Russian consulates at Kuldia and in other towns remained open. His successor Chen Shu-jen followed a similar policy, and in a secret treaty of 1931 conceded III the Russians rights to commercial offices in Kuidla or Ili, Urumchi, etc.

These governors in the far most of China had been virtually autonomous, but in 1942 Chiang Kai-shek managed to extend the direct control of Chunking over Sin-klang, with disquieting effects in the non-Chinese population elements there. Hence in November 1944 there was a rebellion of the Kazakh Turks in the lif region, soon joined by the Uyghurs. An Eastern Turkestan Resublic was proclaimed in Kuldja, independent of the Sin-kiang Chinese provincial government in Urumchi. The Kuomintang government in distant Chunking was unable to do more than come to a compromise with Ahmad Dian's regime in Kuldia, but by the end of 1948 its influence in Sin-kiang was in any case declining perceptibly. In September 1949 representatives both of the Kuldja regime and the Urumchi - started negotiating with the Communists in Peking, and in December of that year a Communist Provincial People's government was established in Sin-kiang. The Communists eventually accorded to the province certain autonomy, and in 1954 the Kuldia region was made into the III Kazakh Autonomous District of what in 1955 became the Sin-kiang Uighur Autonomous Region. Now, under the Chinese name of I-ning. Kuldia is one of the chief towns of that Region.

KULLIYYA (a. lit. "completeness"; Turkish: fakilis; Persian: dānishkada) acquired in the 19th century the technical meaning of faculty in unit of teaching and learning, mostly at the university level, according to branches of learning.

Islamic education in massiid, madrasa or khāmahāh did not know of m division into hallisysāt, which presupposes institutionalised specialisation. So it was only in 1930 that al-Azhar in Cairo was regarised according to three hallisysāt of higher studies: upid al-din, ghari'a, and al-dirāsāi al-'arabiyya. Nedjai in Irāq, as a centre of Shī'i Ilmā

'ashari learning, had in 1963, besides a number 🖿 independent maddris, a kulliyyat al-fikk which connected with the University of Baghdad. When modern institutions of higher education were established beside the traditional Muslim in the roth and 20th centuries, the latter underwent a number of innovations and reforms which were mostly imposed by the state authorities. In this way, the faculty system was introduced into the traditional Islamic teaching, either by a radical transformation of an existing old-established institution (e.g. | al-Athan); or by integrating such an institution as a hullivyat al-shart'a or a faculty of religious studies into a new modern state trainersity (e.g. at al-Zaytuna in Tunis); - by establishing completely new religious institutions with a division into faculties, replacing older such institutions (e.g. the King Sa'ud Islamic University in Medina). By now, the faculty system has been introduced in nearly all Islamic institutions of higher education; sometimes such institutions have "modern" faculties side-byside with those of the Islamic sciences. These institutions provide the education of religious leaders and they perform a function in the transmission and reformulation of Islamic thought. They may lead to a meeting in the judiciary, in institutional teaching or in less formal forms of instruction in Islam, both within and outside Muslim countries.

The non-religious modern (state) universities [see Drawt'a] and other institutions of higher education (al-la'lim al-'ali) have been organised according to the faculty system, as taken over from the West, since their establishment in the 20th and sometimes the 19th century. They come under the Ministry of Education, or in some cases the Ministry of Higher Education. These universities expanded greatly in number was size after the independence of the different countries, and they serve the moderaisation and development of the societies of these countries by providing them with professional intellects, besides the general role of such institutions in the acquisition and transmission of knowledge. There is a direct imbetween the modernisation of a society and the expansion of its educational system, including higher education. The educational institutions undergo during the process the influence of those ideological forces which constitute, = | least accompany, the dynamic of the modernisation process. The planning of higher education has started in most countries according to the needs of these countries, following western models and resulting in the growth of faculties (hulliyyāt).

In Arab universities the following kultiyyat have developed: ādāb (arts), kuhūk (law), 'ulām (sciences) and fibb (medicine), the first two of which are called mapari (theoretical), the latter two 'amali (practical). Then there are those of terbiya (education, i.e. for teacher-training at secondary schools), tidiase (commerce), idara (administration), handasa (engineering), nied'a (agriculture), saydaliyya (pharmacy), tibb al-asnon (dentistry) and bastera (veterinary medicine). In some there is a kullipydi al-Salam al-iditizativya (social sciences), but mostly these disciplines are served by institute instead of a faculty. Some universities, e.g. al-Azhar, have a kullivyai al-banai (women's faculty). In a number of cases, university faculties are the continuation of previously existing educational institutions which became part of the university once it had been founded.

The faculties have been organised in different countries according to French (especially for law

faculties). British and American models. | they have developed in their own in adjusted in ministerial directives. The kullippid constitute together a djāmi'a. Within the university, the hallipytt enjoy a relative independence; their deans have great authority; they often have their own delil (guide) besides the tabuim or takrir (calendar) of the university. They mostly have their men library and may issue their periodical. Generally speaking, the decision-making process is slow and the bureaucratic apparatus allows for little efficiency, apart from ever-recurring financial problems. Most programmes of study show an early specialisation, and the hullivyat or faculties tend to function - professional schools. Certain on history, culture and society may be made compulsory for all students. The degrees awarded are those of bachelor, master, specialised diplomas and doctorate. The faculties (kulliyyát) are each subdivided into sections (kusűm, sing, kism), and specialised institutes may be attached to them. Nearly all teaching is done in the national language, and English and French are not well known; most universities have insufficient funds to obtain books for their libraries in these languages.

Given the great number of students enrolled, faculties like medicine and the sciences limit the admission of students according to the number of places available, taking into account the earlier marks received by applying students. There in evidently a job-market problem in most countries for those who obtain their bachelor degree, and even for those who finish graduate studies. A certain number of students are sent abroad or admitted for foreign scholarships to continue their studies or to specialise; a certain percentage of students, varying according to country, stays abroad. Faculty teachers, on the other hand, have a high teaching load and often take supplementary jobs besides; there is not only a lack of facilities for reading and research, but also in some cases a problem of intellectual independence.

As everywhere else, the kullivist in Muslim countries are in transition and undergoing permanent re-organisation. The exact, natural and applied sciences have an immediate relevance for the modern-feation of these countries. The social sciences, not always developed adequately, are sensitive to ideological considerations, but are pivotal for the interpretation of the present-day situation of the societies of these countries; this holds true for the teaching of history too. The tendency at all faculties is to spread knowledge imposed from above, and this knowledge often appears to be considered as a finite quantity, to be assimilated by memorisation. Consequently, little attention is paid to promoting the awakening of the available natural intelligence.

It would be difficult to interpret the kallippis, and the institutions of higher education in general, apart from their social context and the function which they fulfil in societies with pressing needs and with many uncertainties. They play an important role, in particular in the construction of a modern society and in the cultural transformation of whole countries. This takes place at a time when the ideals of culture have changed greatly, not only in relation the religious orientation of the traditional Islamic educational institutions, but also since the political independence of the countries under consideration.

See also the bibliography under Diànis.

(J. D. J. WAARDEHBURG)

KÜLLIYYE (r.), in Ottoman usage the complex of buildings with varying purposes centred round a mosque. The concept of a killipys was inherent in the earliest form of the mosque or didner where building housed the place of prayer and teaching as well = serving as a hostel [see E13, art. Maspin). Later, other services were incorporated under one foundation document, and each was housed in its own building within an enclosure. This dld not preclude the foundation of hospitals, etc., as separate institutions, as in 7th/13th century Anatolia. The early grouping of a killipys was often due to the contours of hillsides or the irregularities of the rite donated, as with the royal foundations at Bursa in the 8th/14th centuries. In the late 9th/15th century, the great ordered killippes of the Ottoman dynasty were founded, in particular those of Bayazid II at Amasya and Edirne, the latter devoted to all aspects of medicine including the training of students. While each element of the foundation was separate, the buildings, their courts and parterres were conceived as an architectural whole.

The greatest of these külliyyes were built in Istanbul by Mehommed II Fatih and Sülayman I (Kanuni). The latter incorporated seven madrases, four for each of the Sunni law schools, a preparatory college and for studying the Hadith and medical school. Besides these with their courts, latrines and two houses for teachers or mudarrisin there was a school for boys, a chantry, me hostel with stables, a bath or hammam, the mausoleum of the sultan and that of his consort in a cemetery, rooms for mosque servants over gateways, a large kitchen and refectory with store-rooms attached, a wrestling ground, and in the vaults supporting the vast platform on which these many buildings were crected, there were iconsmiths, caiés, button shops and other workshops. The one pavilion lacking was the usual royal kase with to the maksura or royal lodge (hhitskår

mahfin).

Each and all of the charitable services had to be staffed, and detailed foundation documents regulated every duty, item of diet or salary. Besides the administrative officers who came under the chief eunuch in the department of the harem at Topkapi Sarayl, there were religious officers and teachers, porters, chanters, grave diggers, servants responsible for maintenance, including the polishing of courtvards and window grilles, cooks, scullions, plumbers, lamp-lighters, a guard against the theft of oil for lamps, carpenters, masons and tilets responsible for the lead sheets covering well over 500 domes. The kitchens coped with the feeding III this company, as well as the students and travellers and the poor; the scraps were given to the dogs. All these services required a considerable supply of water, and the cost of laying pipes and rebuilding aqueducts excooded that of building the foundation. The initial building costs and the endowment needed to maintain wast a foundation were raised by public subacription, including the gift of various properties, ranging from entire estates to a mill or one cottage. The donors ranged from the ruler, who might assign the revenues of a part of the realm through office holders of greater and lesser rank, to the common people.

KUL-OGHLU (r.) "son of a slave", in Ottoman usage, more specifically the son of a Janissary, admitted to the pay-roll of the corps; for further information see YER! ČERI.

In the period of Turkish domination in Algeria and Tunists, the word bulughli kulughli and, with dissimilation, kurughit/kurughit (pl. kulughidn/kulughian, kurughidu/kurughidu/kraghel; French koulough and variants) denoted those elements of the population resulting from marriages of Turks with local women. They were fairly numerous at Tunis, Algiers and Tlemcen, and in the towns which had Turkish garrisons, such as Médea, Mostaganem, etc. In Algeria, they lived in special quarters, and were rather looked down upon by the urban population (hadar), who would not give them willingly their daughters in marriage. The rules of the odiek [q.v.] did not allow them to rise to higher levels, and they often endured harassment from the authorities. A considerable number of them also became mingled with the rural population and took up agriculture, especially in Tunisia. After the conquest, those who lived in Algeria were the target for hostility from the tribes, and many of them enrolled in the locallyrecruited bodies of troops. They subsequently bewarm merged within the general urban or rural populations. (Ep.)

KULOGHLU. Turkish felk poet of the 11th/17th century. Hardly anything is known about his life. He to have belonged to the Janissary corps and to have flourished during the reigns of Odman II, Mustafa I, Murad IV and Ibrahim, and to have found particular favour at the court of Murad IV. A contemporary of Kul Mustafa and Kātibi, he at his best in lyric and epic poems, the best known of which is his elegy for Murad IV. His poems, scattered in most of the 17th and 18th century anthologies of folk poets (#jönks), have been collected and published by Sadettin Nüzhet Ergun.

KULTHUM B. TYAD AL-KUSHAYRI, Kaysi notable [see KAYS] whom the Umayyad caliph Hisham b. 'Abd al-Malik | to the Maghrib. in Djumādā 11 123/April-May 741, to avenge the bloody defeat which the Berbers, commanded by the successor of Maysara [q.v.], Khālid b. Hamid/ Humayd al-Zanati, had inflicted on the Arabs in the "battle of the nobles" (ghazwat al-ashraf). Kulthum left at the head of an army of 30,000 men, to which there were added contingents raised along the way, and he joined up with Habib b. Abi 'Ubayda al-Fibri, the former companion of Müsä b. Nusayr [q.v.], who was endeavouring to halt the progress of the Sufri Khāridiites near Tlemcen. The clumsy conduct of the Syrian army and the arrogant attitude of the commander of the vanguard, Baldi b. Bishr (q.v.), who was Kulthüm's nephew, towards Habib hampered the conduct of operations. Khālid al-Zanatl, after retiring before the Arabs, gave battle to them near the Wadi Sabu (Oued Schou). Ignoring Habib's sensible advice, Kulthum sent to the front Baldi's cavalry, which succeeded after great efforts in piercing the Berber lines, but the latter reformed behind them and overwhelmed by their mass the caliphal troops which had taken up battle order | late. Habib | the other chiefs were killed.

Kulthum fought with the greatest bravery, reciting verses of the Kur'an to encourage the others, but finally he fell. One-third of the army was killed and method taken prisoners (Dhu 'i-hididia 123/Oct.-Nov. 741). Baldi's cavalry's only hope was to take refuge in Ceuta, whence after much suffering they were able to to Spain.

KULUMRIYA, the name given by the Arabs to the town of Coimbra, on the right bank of the Mondego River in central Portugal. The town still has some ruins from the Roman period, and was originally called Asminium; but it took over the name of another important Roman town, Conimbriga, which lay 18 km. to the south and had been devastated and depopulated during the barbarian invasions. The episcopal see of Conimbriga was transferred to Acminium in ca. 580-9, and the change of name took place towards the middle of the 7th century A.D. Although the usual Arabic form was Kulumriya, Ibn al-Kütiyya (4th/10th century) has that of Kulunbiriya (Iftitale, 200). The occupying of the town is attributed to 'Abd al-'Azlz b. Musa b. Nusayr, governor of al-Andalus 95-7/714-16. His lands, like those of Santarém to the south, appear to have been omitted from the conqueror's division of the territories, probably because of a treaty (cf. Lévi-Provençal, Hist. Esp. mus., iii, 201-2).

The Arab geographers give descriptions of Kulumrlya. Al-Rázi states that it was an ancient town, well-fortified and with fertile surrounding estates where there were comfields, olive groves and gardens. Al-Idrisi (548/1154) says that the walls had three gates (one of which still exists, with the name of almedina), and mentions the mills along the Mondego vineyards and gardens and also the force of Christians living there. Al-Himyarl repeats this information, and Yakût gives a brief notice of the town.

Coimbra may have been the central town of a have or territorial district during its Islamic period. This last was very disturbed, for the town was covered by the Christians who set afoot the Reconquista [see AL-ANDALUS and BURTURAL]. In 264/878 the town was taken by Count Hermenegildo in Alfonso III's name, but al-Mansur recaptured it in 377/987 after having briefly occupied it two years previously. It me finally conquered by Ferdinand I in 456/1064 after a six-months' siege. He created the Mozarab Sisnandus Davidiz governor as a reward for his role here. The Coimbra district was one of the Mozarabs' most lively centres; as well - the facts described in e.g. the works of Gomez-Moreno and I. de Las Cagigas, P. da Cunha Serra (Contribuição, 35-6 and map II) has emphasised the role of the town's Mozarabe in the peopling of northern Portugal during the Reconquista. The presence of the Muslims in the area has left many traces, as its toponomy shows. From the roth century onwards, Christian documents make a very clear distinction between what was in the almedina (the walled town and citadel) and what me in the creabolds (< rabad) outside the walls at that time.

(A. Dias Farinha)

at-KULZUM, an ancient town and seaport the Red Sea (A. Bahr al-Kulsum [q.u.], Bahr al-Hind or Bahr al-Hindagha), now administratively in the province (muhā/aṣa) of al-Suways. It appears to have been a fort as well a town, and was,

perhaps, the spot where the troops destined to guard the sluices of the canal were stationed. It was called Castrum by Hierocles and Epiphanius; and κλύσμα (Clysma), or κλείσμα II first mentioned by Lucian. Kulzum is a corruption of the Greek name κλύσμα (in both Arabic and Greek almost always without the article; the Greek refers to the "sluice" at the mouth of the canal, which led from the Nila to the Red Sea). This canal, begun by Pharach Necho and finished by Darius of Persia, was later restored by Ptolemy II Philadelphos and by Trajan. In the Muslim period, when the construction of the canal was wrongly ascribed III Hadrian, labour was repeatedly spent on it.

Umar b. al-Khattab in 23/643-4 for example had it repaired to facilitate the transport of corn for Mecca from al-Fustat to the Read Sea; it was called after him Khaligi Amir al-Mu'minin. According to Aba Salth, its mouth was at al-Kulzum, according to al-Mas'adi and others (more accurately) at Dhunb (sic; dhansb?) al-Timsāh, mile from the town, where the Meccan pilgrams from Egypt crossed the canal by a large bridge. The caliph al-Manşür in 158/275 had it partly filled in, fearing an attack from his mode Muhammad b. 'Abd Allah, who had rebelled against him in Medina, m that in Abû Şâlih's time it ended at al-Sadir III the entrance to the Wadi Tumilat. New but fruitless attempts to make it navigable again were made by the caliph Hārûn al-Rashid, who is said to have abandoned the attempt out of lear of the Greeks. Henceforth the bulk of its water flowed into the Birkat al-Djubb till it was completely filled in (1899) for sanitary

The town of al-Kulzum owed its importance mainly to this canal, for according to the descriptions of the Arab geographers, it was a desolate and miserable site without water and vegetation; neither trees nor fruits could flourish there. However, it was useful me source of salt which was transported to various parts of Egypt and Syria for sale, and al-Baghdadi reports that quarries for red flint operated in its vicinity. In antiquity and in the early Muslim period its main importance was as a point of departure for shipping on the Red Sea, which consequently came to be most commonly known to the Araba as Bake al-Kultum. The corn ships of al-Fustat after they had passed the canal sailed from here to al-Diar and Diidda. Of the Jewish merchants called al-Rādhāniyya, Ibn Khurradādhbih says that they came from the lands of the Franks to al-Farama'; thence they carried their man 35 fortakhs on careels to al-Kulzum, where they were loaded on ships which sailed to India and China. According to the same geographer, al-Kulzum with al-Tür and Ayla formed a district of Egypt.

The country round al-Kulzum inhabited at an early date by Arabs. They are already mentioned in the Acts of the hermit Sisces (Coptic: apa Diidio). Sisces was one of the three Coptic maryrs (the other two being 'Itānās and Pidiuni) whose place of burisi is known to have been in al-Kulzum. For seventy years the suchorite Yühannā al-Kaşir (John Kolobos, died ca. A.D. 409) lived in m cave which in had dug himself in the nearby Djabal Antwān, and was buried beside the graves of the three martyrs. Djabal Antwān was so named after St. Antony who went into retreat there from the importunities of the secular world. In the History of John Kolobos, Kulzūm (sie) appears for the first time in the Arabic Synaxarium as the name of the ancient Clysma.

When under the last 'Abbäsid governor in Egypt,

'Anbasa b. Isbāḥ, the Budjā or Bedja [q.o.] rebelled in Nubia, invaded the Sa'id or Upper Egypt and laid waste many towns, al-Mutawakkil sent against them an army under Muhammad b. 'Abd Alläh al-Kummī which went from Küş [q.r.] struight through the desert to the emerald mines, while seven ships with stores sailed from al-Kulzum to Sanga near 'Aydhāb and provided the victorious army from there with the necessary supplies.

In the autumn of 361/97t, the Karmatian lender Hasan b. Ahmad on his campaign against the Fățimid Diawhar took the towns of al-Kulzum, al-Faramă², and Tinnis; after his defeat before Cairo (3 Rabi⁴ I 361/24 December 971), he retired under

cover of night via al-Kulzum to Arabia.

Reynald de Châtilion at the beginning of his naval expedition against the holy cities in the winter of 576/1182-3 sent two ships from Aden, which were to watch the citadel of al-Kulzum and prevent the garrison from procuring water. But afterwards the Hadjib Husam al-Din Lu'lu' built afteet by order of Salāh al-Din's brother al-Malik al-'Adil, in al-Kulzum, which sailed for 'Aydhāb and put a sudden end to the desperate enterprise. When al-Dimashki includes al-Kulzum among the lands under al-Karak, this is perhaps a memory of these events of a century before.

In the time of al-Idrisi, Yakût and al-Dimashki, al-Kulaum was already a deserted town. Al-Makrisi found among old documents in the palace of Cairo accounts of the expenditure on the civil and military administration of the town and district and cluded from them that it must once have been most flourishing. He quotes al-Kuda'l as saying that the town was already ruinous in his day, and this presumably included the fortress (Kalfat al-Kulaum) mentioned in several accounts. According to al-Idrist, the Bedouins had occupied and plundered it. The only water-supply he knew of in the vicinity the well at al-Suways, which yielded only a scanty supply of brackish water. Al-Mukaddasi (4th/10th century) already mentions al-Suways (i.e. Suez), which gradually took the place of al-Kulzum, a mile from it.

The of al-Kulzum is still given to some heights to the north of Suez, Kom al-Kulzum.

EUM (Ar. Kumm, current Persian pronunciation Ghom rather than Kum), a city of central Iran (Media in ancient times, later Djihâl or 'Irāḥ'i adjam) situated in lat. 34°38' N. and long. 50°58' E., 150 km. to the south of Tehran. It is the capital of m shāhristān of the Central Province (Ustānimarkani) and the ninth city of Iran, with a population of 246,873 m 1976. Situated m the great northwest/south-east axis, which follows the foothills of the central Iranian range and skirts the fold of the Zagros, it lies at the junction of all the road and rail routes linking southern Iran with Tehran.

Geographical setting.

With a complex geological history (entirely post-Cretaceous terrain; late formation of mountains linked to volcanic activity; marine development of the site of Kum in the Oligo-Miocene period), the region is characterised by uneven relief. As elsewhere in central Iran, the natural environment bears the marks of aridity and of the features associated with inland continental setting (steppe veretation, saline earth; see M. Bazin. La vie rurale. s ff.). To the south, the mountainous region of Kuhistan contains balf-a-dozen peaks whose southwestern elevation exceeds 3,000 m. Towards the north-west, other mountains separate Kuhistan from another dense range exceeding 3,000 m. in altitude in the region of Tafrish. The valley of the river Kum (Anarbar in antiquity) constitutes a pass crossing the mountainous region of the south. It clears the final barrier of the mountains through a broad gap and spreads thick deposit of sediment on the plain where the city of Kum is situated. To the north-east, the plain is barred by hill-ranges of only moderate elevation (1,000 m.), dominated to the west by the Küh-i Namak (Mountain of Salt); distorted in shape and dangerous of access, it has given rise to a whole cycle of legends (see Bazin, op. laud., 8, n. 4). Further to the north, the relief rises, dominating the low-lying areas which are divided unequally between dasht and hawle. Rivers of most irregular current flow into the basin of Hawd-i Sultan and the vast salt lake (darvd-i namak) of Masila. Although meteorological data are incomplete, the temperatures are characterised by strong daily and annual fluctuations, and a high general average (18'4" over the period 1958-68, as calculated by M. Bazin, op. laud., 13; the pioneering work of A. H. Adle, Ab u hawa-yi Itan, Tehran 1339, 77, gives average of 18'5°). The winter is not very cold, and the temperature in summer frequently exceeds 40°. Rainfall is sparse everywhere (less than 200 mm, below 1,500 m.) and very irregular. Prolonged droughts can be disastrous (there have been instances in 1869-72 and more recently in 2960-6). The strength of the river-currents is also most irregular and there are often catastrophic floods (Bazin, op. land., 14 ft.; Bémont, 180). The soil is in general unfavourable to agriculture, and the natural vegetation is very poor.

Socio-sconomic setting.

This bestile natural environment is inhabited by a

population of great ethnic and linguistic diversity. Since the beginning of the and/8th century, a number of simificant Arab elements have been added to the original Persian nucleus. Among the groups of foreign origin the Khaladi [q.v.], who speak archaic oriental Tuckish and who arrived in the are at a very early stage (between the 11th and the 14th centuries). They have given their name to the mountains of Khaladjistan, to the east of Kum, the region where they settled. There are considerable contrasts in the demographic evolution of this rural environment, where the density of population is generally below five inhabitants per square kilometre and where, in contrast to other regions of central Iran, the larger villages are mostly situated at high altitudes (Bazin, op. laud., 21 ff.).

Agriculture depends primarily on irrigation by the traditional utilisation of water-courses (barrages, diversion channels) and of underground (kandts [q.v.]) as well as on modern techniques of developing fertility through wells of varying depths. The sharing of water among those exploiting it has given rise to a system of minute division which, in contrast to the practice elsewhere in Iran, operates without any particular supervision (Bazin, ob. laud., 30). In spite of the introduction of some modern methods of exploitation, agricultural techniques and systems are still archaic. Cereals (wheat, barley) give a rather mediocre yield. Summer crops (cotton. market-garden products including various kinds of melon and water-melon, pomegranates, figs, raisins, apricots, almonds, more recently opium, etc.) are mostly grown for sale. In general, agricultural production is inferior (Bazin, op. cit., 40 ff.). In contrast to the situation ocevailing elsewhere in Iran, before the implementation of land reform the bulk of [18] land belonged to urban middle class landlords and to peasant smallholders. The crown properties (Malisa [q.n.]) which existed in the Kādjār period were no longer represented in the region (Bazin, op. laud., 55). The was/ estates gifted to the sanctuary of Fatima al-Ma'sume continue to be decidedly less important than those of the sanctuary of Imam Rida at Mashhad [Bazin, op. cit.]; for a comparison, see Fisher, 70, and on Mashhad, N. Hakami, Le vaci d'un lieu saint en Iran-Mashad, Memoire de l'EPHE, Section vi. Paris 1975, 22 ff.). Traditional forms of ownership, exploitation and the sharing of crops are now being modified by the gradual implementation of land reform; a number of successful co-operatives have been created (Bazin, op. cit., 57 ff.).

The relatively meagre agricultural yields are supplemented by ancillary activities: peasants and numerous nomadic and semi-nornadic groups practise stock-breeding (cattle, sheep, goats, camels); the crafts formerly practised (see below) have been replaced by the manufacture of carpets, introduced, at least m far m quality products are concerned, by merchants of Käshän in the nineteen-thirties (Bazin, op. laud., 64 ff.; idem, Qom, ville de pèlerinage, 105 ff.; idem, Le travail du tapis dans la région de Com). Numerous factors (including the religious and social conservatism of the population; have hindered the industrial development of the town and of the region. in spite of the discovery and exploitation of petroloung and natural gas in the folds of the Alburz and of Saradia (for a bibliography relating to the industry of the region; textiles, building materials, ceramics, flour-mills, petroleum, natural gas, etc., see M. Bazin, Qom, ville de pèlerinage, 100 ff.). The influence of Kum over the region has been to some extent artificially diminished to the advantage of the surrounding KUM

shills risides, especially those of Kashan and Tafrish, the latter being a recent creation (ibid., 124 ff.). In spite of the potential richness of the soil and attempts at modernisation, crop yields and the standard of living continue to be rather poor (M. Bazin, La vie swale, 79 ff.; idem, with regard to nutrition, in Soudia Iranica, ii [1973], 243-53).

Historical evolution.

Numerous signs testify to the occupation of the site of Kum in ancient times (M. Bazin, La via rurale, 25 ff.). The remains of coulds take of the Sasanid period are still visible in the region (A. Godard, L'art de l'Iran, Paris 1962, 232 ff.; M. Siroux, Le site d'Atesh-Konh pres de Delidjan, in Syria, xliv [1967], 53-71). Excavations on the site of one of these, the Kafa-yi Dukhtar, very close to Kum, have brought to light fragments of pottery of the type associated with Sialk II and III (5th and 4th millenia B.C.): see M. Siroux, Le Kal? Dubbter de Kumm, in Athar-e Iran, ili, (1938), 113-20; R. Ghirshman, Fomiles de Sialk, Paris 1938, i, 91; L. Vanden Berghe, Archéologie de l'Iran ancien, Leiden 1959, 125. <u>Similar remains have been discovered in Khaladjistän</u> (see . Bahrami, in Americk . partearisk, x/4 [1940], 31-8). Two Seleucid columns are still to be found near Dilidian (A. Godard, op. land., 149, 153, 164, and plate 88).

Kum is included among the biless of Dibal (Ibn Khurradadhbih, 20). Ibn al-Falch (209 ff.) and other Arabic sources mention Sasanid Kum in various contexts (see Fakihi, Ta'rikk-i madkkab-i Kum, 54 ff.). According to the Taribbi Kem, 24, Alexander the Great destroyed Kum, and it was the Sasanid Kubad I (488-531) who restored its prosperity and gave it administrative independence from Isfahan. Many of the rustdys of Kum mentioned in the Taribb-i Kum bear Iranian names, some of which are still in use today. A version of a Pahlavi text draws attention to the merits of the saffron of Kum (see J. M. Unvala, The Pakinei test "King Rusrace and his boy", Paris 1924, 44, following al-Tha alibi). In the Shah-nama of Firdaws!, Kum is included among the towns belonging to the Pishdadiyan and

Kayanid kings (Fakihi, 55, etc.).

But in spite of the archaeological remains and the literary allusions to Kuzu in the ancient texts, an inthe case of Kashan, with which it is often associated {Kum and Kāshān together are said to have supplied 20,000 horsemen to the Sāsānid army at al-Kādisiyya: see Fakihi, 56, following Ibn Aftham al-Küfi), virtually nothing is known of the pre-Islamic town. According to the majority of Arabic sources (which often contain internal contradictions), the town was an Islamic foundation. According to the Taribbis Kum, the Ash'arl Arabs of Kufa, persecuted for their Shi'l beliefs, came and established themselves in the region (where they were probably received by coreligionists), in 94/712-13, protected it from attacks by the Daylamis, and ultimately built a wall around seven of the forty villages of the plain (240 ff.; on the non-Ash art Arabs who established themselves at Kurn, see Falchi, 43 ff.). This conglomeration presumably took its name from that of one of these villages, Kumidan, But the author of the Ta'rikh-s Kum follows al-Barki m preferring to derive the name Kum from knims, a kind of hut, possibly the origin of Kumamaydan, which could have been contracted into Kümaydan/Kumidin (25; Houton-Schindler, 59). A derivation from Godman, pronounced Goman, is suggested by R. N. Frye (The golden age of Persia, London 1975, 11). Other fanciful etymologies (generally based on the Arabic imperative kum "rise up") have also been proposed (see for example, Houtum-Schindler, 59 ff.). There also numerous Shift kadiths extolling the virtues of Kum as a place of refuge for believers etc. (Ta'rish-i Kum, 90 ff.; Fakhi, 75, 83 ff.); this latter attribute earned it in the course of time numerous honorific titles such as Dâr al-Mu'minîn, Dâr al-'Ibāda, Dâr al-Muwahhidin, Dâr al-'Ihm, Khāk Faradi etc. (Fakhi, 14).

This region, with its strong undercurrent of religious feeling (including Jewish and Christian associations; see Monneret de Villard, La leggende orientali sui magi evangelici, Vatican 1952, 84 ff.) became one of the first bastions of ShI'ism (on the Shi'll and non-Shi'll groups at Kum, see Fakihi, 308 ff.). The Zoroastrian community, whose chief, Yazdānfadhār, had in an earlier period assisted the Ash arl Arabs to settle in the region, was ultimately eliminated (sometimes brutally) or Islamised; it has been observed, however, that Zoroastrian fire-temples continued to be in use in the area until the grd/gth century, and perhaps even later (Monneret Willard, 139). From the start, the inhabitants of Kum had a reputation for rebelliousness, for resistance to SunnI governors and to the payment of the levy (for the collection of taxes by force under Harûn al-Rashid; the destruction of the city's fortifications at the orders of al-Ma2mun, who more than tripled the already excessive rate of bearddi exacted from the Kumis; and a further punitive expedition ending in massacre in the reign of al-Mu'tazz, see Schwars, 562). By contrast, a Shift governor was accorded such co-operation that he was recalled by the caliph (Fisher, 56). Also to be noted are the conflicts between the people of Kum and the people of Istahan, who were fanatical Sunni (Fakihi, 222).

In the 3rd/9th century, the principal settlement was Manidjan, one of the original "seven villages" or "seven fortresses" (Fakihi, 13, 58 ff.). In the 4th/roth century, Kum was described as a prosperous city, fortified with a rampart, with fields wellirrigated by means of canals, dams and pumping apparatus. The majority of the population Shiff, ethnically Arab but Persian-speaking (Ibn Hawkal, K. Sürai al-ard, ed. Kramers, 370). There were frequent disputes between Kum and settlements lying up-stream (Taymara/Gulpāygān and Anar/Mahallat) regarding the distribution of the waters of the Anarbar. The flooding of this river was sometimes catastrophic (notably in 292/904-5, 2534, 1670, 1881, 1893: see Houtum-Schindler, 65 ff.; M. Bazin, La vie rurale, 33 ff.). With its many 'ulama' (tradition tells of seventeen tabifan and of hundreds of Ashfari rumit (see Fakihi, 37 ff.; in the 3rd/9th century there were two hundred and sixty-six ShIT 'sland' and fourteen Sunnt 'slama', ibid., 309) and especially the family of the famous Shaykh Şadûk (Muhammad b. 'All b. Babtiya), Kum could boast of having preceeded Nadiaf as a great theological

entre.

The prosperity of the city seems to have begun with its administrative independence from Işfahān in 189/804-5. In 201/816-17, Fāṭima al-Maʿṣūma went to visit her brother, the Eighth Imām, ʿAll b. Mūsā al-Ridà, at Tūs. She feli ill at Sāwa (a Sunni town) and asked to be taken to Kurn, where she died and am buried. Besides the town's reputation as a centre of theological education, it was this event which contributed most to its fame. The town expanded progressively from north-east to south-west in the direction of the tomb of Fāṭima, which ultimately

KUM

became its centre [Fakiki, 94 ff.]. Patronised by the Bûyids (Fakihi, 127 ff.), Kum was renowed in the Saldiuk period for its madrasas, for the sanctuary of Fatima (visited by Sunnis as well as Shi'is), for its religious foundations, and also for its administrators and viziers (see J. Calmurd, in Le monde transen et l'Islam, Paris-Geneva 1971, i, 58 ff.) = well as for its many 'wiami' and scholars, known by the mirres of Kumi, Barki, Baravistani, Tabrisi (from Tabris) Tedrish), etc. At the time of the Mongol conquest in 621/1224, its inhabitants were messacred, possibly at the instigation of the Sunnis (see Falgihi, 223). Hamd Allah Mustawil described the town as being mostly in ruins in the 8th/24th century. It seems, however, that there was an attempt at reviving the region under the Ilkhins, mevidenced by some important hydraulic constructions: the weighted dam at Sawa (end of the 13th century) and the vaulted dam at Kebar, 25 km. to the south of Rum (see H. Goblot, Kébar en Iran, sans doute le plus ancien des barragesnostes (1300 environ), In Science Progres (La Nature), Paris, February 1965, 50-6; the same, in Arts et Manufactures, Paris, June 1965, 43-9, April 1973. 15-20). Although travellers have drawn attention to the massacre perpetrated by Timür, it seems that the Timurids showed respect and favour to this holy city (we may note the mosque of Gawhar-Shād, wife of Shah-Rukh, near the mausoleum of Fajima, and the fact that the sultan Muhammad, son of Baysunghur, chose Kum as his capital in \$46/2442: see Fakihi, 144-7). It was in any more from the 9th/14th century onwards that the town began to enjoy definite royal patronage. The Turkoman sultans Diahan-Shah, Uzun Hasan, Ya'kab, Murad and Alvand used it as a kind of winter capital for hunting, and this tradition was continued under the earlier Şafawids, Ismā'll I and Tahmāsp I (Fisher, 56 ff.; Fakihl, 147 if.; on the farmins, Turkomans charged with the appointment of an official (mulgwelli of the sanctuary and nakib of the sayvids), see Mudarrisi Tabățabă'i, in Farkang-i Îrăn-comin, xix/1-4, 118-35).

But it was above all the result of the religious policy of Shah 'Abbas I-consisting in attracting pilgrims to the ShI's shrines of Iran (Mashhad and Kum) rather than to those of 'Irak, then controlled by the Ottomans-which endowed Kum with an unprecedented glamour. The sanctuary was embellished, and two of its four sales were transformed into a madrasa with a hostel for pilgrims. Many ^eulamā' came to Kum to study, men such 🖿 Mullā Muhsin Fayd, Mulla 'Abd al-Razzāk Lāhidil, Mulla Şadra Shirazi, Kâdı Safid Kumî, etc. (Fisher, 57). Traditions extolling the sanctity of the soil of Kum current, and to the hundreds of tombs of lmām-zādas (at the time Amin Ahmad Rāzl counted 444 of them) were added the tombs of thousands of the faithful. The descendants of Shah Abbas I were buried there, in were thirty-one other princes (M. Bazin, Qom, ville de pelevinage, 84). No other Iranian city has such a vast number of tombs of 'ulama', of distinguished people or of simple believers, and the cemeteries extend over an enormous area.

In the 17th century, travellers described at length the merits of the town's craft-products (rapier and sabre blades, silks, cottons, glass, porcelain, porous white ceramics, etc.: see Bazin, Qom, 105). But at the same time it was whind of land of extle for deposed aristocrats (Fakihi, 151), and insolvent debtors took refuge in the sanctuary (Gemelli Careri, ii, 74-5). Money was coined at Kum in the 3rd/9th and 4th/10th centuries, and it

appears that the Safawids and the Kādjārs sought to re-establish this tradition (Houtum-Schindler, 73; Fakihi, 39, 152 ff.).

After the terrible depression of the 18th century (pillage by the Afghans, massacres perpetrated by Ibrahim Khān, brother of Nādir Shāh and by an Uzbek governor in the service of this soversign: Fakihl, 224 ff.), the practice of building royal monuments was revived by the Kädjärs. The shrine of Fătima built by 'Abbas I was embellished by Fath All Shah who also built a madrasa. The vast "new court" (sahn-i diadid) was constructed by Amin al-Sultan, vizier of Nasir al-Din Shab, in 1883. Around the "old court" (sahn-i 'olik) stand an octagonal monument containing the tombs of semor Kadjar dignitaries (Fath 'Alt Shah, Muhammad Shah, his wife Mahd-i Awliya, etc.) and the sanctuary library (1,000 manuscripts and 8,800 volumes) which also contains a museum. The Masdid-i A'zam, constructed on the orders of the Ayat Allah Buradlied! (d. 1961), stands to the west of the sanctuary which includes other monuments (for a plan of the sanctuary, see Bazin, Qom, 91; Fisher, 58; a history of the monuments, including a description of their contemporary state, with plans and illustrations of inscriptions, documents, etc., is supplied by Mudarrisl Ţabāṭabāʾī, Turbal-i pākān, 2 vols., Ķum 2535/ 1976). The city-sancinary today (1976) comprises fourteen large traditional madrasas, supervised by the Ayat Allahs, four modern schools (Fisher, 23) well as numerous private libraries, the most Important being that of the Ayat Allah Mar'ashi Nadiali (70,000 volumes including 25,000 manuscripts). After 1965, the sanctuary was administered by mutawalli nominated by the Shah (Fisher, 66). The revenues of the sanctuary and the annual number of pilgrims (about a million in 1970) 🚥 poor in comparison with those of Mashhad (four and a half million, including tourists, in 1352/1973-4]. Nevertheless the spiritual role of Kum continues to be very important. Since 1340/1920, m modern Centre for Theological Education (Hands-yi 'limi) has been established there (Fisher, 62 ff.). Three of the most eminent mardjots taklid (Gulphygani, Martashi Nadiaff, Sharf'at Madarf) reside there (on the religious élite and the role of the mardias-i takitd, see Fisher, 30 ff., and A. K. S. Lambton in Studia Islamica, xx [1964], 115-35).

The demographic evolution of the town—which, in spite of inistakes on the part of travellers, may be more or less traced from the 9th/15th century onwards—contributes to muderstanding of the vicinsitudes that have affected it:

20,000 houses in 1474 (Barbaro) 2,000 hearths in 1524 (Tenrelro)

2,000 hearths in 1565 (Mestre Afonso)

2,000 families in 1627 (Herbert) 15,000 houses in 1673 (Chardin)

50 houses (sic) in 1796 (Olivier)

(each hearth, house or family should represent five to six persons).

After 1850, the population fluctuated between 20,000 and 25,000 inhabitants (with a drop to 14,000 in 1874-5 m account of a famine; see A. K. S. Lambton, Landlord and peasant, 153, in. 3) rising to 35,000 in 1886-7. Since 1913 (30,000) the population has grown continuously (55,000 in 1937-8; 81,540 in 1947-8; 95,499 in 1956; 134,292 in 1966; and 246,873 in 1976).

Under the Kādjārs, Kum was a haven of refuge (bast-nishini) for political opponents of refuge. This opposition was particularly marked during the

events of the constitutional revolution of 1905-11. Under Rida Shah (1925-41), the opposition of certain 'wlamd' was also manifested in various wave (Fisher. 62). There now exists a dichotomy between technocratic and religious power, and some influential 'silema' of Kurn have encouraged their disciples to rebel: examples - Kashani, under Musaddik, and Khumaval, who was arrested on the 15th of Khurdad (5th of June) 1963 and exiled to Turkey, then to Trak (see H. Algar, in Scholars, saints and Sufis, ed. N. R. Keddie, Berkeley-Los Angeles 1972, 241 ff.); and riots involving "Muslim Marxista" the 13th of Khurdad, 1975 (Fisher, 77 ff.). The troubles which convulsed the whole of Iran in 1028 began in Kum between the 7th and 9th of January 1978. In October 1978, Khumayni took refuse in France, at Neauphie-le-Château, whence he led ill opposition which caused the Shah's departure from Iran. He returned to Tehran fi February 1979) and thence to Kum (2 March 1979). He still represents the radical Islamic tendency; a steadfast though more moderate opposition had crystallised around other 'uloma', especially the mardjas-i takifd of Kum, Shart'at Madari.

(J. CALMARD) AL-KOMA or AL-KAWMA, the name of one of the seven types of post-classical poetry (see RAN WA-KAN]. It was invented by the people of Baghdad, and is connected with the salar, i.e. the last part of the night when, during the month of Ramadan, it is still permitted to eat and drink and to take meals at that time; it derives its name from the expression hami li 'l-sahir which the singers recite after each strophe of a ramal or radial in praise of the master of the bouse. Contrary to what is generally believed, it does not that Ailmd is the imperative dual, "Arise, both of you!", but the singular human > huma "Arise!". This interpretation is justified by Kur'an, XCVI, 15, la-masfa'd bi 'l-nasiya (for la-nasfa'an), and better still, by a verse of Umar b. Abi Rabita [Dissan, Cairo 1371] 1952, 226, l. 4), where m have exactly bamd for human "Arise!" - the rhymeword (cf. Ibn Kutayba, Ampd', § 158; al-Mas'ūdī, Murādi, ill 340 = § 1317). The origin of this poetic genre is obscure, and it is probable that it existed before Ibn Nukta, who is said to have invented it to please the 'Abbasid caliph al-Nășir (575-622/1179-1225). At all events, the \$6md, which is always in Arabic colloquial, but only been cultivated in 'Irak, where it has been used to express various themes, such as those of love, of wine-drinking, of flower-description, etc.

Technically, there we two types of kimā: Type r is made up of strophes of four hemistichs, of which three (the first, second fourth) are the in length and rhyme with each other, whilst the third is longer and does not rhyme with the rest.

hemistiches I, z, 4 (mustafilun failan failan mustafilun failan failan failan hemistich mustafilun failan failan failan failan failan

Type 2 is made up of three hemistiches of the same rhyme, but of increasing length-

hemistich i | mustafilatun | mafafilatun | fafilatun | fafilatun | fafilatun | mustafilatun | mustafilatun | mustafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mafafilatun | mustafilatun | mafafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatun | mustafilatu

(M. BEN CHENES - [CH. PELLAT])

KUMAN, a Turkish people whose origin is connected with Central Asia. In all probability their forelathers are to be found in the people indicated by Marwati (Taba'i' al-kayawan, ed. Minorsky, 18, 3), shari (sari), identical with W Yellow Uyghurs, who since about 850 A.D. mere living to the east of the Tarim basin. This name is probably derived from their physiognomy, varying from that of the other Turkic peoples. At the beginning of the 11th century A.D. (ca. 1012-18), the Sari left their homeland under the pressure of the Kun [q.v.] who were migrating to the west before the Kitay. This movement of peoples reached in the west also the regions of the Turkmens, who were driven away to meet In the newly-conquered regions in the north of the Sir Darva, close contact between the participants in this migration (the and the Kun) and the Kimak and Kipčak [q.vv.] tribes who man living there, led to the formation of a new tribal confederation. It is probable that about this time the Sari (sari - yellow) - given by other Turkic speaking peoples the name kuman. derived from = root with similar meaning (& = yellowish).

A few decades later the Kuman pressed forward to the west. Apart from their own name, various other names mentioned in Western and Armenian sources (polovci, polovcy, plauci, plauci, Valben, Valuen, Falones, Xartes, etc.), but semantically these terms ("yellow, pale, sallow, bright, clear") accord with the meaning of the name Kuman. Towards the middle of the 11th century A.D., the Kuman were living in the Dalepr region. In 1062 they started launching attacks against Kiov, and in 1078, together with the Pecenegs, against Byzantium. In 1085 they took part in the rebellion of the Bulghars, but in root they were allies with emperor Alexius against the Pedenegs. Their raids against Hungary started in the same period. Hungarian historical sources mention them under the name Kan (cani, chani), but it has not yet become clear whether these tribes can be put in direct relation with the above-mentioned Kûn, who probably sees absorbed later by the Sarl

(i.e. the Kumān). In 1094 and again in 1114 the Emperor Alexius waged two quite important wars against the Kumān, who were to be pushed back to the other side of the Danube. The Mongol invasion put an end to the control of the Kumān over Pontic steppes, and after the final defeat in 1239, a part of them sought refuge in Bulgaria. Thus they played an important rôle in the history of Hungary, in that of the second reign of the Bulgarian Tsare and in that of Byzantium. The Kumān who had remained in the Pontus area were incorporated into the western part of the Mongol empire called Klpdak [see Daght-1 Kfréax in Suppl.].

The most important document of the Kuman language is the Codex Cumanicus (14th century) a collection of texts brought together in South Russia by Italian and German missionaries. Some rudimentary remnants of the language also found in Hungarian. Important references to their language are further present in loan-words of Kuman origin in Hungarian, Bulgarian and Rumanian, as well as in place-names in various regions of these countries.

(G. Hazat)

KUMASH (a. pl. abmisha), in general sense, "cloth", but in a more particularised sense, "a Mamilak garment". The term sumask in the later Middle Ages commonly designated "cloth" or any "woven stuff" in general and was synonymous with the classical words boss and thiyab. Abu 'l-l'adi al-Dimashki (ca. 5/xith century) does not use the term at all in his handbook for merchants K. al-Ishara ila mahasin al-tididra (Cairo 1318), but the word is employed by the 4th/10th century geographer Ibn Hawkal in his K. Sarat al-ard (BGA 61). ed. J. H. Kramers, Leiden 1938, 132). It rarely appears in the documents of the Cairo Geniza [q.v.] (for example, TS 16.298, ed. S. D. Goitein, India book, 190, l. 13; al-kumdeh al-sharb-"fine linen stuff"). Kumāsh does not seem to have come into common usage until Mamlük times. Thereafter, it became the general word for fabric throughout the Middle East and is still current in most dialects, as well as in Persian and Turkish. It never seems to have been particularly common in the Maghrib. although the Hafsid Abū Zakariyā' (625-47/1228-40) is reported to have built a suk al-kuman in Tunis.

Under the Mamiliks, humdsh took in the specialised meaning of "dress uniform" although this sense is not found in any dictionary. A young Mamilik was presented with his horse, a kundsh, and is sword upon his manumission and induction into the corps. Sulfan al-Nasir Muhammad b. Kalawan (693-741/1293-1341) is credited with introducing the shah "lawnish, or "turban cloth and formal coat" of a Mamilik warrior (Ibn Iyas, Bada's' al-auhar fi waha's' al-duhar, Bülak 1311, i, 173, ll. 15 f.). This dress uniform was also called kundsh al-hidma (sorvice coat), humdsh al-mawkib (parade or processional coast). The Mamilik humdsh

must have been a heavy garment. Mamluk soldiers threw off their armour and humāni when fleeing the battlefield (Mayer, Mamluk costume, 76, citing al-Yūnini), and the Suițăn al-Malik al-Ashraf Kā'itbāy (872-901/1468-96) is reported to have abolished the obligation of wearing the humāni for ordinary palace service (hidmat al-happ) as it was too hot for continual wear throughout most of the year in Egypt (Ibn Iyās, op. cit., iii, ed. P. Kahle and M. Mostafa, Istanbul 1931, 322, l. 12). The less formal must for everyday wear was called humāni al-highalis.

Kumdah (pl. humdahdt) was also sometimes used in Mamlük terminology m a synonym for handah or "caparison" of a horse (lbn al-Furat, Ta'rith al-Duwal was 'l-mulah, ed. K. Zurayk and N. Izzedin,

Beirut 1942, ix, 247, ll. m f.).

(N. A. STILLMANN)
AL-KUMAYT B. ZAYD AL-ASADI, ABU 'LMUSTAHILL, an Arab poet of Küfa (60-126/680-743)
who is not ■ be confused with two earlier and lesser
known Asadis, al-Kumayt b. Ma'rûi and al-Kumayt
b. Tha'laba (see Ibn ai-Kalbi-Caskel, Diawkara, ii,
373; Ibn Salism, Tabahāi; al-Āmidi, Mu'lalif, no.
571: Ibn Hadjar, Isāba, nos. 7498 and 7499; etc.).

Al-Rumayt applied himself in indirect fashion to the poetry and the language of the Bedouins, and he was acquainted with poets such as al-Farazdals, Ruba b. al-'Adidjādi and the Khāridil al-Tirimmāh, whose hostility towards the Umayyads he shared; in contrast to the last-mentioned, he under the influence of the Shii tendencies of his native town and these had a decisive effect on the direction that his career was to take, inspiring him with violently pro-fallid opinions. He is reckoned to have acquired a fairly extensive intellectual training, and he also possessed a talent for oratory which shows in his poems, to me extent that meet critics regard them as speeches. At first a schoolteacher in a Küfa mosque, he was pressed by his family, so at least tradition has it, to set his poetic gifts to work and to undertake moetic career which nowadays would be called "committed". Henceforward he acquired distinction with the composition of verses in praise of the Ahl al-Bayt [q.v.] and of a series of poems, among which the best known are his long Mudhahhaba directed against the Yemenis and his Malhama in praise of the Kuraysh. The chronology of his work in far from clear, and the outstanding incidents of his career cannot be dated with certainty. His celebrated conflicts with the governor Khalid b. Abd Allah al-Kasri (105-20/723-38 [q.v.]) and the decision of Highām III. 'Abd al-Malik (205-25/724-43) to have him put to death, have given rise to conflicting accounts which are difficult to reconcile and to remantic embelfishments which are to be treated with caution. It was probably the Mudhakkaba which carned him

the hostility of Khalid, at a time when the latter needed assurance of the loyalty of the South Arabian slements. By a circuitous procedure, the governor informed the calibb of the attitude of the poet. who was imprisoned; with the help of his wife, who had to visit him, he succeeded in escaping disguised as a woman and, after a period of wandering, he finally obtained pardon from the caliph through the mediation of the prince Maslama h. Mishām. On his return to Kūta, he must have been gratified at the dismissal of Khalid (120/738); although his successor. Yout b. "Umar al-Thakaft [q.v.] was responsible, two years later (122/740), for the death of Zayd b. 'All [q.v.], who had allowed himself to become involved in a Shift revolt, al-Kumayt had m scruples about flattering him, although he did not succeed in deluding the Yemen! soldiers of his guard, who, on an occasion when he arrived to recite a poem, inflicted on him a mortal wound (226/743).

The renown of the poet, maintained by Shiq circles, rests fundamentally the Hathimiyyat, which have been the objects of a commentary by Abū Riyāsh (d. 339/950 [q.v. in Suppl.]) and of a number of editions: of M. Shakir al-Khayyat (Calro 1321, 1331), of Muhammad Mahmud al-Rafi'l (Shark al-Hashimiyyat, Cairo n.d. [1928]), of 'Abd al-Muta'al al-Sa'idi, with a quite interesting commentary lai-Kumayi b. Zavd al-Asadi, thatis al-tase ol-marwani wa-kasa'iduh al-Hashimiyyat, Catro n.d.). and most of all, of J. Horovitz, with a German translation (Die Haschimijat des Kumait, Leiden 1904). In spite of the title, the poet's praises are not aimed at all the Banu Hashim, but principally at the Prophet and at 'All and his descendants. Some verses (i, 79, ii, 205 ff. of the Horovitz edition), in which mention is made of 'Abbas and of his sons, were doubt added in the 'Abbasid period, perhaps by the son of al-Kumayt, al-Mustahill, who was also a poet (see Aghání, index) and was concerned to perpetuate his father's memory. The Hashimiyyat are composed, in the Horovitz edition, of four long basides (101. 140, 153 and 111 verses), of short kaşidas (33 and 20 verses), of one fragment of seven verses of which more than half constitutes an opening typical of the Aasida, and of four short pieces of six, two, two werses. In the long poems, al-Kumayt follows the framework of the kastala, but with a short and not very conventional sastb. In the radit, follows classical tradition, and subsequently he produces lavish eulogies of the 'Alids similar to those that addressed to the Bedoum sayyids. He also borrows frequently from the Kur'an, to such an extent that a scholar of Küfa, Ibn Kunāsa [q.v.] was able to compose, in the 2nd/8th century, w Kitāb Sarikāt al-Kumayi min al-Kur'ān. Some philologists and poets accuse him of plagiarism and inconsequence (see for example, al-Marzubant, Musuashshah, 191-8) and do not judge him worthy, in spite of his antiquity, of figuring among the poets who serve = a "proof", = hudidia (cf. al-Baghdadl who takes his shahid no. 16 from m poem of al-Kumayt). His compositions were on the other hand very highly regarded in Shift circles, whose members probably did not hesitate to add to them verses or even whole sections of which he was not the author. For . Blachère, "the simplicity of the language, the platitude of the arguments makes one think of a poetry of propaganda aimed at a public (possibly urban) immune to the lexicographic beauties of the desert poets." The language of al-Kumayt nevertheless does not lack refinement, but the artificial use of a badly-understood gharib was a source of irritation to some of his contemporaries. In fact, the importance of the Hāskimiyyāt, insolar as they are entirely authentic, resides in the opinions and the sentiments current in the Shift circles-or rather Zaydī circles, so it seems-of Kūfa which they reflect. Al-Kumayt, it is true, regards the first caliphs as usurpers (iv, 10), but he refrains from excommunicating them, even if they did wrong in not handing Fadak [q.v.] back to Fatima; 'All is the wast of the Prophet, who bequeathed the waldya to him near the pool of Khumm (vi. 6, which to be the earliest evidence of this Sht'l doctrine); it is to the 'Alids alone that power belongs and it is they who will consolidate afresh the foundations of Islam which anworthy rulers have shaken. The poet's enthusiasm does not, however, run to the extent of leading him to take up arms in support of the 'Alid cause, personified especially by Zayd b. 'All, and his warfare is limited to virulent versified attacks on the ruling régime, although his convictions do not prevent him from addressing compliments to it, as is shown by the eulogies of Maslama and of Higham himself, after his tigades had been pardoned. He recognises, besides, that in doing this, he had used takiyya [q.u.], in a verse (iv, 86) where this term, according to Goldziber (in ZDMG, Ix, 210) is used for the first time in the sense which IIII Shi'is give to it (Goldsiber, in ZA, xxii [1909], cf. Arabica, viift [1960], zz, also comments on the metempsychosis referred to in iii, vv. 39-40).

It is probable that Highlim would not have shown so much elementy if he had really known the content of the Hathimsypat; these must in fact have been circulated surreptitiously, with or without the complicity of the local authorities. It seems clear, in fact, in spite of divergences in the traditions, that al-Kumayt owed his rebuffs to the Mudhakhaba alone. This poem of 300 verses, of which only a part has been preserved, is a riposte 🖿 a Kalbi poet referred to by the name al-A'war, who had attacked Mudar and, among them, the 'Alids. In the Hashimtyydl there is no sign of any hostility towards the Yemenis, and the poet had even lauded the Muhailabids in the person of Makhlad b. Yazld b. al-Muhallab, which seems to prove that the section in which were enumerated the disreputable characteristics of the tribes of the Yemen is of a mainly occasional nature. Not only was this poem the primary cause of the assassination of al-Kumayt, but in addition, al-Mas adl (Muradi, vi, 36-46 🖚 📗 2267-72) comes close to seeing here both a manifestation and a cause of the conflicts between the Northern and Southern Arabs which led to the fall of the Umayyads. This Mudhahlaba certainly enjoyed a dangerous renown among the tribes of Mudar, since, m the beginning of the following century, another Shift poet, Di'bil al-Khuzaq [q.v.], still considered it advisable to refute it and to take up the defence of the Yemenis in a kaşida, which is said to have comprised 600 verses, of which only 25 are now extent (see 'Abd al-Karim al-Ashtar, Shi'v Di'bil, Damascus 1384/1964, 193-7; idem, Di'bil b. 'All al-Khund'l'. Damascus 1967, index).

As for the Malhama, preserved by Abû Zayd al-Kurashî (Djamhara, 287 ff.), it comprises 16 verses and contains general and personal observations and the culogy of Kuraysh, that is, ultimately of the Umayyads.

The Diran of al-Kumayt, which must have contained 5,000 verses, has been the object—proof of the interest aroused by this poet—of a number of

recensions by Ibn Kunāsa, Al-Aşma'l, al-Sukkarī and Ibn al-Sikkit (Fibrist, 158; Cairo ed., 225). It has been partially reconstituted by Dāwūd Sallūm, Baghdād 1969-70 (3 vols. without the Hāṣhimiyyāt).

In spite of the studies that have been devoted to him, the personality of this poet, who was capable of composing eulogies simultaneously to the 'Alids and the Umayyada, remains inscrutable, even enigmatic, by of the meagre credit that may be accorded to the sources, Sunni as well Shift; his versatility, even when justified by takiyya, is such as to throw doubt upon his sincerity and to advise the greatest caution in the of his work.

KUMIDJIS, a people mentioned in the Arabic and Persian bistorical and geographical sources of the 4th/roth and 5th/reth centuries as dwelling in the Buttaman Mts. at the heads of the valleys running southwards through Khuttal and Caghaniyan down to the course of the upper Oxus. The Hudad al-falam (372/982) describes them m professional brigands and as linked with a smaller group, the Kandina Turks. In fact, these two peoples must be remnants of some earlier waves of invaders from Inner Asia, left behind in the Pamir region, probably of the Hephthalites [see HAVATILA], or even of the earlier Sakas; Ptolemy mentions a Saka tribe of Komedai, and it in accordingly probable that the name of our people should be read as *Kumēdh-dijis. Sources like Gardizī and Bayhald mantion the Kumldills marauders called in by warring factions during the decline of the Sămanids (e.g. by Aba 'All Caghanl), and during the disintegration of Ghaznawid power in the west (s.g. by the incoming Karakhanids); but with the opening of the Saldjük period, they disappear from recorded history.

(C. E. Bosworth)

KUMIS, the Russian form of the Turkish filmle "fermented mare's milk", "koumiss", the staple drink of the steppe peoples of Eurasia from the eatliest time. Herodotus refers to its manufacture by the Soyths and the Chinese sources to its manufacture to the Ancient Turks and the Khitan. William of Rubruck, who calls it cosmon, describes in detail the production of this drink by the 13th-century Mongols; and we read in the Socret history of the

Mongols how the youthful Cingiz-Khān, fleeing from the Tayiciant, sought refuge in a tent "in which koumiss was churned all through the night till the dawn". In this, as in other respects, the Timurids continued the practice of their Cingizid predecessors; and kounsiss is prepared and drunk to this day by the nomads of North-Eastern Asia.

EDMIS, the Arabic transcription of the Latin comes*, a title which in al-Andalus denoted the person responsible to the state for the medicidin [q.v.] or Scriptuaries, or at least, for the Christian Mosarabs [q.v.]. According to A. Fattal, "les représentants ratigieux des gimmis sont autorisés par le pouvoir, moyennant majorys*, a exercer leur autorité. Il semble bien que les Arabes de la conquête respectèrent tant l'organisation administrative que judiciaire, que religieuse populations soumises". Certain capitulation documents (*ahd, *sulh) [q.v.] expressly affirm this: "They shall not be forbidden the exercise of their religious cult and shall keep their own laws". This was the min al-Andalus, as reflected in clauses 3-9 of the "treaty of Tudmir" [q.v.].

The first known comes - Arfubās gāmis al-Andalus wa-sa'im 'Adjom al-dhimma wa-mustakhridi tharadiikim li-umara' al-muslimin (Ibn al-Khatīb, Ibāja, 109), who advised the governor Abu 'l-Khattār to grant to the Syrians flefs of income (Chalmeta, Concesiones territoriales, in Cuadernos de Historia Hispania, vi. 1975). According to Ibn al-Kūtiyya, Iftitak, 38, "he was the first to exercise kimasa in Muslim Spain". We have therefore here a concentration in the person of the protector or defensor of extremely wide powers, embracing administrative, judicial and probably—to a certain degree—religious ones. At least, this is what one can deduce from the treatment as screnissimo hominum catholicorum summo which Alvaro of Cordova accords to the Count Romanus (Carus, 211), m does Ibn Khaldun from Asbagh b. Abd Allah. In this context, it would probably be correct me see in the confiscation of Ardobas's properties not only a "resumption of former meen domains" (safdyd al-muluk), but also an extraordinary impost (not paid in cash) of the same type as we find in the East (Fatta), Le statut legal, 220-4) or m that which probably cost the Count Harmir his life. The Annie was equally responsible, as mustakhridi-which could be translated by the Latin exceptor-for the collecting of on his co-religionists. As such, he had to levy not only the Mardel and dirrys, but also all extraordinary imposts (madanin, magharim). This gave him a certain expertise and "vocation" = a professional tax-collector, and it explains the fact that we find under al-Hakam I a kilmir Rabi' in charge of all taxes, on dhimmis and Muslims equally (Ibn al-Khatib, A'mdi, 15).

The comes was, then, a Christian, appointed by the state, but we do not know whether he was officially designated from above or nominated after proposal and election of his co-religionists. As an official, he had his subordinates, His powers made him the supreme judicial authority over his flock, by virtue of his rôle as salim or head of the community. He was therefore by virtue of his office also kādi al-'Adjam or kādi al-nasārā, whether in person, or by delegating his powers. Consequently, the meagra list of our "counts" should be completed by adding the list of consores or indices (a hypothesis put for-

ward, but not followed up, by Simonet, Historia de los molarabes, 212).

The names of some basedmis have come down to us. After Arțubăs, one should doubtless place a certain Alfonso, since the genealogy of Umar b. Hafsûn given by Ibn Khaldûn (16ar, iv, 134), and Ibn Idhari (Bayla, ii, 108), quoting Ibn Hayyan, gives him m the sixth descendant after a hamis Adlunsh. Rabit b. Theodulf, mutawalli al-mutahidin min almasded, and not only the hated chief tax collector over the Cordovans, but also commander of the foreign palace guards of al-Hakam I, and ended up by being crucified (Ibn Hazm, Diamhara, 96). He probably followed by the count (and physician) Romanus cited by Alvarus (Corpus, 211). St. Enloghis mentions one Isaac, a noble Cordovan who, before retiring to the monastery of Tabanos, had been docums lingua arabica, exceptoris sel publicae officio fungeratur (Corpus, 402). Kūznis b. Antunyān, who served in 'Abd al-Rahman II's administration and was katib to the amir Muhammad, and who is stigmatised by Alvaro and St. Eulogius as a hateful persecutor, Ecclesiae publicanus. . . publicae rei exceptor, should be included amongst the comes (and not amongst the "Gomez", as according to Simonet), because of (a) his function musishhridi, and (b) the fact that he seems to have been the official intermediary (much more than Recafred, metropolitan of Seville) between the state and the Mozaraba. With this authority, he transmitted the amir's commands, and consigned members of his flook to jail, when necessary, not as a state official, but as the leader and me responsible for the Christians under his jurisdiction. He presided over the council at Cordova in 852 which forbade the Mozarabs to seek voluntary martyrdom. The course ill events shows that he had not only the backing of the whole state apparatus but also that of the majority of his community. The upper classes were mable to agree, and he reached the point of fearing for his life (Khushanl, Kudat, 130-1; ibn Hayyan, Muktabas, ii, 138, 142). but things did not me far to his assassination, as frequently happened | the East (Fattal, op. out., 220-3). He was have been followed by the comer Servandus, who held power in ca. 853, according to Alvaro (Corpus, 214, 551, 554, 560, 581). Ibn Antunyan's son, also the amir's katib, disappeared in 298/911 (Bayan, ii, 153). The Archpriest Cyprianus wrote in ca. 890 his Epigrammas for the comes Adultus, and he also mentions a comes Guifredus (Corpus, 685-6). Ibn al-Kütiyya (Iftidak, 5) cites his contemporary Ahū Saald al-kūmis, well the addi al-Adiam Hafs b. Albar, both of them descendants of Astobas. Ibn 'Idhari (Bayan, ii, 142) records under the year 293/905 that "Hazmir sihilmis was imprisoned; he was tortured and underwent the torture of the iron boot until he died". It is likely that the kadi al-nazārā of Cordova in 351/ 962, who acted as interpreter for Ordono IV, was also the "comes of the Mozarabs". This was doubtless also the case with Asbagh b. 'Abd Allah b. Nabil, who was commissioned, in the name of the 'Amirid 'Abd al-Malik, to arbitrate in the dispute over the tutelage of Alfonso V between the two counts, Sancho Garcia of Castile and Menendo Gonzalez of Léon. Ashagh must have been the successor of Mufawiya b. Lubb, who was kamis in 361/971. According to 1bn Bashkuwai (Sila, No. 443), there was in the time of the caliphate a little market in Cordova called the surraykat al-kûmis.

The fact that, in the course of the 4th/zoth century,
in finds more references to judges than to counts,

KOMIS

in contexts where one would expect the reverse, must indicate a lowering of the latter's status, who by then had lost many of his duties. It is hard to believe that Ibn Zaydun, appointed by Abu 'l-Walld Ibn Diahwar to "enquire into certain affairs of the dhimmis" (lbn al-Abbar, I'lab al-kutldb, 212-13), can have title of humis. Indeed, if he had really fulfilled this role, it would have been indicative of a profound change, since Christians would have become subject to . Muslim and not to one of their coreligionists. It is very possible that Ibn al-Kallas, hable of mu'ahidin of Granada in 1125-6, at the time of Allonso the Warrior's Andalusian expedition, was comes of the Mozarabs (Ihita, 113, 116). The disorders of the period of fibia [q.v.], conducive to rebellions, the emigration of native Christians to the kingdons of the north, and the severitles of the Almoravids and Almohads, explain the silence of our sources for the later periods.

The term knows was applied not only to the head of the Mozarabs, however, but also to the counts of the Christian kingdoms. Ibn Hayyan (Mwatabas, v) says that Ordono II railied for warfare all his counts at the siege of Evora in 301/913. He gives this title to the counts of Alaba and Dialithiya, to the Banu Gümla and Banü Anshür, and cites by specific Sandio b. Gharsiya (Banbaldna), Fardhiland b. Chundishalb (Kashtiliya), Barmundh b. Nuño (Shalamanka), Abu 'l-Mundhir (Gormaz), Fortûn b. Gharsiya kuowu as Amat al-kumis, Rudhmir ai-sumis alias Ibn Mamma Tuta, the counts Manyura and Falin, and above all, of-fixed hamis Diarisha. At the time of al-Hakam II (Multabas, vi), the same author gives this title to Bon Filyo, Gundishalb b. Munyo, Esimeno b. Charsiya and Ashraka b. 'Umar b. Dawad. Ibn Khaldan, in his chapter in the K. al-Ibar on the Christian kings of Spain, speaks of Fornau Gonzalez and García Fernandez hámis Alaba wa 'l-Kilo', Menendo Gonzalez kūrais Ghalisiya, Henry of Burgundy, and the Banti Gamis and Banti Fardhfland, as well as Alvar Fafiez, Ibn Bassam spoke in as. 1010 🔳 the Admis Raymund, ford of Barcelona. Speaking of events from the beginning of the 6th/tith century, Ibn Khaldon www kumi, akmāj for Raymond of Burgundy, Don Nuño (Gonzalez de Lara) and Henry of Trastamara. The Vocabulinta attributed to R. Marti gives burnt, about as the equivalent of comes; P. de Alcalá has conde o condesa = tond, agndt; whilst the Fragmento . . . reyes natarles published by Müller and re-edited by Bustam-Onios (Larache 1940) translates "count" by kundi.

KOMIS, a small province of mediaeval Islamic Persia, lying to the south of the Alburz chain watershed and extending into the northern fringes of the Dasht-I Kavir. Its western boundaries lay almost in the eastern rural districts of Ray, whilst in the east it marched with Khurasan, with which is was indeed at times linked. It was bisected by the great Ray-Khurasan highway, along which

were situated the chief towns of Kümis, from west to east Khuwar or Khuwar (classical Xoxonyin, modern Aradun), Simnan [q.v.]. Damehan [q.v.], and Bistam [q.v.], whilst at its south-eastern extremity, out in the Great Desert, was the small town of Biyar [q.v. in Suppl.], modern Biyardjumand. The administrative capital of Kumis - Damghan, which is often accordingly called in the sources Madinat Kümis or Shahr-i Kümis, according to a well-known toponomastic process (cf. the town life Bardasir/Kirmán). The name Kūmis is obsolete today, and the lands making up the mediaeval province are included administratively in the formandaripi kull or governorate of Simnan and the ustdo or province of Mazandaran. The present-day town of Shāhrād, just to the south-west of Bistam, does not seem to have been in existence as such in mediaeval times.

The province was one of considerable importance in pre-Islamic times. In Greek sources it appears as Κωμισηνή, and in Armenian writers like man and Moses of Khoren as Komsh. H. W. Bailey, in JRAS (1970), 61-2, has suggested that the name derives from m Old Ir. root ka-, kans-, conveying the idea. of "hollowness", plus m passive or agental suffix, whence Komish "opened up, excavated place". Seleucus Nicator seized the satrapy of Parthia between 311 and 302 B.C., and it was allegedly he who founded the "city of a hundred gates" Hecatompylos, although it almost certainly existed before then; a legend retailed in the 8th century A.D. Middle Persian catalogue of the towns of Iran says that Kumis "the five-towered" (pandi-burg) was built by the sorcerer Azh-i Dahāk, whilst from later Islamic times, Hamd Allah Mustawfi, Nusha, 161, tr. 157, attributes the building of Damghan to the hero Hüshang, Such classical authors as Strabo, Pliny, Ptolemy, etc. mention Hecatompylos as the royal city of the Parthians, and some of these sources give the distance of the city from the Caspian Gates (e.g. Strabo, 1260 stadia, and Pliny, 133 milia passioning the consensus of modern opinion tends to identify the Caspian Gates with the Sar-Darrah defile through the Küh-i Namak spur of the Alburt). But the site was never properly identified with any reasonable certainty, although it was thought that it probably by somewhere between the towns of Damghan and Shahrad, until recently, however, Hansman and Stronach have examined and excavated the site of the modern spot called Shahr-I Kumis, near Kusha to the south-west of Damghan on the Simnan road. It seems that this very extensive site could well be the ancient Parthian capital, apparently largely abandoned around the middle of the 1st century B.C. when the Arsaelds moved their winter capital to Ctesiphon, See A. D. Mordtmann, Hekalempylos, in SB Bayer, Akad, der Wiss., Phil. Hist. Cl. (1869), 497-536; Pauly-Wissowa, xii/2, cols. 2790-7, s.v. (Kiessling); Markwart-Messlina, A catalogue of the provincial capitals of Erdushahr, Rome 1931, 12, 55-6; R. N. Frye, The heritage of Persia, London 1962, 183-4; J. Hansman, The problems of Quass, in JRAS (1968), 121-39; idem and D. Stronach, Excavations at Shahr-i Quasis, 1967, in JRAS (1970), 29-62; idem, A Sasanian repository at Shahr-i Quemis, in ibid., 142-55; S. Matheson, Persia: an archaeological guide. London 1972, 191-2.

In Sasanid times, there to have been a refounding of Könnish, perhaps by Yazdagird I [399-421] = a defensive post against the Turks and Hephthalites [see HAYAJILA] who were threatening the north-eastern frontiers of his kingdom. The region

retained its old connection with the Parthlans through its being the home of the noble Parthian family of Mihrān, to whom belonged the Spahpat (Islamic form, Ispahbadh, [q.s.]) Pahlav, killed by Hormizd IV (579-90); in the next reign, Kömish was the residence of the Spahpat of Khurāsān, Kāren of Nihāwand (see KARINIUS for the subsequent history of this lamily). There was there a highlyvenerated fire-temple, described in Middle Persian sources of the early Islamic period as burning perperually without fuel (whence, presumably, its N. Pers. name Khurishn < M. Pers. a-rearish "without food"), obviously a fire fed from some volcanic source or else from a natural seepage of petroleum. Towards the end of the Sasanid period, however, the administrative centre of the province seems to have been transferred to the apparently new foundation of Damghan, which thereafter acquired in early Islamic times the name of [Madinat] Kümis. It may have been that the old Kômigh of middle Sasanid times had never been more than a frontler post, since no Sāsānid coins are known to have been minted there. See Marquart, Eransahr, 71-2; Markwart-Messina, A catalogue of the provincial capitals of Eranshahr, 56-7; Hansman, The problems of Qumis, 136-9.

At the time of the Arab conquest of Persia, the men of Kûmis fought in the Sasanid army at Nihawand and at the defence of Ray, but the province offered no resistance to the Arabs thereafter. According to al-Baladhuri, Futch, 318, Sulayman b. Umar al-Dabbi sent troops into Kümis, but according to al-Tabari, i, 2656-7, the caliph 'Umar sent an army under Suwayd b. Mukarrin in 22/643, and Kumis was thereafter used as a base for attacks on Gurgan and the Caspian region. As with Djibal and Ray, it was Arah warriors from Küfa who garrisoned the chief town of Damghan. Al-Tabari further records, i, 2839, that the more northerly highway to Khurasan was less used in these early decades than the one via Pārs and Kirmāu, since Kūmis was vulnerable mattacks by Daylami and other mountain peoples of the Alburt; it was, - says, the governor Kutayba II. Muslim [q.v.] who first regularly used the Kūmis route to Khurāsān and Transoxania (cf. C. E. Bosworth, Sistin under the Arabs, from the Islamic conquest to m vise of the Saffarids (30-250) 657-864), Rome 1968, 20). In fact, the governor 'Abd Allah b, 'Amir b. Kurayz [q.o.] had used that route in 31/652, according to al-Yarkübl, Tarrikk, ii, 192. The region had meanwhile been disturbed by Kharidii sectaries, involving the appearance there of the Azraki leader 'Abida b. Hilai al-Yashkuri in 77/696 with the remnants of Katari b. al-Fudja'a's forces fleeing before the pursuing Umayyad army [see AZĀRIĶA and KAŢARĪ B. AL-PUĐĮĀJA]. Also, soon after 127/744-5. Kumis, together with much of northern Persia, cocupied by the 'Alid pretender 'Abd Allah b. Mu'awiya [q.v.] (al-Tebari, ii, 1880, 1976). Reform type dirhams were minted under the name Kümls from 91/710 onwards, but there do not seem to have been any Arab-Săsănid coins minted there (cf. J. Walker, A catalogue of the Muhammadan coins in the British Museum. i. Arab-Sassanian coins, London 1941, pp. exxxviii-exxxix).

Administratively, Kūmis was mostly linked during this period with Damāwand [q.v.] or Dumbāwand and with northwestern Persia in general; thus under the caliph Hishām, Kūmis and Işfahān both formed part of the governorship of Ray (al-Ya'kobi, ii, 388), until in 164/780-1 under the early 'Abbātids Kūmis was separated from Ray, according to al-Jabari, iii,

503. Abū Muslim's troops early occupied Kūmis in their march westwards during the 'Abbasid revolution, and some years later, in 137/754-5, it was briefly seized by the anti-Abbasid Persian rebel Sunbadh (q.v.). In the 3rd/9th century, Kamis suffered several severe bouts of plague (e.g. in 242) 856-7), and in 259/873 it was occupied temporarily by the 'Alid al-Hasan b. Zayd b. Muhammad [q.v.] in his expansionary wars outside his base of Taharistan (al-Tabari, iii, 1880). By the beginning of the 4th/toth century, Kumis had fallen away from caliphal control, and was disputed by various Daylami ather adventurers contending, together with the major powers of the Buyids and Samanids, for mastery in northern Persia; at various times, Buyids, Sămănids and Ziyārids controlled it, as the evidence of coins, principally bearing the mint-name of Dänghan, shows (cf. E. von Zambaur, Die Müntprägungen des Islams, zeitlich und örtlich goordnet, i. Wieshaden 1968, 215).

The geographers of this period give descriptions of the province, usually dealing with it town-by-town. They emphasise its fertility, with exports of its fruit, such as the famed kamisi and bistami apples. as far as Trak, and the fame of its woollen, silk and goats' hair textiles and carpets (see e.g. ai-Ya'kābi, Buldan, 276, tr. Wiet, 80; Abū Dulai, Second Risála. tr. Minorsky, Abu-Dulaf Mistar ibn Muhalhil's travels in Iran (circa A.D. 950), Cairo 1955, 56-8; Mukaddasi, 167; according to al-Diahiz's K. al-Tabaşşır bi V-tidjara, Kümisi Jaylasans were the best procurable after those of Rūyan, Amul and Egypt (cf. R. B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, 75, 80). The Hudud al-talam, tr. Minorsky, 135, 1 32, comments on the bellicosity of the people of Kamis and Dämghäu, perhaps a reflection of their position, exposed to attacks along the Khurásán highroad and from the Caspian region. Al-Mukaddasi, 353, 367-8, comments on the piety of the Hanafi inhabitants of Kumis and on the peculiarities of their Persian dialect, which he says is connected with that of Tabaristan and which seems to show archaic features. Various authorities give the tax-yield of the province, from the figures of Ibn Khurradadhbih (mid-grd/oth century), 34, of 2,196,000 diragms to those of al-Mukaddasi, 371, according to whom the kharadi of Kumis amounted to 1,196,000 dirhams plus 26,000 dirhams from Biyar [q.v. in Suppl.], this before Biyār was transferred administratively from Kumis by the Samanid amir Nasr b. Abmad (301-31/914-43) and linked with Nishapur and Khurusan.

From the beginning of the 5th/11th century, the

Kumis gradually drops out of usage, although
Mustawff (8th/14th century) still uses it in his Nusha,
162-3, tr. 157-8, to denote the province; its last
appearance a coin appears to on a Ziyarid
dirham of 164/974-5 (Zambaur, op. cit., 199).

(C. E. Bosworth)

KÜMIYA, one of the most important tribes of the Maghrib in the Middle Ages; they were at one time called Salffra and were descended through Fatin from Madghls al-Abtar. Tradition says that the brothers of Kümiya, the eponymous ancestor of the tribe, were Lemaya and Matghara from whom were descended numerous families, were of whom still exist at the present day. The most important representatives of the Kümiya, who live in the north-

west of Algeria between Tlemeen and Areshkill (Rasheun) are the B. 'Abid, from whom was doscended the first caliph of the Almohad dynasty, 'Abd al-Mu'min [q.v.], bors at Tadiera between Humayn and Nedroma; the Nedroma who gave their hame to an important town: the Saghara, now represented by the Natila, the Band Hol, of whom a section the Masifa still exist. The Kümiya showed themselves devoted to 'Abd al-Mu'min, who was one of them. They formed the second disund in the Almohad army; but they exhausted themselves in supplying the dynasty with soldiers for the wars in Spain and North Africa. Subjected to Aharadi by the Zenāta, some of them joined another group, the Chase and formed the powerful confederation of Trara in the north-west of Algeria.

Bibliography: R. Basset, Nedromah et les Traras, Parls 1901, and the writers there quoted. (R. Basset)

KUM(M)I. KADI AHMAD IBRĀNĪNĪ HUSAYRI. Persian chronicler and chancery clerk (men-(Af), was born on 17 Rabi' I 953/18 May 1546 in Kumimi, the son of the manshi Sharai al-Din Hasayn al-Husayni. In 964/1556-7 he went with his father to Mashhad at the court of the art-loving prince Ibrāhīm Mīrzā b. Bahrām Mirzā b. Ismā'ti I, where he was trained by well-known callieraphers. In 974 1566 he was a munski at the court of Shah Tahmasp I. together with his father. At the instigation of Shah Isma'll II, he started composing in 984-5/1576-7 his chronicle Khulaşat al-tanarikh. From 984-8/1576-1580 he was employed at the chancellery of musicusti al-mamatik Mir Shah Ghazi, in 988/1580 m financial supervisor with Erdoghdl Khallfa Takkalu and from 959/1581 onwards worked at the highest level of the financial administration by command of the highest authority. In 992/1589 he was at the residence of Shāh 'Abbās I to whom he dedicated in 999/1591 his chronicle Khulaşat al tawarikh. About his further life nothing is known; in far his works are the only sources for his life (see Minorsky, 1-12, Müller 3-7).

Kum(m)I composed at least three works: 2. Madima* (or Tadhkirat) al-hu*ard-yi *Abbāsī. The work has not been preserved but the author refers to it several times in his later works. According to these references the work must have been an anthology of ■ least six volumes in which among other things information was given about the lives of great

scholars, scientists and poets.

z. Khulāşat al-tamārtāh, a ch onicle in five volunies, of which the lifth volume only has been preserved. It describes at full length the bistory of the Safawids from their origin to the first years of the reign of Shah 'Abbas i and was probably composed between 995/1587 and 1000/1592. It exists in five manuscripts. The first part of this volume, dealing with the early Şafawids, has been published, translated into German and annotated by E. Glassen, and the last part, in which the first years of Shah Abbas I are treated, by H. Müller. This chronicle is one of the most important sources of Safawid history. Although the first part is highly dependent upon other known and unknown sources, the sections dealing with later times, witnessed by the author himself, give truly independent information. Together with Iskandar Beg Munshi's 'Alamara yi 'Abbdsi, it may be contidered as one of the two most important sources for the period of Shah Abbas I.

3. Gulistán-i hunar, a treatise on calligraphers and painters, composed ca. 2005/1597, exists in several incomplete manuscripts; it has been edited by A. S. Kh-ansari, translated into Russian by B. N.

Zakhoder and into English by V. Minorsky. The contents of this work, classified according to the various kinds of writing, are mainly based on earlier sources. There are however many important observations by the author himself on contemporary calligraphers, whom he had plenty opportunity to meet at the court of Ibrahim Mirza, at that time a flourishing centre for calligraphy.

For other works, possibly written by Kum(nu)! (Muntakhab al-ususara' and Madima' al-khiyar) see

Müller, 8-10.

(H. MOLLER) KUMR, the Arabic name for the Comoro Is., a group of four islands in the Indian Ocean at the northern exit of the Mozambique Channel, halfway between East Africa and northern Madagascar. The largest island of the archipelago is Grande Comore (in the local language: Ngazija; in the chronicles also: Hangazidja, Langazidja, al-Angazidja, Kum[u]r), with 1148 km2 and ca. 120,000 inhabitants (1966); followed by Anjouan (Nawani, Hinzwani; in older Portuguese and English sources: Johanna) with 424 km3 and ca. 85,000 inhabitants; Mayotte (Mayuta, Mach)ore) with 574 km2 and ca. 28,000 inhabitants; and Mohéli (Mwall; in older European sources Molaly, Mohilla etc.), with 290 km and co. 10,000 inhabitants. The capital of the islands is Moroni on Grande Comore. The islands are of volcanic origin (still active is the volcano Karthala, 2361 m, on Grande Comore) and consist mainly of basalt and tuff. The climate is tropical-maritime with the heaviest rainfalls from November to April. The natural vegetation is a dense rain-forest with rare varieties of wood, which, however, for the most part have been rooted out and replaced by plantations and savannas. Agricultural products of importance for export are soco palms, vanilla, coffee, pepper, aromatic plants (ylang-ylang), sisai and sugar-cane. Cattle-breeding and fishery are scarcely developed.

The population, which suffers from a very high birthrate (outside the islands, in Madagascar and 380

East Africa, there already live about 300,000 Comorians, cf. Guy, Islam comories, 149), has developed from three different ethnic elements; (a) Bantus from East Africa, (b) Malayo-Indonesians who came via Madagascar, and (c) Arabs who immigrated directly from South Arabia (especially Hadramawt) or from Arab settlements in East Africa. The Comorian language is divided into two main dialects, the Shi-Ngazija and the Shi-Nzwani, and, m least from the phonetic point of view, were to be related more to the Venda, a Bantu language spoken on the middle Limpopo river, than to Swahili (Heepe, Die Komorendialekte, 45). Like Swahili, which is well understood by most of the Comorians, it has incorporated many Arabic loanwords. While Arabic to have been used as the written language still in the last century, most of the recent chronicles and correspondence are written in the local language with Arabic letters. Arabic is taught in Kurlan-schools but is understood only by a small minority. The Comorisms are Sunni Muslims of the Shafi'l rite, but many African antmistic conceptions and magic practices have survived in popular belief (cf. Robineau, Société, 51, with further references). Al-Nawawi's Minhadi at-jalibin is widely used and still serves as the theoretical base for Civil Law, The Shafi'l law was widely respected by the French administration, but in many fields it is supplemented by the customary law (ada) which shows many matriarchal characteristics (e.g. law of succession). The Suff brotherhoods of the Shadhiliyya, Tidiāniyya, Rāfi'liyya, Kādiriyya and 'Alawiyya play a very important part in religious life (sc. Guy, Islam comorien, 145 ff.).

Local legendary tradition, as well as false identifications of place-names, have led some former historians (Gevrey, Grandktier, etc.) to fantastic speculations about the early relations between the Comoro Is, and the ancient Mediterranean world. Until there seems to be only think which deserves some attention and which might establish such relations. Pliny gives as the name for island, the location of which would fit well with one of the Comoro Is., Damnia, and Von Wissmann (art. Zangenac, in Paulys Realencyclopedie, Suppl.-Bd. xi [1968], 1330) may be right in identifying Damnia with Domoni, an old settlement on Anjousa and formerly used mame for the whole island. Arab geographers, including the pilots of the 15th and 16th century like Ibn Madiid and Sulayman al-Mahri, used the name Kumr for Madagascar exclusively and cited, If they did at all, each of the islands by its proper name (cf. Tibbets, Arab navigation in the Indian Ocean, London 1971, 432). Local tradition starts the history of the islands with the legendary report (unknown on the Swahili coast) of the immigration of two families from the Arabian peninsula some years after the death of Solomon. But the first traditions which deserve more interest are those that speak of the arrival of Bantu-speaking people from East Africa to Grande Comore at an unknown date but in any case before the 14th century. One chronicle (Rotter, Muslimische Insein, 24) calls them Wa-Mizi and Tungl; 📰 = place-name was already known to Pliny (Von Wissmann, Zangenae, 1339) and corresponds with modern Kilwa Kisimani, while Tungi is identical with Tungui south of Cap Delgado, Since a group of former slaves in Anjouan bears the name Makwa (Robineau, Islam, 46; idem, Societa, 34) which corresponds with the tribe Makua in the hinterland of Tungui, it is very likely that at least the greatest part of the Bantu element on the Comoro Is. came from the East African coast between Lindi and

the mouth of the Limpopo River. This fits with the above-mentioned linguistic facts. At least on Anjouan these Africans were not the first inhabitants, but merged with an older population, now generally called Antalaotra, of Malayo-Indonesian race, which might have immigrated in the course of the first millenlum (cf. Robineau, Societe, 34) via Madagascar fformer European sources often call them wrongly Bushmen, cf. Repiquet, Sultanat, 50).

The local tradition of Grande Comore and Anjouan has preserved the names of the ruling houses before the coming of the Shirasi (25th century). On Grande Comore the ma-fey (or ma-fe "chiefe", of. Swahili fu and fumu) are said to have established and ruled the first eleven villages, before they were defeated by the ma-beja (cf. Swahili wa-mbeja) [Harries, Swahili chronicle, 12, 71). On Anjouan the beje are regarded as the oldest ruling class, which was replaced by chiefs who bore the title fani (Faurec, L'Archipel, 33). Although we must take for granted that at that time, i.e. in the first half of this millenium, Arab or Swahilised-Arab merchants were in contact with the islands, and some of them might have settled there, it is difficult to say, whether Islam was already wide-spread. It is noteworthy, however, that the fast fani-rulers - Anjouan bore Arab names like 'All and 'Isa.

The decisive turn in Comorian history was the arrival of the Shirazis in the second half of the 15th or the beginning of the 16th century, who by fighting and internarriage seized power in all four islands (the coming of the Shirazi clan with their ancestor Muhammad b. Isā is described through the legend of the Seven Brothers which is also well-known in East Africa, cf. among others, Chittick, Shirazi colonization, 276; Trimingham, Islam in East Africa, to ft.) and became the real founders of Islamic culture on the islands (the first mosques were built by them at Tsaweni in Grande Comore, at Sima and Domoni on Anjouan, and at Chingoni on Mayotte, all in the middle of the 16th century).

In the following three centuries the political situation was marked by (i) very complicated internal dynastic struggles, (ii) the invasions of the Malagasy tribes, Sakalava and Betsimisaraka, and (iii) the growing political influence of the French and British in the area.

(i) Grande Comore was divided into eleven more or less independent territories (Bajinl, La Dombe, Bambao, Hambu, Itsa (dra, Hamamyu, Mitsamibuli, Mhude, Mbaku, Washili, Hamahame) ruled by sultans who only seldom jointly recognised the supremacy (stibs) of one of them. Sultan Ahmad (= Mwinye Mkuni) (1793-1875), the son of <u>Sh</u>ay<u>kh</u> Ngome from Pate in northern Swahili country, and of Mwana Mtiti, half-sister of a suifana of Grande Comore (women rulers were not unusual, and the maternal line was often accorded higher prestige 🚥 all four islands) was the last really great personality who, at least for some years, managed to unify the islands, before he was defeated by Müsä Fumu. The rivalry between Sultan Ahmad's grandson Sayyid 'All, the favourite of the French, and Müsä Fumu (d. 1883 in prison), who was supported by the British and the Sultan of Zanzibar, marked the last years of independence. Against the will of most of the other sultans 'All signed in 1886 a treaty of protectorate with France.—On Anjouan the political situation was characterised by the bipolarisation of the two main towns Domoni, which was made the capital by the Shirazis after Sime, and Mutsaraudu, which became the political and commercial centre from the

and of the 18th century onwards when power shifted from the clan (kabila) of Al Madwa to the clan of Al Mastia (both names show their Hadramawii origin, cf. B. G. Martin, Migrations from the Hadramatel to East Africo, in Centre of Arabic Documentation, Research Builetin, Ibadan 1973). Continuous succession struggles in the first half of the 19th century only ended by Suitan Salim (1842-55), whose Sultan 'Abd Allah III (1855-1890) put his island under French protection. Neither Mayotte spared from dynastic rivalries within the Shirazi clan who ruled at Chingoni from the 16th century. In addition, the situation was complicated by the constant attempts of the sultans of Anjouan to bring Mayotte under their control. The last Shirazi sultan ceded his island in 1832 to the Malagasy nobleman in the Hova tribe Kamanetaka who already ruled on Mohéli. In 1835 or 1836 Ramanetaka defeated by the Sakalava Dia-Ntsoli (= Andrian-Teorh), and the island became nominally a possession of the sultan of Anjouan. The same Dia-Ntsoli, without the authorisation of the sultan of Anjouan, in 1841 presented the island to France. The smallest island Mohéli apparently was always dependent on Anjouan, until in 1830 the above-mentioned Ramanetaka (d. 1841) after having become a Muslim, appointed himself sultan of the island. One of his descendants signed the treaty of protection with France in 1886.

(ii) There seems to have been a more or less peaceful influx of Malagasy people to the islands throughout the centuries, but around the turn of the 19th century the nearly annual invasions of the Betsimisaraka and Sakalava threatened the political and cultural integrity of the islands. The main reason for these invasions, which caused heavy losses among the population and the destruction of whole settlements, was the search for slaves, although some groups had been summoned by the quarrelling sultans themselves. Only after the Anglo-Malagasy treaty of 1817 did the invasions gradually stop. In the following decade it was the political situation on Madagascar and the extension of the Hova state that drove large groups of Sakalava (under Dia-Ntsoli) and Botsimizaraka (under Ramanetaka) to the islands. They finally settled down on Mayotte and Mohéli,

(sii) The first contact with a European power was a short visit of the Portuguese on Grande Comore about 1505 which, however, left no permanent traces on the Islands. In the first half of the 19th century when the British and the French disputed control of the Indian Ocean, the Comoro Is, also became involved. In taking possession of Mayotte in 1841, France tried to counterbalance the growing British influence on the other three islands (in 1833 the British had reinstalled Sultan 'Abd Allah 11 on Anjouan by force). Only after the British slowly withdrew from the Malagasy region after 1880 could France bring the other islands under its protection in 1886 (a process intensively studied by B. Dubins, Political history).

From 1914 till 1946 the whole archipelago was placed under the Gouvernement Général of Madagascar. On I July 1975 the Comoro Is, declared their independence, except for Mayotte, where on 11 April 1976 I referendum saw a large majority voting to become a département outre-mer of France.

KUMUK (variant: Kumik) - people of the eastern Caucasus. The Kumuks belong to the Kipčak Turkic ethnic group, along with the Noghay, Karacay and Balkar. They live north of the main chain of the Great Caucasus, - the northern, northeastern and eastern slopes of the Darhistanian Caucasus between the foothills and the Caspian Sea, from Derbend to Adahi-Su (near the lower Terek River). Although confined to a narrow strip of land in the south, they inhabit a wider area near the Terek in the north. The Kumuks are bordered by the Noghays in the north, the Avars [q.v.] and Darghins [q.v.] in the west, and Tabasarans and Azeris [q.v.] in the south. The major rivers in Kumuk territory the Terek, Sulak, Shura, Ullu-Cai, Gamel, Manas, Alesai and Gubden. The great majority of Kumuks - Sunni Muslims of the Hanaft school, although Kumuks of Derbend and Makhackala are "Twelver" Shi's. The 1926 Soviet census lists 94,549 ethnic Kumuks, of which some ro,000 lived outside Däghistan, and 94,909 Kumuk-speaking people. The 1959 Soviet census lists 134,967 ethnic Kumuks, and 132,303 Kumuk-speakers. (Due to the adoption of Russian = a primary language by Kumuk-speakers in the north, and Azeri by those in the south, the relative number of Kumuk-speaking people has declined, despite increasing numbers of

mountaineers using Kumuk as their primary

The Kumuks inhabit eight districts of the Daghietan ASSR: Baba-Yurt, Khasav-Yurt and Kizil-Yurt on the northern plains, and Buynaksk and Karabudakhkent in the eastern coastal plains. The "Southern Kumuks" (Kumuks of Kayakent) live in the Kayakent district and in the villages of Magalis, Yangikent and Tumenler in the Kayake district. The Kumuks are also found in six settlements in the vicinity of Makhackala, and in the cities of Makhackala, Khasav-Yurt, Buynaksk, Irberbash and Derbeud. A number of Kumuks live outside Daghistan on the Noghay steppes in the Gronnyi region, north of the Terek River, in well as in North Ossetia.

The ethnic origin of the Kumula is complex and difficult to determine. They are probably a mixture of the indigenous Ibero-Caucasian tribes and various nomadic Turkic groups (Kuman-Polovisi, Khazar, Kipčak, etc.) who were pushed into the lowlands from the North Caucasian steppes in the 11th-13th centuries, imposing their language on the inhabitants.

The formation of the Kumuk people began in the 7th century when the Khazars (q.v.) overran the plains of southern Russia and populated them with Turkic-speaking peoples. The indigenous Ibero-Caucasian population mixed with these Turkic peoples, especially the Kipčaks [q.v.], and adopted their language. The Kumuk "nationality" appeared in the 13th century on the steppes of northern Daghistan when successive waves of the Golden Horde pushed these Turkic-speaking peoples southwards. Their Islamisation began immediately, under the influence of the Golden Horde from the north and the Laks from the south, and was completed by the 34th century when the Golden Horde annexed northern Däghistan. Prior to this, the people had been Christians. Jews and animists.

The first political organisation of the Kumuks the feudal Shamkhalat, which united all the Kumuks as well as other northern and eastern Dāghistāni peoples. The Shamkhal originally resided in the mountains of the Lak (Kazi-Kumuk) region. When Shamkhal Coban died in 986/1578, the Laks shook off the rule of his son Sulfan-But, and the centre of government was shifted to Buynaksk. After 1050/1640, Tarku was the capital of the Shamkhalat. The Shamkhals acknowledged Persian sovereignty throughout their existence, spite of their strong diplomatic ties with Russia in the late 16th century when Russia was attempting expansion into Daghistan. The power of the Shamkhalat began to decline with the wars against the Kabardines and Georgians. It lost control of the area between the Terek and Sulak Rivers first, then the Darghin and Lak regions in the 17th century. However, the Russian expeditions of 1586, 1590 and 1604 were defeated by a joint Kumuk and Ottoman effort. Although the Snamkhals were formally vassals to the Moscow state, they remained close allies of the Ottomans from the late roth till the late 18th centuries. In 1725 the Russlans ended independent Shamkhal rule and the decline of the Kumuks was completed with the creation of the Mehtufin and Bammatulah Khānates. By 1765 the Shamkhalat was reduced to a 2,500 km² strip of land along IIII Caspian Sea.

Imam Manger attempted to rally the feudal nobility of the Caucasus (especially among the Kumuks and Kabarda) against the Russians in the late 18th century, but failed. The Treaty of Gelistin (1813) formally ceded Daghistan to Russia, but the Kumuks continued to be governed by the Shamkhals. After the Russians subdued the Murid insurrection (1834-59) led by the Imam Shamil [g.v.], the Kumuks and the other Daghistan peoples were incorporated into the Russian Empire. Native rule was supplanted by m Tsarist military administration.

A small Rumuk intelligentsia emerged in the early 20th century. They had been educated in the Diadia [q.v.] schools on the borders of Daghistan, and were among the first to be impregnated with socialist ideas. This small group was destined to provide the leadership for the national liberal movement (which was doomed to failure) during and after the Russian Revolution.

In 1917 the Rumuks played an important role in the North Caucasus peoples' move for independence, Motivated by their own political traditions and Turkic cultural influences, they favoured a "Turklo" consolidation of Dāghistān (as opposed to the "Islamic" consolidation favoured by conservative Daghistania), with linguistic unification based on Kunnak or Azeri. They sought to become part of the great Pan-Turkic movement centred on Bako, Kāzān and the Crimea. Pollowing a power struggle between the religious and conservative elements led by Shaykh Uzun Haği and Imam Gotsinski and the socialists, the Soviet régime established in the principal cities on the plain in April 1918. By September 1918, General Bičerahov's "White" army, equipped in Persia by the English, had crushed the Soviet forces. Soviet power me not re-established in Daghistan until 1920 when the Eleventh Red Army defeated Denikin's White Army and drove the partisans of Imam Gotsinski back into the mountains.

The Kumuks had not the most powerful, complete and complex feudal structures in Däghistän before the Revolution. The ruling class consisted of the Shamkhal, beks, high nobility (tanka), middle nobles (sala-urden), and religious leaders. The free-men [urden], free seris (lagar, organised into various groups (dims)], seris bound to the land (terkeme, living in separate auls and working the land), and house slaves (kul, a very small group) comprised the lower classes. The merchant class grew rapidly with the rise of industry and capitalism in the late 19th century, but the working class was never large, since most industry was domestically oriented.

The Kumuk language belongs to the Kipčak-Oghur subgroup of the Kipćak group of Turkic languages, to which the Noghay and Karačny-Batkar languages also belong. Kumuk has three dialects: Khaydak is strongly influenced by the Thero-Caucasian languages and is used by the Meridional Kumuks; Buynaksk, and Khasav-yurt (or Aksay), which forms the basis of the literary language, developed with the Arabic script in the late 19th century. In 1917 a Latin alphabet replaced the Arabic, and Cyrillic script and adopted in 1938. Kumuk was the lingue france of the Daghistani peoples. The first Däghistäni Communists accepted this rôle for Kumuk in the 1920s, but Russian was later adopted as the official language. Although Avar has replaced Kumuk as an inter-tribal language, Kumuk remains the second or third language of Thero-Caucasian peoples in north and central Dághistán (Andi-Dido-Avar, Darghin, Lak). Article 78 of the Constitution of the ASSR of Dagkistan

KUMUK 383

names Kumuk as one of the nine official literary languages of Daghistan.

The Kumuks are the only Daghistan people having a true national literature which dates back to the early toth century. These early works were generally local versions of heroic epics or adventure novels, and were often consigned to small pamphlets destined for public readings. Turkic-language publications from Kāzān, Adharbāydjān, the Crimea and Turkey satisfied the desire for other literature. Christian missionary publications of the early 19th century were instrumental in the development of a literaty language. Written in a composite language of various Caucasian peoples, they were among the first written literature of the area.

Kumuk literature came under the influence of the Turkic modernist movement centred on Kāzān and Baghčesarāy in the second half of the 19th century, resulting in the nationalistic poetry of Yusuf from Yakhay and Ayyob from Diengutay. In 1883 the Kumuk Osmanov Muhammad (b. 1843) published an anthology of Kumuk and Noghay folklore and literary texts in St. Petersburg, where he was a member of the Faculty of Oriental Languages at the Academy of Sciences. The collection includes = letter in verse, dated 1872, from the revolutionary Kumuk poet Yirdi Kazak (1830-80), inviting Muhammad Efendi, then a student at St. Petersburg, to return home. This letter is one of the oldest literary vestiges of the Kumuk language, and Yird Kazak is thus considered the founder of Kumuk literature.

Muhammad Mirzā Magarayef established a printing shop utilising Arabic script at Tentir Khan-Shura at the beginning of the 20th century. By 1912 he had printed translations from Arabic and Kāzān Tatar and the poetry of Abū Sufyān in Kurauk, Nokhay Bailrmursayev (1860-1919) wrote the first modern narrative works inspired by Kumuk contemporary life in 1906-7. His son Zainalabid (1897-1919) was the first Kumuk Bolshevik writer. Together they founded the political-literary society Taft culpan "The morning ster") at Khasav-Yurt in 1916 to promote the development of modern Kumuk literature. With the assistance of poet and dramatist Temir Bulat Beybulatov and other Kumuk, Tat and Russian writers (including S. S. Kazbekov and H. O. Bulac), this organisation sponsored a nationalist, progressive review of the same name, first published at Temir Khān-Shura in August 1917. The Khasav-yurt dialect of Kumuk was adopted as their literary language.

Tail tolpan was instrumental in reviving the Rumuk national consciousness. In actuality a radical nationalist organ, it professed to III apolitical and declined to choose between the socialist and nationalist positions. However, as a result of the first short-lived Soviet occupation of Daghistan beginning in April 1918, Tah tolpan adopted a pro-Bolshevik position. Publication ceased in July 1918.

Test colpan was the first Kunnuk journal to appear. In 1913 liberal nationalist Mirza Muhammad Mavaraev of Temir Khān-Shura requested authorisation for a Kunnuk journal entitled Kunnuk gazāti ("The Kunnuk journal"). This demand rejected by the authorities, and the classical Arabic publication Djaridal Dāghistān (published in 1915) notwithstanding, the first Kunnuk publications did not appear until after the Revolution of February 1917. The journal Musānāt ("Equality") was the first Kunnuk periodical, published at Temir Khān-Shura in June 1917, under the editorship of Mavaraev.

This first period of Soviet domination witnessed the publication of a third Kumuk journal, Iskii khaik ("The working people"); it was edited by Zainalahid Bathrmurzayev and adhered to a Bolshevik position. The journal Yoldash also supported the development of a national Kumuk literature. The Kumuk press II currently represented by one republican organ published at Makhackaia, and several district organs (at Khasav-Yurt, Baba-Yurt, etc.).

The Kurnuks possess a very rich Soviet literature. Abd Alfah Muhammadoghlu Magomedov (1869-2037) is considered the national poet of Daghistan. by the Soviety as a result of his pro-Communist writings in the post-Revolutionary years. The most celebrated Kumuk prose writer is Yasuf Gereyef, whose satirical style was influenced by the Adharbaydiani poet Şabir. Other literary figures of note include poet, dramatist and author of children's books 'Alimpasha Salavatoghlu (1901-43), poets A. Beshirov and Kalyan, poet-novelist Abdul-Wahab Sulaymānoghlu (b. 1909), playwrights Hamid Rustamov and Amir Kurbanov (b. 1909), and novelist Anvar Agiev (b. 1913). The Kumuk poetess Indu Gadieva is the most renowned female Daghistant writer. In addition, many Russian authors have been translated into Kumuk (e.g. Tolstoy, Lermontov, etc.).

The Kumuks participate actively in the political life of Dāghistān. In 1924, Kumuks comprised 5.7% of the projecture of the Dāghistān ASSR, and in 1927 there were 696 Kumuks in the Dāghistāni Communist Party.

The Kuntuk educational system is less developed than that of the Avars; in 1948 there were eight Kumuk secondary schools (compared to 17 Avar); Karabudukhkent, Kayakent, Izberbash, Makhačkala, Buynaksk, Khasav-Yurt, Baba-Yurt and Kizil-Yurt. Islam seems to remain a strong force among the Kunuks up to the present time.

Modernisation is changing the character of the traditional Kumuk economy. Agriculture and animal husbandry remain the basis of the rural activity, but mechanisation and collectivisation have made the large-scale production of cereals and cotton possible. The fishing and canning industries, as well as off (at Kayakent), hydroelectric plants and other factories are evidence of advanced industrialisation in certain sectors. Nonetheless, traditional crafts are still pursued: woven woollen goods and carpets (villages of Kumtorkal, Kayakent, Upper and Lower Kazanishče), gold work (Irneli, Kafir-Kumukh, Sultan-Yanl-Yurt, etc.), wrought iron work (Verkineye, Nighneye, Kazanishče, Anderey-aul), and pottery (Verkineye, Kazanishče).

The Kumuks, along with the Avers, Darghins, Laks and Lezgs, appear to be points of consolidation among the Daghistani peoples, destined to absorb certain small groups (although certainly not all). Of the nine official languages of Daghistan, newspapers are only published in the languages of these

live groups.

(W. BARTHOLD · [DAVID K. KERMANI])

KUMÜN, "latency", a key-notion of speculative
physics in early Muslim theology, especially in the

system of al-Nazzām [q.v.].

The concept was derived from simple observations: blood is "hidden" in the body of man, oil in sesame, flour in wheat, butter in milk etc.; these substances can be made patent by certain procedures, such = grinding, churning etc. On the other hand, new substances can be produced by putting several ingredients together; pottery results from the "mixture" of clay, water, and fire, and these primary elements are "hidden" in it afterwards. On this empirical basis, where the term still had a rather non-technical meaning, al-Nazzāni constructed a rather elaborate system which has not yet been the object of more thorough investigation. He did not follow atomism of his teacher and uncle Abu I-Hudhayl, who treated qualities as accidents which may be replaced by their contraries. For him, all natural qualities (with the exception of movement, understood in a very broad sense, as "all actions depending on man's will") were "bodies" inherent in other bodies: fire | | | hot and luminous, but is composed of heat and luminosity. As such, fire may itself be considered an ingredient (khill) of wood where it is "latent" until the wood is burnt. When it becomes manifest, other ingredients do so too: ashes, which consist of taste, colour, and dryness; tmoke, which consists of taste, colour and smell; and water, which consists of humidity and a certain sound, i.e. the crackling produced in burning. In consequence of his "corporealism", al-Nazzám thus treated the qualities of an object and its constituent parts alike. It is possible that he differentiated between them insofar as the qualities form the ingredients of the primary elements which then make up for the more complex bodies; but we are not yet able to ascertain whether his theory implied such = hierarchy.

The "elements" (fire, water, etc.) are thus not simple themselves, but composed or, as al-Nazzām said, "joint" (muzdawidi). They may inhere in each other: water always contains fire, which may be activated through heating and then leaves it for the empyraean. The process can be recognised through the bubbling of the water; the particles of humidity which are dragged along the fire in its upward movement manifest themselves in vapour. Similarly, water normally contains earth which remains as a salty or limelike sediment in the kettle after evaporation. On the other hand, earth usually contains water; otherwise, it would we keep together (clay being normally given as an example). That fire and water may penetrate each other (meddhhala) without conflicting, is to be explained by the fact that they keep each other's balance; God has wisely calculated their proportions so that things do not explode by themselves (ci. al-Khayykt, K. al-Intisar, ed. Nader, Beirut 1937, | 18). Their equilibrium may even be used as a proof for the existence of a creator (ibid., 26). Only when this equilibrium of "hidden" contradictory ingredients is disturbed by external influence does disintegration ensue. When fire is brought close to wood, the fire latent in the wood gets the upper band and destroys the coherent structure of its vessel. When somebody is bitten by a anake he dies through the of the snake,

but through the venom which he has in his own body and which is now reinforced. For the reason the snake does not die from its own venom; here the venom is balanced by the right proportion of antidotes. When water freezes, this means that not only the cold which is latent in it has been enforced from outside, but also its "hidden" dryness; for ice is not only cold, but also dry. When it melts again, this process is thus not merely produced by heat, but also by humidity which a added from outside. When something wer becomes dry, it does not only lose humidity, but also weight; this shows that humidity contains "latent" weight, whereas heat does not.

Disintegration may be slow and imperceptible, as happens, e.g. with an oil lamp which burns down during the night, although it looks alike from one moment to the other. Disintegration may sometimes also be stopped. Wood must not lose all its fire at once; it may be transformed into charcoal which still contains part of it. Different species of the same genus may contain different proportions of the proper abbat. Some kinds of wood are more inflammable because they contain more fire; for the same reason, some kinds of stone can be better used as a flint than other ones.

This advanced theory presupposes a rather intricate intellectual tradition and a widely-developed range of discussion. As a matter of fact, the word kumin is already alluded to in a poem by Abū Nuwās, one generation before al-Nazzām (cf. Dimin, ed. E. Wagner, i, 136, l. 6). Al-Nazzām took over his vocabulary (humin and muddhhala) and the basic structural assumptions of his system; his rejection of atomism and his definition of the body, from the Shiff theologian Higham b. al-Hakam [q.v.], who had adopted them in his discussions with dualists, especially with Abû Shākir al-Daysānī, whom he seems to have converted to Islam. Via the Daysaniyya and their spiritual ancestor Bardesanes (died 216 A.D.), we may trace some basic ideas back to Stoicism: a similar definition of body (σώμα) and the concept of xράσις δι' δλον (= mudākhala) = μίξις (- imtisādi, (Abrilds). In the Iranian environment this tradition was perhaps amalgamated with cortain Indian ideas (the example of pottery is used in the Indian Samkhya; ct. W. Ruben, Geschichte der indischen Philosophie, Berlin 1934, 193). All dualist creeds understood the world as being in a stage of "mixture" (gumāčišn) between light and darkness. In a Syriac fragment of Bardesanes, the qualities (moiorness mayya or hails) are called mussags, "mixtures". But al-Nazram did not simply imitate: he refuted the Manichaeans, as is shown by several passages in al-Khayyat's K. al-Intigar, and he attacked the Daysaniyya; he did not accept their axiom that light and darkness are at the bottom of every mixture (cf. al-Diahiz, Hayawan, v. 46, ll. 6 ff. etc.). He used the advantage of meeting them - common ground, but he seems to have developed quite individual ideas.

Inside Islam, there were certain affinities with the—rather vaguely definable—ashāb al-labā'i who believed that all things have a nature of their own which, once being created, no longer depends on God's will (and may m well be "hidden" in them, the khilke in al-Nazzām's terminology), and with the Mu'tazili Mu'ammar b. 'Abbād (cf. H. Dalber, Das theologisch-philosophische System des Mu'ammar den 'Abbād as-Sulami, Belrut 1975, 110 fl.). Opposition came from the ashāb al-a'rād, the "accidentalists" or atomists whose ideas had been first expounded by

Dirár b. 'Amr (q.v. in Suppi.), but also from apparently al-Asamin [q.v. in Suppl.], who, in spite of denying the accidents, did not think of qualities -"bodies". The critique used mainly three arguments: (a) nothing can take place in something smaller than itself (and fire is bigger than wood); (b) several things cannot be simultaneously in the same place (which would be the case if several qualities were "hidden" in one substance); and (c) if fire were hidden in wood, we should feel it when we touch the wood, or we should find it when - cleave it. Arguments (a) and (b) were already brought forth against the Stotes (e.g. by Alexander of Aphrodisias in his Περί μίξεως, ch. 5 ff.); (c) is found in Indian philosophy (cf. W. Ruben in AO, xiil (1935), 147). The discussion turned especially around (c); al-Nazzām objected that coldness balances the fire hidden in the wood; when the fire comes forth in burning, the coldness also leaves the wood immediately and enters the cold substances in its environments, i.e. water and earth, in | leap (fafra), without getting into contact with the things in between. This is why the ashes are not cold, in spite of the fact that the fire has left; the warrath found in it is not the warmth of the fire, but the warmth which was "hidden" in it and was activated by the fire. As the "accidentalists" recurred to Aristotelian tradition (visible in (a) and (b)), al-Nazzāra also criticised Arktotle's model of physics.

The theory was eagerly defended by Nazzam's disciples. But already al-Djahiz did not conceal his scepticism (cf. the quotations in van Ess, Das K. an-Nant des Nassam, Göttingen 1972, 120). In the second half of the 3rd/9th century, it was apparently given up completely within the Muctazila. The future

belonged to atomism.

KUN, Arabic orthography Kun, a Turkish tribe of laner Asia known in the pre-Mongol period, but

only in a shadowy fashion.

The earliest mention of the Kun is in Birunt's K. al-Tafkim (420/1029), ed. R. R. Wright, London 1934, 145, and | places them in the Sixth Clime, in the territory of the eastern Turks between the Kay and the Khirkiz [see gAvl and glaciz]. The tribe is not, however, mentioned in Birûni's al-Kanan al-Mas add (pace Pelliot, A propos des Comans, in JA. Ser. 11, Vol. xv [1920], 134-5). Nor are the Kun given in Kashgharl (who does however deal with the other two tribes mentioned in the Tafhim in their neighbours), but there is an important section on them in Marwazi's Taba'i' al-hayawan (early 6th) rath century), see Minorsky, Sharaf al-Die Tiblir Marvasi on China, the Turks and India, London 1942, taxt li, tr. 29-30, comm. 95-202. This was adapted a century later by 'Awfi in his Diamami' al-hihdydt, section on the Turks, printed and tr. by Marquart in his Ober das Volkstum der Komanen, in Bang and Marquart, Osttürkische Dialektstudien, in Abk. G. W. Gött., Phil.-Hist. Kl., N.F. xiii/z (Berlin 1914), 40-2, and used by him as the basis of a complex and convoluted commentary on the Kun, ibid., 42-77.

It seems that the Kun were amongst the easternmost of the Turkish peoples, with their original homeland in eastern Mongolia and the fringes of Manchuria. It may be that the Kun were the epigoni of the T'u-vu-hun to the north of the great northwards bend of the Huang-Ho or Yellow River; resemblance of the name Kun to that of the proto-Huns, the Hsiung-nu, etc., had already been noted he Marquart, op. cit., 64-5, cf. also Sir Gerard Clauson, Turkish and Mongolian studies, London 1962, 12. According to Marwazi, the tribe had been converted in their homeland to Nestorian Christianity (by missionaries from the Ordos region?), but had been impelled to migrate far westwards by pressure their pasture grounds from the Kayi. The Kun then moved into the land of M Sharl/Sarl (whose name Barthold, in Markwart, Wehrot und Arang, Leiden 1936, *34*, connected with the Turkish word sars "yellow" and the Kipcak/Comans, the Russian Poloitsi "pallid, yellowish ones"; possibly, however, they should be linked rather with the Sarl Uyghur of Kansu [q.v.]), and eventually ended up in the Aral Sea-Kipćak Steppe area. This chain of migrations must have been set off after Bîrûni's time, i.e. in the middle m later years of the 11th century. Minorsky was at first inclined to identify the Kun with the Kürl/Fürl (mentioned in the Hudud al-'álam, § 14, tr. 97, cf. comm. 283-6, 311-12, a savage and bestial tribe living m the east of the Klrgla (i.e. apparently in the east and south of Lake Baikal. their name surviving in the present-day Khori tribe of the Buryats), but subsequently abandoned this equation when he found the clear orthography Kan in Marwazi. Earlier, Marquart had attempted to connect the Kun with the later Comans (in Magyar, Kun) of the South Russian-Western Siberian steppes [see kircax], withis min later affirmed by J. Németh: that Kun and Kuman/Koman both stem from a Turkish adjective &d < Aub "yellowish, pale" (Die Volksnamen guman und gün, in KCtA, lii [1942-3], 95-109).

At all events, the Kun have left very little mark on the Islamic history of Central Asia; we do not know whether they were substantially Islamised before losing their identity in some larger steppe confederation, such as that of the Kipčak or the later Golden Horde. The only member of the Kun to achieve mention in Islamic sources is the slave commander of the Saldjüks Ekinči b. Kočkar [s.v. in Suppl.], who was appointed governor of Khwarazm by Berk-Yaruk in 490/1097; Minorsky plausibly surmised that he may have been Marwazi's in-

formant for his section - the Kun.

KUNA, Qena, a town in Upper Egypt, = the east bank of the Nile (population 40,000). It 🛮 📖 capital of the province (mudiriyya) of the same name, which is divided into seven districts (markat), namely: 1. Dighnā; 2. Isnā; 3. Kunā; 4. Kuṣayr; 5. Kūṣ; 6. Luṭṣur; 7. Naḍi Hamādi. In 1897 the population of the province was 711,457, but by 1936 it was more than 1,700,000. In 1940 the town of Kunā and the village of al-Humaydāt and made dependencies were detached from the district of Kunā and made into a separate ma'māriyya. The region produces cotton and cereals; in the town, cloth and sweet-stuffs am manufactured. But Kunā is especially noted for its porous pottery; the jars (kulla) which are made there are called ballās from the name of a place a tew miles to the south.

The Arabic name, written Iḥnā by some geographers and Kūnā in the Copto-Arab scalas, comes from the Coptic K Ω N H which gives rise to □ play □ the Greek καινή πόλις "new town", □ name which did not last long as it is never found in the Byzantine period. The identity of this town with the Neapolis of Herodotus has been seriously urged; it is rather the modern Minsha'a, the ancient Ptolemais. On the other hand, it has been conjectured with much probability that at the end of the 3rd century it received the name Maximianopolis.

Its prosperity was not long in beginning, owing to the termb of the saint 'Abd al-Rahlm, which became an object of pilgrimage, while pious Muslims settled in its vicinity. Some years previously, Ibn Diubayr had mentioned Kunā as a pretty little town with houses of a dazzling whiteness; I makes special mention of the virtue of the women, who never appeared in the streets. After Ibn Battata, al-Adfuwl gives = secount of the merits of 'Abd al-Rahlm; he describes the houses of the town spacious and very high and mentions two madrasas in Kuna and a number of hospices (ribit), Ibn Dukmāk only copies al-Adfuwi. In the Turkish period, Kuna was the residence of a Kashif, but it is only in modern times that it has assumed the administrative position which it were to its present steadily-increasing prosperity.

The town, situated at the point where IIII Nile comes nearest to the Red Sea, had become the point of departure for caravans in the direction of Kuşayr. This route took the place of the one used in the Middle Ages between K@s and 'Aydhab, which in turn succeeded the ancient Copto-Berenice road. The continual intercourse between Egypt and Arabia and India gave these roads great value; it is by this route that many of the Muslims of North Africa go to Mecca, and even during the Crusades, it is the only pligrim road. In 1831-3 Muhammad 'Ali had the wells inspected in the Kusayr road; some were deepened so that they would provide water at all seasons (cf. L'Egypts moderns, collection L'Unions, 164-6; Barron and Hurne, Topography and

geology of the East Dezert of Egypt, Central Portion,

The saint who is the object of Muslim veneration, 'Abd al-Rahim b. Ahmad b. Hadiding, twelfth descendant of Diaffar al-Şādik, was born in the envirous of Couta in Morocco. After a journey to Mecca where he spent seven years, he settled in Kuna and died there on 9 Safar 592/23 January 1196. Honoured during his life for his reputation for sanctity and asceticism, he has become one of the principal taints of Egypt, along with Ahmad Badawi, Ibrahim Dasuki and Abu 'l Hadidjadi Aksuri. At time a pious formula used to be handed down which, if recited beside the tomb, hastened the realisation of a desire or brought about cures. According to travellers, the pilgrims who came to Kuna made circuits (Jaud) of the tomb of 'Abd al Rabim similar to those made by the pilgrims at the Karba (Adfuwl, Talic said, no. 231; Goldziber, Muh. Studien, il, 325. Eng. tr. il, 287; RHR, ii, 284; Gaudstroy-Demombynes, Le pèlerinage d la Mehhe, 224). There were descendants of 'Abd al-Rahim living in Egypt for two centuries; they were, in particular, jurists and professors (Adfuwi, nos. 29, 117, 129, 308, 402, 476, 533; al-Makriel, Khitof, II, 423).

(G. WIET)

KUNAYTIRA [SOC KANTARA].

KUNBI SALIH, an important cluster of ruins of mediaeval date, situated in lat. 15° 46' N and long 7° 59' W in Hodh (southern Mauretania), 330 km. N of Bamako, 95 km, WNW of Nara and 70 km. SSE of Timbédra. Most modern writers that it was the capital of the Sarakoli kingdom of Châna [q.v.] which dominated III southern part of the Western Sahara and the North Sudan from around the 6th century until ce, 1076.

The ruins are situated mm a schistose plateau which is covered with them-bushes, and they stand between two seasonal pools. They extend for about 1,200 m, north to south and 800 m, east to west, but this does not include the scattered outbuildings and two extensive burial grounds. The one in the north-west covers an area 1,500 m, by 800 m, and contains a columned tomb with six chambers. The other in the touth-east at Sohobi measures 700 m, by 400 m.

There are many mediaeval references in Arabic to Ghana, from al-Fazări (before 184/800) to Ibn Khaidun, but local oral traditions do not mention this place seem In fact, it mot until the 17th century that the name Kunbi appears in the Tarrick al-Fatiagi, which says: "The seem [of the empire of Kayamaga] was Kunbi, and this Kunbi was a great city." The Tarrick al-Südän specifically states that the capital of Kayamaga was Ghana, but all the Sarakoii traditions about the Wagadu speak of Kunbi (Ch. Monteil, Mélanges athnologiques, 390; A. Bathily, B. IFAN B [1975], 73; Wa Kamissoko, 1976, unpublished) as the residence of the serpent Bida. The persistance of the Sarakoii and Moorish tradition is best illustrated by the fact that in 1914

Bonnel de Mézières was driven directly from Walata to Kunbi when he expressed a desire to the marabouts to me the site of the capital of Ghāna.

Although the ruins of Kunbi were well known to Africans, Bonnel de Mézières in 1912 was the first European to see them. He then undertook some excavations there, and the results were published in 1020, but unfortunately none of the material which was brought back from the expedition can now be located: it cannot be found in the Musée de l'Homme. the Académia des Inscriptions et Belles Lettres or anywhere else. Later excavations have been made by M. Lazartigues (1030), P. Thomassey (1949-50) and R. Mauny and G. Szumowski (1051): the most recent excavations have been by J. Devisse, D. and S. Robert and their team (1972, 1975, 1976), but as yet these are not published. These excavations have revealed many schist-built houses with beautiful Arab-Berber architecture, which predates the Hispano-Moorish style. They contain carefully-made paying stones, wall-niches, stairways and stone beds. An imposing columned mosque is slowly being revealed on the Main Avenue which crosses the ruins from east to west. It has superimposed mikrabs showing that at least two sanctuaries have stood on the same site. Material remains include stones with painted inscriptions of the shahada, countless pieces of coarse pottery with some slip-decorated ware and even some gluzed (Mediterranean) ware, tools and weapons in iron, objects in copper and glass and beads in stone and glass.

The north-east necropolis comprises a series of chambers for multiple Muslim burials; they collective tombs for families or lor people from the same Maghribi town the same tribe. The most elaborate "columned tomb" successive chambers, the last of which has a perimeter of 800 m.

The ruins show that this was an urban settlement with a high population density. The estimated population for the town at its peak is 15,000 to 20,000. which is an ingure for a Saharan town with a limited water supply (R. Mauny, Tableau geogra-482). Walls have been found at depths of up to I may showing occupation levels over several centuries after the 8th century. The dates provided by carbon 14 analysis ara: 828 ± 115 A.D.; 933 ± ? A.D.; 963 ± 114 A.D.; 1210 ± 121 A.D. This confirms what is already known of the history of the capital of Ghana with which these ruins are to be identified, in the present writer's opinion, despite the hesitations of Ch. and V. Monteil (1951, 441-52; 1964, 58-62; 1968, 109-12), who are more inclined to follow al-Idrist (i, 2) In situating Ghana "on the two banks of the river [Senegal]". However, their identification must be challenged, for al-Idrisi made enormous errors in his work and, furthermore, no ruin of this importance has ever been found in the banks of the middle Senegal river. The evidence of oral traditions and what written in the Tabighs all points to Kunbi as the correct site.

The irritating question remains to be resolved about the two places called Ghāna which al-Bakrī (460/2057-8) describes. The one was populated by Muslim merchants and had tweive mesques; the other was six miles away and was reserved for the king and his court. The present writer holds that Kunbi Şālib should be identified with the town of the rich Arab-Berber merchants described by al-Bakrī. If this is so, where was the royal capital? New ideas about this problem have been suggested at a recent conference on the history of Mail, held at Bamako in

February 1976. Traditions show that the royal residence apparently at Kalaka (Karka, 23 km. south of Kunbi) and the royal stockyard at Kunbi Dyuli, a modern village 20 km. SSE of Kunbi Salih, which am in fact the merchants' town. The existence of a double at triple town are the understood because of the natural desire of the animistic kings to live apart from the Muslims and also because of the scarcity of water in the area. This is a potentially new field for archaeological investigation. Kunbi Salih is the most important ruined site in West Africa—with Tegadaoust (Awdaghost?) running it a close second—and because of this, fresh excavations out to be undertaken there.

Vidal, Le mystère de Ghana, in BCEHSAOF (1923), \$12 ff. (R. MAUNY) AL-KUNDURI, 'AND AL-MULE

AL-KUNDURI, 'Anilo al-Mulk And Naşa Musamad B. Manaca, vizier of the first Great Saldiuk, Tugiril Beg (447-55/1055-63). The nisba Kunduri may refer to one of two villages by the name of Kundur, be located in Turaythith in Kühistän, the other near Kazwin; the reference may also be to the selling of kundur (frankincense).

The Great Saldjüks, Tughril Beg, Alp Arslån and Malikahåh, were served by two wastrs: Kunduri, wastr of Tughril Beg, and the man famous Nizām al-Mulk, wastr of Alp Arslan and Malikahāh. The main ambition of these two wastrs was to manipulate power and influence through the sultans whom they served. Nizām al-Mulk man this with consummate skill for three full decades, outmanoeuvring

rivals, and always keeping a step ahead of them in their plots and intrigues against him. Kunduri mu not as successful. In comparison with the magisterial politics of Nizām al-Muik, M appears as a bungling fool.

Kunduri's first ill-advised deed is recorded early in his career
Tughril Beg's minister. Sent by Tughril
a mission to contract a marriage for him, Kunduri contracted the marriage for himself instead; as punishment for this, Tughril had him costrated.

Kunduri's next ill-advised deed was to scheme against Tughril Beg in an effort to replace him with Anûshirwan, son of Khatûn, Tughril's wife. This plot against Tughril appears to have been mounted when Jughril was setting out to light one of his rivals in Mawsil, the Turkish general Artian Basasiri [q.v.]. At his departure, noticing that he had a following of only 2,000 men, he reproached Kunduri, saving: "Why did you not inform me so that I could wait until III the men were assembled?" Again at Hamadhan, faced by the superior forces of Ibrahim Inal, his half-brother, Tughril asked his wife Khatun and Kunduri to come to his aid. Khatun wanted to do so, but was convinced by Kundurl that their troops would fall into the bands of Inal and that this would only serve to strengthen Inal's forces and weaken hers well as Tughtfl's. Kunduri then began to arrange for Anushirwan to make a bid for the sultanate, and money was distributed among the troops for their allegiance (bay'a). Kunduri, Khātun and Anûshirwan contributed, well as the caliph, the merchants and the high functionaries of Baghdad. But Kunduri's plan met with opposition from two of Tughril's generals, 'Umar and Inandjil, who refused to recognise Anúshirwán. Then when Kundurf asked the caliph to proclaim Anüshirwan as sultan, he told to defer the matter, and to see that the city was not deprived of troops to defend it against the menace of Basasiri. Khātān also changed ber mind and went III rejoin her husband. The sources are not expansive in their reports regarding this plot, but later both Kundurf and Anushirwan in the service of Tughrli Beg. They later fought against Basasiri and negociated the latter's delivery in the hands of the Maryadid Duhays b. Sadaka, and their success here regained for them the confidence of the sultan.

After Tughril's death in 455/1063, Kundur! once again saw his opportunity to serve under a sultan whom he could manipulate. Tughril, before his death, had designated Sulayman, son of his brother, Caghri Beg and brother of Alp Arslan. This choice may have been suggested by Kundurl. In any case, the succesdon to **m** sultanate had **m** be secured by eliminating all other pretenders. Alp Aralan was ready to oppose the choice of Tughtli, and here he had is deal with Kunduri. From 199 beginning, Kunduri 1991 the hisibs in Rayy made in the name of Sulayman. He then wrote a letter to Alp Arslan and, in threatening tones, told him to be content with the possession of Khurāsin, Alp Araiān marched on Rayy, Kundurī baving now to face both Alp Arsian and Kuthamush, called on Alp Arslan to help him against Kutlumush, and made the house in Rayy in the name of Alp Arslan. Arriving at the palace of the sultanate in Rayy, Alp Arsian did not make known his true feelings towards Kundurl, and insisted on Kundurl remaining with him in the palace when the latter wanted to move, saying "My joy consists in having you beside me, how can you entertain the thought of going away from us?". This was the beginning of a cat-and-mouse game played with relish by Alp Arslan, who kept Kunduri until he had recovered all the wealth amassed by the warr, before finally putting him to death, having taxed him with crass ignorance for imagining that he suitanate, meaning himself, Kawurd [s.v.] and Kutlumush.

Kundurl's ambition had been to the factor power under a docile and malleable suitan, but his plans failed disastrousity. He did, however, succeed in arranging the marriage between Tughril Beg and the daughter of the caliph al. Kā'im, the negociations for which lasted for a period of three years (452-5) 1050-3). Tughril had hoped to see a Saldjūk descendant assuming the 'Abbāsid caliphate, but the marriage ended with his death and without issue. Kundurl's success in arranging the marriage, against the caliph's will, earned for him the enmity of al-Kā'im who, making the histor in Alp Arslān's name in Baghdād (Rabi' II 456/March-April 2064) asked Alp Arslān to eliminate Kundurl.

Where Kunduri had failed, Nighm al-Mulk succeeded. The difference between these two wastra consisted in the political acumen and consummate administrative skill of the latter as compared with the former's lack of perception and discrimination. Kundurl supported the Mu'tazili movement, and was instrumental in having al-Ash art cursed from the pulpits of Khurasan by the order of Tughrii Beg. In Baghdad, he carned the hatred of the Sunnis by supporting the Shi'is, By contrast, Nizam al-Mulk supported the Ash aris, but was not meet to supporting 'ulama' of other movements wherever these last had a strong following. Also, his establishing awhilf for the 'ulama', in the form of madrasas, masdiids and ribits, secured the support of the masses among their followers. Not the least among al-Kunduri's mistakes was his personal engagement in battle, whereas Nigam at-Mulk remained man who manipulated the pen, leaving the sword for those better suited to the battle field.

E. Bosworth, in Cambridge history of Iran, v. Cambridge 1968, index s.v.

(G. MAKDISI)

KUNDUZ, the name of a river, a town and a modern province of Afghanistan.

- I. The river is seed of the two main left bank affluents in Afghānistan of the Oxus. It rises in the central region of the Hindú Kush [q.v.], with Bāmiyān in its catchment area, and flows for some 300 miles/480 km. until it reaches the Oxus just below where it receives its right-bank affluent the Wakhsh River. The different stretches of the river have varying names; thus the middle course, within which are situated the towns of Baghlān and Pul-i Khumri, is called the Surkhāb or "Red River".
- 2. The town is aituated in lat. 36°45' N. and long 68°30' E. at an altitude ill 1,500 feet/400 m. in a region which has the general seem of Kataghān. The surrounding countryside, centred on ancient Kunduz and the nearby modern town of Khānābād, is now fertife agricultural land (rice, fruits, etc.) and pastures, but was until very recently notoriously malarial and unhealthy. The town of Kunduz (presumably Pershahan-dir "fortress") is not mentioned under this name by the mediacval Islamic geographers, but it

fell within the province of Tuhhāristān [q.v.], and is very probably identical with, or situated close to, the important early Islamic town of Walwalidi or Walwalidi, originally centre of the Hephthalites [see hayatla] in their struggles with the invading Araba in the xst-2nd/7th-8th centuries, and then an administrative centre and mint town for northern Afghānistān until Saldjük times (cf. Hudūd al-ālam, conum. 340, and Le Strange, The londs of the Eastern Caliphate, 428); today, there many ruins in the vicinity of Kundus.

In the Timurid period, founduz is frequently mentioned under this name. It figures in the campaigns of Husayn Baykarā [see Kusayn Nīnzā], e.g. in 901/1495-6, being until this time ruled by the rival Timurid prince Mahmud Muzā b. Abī Sa'īd, d. 900/1495 (see Barthold, Four studies on the history of Central Asia. Sii. Mir 'Ali-Skir, Leiden 1962, 53, 02-3). It then passed for years 916-20/1511-14 used it as a base for his unsuccessful attempts to conquer territory north of the Oxus in Hisār and Wakhsh (Babār-nāma, tr. Beveridge, 45-8, 318, 345, 352 ft., and bassion).

Northern Afghanistan was by now becoming increasingly Turkicised by Ozbeg and Turkmen groups. and the period of the Safawid-Ozbeg rivalry, petty Özbeg principalities were established in towns like Balkh, Khulm and Kunduz. These submitted in 1164/1751 to Ahmad Shah Durrani [g.v.], but in the early 19th century Mountstuart Elphinstone again found Kundaz under mindependent Özbeg chieftain "Khauldaud Khaun", who had 15,000 men under his command (An account of the kingdom of Caubult, London 1839, ii, 200). A few decades later, in the years 1850-9, the Özbeg principalities of Balkh, Khulm, Kunduz, Maymana, Akča, etc. came into the orbit of Dust Muhammad [q.v.] of Kabul. Kunduz was visited by John Wood in the 1830s, who found it miserable settlement of 500 to 600 mud buts of sedentaries plus reed buts and black tents of Özbeg nomads (A journey to the source of the River Oxus?, London 1872, 137-8).

The present population of the Kunduz district is highly mixed, but includes a large proportion of Ozbegs, Turkmous and Kazakha, plus some Pashtins sattled there in the present century by the Afghan government, and some Arabic-speaking groups have been reported from the region (see G. Jarring, On the distribution of Turk tribes in Afghanistan, an attempt at a preliminary classification, in Lunds Universited Arashrift, N.F. Avd. i, Bd. 35, Nr. 5 (1939), 17-20). There is important amount of seasonal immigration from the Hindū Kush mountain regious, the workers being attracted by the higher wages which can be carned in agricultural work.

Since the 1964 administrative re-organisation, Kunduz town has been the capital of a province of the name, having been previously in the province of Kataghān; the population of the town has been estimated (1969) at 40,000, and of the province at 415,000. It is now a centre for agricultural development schemes in the Oxus lowlands, and the local Turkish population also carries on carpetweaving; moreover, it has an airfield, with regular flights connecting the town with Kabul.

KUNFUDH, Kunpaps (A., iem. hunfudha, pl. hanāfidh), a masc. noun preserved in all the Arabic dialects (Maghrib, hanfüdlganfäd, Middle East, hanfüd) which denotes, like its Hebrew counterpart, hippod (see Isaiah, xiv. 23, xxxiv, 11, and Zephaniah, ii, 14), both the hedgehog and the porcupine. These two small excavating mammals, externally fairly similar through the sharp, hairy spines covering their backs and flanks and through their nocturnal habits, are nevertheless quite different zoologically in their respective species, dimensions and food habits. But all the ancient authors, Greek and oriental, systematically included them in the family, although the first is insectivorous and the second a rodent.

T. The hedgehog (Pers. khár puskt, Tkish. kirpi), of the Erinaceid family, comprises, in the Old World, some fifteen species spread from the Atlantic coasts to Manchuria and from the 60th parallel north to South Africa, with the exception of Madagascar, where it is not present. Thus in the Arab lands is found, in the side of the universal Erinateus curopasus, the race E. algirus in the Maghrib (nicknamed in Algeria al-Hādidi Ahmad, Borber inisilinsi, pl. inisawen/insani, E. deserti in the Sahara /Tamahak. Hoggar skonisi/tekenisit, ol. ikenusay/tikenusay, at Chat hensien, in Air tikaneshit), E. albiventris in Egypt and the Sudan, E. acthiopicus in Abyssinia, and E. syriacus and auritus in 'Irak, Syria, Lebanon, Palestine and Arabia. This unobtrusive, nocturnal traveller, with its rapid and jerky movements like a mechanical toy, is endowed with, as well as the generic was kunfudh and ankad (this latter was shared with the tortoise), various bynames evoking its nocturnal habits (carcas, ddlidi, madlidi), its scampering gait (darrām, darrādi, mudadidiidi, dhafif, marzic), and its spinyness (hasika, hiskik, hiskil, hasba, abil shakal); its sleeping or defensive attitude, involving its curling up into a ball like a chestnut-bur, cause it to have such names as kabbābat al-shūh, hubbwiba "ball of spines" in Syria and, since cannot then see its head any longer. it is buried within its prickly suit of armour, it is called huba'/hubba'. The ory of the male hedgehog is a short sighing noise, whence its will himana "whining, griszling one". The hodgehog is considered one of the most inoffensive and feeble of animals, as expressed in the old, assonantal and metathesising adage, majā lam naķķi al-tulunna a<u>khadh</u>atnd 'Iluturns "when one does not do what is required, one becomes subject even to every gantle hedgehog".

2. The porcupine (Pers. laght, Tkish. bayth kirpi, in the Maghrib dorbān through confusion with the classical paribān/parbān denoting the zoril, Berber arai, Tamahak, in Air and Adrar, emetey/temereyi, pl. imerepen/timereyin) is from the family of Hystricidae which comprises five genera and some fifteen species. It is present, with two geographical races which are the most universal (Hystrix cristata and H. lsucra), in all Africa, the Near East, Iran, and from the East Indies to China; but in Arabia, it is present only in the southern baff of the peninsula. It is three or four times larger than the hedgehog and always considered to be its big cousin, but this vegetarian is nevertheless distinguished from the former by al-Diāhiz (Hayanān, vi, 461-2) under the

KUNFUDH

names duiduliduidui, sharhamisharram and navs (this last preserved an els/els in the Near East). This careful observer adds, in good faith, that the porcupine is to the hedgehor me the ox is to the buffalo isee brands in Suppl.) or the rat to the mouse. The long, horny, erectile and widely-spaced needles (shat al-maddel), which are its only defence, and at the base of the legend that it defends itself by hurling in the enemy these sharp-pointed darts although it only leaves them behind in the wounds caused by their immediate contact; without grudging it the by-name of abil shik, that of kabkab is in me way justified. though it is given it in Syria, because it never in fact goes into a spiny "ball" and never curls up like the hedgebox. On the other hand, the motherly cars with which the female porcupine surrounds her young. usually from two to four, is well-recognised; a touching and very ancient lable (see al-Damiri. Hayat al-hayawan al-kubra, i, 337-8, ii, 57, 265-7, and in the same edition, al-Kazwini, "Adja"ib al-makkia-\$64, ii. 357-61) relates that the porcupine, when it has young, climbs up the vine-stems by night, pulls off the bunches of grapes and lets them fall, then comes down and rolls among its harvest and carries it off transfixed on its spines to its home territory. thus providing an ample diet of succutent grapes for its children.

3. Whether it is a case of the hedgehog or of the porcupine considered as a large hedgehog-and both of these me taken by the mediaeval Arab naturalists. together with the thorn-tail lizard [see DABB] and the jerboa (yarba' [see FA'R in Suppl.]), as "creeping beasts" (ahnésh ai-ard, hasharát al-ard (Hayawán, v. 283)—the kunfudh, through its nocturnal life and its innate distrustfulness, has given rise to such comparisons m assa min hunfudh "travelling more often by night than a hedgehog" and asma min bunfud ... min dulde! "having sharper ears than m hedgehog . . . porcupine"; whence maight racked by insomnia may be described = laylet al-kunfudh, layl al-ankad "hedgebog's night". The mysteriousness of the gloom envelopping its journeyings summoned up in the fertile imagination of Bedouin the image of dissimulation and calumny and, by a simple inversion of the construction of the two preceeding expressions, an "undercover" called kunfudk layl, ankad lay! "night hedgehog" (Hayawan, iv, 166).

Like the Greeks, the Arabs, despite all this, well recognised the great value of the hedgebog as a destroyer of vermin and especially, against the of serpents, which they man considered to be immune from after having nibbled thyme bushes (satiar); for this reason, experienced men from certain tribes recommended that this valuable helper should not killed, if the land abounded in vipers, and in particular, this was the order given to Ibn al-Ash'ath's army at the time of the expedition of Br/700 into Sidjistan, m region with these dangerous reptiles and m great producer of anake-charmers as well as the compounders of make-bite antidote. The ancients had likewise observed in regard to the hun/adh an innate faculty for detecting the direction of winds (Aristotle, Hist. anim., li, 602, and Hayawan, (v, 229) prevalent at the orientation of the two entries of its burrow.

The firsh of the swafingh (of both kinds) is succulent according to those who eat it, such as, in Europa, the gypties. The Bedouins have always been fond of it, and in our time, the Touareg appreciate it in a stew or braised within the glowing embers after having wrapped it in a covering of clay. Although it formed a kind of game easily captured, in ancient Arabia the

risk was more taken of killing it in the early hours of the night, because it could serve as the mount for some benevolent genie, and people preferred to postud it with a cudgel, by day, in chance encounters rather than mounting a regular hunt for it. At beginning of this present century, in the Maghrib and especially in Morocco, the capture of these two spiny creatures was of the nocturnal activities of slimly-built adolescents of the equivocal class of kit smokers; slipping into the haunts of these animals, they would empty them of their occupants either with gloved hands in the case of the hedgehogs, or with a spear in the case of the porcupines, and groups of vagrants would have a feast of the mashed of these victims (see L. Mercier. La chause et les sports chez les Arabes, Paris 1927, 15-6). The long spines of the porcuping were used for the making of pretty, darkened cages for nightingales.

This ancient custom of eating the flesh of the kun/ud) posed a question, as with the hyena [see DABU' in Suppl.], in early Islam, about the lawfulness of this practice. When the Prophet was asked about this, he is said merely to have relied inconically that such m animal was "ignoble" (hhabith), but he did not make a formal prohibition. Basing themselves on this vagueness, the Shati'lls considered the hunfuda to be perfectly legal eating, whilst the Hanafis and Hanballs formally excluded it from the category of permitted types of meat. As for the Malikis, they remained undecided on the question and depended on the decisions of local authorities, basing themselves on the customs and usages of the region; thus amongst the Berbers in the Maghrib, no objection is met with against making the swafudh an article of dist

The various anatomical parts of the busfulk possessed, in the ancient therapeutic inventory, numerous specific qualities, notably that of the right eye, which, boiled in sesame oil and mixed with collyrium, caused nyctalopia in day-blindness; this formula was, it seems, used by rogues and nocturnal prowlers in order to facilitate their nefarious activities. Salted hedgehog flesh was beneficial for children suffering from urinary incontinence. At the present day, according what the Touares say, a porcupineneedle stuck in a camel's saddle prevents fatigue ta the loins for the camelriders of the Sahara. Of a more practical kind is usage of a hedgehog skin, with its spines, as a muzzle for kids too inclined inconsiderately to suck their mothers' milk. The porcupine's quills also used, moreover, for making little instruments and tools like needles for sewing, sticks for applying kohl, etc.

For some time past, the hedgehog, which is very easily domesticated, has been the domestic pet in numerous dweilings of the Saharan min in order to rid them of cockroaches and other undesirable infestations; here we have a modest rehabilitation of the samudh burka, "hedgehog of the stony ground", a byname given metaphorically to an individual with unattractive features but where there is still mossibility of finding someone even less attractive.

From a similarity of appearance, the terms sunfuelt al-bass or shapham babri "sea hedgehot" denote the edible sea-urchin (Echinus similarius), whilst in al-Damiri and al-Kazwini, op. cit., the term hunfuelt babri is applied to the beaver.

Paris 1951, 117-18, 133-6; Fīrūz īskandar, Rāhna mā-yi pistāndārān-i Irān (Guide to mammals of Irān), Tehran 1977, 7, 12, 20, 50. (P. Virá) at-KUNFUDHA, a port on the Red Sea coast of the Tihāma or lowland of the southern Ḥidjāz, situated in lat. 19°9' N. and long. 41°04' E. and at the mouth of the Wādi Kanawnā. It lies 210 miles south of Liidda or Diudda [q.v.] and 45 miles north of Haly.

The town is in the form of a large rectangle enclosed by a wall, strengthened at several points by towers and pierced by three gates. Practically the only stone buildings are at the harbour, where in the bazaar with its one-storied warehouses in an irregular line, and the chief mosque and smaller mosques with low minarets. On a little island about a quarter of a mile away is a small eastle which used to be the residence of the representative of the Sharif of Mecca. The town was estimated in sa. 1920 to have a population of 10,000, but S. Langer in 1882 put it at only 2,000. The barbour, which is enclosed by a number of sandy islets and is only accessible to Arab vessels of medium size, has great disadvantages, notably that the boats cannot land there; until recent times, however, a certain number of pligrims on the hadidi have landed there and at al-Lith to the north by sailing craft. Trade and commerce are moderate: It exports the myrrh collected in 'Astr [g.v.] and also hides and boney; the harbour used to be frequented by slavedealers who brought their Abyssinian slaves for sale here, but Britain's sharp control made slave amuggling practically impossible by the early 20th century. Trade with the interior is limited to the exchange of provisions and everyday necessities and is confined to modest bounds. The much more important harbour of Hudayda further south has long since attracted almost all the trade. The poverty of the inhabitants is revealed by the primitive huts, built of poles and thatch with gable roofs, which are typical of the whole coast plain. Of agricultural products, cotton and millet me grown in the district.

Al-Kunfudha is parhaps a very old settlement; in any case it is a district of great interest to classical students, the land of the Debae. Pliny's regio Canauna has been identified by A. Sprenger and B. Moritz with the Kanawna mentioned by al-Hamdani, but this town lies at the mouth of the Wadl of the same name. Gold, for which this region was celebrated in antiquity, is still found here; the Al Khatārish still get gold from the streams. Al-Kunfudha, however, seems to have been the northern limit of this ancient gold area. The man appears to be comparatively modern. The Portuguese know it in the form Confutá. Niebuhr calls al-Kunfurlha | large but badly-built town, In his day (176r) it derived a certain importance from the trade in coffee, because all the ships carrying coffee from Yemen to Didda had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the Imdm of Şan'a'. It passed to M Sharif, together with the whole strip of coast from Didde to Haly which the Sharif of Mecca 🚃 🗎 ca. 1722, and even had a certain revival m prosperity when Muhammad All conquered the Sharifs and made al-Kunfudha his base of operations for the campaign against Central Arabia and 'Aslr. Soon after this, al-Kunfudha figured in the rebellion of the Georgian commander Mehmed Agha Türkte Bilmez against Muhammad 'All's governor in the Hidjaz, Ahmad Pasha (1832-3); Türkče Bilmez penetrated to al-Kunfudha, Abû Arish, Hudayda, and even to Mocha by 1833, before his revolt was quelled. It was only in 1870 that the Ottomans were able to revive Muhammad 'All's plans and al-Kunfudha became the base of operations against the tribes of the hill country of 'Asir, after the conquest of which in 1871, al-Kunfudha with its hinterland became a kada' of the sandiak of 'Asir. A certain degree of Ottoman control was now implanted, and al-Kunfudha was linked by telegraph with Diidda to the north and Lubayya, Hudayda and San'a' to the south. However, the district soon fell to the Sharti Husayn of Mecca's son 'Abd Aliah at the time of the Arab Revolt, and in September 1916 both al-Ta'if and al-Kunfudha were lost by the Turks; already in the previous year, the local ruler of adjacent 'Asir, Sayyid Muhammad al-Idrisi, had adhered to the Allied cause [see 'ASIR]. In 1923-5 the whole of the Hidjaz was occupied by 'Abd al-'Aziz b. Sacid, and #I-Kunfudha henceforth has formed part of the Sa'adī kingdom.

(A. GROHMANN-[C. B. BOSWORTH])

KUNGRAT, the name of first a Mongol and
then Türkmen tribe of Central Asia, and
deriving its name from these last, meetilement on
the lower Amū Darya or Oxus, modern Kungrad.

The Mongol tribe of Konkirat/Konkurat or Onggirat (spelt K.n.kūrāt in Diuwayal, Ungrat in Marco Polo) seems to have lived in the extreme east of Mongolia, towards the Khinggan Mts. in a district called Abdjiya-Küteger, The tribe gave its allegiance to Čingiz in his struggle against Ong Khān [see činozz knin), and had the privilege of supplying the Khans with wives; thus Čingiz's wife Borte Fudjin, mother of his five principal sons, was from the Konkirat, as were wives of Djoči and Orda, Cf. P. Pelliot and L. Hambis, trs., Histoire des compagnes 🔳 Gengis Khon; Cheng-wow ta'in-tokeng lou, i, Leiden 1951, 402-9; Pelitiot, Notes on Marco Polo, Paris 1959-63, ii, 869-70, No. 375; Djuwayni-Boyle, i, 38, ii, 585; J. A. Boyle, The town of Genghis Khan, New York-Loadon 1971, 17, 97.

The tribal name was carried westwards in the mass movement of peoples during the Mongol invasions, and elements of the Mongol Konkirat doubtless mingled with and were eventually absorbed into Turkish tribes of the Turkestan steppes. Hence in recent times Kungrat has been noted as a tribal mass amonst both the Özbegs and the Kara Kalpaks of the

region to the south of the Aral Sea (M. A. Czaplicka, The Turks of Central Asia in history and at the present day, London 1918, 38, 40). In the 18th century the Ozbeg Kungrāt played a dominant role in the Khanate of Khiwa. When the 'Arabahahid line of Khans of Khiwa became extinct at the end of the 17th century, real power was exercised in the Khanata by Kungrat military chiefs who held the title of Inak [g.v. in Suppl.]. In the early 19th century, these Inaks themselves to sesume the title of Khān and ruled in Khiwa until the period of the Russian protectorate [see KETARAEM]. The tribal name was given to m settlement in the delta m "island" area of the Oxus mouth, on the road between Khodja-ili and the Aral Sea shores; during the later 18th contury, until 1226/1811 and the time of Muhammad Rahkn Khan of Khiwa (1221-41/1806-26), this district centred on Kungrät was in effect an independent principality (see Barthold, Turkeston down in the Mongol invasion, 151, and idem, Histoire der Turcs & Asie Compale, 192).

In 1858 a Russian military steamer sailed up the Oxus delta, alarming the inhabitants of Kungrāt, and the town was an important strategic point in the Russian expeditions of 1873 under General Kaufmann and directed against Khlwa; it formed the concentration-point for the naval force from the Aral Sea and the land forces from Orenburg and from Manghishiāk (see E. Schuyler, Turkistan, notes of a journey in Russian Turkestan, Khokand, Bukhara, and Kuldja, London 1876, i, 107, ii, 331, 336, 346-8). Kungrad in now a town in the Kara Kalpak ASSR; see on it

BSE, xxiv, 53.

KÜNKA, varient forms Könga, Könga, Könga, Könga, Kunka, the Arabic name for the modern town of Cuenca, administrative centre of the province of the same name in Castile, Spain, situated near the confluence of **IIII** Júcar and Hudcar Rivers at an altitude of 922 m. at the point where the Mancha becomes a mountain chain. According to al-idrist, Kunka was "a small, ancient town, surrounded by e wall, and lacking = suburb". Al-tUdhri mentions it among the 20 stages of the route connecting Cordova and Saragossa. Al-Idrisi mentions Cuenca in his division of al-Andalus into 26 ikiloss, but gives it the title of a here. Al-'Umarl makes it the eleventh province of Spain, comprising the towns of "Orthwela, Cuenca, Elche and Denia, as well mannerous strongholds". Yāķūt makes it part of the a'māl of Santaver, and Ibn Şāḥib al-Şalāt, who was there

In 567/1172, has left a description of it.

During the period of the multik al-famalif, various political and economic factors reinforced the strategic importance of Cuenca. Previously, from 151/768 to 160/777, it had been part of the region shaken by the rebellion of Shakyā al-Fātimī. It had then passed to the Dhu 'l-Nunida [q.v.], and in 295/908 had been divided among the three sons of Müsä, who in these strongholds of the frontier zone, were virtually independent of the central government. At the beginning of the 5th/11th century, Cuenca belonged to Isma'll b. Dhi 'l-Nan, who proclaimed his independence in the parisa of Toledo. Later, me find Ibn al-Facadi, who distinguished himself in military campaigns, as wall of Cuenca for the Dhu 'l-Nunits. Whilst al-Mutawakkil b. al-Aftas temporarily occupied Toledo (472/1079), al-Ķādir took refuge in Cuenca. In the following year, Sancho Ramirez and Ahmad b. Hud besieged the town, which bought them off with a sum of money. After Alfonso VPs capture of Toledo (478/1085), Cuenca passed under Castilian rule and was included in the famous "dot an ia mora Zaida". Alfonso probably kept the Muslim structure of the town, requiring a tribute, according to the homilies of the Mozarab Count Sisnando. In 490/1097, whilst Cuenca was being protected by Alvar Fafiez's army, the Almoravids led by Muhammad b. 'A'igha raided IIII district, and after IIII victory of Uclés (501/1108) occupied the town; but in 531/1137 the populace me against the Almoravid garrison and felt the sting of Tashfin b. All's sword. Ibp Mardanish [e.v.] made over to the Christians lands Cuenca, but the latter retreated before the Almohad callph Abū Ya%ūb, who in 567/1172 found the town sunk in decay, with only 700 inhabitants. It was besieged by Alfonso VIII, helped by Alfonso II of Aragon, and surrendered on 21 September 1177 after a seven months' siege, without the Almohads being able to protect it. Abu Ya'kūb tried 🖿 regain it in 1194 and burnt its standing crops in 1197. After the conquest of Cuenca, the Castilian king made grants to the military orders of Santiago and Calatrava, and the town was soon organised as a Concejo, whilst retaining some of its older organisations and structures, such as the office of almolacen (muhlasib [see HISBA!], The Fuero offered commercial concessions to the Mudéjares. The second bishop of Cuenca was a Mozarab from Toledo, Saint Julian. There remained a mosque, "lindante con el monasterio de Ntra. Sea. de la Contemplacion" until the 15th contury. During the period of the harrying of the Moriscos, Cuenca was the seat of a tribunal of the Inquisition.

The local economy of Cuenca flourished greatly during the 4th/aoth century, with textile and lvory-carving crafts, and there seems salt pans and silver and iron ore mines in the vicinity. Also, wood cut in the Serrania was sent down the Júcar to the

Mediterranean shores.

(MARIA J. VICUELA)

EUNSUL [see consul]. KUNTA (sometimes pluralised m Kanāta), 2 highly ramified Arabic-speaking tribe widely dispersed over the southern Sahara from Taganit in Mauritania to the Adrar-n-Itoghas in eastern Mali and beyond. Their own genealogies claim descent from Ukba b. Nafis al-Fihrl [q.p.], to whom they attribute a series of exploits in and beyond ancient Ghana as far as Takrur. According to the so-called Tarikh Kunta (tr. III I. Hamet, Notice sur les Kounta), Sid! 'All, a descendant of 'Ukba, married the daughter of Muhammad b. Kunta b. Zazam (or Zam), chief of the Id Oukai (Ibdūkal/Abdūkal) fraction of the Lamtuna Berbers, allegedly in the early 9th/15th century. Their son, Muhammad, married into another Lamiuna group, the Tadjakant, as did also his son Ahmad al-Bakkill. It is from the latter's three sons that all the branches of the Kunta derive. Thus, even by their own accounts, the Arab element in Kunta stock would appear small, and, significantly, their eponym is Berber. Their zawdyd (non-warrior) status, too, is indicative of Berber origin and, like most such groups in the western Sahara, they probably acquired an Arab pedigree along with the Arabic language during the period of Hassanlyya ascendancy in the oth-roth/15th-16th centuries.

The period from the mid-roth/roth century, when Ahmed al-BakkaTs son Sidi Umar al-Shaykh is said to have died, until the early 12th/18th century seems to mark the emergence of the Kunta as a distinct and relatively large tribe, their numbers no doubt being augmented by the acquisition and eventual integration of tributaries and slaves. They appear to have roamed over a wide area from the Hodh (al-Hawd) in the south to al-Sāķiya al-Hamra' in the north and Tuwâl in the east. Some members settled in Walāta and in a village in Tuwāt known as Zāwiyat Kunta where Sidi 'Umar's son, Sidi al-Mukhtar al-Shaykh, is said to have been buried.

In the early 12th/18th century a rist occurred. The clans descended from Sidi Muhammad al-Saghir b. Ahmad al-Bakka'l hived off to roam the western Sahara from the banks of the River Senegal to al-Sakiya al-Hamra' (the Kunta al-Kibla), while those descended from Sidi 'Umar al-Shaykh combined pastoralism with commerce, establishing a network of camps and trading posts from the Wadi Dar'a through Tuwat and the Azawad region north of the Middie Niger Timbuktu in the west and Katsina in the east.

Among the latter, the Awiad Sidi al-Waff established position of pre-eminence in the second half of the 12th/18th century, due to the role of their leader Sidi al-Mukhtar al-Kabir b. Ahmad b. Abi Bakr (1142-1126/1729-1811), who combined qualities of sanctity with political actuteness and commercial actumen. In 1167/1753-4 he established his camp at al-Hilla in Azawad, which rapidly became a centre of study and of the propagation of the Kadiriyya Order. It is from the sub-order which he established, the Mukhtariyya, that most of the Kadiriyya

394 KUNTA

groups in West Africa derive their affiliation. Sldi al-Mukhtar's role as a Suff leader and his prestige as a scholar enabled him to mediate between warring Arab and Tuareg tribes in the sum and to the rift between the eastern and western Kunta. His far-ranging missionary tours (sivida) in the Sahara, and his admire at al-Hilla, which received disciples from distant areas, were supported by income from participation in the salt trade from Taoudeni to the Niger and the trade in tobacco from Tuwait to Timbuktu.

His teachings, born of his Süfi outlook well as the position of his clan as a randyd group, emphasised leniency, the overlooking & faults and the winning of hearts through "dishad of the tongue" rather than "dishid of the sword", though when 'Uthman b. Füdi [q.v.] initiated a militant dishad in t218/1804-5. he expressed his approval of it. He proclaimed himsail the sole "regenerator" (mudjaddid) of the 13th century of the hidira (1200 - 1786), though for earlier centuries be named a multiplicity of regenerators in different spheres of endeavour such as fish, hadith, siyasa, sund etc. (cf. the view of !bn Kathle reported by a)-Suyūtī, Risāla fi man yablath Allah li-hadhiki 'l-umma 'ala ra's kull mi'a, ros. Leiden, 2400, f. 6). Over sixty works are attributed to him, including several series of adjurba, as well = a great deal of poetry. None has so far been published and manuscript copies are scattered over private libraries in Timbuktu and the southern Sahara and in such publie collections as the Bibliothèque Générale et Archives, Rabat, and the Bibliothèque Nationale, Paris.

His son, Sidi Muhammad (ea. 1178-1241/1765-1826), inherited his position as leader of the Kadiriyya-Mukhtariyya and was himself a prolific author. His Ta'rikk Kunta (properly called al-Risala al-Ghalldmiyya) has already been mentioned, and him Kitāb al-Tard'if we 'l-tald'id, estensibly m hagiographical work on his father and mother, has been abstracted by Ismael Hamet in his Littlerstore arabe saharienne, in RMM, xii (1910), 196-213, 380-405. It contains an annotated silsils for the Kadiriyya-Mukhtariyya, in which the names of al-Suyūtl, 'Abd al-Rahman al-Tha'alibl and Ibu 'Arabi appear as successive links, thus invalidating it as an historical document, but no doubt enhancing the spiritual prestige of the order in the eyes of its members. The wird of the Mukhtariyya was widely propagated in southern Mauritania by moutstanding pupil of Muhammad, Shaykh Sidiyya [1190-1284/1776-1868] of the Awild Abyayri from his *zāwiya* in Būtilimit,

On Muhammad's death, leadership of the Awlad Sidi al-Wall and direction of the Mukhtariyya passed to his eldest son Shaykh Sidi al-Mukhtar al-Saghir (1204-64/1700-1847). He was instrumental in saving Timbuktu from the worst excesses of the Fulbe forces of Ahmadu Lobbo [q.s.] and eventually driving them from the city. His brother, and successor to both his political and spiritual role, Ahmad ai-Bakkā'i (ca. 1217-81/1803-65) negotiated a pact with the Fulbe in 1846 at Muhammad's request and himself came to settle in Timbuktu, gaining sufficient moral authority there to be able to act m protector for the explorer Heinrich Barth, 🚃 open Christian, in 1853. Al-Bakka'i wrote numerous poems and rasa'il, some addressed to the Fulbe rulers of Masina, others attacking the claims of the Tidjaniyya order.

In the closing years of the 19th century, two grandsons of Sidi Muhammad distinguished themselves by their attitudes to French penetration of the central southern Sahara: Zayn al-'Abidin b. Muhammad al-Kunti (b. 1848), who declared a gibbid against the French after their occupation of Timbuktu in 1894 and whose continued challenge to French authority remained a menace in the first two decades of the 20th century; and Skil Bây h. Sidi 'Umar (b. 1865), scholar and man of saintly repute who took up residence in the Adrara-Hoghas and encouraged both the Hoghas and Ahoggar Tuareg to avoid conflict with the French. Several copies of his Namestil, we get unstudied, preserved in the Institut des Sciences Humaines, Niamey, Rép. Niger.

The spiritual influence of the Kunta in the 12th-13th/18th-19th centuries was tar-reaching. The two major Fulbe leaders, Shaykh 'Uhmān b. Fūdi and Shaykh Ahmadu Lobbo, both received and propagated the misd of the Mukhtāriyya, though in both Hausaland and Māsina the Tīdjāniyya gained ground rapidly from the mid-19th century. A list of the main groups of West African Muslims attached to the Order or branching from it may be found in

P. Marty, Einder, i, 140-1 (see Bibl.).

(J. O. Hunwick)

KUNUT (A.), a technical term of Islamic religion, with various meanings, regarding the fundamental signification of which there is no unanimity among the lexicographers. "Refraining from speaking", "prayer during the sakir", "humility and recognition that one's relation to Allah is that of m creature to his creator", "standing"—these are the usual dictionary definitions which are also found in the commentaries on different verses of the Kur'an where kun'at or derivatives from the root k-n-1 occur. There is hardly one of these for which the context provides m rigid definition of the meaning (see II, 110, 239; III, 15, 28; IV, 38; VI. 121; XXX, 25; XXXIII, 31, 35; XXXIIX, 12; LXVI, 5, 12).

The hadigh gives more definite contexts. "The best şalāt is a long kunūt" (e.g. Muslim, salāt almusăfirin, trad. 164, 165, bab afdal al-șalăt fül albundt; al-Tirmidhi, Şalāt, bāb 168). Here, in the unanimous opinion of all the commentators (see al-Nawawi on the passage), hundt means "standing". In the well-known hadith: "alike to the fighter on the path of Allah is he who fasts, who stands, who hanit bi-ayat Allah" (Muslim, Imara, trad. 220), hanit has obviously the meaning of "to recite standing" (cf. Abu Dawud, Shahr Ramadan, bab 9: "And be who recites too verses of the Kur'an standing is enrolled among the kanitan"). Kunat, however, usually seems to be connected in meaning with du'd'. e.g. in the oft-quoted tradition which tells how Muhammad in the salat al-subh appealed to Allah for month against the tribe of Ri'l and Dhakwan, as they had slain the kurra? at Bi'r Ma'Cna (Witt, 646 7); in this case the meaning is certain from the explanation yad's 'ala (al-Bukhāri, Wite, báb 7; Dithad, ab 184). In the parallel tradition, idem, Maghazi, bab 28, trad. 3, there is added "and till then we were wont to perform the &unit". Some sources (see Goldziher, Zauberelemente, 323) add that this was in the month of Ramadan.

The rite also appears in parallel traditions in a more precise form; it is said that the kunūt took place in the salat al-fadir (al-Bukhari, Da'owai, bab 59) after the rubut (idem, Wite, bab 7). It is still more precisely defined in a hadith in al-Nasa'i, Tajbib, oab 32: "... that he heard how the Prophet when he raised his head after the first rait's at the salat alsubly, said: "O Allah, curse this and that man (i.e. some of the munafikan); thereupon Allah revealed; "It does not concern thee whether He turns to them with favour - punishes them" (III, 123). The following another example of sumit: "When the messenger of Allah lifted his head after the second rak'a at the saids al-subh, he said: "O Allah, save b. Abl Walid and Salima b. Higham and 'Ayyagh b. Abi Rabi'a and the weak ones in Mecca. Allah, tread heavily on Mudar and send them

years of famine, like the years of Joseph" (al-Nas&T, Taibik, 28). According to another tradition, which also goes back to Abū Hurayra (al-Bukhāri, Adhān, bdb 126), the kunāt consisted of prayers and blessings for the Muslims and curses upon the unbelievers.

We are also told that the kunst was regularly performed at the morning and evening saidt (subs and maghrib; al-Tirmidhl, Saidt, bdb 177; al-Nasa'l, Taibith, bab 30). Al-Tirmidhl gives the following note on this tradition: "The learned differ in their views about the bundl at the paidt al-fadjr. Some of the scholars of the Sahāba and later generations advocate this kunst, such as Mälik and al-Shāti?". Ahmad [b. Hanbal] and Ishāk say: "There is no kunst uttered at the saidt al-fadjr except in case of a calamity, which affects the Muslima as body". In such a case the Inām has to pray for the Muslim armies. Zuhr and 'Likā' are also mentioned as saidts into which the bundt was Inserted (al-Bukhāri, Adhān, bāb 126; al-Nasā'l, Taibik, bdb 29).

There is further a difference of opinion = to where, in the salat, the kunut should be inserted. 'Asim is said to have asked Anas b. Malik about the sweat. Anas replied; "The hunds took place ..." I asked: "Before or after the ruke"?" He replied: "Before the rukā". I said: "But I have been told on your authority, after the ruke". Anas replied: "Then they lied. The apostle of Allah only uttered the kunut prayer after the rubac for a month. I think, after he ..., etc." (here follows the story of Bi'r Ma'ana, see above, Bukhārī, Witt, bāb 7). It is even said that the kunul is a bidia. Abu Malik al-Ashdiai records a tradition on the authority of his father, that the latter had performed the salfs under the direction of Muhammad, Abu Bakr, 'Umar, 'Uthman and 'All and that none of these uttered the \$unit prayer. He adds "it is therefore also a bid'a, my son" (al-Nasa"), Tafbik, báb 33).

Nevertheless, it continued to be known as the name of the prayer (du'd') at the salat. In the books of tradition a formula is given for the bundt al-wite fit occurs often and in different forms, though it is not always called kunut but is given names like du'd', etc.): "O Alfah, lead me amongst those whom Thou guidest, and pardon me among those whom Thou pardonest, and in for me among those for whom Thou carest and bless me with what Thou distributest, and protect me from the evil that Thou has decided upon; for Thou decidest and none decides about Thee. Disgrace will never come upon him for whom Thou carest. Thou art blessed and exalted, O our Lord" (al-Tirmidhi, Wier, bab to). The same formula is found as an element in the salát in al-Nawawi, Minhādi, ed. van den Berg, i, 83, 455-6; cf. Lane, Lexicon, s.v. è-n-t, who gives another formula.

(A. J. Wensinck)

EUNYA (a.), patronymic, an onomastic element composed of Abū (m.) "father" or Umm (t.) "mother" plus a name. We have here a metonymic designation corresponding to a general tendency among primitive peoples to consider ■ individual's name ■ taboo and not ■ pronounce it unless exceptionally (see J. G. Frazer, The golden bough, ch. xxii). The kunya was therefore accordingly the ■■ which should ■ used, but in historical times, the original intention here was forgotten, and al-Djāḥiş (see JA [1967], 70, 82), far from seeing here any

connection with sympathetic magic, counts the humps amongst the claims to glory of the Araba and, seeing only one aspect of the reality, stresses the honour attaching to it. Nevertheless, it is certain that the see of the humps was not wholly honorific, since it gave the possibility of citing a person whose name, for various reasons, including certain rather humilating ones (e.g. in regard to an enamy), one did not wish to pronounce. In any case, usage was such that the humps sometimes came to predominate over the isset (g.v.) or name proper, to such an extent that the same of certain personalities cannot be established with certainty, has been forgotten as may even never have existed (see e.g. Abū Tālib, Abū Lahab, etc.)

In principle, Abb ... Umm is followed by the eldest son's name, and this usage is based on the value which Semitic peoples placed upon their chidren, and above all their sons. This again points to the importance placed on the punctifious performance of luneral rites, a duty that was incumbent upon the eldest son in particular. There is negative evidence of the connection between the kunya and tuneral rites from the facts that slaves, as a rule, had no patronymic and that, unless they had been received into the familia, they were buried without ceremonies.

However, the himps can be composed of the name of a younger are even of a daughter, but again, this does not necessarily correspond to reality, and since it is given to a child, the latter might well have no issue of its own throughout his life. The giving of a knows can in effect act as an expression of the hope that its nearer will have a son and will give and a determined name. Several kunyas are traditionally attached to certain names (the ism(q.n.)) by custom or in order to show respect for a precedent; - lbråhlm is often called Abū Ishāk or Abū Ya'kūb, and a Umar, Abū Ḥafs. Contrariwise, in principle it is forbidden to take Muhammad's hunya, Abu l'-Kasim, in conformity with the hadith, tasemman bi-Muhammad], but not my hunyo"; however, this prohibition was considered null and void at the Prophet's death, and it became regarded as sufficient to avoid the coupling of Abu 'l-Käsim Muhammad. The one and the same person might have more than one kunya (e.g. 'Uthman b. 'Affan had three, Abū 'Amr, Abū 'Abd Allah and Abu Layla), and cases are cited of warriors who had one for use in times of peace and one for times of war (e.g. 'Amir b. al-Tufayl and Katari [q.vv.]; see al-Diahiz, Bayan, i, 342). On the other hand, the hunya may be purely metaphorical and allude to some desired quality, like Abu 'I-Fadl "father of merit" or Abu 'I-Khayr "father of goodness", etc. In certain cases, it may be a sobriquet based on some personal feature or characteristic, e.g. Abu 'I-Dawanik "father of farthings", given to the 'Abbäsid caliph al-Manşûr, renowned for his meanness, - Abû Hurayra "father of the little cat, kitten", allegedly given this Aunya because of his love of cats. The Aunya not unfrequently may have a pejorative sense, I in Abū Djahl "father of ignorance", or point to some physical pecularity, as in Abū Shāma "the man with a birth-mark". In this way, Abū loses its original meet completely and becomes a synonym for 444 "the man with . . . "

The Annyo II also applied, from III early period, to certain animals, e.g. Abū Fāris "lion", Umm 'Āmir "hyena", Abū Sulaymān "cock", and to all IIII of things which III IIII degree personified, e.g. mountents IIII Abu 'l-Hawi "the Sphinx", and toponyms, a.g. Abū Kubays, a mountain. Furthermore, the ancient usage of the words abū or was

with the sense of dialidial called forth a proliferation, especially obvious in the dialects, of expressive appellations including which usually marks out a peculiarity of the person or animal or thing in question, either in a humorous way (abd likya/bū lahya "bearded person"; b@ hhemsa, in North Africa, "colonel" with live rank stripes, etc.) or in an euphemistic one (abs: "-başir "blind person", etc.). Some compound expressions of this kind are particularly applied to some plants and their fruit (abil 44 64 "nux vomica" because of its bitterness (as ha); abs farwa "chestnut", from the busk which resembles a fur; etc.), but mainly to certain animals (abd misalla or abs minker or umm minker "woodcock", with its long beak; umm arbas wa-arbash "centipede"; abu 'l-maththab "flea", from its habit of jumping; etc.).

The kunya became very early an onomastic element charged with expressiveness, in such a way that it had a caritative value and could be employed in special circumstances outside the sphere of private life. The warrior who advanced against enemy armies to challenge an enemy to single combat would call himself by his hunya, and it was by this name that the tribe would appeal to its champion for help (see Kays b. al-Khatim, Diwin, ed. Kowalski, fragment 4, v. 38). In official relationships, the caliph sometimes marked out one of his courtiers for special favour by publicly addressing him by his kenya and not by his meet or ism, but after the 5th/11th century, protocol forbade such familiarity (Mez, The renaissance of Islam, Eng. tr. 136-7). Similarly, in correspondence emanating from the chancery, the hunys of the addressee was used when the sender wished to bonour him (see al-Kalkashand), Subb. v. 430-7).

At the present day, the usage of the hunys has disappeared, and the term is sometimes used, in official contexts, together with the labab [q.z], to denote within amm; but me should remark that when the context of patronymics adopted after the setting-up of a civil government in Arabic-speaking countries atom from former hunyas and that the nom-deguerre of several Palestinian fighters is precisely a hunya.

Gräl, Laiden 1968, 336-50.

(A. J. WENSINGER)

EUR, the largest river in the Caucasus (according to Hamd Allah Mustawii Kazwini, 200 farsakhs - nearly 800 miles in length). The Kur, known as Cyrus to the Greeks; Nahr al-Kurr to the Arabs; Kura to the Russians (said to be derived from a-kuars, "river", in the Abkhāzī tongue); and Mtkvari to the Georgians (said to be derived from mdinard, "river" in the Kartlian dialect), rises in Georgia south of Ardahani (west of Karş in the Poso district), and flows northwards to Akhaltzikhe, where it turns east (see map in V. Minorksy, A History of Sharvan and Darband in the 10th-12th centuries, Cambridge 1958, 174). For the rest of its course it maintains a generally west-east alignment, bisecting the city of Tiflis [q.v.]. The Kur, 240 feet wide in places, is navigable only by rafts in its upper course, "but lower, 150 miles before the Caspian, large sailing beats may ply, drawing up 🔳 🛊 ft. of water" (W. E. D. Allen, A history of M Georgian people,

London 1971, 8). The navigation of the Kur has only once played a part in political history, at the time of the destruction of the town of Bardha's [q.v.] by the R0s in 332/943-4. Some 100 miles west of the Caspian Sea [see BAHR AL-KHAZAR], the Kur is joined by the river Aras [g.v.], and the "united waters find a double mouth along the sandy foreshore of the Caspian" (Allen, loc. sit.) in the Gushtäsff district. Just east of the confluence with the Aras, the Kur is crossed by a bridge III Djawâd. In Islamic times, the Kur formed the boundary between the province of Karābāgh or Arrān [q.vv.], and the regions of Shirwan [q.v.] and Georgia [see AL-EURPI].

Bibliography: Given in the article.

(W. BARTHOLD - [R. M. SAVORY])

AL-EURA, the sphere.

1. The sphere itself. The Arabs studied the properties of the sphere, following Euclid, Archimedes and Theodosius. They also dealt with certain principles of spherical trigonometry, which form the foundations for astronomical theory, the principle of the transversal (shahl al-hatfal'), the principle of the four magnitudes (al-shahl al-maghai) and the principle of the shadow, i.e. of the tangent (al-shahl al-sill) following Menelaus and Ptolemy. (On the translations of M. Steinschneider in 2DMG, i [1896], 161 ft.; the mathematical principles are discussed by H. Bürger and K. Kohl, Azal Bjarnbo Thābits Wark über den Transversalensatz, in Abhandl, not Gesch, der Naturwissenschaft und Medizin [1924], part 7, pp. 1-91; references are given there.

2, al-Kura dhāt al-kursī (the globe mounted on

a stand) is used in two senses:

(a) The globe of the heavens (instead of al-kura we also find al-bayds, the egg, in this sense, e.g. in Mafatih al-fulum, 235, in al-Bettani, Opus astronomicum, ed. C. A. Nallino, 1923, i, 138; cf. E. Wiedemann, Beitr. iii, in SBPMS Erlg., xxvii. [1905], 239 ff.). The constellations are painted on a globe. It is placed in a ring which stands on 3 or 4 legs Such globes have been prepared and described. perhaps = early = by Hipparchus, at any rate by Ptolemy. Ptolemy's description is given in the Arabic translations of the Almages; and in separate treatises, One such globe, erroneously ascribed to Ptolemy, Calro in 435/1043-4 by Ibn al-Sandbadi (cf. Ibn al-Kiftl, 440). The globes were made of wood covered with paper or with different metals. Hollow globes could also be made of metal, which were then fastened to wooden spheres. Alam al-Din Kaysar al-Tarasif used a gilt wooden globe (Abu 'l-Fida', Annales, ed. Reisko, iv. 497; H. Suter, Mathematiker, no. 158). The making of such globes and the errors that occur in them were fully discussed by al-Birani Beitrage zur Gesch, der Mathematik, etc., in Abkandl. zur Gesch, der Naturwiss, und Medizin, part 4 [1922]. 79-93; cf. also H. Schnell, ibid., in a later part).

The astronomical instrument prepared by al-

armillary sphere.

(b) ai-Kura that al-hard is also an arrangement by which one follows the movements of the heavens. The horizontal ring is directed to the horizon; it is notched at right angles in two opposite points, a meridian ring is placed in the notches and allowed to go to its lowest position in a groove. The globe itself turns round an axis which is placed in round holes at two opposite points on the meridian ring. Divisions are marked on the horizon and on the meridian ring. By turning the meridian ring in its grooves, the axis of the globe can be inclined at will to the horizon and

the instrument can thus be used for all latitudes. A quadrant with divisions which can be placed on the globe enables many kinds of measurements to be taken. With this globe, the magnitudes of importance in astronomy, al-filit, al-majdit, the prope of the earth etc., may be obtained.

The oldest Arabic work on subject is by Kustā b. Lūkā [q.v.] and exists in Arabic in several editions, e.g. that of al-Marrākushī; it may go back to classical originals, as is probable in view of the arabic into Latin, and into Spanish by Alfonso Castile (Libros del Saber, i).

If the globe is left out and a series of other rings is added to the horizon and meridian rings, which correspond to circles in the heavens, we get the armillary sphere (*alat dhāt al-kalak*), the instrument with the rings with which the ancients, the Arabs and notably Alfonso of Castile, occupied themselves a great deal.

Bibliography: B. Dorn, Drei astronomische Instrumente, in Méms. de l'Acad. impériale des Sciences de St. Petersbourg, series 7, vol. ix, no. t 31; L. Am. Sedillot, Mém. et les instruments astronomiques des Arabes, in Mémoires présents par divers savants à l'Acad. R. des Inscriptione etc., Paris 1844, series 1, vol. i, 1-229; F. Nolte, Uber die Armillesephäre, in Abhandl. sur Gesch. der Naturwissensch., etc., part 2, 1-30. Nolte also gives the earlier literature.

1. al-Kura al-muharrika, the burning-glass flit, the strongly-burning globel. Even the ancients knew the property possessed by rock crystal and glass globes of concentrating sunlight falling upon them on one point and setting alight an inflammable material there. But we find no indications that any scholar of antiquity studied the theory of this phenomenon. Ibn al-Haytham and Kamal al-Dîn al-Farisl (g.ve.) investigated this theory very brilliantly. Ibn al-Haytham starts from the values, given in a table of Ptolemy's and collected by himself also, of the angle of incidence, angle of divergence and angle of refraction of a ray of light falling on a smooth surface of glass, and investigates the path of the rays when they strike the surface of the globe in different distances from the axis drawn between the sun and the centre of the ball. It is proved that after refraction they all meet on the opposite surface of the globe in a little section from which they emerge with their direction altered. They cut the axis at different distances from the ball: the majority, however, meet at a point distant less than half the radius of the ball, and this is burning point. If drawings are placed in the cone of rays formed by the rays coming from it, for example a red circular surface with a black ring upon, it and this is looked 📰 through the front of the ball, remarkable figures seen; these were also studied very fully by Ibn al-Haytham and Kamal al-Din; they were able even then = reach the results as Scheilbach = = later date.

(E. WIEDEMANN)

KORA, a term designating, in the geographers and in official documents, — administrative unit within a province. It was felt as being a loan word, certain authors giving it I Iranian origin, although a Greek origin (from Yúpa) seems more likely. The exact definition of a kūra varies according to authors. Thus Ibn Khurradādhbih enumerates, in the same region, that of Hims in Syria, kūras and ihlims at the same time, I that in this case, the two terms seem to be equivalent [see rquia]. But most of the geographers reserve the term skūm for a region or province, call the districts kūras, and distinguish within these districts cantons called tassūdis or rautāts; this is distinguished in particular by Ibn al-Fakh (passim, and tr. Massé, Abrāgi, index) and shukaddasi (passim and tr. Miquel, index). Usually, the kūra has a chef-lieu which is often called a kasada.

According to Yākūt, the kārs is the equivalent of the Persian islān, with the islān comprising several rustāts, the rustāts meteral lassādje, and the tassādje several villages; thus Nā īn is massādje belonging to the rustāt of Yazd, which comes within the islān of Istakhr, in the province of Fārs (W. Juwaideh, The introductory chapter of Yācāt's Mu'jam al-Buldān, Leiden 1959, 50-8).

In mediaeval documents relating to Syria, acts of sale or walfs, the following classification is found: a kars like that forming the Ghota of Damascus comprises cantons (iddin) which themselves contain villages (karya) (see J. Sourdel-Thomine and D. Sourdel, Trois actes de vents damascains du dôunt du IV~(X~ siècle, in JESHO, vill [1965], esp. 169 and n. 4, and also Biens fonciers constitués magf en Syria fâțimide, în JESHO, xv [1972], 289-91). This usage of the term iklim is apparently peculiar to Syria and Upper Mesopotamia, according to Hamza al-Işfahāni and Yaḥāt (Jiwaideh, op. cit., 39-40). It is further used thus in al-Andalus, which is explicable by the influence of Syrian practices in that country.

In al-Andalus, a simple province of the original Islamic empire, there existed, as elsewhere, administrative divisions called kilvas, of which certain ones were, in origin, "militarised zones", i.e. they held contingents of soldiers who were maintained on the revenues of land grants; these divisions were therefore termed kilva mudjannada (Lévi-Provençal, Hist. Esp. Mus., ill. 47-53).

[D. SOURDEL)

EUR'A (a.), in a technical designates rhaps of omancy. It is an Islamic divinatory procedure, analogous to bibliomancy; but in current usage the term refers to the drawing of lots, whatever form this may take, and this has been used following the Kur'anic prohibition of isriesam [q.v.] and of maysir [q.v.], the two principal eleromantic techniques of pagan Arabia.

I. In the usual so of "the drawing of lots", the term burto, originally applied to "a wineskin with broad base and narrow neck" (TA, v, 453, 1, 23) which probably served a receptacle for the shaking of the lots, is still used in the present day in the sense of choosing and electing by lot or by vote. Monks choose among the novices those to whom they propose give the habit, by ear's (the lots used being grains of wheat for "yes" and grains of barley for "no"). The polling station for legislative elections (intihhābāt) is called maktab al-iķtirās. In Ottoman Turkish circles, kur's was practised in the recruitment of conscripts, whence were the expression turfaya girmek signifying "to reach the age of military service". A. Musil notes that in Arabia Petraea, the term bur's refers to a ball serving the function of a lottery ticket, made out of strips | paper bearing the names of the parties which are rolled in a ball of clay or wax and which are drawn out by persons who were not present during the inscription of the names or the rolling of the balls (Arabia Petrasa, ili, 201).

The permanence of this usage is attested by the fact that the Prophet used to "draw lots" (kdra'n) in order to decide which of his wives could accompany him in his travels (al-Tabart, i, 1519), a procedure that he also used for the distribution of loot taken in raids (Ibn Sa'd, ii/1, 78, 82, 83), and also by the fact that a chieftain chosen by the drawing of lots was called magrat (TA, loc. cit., 1, 8).

The legitimacy of to ear's was anknowledged at a very early stage through imitation in the
Prophet. Hadily describes a number of cases where
the latter resorted to kur's for a solution to questions
of distribution (cf. al-Bukharl, Shahddu; al-Kastalläni, iv. 416 ff.).

In certain cases, where any decision is itable to appear unjust to one party or the other, the judge may resort to hur'a (cf. al-Marghinant, Hiddya, Calcutta 1818, 813-14; tr. Hamilton, 2nd ed. London 1870, 565-6). It the eleven cases of hur's listed in the Minhādj al-tālibba (ed. Van den Berg, i, 119-20, 324; il. 328, 404-5; ili, 99-100, 461-2) only two are considered impermissible.

II. In this list there is confusion between the drawing of lots and rhapsodomancy. On the latter, opinious vary to its legitimacy. While al-Kastaliani, in his commentary on al-Bukhari, concedes its legitimacy, following the Hanball lbn Batta (d. 387/997), other authors like Abū Bakr Muḥammad b. al-ʿArabi (d. 543/1748), in Abkim al-Kur'da, Abū Bakr Muḥammad al-Ṭurtūshi (d. 520-5/1726-32) and Shihab al-Din Abu 'l-ʿAbbas al-Karafi (d. 684/1405), quoted by al-Damiri, Hayāi al-hayaman (ed. Hūlāk 1284/1867), it, 119, oppose the use of the Kur'ān for fa'i [a.c.]. Ibn al-Ḥādiḍi (d. 737/1336) expands on this prohibition in m chapter entitled Kordhai aḥḍḍ al-fa'i mie al-mauhaf (cf. Madkhai, i, 878).

Of what does Islamic rhapsodomancy consist? Like bibliomancy, it is a divinatory procedure involving the interpretation of verses or parts of verses or prophetic words encountered by chance on opening the Kur'an or the Sabik of al-Bukhāri. This practice is attested as early as the Umayyad period and the beginning of the 'Abbāsid period (cf. accounts relating to the and of the Umayyad caliph al-Walld II, d. 126/744, and to that of Abū Dja'far al-Mansūr, d. 158/775, in al-Damīrī, ii, 119; Fahd, Divination, 215).

This consulting of the two most venerated books in Islam takes place in various forms, as the rhap-sodomantic writings that we available to bear witness:

(1) Kur'at al-Imam Dia'larb. Abl Talib or Dia'lawiyya (ms. Aya Solya 1999, lots. 2-18b, 21.2 = 16 cm., a fine illuminated nashli text dating from 907/1501), containing rhapsodomantic interpretations of Kur'anic verses. Patronage of this art, propagated by the Shl'a, is attributed in Dia'lar, the Prophet's cousin, killed at the battle of Mu'ta, in 8/629, because at the time of departure, one of his companions, 'Abd Aliah b. Rawaha, drew a rhapsodomantic conclusion from in Kur'anic verse relating to Hell (Kur'an, XIX, 71) enunciated by the Prophet, and had in presentiment of the death of Dia'lar.

(2) al-Kur'a al-Ma'ma'niyya, attributed to Ya'kûb b. Ishāk al-Kindl (d. after 256/870), containing, in the form of tables, 144 questions, followed by 144 chapters, each comprising 12 answers; cf. ms. Aya Sofya 1999, 3, fols. 59-138a: al-Kur'a al-mabbraha at-Ma'mūniyya, mopy dating from 700/1300-1. The same madimū'a (fois, 19a-18a) contains an opuscule entitled al-Kur'a al-Dawazdhhamradi (— ma'rifat istihhrādi al-damīr) by an anonymous author, but an essay bearing — analogous title (K. al-daw'ir-hamradi) in the Library of the University of Istanbul (A 6292, 79 fols., 19 × 13 cm., a poor nashhi text from 1279/1765), carries the name of al-Kindt.

Two other works of bur's are attributed to al-Ma'min (d. 218/833): Kur's it-ikhrādi al-ja'l wa 'ldamir (Cairo ms. 7612, dating from 1058/1648) and Kur's li 'l-Ma'mān (Cairo ms. 7613). These differ from the above and contain in the end some rhapsodomantic poems attributed to various authors.

(3) al-Kurta al-Diamheriyya (ms. Saray, Almet, III 1600, 1, fols. 12-23b, 36.5 × 18 cm., naskli, n.d.) marks a perceptible evolution in the practice of rhapsodomancy. In fact, the use of Kurlanic verses interpreted according to the method of talvil or allegorical exegesis, is supplemented by arithmomantic procedures (kisāb al-diumnat or kisāb al-nīm), which play a part in diafr [q.v.] and in 'ilm al-kurūf [q.v.] ma 'l-asmā'. This consists, in the event, of combining the four consonants of the word diachar didiu, didin, didir, dirh, etc.). Each paragraph contains a prose interpretation of the combination, followed by another in verse, introduced by the formula hāla al-rādjis.

In the Kurtai hurdi al-mudiam (ms. Köprülü Fazil P. 164, fols. 572-65h, 18 m 14 cm., nashii, n.d.), the letters are arranged according to the

abdied, on three horizontal lines:

bdidhwably himnsffs bruhthhhdhdagh

The inquirer selects one of these letters at random and is referred to the paragraph where the meaning of this letter is explained in verse (cf. the examples in Filigel, Loosbücker, 59-70).

In the Kur'at Daniyal, it is numbers, formulated in two phrases, which serve in the kur'a. These phrases are arranged in the following manner:

Kāra'tu and ahad Kāra'tu and i<u>th</u>nayn Kāra'tu and <u>ithalyn</u> Kāra'tu and ithnayn

Kāra'ta ante ahad Kāra'ta ante ithnayn Kāra'ta ante thalāth Kāra'ta ante ahad, etc.

The meaning of these formulae is explained, as in the essay discussed above, in the form of verses introduced by kāla al-rādisz (cf. ms. AS 523, fols. 958-1032, 26 = 17 cm., mashāt from \$40/1436-7}. In the Fihrist, 314, a similar essay is attributed = Daniel, to Iskandar Dhu 'I-Karnayn (with arrows), to Pythagoras (cf. P. Tannery, Notices sur des fragments d'onomatomancie arithmétique, in Notices et Extraits, XXXII2 [1886], 231-60 = Mémoires scientifiques, ix, 17-50), to Ibn al-Murtahil and to the Christians.

The greatest degree of complexity attained by this type of kur's appears in three works which al-Birdari (d. 440/1048) claims that he translated (from Hindustani?) bearing the following titles: al-Kur's almusarrika bi 'l-'awākib' ("The bur's which gives clear indications of consequences"), al-Kur's al-muthammana ("The eightfold kur's for the discovery of inner thoughts in the mind") and Shark maximir al-bur's al-muthammana ("Commentary of the reeds of the eightfold bur's") (cf. al-Birtini, Chronologic orientalischer Valker, ed. Sachau, Leipzig 1976, Introd., p. xlv).

(4) Too complicated for popular usage, these sur'as have yielded place to a series of much simpler tar'as, based essentially on the drawing of looking for the as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have as have

answer to the question that one poses in the name of the Prophet on whom the finger falls; Kur'at altwydr (farr | be taken here in the broad sense of "fortune", good or bad) which draws a conclusion from every omen presenting itself at the moment of consultation, including the flight of birds; bur's maymina ("The kur'a crowned with success"), etc. (cf. refs. in Divination, 218, n. 4). Thus the term kur'a acquires | generic sense and serves to designate various forms of divination by lot (such as Kur'at altami, Kur'at li-ikhrādi al-fa'l me 'l-dāmir, etc.).

KURAMA, according to Railloft (Versuch eines Worlerbucken der Türk-Dinlecte, St. Petersburg 1899, ii, 924) "a Turkish tribe in Turkistan"; the same authority gives | Kirgiz (i.e. Kazak) word kurama (from kura, "to sew together pieces of cloth") with the meaning "a blanket made of pieces of cloth sewn together". In another passage (Aus Sibirion?, Leipzig 1893, i, 225) Radloff himself says that the Kurama " mixed people of Özbegs and Kirgiz" and their name ____ from the fact, asserted by the Kirgiz, that "they made up of patches from many tribes" (kura to "patch together"). He further says that the Kurama - "a settled tribe" between Tashkent and Khodjand, to more accurate, on the river Angren (a corruption of Ahengeran) south of Tashkent, In Russian sources we find it stated early = 1875 that the Kurama first = in the 18th century. But we early as 1045/1635 in the description of the wars between the Kazak and Ozbegs on the Angrea | find the "leaders of the Kurama" [serdarde-i Kurama) mentioned (Mahmud b. Wall. Bahr al-asrar, India Office ms. 575, f. 1108).

Under the rule in the Khans of Khokand in the 10th century, the word Kurama is used not only as ethnographic but also m a geographical term and the name of an administrative division. The road from Khokand to Tashkent over the Kendir-Dawan pass was called the Kurama road (Rah-i Karama, e.g. in the Tavikk-i Shahrukhi, ed. Pantusov, Kazan 1885, 238). The Kurama were ruled by a Beg who lived in the fortress of Kercući (in the written language Kirāwel; on Russian maps also Kelyaudi). This are of the word Kurama was retained for some time under Imperial Russian rule. In the division of the territory (oblast) of Sir-Darya into districts (w'erd), what later (after 1880) became known as the "district of Tashkent" was called the "district of Kurama" (Kuraminskiy a sid). The centre of government of the district | Intended to be the little town of Toy-Tübe founded in the reign of Madall Khan (1822-42; cf. Knokand); but the district headman (weenly natal'nik) actually lived at Küylük on the Circle. Under Russian as under Khokand rule, the district of Kurama was of considerable economic importance a centre of rice-growing, Russian ethnographers put the Kurama in a class by themselves as descendants of nomads (Kirgia, i.e. Kazak) who have become agriculturists (Sarts, q.v.). In spite of the adoption of the Sart mode of life, the Kurama never quite lost their particular characteristics inherited from their nomadic ancestors.

This could still be me in the early 20th century. Unlike the Sarts, the Kurama lived, like the Kazak, in yurts; their wives, as with the Kazak, were unveiled. In other respects, however, the Kurama had advanced further from their nomadic ancestors than they had at the beginning of Russian rule. At that time, Radloff and other observers could still distinguish among them the division into families. According to Radloff there were five of these Diulayr, Telau (this name is still borne by ■ village inhabited by the Kuramal, Tama, Diagaibayil and Tarakii. This division is now quite lost; where traces of it still exist, marriages between members of family are m longer—as among the Kazak—considered illegal. The fact that the Kurama ere a mixed people can still be recognised; besides the mixture of different stocks among them there has been, according to Zarubin, a mixture of different social ranks. The Kurama themselves do not use this same, although they do with the addition of another ethnic (Kirgiz-Kurama, Sart-Kurama). The number of the Kurama in the district of Tashkent (formerly Kurama) in 1917 52,335; in 1920 49,697. There were further some 9,330 Kurama in the district of Khodjand. The word with the meaning of "mixed people" is also found in the area where Turkoman languages are spoken, but these Kurama have m connection with those on the Angren.

2. ETYMOLOGY AND SYNORYMS

s. Derivation and Kur'anic usage. The eartiest attested usage of the term hur are is in the Kur'an itself, where it occurs about 70 times with a variety of meanings. Most Western scholars have now accepted the view developed by F. Schwally (Gesch. des Qor., i, 33 f.) and others that kur'an is derived from the Syriac kerydna, "scripture reading, lesson", as used in Christian liturgy (see for example the 6th century Syriac mas., Brit. Museum, Add. 14, 432, e.g. beryand d-yom bd'awata, "lection for the Day of Supplications", fol. 43b). See also J. Wellhausen, ZDMG, Izvil (1913), 634; J. Horovitz, Isl., xill (1923), 67; Foreign vocab., 233 f.; Bell-Watt, 136 i. (for works abbreviated in this article, see Bibl.). The majority view among Muslim authorities has been that kur'an is simply the verbal noun from kara'a, "he read" or "he recited". Both views find support in the Kur'an, where the verb eara's does occur, but not in frequently as the usual term for reading or reciting, tald. In early Kufic manuscripts we find buran without the hamsa, causing some authorities such m Katada and Abū 'Ubayda to derive it from karana, "he put together" or "he bound together" (see Gesch. des Qor., i, 31 f.). Against this view it should be noted that the omission of the hamsa was a characteristic of Meccan speech and early Kufie Kur'anie script, and that the term hur'an is closely related to the verb bara's in Kur'anic usage. The soundest conclusion were to be that the me her'an originated in the Kur'an itself to represent the Syriac keryana, but was based on Arabic masdar form (/u'lān) from hara'a.

The verb hara's occurs in the Kur'an 17 times. usually meaning "recite", but occasionally "read (aloud?)". Where it clearly means "recite", it always the Kur'an that is recited, usually by Muhammad (XVI, 98, XVII, 45, 106, etc.). But in one of the earliest contexts it | God who recited the revelation to Muhammad: "When we recite it, follow recitation" (LXXV, 18), im one of the latest contexts [LXXIII, 20] it | the believers (see below). Kara's "read" in four m five verses, always with "book" (hitāb). In XVII, 93, Muhammad is challenged by some unbelievers to ascend to heaven and bring down a book they can read for themselves. Three passages (XVII, 14, 71, and LXIX, 19) refer 🐯 the record books to be read at the Last Judgment, and one (X, 94) rulers to some of Muhammad's contemporaries-probably Jews and Christians-as "those who have been reciting [or reading] the Book" before him. Rudi Paret (Ubersetrung, I locc.) is no doubt correct in seeing in the Kur'an different nuances in the meaning of bara's, which he translates lesen, verlesen, resitieren, wie vortragen. But there may not be as much variation in the Kur'anic usage of this verb as these terms suggest, since where it means "recite" it could be interpreted "recite (the Kur'ān) from written notes", and where it means "read" it could be interpreted "read aloud".

Most occurrences of the term hur law in the Muslim scripture date from a period of about ten years beginning when Muhammad began to perform the salst publicly and ending around the time of the battle of Badr in 624. It is impossible to date the contexts precisely or determine their exact chronological order, but the general development of the Kurlanic usage of hur law is fairly clear. (Unless otherwise indicated, all statements on dating in this article are the present writer's own conclusions. In most cases these analyses tend to support the conclusions reached by Richard Bell, who also dated individual pericopes rather than entire suras-see

section s below.) (1) Among the earliest meanings of gur'de is "act of reciting", seen in two passages where God addresses Muhammad: "Ours is it to put it together and {Ours tel its sur an. When We rocite it follow its kur an" (LXXV, 17 f.), and "Observe the salat at the sinking of the sun until the darkening of the night, and [observe] the burlan at the dawn; surely the burlan at the dawn is well attested" (XVII, 78). This last provides useful insight into the relationship between the salat and the kurlan at the time when both were just being instituted. (2) In some verses kur'an means "an individual passage recited [by Muhammad]", In LXXII, r f. the Prophet is informed that "a number of the finn listened, and said: 'Verily, we have heard a kur'an, a wonder, which guides to rectitude, so we have believed in it'." See also X, 61, XIII, 31, and cf. X, 13. (3) In a large majority of contexts, dating mostly from the late Meccan and very early Medinan years, hur'an, usually with the definite article, has a complex meaning involving several elements. It is the "revelation" (tansil) sent down by God upon Muhammad (XX, a fl., LXXVI, a3, etc.). It is sent down at intervals (XVII, 106, XXV, 32), and in some contexts it appears to be something in God's possession that is larger than what has me far been "sent down": "What We send down of al-kur'an is a healing and mercy to the believers" (XVII, 82). In other contexts al-kur'an refers to a collection of revelations in Muhammad's possession, which he is commanded to recite (XXVII), 91 f.; cf. XVI, 98, XVII, 45). Its liturgical setting is seen in a number of passages, such = Vil, 204: "So when al-kur'an is recited (by Muhammad), listen to it and keep silent" and LXXXIV, 20 f.: "Then what ails them, that they believe not, and when elpur'an is recited to them they do not bow?" Specific references to other Muslims reciting parts of al-hur an occur only in one or two Medinan passages, such as LXXIII, 20, where the believers are told to recite during the night vigil only as much of al-bur'an as is convenient m easy (md layassar) for them. (4) In a number of contexts that appear to be early Medinan, dating from before LXXIII, 20, the kur'an (sometimes without the definite article) is said to be a Arabic version of "the Book" (al-hitāb): "By the clear Book, Behold We have made it m Arabic èur'ān" (XLIII, z f.; see also XII, z l., XLI, z f., and other verses quoted below). The closest the Kur'an comes to using the term al-fur'an with its present meaning as the name of the Muslim scripture is where it is mentioned with the Torah and the Gospel in IX, tit, in a construction that suggests three parallel scriptures. But it must be remembered that the revelation was not yet complete, and the final scripture was not compiled until after Muhammad's death. b. Synonyms in the Kur'an. The meaning of the term kur'an and me origin of the Muslim scripture cannot be understood fully without taking into consideration the Kur'anic usage of several other closely related terms, especially aya, kilab, and sura, but also dhike, malhani, kikma, and others. Each of these terms has its own distinct, basic meaning in the Kur'an, but in mean contexts their usages converge with that of kur'an.

The basic meaning of ava, like the related Hebrew oth and the Syriac atha, is "sign", in the policy a token of some unseen reality or truth. Its derivation is uncertain. It would most naturally come from 2-w-h. corresponding with the Hebrew limit, but such m root does not exist in Arabic, and the Arabic form would be difficult to explain as a borrowing from Hebrew or Syriac (see Foreign vocab., 72 f.). Aya and its piural ayai occur in the Kur'an almost 400 times, most frequently in reference to natural phenomena that confirm God's power and bounty and call for gratitude from man. These are the so-called "signpassages", discussed below in 7.b. In other contexts and refers to some extraordinary event or miracle that confirms the truth of the message of a prophet. Then in late Meccan or possibly very early Medinan passages, probably in response to the continuing demands for a miracle from Muhammad, aya takes on a new meaning-"revealed message". And finally in a number of Medinan passages and comes to be used for the basic unit of revelation. Later Muslim scholars interpreted five in these passages to mean "vorse". but the Kur'an gives no indication to the length of these units of revolation, except that in some contexts they are said to be parts of the kur'an, the kitāb, and possibly of a sūra.

Kitab, literally "book, writing", occurring 255 times in the singular and six times in the plural (kutub), is among the most difficult terms in the Kur'an to Interpret. Only rarely does it refer to some everyday type of writing, e.g. | letter sent by Solomon to the Queen of Sheba (XXVII, 28 f.), and a document of manumission (XXIV, 33). Sometimes it refers to a record of men's deeds (XVII, 7z, XVIII, 49, XXXIX, 69, etc.), events that have been prescribed (XVII, 58, XXXV, 11, etc.), or God's knowledge (VI, 59, X, 62, XI, 6, etc.). The commentators tend to interpret these passages as referring to actual celestial books, a view also adopted by most Western writers the topic. A. Jeffery (The Que'an as scripture, in MW, XL [1930], 47-50) saw references to the ancient Near Eastern Record Book, Book of Decrees, and Inventory Book, while G. Widengrea. Muhammad, the apostle of God, and his ascension, 1935, 115-22) argued that these passages referred to a single "Heavenly Book". There is me conclusive evidence in the Kur'an for either view, and there are serious problems with any literal interpretation of these verses, all of which could just as well be taken as metaphorical references to God's knowledge and decrees. A similar interpretation is possible for those verses usually regarded as referring to the heavenly original of the Eur'an, e.g., "Indeed is mobile hurbin in a treasured hitab touched only by the purified" (LVI, 77-9), "Nay, it is a glorious burids in a preserved tablet" (LXXXV, 21 f.), and "By the clear kitāb. Behold We have made it an Arabic knedan . . . it is in the warm al-kitab with Us" (XLIII, 1-4; cf. III, 7, and XIII, 39, which are more ambiguous). There is in fact no clear indication in these verses or anywhere in the Kur'an of a heavenly original or archetype of the Muslim scripture. This concept has been read into the text by the later commentators. By far the most frequent usage of hidd in the Kur'an is in reference to God's revelation to Muhammad and to certain religious communities that existed before and during his time, especially the Jews and Christians, who are called "the people of the Book" (ahl al-hidd). This complex series of kleas involving the Kur'an, the Book, Muhammad, and the People of the Book is discussed in manudetail in section 2 below.

The sara, occurring in the Kur'an nine times in the singular and once in the plural (sugar), seems to be derived from the Syriac surfa, surtha, "scripture, scripture reading" (Gesch. des Qor., i, 31; Foreign 10cab., 180-2). In the Kur'an sara refers to a unit of revelation and could be translated "scripture" or "revelation". Several verses mention a site being "sent down" (IX, 64, 86, 124, 127, XLVII, 20, etc.), in contexts that are similar to some Kur'anic mages of dya. hur'an, and kitab. And Muhammad's opponents, who dissatisfied with what he has been reciting, are challenged to "produce a size like it" (11, 23, X, 38) or "ten surrar like it" [X1, 13], Cf. XXVIII, 49, where the challenge is to produce a hitab from God. The Kur'an sives no indication as to how long these units of revelation were. They were most likely only parts of the present suras.

The Kur'anic usages of hur'an, dya, kilab, and sura converge in the following points: (t) Kur'an, aya, and sara are each used sometimes for the basic unit ill revelation, a pericope consisting most likely of several series [e.g. X, 61, 11, 106, and X, 38, respectively), and kitāb may have the same meaning in XXVIII, 49, and a few other places. (2) Kur'an (e.g. XXXIV, 31) and hitab (e.g. II, 89, VI, 92, 155, VII. 2) sometimes mean "a scripture", and sire may have this meaning in XXIV, 1. (3) Occasionally her in and hitab are used for the revelation of God a whole, only part ill which has been sent down, e.g. XVII, 8a, quoted above, and XXXV, 3x: "And what We have revealed to you (Muhammad) of the hitab is the truth, confirming what we before it". (4) Usually, however, there is a distinction. Kitāb, when referring to the revelation, usually means the "Book of God", the revelation = a whole, while sur do usually means that part of the revelation that has been sent down to Muhammad, e.g. X, 37: "This bus'an is . . . a distinct setting forth of the kitab in which there is no doubt" and XII, I f.: "These are the ayes of the clear kitab. Verily We have sent it down as an Arabic kur 2n".

Other technical terms used in the Kur'an for the revelation being sent down to Muhammad include the following. (1) Three nouns from the verb diskara, "to remember, to mention", are used for the revelation in the sense of a reminder warning: tadhhira in LXXIII, 19, LXXVI, 29, etc.; dhikrā in VI, 90, XI, 120, etc.; and dhier in the formula, "It is nothing but a diskr to the worlds", at the end of the suras XXXVIII, LXVIII, LXXXI, etc., in the introductory formula to XXXVIII where it is connected with al-kur'an, and in VII, 63, 69, etc. (2) The term mathini has puzzled Muslim commentators and given rise to several theories among Western interpreters of the Kurlan. Even if it is a derivative of the Hebrew mishnäh (Koran, Untersuchungen, 26-8) or the Syriac or Aramaic mathnitha (Gesch. des Qor., t, 114-16), the term mathani must have been influenced by the Arabic thand, "to double, ropeat"; cf. mathed, "by twos", in IV, 3, XXXIV, 46, and XXXV, 1. Thus it is probably best translated = "repetitions" (Bell, Trans., 247; Blachere, Trad., 290]. But it refers to the revelation sent down to Nuhammad: "Wa have given thee seven

of the mathemand the wondrous harda" (XV, 87), and "God has sent down the best of accounts, in agreement with itself, mathani at which the skins of those who fear their Lord do creep" (XXXIX, 23). The commen-tators usually take the "seven malkdni" to be the seven verses of the Fatiba [4.0.]. A more likely interpretation is that this term refers to the punishment-Stories (see 6.d and 7.d below), which Ten suggested may have seem formed a collection separate from the Kur'an (Bell-Watt, 134f., 143f.). For the literature, see Foreign vocab., 257 f., and Paret, Kommenter, 279f. (3) Hikms, "wisdom", probably from the Aramaic hekhma, is used in several Medinan passages for the revelation or part of it. God sends down the kitch and the &skma to Muhammad (II, 231, IV, 113, etc.). Mubammad recites the agat, and teaches the hitab and the hikma (LX15, 2). And the avail and the hikma are recited in the Muslims' homes (XXXIII, 34). These verses should probably be interpreted in the light of IV, 105, where it is said that Muhammad is to judge (tahkum) mankind on the basis of the Book sent down to him. For the literature, - Foreign vocab. III, and Paret, Kommentar, 68. The term hurban as the name of the Muslim scripture acquired connotations of those terms and others used for the revelation "sent down" to Muhammad; see also Bell-Watt, 145-7, and Paret, Kommentar, 19, on furkân.

2. MUHAMMAD AND THE KUR 'AN

The Muslim scripture and Muhammad's prophetic experience so closely linked that cannot be fully understood without the other. The orthodox view of the dramatic form of the Kur'an is that God is the speaker throughout. Muhammad is the recipient, and Gabriel is the intermediary agent of revelation-regardless of who may appear to be the speaker and addressee. An analysis of the text shows that the situation is considerably more complex than this. In what appear to be the oldest parts of the Kur³an, the speaker and the source of the revelation are not indicated. In passages (XCI, 1-10, CI, CII, CIII, etc.) there is not even any indication that the message is from a deity (on this, cf. Muir, Mohammed, 30 ff.), and in some (LXXXI, 15-ax, LXXXIV, 16-19, XCII, 14-21, etc.) Muhammad seems to be the speaker. In the earliest passages that mention Muhammad's God, he is not named but ill spoken of in the third person, usually as "may Lord", "your Lord", etc. (L.I., 1-23, L.II, 1-16, L.XXIV, 1-20, L.XXXVIII, 1-22, XCVI, 1-8, etc.). From Lill, 10, LXXXI, 23, and other verses it is clear that Muhammad had visions of God, and at least in the Meccan years it was the voice of God himself, and not some intermediary, that Muhammad heard. In the earliest passages to indicate the source of the revelation, God is the speaker and the direct source, e.g., "We shall cast upon thee [Muhammad] a mighty word" (LXXIII, 5) and "We shall cause thee to recite without forgetting" (LXXXVII, 6). And a number of late Mescan and early Medinan passages speak of God reciting the dyds, the hur'dn, and the hilds to Muhammad (11, 252, 111, 108, XLV, 6, etc.).

But during the same period a series of passages have the effect of elevating God from direct revelation. This is done in two ways: the message is said to be brought down by certain intermediaries, and it is connected in some way with "the Book" (af-kitab). Both of these concepts occur in XLII, 51 ft., where it is explicitly denied that God speaks directly to Muhammad: "It is not fitting that God should

speak to any mortal except by inspiration (maky), from behind a veil, or by sending a messenger to inspire whatever He wills Thus have We inspired you [Muhammad] with a spirit of Our bidding (rid/m min amrind); you did not know (before) what the Book and faith were". The role of this spirit as the agent of revelation is seen more clearly in XXVI, 192 I.: "Surely it is the revelation of the Lord of all beings, brought down by the faithful spirit (al-rah al-amin)" and XVI, 102: "The spirit of holiness (rak al-kudus) has brought it down from your Lord in truth". Then in the fairly early Medinan passage, II, 97, the agent of revelation for the first and only time in the Kur'an is said to be Gabriel. On the basis of this verse and a number of hadith accounts, the commentators have identified the "spirit" in the earlier passages as Gabriel, and have placed Gabriel at wery beginning of Muhammad's ministry as the agent 🛍 revelation. Also, contrary to popular belief, Gabriel is never identified in the Kur'an as one of the angels, and the angels are never said to be agents of revelation (XVI, 2, comes the closest). The angels may be the speakers in a few passages such as XIX, 64 ff. and XXXVII, 161-6, just as Muhammad or Abraham is sometimes the speaker; but there is no need to interpret the plural "we" as referring to the angels in the numerous passages that also refer to God in the third person. On the "say" passages, in which Muhammad is sometimes the speaker, see 7.c below.

The Kur'an also speaks of Muhammad's human informants, at first in contexts involving accusations made against the Prophet by his opponents: "The unbelievers say: 'This is nothing but a fraud [Muhammad] has devised, and others have helped him with it' ... 'Tales of the ancients he has written down; they are recited to him morning and evening " (XXV, 4f.). Except for the element of fraud, the Kur'an does not deny what is reported in this passage. The response given in XVI, 103, to a similar charge seems to concede that Muhammad had a foreign informant: "We know very well that they are saying: 'It is only a mortal who is teaching him'. But the language of him whom they suggest is foreign, and this is clear Arabic speech". Here again the accusation is not denied; there is simply insistence that the actual wording of the Kur'an did not come from the informant, Several Medinan passages give the impression that Muhammad actively sought information from the scriptures of the Jews, since they are condemned for concealing their Book from him. Some mention written copies that were shown to Muhammad or his followers, e.g. VI, g1: "the Book Moses brought . . . you have put on parchments you show, but you hide much of It". Others such as II, 79, accuse the Jews of writing out passages of their own and then saying "This is from God". also II, 77, 140, 174, III, 71, and V, 15. In these passages it is not difficult to see Muhammad receiving stories and other information from various informants, including Jews and Christians, and then in moments of inspiration reworking the material into its Kur'anic form. Such a view, although considered unorthodox today, is not inconsistent with some reports found in the kadith collections and other early Muslim sources.

This raises the question of the relationship between the Kur²ān and the scriptures of the Jews and Christians, Meccan and very early Medinan parts of the Kur²ān speak of a single revelation or Book, sometimes called the Book of God (hitāb Allāh), and specify those to whom it had been "given" previously: the prophets (II, 213), the seed of Abraham (XXIX, 27, LVII, 25 f., etc.), the Children of Israel (XI., 53,

XLV, 16), Moses (11, 53, 87, VI, 154, etc.), John the Baptist (XIX, 12) and Jesus (XIX, 30, etc.). In II, 101 and III, 23 (cf. III, 93) the kildb Alldk is specifically identified with the scriptures of the akl al-kitab, "people of the Book". This expression, which occurs over thirty times (II, 105, 109, III, 64 f., IV, 123, 153, etc.—all Medinan), is often interpreted = "the people who have a scripture". But it more likely means "the people who have (previously) been given the Book of God", since it is synonymous with the Kur'anic expressions alladhina dia 'l-hidb, "those who have been given the Book", in II, 101, 144, 145, III, 19 f., IV, 131, etc., and alladking diagnahums 'l-kitāb, "those to whom We have given the Book", in II, 121, VI, 20, 114, XIII, 36, etc. The oftendiscussed term ummiyyan (II, 78, III, 20, 75, LXII, seems to be the antithesis of these three expressions, thus meaning "those who have not been given the Book previously". And this is almost certainly the sense of the singular, norms, which is applied to Muhammad in VII, 157 f. That is, instead of sending to the Arabs and the world a missionary from among those who had already been given the Book (the ahl al-kiláb), God chose to send a prophet, Muhammad, from among those who previously had not been given the Book (al-nabi al-nami). There is no basis In the Kurbin for the traditional view that ummi means "illiterate" (see waxl; Gesch. des Qor. i, 14-17; Bell-Watt, 33 f.; and Blachère, Introd., 6-12). After the so-called "break with the lews" in Medina around the time of the battle of Badr, the Book came to be distinguished from the Torah and the Gospel (III, 48, V, 110, etc.) and identified more closely with the revelation being sent down to Muhammad (see, e.g., the Medinan formulas, XII, z f., XLI, 3, XLIII, 21, etc.). And the expression "those who have been given the Book" became "those who have been given a portion (nastb) of the Book" (III, 23, IV, 44, 81, etc.). About the same time the plural "scriptures" (hutub) was introduced in two credal statements in 11, 285 and IV, 136 (cf. LXVI, 12, NCVIII, 3).

in late Meccan and early Medican passages Muhammad is said to have been challenged to produce a book the people could read for themselves (e.g. XVII, 93), and his followers complained that they did not have a scripture like those of | Jews and Christians (VI, 155 ff.), The establishment of an independent, Muslim community in Medina, distinct from the ahl al-kitab, was marked by the granting of a separate Islamic scripture that was to serve as a criterion (cf. fur#4%) for confirming the truth of previous scriptures (III, 3, IV, 105, V, 48, etc.). The evidence seems to indicate that Muhammad began to compile a written scripture some time in the early Medinan years, but that the responsibilities of leading the rapidly growing Muslim community forced him to leave the task unfinished (see Bell-Watt, 141-4), That Muhammad participated in and directed the task of preparing a written scripture seems certain. This is to some extent supported by the hadith, where told that he dictated to scribes and instructed them on how arrange the revelations, sometimes inserting a new passage into an older one (al-Bukhāri, Fada'il al-Kur'an, bab 2 f., Abu Dawud, Şalat, bab 2, Ibn Sa'd, iii/2, 59). The Prophet most likely did not do the actual writing and editing himself, especially in Medina where he had scribes to perform these menial tasks (Gesch. des Qor., i, 46f.). But it is not unlikely that Muhammad did occasionally write out the revelations himself (see e.g. XXV, 4-6, quoted in part above, and Bell-Watt, 36, on this passage). The task

of preparing the written scripture included some revision and alteration of earlier revelations (see Bell-Watt, 89-101). The Kur'an itself acknowledges that changes were made in the revelation: "For whatever ava We abrogate or cause (you, i.e. Muhammad) to forget, We bring [another that is] better or like it" (11, 106), and "When We substitute one dyn for another-and God knows best what He is sending down-they my: 'You [Muhammad] are m mere forger' " (XVI, 101). A similar verse, XXII, 52, gives another explanation for changes in the revelation: "We have never sent any messenger or prophet before you (Muhammad), but Satan cast [something] into his thoughts when he was yearning [for a message from God]. But God abrogates what Satan casts in, and then God adjusts his ayat". These verses seem to be responses to complaints or accusations about changes in the revelation. The Kur'an gives three explanations: that Muhammad sometimes lorgot parts, that Satan inserted something into the revelation, and that God simply replaced some parts with others as good or better. The term dys in these passages came to be interpreted "verse", but the Kur'an gives no indication in to the length of these units of revelation that were withdrawn and replaced by others.

In his commentary on XXII, 52, and in his Annalor (i. 1192 f.), al-Tabari records several versions of a curious story in which Muhammad is said to have recited the two short verses. "These are the exalted [al-shardnik = cranes), Whose intercession is to be hoped for", just after LIII, 19 f., which mention the Arabian goddesses, al-Lat, al-"Uzza, and Manat [q.vv.]. The Kuraysh (q.v.], who were in the mosque listening to Muhammad, then prostrated with the Muslims at the sadida at the end of the silva, and some of Muhammad's followers who immigrated to Abyssinia to avoid persecution returned to Mecca. But before they arrived, Gabriel informed Muhammad that these two verses had been inserted into the revelation by Satan, God then revealed XXII, 52, to comfort Muhammad, and then LIJI, 22-7, to abrogate the two gharanik verses. Hostility between Muhammad and the Kuraysh resumed, and the immigrants had to arrange for protection before re-entering Mesca. This story of the "Satanic verses" has been accepted as historical by most Western writers who mention it, since they find it unthinkable that it could have been invented (e.g. Gesch. des Cor., i, 101-3; Wait, Mecca, 103; A. Guillaume, Islam, 189 (.). Although there could be some historical basis for the story, in its present form is is certainly a later, exegetical fabrication. Sura LIII, 1-20 and the end of the sure are not a unity, is is claimed by the story; XXII, 52, is later than LIII, 21-7, and is almost certainly Medinan (see Bell, Trans., 316, 322); and several details of the story—the mosque, the sadida, and others not mentioned in the short summary above do not belong to m Meccan setting. Caetani (Annali, i, 279-81) and J. Burton ("Those are the highflying cranes", in JSS, xv [1970], 246-65) have argued against the historicity of the story on other grounds, Cantani on the basis of weak smids. Burton concluded that the story was invented by jurists so that XXII, 5z, could serve m a Kur'anic proof-text for their abrogation theories.

3. History on the Kur'ln appen 63:

The history of the text and the recitation of the Kur'an after the death of Muhammad in 632 is still far from clear. The development of the canon involved three main stages, each of which is difficult to reconstruct and date: the collection and arrangement

of the text from oral and written sources, the establishment of the fittal consonantal text, and the by which several readings, i.e., different ways of vocalising the text, came to be accepted as canonical or "revealed". According to the orthodox view, the Kur'an was perfectly preserved in oral form from the beginning and was written down during Muhammad's lifetime or shortly thereafter when it was "collected" and arranged for the first time by his Companions. The complete consonantal text is believed to have been established during the reism of the third caliph, "Uthman (644-56), and the final vocalised text in the early 4th/10th century. Most Western scholars have accepted the main points of traditional view. But there are problems here. In addition to the usual difficulties of evaluating Muslim sources that were regulated by the science of kadith, the task of reconstructing the history of the Kur'an is further complicated by the fact that the classical literature records thousands of textual variants, which, however, are not found in any extant manuscripts known to Western scholars, Several valuable works on the history of the Kur'an were written during the 4th/10th century (see below), but later Muslim scholars, with just a iew exceptions, have shown little interest in the problem of reconstructing the history of the canon. The basic European works continue to be the second edition of Th. Nöldeke's Geschichte des Quidns, especially Part II. Die Samming des Quidns (1919), ed. and revised by F. Schwally, and Part 111, Die Geschichte des Korantexts (1938), by G. Bergsträsser and O. Pretzl, and A. Jeffery's Materials for the history of the text of the Our'an (1037).

a. The "collection" of the Kurlan. The most widely accepted story of the "first collection" of the Kur'an places an official, written copy of the entire text in the reign of the first celiph, Abu Bakr (632-4), thus within two years of the Prophet's death. According to the dominant version of this story (al-Bukhāri, Fadā'il al-Kur'an, bāb 3; Ibn Hadjar, Falb al-bari, ix, 9), 'Umar b. al-Khattab [q.v.] became concerned that so many Kur'an reciters (kurrā) [q.v.]) had been killed at the battle of al-Yamama. So he suggested to the caliph that a complete, written text of the Kur'an be prepared so none of the revelation would be lost. Abn Bakr hesitated, saying "How dare I do something the Prophet IIII not do?", but Umar convinced him of the need. Abû Bakr then sent for Zayd b. Thabit [q.v.], one of the Prophet's secretaries, and said: "You ma a wise young man, and we trust you. And you used to write down the revelations for the Prophet, we go and find (all the fragments of | Kur'an and assemble it together". Zayd also hesitated, saying "How dare I do something the Prophet did not do?" But Abū Bakr convinced him of the need, and Zayd collected all the fragments of the Kur'an "whether written ou palm branches or thin stones or preserved in the hearts of men". and he wrote it out on "sheets" (subuf) of equal size and gave them to Abû Bakr. When 'Umar became caliph in 634 he acquired the "sheets", and on his death they passed to his daughter, Hafsa, a widow of the Prophet.

This story makes several key points, either explicitly or by implication, that would be of considerable significance for our understanding of the history of the Kur'an if they could be accepted: that Muhammad did not leave a complete written text, that nothing of the Kur'an was lost, that it was preserved primarily in oral form and that any written fragments were on crude materials, that the first

official recension, authorised by the first calinh, was also the first complete collection, etc. Muslim tradition came to accept this story as a historical account, and these points as facts. But there serious problems with this account. For one thing most of the key points in this story are contradicted by alternative accounts in the caponical hadila collections and other early Muslim (see Wenslack, Handbook, 131; Gesch. 4es Oor., ii, 15-18; Burton, Collection, 120-8). According to me hadith, 'Umar once asked about a verse and was told that it had been in the possession of someone who was killed at Yamama. - he gave the command - the Kur'an was collected, and ""Umar was the first to collect the Kur'an" (Masahif, 10; Ithan, i, 58). Other accounts say that Abe Bake began the collection and Umar completed it, or that Abú Bakr was the first to collect the Kuran on sheets (subuf), while 'Umar was the first to collect the Kur'an into a single volume (seaskaf). Others say 'Umar ordered the compilation, but died before it was completed (Iba Safd, iii/t, 212), In fact, each of the first four calinhs III reported to have been the first person | collect the Kur'an (Masakif, 10; Itkan, 1, 57-9). And several alternative accounts state explicitly that no official collection of the Kur'an existed prior to 'Uthman's, Caetani (Aunali, iiir, 213) and Schwally (Gesch, des Cor., li, 20) have questioned the significance of the al-Yamama battles as occasion for an official collection of the Kur'an, pointing out that very few men distinguished for their knowledge of the Kur'an are mentioned in the lists of those who died there (Schwally found two). Even more significant is the fact that there is no evidence that the alleged collection under Abū Bakt was ever accepted as authoritative. Finally, this story fails to acknowledge the role of written copies of parts of the Kur'an left by Muhammad. These important documents for the history of the Kur'an. alluded to in the statement that Zayd "used to write down the revelations for the Prophet", must have played a significant role in the preparation of an official text. There are thus sufficient grounds for rejecting the historicity of this story, the most likely purposes of which were to obscure Muhammad's role in the preparation of written Kur'an, to reduce Uthman's role in establishing an official text, and to attempt to establish the priority of the Uthmanic text those of the (pre-Uthmanic) Companion codices. All three purposes would be accomplished by establishing the belief that the first official collection of the Kurlan prepared during the short reign of Abu Bakr and served - the basis for 'Uthman's rescension. See Gesch. des Qor., ii, 11-27; Bell-Watt, 40-2; Blachère, Introd., 27-34; also Burton, Collection, E17-37 (on Burton's view, see below).

The accounts of the collection of the Kur'an under "Uthman assert that the final consonantal text was established during the last half of his reign, am about twenty years after Muhammad's death. According to the dominant version (al-Bukhārī, loc. cit.; Masāhif, 18 f.; Ithan, i, 58 f.; Fath al-bart, ix, 14 f.; Gesch. des Oor., ii, 47-50), the occasion for the final collection of the Kur'an was a dispute between Muslim forces from Itals and Syria over the correct way of reciting it during communal prayers while on an expedition to Armenia and Adharbaydjan. The general, Hughayfa b. al-Yaman, reported this problem to the caliph and asked him to establish a unified text. Uthman obtained the "sheets" from Hafsa and appointed a commission consisting of Zayd b. Thabit and three prominent Meccans, and instructed them to copy the sheets into several volumes following the dialect of Kuraysh, the main tribe of Mecca. When the task was finished "Uhmān kept one copy in Medina and sent others to Kūfa, Başra, Damascus, and, according to some accounts, Mecca (Gesch. des Qor., ii, 122 f.), with an order that all other copies of the Kūr²ān were to be destroyed. This was done everywhere except in Kūfa, where Masfūd and Mi followers refused. The details differ in various versions of this story (ibid., 50-4), mainly on the number and identity of the commissioners and the cities that received official copies.

This second collection story stands up to critical analysis better than the first. Western scholars now accept the view argued by Schwally (ibid., 17-62) and others that the Kur'an is not in the dialect of the Kuraysh (see 6.a below), if this is so, one of the two main points of the story is discredited, and it is difficult to what role the commission might have played. Schwally also showed (54-2) that those named in the various accounts are unlikely candidates for such a commission appointed by 'Uthman, and he gave good _____ for doubting that the caliph would have ordered all extant copies of the Kur'an to be destroyed. It also unlikely that differences in the way the Kur'an was recited during the daily prayers would have caused serious dissension among Muslim forces involved in the initial conquests. These parts of the story all bint of a later historical setting. The Hafsa element to be simply a device for tying the two collection stories together, while establishing an authoritative chain of custody for an official text going back almost to the time of the death of the Prophet, and explaining why this official text not generally known (see Bell-Watt, 43 f.). For several alternative accounts that give completely different reasons and circumstances for 'Uthman's order for an authorised text, see Burton, Collection, 138-5q.

We thus have before us another story whose particulars cannot be accepted. But this does not mean necessarily that the story has no historical basis at all. The unanimity with which an official text is attributed to Uthman, in the face of a lack of convincing evidence to the contrary, leads Western scholars to accept one central point of this story; that the Kur'an we have today, at least in terms of the number and arrangement of the sales and the basic structure of the consonantal text, goes back to the time of Uthman, under whose authority the official text was produced. This was, however, certainly not a textus receptus no varietur, even in terms of its consonantal form (see below), Most Western scholars also accept one other element of the story: that Zayd played some role in establishing the 'Uthmanic text, Just what that role might have been is difficult to say; alternative accounts give several possibilities (see Burton, Collection, 117-26, 141-6, 150, 165-7, etc.). Burton contends that both collection stories we completely fictitious and that Zayd's prominence in the various accounts is due solely to the fact that he had been a young secretary to the Prophet and an early Kur'an specialist who happened also to be one of the latest surviving Companions, dying ca. 45/665 (Collection, 120-4, 228, etc.). Burton has raised serious doubts about the role of Zayd in establishing the official text, and he has shown that the sciences of hadith and fifth influenced the proliferation of Kur'an collection stories; but he has not demonstrated the likelihood of his main contention, that the collection stories were fabricated by later jurists to provide support for their abrogation theories by hiding the fact that the final text of the Kur'an was produced, not by 'Uthman, but by the Prophet himself.

b. Variant readings and Companion codices. The 'Uthmanic text tradition was only one of several that existed during the first four centuries A.H. The general view is that 'Uthman canonised the Medinan text tradition and that this one was most likely the closest to the original revelation. Other text traditions, attributed to several Companions of Prophet, are said to have flourished in Kūfa, Başra and Syria. The sources speak sometimes of various "readings" (hirā'āt, sing. hirā'a), i.e. different ways of reading or reciting the text, sometimes of "codices" (masāhif, sing. mushaf). On the usage of these two terms, see KIRL'A and Materials, 13 f. A number of works on the "disagreement of the codices" (ikhtild) al-majāhif) are said to have been written by Muslim scholars of the first four centuries. Ibn al-Nadim lists eleven such works (Fibrist, 16; tr. Dodge, 79, which is incomplete), including the K. Ikhtilaf masahif al-Sham wa 'l-Hidids wa 'l-Irdh by Ibn Amir al-Yabaubi (d. 118/736), K. Ihhitildf magakif ahl al-Madina wa-shi al-Kufa wa-shi al-Başra by al-Kisan (d. 189/805), K. Thhiridf ahl al-Kufa wa 1-Bases we 11-Sham fi 'I-masahif by Abu Zakariya al-Facta' (d. 207/822), K. Ihhtildf al-masahif wa-diame at-fire at by al-Made int (d. ca. 232/845), and three works each called simply K. al-Masabif by Ibn Abl. Dāwūd (d. 316/928), Ibn al-Anbari (d. 328/939), and Ibn Ashta al-Isfahānī (d. 360/970). Of these works, most of which have not survived, the last two to have been the most complete and the most highly regarded by later scholars. The shorter and somewhat earlier work by Ibn Abl Dawud, son of the famous traditionist, was edited by A. Jeffery and published with his Materials, which lists several thousand variants taken from over thirty "main sources" (see 17 (.), including the classical taries by al-Tabari, al-Zamakhshari, al-Baydawi, and al-Razi, and various works on hird'dt, sharidhdh, gharib al-Kur'an, grammar, etc., including the Ma'dni by al-Farra' (d. 207/822), the Mukatasar by Ibn Khālawayh (d. 370/979), and the Muldasab by Ibn Dinn! (d. 192/1002) (see Bibl.). The comments made by al-Tabari (d. 311/923) on variants (e.g. 🚃 XXIII, roo) show that the text of the Kur'an was not fixed no varietus in his day.

Most often mentioned in the sources are the "readings" or "codices" of Ion Mas'od, Ubayy, and Abt Mūsā, said to have been dominant in Kūla, Syria and Başra respectively. All three codices are said to have been begun during Muhammad's lifetime. "Abd Aliāh b. Mas" ūd [see ibn mas" ūb] (d. ca. 33/ 653), an early convert who became a personal servant to Muhammad and accompanied him on many major occasions, is reported to have learned some seventy sures directly from the Prophet, who appointed him as one of the first teachers of Kur'an recitation (Ibn Sa'd, iff/1, 107). Later he was appointed to an administrative post in Kūfa by the caliph 'Umar, and there he became a leading authority on the Kur'an and hadith. Ibn Masfed is consistently reported to have refused to destroy his copy of the Kur'an or stop teaching it when the Uthmanic recension was made official. Also, there are reports that many Muslims in Kufa continued III follow his reading for some time after his death, thus dividing the community there. Ubayy b. Kab [q.v.] (d. 18/639 or #9/649 = later), a Medinan Muslim who served m a secretary for the Prophet, seems to have been even more prominent as a Kur'an specialist than Ibn Mas'ad during Muhammad's lifetime. There are reports that E - res-

ponsible for retaining verbatim certain important revelations, apparently on legal matters, which from time to time the Prophet asked him to renite. Ubayy appears frequently and in a variety of roles in the various collection stories. For instance, the "sheets" of Ubayy are sometimes mentioned instead of those of Haisa, and he sometimes appears in place of Zayd, dictating the Kur'an to a corps of scribes (see Materials, 114; Burton, Collection, 124 fl.). The accounts saying that when the 'Uthmanic text was made official, Ubayy destroyed his codex while Ibn Masfed refused to do so may be examples of historical telescoping, meaning that the people of Syria (possibly over a period of many years) gave up their distinctive reading (i.e. that of Ubayy), while the people of Kula refused to give up theirs (i.e. that of Ibn Mas'ud). This would explain the later dates sometimes given for Ubayy's death and the conflicting reports regarding his role in compiling the official text. Abu Musa Abd Allah al-Ash arl [q.v.] (d. 42/662 or later) was a Vemenite famed for eloquent recitation of the Kur'an. His codex is said to have been accepted in Başra, where he served m governor under Umar, and there are reports that his reading continued to be remembered and studied there for some time after 'Uthman's text was made official. According to one account, when the messenger from 'Uthman delivered the Basra copy of the new standard text, Abû Mûsê said 🔳 his followers: "Whatever you find in my codex that is not in his, do not remove it; but whatever you find missing [in mine], write it in" (Masdhif, 13). This is consistent with other reports saying Abū Mūsā's codex was large and that it contained the two extra saras of Ubayy's codex (see below) and other verses not found in other codices (Materials, 209-11).

In addition to these three codices, two of which are discussed in more detail below, Jeffery classified as "primary" the codices attributed to twelve other Companions of the Prophet: the second and fourth caliphs, 'Umar and 'All; three of Muhammad's widows, Hafsa bint 'Umar, 'A'isha bint Abi Bakr, and Umm Salama; four whose readings to have been variations of the Medinan text tradition, Zayd b. Thabit, 'Abd Allah b. 'Abbas, Anas b. Malik, and 'Abd Allah b. al-Zubayr; and three others, Salim the Client of Abo Hudhayfa, 'Ubayd b. 'Umayr, and Ibn 'Amr b. al-'Aş. 'Alt b. Abi Tālib [q.v.] (d. 40/66z). cousin and son-in-law of Muhammad, is often said to have been the first to collect the Kur'an after the Prophet's death (e.g. Fibrist, 28; tr. Dodge, 62 f.). He is reported to have arranged the sures in some sort of chronological order, e.g. XCVI, LXXIV, LXVIII, LXXIII, etc., and to have given up his codex to be burned when 'Uthman's text was made official. 'Abd Aliah b. 'Abbas [4.7.] (d. ca. 68/688), also a cousin of Muhammad, later gained fame as the doyen of early Kur'an exegetes. He is said to have included in his codex the two extra suras of Ubayy's text (see below), and several later scholars are said to have taken their readings from him. Salim b. Mu'kib (d. 12/633), sometimes called Salim b. Ma'kil (Gesch. des Qor., il, 11, 20, etc.), one of the Kur'an reciters killed in the battle of Yamama, was was of four to whom Muhammad is reported to have advised his followers to turn for guidance concerning the Kur'an, 'Ubayd b, 'Umayr (d, 74/693) was an early Kur'an reciter in Mecca; his codex may have been the basis for the Meccan text tradition, which not to have been as strong m those of K0fa, Başra and Damascus (or Syria). Compared with the large pumber wariants attributed to Ibn Mas'ad

and Ubayy, relatively few are mentioned in the literature for these other codices. Jeffery also cullected variants attributed to a number of Muslims of the second generation: al-Aswad b. Yazid, 'Alkama, Haṭṭān, Sa'id b. Djuhayr, Talha, 'Ikrima, Mudjābid, 'Aṭā' b. Rabāh, al-Rabī' b. al-Kūuthaym, al-A'mash, Dja'far al-Ṣādik, Ṣālih b. Kaysān, and al-Hārith b. Suwayd. More variants are attributed to some of these "socondary codices" than to most of the "primary" ones. In some cases, Jeffery was able to determine the primary codex from which a secondary one was derived.

Ibn Mas 'ad's codex is said to have differed from the Uthmanic text in several important respects-The sources are fairly consistent in saving it did not contain the Fatika and the two charms that became suras I, CXIII, and CXIV of the "Uthmanic text (see 4.a below). Variants in the Faliba are, however, attributed to Iba Mas'ud (Materials, 25), and Iba al-Nadim reported in 377/087 that he caw a number of Ihn Mar'ud Kur'an manuscripts and that one that was about 200 years old included the Faltien (Filmist, 26; Dodge tr., 57 f.). Of the many variants attributed to Ibn Masfüd (see Gesch, des Oor, jii, 60-83; Materials, 25-113), some involve only different vowels with the construantal text, and some are purely orthographic, e.g. Ibn Masind is said to have written Audia mā 🖿 two words rather than one in a number of places. But the vast majority of variants listed by Bergsträsser and Jeffery for Ibn Mastud involve differences in the consonantal text that would also show up in recitation. Of these, many may be regarded explanatory glosses in the 'Uthmanic text; but in ____ cases it is the 'Uthmanic text that seems to contain an "expansion" or "Improvement", sometimes apparently for theological reasons (see Matevisis, 17). Among the most questionable of the variants attributed to Ibn Mas'ad are the "ShI'a readings", e.g. in V, 67, XXIV, 35, XXVI, 215, XXXIII, 25, 33, 56, XLII, 23, XLVII, 29, LVI, 10, LIX, 7, LX, 3, LXXV, 17-19 (see abid., 40, 65, 68, etc.). More difficult to evaluate are the "aynonym variants", as for example the following found in Sura XXV, where, instead of the 'Uthmanic terms given in parentheses, Ibn Mas'ad is reported to have read distale, "makes, brings about", in verse 48: "and He it is Who sends (arsala) the winds": li-manshira, "give life", in 49: "that We may give life (li-nukyiya) thereby to a dead land"; kusar, "castles", in 62: "Blessed is He Who has placed in the heavens constellations (burddj)"; yatafakkara, "ponder, consider", in 62: "for him who desires to remember (yadhdhahkara)"; and al-djaana, "the Garden, Paradise", in 75: "They will be awarded the high place (al-ghurfa) inasmuch as they were steadfast". Just as frequent are cases where an entire phrase is different, e.g. Ibn Mas od's reading in III, 39: "Then Gabriel called to him, 'O Zachariah'", instead of the 'Uhmanic reading, "Then the angels called to him as he stood praying in the sanctuary". Some variants may have significance for the early history of Islam = the history of the Kur'an, e.g. Ibn Mas ad's well-known reading al-hanifiyya, "the way of the Hanifs" [q.v.] instead of al-islam in III, 19: "Behold, the [true] religion (din) of God is Islam", and III fact that he is said to have included the basmain at the beginning of Sura IX (see 4.c below). Also, the order of the suras in Ibn Mas'ad's codex is said to have differed considerably from that of the Uthmanic text. Two slightly different, incomplete lists are recorded, the earlier was by Ibn al-Nadim (Fibrist, 26; Dodge tr., 53-7) and m later one by al-Suyūti (Itkān. i. 64). The missing s@ras in each list included in the other, and it is possible to reconstruct a single list. The principle of arranging the surus in order of descending length is followed more closely than in the 'Uthmanic text, but there is still considerable variation from this criterion (see Bauer, Anordning der Suren, Table IV). Following the assumption that the longer saras were not put together until the 'Uthminic text was compiled, some scholars have concluded that the Ibn Mas iid lists are "post-"Uthmānic" and have little validity (e.g. Malerials, 23 f.). But if most of the sures were written down and put into approximately their final form during Muhammad's lifetime, then there would be no strong reason for rejecting the validity of these reports outright.

Ubayy's codex seems according to the extent evidence to have been less important than Ibn Mas'ûd's. It appears not to have been the source of any secondary codices, and very few unique variants are attributed to it. Most variants attributed to Ubayy are attributed also to either Ibn Mascad or Ibn 'Abbas. Probably the best known feature of Ubayy's codex is that ■ is said to have included two short saves not in the 'Uthmanic and Iba Mas'ud texts, Sürat al-Khalf, with three verses, and Sürat at-Hald, with six (see Materials, 180 f.). The order of saras in Ubayy's codex is sald to have differed from that of 'Uthman's and Ibn Mas'ad's, and again 🚃 have two slightly different lists (Fibrist, 27; Dodge tr., 58-61; and Ithan, i, 64). These lists are, however, less complete and less reliable than those given for 1bh Mas'ad, and some sures and difficult to identify. Dodge (60) in probably correct in identifying al-nabi as Sura LXVI, and Jeffery (Materials, 115) is no doubt mistaken in saying it is Sura LXV. But Dodge is certainly wrong in reading al-din (one of the titles for Sura CVII-see Paret, Kommentar, 554) as al-lin (the title of Sura XCV), and in failing to recognise Ubayy's two famous extra stras mentioned above. Ibn at Nadim states at the end of his fist in the Fibrist that Ubayy's codex contained 116 sores, and he reports that his source of information, al-Fadl b. Shadhan, saw a copy of **W** Ubayy codex in a village near Basra in the middle of the 3rd century A.K.

Western scholarship has not reached a consensus on what value this mass of allegedly pre-flithmanic variants has for our knowledge of the history of the Kur'an. Confidence in the variants declined during the 1930s as they were being collected and analysed. Bergsträsser (Gesch. des Qor., ii, 77-83, 92-6) still gavo a fairly positive appraisal, but Jeffery (Materials, 16) wrote: "With the increase of material me feels less inclined to venture on such a judgment of value", a view that ____ to be shared by O. Pretzl. Then after the project to prepare a critical edition of the Kur'an came to a halt, A. Fischer [Isl., xxviii [1948], concluded that most of the allegedly pre-*Uthmanic variants were later attempts by philologers to emend the 'Uthmanic text. Recently J. Burton (Collection, 199-112, etc.) and J. Wansbrough (Quesnic studies, 44-6, 202-7, etc.) have concluded that, not just some, but all of the accounts about Companion codices, metropolitan codices, and individual variants were fabricated by later Muslim jurists and philologers; but they reach opposite conclusions on the reason for this hear. Burton argues that the Companion codices were invented in order to provide a setting for the 'Uthman collection story, which in turn was invented to hide the fact that Muhammad himself had already collected and edited the final edition of the Kur'an (art i., a39 l.). Wansbrough, on the other

hand, asserts that the collection stories and the accounts of the Companion codices arose in order to give ancient authority for a text that was not even compiled until the ard/oth century or later. He claims, without providing any convincing evidence, that the text of the Kur'an was so fluid that the multiple accounts (e.g. of the punishment-stories) represent "variant traditions" of different metropolitan centres (Kūfa, Başra, Medina, etc.). Each writer has stressed a valid point, i.e., that Muhammad played a larger role in compiling and editing the Kur³an than is admitted by the traditional accounts (Burton), and that as late in the ard/oth century a consonantal textus receptus wariefur still had not been achieved (Wansbrough). But both writers to have overstated their cases. Neither has given convincing tor his me hypothesis, or for the shared assertion that the Muslim accounts should be rejected altogether.

c. Establishment of the canonical text and readings. Historically, it is better to speak of the 'Uthmänic text and the oral tradition that accompanied it as evolving gradually over a period of about three centuries. The process by which this text to prevall over its rivals and then became the foundation for several of accepted or "canonical" readings is far from clear, and the issues involved are complex. They include the difficult task of reconstructing the stages in the development of Kur'anic orthography, the relationship between the written text and the oral tradition, and the tension between a critical evaluation of the historical evidence and the orthodox views on the Kur'an.

From the beginning there were variations in the copies of the 'Uthmanic text. Even the official copies of the Medina standard codex (al-imam) sent to the main centres are said not to have been identical. Bergsträsses (Gesch, des Qor., ili, 6-29) lists and discusses a number of variations in the Medina, Damascus, Basra, Küfa and Mecca copies of the "Uthmanic text, reported in the Muhni" of Abû 'Amr al-DanI (d. 444/1032) and in other works. E.g. the Damascus copy is said to have had we-bi 'l-rubur and wa-bi 'l-kildb instead of we 'l-subur and wa I-kitab in III, 184, and minkum instead of minhum in XL, 21; and the Kūfa copy is said to have had Smilat instead of 'amilat-he in XXXVI, 35, and are an (which occurs in Egyptian standard edition) instead of wa 2m in XL, 26. These differences are of course minor, but they do involve changes in the consonantal forms. Such variations can best be explained as resulting from carelessness on the part of the scribes in tack of concern for exact uniformity among the authorities.

Deficiencies in the Arabic script used in the earliest copies of the Kur'an led to further differences, in the oral tradition as well as the text tradition. During the first Islamic century, Arabic was written in a so-called scriptio defection in which only the consonants were given, and in several instances the same form was used for two or more consonants, e.g. d and dk, h and kh, and even very different phonemes such as r and s, and in some positions b, t, th, n, and y. Since no diactitical points or vowel signs were included, the vocalisation was moreover left to the reader. This meant that we when there was agreement on the consonants, were verbs could be read as active or passive, some nouns could be read with different case endings, and some forms could be read as either nouns or verbs. The lists compiled by Jeffery in his Materials contain many examples of canonical and non-canonical variants based m forms that are indistinguishable in the scriptio defective of early Kur'an manuscripts. In most cases the meaning is affected very little, — for example whether kabir or kathir is read in II, 219 (the latter was read by Ibn Mas'dd and two of the Seven, Hamza and al-Kish?—see below), or kadab, "mound", or gladath, "tomb", is read in XXI, 96 (the latter was read by Ibn Mas'dd and others). In some Instances the alteration of a case ending or some other slight change in the vowelling does significantly affect the meaning (see KRATT and Zwettler, Oral tradition, 122 ff.).

During the Umayyad period (41-132/661-750) the Uthmanic text tradition became more and more diverse, and new readings arose combining elements of the 'Uthmanic and Companion oral and text traditions, especially those of Ibn Mas'dd and Ubayy. By early 'Abbasid times there was such a confusion of readings that it became impossible to distinguish Uthmanic from non-Uthmanic ones, or I recover with confidence the "original" "Uthmanic text. Some order was brought to this confusion by the establishment of a scriptio plena, a fully vowelled and pointed text. Muslim accounts of the introduction of this improved script we unreliable because they vary much and me not consistent with palaeographical evidence (Blachère, Introd., 78-90). A popular view is that al-Hadidiādi was responsible for introducing vowel signs and dots for the consonants when he was governor of 'Irak (74-05/694-714). But Kur'an manuscripts from the first three or four Islamic centuries show that a scriptio plane came to be accepted very slowly. Dots of different colours or in different positions (above, below, and beside the consonantal were used to indicate the three short vowels in some fairly early manuscripts, and in some, but not all, later ones. Strokes or dots for distinguishing consonants. well as other signs for doubled consonants, pauses, and even the finer points of recitation, were introduced later [see Knarr, Gesch. des Oor., iii, 19-57 and N. Abbott, Rise of the North Arabic script, 17-44; on the difficulty of dating these early manuscripts, . A. Grohmann, The problem of dating early Que'ans, in Isl., xxxiii [2958], 213-31).

By the early ath/soth century the improved Arabic script was widely, although not universally, accepted by Kur'an scholars. One result of the general use of the more precise script was that the differences in the texts became more pronounced, and this caused heated disputes as to which reading we the correct one. Another result - that it became possible for the authorities to enforce m greater measure of uniformity. The central figure in what became the most important Kur'an reform since the time of "Uthman was Abu Bakr b. Mudjahid (d. 324/ 036). His aim was to restrict the number of acceptable readings, accept only those based on a fairly uniform consonantal text, renounce the attempts of some scholars to achieve absolute uniformity (something which he realised was impossible), and at least ameliorate if not bring to an end the rivalry among scholars, each of whom claimed to possess the one correct reading. With a stroke of genius be chose seven well-known hur an teachers of the and/8th century and declared that their readings all had divine authority, which the others lacked. He based this on the popular hadith in which the Prophet says the Kur'an was revealed to him in "seven alruf" (al-Bukhart, Fadd'il al-Kur'an, bab 4; Muslim, Salat alseusafirin, trads. 270-4, etc.). The meaning of this expression in the hadith is uncertain, the term alway being the plural M harf, "letter" (see Getch. des Qor., !, 48-51, ili, ro6 f.). The Mudiahid interpreted the expression to mean "seven readings". His view, worked out in a book called al-Kirā'āl al-sab'a, "The Seven Readings", came at just the right time. It was adopted by the wast's lim Mukla and 'All b. 'Isā [q.w.] and made official in the year 322/034 when the scholar lim Miksam was forced to retract his view that the consonantal text could be read in any manner that was grammatically correct. The following year another Kur'an scholar, Ibn Shanabūdh [q.w.], was similarly condemned and forced to renounce his view that it was permissible mose the readings of Ibn Mas'ūd and Ubayy.

Selecting several rival systems and declaring them equally authoritative was of course the same method used elsewhere by Muslims to avert endless disputes, e.g. the four Sunni legal schools. But Ibn Mudjähid's system of seven readings - not completely arbitrary. Strong Kur'an traditions existed in Kufa, Basra, Medina and Damascus; and Menca also had its own tradition. Kufa stood out above the others as the leading centre for Kurlan studies and the seat of several rival traditions. So Ibn Mudjahid selected one reading each for Medina, Mecca, Başra and Damascus-those of Nafif (d. 169/785), Ibn Kathle (d. 120/737), Abū 'Amr (d. 154/770), and Ibn 'Amit (d. 118/736), respectively—and three for Kufa, those of 'Asim (d. 127/744), Hamza (d. 156/772), and al-Klså? (d. 189/804). His attempt to limit the number of canonical readings to seven was not acceptable to all, and there was strong support for alternative readings in most of the five cities. Eventually scholars began to speak of the Ten readings, and even the Fourteen. The most widely accepted of these, the so-called "three after the seven" - the readings of Abū Jafar (d. 130/747), Yafküb al-Hadrami (d. 205) 820), and Khalaf (d. 229/843). Among the "four after the ten", two deserve special notice, the readings of the famous al-Hasan al-Basri (d. 110/728) and al-A'mash (d. 148/765), of Başra and Küfa respectively. For each of the Ten, two slightly different "versions" (sing. rimeyo) came to be accepted according to scholars of a generation or two later, e.g. the "versions" of Warsh (d. 197/812) and Kalan (d. 220/835) for the reading (kird'a) of Nafi', those of Hafs (d. 190/805) and Shuba (d. 194/809) for 'Asim, and of Khalaf (mentioned above) and Khallad (d. 220/835) for Hamza. For complete lists and discussion of this development, Gesch. des Que., til, 169-90, and Blachère, Introd., 116-35.

During the 5th/11th century the exclusive authority of the Seven began to prevail, and several works were written on them, e.g., the K. al-Taysis by al-Dani (d. 444/1053) (see Bibl.), which replaced I'm Mudiahid's work. The seven came to be followed exclusively in public readings, while the others continued to be used in Kur'an commentaries and works philology, grammar, etc. The Kur'an readers (\$10787), who maintained a lively tradition, continued at least - scholarly interest in the "three after the seven", and further refinements were made in of the Ten readings. Two "ways" (teruk, sing. tarth) of reciting each "version" (rimaya) came to be accepted, and then two more "ways" for each foria, making altogether eighty "ways" of reciting ten "readings". See Labib as-Said, The recited Koran, Princeton 1975, including a complete list of the eighty, 127-30; on the readings, see grad 'A, and on methods of reciting, TADIWIO.

At the present, only two "versions" are in general use, that of Hals 'an 'Asim, which for centuries has been followed in most regions and in 1924 was given a kind of official sanction by being adopted in the Egyptian standard edition of the Kur'an, and that of Warsh 'en Naft', followed in parts of Africa other than Egypt. The latter was used by the Yemanite scholar al-Shawkan! (d. 1250/1634), in the manuscript of his Kur'an commentary (see Hibl.), but in the printed edition the Hafs 'en 'Asim reading was substituted. The Egyptian standard edition is now regarded as the best of the Kur'an m far available, although it was based on oral tradition and late kird'al literature and is not always consistent with the oldest and best sources (see G. Bergsträsser, Koranissung in Kairo, in Isl., m [1932], and O. Pretzi, "Anmerkungen" to Orthographia and Punhisrung des Koraus, 1932).

The history of the text of the Kur'an is yet to be written. One aspect of this task
a thorough analysis of the relationship between the Seven or the Ten and all the other readings, including the Companion codices. Until such an analysis is undertaken it will not be possible to give a final evaluation of the sources. The variants found in the "four after the ten" often involve a consonantal text that differs from that of the majority among the Ten (i.e., the ""Uthmänic text"), and they sometimes have completely different words-see, e.g., the references to the readings of al-Hasan al-Basri and al-A-mash in Materials, especially in the listings for Ibn Mastad and Ubayy, A rough survey of Jeffery's lists shows that Ibn Mas'nd's variants agree fairly frequently with those of two of the Seven from Kūfa, Hamza and al-Kisa'l, as is to be expected, and even more frequently with those of al-Hasan and al-A'mash (the latter was also m Küfan reader). Ubayy's variants agree fairly frequently with those of two others among the Seven, Ibn Kathir and Abu 'Arm (from Mecca and Basra), and also with those of al-Hasan and al-A'mash, but somewhat surprisingly not with those of Ibn 'Amir, the only reader from Damascus among the Fourteen. This important aspect of the history of the Kur'an deserves a thorough scientific study, preferably with the use of a computer. On the question of the completeness and authenticity of the Kur'an, see Beil-Watt, 50-6; for a clear statement and defence of the modern orthodox position, Labib as-Said, op. cif., 19-41.

4. STRUCTURE

a. The saras and their names. The Kur'an consists of til sections of widely varying length and form called saras, which are divided into a number of verses (dydt), ranging from three to 286 or 287. As shown above, the terms salve and dye both occur within the text of the Kur'an, but it is not certain that either has its present meaning there, i.e., refers to the present suras and verses. Sura is sometimes translated "chapter", but this is misleading. The first sara, al-Fatiba, "The Opening" (q.c.), is a prayer, and the last two, known as al-mu'awwidhatan, "the two [sūras] of taking refuge", are charms or incantations. These three serve as a kind of introduction and two-part conclusion to the Kur'an. Except for ■ (ew other very short saras near the end (e.g. CIX, CXI, CXII), very few treat a single topic (XII, on the story of Joseph, and LXXI, on Noah, are notable exceptions) or otherwise appear to | structured entities (e.g. XXVI and LV). Most of the suras consist of several segments or pericopes that we only loosely connected, often with little or mapparent connection of thought. Some short suras (e.g. CIII, CVIII) to be isolated (ragments; and it is not unlikely that some of the present suras or parts of them were once joined with others. For instance, Ubayy b. Kath and other early authorities are reported to have regarded CV and CVI as m single sura (see Ithun, i, 1861.; Materials, 179; Birkeland, The Lord zuideth. 100-10).

After the Fatika, the sures are arranged roughly in order of descending length, beginning with "The Cow" ([]), with over 700 lines (60 pages) in a modern printed copy of the Egyptian standard edition, and ending with several sures with just two or three lines. Actually, the sure called "Abundance" (CVIII). mentioned above as a possible fragment, has the distinction of being the shortest, having only ten words. The length of the suras was only one of several factors affecting the arrangement of the Kur'an. If the sures were exactly in order of length. the first thirty would be: II, IV, III, VII, VI, V, IX, XI, XVI, X, XII, XVII, XVIII, XXVII, XXVIII, XX, XXIV, XXXIII. XXII, VIII, XXI, XL, XXXIX, XXVII, XXIII, XXXVII, XIX, XXV, XLIII, and XXXIV. Note that Sura VIII (which is soth in order of length) and XIII, XIV, and XV (not in this list) are much too short for their positions, while XXXIX, XL, and XLIII are too long. The explanation for these last two groups is clear: XIII. XIV, and XV begin with the "mysterious letters" alim)r and were kept with the other ale suras, X-XII. while XL and XLIII begin with am and were kept with the other hm salras, a group to which XXXIX also belongs (see 4.d below). Other factors that influenced the order of the saras include their dates. main topics, and introductions. For instance, LVII-LXVI are a group of Medinan sassas kept together in spite of verying lengths (see also their introductory formulas); X-XV, besides being ale saras, all feature prophet stories and me named after prophets, except for XIII, which has almr; and XXXIV and XXXV begin with the same formula, as do LXV and LXVI, and several groups of sares with the same mysterious letters (see below); cf. also LXXIII and LXXIV, LXXXV and LXXXVI, and others that begin with oaths. For complete lists of the saras and their relative lengths, see Bell-Watt, 206-12, and Bauer, Anordiumg der Suren (see Bibl.).

Muslim writers normally refer to the sures by their names rather than their aumbers. Since the names were not established during Muhammad's lifetime and did not come to m regarded as parts of the text, will silves made to be known by more than one name. The Egyptian standard edition has had a considerable impact in establishing uniform names, and most of the alternative me are ionger used. Notable exceptions are the continued use by Indo-Pakistani writers (and also Pickthall's translation of the names Bani Isra'll for Sura XVII, al-mala'ika for XXXV, al-nur'min for XL, al-taffif for LXXXIII, al-inshirah for XCIV, al-vilidi for XCIX, and most also use ha'mim for XLI, al-dake for LXXVI, and al-lakes for CX1. Flugel and thus Bell and other European writers use al-mala'ika for XXXV, almu'min for XL, alam nughrah for XCIV, and tabbat for CXI. A complete list of the surg names and abbreviations found most often in the literature on the Kur'an is given in Paret, Kommentar, 551-9. Most of the sure names do not indicate the subjectmatter, would normally be expected of a title. Instead they are taken from a key term or catchword that would identify the sara for those who had them memorised, showing that the names arose within the oral rather than the written tradition.

The sura names used in the Egyptian standard edition can be classified in follows: (1) Just over half of the suras take their names from key words at

or near the beginning of the saves. The mothod most often used is to name the sare for the first rhyme-word, i.e., the last word of the first verse, This is done in 30 suras: XX**, XXIII, XXX, XXXVI**, LII*, LIV, LVI, LXIX*, LXXIII-V, LXXXIII, LXXXV-VIII, LXXXIX*, XC, XCIII*. XCVII-VIII, CI*, CII, CIII*, CV-VI, CVIII-IX and CXIII-XIV. In the eight marked with asterisks, the first thyme-word is also the first word of the sara. method used in 14 other sures: XXXVII, XXXVIII**, L**, LI, LIH, LV, LXVIII, LXXVII. LXXIX, LXXX, XCI-II, XCV and C. The four marked with two asterisks are named for their mysterious letters. A further are named for other key words in the first or second verse: VIII, XXV, XXXV, XLI, XLVII-VIII, LIX, LXIII, LXVII, LXX-LXXII, LXXVI, LXXVIII, XCVI, XCIX, CIX and CX. (2) In about one-third of the signes the name is a key term or catchword that occurs elsewhere in the sara. In 16 of these this is the only occurrence of the term in the Kur'an (given here without the definite article): Cow in II. 67-72: Table, V. 212-14; Heights, VII. 46-8; Hidir, XV. 80; Rec. XVI, 68; Cave, XVIII, 9ff.; Poets, XXVI, 224; Aut, XXVII, 18; Spider, XXIX, 41; Lukman, XXXI, 12 f.; Troops, XXXIX, 71-3; Counsel, XLII, 38; Hobbling, XLV, 28; Sand-dunes, XLVI, 21; Apartments, XLIX, 4; and Mutual Fraud, LXIV, a (some first-word and first rhyme-word names listed above are also only occurrences). Only two of the narrative sires we named for a key term in the sire that designates the single theme: Joseph (XII) and Noah (LXXI). Twelve are named for a key term that designates one of several themes m stories: Family of finran (III), Women (IV), Jonah (X), Had (XI), Abraham (XIV), Mary (XIX), Pilgrimage (XXII), Confederates (XXXIII), Sheba (XXXIV), and three listed above-Hidir, Cave, and Lukman, Seven are named for other striking terms that occur also in other sares: Cattle (VI), Thunder (XIII), Light (XXIV), Ornaments (XLIII), Smoke (XLIV), Iron (LVII) and Ranks (LXI), (3) The names of 14 sures do not occur in these silves, and most do not occur anywhere in the Kur'an. Nost of these names are based on verbs that do occur, usually near the beginning of the saira: Night Journey (XVII), Prestration (XXXII), Disputer (LVIII), Woman Tested (LX), Congregation (LXII), Divorce* (LXV), Prohibition (LXVI). Veiling (LXXXI), Splitting (LXXXII). Rending (LXXXIV), and Expanding (XCIV). The names of the other three were chosen to indicate the function of the sara, The Opening (I), or the main theme, Prophets* (XXI) and Unity (of God) (CXII). Only the two terms with asterisks occur elsewhere in the Kur'an. On the names and abbreviations used for the suras, see Paret, Kommentar, 545-30.

b. The verses, Like the suras, the verses vary considerably in length and style. In some saras, which tend to be short and early, the verses are short and often rhythmic. Sometimes there even seems to be an element of metre (LXXIV, 1-7, XCI, 1-10; cf. XCIX, CIV), but this is caused by the repetition of certain grammatical forms and not by meffort to carry through a strict metre of either syllables or stresses. These short, rhythmic verses are often also difficult to translate or interpret because of their use of rare terms, symbolism, metaphor, and other "poetic" features. Most longer saras, and some short Medinan ones (e.g. LX, LXV), have longer, more prosaic verses, often with short statements or formulas attached to the ends in order to provide the rhyme. The one feature that | the verses have in

common is that they end in an irregular rhyme or assonance (discussed in 6.c below). Because of the rhyme the verses form the most natural divisions of the text, and yet we cannot be certain where some verses originally ended. Verse divisions are not indicated in the oldest manuscripts, and they vary somewhat when they are marked, possibly reflecting differences in the early oral tradition that go back to revisions made in the text during the Prophet's lifetime. There is clear evidence that the rhyme and the verse divisions were altered in some suras, where passages originally in one thyme were inserted into passages in another thyme (see Bell-Watt, 80 ff.). But the main reason for the variation in the verse divisions is that the rhyme or assonance is usually formed by certain grammatical forms and endings that occur frequently in Arabic, and thus within many of the longer verses.

Several different systems of verse division and numbering arose within the Muslim community. In his English translation M. Pickthall followed an Indian text tradition in which VI, 23 of the Egyptian standard text is divided into two verses, so that 74-165 become 75-166, XVIII, 18 is divided so that 19-110 become 20-111, and XXXVI, 34 and 35 are combined so that 36-83 become 35-82. The editors of the 1976 Festival edition (see Bibl.) adopted the Egyptian verse divisions and numbering throughout. Even where the verse divisions are the same, there are variations in the numbering in various Muslim editions of the Arabic text and translations, depending on whether or not the basinala and the mysterious letters are counted. The Egyptian standard edition counts the basmala (see below) as verse I only in the Fātiba, and in inconsistent in counting the mysterious letters, counting them as a separate verse (verse 1) in sures II, III, VII, XIX, XX, XXVI, XXVIII, XXX, XXXI, XXXII, XXXVI and XL-XLVI, except that in XLII has and ish are counted as two verses. In all other cases the mysterious letters are regarded as the beginning of verse 1. Pickthall counted these letters as a separate verse in the same suras as in the Egyptian edition and also in X and XXXVIII. Some Indo-Pakistani Arabic texts and translations of the Kur'an, e.g., those of Pir Salahaddin, M. Zafrulfa Khan and M. G. Farid, always count the basmala as verse I.

The Arabic text of the Kur'an most widely used in the West until recently is that of Gustav Flügel (1834), which does we follow any one Oriental text tradition. In an effort to establish an improved text, Flügel made many changes in the verse divisions, altering the numbering in slightly over half the sures. The verse divisions and numbering are the same in the Egyptian and Flugel editions only in tërat XV, XLVIII-IX, LI-II, LIV, LIX-LXX, LXXIII, LXXV-VII, LXXIX, LXXXI-VIII, XC-XCVII, XCIX, C, CII-V and CVII-XIV. The Flugel text were counts the basmala as a verse, and never counts the mysterious letters in a separate verse, but always as the beginning of verse t. The English translations by R. and A. J. Arberry follow the Flügel numbering. The Italian translation by A. Bausani and 📰 English by A. H. Siddiqui follow the Egyptian numbering, as does Yusuf Ali, usually but not always. The German translation by R. Paret and the French by R. Blachère give both numberings, Paret giving the Egyptian first, Blachère the Flügel first. For a complete list of the differences in these two numbering systems and a table for converting the Flügel numbers to Egyptian, see Bell-Watt, f. The standard work me the various Islamic numbering systems is A. Spitaler, Die Verszahlung des Koran nach islamischer Überlieferung, Munich 1935.

c. The basmala. At the beginning of each sard except IX stands the basmala, the formula, bismi 'lidhi 'I-rahmani 'I-rahim, which can be interpreted or translated at least three ways: "In the name of God, the Merciful, the Compassionate" (e.g., Bell, Arberry); "In the sees of God, the compassionate Merciful (One)" (cf. Blachère); or "In the name of the merciful and compassionate God" (cf. Paret), This formula occurs one other time in the Kur'an, in XXVII, 30, in the opening of Solumon's letter to the queen of Sheba. The elements of the basmala also occur separately: bismi 'llah (without the alif in bismi, as in the basmala) occurs once, in XI, 41, and the twin attributes, al-rahman al-rahim, occur together four more times, in I, 3, II, 163, XLI, 2 and LIX, 22. It may be significant that whenever these attributes appear together, including in 1, 1 and XXVII, 30, al-rahim always serves as a rhymeword. Al-rahman, always with the definite article, occurs within the text 57 times altogether-i.e. counting I, 1, but not the other occurrences of the basmala at the head of the suras. Al-rahim occurs 33 times with the definite article, and frequently without. The fact that the last two terms of the basmala occur together elsewhere in the Kur'an following the same pattern as many other pairs of divine attributes (see 6.c below) suggests that the first of the three interpretations given above in the best (cf. Jomier, Le nom divin 'al-Rahmān" dans le Coran [see Bibl.]).

On the origin of the basmala and its placement at the head of the suras there in difference of opinion. Some Mustims believe that this formula was part of the revelation and was included at the head of the suras from the beginning. Textual evidence within the Kur'an, supported by other early historical evidence, suggests that this is not the case. "Allah" in the basmala is clearly the preferred name for God, and al-rahman and al-rahim, according to their Kur'anic usage, are either names or epithets for God. Yet these names are conspicuously absent in earlier parts of the Kur'an, where Muhammad's Lord is referred to as rabb, "Lord", and the Kur'anic formula that occurs during this early period is bi 'smi rabbiha, "in the name of thy Lord", occurring in LVI, 74, 96, LXIX, 52, and XCVI, 1 (in this formula bi 'toui has the alif). Then, possibly as much as two years or even more after the beginning of Muhammad's public ministry, the names al-Rahman and Allah were introduced into the revelation. For while the name al-Rahman was preferred; see, e.g., X111, 30, XXV, 60 and sixteen times in XIX. Kur'anic evidence supports the testimony of early Muslim scholars who report that the Meccans rejused to accept al-Rahman as the name of God, while they did know Aliah as a type of "High God" (see W. M. Wart, Belief in a "High God", in JSS, xvi [1971], 35-40). The next stage in this development is me in XVII, 110, a key verse that says Muslims may use either name, Alläh or al-Raḥmān; but the effect of this verse was to replace al-Rahman with Allah as the primary or preferred name for God, in is seen in XIII, 16, XXXIV, 24 and many other verses that parallel the earlier al-Rahman contexts. After the revelation of XVII, tto the term al-rahman seldom if ever occurs in the Kur'an alone, and it loses its significance as a proper name for God, partly by being connected with al-rahim and the Arabic root r-h-m. Further evidence for the conclusions stated here are given in Welch, Allah and other supernatural beings (see Bibl.); on the foreign origin of al-rahman and its

use in Arabia as a proper name for God before and during the time of Muhammad, and Gesch. des Ques., i, 112 f.; Hocavitz, Jewish proper names, 57-9: Foreign vocab., 140 f.; and BASMALA.

The evidence seems to indicate that the basmala into in result of this controversy divine names, probably a short time after the revelation of XVII, 110. It m possible that the basmala - formed from existing Kur'anic expressions, i.e. bismi 'lidh in XI, at and al-rahman al-rahīm in what is now I, 3; but it seems much more likely that the Fatika and all Kur'anic occurrences of these twin attributes date from after XVII, tto. It also seems likely that the basmala was not originally part of the Fatiha; note that the Kur'an scholars of Medina, Basra, and Syria did not count it as a verse in the Fatina, and that this sura without the basmala is often referred as al-hand, which may have been its original title [see BASMALA]. As soon as the barmala came into use, Muhammad no doubt used it to introduce each recitation of a portion of the Kur'an. Since many sures contain passages from different periods (see 5.0 below), Muhammad must have recited the basmala before many segments that are now in the middle of the saras. Only when the same reached their final, written form, in some cases after Muhammad's death, was the basmala placed at the beginning of each sura as we have it today.

d. The mysterious letters. At the beginning of 29 stirus just after the basmala stands a letter or group of letters called in Arabic familie al-succes, "the openers of the sures", and'il al-surer, "the beginnings of the sures", al-huruf al-mukestatalat, "the disconnected letters", etc., but generally referred to in European languages in "the mysterious letters". They are recited as letters of the alphabet, and for 14 centuries they have intrigued and Muslim scholars. Some saw them as abbreviations, e.g. air for al-rahmon, alm for el-rahim, hm for al-rahmon al-rahlm, ş lor sadi yê muhammad, ya for yê sayyid al-mursalin, etc. Ikrima and others relate from Ibn 'Abbas the view that air, hm, and n together stand for al-rahman (Ithan, il, 9). Others concluded that the letters are not abbreviations, but offered a variety of alternative explanations, that they are sounds meant to the attention of the Prophet or to captivate his audience so they would be more attentive, mystical signs with symbolic meaning based on the numerical value of the Arabic letters, (written) signs of separation (faudgil) between the suras, simply Arabic letters aftesting that the revelation is iii the familiar language of the people, etc. Al-Suyūjī (ibid., 10) mentions, for instance, a tradition related by Ibn Ishāk on the authority of Ibn 'Abbas in which a group of Jews tell Muhammad that the numerical value of the letters would indicate the number of years his community would last. At first they heard him recite alm (z + 30 + 40 - 71), and said it would last 71 years. Then they heard aims (1 + 30 + 40 + 60) suggesting 131 years, then air (1 + 30 + 200) or 231 years, and then aims = 221 years. In the end they concluded that the matter was ambiguous. Al-SuyOtl discusses these and many other possibilities (shid., 8-13) and concludes that the familih are simply mysterious letters or symbols known fully only to God. Later Muslim scholars have tended to accept this view, although the abbreviation theory has remained popular. A few modern Muslims have put forward new variations of mediaeval suggestions, e.g. Hashim Amir Ali (see Bibl.) argues that all of the groups of letters, not just meet of them, are vocatives addressed to the Prophet, and 'All Nasub al-Tahir (see Bibl.) proposes that the numerical value of the letters represents the number of verses ■ the "original" (in most cases, Meccan) versions of the saras or groups of saras concerned. Citing the same examples as al-Suyûţī (but not always the 🖿 values), al-Tahir says, for instance, that Sûra VII, which has so 5 man and begins with alms (1 + 30 + 40 + 90 = 151), originally consisted of only the first the verses. In other cases he has to combine various groups of susus in order to obtain the required number of verses. Thus, adding the rer verses of XII and the "120 Meccan verses" of XI gives him 231, the value of the letters als which occur at the beginning of these two sures (and also X, XIV, and XV, which he does not mention). Sura XIII, with also (x + 30 + 40 + 200 - 271), he argues has 40 Meccan verse which when added to the 231 of XI and XII gives the required 271. In response, it is sufficient to note that = sara with the letters now has the same number of verses as the value of the letters, and in no does al-Tähir's suggested number of original or Mercan verses agree with the view given in the Egyptian standard edition, much less a critical view of the chronology of the savas involved. This theory is a prime example of the way arbitrary speculation has been applied to these letters.

A number of Western scholars have taken up the challenge to explain these letters since the publication of Th. Nöldeke's Geschichte des Qurans in 1860. Nöldeke suggested (215 f.) that they me the initials or monograms of the owners of the manuscripts used by Zayd when he first compiled the Kur'an, e.g. alr(s) for al-Zubayr, aimr for al-Mughira and him for Abd al-Rahman. These monograms, he said, got into the text by accident when later Muslims no longer knew their meaning. This view was widely accepted for a while in Europe and was taken up again and defended in 1901 by H. Hirschfeld (New researches, 141-3) who however regarded each letter as the initial of a different owner, rial for al-Zubayr, ss for al-Mughlra, & for Hudhayfa, etc. Hirschfeld's reason for rejecting the view that the letters went back to Muhammad was that if they did "he must have had an important share in the arrangement of the suras, and this would contradict all we know of the compliation of the Qoran" (141). But by the time Hirschfeld's book was published, Nöldeke had reversed his position, on the basis of a brief but insightful discussion on the subject by O. Loth (Tabari's Korancommentar, in ZDMG, xxxv [1881]. 603 f.). According to Loth, the letters occur only in "late Meccan and early Medinan sures" when Muhammad was "drawing near | Judaism", and in some cases the beginning verses contain an allusion to the letters (i.e. "these are the signs (ayal) of the Book"). He concluded that the letters are Cabalistic symbols standing for certain key words and phrases in the sures before which they stand. Loth's arguments were sufficient to cause Nöldeke to abandon his earlier view and conclude that the letters me part of the revelation, having however no special meaning other than as mystical allusions to the heavenly Book (Orientalisake Skirzen, 1892, 50 f., also stated in Ency. Brit., 9th ed., xvi, 597 L). F. Schwally, in a perceptive survey of the literature up to 1919 (Gasch, des Qor., il, 68-78), wisely rejected Loth's abbreviation suggestions as being too arbitrary (73), while commending him on his main argument (73-5). Schwaily could not, however, accept Nöldeke's later view, calling it "doubtful" and insisting that "the symbols are still somehow connected with the reduction of the sures" (76). Leaving open the

possibility that the letters may part of the revelation, Schwally made the following important statement: "If Muhammad was indeed the originator of the symbols, then he must also have been the editor of the ciphered saras. This would indeed contradict earlier prevailing views, but would agree with our earlier statements that the Prophet relied on secretaries to whom he dictated his revelations, that already his object was to produce a special book of revelation, and that the manner in which pieces from various periods but of similar content are strung together in certain saras produces the impression that this editing originates from the Prophet himself" (77). Schwally was thus marbinger of the work of Bell in the 1930s.

In the meanwhile, two more attempts were made to follow up on Loth's version of the abbreviation theory. In 1921 Hans Bauer (Anordnung der Suren) provided statistical evidence for Schwally's first point, that the letters are connected with the redaction of the suras, but failed to follow up on the second. Instead, he offered an unconvincing list of catchwords for which the letters are said to be old abbreviations: ys for yas'd, "he who runs", in XXXVI, 20; 5 for safinat, "chargers", in XXXVIII, 32; & for karlnuku, "he who is at his side", in L, 23 and 27, etc. For the groups of stires with the same letters he sought some "inner mouter connection among the stires", and suggested that (s(m) in XXVI-VIII stood for for sinin, "Mount Sinal", and Moses, and that alm stood for al-mathani (see 1.b above). Independently E. Goossens proposed a similar view in # 1923 Isl, article (see Bibl.), that the lotters are abbreviations for discarded sara titles: & for hur'an, n for al-nun, "the lish", = dhu 'l-nun, one of Jonah's titles, etc. The air saras, now named after individual messengers, he said once formed a swa-group called al-rusul, "the messengers", and the alm surns formed a similar group called al-mathal, "the parable". His most innovative suggestion was that some letters are remnants of titles that were discarded or abbreviated when some suras were reactanged, e.g. ys (XXXVI) is the remnant of al-yas or al-yasin (two names for Elias in XXXVII, 123, 130), the title of an earlier s@ra consisting of XXXVI + XXXVII, 12-182, and s (XXXVIII) is the remnant of al-saffat (the first word and title of what is now XXXVIII, the title of an earlier sura consisting of XXXVII, 1-11 + XXXVIII. Batter and Goossens inspired another abbreviation theory, that of Morris Seale (see Bibl.) who suggested that the letters served as mnemonics of the contents of the suras involved. Seale accepted Bauer's Mount Sinai and Moses for fs(m) and Goossens' al-rusul for air, but preferred al-mawipa, "admonition", for aim and Yunus (Jonah) for ys. The diversity of these proposals and the fact that several alternative suggestions are often equally plausible demonstrate the futility of this approach, which also fails to respond to some of the textual evidence. In the end, what Schwally said of Loth's abbreviation suggestions applies also to those of Bauer, Goossens, and Seale,

James A. Bellamy in 1973 JAOS article (see Bibl.) has proposed an abbreviation theory that attempts to avoid the arbitrariness of the others. Starting with the views recorded by the classical commentators that air, aim, aimr, im, and n (letters that occur at the beginning of all but ten of the affected sural) are abbreviations for al-valman or al-valman or al-valman or both, Bellamy proposes that these letters stand for these terms in the basmala, and that all the other mysterious letters are also abbreviations for this formula. In order to accomplish this he suggests

a number of emendations, m that j and k > ba, sand k > m, y > b, and k > bs or s. Thus with the change of only one letter, tem, to, th, ye, almy, s, and b, become basm, bas, bah, bs, almm, m, and m, all suitable abbreviations for the basmala. This leaves only hmesh and hayes, which with two and four changes respectively become him bem and bah bem. Bellamy suggests that when the basmala was first introduced (in the "middle and late Moccan" saras) it was abbreviated variously by the Prophet's scribes at the beginning of these 29 suras, and that the later compilers, failing to recognise these abbreviations, gave them a permanent place in the text by writing the basmala out in full just before them. Most of Bellamy's suggested emendations are indeed plausible, but his theory as a whole is not consistent with some of the textual evidence (e.g. the letters are almost certainly not Meccan, but Medinan), does not answer some crucial questions (e.g. the relationship of the letters to their immediate contexts), and is based on several very unlikely assumptions (e.g. that a new formula was abbreviated a dozen different. ways by unknown scribes in Mecca who died without revealing their meaning, that the well-known scribes in Medina knew nothing about the abbreviations.

Any solution in the puzzle of the mysterious letters must provide a reasonable theory that is consistent with in of the textual evidence, and the place to begin is the immediate contexts of the letters, which provide some important clues. The following list gives the sûra number, the position the sûra would have if all the sûras (except the Fütiha) in arranged exactly according to length (based on Bauer, op. cit., Table 11; in also Bell-Watt, 206-12, for the length of each sûra), the letters, and the opening formula or phrase:

	(2)	aim	That is	the	Book,	wherei	n is	no do	abt

68 (62) n By the Pen and what they inscribe

Two points, stressed by Schwally, Bauer, Loth and others but largely disregarded by all the abbreviation theories, stand out in this list: the mysterious letters influenced the final arrangement of the Kur'an, and they are closely related to the introductory formulas and to the Book. Groups of saras with the same letters but with widely varying lengths have been kept together even though this violates the principle of arranging the silvas according to length. This suggests that separate collections of sures with the same letters existed at the time of the compilation of the Kur'an and that the redactors were hesitant to break them up. The most likely reason for this hesitancy is that they regarded the letters as part of the revelation, and the groups of saras as going back to the Prophet. In nearly every case the letters are followed immediately by a reference to some form of the revelation, usually a distinctive revelation formula or oath that mentions the Book or the Kur'an or both (XXIX and XXX being obvious exceptions). In III this formula occurs in verse 2, which Schwally (Gesch. des Qor., il, 75) says was probably the original beginning of the sura. In XIX a Book formula, "Mention in the Book Mary (Abraham, etc.)" introduces five other accounts (verses 16, 41, 51, etc.), but what appears to be older formula is retained at the beginning of the first (verse 2). The close connection between the mysterious letters and the Book is proved by the fact that, although many suras begin with formulas or oaths, only me other sare opens with the same type of revelation formula, namely, XXXIX, which belongs with the Am suras. It begins exactly the same as three of them (XL, XLV and XLVI), it shares the same themes, and it is placed with them despite its length (see Bauer, Table II). Ubayy and others are in fact said to have read &m at the beginning of this sura (Materials, 160). Revelation is mentioned in a few other tiles introductions, but they me different, e.g. XVIII and XXV begin with praise formulas (al-hamdu li 'llāh and labāraha), XCVII with a wa-mā adrāka formula (see 7a below) and LV mentions al-kur'es in verse 2, but is in a completely different style. There is also some correlation between specific formulas and groups of sures with the same mysterious letters, e.g. the fam suras have the same formula, three of 📖 him sures have the same formula, and four with unique letters (ys, s, &, and a) begin with oaths.

Whether or not Loth is correct in saying that several of the introductory formulas contain allusions to the mysterious letters, there is other evidence that these letters are part of the revelation and were recited as separate letters from the beginning. For one thing, most of the groups of letters when recited as letters of the alphabet introduce the rhyme of their respective suras. The 17 suras with groups of letters ending in im, in, or an (i.e. six with alif lam mim, six with ha' mim, two with ha'

sin mim, and one each with fa' sin, ya' sin, and nan) all have this rhyme, with one partial exception. Sura XX, on the other hand, with fai has the d rhyme (in verses 1-14); XXXVIII, with said, bas the chyme de, és, etc.; XI, with alif lam ra', has fr. fr in verses 1-5; and XIII, with alif lam mim rs?, and XIII, with he's mim, ayn sin haf, both have in, as in verses 1-5, and then change to ab, ar and il, ir, respectively. The correspondence is not exact, and there are exceptions, but this close relationship between the letters and the thyme or sonance of the sares must be more than a coincidence.

Another striking fact that must be more than coincidental is that the mysterious letters represent every consonantal form in Arabic, while no form occurs for more than one letter. Thus we have y but no b, t, or th; & but no di or th; r but no s; s but no sh; s but no d; f but no s; but no gh; h but no f or w; and k but no d or dh-along with each of the forms that represent only one letter, 2, 1, m, n, and I (note that in Kūfic Arabic w was written like & and f. and and di were written like &, except that letters were not attached to the ends of w, d, and dh). The most reasonable explanation of the fact that these 14 letters, and no others, occur is that they were intended to represent the Arabic alphabet. If this is so, then the statements in the introductory formulas saying that the revelation was being sent down as a "clear Book" (kitāb mubīn) in Arabic take on significance; other passages (XVI, 103, XXVI, 195) speak of the revelation being in "plain Arabic speech" (lisan 'arabi mubin). The fact that the literature variant readings does not record differences in the way the 14 consonantal forms - recited seems to indicate that there was a strong oral tradition supporting the mysterious letters.

A number of questions still remain, but the evidence seems to support Loth, the later Nöldeke, Schwally, Bell, and Alan Jones (see Bibl.) in regarding the mysterious letters as part of the revelation. Moreover, Bell seems to have been correct in seeing the letters and the introductory formulas as part of the early Medinan revisions adapting the suras for inclusion in the written scripture Muhammad was preparing, It is not unlikely that the suras with the letters are the ones Muhammad prepared for the Book. The letters are significant for understanding the history of the text, and the chronology of the text is important for understanding the letters.

5. CHRONOLOGY OF THE TEXT

The Kur'an responds constantly and often explicitly to Muhammad's historical situation, giving encouragement in times of persecution, answering questions from his followers and opponents, commenting on current events, etc. Major doctrines and regulations for the Muslim community, which never stated systematically in the Kur'an, are introduced gradually and in stages that me not always clear. There are apparent contradictions and inconsistencies in the presentation of both the beliefs and the regulations, and the latter are sometimes altered to fit new situations. Thus it is essential to know the approximate dates or historical settings of some passages, and at least the chronological order of others, if they me to be understood fully. This problem was recognised by early Muslim scholars who devoted much attention to it in the first few centuries, until a fairly rigid system of dating was established and given in imprimatur of orthodoxy. In modern times the study of the chronology of the Kur'an has been almost exclusively a domain of

Western scholars, who have not however been able to reach a consensus on a dating system, or even on

the possfollity of establishing one.

a. Historical references and allusions in the Kur'an. The Kur'an mentions specifically or alludes to m number of historical events in the life of Muhammad and his contemporaries, but it gives no dates or other indications as to exactly when these events occurred. In most cases, the specific occasions alluded to and the dates of the passages involved cannot be determined. This is especially true for the period before the Hidjra in 622, for which there are only a few references to dateable historical events, and even if the events could be identified with certainty this would be of little help in dating the passages that refer to them, e.g. XXX, 2-5, mentions a military defeat of the Byzantines, presumably their loss of Jerusalem to the Persians in 614 (cf. also CV, believed to refer to a military expedition against Mesca in the middle years of the 6th century). There are many allusions to Muhammad's personal situation in Mecca (e.g. the persecution he suffered, accusations made by his opponents, his early life and orphanhood) and to specific practices of the Meccans, but the passages that contain these allusions cannot be dated with any precision. It monly in the Medinan period that we have m number of passages that can be dated fairly precisely on the basis of references or allusions to specific historical events that can be dated from other sources. For instance, the battle of Badr (spring 624) and the battle of Hunaya (early 630) - mentioned by name in III, 123, and IX, 25, respectively. The change of the kible [q.r.] (direction - faces when performing the ritual prayer) from Jerusalem to Mecca in late 623 or early 624 is discussed in 11, 162-50. The adoption of the ancient pilgrimage rituals about the time of the battle of Badr is discussed in 11, 158, 198, V, 95 If., etc., where the Kaba, al-Safa and al-Marwa (two ancient boly places in Mecca), Mount 'Arafat, and al-Mash ar al-Baram (the sanctuary in Muzdalifa) mentioned by name. Muhammad's adopted son, Zayd (b. Hāritha), is mentioned by pame in XXXIII, 37 in connection with an episode that occurred in the spring of 627. And many other events are alluded to, although not by name: the battle of Uhud (625) in III, 155-74; the expulsion of the Jewish tribe of al-Nadlr (625) in LIX, 2-5; the Day of the Trench (627) in XXXIII, 9-27; the expedition to Khaybar (628) in XLVIII, 15; the expedition to Tabûk (630) in IX, 29-35, etc. All Kur'anic dating systems, Muslim and non-Muslim, take these historical references and allusions in Medinan contexts as their starting point.

b. Traditional Muslim dating. During the early Islamic centuries a number of passages in the Kur'an came to be connected with stories that arose in the attempts to reconstruct the life of the Prophet, especially for the period in Mecca before the Higira: LIII, 1-18, and LXXX, 15-29, came to be interpreted as Muhammad's call visions, while XCIV came to be associated with a story about the miraculous opening of his breast and purification of his heart, XCVI and LXXIV with his call to public prophethood, XVII, 1, with his Night Journey, etc. (see, e.g., al-Tabari and al-Zamakhshari, ad loce ; for the European literature, Paret, Kommuniar, 460 L. 523-15, 493 and 295 f.). Other passages came to be connected with certain events in the life of the Muslim community: XIX is said to have been retited to the Negus of Abyssinia by Muhammad's followers who were forced to emigrate from Mecca to escape

persecution around 615; and a written copy of XX is said to have been involved in the conversion of 'Umar at about the same time. Early Kur'an scholars also attempted to identify and explain vague allusions in the Kur'an, e.g. they explained that the blind alluded to in LXXX was a certain 'Abd Aligh b. Umm Maktum, and that the man involved in a divorce dispute in LVIII was Aws b. al-Şamit, And episodes related to IX, 40, XXIV, 12-20, XXXIII, 37-40, LXVI, 3-5, CXI, 1-5, and many others were similarly explained. From these stories and explanations there arose a separate genre of Islamic literature called asbab al-numli, "the occasions of the revelation", the prime example being a work of the same title by al-Wähidi (d. 468/1075-6). This literature does not attempt to provide a complete system for dating the various parts of the Kuran, and only = small proportion of the text is treated. Also, there are a number of inconsistencies, e.g. whether XCVI or LXXIV was the "first revelation" (see Itkan, i, 23 f.). Some of the stories and other explanations found in this literature and in the Kur'an commentaries are obviously legendary, and in seem cases the process by which these accounts must to be attached to Kur'anic passages can be reconstructed (see, e.g., H. Birkeland, The legend of the opening of Muhammad's breast, Oslo 1955, and The Lord guideth, Oslo 1956, 38-55). Others probably have some historical validity, but there is often good reason to suspect elaborate embellishment. These accountshistorical, semi-historical, and legendary—came to be accepted, often without discrimination, as the basis for the traditional Muslim dating of the Kur'an.

The adoption of the Kur'an as a primary source for Islamic law played an important role in the establishment of m chronological order for the text. Rather than attempting to explain away the inconsistencies in passages giving regulations for the Muslim community, Kur'an scholars and jurists came to acknowledge the differences, while arguing that the latest verse on any subject "abrogated" all earlier verses that contradicted it. A classic example involves the Kur-Anic teaching or regulation on drinking wine, where V, 90, which has a strong statement against the practice, came to be interpreted as a prohibition, abrogating II, 219, and IV, 43, which appear to allow it. This theory or doctrine of abrogation (naskh) has only limited support in the Kur'an itself, since the verses on which it is based, especially 11, roo, involve passages that are no longer in the Kur'an. But a number of treatises on the subject influenced the development of the traditional dating of the Kur'an by establishing a widespread belief in the chronological order of certain groups of isolated verses. Eventually, long lists of "abrogating and abrogated (verses)" (al-ndsikh wa 'l-mansükh) were drawn up, as jurists and others, in efforts to support their own views, sought out all possible inconsistencies and claimed that the "earlier" verses involved had been abrogated. See MASKE and TAPSIR; Ithin, ii, 20-7: Bell-Watt, 86-9; Burton, Collection, 46-104.

The lask of dating parts of the Kur'an and determining its chronological order was further complicated by assumption that the present saws were the original units of revelation, i.e. that except for a few verses in some sawas, each sawa was revealed all at once or during a short period of time before the next sawa was begun. This assumption led to the practice of designating each sawa "Meccan" or "Medinan" (i.e. revealed before or after the Highra) and to attempts a determine the exact chronological order of all the sawas as wholes—rather than dealing with

separate parts in in the ashab at-nural and al-nasign "I-mansahi literature. But al-Suyūti's tists of savas attributed to Ibn 'Abbas [d. ca. 68/688], Katada b. Difama (d. ca. 112/730), and others show that the schools of these early Kurian scholars could not agree even on whether some sures were "Meccan" or "Medinan", much less m their exact chronological order (Ithan, i, 10f.). Al-Baydawl fd. 716/1316) classified the savas as "Meccan", "Medinan", ... "disputed", and included 17 in this last category: XIII, XLVII, LV, LVII, LXI, LXIV, LXXXIII, XCV, XCVII-C, CII, CVII and CXII-CXIV. The lists given by al-Suyūțī show that there was also difference of opinion on six others: XLIX, LXII-LXIII, LXXVII, LXXXIX and XCII. The chronological order attributed to Ibn Abbas (ibid.) came to be widely accepted, and with a few changes was adopted by the editors of the Egyptian standard edition of the Kur'an (1322/1924), who indicated in the heading to each sara the sara revealed just before it and any verses that belong to midiferent period, Thus the heading for XIV reads: "Sura of Abraham, Meccan, except verses 28 and 29 which are Medinan; It has 52 verses; it was revealed after S0ra of Noah".

The Egyptian standard edition gives the following chronological order of the saras, with the verses said to date from a different period given in parentheses: XCVI, LXVIII (17-33, 48-50 Med.), LXXIII (xo f., 20 Med.), LXXIV, I, CXI, LXXXI, LXXXVII, XCII, LXXXIX, XCIII, XCIV, CIII, C, CVIII, CII, CVII, CIX, CV, CXIII, CXIV, CXII, LIII, LXXX, XCVII, XCI, LXXXV, CVI, CI, LXXV, CIV, LXXVII (48 Med.), L (38 Med.), XC, LXXXVI, LIV (54-6 Med.), XXXVIII, VII (163-70 Med.), LXXII, XXXVI (45 Med.), XXV (68-70 Med.), XXXV, XIX (58, 71 Med.), XX (130 f. Med.), LVI (72 f. Med.), XXVI (197, 224-7 Med.), XXVII, XXVIII (52-5 Med., 85 during Hidjra), XVI! (26, 32 f., 57, 73-80 Med.), X (40, 94-6 Med.), XI (12, 17, 114 Med.), XII (1-3, 7 Med.), XV, VI (20, 23, 91, 114, 141, 151-3 Med.), XXXVII, XXXI (27-9 Med.), XXXIV (6 Med.), XXXIX (52-4 Med.), XL (56 f. Med.), XLI, XLII (23-5, 27 Med.), XLIII (54 Med.), XLIV, XLV [14 Med.), XLVI (10, 15, 35 Med.), Ll. LXXXVIII, XVIII (28, 83-101 Med.), XVI (126-8 Med.), LXXI, XIV (28 f. Med.), XXI, XXIII, XXXII (16-20 Med.), LH, LXVII, LXX, LXXVIII, LXXIX, LXXXII, LXXXIV, XXX (17 Med.), XXIX (t-tt Med.), LXXXIII-Higjra-II (c8t later), VIII (30-6 Mec.), III, XXXIII, LX, IV, XCIX, LVII, XLVII (13 during Hidjra), XIII, LV, LXXVI, LXV, XCVIII, LIX, XXIV, XXII, LXIII, LVIII, LVIII, XLIX, LXVI, LXIV, LXI, LXII, XLVIII, V, IX (128 f. Mec.), CX. Sura II is the only men said to have an addition later in the same period. Suras VIII, XLVII, and IX, all Medinan, me the only ones said to have earlier verses inserted into later sueas. Of the 86 Meccan sares, 33 are said to have some Mediaan verses. The traditional dating seen here is based on three assumptions: (1) that the present rdras were the original units of revelation, (2) that it is possible to determine their chronological order, and (3) that Tradition (including the hadith, sira, IIII ol-nutül, al-nätikh wa 'l-mansükk, and tajsir bi "I-ma"(her literature) provides a valid basis for dating the suras.

c. Modern Western dating. Since the mid-roth century, Western scholars have been applying critical methods to the Kurlan in varying degrees, and have proposed a variety of dating systems. The one that has gained the most acceptance is that of what might be called the Four-period School, founded by Gustav Well in his Historisch-kriffische Einkelung in der Koran (1844, 1878). Weil roassessed the dating of the Kur'an and offered his own chronological order of the sures using three criteria: (1) references to historical events known from other sources, (2) the character of the revelation = reflecting Muhammad's changing situation and roles, and (3) the outward appearance or form of the revelation (1st ed., 54 f.). His most notable contribution was his division of the "Meccan silvas" into three groups, thus establishing altogether four periods of revelation, with the dividing points at about the time of the emigration to Abyssinia [ca. 615), Muhammad's return from al-Tabit (ca. 620), and the Hidira (September 622). Weil's four-period dating system and his three criteria were then adopted, with some changes in the order of the saras, by Th. Nöldeke in 1860 and F. Schwally in 1909 in their monumental Gesch. des Qor., and then by R. Blachère in his Introd. (1947, 1959) and translation, Le Coran (1949-50, 1966). In the 1st ed. of his translation, Blachère arranged the saras in what he took to be their chronological order; in the and ed, the suras were put in the traditional order (this and ed. was meant for a wider public; but Blachère may also have felt, after deeper acquaintanceship with Bell's work, that it was not possible to arrange the suras in an exact chronological order). In order to show the similarities and differences among the three versions of this four-period system, and to facilitate a comparison of this system with the traditional dating, the three European versions are all given below. The few manner in some sures that are said to date from a different period me not indicated here, except where Blachère divided two surse in the first edition of his translation.

The suras of the First or Early Meccan Period tend to be short, with short, rhythmic verses. They often begin with a series of historiative caths, and the language is said to be full of "poetic imagery and power". Assuming a progressive deterioration of style, Weil placed in the First Period the suras be felt have the most exalted poetic style, along with others that share the same themes and general style. The chronological order of the suras of the First Period according to the three versions is 100lows: Weil: 96, 74, 73, 106, 111, 33, 81, 68, 87, 92, 89, 93, 94, 103, 100, 108, 102, 107, 109, 105, 113, 114, 112, 80, 97, 91, 85, 90, 95, 101, 75, 104, 77, 86, 70, 78, 79, 82, 84, 56, 88, 52, 69, 83, 111

The sares of the Second Middle Meccan Period are longer and "more prosaic", but still with "poetic" qualities. In style they said to form transition between the sares of the First and Third periods. The signs of God In nature and the divine attributes such as mercy (rahma) are emphasised, and God is often called the Merciful One (al-rahmas). There are vivid descriptions of paradise and the helitire, and here too the punishment-stories are introduced. The sares of the Second Period are (italics = Nöldeke only; parentheses = Blachère only): Welf: 1, 51, 36, 50, 54, 44, 19, 20, 21, 23, 25, 26, 67, 37, 38, 43, 71, 55, 15, 26.

Nöldeke and Blachère: (31), 54, (68), 37, 71, 76, 44, 50, 20, 26, 75, 19, 38, 36, 43, 72, 67, 23, 21, 25, 17, 27, 18.

The sares of the Third or Late Meccan Period are even longer and "more prosaic", and Weil says the "poetic power" has been lost altogether. The revelation often takes the form of sermons or speeches, and the prophet stories and punishment-stories are retold in more and more detail. Nöldeke emphasises changes in vocabulary, but similarity of form, in Late Meccan ""Medinan sares. The sares of the Third Period are:

Weil: 7, 72, 35, 27, 28, 17, 10, 11, 12, 6, 31, 34, 39, 40, 32, 42, 45, 46, 18, 16, 14, 41, 30, 29, 13, 64. Nöldeke and Blachère: 32, 41, 45, (17), 16, 30, 11, 14, 12, 40, 28, 39, 29, 31, 42, 10, 34, 35, 7, 46, 6, 13.

The Medinan suras and their chronological order are determined by the subject matter of these revelations that reflect Muhammad's growing political power and the general development of events in Medina after the Hidjra. New themes and key terms are said to help distinguish these saras from certain Late Meccan ones. The Medinan suras are:

Weil: 2, 98, 62, 65, 22, 4, 8, 47, 57, 3, 59, 24, 63, 33, 48, 110, 61, 60, 58, 49, 66, 9, 5.

Nöldeke and Blachere; 2, 98, 64, 62, 8, 47, 3, 61, 57, 4, 65, 59, 33, 63, 24, 58, 22, 48, 66, 60, 120, 49, 9, 5.

Here we see a combination of excessive dependence at traditional Muslim dating and a matters of form and style, e.g. in Weil's First Period the first 14 suras, with just a few exceptions, are in almost exactly the same order as in the traditional biuslim dating (cf. the Egyptian list above). Weil then closed this period with eleven sures that have the "poetic style", but are dated considerably later by Muslims (note the exact order of LXX-LXXXIV). Nöldeke then accepted all of Weil's First Period saras, and added three more (I. L.I. LV); and Blachere accepted all of Nöldeke's except for two (LI, LX VIII). and added one (LXXVI)-these differences involve mainly the dividing points between the periods. Also, the traditional stories involving certain sures-Mubammad's call (XCVI, LXXIV), an incident involving Muhammad's uncle, 'Abd al-Uzzā (CXI), the emigration to Abyssinia (XIX, XX), etc.—seem to have been accepted as historical. But the Tradition, especially the Meccan period, is not this trustworthy. Weil, Noldeke, and Blachère have accepted the three assumptions of the traditional Muslim dating stated above; their four-period system is essentially little more than a European variation of the traditional dating. On the question of style, it is true that there were changes through the years; but there me no reason to assume that all sures with the same style belong to the same period. The Fourperiod School have not demonstrated the validity of the historical framework or the development of ideas and key terms assumed by their system, which has been widely accepted in the West with much more confidence than is justified. It should be emphasised, however, that this system is often used by others in a rigid way not intended by its founders (Weil and Nöldeke), e.g. giving the exact chronological order of several verses, or the exact number of occurrences of a term in each period. Schwally in particular emphasised that the order proposed by Nöldeke only approximate.

Three other dating systems were proposed by Europeans within a span of ten years around the turn of the 20th century. That of H. Grimme, presented in his Mohammed (1892-5), ii, 25 ff., was basically a variation of Nöldake's, with more emphasis on

stages in the development of doctrinal themes. Grimme's analysis of groups of ideas that occur together in the Kur'an was useful, but his view of the overall sequence of ideas (monotheism, resurrection, the Last Day, etc.) was not widely accepted, and has since been discredited. Sir William Mult. in his The Coran: its composition and teaching (1896), 43-7, offered an arrangement of the sures in six periods (five Meccan and one Medinan). His most significant and innovative suggestion was that the first period in the composition of the Kur'an comprised eighteen short suras, which he called "rhapsodies", dating from before Muhammad's call: CIII, C. XCIX, XCI, CVI, I, CI, XCV, CII, CIV, LXXXII, XCII, CV, LXXXIX, XC, XCIII, XCIV and CVIII. Muir pointed out that none of these is in the form of a message from a deity. His second period has four savas (XCVI, CXIII, LXXIV, CXI) treating "the opening Muhammad's ministry", presumably ca. 610. The other dividing points are the beginning of Muhammad's public ministry (cs. 613), the Abyssinian emigration [ca. 615], the Year of Sorrow (ca. 610), and the Hidira, Muir is no doubt correct in dating some saras before XCVI and LXXIV, but I and others he lists almost certainly later. In general, the criticisms stated above of the four-period system apply also to Muir's. In 1902 H. Hirschfeld, in his New researches (see Bibl.), proposed a chronological arrangement of the Kur'in based on the character or function of individual passages. After the "first proclamation", XCVI, 1-3, Hirschfeld's arrangement also has six periods, in which the revelations elassified as "confirmatory" (LXXXVII, LXVIII, r-33, XCII, LXIX, 40-52, etc.), "declamatory" (LXXXI, LXXXII, LXXXIV, etc.), "narrative" (LXVIII, 34-52, LI, XXVI, r-220, LIV, etc.), "descriptive" (LXXIX, 27-46, LXXI, LV, etc.), "logislative" (VI, 2-73, XCIII, 9-11, XXV, 63-72, etc.), and Medinan, grouped together but discussed separately as those up to the battle of Badr, political speeches, revelations on Muhammad's domestic affairs, and preparations for the Pilgrimage to Mecca. This system has a number of obvious flaws. but Hirschfeld's work was valuable for its preliminary analysis of Kur'anic literary types and its recognition of the fact that in duting parts of the Kur'an we must deal with individual pericopes rather than entire suras.

This insight became a guiding principle in the most elaborate attempt so far to identify and date the original units of revelation, Richard Bell's The Qur'an, translated, with a critical re-arrangement of the suraks, wools. (1937-9). Over a decade earlier he became convinced that Noideke's dating was inadequate (ibid., 689 f.). Bell's verse-by-verse analysis of the entire Kur'an led him to conclude that the sures are far more complex than is assumed by the traditional Muslim and European dating, that the revelations underwent considerable revision, including expansion, replacement of older passages with men material, changes in the rhyme, etc., that this revision involved written documents and was done during Muhammad's lifetime under his supervision, and that the material for most of the saras was compiled, but not put into its final form, under Muhammad's supervision. Bell did not present a rigid dating system, but concluded "provisionally" (vil.) that the composition of the Kur'an fell Into three main periods: an early one from which only some sign-passages and exhortations to worship God survive; a "Kur'an period", covering the latter part of the Meccan period and the first year or two in

Medina, during which Muhammad's task was to produce a hur'an, a collection of lessons for liturgical tase; and a "Book period", beginning about the and of the year # A.H., during which Muhammad began to produce a written scripture. According to Hell, the present Kur'an is not to be divided into these three periods, since a number of sign-passages were incorporated into the liturgical hurlde, and in Medina this collection of oral materials was revised to form part of the Book. Bell attempted to date some Medinan grant fairly precisely-"carly Medinan, ravised after Badt", "shortly after Uhud", "year VII", etc. But for most passages he gave very general and often tentative suggestions, especially for the Mescan material, e.g. "early, revised in Mesca (?), "Meccan, with Medinan additions", and very often "Meccan" and "late Meccan or early Medinan". A survey Bell's provisional dating of the individual passages shows that he regarded fewer than twenty airas as being probably completely Meccan: L, LIII, LV, LXIX, LXXV, LXXIX, LXXX, LXXXII, LXXXVIII-LXXXIX, LXXXVI XCI-XCIII. XCV-XCVI, XCIX, CIV and CXIII, all of which said to have material from different dates. Of the other short suras, some of which he regarded possible unities, Bell said CII, CV, CXII and CXIV seem to be Medinan; I, XCIV, Clif and CVI-CVIII could be either Mercan or Medinan; and on C, Cl, CIX and CXI he gave no opinion. He regarded as completely Medinan the same 24 suras said to be Medinan by Nöldeke, but saw them as having significant amounts of material from several different dates, thus making it impossible to put the suras as wholes in chronological order. This leaves exactly half of the seros (57) which Bell regarded as having significant amounts of material from both before and after the Hidira: 33 said to be mostly Meccan, with Medinan revisions and additions--VI, VII, XII, XIII, XV, XVII, XVIII, XXI, XXV-XXVI, XXXIV, XXXVI-XXXVIII, XLI, XLIV, LI-LII, LIV, LVI, LXVIII, LXX-LXXIV, LXXVI-LXXVIII, LXXXI, LXXXIV, LXXXVII and XC; and 24 said to be mostly Medinan, with Meccan passages, or based on Meccan material-X, XI, XIV, XVI, XIX, XX, XXIII, XXVII-XXXII, XXXV, XXXIX, XL, XLII-XLIII, XLV-XLVI, LXVII, LXXXII, LXXXV and XCVII. He thus distinguished between dates of original revelation (or enriest recitation) and dates of later editing and composition during Muhammad's lifetime. The fact that he indicated breaks in the text and identified older components, e.g. Meccan passages in suras that were completed in Medina, does not mean be failed to recognise that some fonger saeas (e.g. XII, XIX, XXVI) and many shorter ones (e.g. LXXXVII, CIV) are carefully composed, unified works in their final

any of the revelation, inserted the old verses just before or after the new E.g. 11, 185, was written on the back of 184, 199 (on fasting), H, 196, on the back of 197-9 (on the Pilgrimage), XXIV, 2-9, on the back of 10-18 (on fornication), and XVIII, 6-9 is new introduction to the story of the Seven Sleepers), m the back of 20-12, which me replaced by a longer version of the story in 13-21a. In other cases the scribes simply used the backs of sheets on which older, discarded material was written, e.g. IV, 11-14, me the back of 2-10, IV, 19-21, on the back of 15-18, and VII, 3-5, on the back of 6 9. This hypothesis provides a feasible explanation and solution to textual problems in ____ cases, but not in others. It now seems that Bell sometimes too quick to designate a passage - "discarded" material - a "scrap" that got into the Kur'an by mistake; and he seems to have failed to recognise some literary forms, e.g. the wa-md advaka formula (see 7.a below). But it must be remembered that Bell was a pioneer in this field, and that he attempted to locate all possible breaks in the text, acknowledging that many of his suggestions were uncertain or tentative and that some would be proved untenable by later research. Or the whole, his dating and reconstructions have been supported by later studies, e.g. K. Wagtendonk, Fasting in the Koran (Leiden 1968), 47-81, on 11, 183 ff.: also Weich, Aliah and other supernatural beings (see Bibl.) = the emergence of the doctrine of lawhid, and idem, in W. M. Watt and A. T. Welch, Der Islam, i (Stuttgart 1980), 264-71, 300-3, on the origin and early development of the salat and sakat. Careful studies of a number of passages and topics merded before a final judgment of Bell's work can be made.

There is room for disagreement on specifics, but there can now be little doubt that Schwally was correct in concluding that passages from different dates were put together to form the present sileas, that written documents were involved, and that this revision was done under Muhammad's supervision [Gesch. des Qor., i, 45 ff., ii, 1 f., 77, etc.). Furthermore, Bell seems to have been right in his main conclusions, which went beyond Schwally's position. Most sures have significant amounts of material from different dates, and nearly all of the longer suras with Meccan material were revised or expanded in Medina, 🚃 that we can no longer speak of "middle Meccan" or "late Meccan" sures. We can speak with more confidence of "early Meccan" suras, although we cannot be certain as to which ones belong to this group. And us can speak of "Medinan saras", i.e. those that **made** up completely of Medinan material (of various dates). It is me possible to put the silvas as wholes in chronological order, or to determine the exact order of the passages on any major teaching-the creation, God and other supernatural beings, the nature and destiny of man, etc. This does not mean that nothing can be said on the development of ideas in the Kursan. On the major teachings and other subjects on which the Kur'an has much to say, it is possible to reconstruct the sequence of the main stages of development, and sometimes the approximate dates of these stages. It now seems certain that the most important single turning point in the development of the Muslim scripture was not the Hidira, dividing the Kur'an into "Meccan" and "Medinan" silvas, but a series of events surrounding the battle of and Muhammad's so-called "break with the Jews". Late Meccan and very early Medinan material is difficult to distinguish; there - many passages that could just as well date from Muhammad's last year in Mccca or his first in Medina.

6. LANGUAGE AND STYLE

a. Language of the Kur'an. Most mediaeval Muslim scholars believed that the Kurlan was in the spoken language of the Prophet, the dialect of the Kurayah, which was also the language of the "Classical Arabic" poetry of Muhammad's day. It was assumed that the Kuraysh and the classical poets retained the pure language of the Bedonins (al-a'vāb). Support for this view, more a theological doctrine than a linguistic theory, was found in the Kur'an in the statements that the revelation was in "clear Arabic speech" (lisān 'arabi mubin) (XVI, 103, XXVI, 195; cf. XIII, 44), which meet to be interpreted as "pure Acabic". This Kuraysh dialect theory was attacked by Karl Vollers in a series of well-documented articles beginning in 1894 and culminating in his classic Volksuprache und Schriftspeache im alten Arabien (1906), in which he argues that the Kurlan was first recited by Muhammad in a colloquial Arabic without case-endings (19ab) (thus distinguishing if from the Classical Arabic of the poets), that the language of the Kur'an as we now have it was a fabrication of later philologists who attempted to put the revelations into Classical Arabic, and that the original language of the Kurban survives only in a few orthographic peculiarities (e.g. the omission of the alif in some words) and in the non-canonical readings. Voller's theory gave rise to much discussion of the language of the Kur'an, but it found little support outside of Germany, except for several articles by Paul Kable (e.g. The Arabic readers of the Koran, in JNES, viii [1949], 65-71), who presented evidence to show that at least during the and century the Kur'an was indeed recited without i'vib, a characteristic of colloquial Arabic. Kahle's arguments also failed to convince others, and the earlier refutations of Vollers' thesis given in a lengthy review by R. Geyer (Göttinger gelehrte Anzeigen, claxi [1909], 10-56) and by Nöldeke (News Britsage, 1-5) have been generally accepted (on the views of Vollers, Kahle, Geyer, and Nöldeke, see Zwettler, Oral tradition, \$12-30). Nöldeke (loc. cit.) and Schwally (Gesch. des Qor., ii, 59) argued that the language of the Kur'an was not the spoken language of any tribe, but was a somewhat artificial Hockspracke that was understood throughout the Hidjaz. On the other side, it has come to be generally agreed that the Classical Arabic of the poetry of Muhammad's time was not the spoken language of the poets or the dialect of any me tribe, but a literary language that was understood by all the tribes. This language has come to be called the "poetic koing" or the 'arabiyya. In the late 1940s three European writers, H. Fleisch, R. Blachère, and C. Rabin, reached the conclusion, apparently independently, that the language of the Kur'an, far from being the spoken dialect of the Kuraysh or a Hochsprache of the entire Hidjaz, was simply the "poetic kein?" of the Classical Arabic poetry, with seem adaptation to the Meccan speech, e.g. the omission of the hamsa (for references and discussion, see C. Rabin, The beginnings of Classical Arabic, in Stud. Isl., iv [1955], 19-37, and Zwettler, Oral tradition, 130-72). This view has been accepted by most Western Arabists. One notable exception is J. Wansbrough (Quranic studies, 85-118) who rejects the hoins or 'arabiyya concept, without offering any clear alternative. He asserts that very little can be known about the text of the Kur'an or about Classical Arabic prior to the "literary stabilisation" of both in the 3rd/9th century. There is nothing in the Kur'ania usage of 'arabi and its cognate forms to support the suggestion of J. Fück ('Arabiya, Berlin 1950, 1-5) that 'arabi in the expression "clear Arabic speech" refers III the 'arabiyya, the literary language of the Bedouins.

b. Foreign vocabulary. The earliest exegetes recognised and discussed freely a large number of non-Arabic words in the Kur'an, and Tradition credits Ibn 'Abbas and his school with having a special interest in seeking their origin and meaning. Then when the dogma of the eternity and perfection of the Kur'an was elaborated (see 8, below) some jurists and theologians, such as al-Shafff (d. 205/820), to believe that it was in pure Arabic and thus denied that any of its vocabulary was borrowed from other languages. But prominent philologists such as Abū 'Ubayd (d. 224/838) continued argue that the Kur'an contained foreign words. Al-Tabari (d. 111) 923) and others, attempting to reconcile the two views, asserted that the alleged foreign elements | the Kur'an were simply words that Asabic and other languages had in common. 'Abd al-Rahman al-Thafalibi (d. 873/1468) explained in his Kitāb al-Diaudhir (Algiers 1905, i, 17) that these words remain into Arabic through the ancient Arabs' contacts with other languages in foreign travel and commercial affairs, but that they had been thoroughly Arabised by the time of the Prophet. Other writers seem to have freed themselves altogether from religious considerations, e.g. al-Suyūtī (d. 911/1505), who gave special attention to foreign loan-words in the Kur'an. In his Ithan he has a chapter on words that are not in the language of the Hidiaz (i, 133-5) and another on words that are not in the language of the Arabs (135-41). In a separate treatise, the Mutanukkili (ed. and tr. Wm. Y. Bell, Cairo 1924), he classifies a large number of terms as words borrowed from Ethiopic, Persian, Greek, Indian, Syriac, Hebrew, Nabatacan, Coptic, Turkish, Negro, and Berber [for a discussion of these, see Foreign words., 12-32). Jeffery indicates surprise that al-Suyūtī was able to gather from the older authorities so many words "whose Arabic origin to us is obvious, but which they regarded as foreign", and he says that some of these are simply rare Arabic words, while others are variant forms used in the Kur'an to establish the rhyme. He then concludes that the foreign elements in the Kur'ania vocabulary are of three distant types: (x) words that are entirely non-Arabic and cannot possibly be traced to Arabic roots, e.g. islabrah (silk brocade), randiabil (ginger), firdaws (paradise); (2) Semitic words that, although their triliteral root is found in Arabic, occur in the Kur'da in a meet in another language but not in Arabic, e.g. fativ (creator), sawāmis (cloisters), darasa (to study [the scriptures] earnestly); and (3) words that are genuinely Arabic and commonly used, but are used in the Kur'an with technical or theological meanings influenced by other languages, e.g. nur, "light", used in the semm of "religion"; ruh, "spirit", and especially ruh al-kudus, "the spirit of holiness"; and halima, "a word", when used of Josus (ibid., 39 f.). Jeffery then discusses about 275 words, other than proper names, that have been regarded as foreign, and he summarises the views of earlier European scholars as to their origin, and sometimes gives his own views. For the Arabic and European literature on this topic, see ibid., xixix, to which should be added two studies by L. Kopl, Religious influences on medieval Arabic philology, in Stud Isl., v (1956), esp. 40-5, and The treatment of foreign words in mediaeval Arabic lexicology, in Scripta Hierosolymilana, ix (1961), 191-205 (both reprinted

AL-KUR'ĀN

in Kopf, Studies in Arabic and Hebrew lexicography, Jerusalem 1976) and other works cited by blim.

c. Rhymes and refrains. A distinctive feature of Kur'anic style, closely related to its oral nature and liturgical function, is that it is all rhymed assonanced prose. There is no attempt to produce the strict rhyme of Arabic poetry (see Zwettler, Oral tradition, 103-10). Some short saras, and segments of longer stres, do have a fairly consistent thyme if the short inflectional vowels at the ends of the verses are disregarded. For instance, the three verses of CVIII end in -ar, the four verses of CXII and in -ad, CV has -il except for the last verse with -il, CX1 has -ab except for the last verse with -ad, and the 55 verses of LIV end in r (or er) preceded by a short vowel. But in most suras there is a loose thyme in assonance formed by common grammatical endings and word forms. By far the most frequent assonance in the Kur'an is -un/-in (considered interchangeable), which is formed by the plural endings of nouns and verbs. And even this form, which occurs frequently in Arabic, is often varied with words ending with one of these vowels but a different consonant. The leminine singular endings -at and -M occur in CIX, XLVII, XCI and XCIX; the dual ending -de occurs in LV; the accusative ending -an occurs in XVIII, LXXII. and C; and the form $-\hat{a}(l)$, a long a followed by mvariable consonant, occurs in parts of longer suras such as II, III, XIV, XXXVIII and XL. On the various thyme forms in the Kur'an (technically known as faul, fittal, fäulat, iftal, taful, etc.), soo Ithan, ii, 96-105, and F. R. Müller, Untersuchungen sus Reimprosa im Koran (Bonn 1969), who presents a systematic compilation of the evidence that peculiarities in Kuranic style and vocabulary were brought about by the imposition of rhyme.

The whole of the Kur'an is often said in be in sadi, the rhythmic, rhymed utterance of the kakin (soothsayer) [q.v.], which, like the Kur'an, does not have a fixed metre or proper rhyme and is thus distinct from both poetry and prose. But those who have insisted that the Kur'an is not in sadic seem on the whole to be on sounder ground (see Gesch. des Qor., i, 36 fl.; Blachère, Litt., 222; Zwettler, Oral tradition, 157 ff.). Some of the shorter saras do have short, rhythmic, rhymed and of the sadi type, often beginning with oaths, e.g. XC to XCIII (see 7.a. below); and parts of a few somewhat longer sitras, e.g. the beginning of LXXV and LXXXII-LXXXV can be described as being "sadif-like". But most suras have longer, prosaic verses that are simply made to fit a loose thyme or assonance pattern. In some a distinctive, fairly consistent thyme is formed by words that me integral to a context and its meaning, giving the impression of being carefully constructed compositions, e.g. XVIII-XX. But la others, especially some of the saras that are completely Medinan. the thyme is formed by set formulas that are attached loosely to the ends of the verses, often with little m no connection of thought with the contexts. For instance, in II, the longest sure in the Kur'an, the rhyme in about three-fourths of the 286 verses is formed by divine epithets, aphorisms, and other formulas that often have little relevance for the meaning of the narrative. In verses 127-268 double divine epithets occur over 30 times, e.g. God is samit salim (Hearer, Knower) occurs seven times; Carls hahim (Mighty, Wise), six times; ghafür rakim (Forgiving, Compassionate), six times, etc. Theological aphorisms occur even more often, and some was repeated several times: "God is not heedless of the things you do", in _____ 74, 140, 144, 149, etc.; "God sees the things you do", in 110, 233, 237, 265, etc.; "God has knowledge of everything", in 29, 231, 282; and "God is powerful over everything", in 20, 106, 259 and 284, etc.

A special type of rhyme-formula that occurs in a number of suras is the refrain, i.e. an entire verse or more repeated verbatim at more or less regular Intervals. The most striking example is the rhetorical question, "Then which of the benefits of your Lord will you two deny?", which occurs = LV, 13, 16, 18 and 21 and then almost every other = to the end of the silve in 78, A similar refrain. "We is that day to those who deny it!", occurs in LXXVII, 15, 19, 24, 28, 34, 37, 40, 45, 47 and 49. In both of these cases the refrain has little connection with the meaning of the other verses, and it difficult to tell whether the latter should be read as an introduction (see Bell, Trans., 627 f.) = a conclusion (e.g., Arberry trans., ii, 328 f.) to the tensegments ranging in length from two in five verses. Each of the man punishment-stories in XXVI ends with the two verses, "Lo, in that is a sign, but most of them have not believed" and "But, lo, thy Lord is the Sublime, the Compassionate", which appear to be separate refrains, the latter being later. Four punishment-stories in LIV end with "We have made the Kuran as the Reminder (dhikr), but is there anyone who takes heed?", and the first three also have what appears to be an earlier refrain, "Of what nature, then, was My punishment and My warning?" Similar formulas occur frequently in the Kurlan, but usually as refrains. On internal thymes and the possibility that there are strophes within the Kur'an, see Bell-Watt, 70-5.

d. Schematic form and multiple accounts. The last two examples of refrains occur in stories that also share another characteristic of Kur'anic style, schematic form, i.e. the repetition of certain verses, or formulas that are woven into the narrative in a regular pattern in different stories presented together a group. A good example of me type of schematic form occurs in XXVI, where five punishment-stories have the same five-verse introduction, as well as the refrains mentioned above and other repeated verses. The introduction of the first story reads: "The people of Noah denied the envoys. / When their brother Noah said to them: 'Will you not show piety? / Lo, I am to you a faithful messenger. / So show piety towards God, and obey me. / I ask you for no reward for it; my reward rests only upon the Lord of the worlds' ". The only difference in the five-verse introductions of the other four accounts is the name of the people (the tribes of 'Ad, Thumud, etc.) and the prophet (Hud, Salih, Lot, etc.). Another type of schematic form occurs in the Sara VII versions of the same five punishment-stories, where about two-thirds of the Noah story is repeated in the Had story (a smaller percentage is repeated in the others), but the repeated parts are interspersed with statements, phrases, and individual words that distinctive to each story. To show the first stage in the development of this group of schematic accounts, the Noah story is given here with the elements that also occur in the Hild story put in italies: "We see Noah to his people, and he said 'O my people, serve God. There is no god for you other than He. Verlly I fear for you the punishment of mighty day'. Said the nobility of his people: Verily we think you are in manifest error'. He said 'O my beoble, there is no error in me; I am but a mestenger from the Lord of the worlds. I deliver to you the messages of my Lord,

and give you cinems advice; I have knowledge from

God which you have not. Does it astonish you that a reminder from your Lord should come to you upon man from among yourselves, in order that he may warn you and that you may show piety? Perhaps mercy will be shown you. But they denied him; so Wo rescued him and those with him in the ark, and We drowned those who denied Our signs. Verily they were a blind people." Part of the Noah story and other parts of the Hud story then repeated in the Salih, Lot, and Shu'ayb stories. Other groups of parallel accounts in the Kur'an have of these two types of schematic form. The extent of the repetition in these parallel accounts has important implications for understanding their nature and purpose, e.g. they are not intended as historical accounts.

These groups of punishment-stories also illustrate another feature of the Kur'an: the complex development of its multiple accounts and their changing relationships with other accounts. Many stories are repeated in different versions in two more sures, and these multiple accounts of the same story differ not only in length and details, but also in their purpose and their relationship to other stories. For instance, different versions of the punishmentstories or brief references to them occur in 16 different suras, Longer versions of the Noah, Hud, Salib, and Lot stories occur in LIV, XXVI, VII and XI; the first three also occur in XXV, LI and LIII; they are referred to in IX, XIV and XXIX; and they occur separately in still other silvas. There are two different Lot punishment stories: the first occurs in LIV, XXVI and VII (mentioned above) and also in XXVII and XXXVII; the second, involving the visit of celestial messengers, occurs in XI and XV. Then in XXIX both appear together separated by a brief version of Abraham story, which also occurs in earlier, longer versions In L1, XV and X1. On the punishment-stories, see 7.d below, Bell-Watt, 127-35, and bibliography given there. A similar development can we are in the creation stories: the story of (the fallen angel?) Ibils occurs 🖿 a complete, independent story in XV and XXXVIII and is repeated in shorter versions in XVII and XVIII; then III occurs with an account of the temptation and fall of Adam in VII, XX, and tinally II. In the last two the Iblis story is reduced to a single verse, and in II these two story segments are preceded by the only Kur anic version of a third creation story, about God consulting the angels before creating man. A third example, of a somewhat different type, involves the two parallel accounts of the miraculous births and childhood of John (the Baptist) and Jesus in XIX, 2-34 and III, 38-51. In XIX the stories of John and Jesus are the first two in a min of separate accounts; in 111 they are woven together as part of a longer account that begins with the birth and early life of Mary. Among the significant patterns seen in the development of these and other multiple accounts in the Kur'an is that the earlier groups of stories tend to be ahistorical in their arrangement, e.g. in XXVI we have Moses, Abraham, Noah, Hūd, Ṣāliḥ, Lot, and then Shu'ayb (who were to be identified with Jethro, the father-inof Moses), while the later versions are put in "historical order", e.g. in XI we have Noah, Hüd, Şălib, Abraham, Lot, Shu'ayb, and Moses. The ahistorical groups are typical of what Bell calls the Kur'an period, while the "historical" ones reflect the Book period, where we see stories combined to form longer multi-episodic narratives that constitute the beginning a Muslim sacred history going back to the creation.

7. LITERARY FORMS AND MAJOR THEMES

The nature and arrangement of the Kur'an make it difficult to classify its literary forms or systematise its main themes. Any attempt to classify we parts of the Kur'an according to the standard literary types-myth, legend, saga, short story, parable, eto.-very soon founders. A few examples can be given for each of these types, but altogether they comprise a very small percentage of the text. Also, they have been adapted so much to conform to the style and message of the Kur'an that they have little significance as distinct types. Bell has argued that since the Kur'an disclaims that Muhammad poet and since his function as a prophet was to convey messages from God to his contemporaries, we should seek "didactic rather than poetic or artistic forms" (Bell-Watt, 75). This is true, except that only parts of the Kur'an can be described as "didactic" in purpose. Other parts are hortatory, rhetorical, legislative, etc., and some parts addressed to Muhammad and his family can only be described as personal (Beil questioned whether some of these, e.g. CXI and parts of LXVI, were "intended for publication"). Thus it seems best in discuss the literary forms of the Kur'an in terms of its own distinctive types of material. What follows is not a complete, systematic classification, but brief descriptions of the main literary forms found in the Kur'an, which at the same time provide summaries of some of its major themes.

a. Oaths and related forms. An interesting variety of oaths and related forms occur in the shorter suras, usually at the beginning. The assumption that most (but certainly not all) 🔳 these oaths are 🚃 the earliest parts of the Kur'an seems to be justified. Some oaths that are cryptic and difficult to interpret. or translate are generally thought to be typical of the ancient Arabian soothsayer utterances. In other cases, the oath form has simply been used to convey Kur'anic (and sometimes Biblical) themes. The oath form that occurs most often consists of one or more verses beginning with wa, "By", followed by a noun in the genitive case, and ending with one or verses beginning with me asseverative particle, usually issue but sometimes \$2d, both meaning "verily, surely". A fairly typical example occurs at the beginning of XCII: "By the night when it veils, / By the day when it thines out in splendour, / By what created the male and the female, I Verily your is diverse" (Bell tr.). Here the first three verses begin with we, and the assertion closing the oath begins with mna. Sometimes the intervening between the opening wa verse and the closing begin with fa- instead of ma, m in XXXVII, 1-4: "By those who dress the ranks, / By those who scare by shouting, / By those who recite the warning, / Verily your God is One" (Bell). The mg and the fa- in the intervening verses me be interpreted as conjunctions (see, e.g., Arberry's tr. of these two passages), but this seems to weaken the impact of the oath. Some wa/inna oaths have only two elements (e.g. XXXVI, 2 ff., CIII, 1 ff.), while others have several, including additional inne assertions, e.g. LI begins with a six-verse oath, the verses beginning with ea, fa-, fa-, fa-, inna-mā, wa-inna; and C has wa, fa-, fa-, fa-, fa-, inna, wa-inna, wa-inna (other variations occur in XLIII, XLIV, LII, LIII, etc.). A fairly typical example of walked oath occurs in the beginning of XCV: "By the fig and the olive, / By Mount Sinai, / By this land secure, / Surely We have created man most beautifully erect" (Bell)—with ww., wa, wa, la-bad. The ten-verse oath at the beginning of XCI, the longest in the Kur'an is also of this type, with ms, ms, ms, ms, ms, ms, ms, fs-, had, ms-had [the m before the asseverative particles in these examples is the conjunction "and"). Other types of oaths also occur in the Kur'an, e.g. the stronger is ultima bi-, "No! I man by", oath, at the beginning of LXXV: "No! I swear by the Day of Resurrection", also in LXXV, 2, XC, 1, and within other stress.

Related to the Kur'anic oaths are several other formulaic usages that are typical III soothsayer or prophetic utterances. One is the idia, "When", passage, which has the ____ force, if not the ____ meaning, as an oath. A good example occurs at the beginning of LXXXII: "When the heaven shall be rent, / When the stars shall be scattered, / When the seas shall be made to boil up. / When the graves shall be ransacked, / A soul shall know what it has sent forward, and what kept back" (Bell). The longest "when" passage is LXXXI, z-14, culminating in "A soul shall know what it has presented". See also LVI, tiff., LXXXIV, tiff., XCIX, etc. Other passages, especially at the beginning of some of the other shorter suras, feature rhetorical questions, such as "Have you seen him who denies the Judgment?" (CVII, I fl.; cf. XCIV, CV), or a modified type of curse or threat, such as "Woe to every maligner, scoffer, / Who gathers wealth and counts it over ... " (CIV, t ff.; ct. LXXXIII, t ff., to ff., CVII, 4 ff., etc. and a different type in CXI). This last example of • "Woe" (weyl) passage continues with another distinctive Kur'anic form, consisting of at least three verses the second of which is the rhetorical question wa-mā adrāka mā -----?, "And what has let you know what ---- is?"; mm XCVII, 1 ff., CI, 1 ff., CIV, a ff., and LXXXVI, t ff., which begins with an oath.

The fact that the Kur'an itself affirms that Mubammad was accused of being a soothsayer (kākin) suggests that his contemporaries saw similarity between what he recited and what they heard from the soothsayers. Bell identified five passages in the Kur'an as having "kākin-form": XXXVII, I-4, LI, I-6, and C, I-6, mentioned above, and also LXXVII, I-7, and LXXIX, I-14. But most of the Kur'anic oaths and related forms are more in the nature of prophetic than soothsayer utterances.

b. Sign-passages. Meccan and early Medinan parts of the Kur'an often speak of certain phenomena of nature and human life as "signs" (ayat) of God's omnipotence and benevolence towards man, calling for gratitude and worship of Him alone. Most often mentioned me the creation of the heavens and the earth, the creation or procreation of man, the shining of the sun, moon, and stars, the alteration of day and night, the sending of the rain, and the permanence and stability of nature. Thunder, lightning, fire, and other natural phenomena 🗪 also meationed, as are human understanding and relationships, the variety of languages and colours, hearing, sight, etc. The "sign-passages" treating these themes have no distinctive form, but an recognised by their content. An example of me early sign-passage is seen in LXXX, 24-32; "Let man look at bls food; / Lo, We have poured out water in showers, / Then have broken up the earth in cracks, / And have caused to sprout up in it grain, / And grapes and green shoots, / And olives and palms, / And orchards tuxuriant, / And fruits and berbage -/ A provision for you and for your flocks" (Bell). See also XXIII, 17-22, 78-80, LXXVIII, 6-16. An example of ■ late, more structured sign-passage is XXX, 20-5, which begins:

"And of His signs is that He created you of dust; then lo, you are mortals, all scattered abroad. / And of His signs is that He created for you of your own species spouses that you may dwell with them, and has set love and mercy between you. Surely in that are signs (ayat) for those who consider, / And of His signs is the creation of the heavens and the earth and the variety of your tongues and bues. Surely in that are signs for all living beings". The next three verses also begin with "And of His signs is" and the first two of these end with "Surely in that are signs for those who -----" ("hear" in verse 23; "understand" in 24). A similar sign-passage in XVI, 10-18, begins: "It is He who sends down to you out of heaven water of which you have to drink, . . . / And thereby He brings forth for you crops, and olives, and palms, and vines, and all of fruit. Surely in that is a sign (aya) for those who reflect". And a similar formula closes the next two verses. These last two examples are typical of most signpassages in consisting of separate sign-verses grouped together 🖮 no particular order; but they are somewhat unusual in having set introductory phrases and concluding formulas (cf. VI, 97-9, XIII, 2-4, XVI, 65, 67, 69, 79, XXXVI, 33, 37, 41, XLI, 37, 39, XLV, 3-5). The singular, dya, is used occasionally in sign-passages, either with one man treating one sign (as in XVI, 11, quoted above; also XVI, 13, 65, 67, etc.), or with two or more verses treating a single sign (XVI, zo f., 68 f., etc.). The plural, dyat, occurs much more often, usually with two or more signs mentioned in a single seem (as in XXX, 20-2, quoted above; also X, 6, 67, XIII, 3 f., XXX, 23 f., etc.). This analysis provides no clue as to how dys came to "verse". In many sign-passages that are otherwise like those cited above the term "sign" does not occur (e.g. VI, tet f., XIII, 12-15, XVI, 3-8, 80 f., XXX, 48-51, XXXII, 4-9). On the other hand, the term "sign" occurs many times in contexts that are not "sign-passages". IIII r.b above and Bell-Watt, 121-7.

c. Say-passages. Scattered throughout the Kur'an are a number of passages in which the main element is a short statement or question introduced by the imperative verb, "Say", usually the singular, kul, but occasionally the plural, killid. Most saypassages, i.e. the immediate contexts in which the Say-statements occur, have two main parts: (2) = statement - question indicating the setting, and (2) the say-statement, which is sometimes followed by a commant or two on I or 2. The setting statement occasionally involves Muhammad's followers, but usually is a report of something said or done by the unbelievers. One frequently occurring form is "They say: ... Say: ...", e.g. X, 20: "They say: 'If only a sign had been sent down to him from his Lord'. Say; 'The unseen belongs to God' " (see also II, 80, 91, 93, zzz, z35, etc.). Sometimes the setting statement has two or more parts, and the say-statement either has two more parts or is followed by one or comments. A good example of this more complex form is seen in X, 18: "They serve apart from God what neither injures them nor profits them, and they say: 'These are our intercessors with God'. Say: 'Will you inform God of what He knows not either in the heavens or in the earth?' Glory be to Him, and exalted be He far from what they associate with Him!" Here the setting statement has two parts, involving something the unbelievers do and something they say; and the say-statement, a rhetorical question, is followed by marise formula (cf. 11, 80-2). In X, I f. a praise formula, "Glory be to Him", and

a comment on the setting statement come between the "They say" and "Say" elements. Another common form is "They will ask you [Muhammad] Say: ... ", e.g. II, 220: "They will ask you about the orphans. Say: 'To set right their affairs is good'." Sometimes one kul introduces a question, and a second one an answer, e.g. VI, 12: "Say: 'To whom belongs what is in the heavens and the earth?" Say: 'To God . . .' " (also VI, 63 f., 71, etc.). Some say-statements are formulas that can be classified as maxims or slogans, e.g. "To God belongs the East and the West" (II, 142), "The guidance of God is the guidance" (II, 120, III, 73, VI, 71), "God guides to the truth" (X, 35), "Those who invent falsehood about God will not prosper" (X, 69), and "Intercession belongs to God alone" (XXXIX, 44), and some of these (e.g. the first two mentioned here) occur elsewhere in MI Kur'an. On maxims and slogans, see Bell-Watt, 75-7. Others are credal statements, e.g. II, 236: "Say (kala); "We believe in God and what has been revealed to us and what was revealed to Abraham ... and what Moses and Jesus received ... and to Him we have surrendered" (cf. XXIX, 46), Still others are prayers, e.g. III, 26 f.: "Say (Bul): 'O God, owner of sovereignty, Thou givest sovereignty to whom Thou wilt, and seizest sovereignty from whom Thou wilt . . . Thou bringest forth the living from the dead, and the dead from the living; Thou providest for whom Thou wilt without reckoning"." This last example is unlike the saypassages described above, since it is not preceded by a setting statement. Thus it is best classified with a second group of say-statements, some of which are in the first person singular and seem to be spoken by Muhammad, e.g. a group of four in LXXII, 20-8, beginning: "Say: 'I call only upon my Lord, and I do not associate with Him anyone', / Say: 'Surely I possess no power over you, either for hurt - for rectitude' " (Arberry); see also XXXIV, 36, 39, 46-50, CIX, etc. Other isolated say-statements occur in LXVII, 23 f., 28-30, CXII-XIV, etc., the first of these being two short say-statements in the form of the sign-passages. Say-passages and separate saystatements are often grouped together, e.g. VI, \$1-19, 56-8, 63-6, 161-4, and the groups mentioned above. d. Narratives. If the term "narrative" is taken in the broader sense to include any story or description of actual m fictional events, then many parts of the Kur'an can be classified as narratives. There is virtually no historical narrative, even though as mentioned above (see 5.a) there are many references and allusions to historical events. Most Kur'anic narratives are versions of traditional stories found in other Near Eastern cultures, which have been adapted to conform to the world-view and teachings of the Kur'an. Several versions of ancient Near Eastern myths and many mythic motifs occur. The creation of the world in six days and the Throne from which the universe is controlled are mentioned several times, as in VII, 54: "Verily your Lord is God, who created the heavens and the earth in six days, then seated Himself upon the Throne causing the night to cover the day" and the well-known "Throne verse", II, 255: "God, there is me god but He, the Living, the Eternal, Slumber overtakes Him not nor sleep His Throne extends over the heavens and the earth, and He is never weary of preserving them" (cf. X, 3, XXV, 59, XXXII, 4, and on the Throne, IX, 129, XIII, 2, XX, 5, XXI, 22, etc.). But there is no sixday creation story, and no account of what was

created on each day (a partial explanation is given

in XLI, 9-12; see Paret, Kommenter, 433). The seven

heavens are mentioned (XVII, 44, XXIII, 86, etc.), m is the Trumpet that signals the Last Day (VI, 73, XVIII, 99, XX, 102, etc.), but there are no stories or complete descriptions. Brief accounts of the iall of Iblis (Lucifer?), the fall of man, and the naming of the animals (not so specified) do occur (II, 30-9, VII, II-25, XV, 28-44, XVII, 61-5, XX, 115-26, etc.). There are several versions of the ancient Near Eastern shooting-star myth (XV, 16-18, XXXVII, 6-10, etc.), and several accounts of Neah and the Flood (XI, 36-48, XXV, 37, XXIX, 14 f., LIV, 9-17). which however is not a world-wide deluge.

The prophet stories, some of which are also punishment-stories, make up the largest category of Kur'anic narratives. The longest single story, which could be classified as a "short story", is that of Joseph, taking up nearly all 111 verses of Sura XII. It follows the Biblical account more closely than 📰 most Kur'anic stories, and it shows evidence of revision, including what appear to be two introductions. There are two parallel accounts of the births of John (the Baptist) and Jesus, III, 33-51 and XIX, r-36, which have some significant differences in details, reflecting the development of ideas in the Kur'an. Both accounts have elements from apocryphal Christian writings and oral tradition, e.g. Mary's stay in a convent or temple until the time of the conception of Jesus, and his miracles of speaking from the cradle and forming a bird out of clay that became alive when M breathed on it. Abraham, Moses, and Solomon have major roles in Kur'anlo narrative in that there are several different stories about each, as well as several versions of some stories. Also, there are non-Biblical stories about each of these three: Abraham destroying idols of his people (XXI, 51-72, etc.) and building the Katba in Mecca (II, 122-9, etc.), Moses and his servant on a journey (XVIII, 60-82), and Solomon building the Temple with the jinn and demons (XXXIV, 12-14, XXXVIII, 36-40) and dealing with his army of jinn, men, and birds (XXVII, 15-21). There was also stories about Adam and Noah (mentioned above) and Lot, Ishmael, David, Elijah, Jonah, and Joh; and several others are mentioned, including Isaac, Jacob, Elisha, Auron (in some Moses stories), Saul, Ezra, and Haman, who however is an associate of the Pharaoh. The heroes of these stories are generally referred to "mossengers" (rusul, sing. rasil), but sometimes = "envoys" (mursuidn, sing. mursui) or "prophets" (nabiyyan, sing. nabi). The latter seems to occur only in Medinau passages and is applied specifically only to Muhammad and certain "messengers" mentioned above from the Hebrew and Christian traditions, while the other two terms occur earlier and have broader usages. But in later parts of the Kur'an rassit and mabi are synonymous, although not exactly interchangeable. Note, for instance, the consistent usage, "God and His Messenger", but "the Prophet", for Muhammad throughout XXXIII. This no doubt explains why rusul occurs in the credal statements in 11, 285 and 1V, 136, which require belief in "His angels, His books, and His messengers (rusulthi)", while al-nubiyyin occurs in II, 177, which requires belief in "the angels, the Book, and the prophets". Among the non-Biblical characters, the most prominent are Hud, Salih, and Shu'ayb (see below), but there are also stories about Lukman, an Arabian sage (XXXI, 12-19), and Dhu 'l-Karnayn, generally regarded as Alexander the Great (XVIII, 83-08), and brief references to Dhu 'l-Kifl and Idrls (XIX, 56, XXI, 85, XXXVIII, 48), sometimes said to be Elijah and Enoch. The story of the Men of the Cave (XVIII, 10-26] is usually identified with the legend of the Seven Sleepers of Ephesus. On these stories, see the commentaries and Paret, Kommentar, ad loce.

Several forms are used indiscriminately for introducing prophet stories and some of the stories about non-Biblical characters, e.g. "Recite to them the story (naba) of ..." (V, 27, VII, 175, X, 71, XXVI, 69; cf. XVIII, 27, XXIX, 45); "We recite to you [Muhammad] part of the story (nobs?) of ..." (XXVIII, 3; cf. III, 38); "Has there come to you the story (hadith) of ...?" (XX, 9, LI, 24, LXXIX, 15, etc.); "Has there come | you the story (naba") of ...?" (IX, 70, XIV, 9, XXXVIII, 21, etc.); and "Mention in the Book . . ." (X1X, 16, 41, 51, 54, 56). All of these are addressed to Muhammad. Far more frequent - two simple forms, idb kdla, "(Recall) - said", said of Moses (V, 20, XIV, 6, XVIII, 60, XXVII, 7, etc.), Abraham (VI, 74, XIV, 35, etc.), Joseph (X11, 4), God (V, 110, 116, XV, 28, XVII, 61, XVIII, 50, etc.), and others, and wa-laked arsalna, "And We sent", said of Noah (XI, 25, XXIII, 23, XXIX, 14, etc.; cf. VII, 59), Moses (XI, 96, XIV, 5, etc.; cf. XXIII, 45), and others. Cf. icalakad ātaynā, "And We gave" (e.g. "And We gave Moses the Book") in XVII, 101, XXI, 48, 51, XXXI, 12, XXXIV, 10, etc.

One special type of Kur'anic narrative that made up a major part of the revelation during the Meccan years is the punishment-story, discussed above for its use of refrains and schematic form in some versions. Five punishment-stories stand out from 📟 others, those of Noah, Had and the tribe of 'Ad, Şâlih and the tribe of Thamud, Lot, and Shu'ayb and the people of Midian. And two others are prominent in some saras, the story of Moses and the drowning of Pharach's army, and the story of Arabhani rejecting the idols of his people. These seven occur together in XXVI, 10-191, and are mentioned together in XXII, 42-4. Fairly complete versions of some of these stories also occur | VII, 59-93 (all but Abraham and Moses), X1, 25-95 (all but Moses), XXXVII, 75-148 (only the Biblical ones), and LIV, 9-42 (all but Abraham and Shufayb). Shorter versions of some of these seven and references to these and some others (Jonah, IIII people of Sheba, the men of al-Rass, and the people of Tubba') occur in IX, 70, XIV, 9, XXI, 48-77, XXIII, 23-48, XXV, 35-40, XXVII, 7-58, L, 12-14, LI, 24-46, LIII, 50-5, LXIX, 4-to, and LXXXIX, 6-14. The "men of al-Hidir" in XV, 80-4, are probably the tribe of Thamud; the "men of the Grove" (XV, 78 f., XXVI, 176-91, etc.) seem to be identical with the people of Midian [see MADVAN SHU'AVE]; and "the subverted (cities)" (al-mu'tafihat) are most likely Sodom and Gomorrah, the cities of Lot. Thus these three are apparently variations of three of the seven. Most Western scholars have accepted the view of A. Sprenger (Laben, i, 462) and J. Horovitz (Koranische Untersuchungen, 26-8) that the term mathani in XV, 87 and XXXIX, 23 (see 1.b above) refers me the seven most prominent punishment-stories, since the first verse says "seven of the malhani and the mighty kur'an" have been sent down to Muhammad by God, and the second describes the Book sent down to Muhammad as having mathant "at which the skins of those who fear their Lord do creep", See Paret, Kommentar, 279 f., and Bell-Watt, 134 f.

The Kur'an also contains some parables, the longest and clearest one being the parable of the Blighted Garden in LXVIII, 17-33. Others include the parable of the man with two gardens (XVIII, 32-44), the good and corrupt trees (XIV, 24-7), and the

unbeliaving town (XXXVI, 13-32). Several other brief parables are little more than expanded similes, e.g. the fire at night in II, 17, the downpour in II, 19, the slave in XVI, 75, the dumb man in XVI, 76, the water and vegetation in XVIII, 45, the light of God in XXIV, 35, the master and his slaves in XXXIX, 29 (see Bell-Watt, 81). These parables have no standard form; some are introduced by the statement addressed to Muhammad: "And coin for them a parable" (ws 'drib lahum mathalan), e.g. XVIII, 32, 45, XXXVI, 13, others by the statement: "God has coined a parable" (daraba 'lishu mathalan), e.g. XIV, 24, XVI, 75, 76, 112, XXXIX, 29, LXVI, 10,

e. Regulations. The Kur'an provides detailed regulations on some aspects of the conduct of the Muslim community, and general instructions on others. No complete code of conduct or list of required duties is presented; each issue is treated separately, usually in several different places. The main religious duties are introduced in stages, and there are inconsistencies in some of the requirements. What follows are some examples that illustrate the nature and form of the various Kur'anic regulations, beginning with four that later became Aillow of International Community of the course of the second of the control of the second of the control of the control of the second of the second of the second of the control of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the sec

ning with four that later became Pillers of Islam. On the prayer ritual (salāt): "Observe thou [Muhammad] the Prayer (akimi 'I-salat) at the two ends of the day and the neighbouring parts of the night" (XI, 114; cf. XVII, 78 f.); "Remember the Prayers (palawat), including the middle Prayer, and stand [in worship] to God reverently" [11, 238]; "so recite what is convenient of it [the Kur'ān], and observe the Prayer (ahima 'I-salat), and pay the Zakāt, and lend to God m good loan" (LXXIII, 20); "verily the Prayer has become for the believers a thing prescribed for stated times" (IV, 203). On almsgiving (zahát, sadaka): "If you give alms (sadakát) publicly it well, but if you conceal it and give to the poor it is better for you" (II, 271); "Observe the Prayer, pay the zakās (āsu 'l-sakās), and obey the Messenger" (XXIV, 56); "The alms (sadakāt) are for the poor and the destitute, for the agents employed therein, for those whose hearts - to be won over, for the ransom of slaves, for the relief of debtors, for expenditure in the way of God, and for the follower of the way-an ordinance (farida) from God" (IX, 60). On fasting (slydm, saum): "O believers, fasting is prescribed for you (kutiba 'alaykum) it was for those before you . . . [during] the month of Ramadan

... It is allowable for you on the night of the fast to go in to your wives ... and eat and drink until so much of the dawn appears that a white thread may be distinguished from a black; then keep the fast completely until night" (II, 183.7). On the Pilgrimage (hadidi, 'umra): "Fulfil the pilgrimage (hadidi) and the visitation ('umra) unto God. ... If anyone of you is sick suffering from an injury to the head, then a compensation (fidya) by way of fasting or almsgiving (sadaha) or plous observance" (II, 196); "Safa and Marwa among the manifestations of God. ... it is no fault (disadh) if anyone makes the circuit of them" (II, 158).

These four religious duties are required of all Muslims only in Medinan passages dating from around the time of the battle of Badr or later. The saidt is mentioned in Meccan or early Medinan passages, but is required only of Muhammad, with the imperative verb in the singular, ahimi "saidt (XI, xx4, XVII, 78, XXIX, 45, XXX, 31, etc.). The term sakit in Meccan passages (XVIII, 81, XIX, 13) means "purity". Passages that me late Meccan me early Medinan say that earlier prophets instituted the

galdt and the sakit (X, 87, XIV, 40, XIX, 30 f., 34 f., XX, 14, XXI, 73, etc.), in recommend them to the Muslims as signs of plety (II, 177, XXVII, 1-4, etc.). Then in passages dating from the year 2 A.H. and later these two practices are required of Muslins, with the imperative verbs in the plural, as into II yalist and did 'I sakit (II, 43, IV, 77, 203, IX, 12, XXII, 78, XXIV, 56, LVIII, 13, LXXIII, 20, etc.). The Muslim fast was introduced in two or probably three stages in the Kur'an (see Wagtendonk, Fasting in the Koran, 42-127), and the pilgrimage was adopted in a Muslim ritual probably before Badr, but was not practised as such until the last years of Muhammad's life.

The form used most frequently for introducing and stressing regulations for the Muslim community is the plural imperative verb, seen several times in the examples given above and often elsewhere involving wariety of practices, e.g.: "O believers, when you stand up for the Prayer, wash your faces and your hands up to the elbows, and wipe your heads and your feet up to the ankles" (V, 6); "O believers, show plety towards God and abandon the usury that remains if you are believers" (11, 278); "O believers, when you contract a debt with another for a stated term, write it down" (fl, 28z); "Fight in the way of God those who fight you, but do not provoke hostillty" (II, 190); "Contribute in the way of God; hand not yourselves over to destruction, but do well" (II, 195), Sometimes negative commands are given, as in VI, x51: "Come, let me repeat what your Lord has forbidden you: do not associate anything with Him . . . do not kill your children because of poverty —do not draw near indecennies . . . do not kill the person whom God has made forbidden except with justification"; cf. XVII, 22-39. The expression Antiba falaykum, "prescribed for you is", seen in 11, 183, above on fasting, also occurs elsewhere, e.g. "O believers, retaliation in the matter of the slain in prescribed for you, the free for the free, the slave for the slave, the female for the female; so if anyone is forgiven anything by his [injured] brother, let him follow it with what is reputable, and pay with kindness" (II, 178), and "Prescribed for you, when death draws nigh to one of you, and he has goods to leave, is the making of a testament in favour of parent and relatives reputable—a duty resting upon those who show piety" (11, 180). And an expression having the opposite meaning, hurrimat 'alaykum, "forbidden to you is", also occurs, e.g. in IV, 23, and V. 3. Other forms and many other regulations occur. especially in the sares that are completely Medinan. Some of these passages be classified commandments or divine legislation; others are min the nature of religious instruction or exhortation.

f. Liturgical forms. While all of the Kur'an is recited in liturgical settings, only some parts are distinctly liturgical in form. By far the important part of the Kur'an for use in worship is the opening sars, the Fatika, a seven-verse prayer recited at least twice in each performance of the saids. Whether or not the Fatika [q.s.] was considered to \blacksquare part 🔳 the Kur'an during Muhammad's lifetime is uncertain. Prayers might seem out of place in a text in which God is the speaker, but others also occur, the best example being the prayer at the end of Sura II: "O our Lord, take us not to task if we lorget. or make ministake; O our Lord, lay not upon us a task such m Thou didst lay on those before us . . . Pardon us and forgive us, and have mercy upon us; Thou art me patron; so help us against the people of unbelievers" (Bell). Some prayers are also included within narratives, e.g. Abraham's prayer in XIV,

35-41. Exaltations, in which God is praised in the third person, occur more frequently; the best known of these is the "Throne verse", II, 255, mentioned in 7.d above for its mythic motif. The divine epithets mentioned in 6.c above m thyme phrases are also a type of praise formula, which however do not give the impression of being liturgical. Praise forms that do seem to have a liturgical purpose occur at the beginning of several Medinan saras. A sabbaka li 'llah tormula, "Magnifies God (sabbaha li 'llah) all that is in the heavens and the earth", occurs at the beginning of LVII, LIX, LXI, LXII and LXIV, three of which continue with "He is the Almighty, the All-wise". These five suras date mainly from the middle Medinan years, after the completion of the suras that begin with revelation formulas and the mysterious letters (see 4.d above). The liturgical setting of the sabbaha li 'llâk sûres is suggested by their introductions and conclusions. One might conjecture that the Friday prayer service was the occasion for the first recitation of these suras (see LXII, g-11), and possibly also those with the revelation formulas. Other praise formulas, which may may not have specifically liturgical functions within the Kur'an, include: the takmed, i.e. al-hamda li 'llak, "Praise be to God", at the beginning of I, VI, XVIII, XXXIV and XXXV, and in VII, 43, X, 10, XVII, 111, etc.; the tasbih, i.e. subhāna 'llāh, "Glory be to God", occurring with variations in XVII, 1, 93, 108, XXVIII, 68, XXXVI, 36, XXXVII, 180-2, XLIII, 82, etc.; and tabaraka 'lah, "Blessed be God", occurring with variations in VII, 54, XXIII, 14, XXV, 1, 10, 61, XL, 64, XLIII, 85, LV, 78 and LXVII, t.

Others: The Kur'an contains other distinctive literary forms and themes that can be mentioned only briefly here. Especially important in Meccan parts of the Kur'an are a large number of dramatic scenes, usually involving death, the Last Judgment, the pleasures of paradise (al-dianna = the garden), and the tortures of the heliffre (see the O'Shaughnessy arts. In Bibl.). Dramatic scenes constitute the main Kur'anic form for treating these subjects, which are nowhere fully or systematically explained, and they also occur frequently in narratives, reflecting the oral qualities of these Meccan parts of the Kur'an (see Bell-Watt, 80 l.). There we also many addresses on a variety of topics. Most Meccan ones treat theological topics-the signs of God, messages of earlier prophets, etc.-and thus can be classified as sermons. Early Medinan ones are often addressed to the Jews, either as the Children of Israel - People of the Book. Later Medinan ones, usually addressed "O believers", but sometimes "O children of Adam" or "O people", treat specific legal, political, and military matters as well in general religious, moral, and social themes. Another special type of material found in both Metcan and Medinan parts of the Kur'an involves Muhammad's personal situation. Many Meccan passages addressed to Muhammad bring comfort and encouragement in times of persecution, instructions on religious practices, etc. Some Medinan ones, addressed "O Prophet", give special marriage and divorce regulations. Others are addressed to Muhammad's wives or otherwise treat his family problems (see suras XXIV, XXXIII, LXVI).

8. THE KOR'AN IN MUSLIK LIFE AND THOOGHT

For Muslims the Kur'an is much more than scripture or sacred literature in the usual Western sense. Its primary significance for the vast majority through the centuries has been in its oral form, the form in

which it first appeared, as the "recitation" (\$ur'ān) chanted by Muhammad to his followers over a period of about twenty years (on its liturgical function during Muhammad's lifetime, see VII, 203-6, LX XIII, 20, LXXXIV, 20 f., etc.). The revelations were memorised by some of Muhammad's followers during his lifetime, and the oral tradition that was thus established has had a continuous history ever since, in some ways independent of, and superior to, the written Kur'an, During the early centuries when the written Kur'an was limited to the scriptic defective of the period (see 3.c above), the oral tradition established itself in the standard by which the written text was to be judged. Even when the Egyptian "standard edition" was prepared in the early 1920s, it was the oral tradition and its supporting kird'at literature (rather than early Kur'an mas.) that served = the authority for determining the written text. Through the centuries the oral tradition of the entire Kur'an has been maintained by the professional reciters (farrd') (on Kur'an reciters in Egypt, see M. Berger, Islam in Egypt today, Cambridge 1970, TT-13, 37-43, and for 📰 oral tradition in general, Labib al-Said, The recited Koran, see Bibl.), white all Muslims memorise parts of the Kur'an for use in the daily prayers. Until recently, the significance of the recited Kur'an has seldom been fully appreciated in the West.

The Kur'an also had a central role in the theological debates of the early centuries, and it has continued to be one of the most controversial issues in Islamic theology, Since the Kur³an 📟 🚻 to consist of messages brought from God to Muhammad by Gabriel, and since God is the "speaker" in these messages, it was natural for Muslims to think of it as God's speech (kalam). About the time of Harun al-Rāshid, theologians began to discuss whether or not the Kur'an was created. Among those who maintained that it was were the Muttazila, including some who had positions in the court of al-Ma'mûn. Convinced by their arguments, and also thinking that adoption of the doctrine would be politically beneficial, al-Ma²man in 218/833 established the mièna [q.v.] or "inquisition", in which most leading officials were obliged to profess publicly that the Kur'an was created. Nearly all submitted but a few refused, notably Ahmad b. Hanbai (d. 241/855) [4.0.]. In 234/848, shortly after the accession of al-Mutawakkil, the milina was abandoned, probably because its political results were disappointing. Up through the time of the milina the issue seems to have been whether the Kur'an was the actual speech of God or was created. Those who accepted the latter view, arguing that God "has never spoken and does not speak", were called by their opponents the Plahmiyya [q.v. see also Watt, Formative paried, 143-8]. Then Iba Hanbai argued that the Kur'an is part of God's knowledge (9lm), and after the minns he accepted the expression "uncreased" (ghayr makhlide) as a description of the Kur'an. This led to the formulation of the doctrine that it is eternal (and/m), argued for by al-Ashfari (d. 323/935) (q.v.) and others. Although this became the standard Sunni view (see, e.g. the 4th/10th century Banasi creed called by Wensinck Fight Abbar II, art. 3), it has not been accepted by all. The Hanball theologian Ibn Taymiyya (d. 728/1328) [q.v.], for instance, disavowed this view, arguing that the question of the eternity or temporality of the Kur'an men not an issue before the time of Ibn Hanbal, and that in affirming the uncreatedness of the Kur'an the "plous ancestors", including Ibn Hanbal, never meant to assert its eternity. It should also be noted that meet the expression ghayr makhlik does not occur in Muslim creeds until after the milns (see, e.g. Wensinck, Muslim Creed, 103 f., 127, 189) and that the early discussions and creeds do not mention the Kur'anic expression "preserved tablet" (lawh mah/mg) (see LAWH) in LXXXV, 22, and "mother of the Book" (umm alkitāb) în III, 7, which only later were to be interprefed as referring to a heavenly archetype of the Kuran in support of the doctrine of its eternity. See W. Madelung, The origins of the controversy concerning the creation of the Koran, in Orientalia Hispanica, Leiden 1974, I, 504-25; W. M. Walt, Early discussions about the Queran, in MW, x1 (1950), 27-40, 96-205; idem, Formative period, 178 f., 242-5. 280-5, 293; J. Bouman, The doctrine of 'Abd al-Djabbar on the Qur'an as the created word of Allah, in Verbum, the H. W. Obbink Fesischrift, Utrecht 1964. 67-86; H. Stieglecker, Die Glaubenslehren des Islam. Munich 1962, 75-83. For an outline of the views of the various schools in the Kur'an in the halden Allāh, see Kalām.

Parallel to the development of the doctrine
the eternity of the Kur'an there also arose the dogma of its inimitability (i'dida) [q.v.]. From the beginning, the Kur'an had been seen as "sign" (dya) or "proof" (bushis) of Muhammad's prophethood. This belief took a more precise form in the teaching that each prophet was given a verifying miracle (muddiss), and that the Kur'sn was Muhammad's; the term i'dils, it should be noted, still had not received its technical meaning as late as the time of Ahmad b. Hanbal (see Tor Andrae, Die Person Mukammad in Lehre und Glaube, Uppsala 1917, 101). Early discussion of the it fide of the Kur'an centred around the concept of takaddi or "challenge", based largely on several verses of the Kur'an (II, 23, X, 38, XI, 13, XVII, 88, etc.). The failure of Muhammad's contemporaries to take up the challengs to produce even one sara like those he recited was taken as proof that it was impossible. This argument was then supplemented by the concept of sarfa (lit. "turning away"), meaning that God prevented the competent from taking up the challenge. In one of the earliest treatises devoted solely to i'diaz, 'Ali b. 'Isa al-Rummani (d. 384/944) mentioned both of these arguments along with several others, involving the eloquence of the Kur'an, its prophecies of future events, its establishment of new literary forms and style that surpass all others, etc. Hamd b. Muhammad al-Khattabi (d. 388/998) in his al-Bayan fi i'dian al-Kur'an (see Bibl.) stressed the rhetorical eloquence of the Kur'an, and al-Bāķillānī (d. 403/1013) in the most famous work - the subject (see Bibl.) rejected the sarfa argument and compiled what he regarded as empirical evidence of the Kur'an's superior style. He also argued that since Muhammad illiterate, he could not have read other scriptures or written down stories told by human informants, and thus Kur'anic reports of past events and prophecies of future events are further proof of the miracle of the Kur'an and its divine source. For summarles of the development of these views see Ithan, ii, 116-25; Abdul Aleem, I'jam'l-Qur'an, in IC, vii (1933), 64-82, 215-33; J. Bouman, Le conflit autor du Coran et la solution d'al-Băgillâni, Amsterdam 1959; H. Stieglecker, op. cit., 371-408; and art. 15 milz. The standard modern work on the subject is that of Mustala Sadik al-Rătiq (see Bibl.).

The doctrines of the eternity and perfection minimitability of the Kur'an contributed to its extensive influence throughout Islamic life and culture.

It became the first "source" (asl) of Islamic law, the Short's, which also came to be regarded as eternal (cf. the Torah in Jewish belief). Its grammar became standard for later Arabic, which replaced other languages across the Near East and North Africa (among Christians and Jews - well - Muslims), and its script came to be adopted in Persian, Turkish, Urdu, and other languages. Verses of the Kurlan became the main subject of Islamic calligraphy and one of the main decorative motifs of Islamic religious art and architecture, as a substitute for statues and pictorial representation. At the same time, these two doctrines have been the strongest factor working against the acceptance of critical studies of the Kur'an within the modern Muslim community. In the early conturies, Muslim scholars studied the Kur'an as literature and as a historical source, analysing its grammar, style, pootic imagery, etc., and attempting to determine its chronology, development of ideas, and historical sottings. But the widespread acceptance of belief in the eternity and i'diaz of the Kur'an has made modern Muslims loath to accept methods of historical and literary criticism that have proved so fruitful in the study of other scriptures. To a certain extent this is understandable to Christians, since the development of the doctrines of the eternity and i'dide of the Kur'an is parallel to the development of the doctrine of the Trinity, and the closest analogue in Christian belief to the role of the Kur'an in Muslim belief is not the Bible, but Christ. Thus the difficulty Muslims have in adopting a critical approach to the liur in is comparable to the difficulty many Christians have in accepting a critical view of the life of Jesus (e.g. regarding his virgin birth and resurrection). But this should not prevent critical analyses of the Kur'an, which is after all still a literary work of supreme importance and invaluable historical document.

Bibliography: (besides works cited in full in the text and those in the list of standard abbreviations): al-Mushaf al-sharif. m al-Kur'an al-karim. 9. TRANSLATION OF THE KUR'AN

a. The orthodex dectrine concerning translation. In the time of Muhammad it is certain that nobody had considered the possibility that the Kur'an might be translated either = whole or in part into a foreign language. It was revealed expressly as an "Arabic Kuran" (Sûra XII, 2) XX, 113; XXXIX, 28; XLI, 3; XLII, 7; XLIII, 3), in "clear Arabic language" (XVI, 103; XXVI, 195; of, XLVI, 12), that the Prophet through it might "warn the capital (i.e., Mecca) and the people in its surroundings" (VI, 92; XLII, 7). was not originally intended for non-Arabs. It was only as a result of the spread of the Arabic Islamic conquests that the sphere of influence of the Kur'an was extended to territories outside the Arabic-speaking world. The Persians and other non-Arabs who embraced Islam were obliged, in the same way me their genuinely Arab fellow-believers, to recite in the ritual prayer the Fatiha and several other texts from the Kuran. The question thus whether they should be permitted to recite the texts | question in their native language instead of in Arabic. In m far m Muslims from the non-Arabic-speaking territories were interested in getting to know not only the texts used in the prayers, but also other parts of the Kur'an, or the whole of the Kur'an, there were the further question whether this might be achieved with the help of a translation.

The theologians and jurists who had to decide on this matter in general adopted a rigorous attitude. With regard to the recitation of the Fatiba in the ritual prayer, the Malikis, Shafi'ls and Hanbalis insisted that the text must be spoken in Arabic, In a casa where the person praying could not recite the Fatiha in Arabic, he must substitute for it another passage from the Kur'an, or observe a silent pause, or repeat the name of God for the same length of time. On the other hand it is reported that Abd Hanlfa had originally declared that the recital of the Fatiha in Persian was permitted without reservation; he later restricted this concession to those worshippers who were unable to speak Arabic. This then became the general rule for the Hanafi school. In similar circumstances other non-Arabic languages besides Persian might be employed. As for the production and use of translations of the whole of the Kur'an, the attitude of the scholars was that a "translation" of the Kur'an in the true sense of the word was not possible. They based their attitude mainly on the argument that the wording of the Kur'an is a miracle (mu'dica) incapable of imitation by man. This characteristic would be invalidated in a translation into a foreign language. since this would be made by man. Furthermore, the scholars maintained that a translation of the Kur'an which was both literal and at the same time true to the meaning was not possible. They conceded, however, that a so-called translation (tardjama) in the sense of a commentary (tafsir) might be used, on the assumption that the text of the original was not superseded by this. Thus manuscripts of the Kur'an might be provided with an interlinear (quasi-)translation. In more recent times this was extended to the printing of the translation (as commentary) beside the Arabic text. This is the practice which remains usual for translations made by Muslims.

The question whether in the ritual prayer texts from the Kur'an may be recited in a non-Arabic language and whether the production and use of translations of the Kur'an should permitted became once again acute when in Turkey in the nineteen-twenties the authorities proceeded "nationalise" the ritual prayers and to publish Turkish translations of the Kur'an not accompanied by the Arabic original. Authoritative theologians found themselves induced once again to explain and to justify the orthodox standpoint by reference to earlier authorities.

The first statements were mainly of a polemical and negative nature. In the course of time, however, there prevailed a more circuical judgement on the matter. Thus the Hanafi scholar of al-Azhar, Muhammad Mustafā al-Marāghī, in a thorough investigation first published in 1932, adopted the attitude that for a Muslim without m knowledge of Arabic the recital of the Kur'anic texts prescribed for the prayer in an appropriate translation was absolutely obligatory (wadjib). The important thing in the prayer is the meaning of the text, not the character of the i'didz. The true is, however, transmitted through a translation. Furthermore, it is not realistic to require the great mass of Muslims from the non-Arabic-speaking territories to learn Arabic on account of the Kur'an. It is much more desirable and indispensable (according to Mahmüd Shalfut, even obligatory) for them to use translations, quite apart from their use in the prayer. The thesis that the Kur'an in translation ceases to be the Word of God (kalām Allāh) is, according to Marāghi, valid only with reservations. The translation does not simply represent human speech (haldm al-nds), for although it does not contain the Word of God literally, yet its content consists of the meaning of God's Word.

b. Translations into specific languages. The Kur'an has been translated into most of the languages of Asia and Europe, and into some African ones. A Persian translation is said to have been made during the time of the Orthodox Caliphs by Salman al-Farisi, a Companion of the Frophet; one into Berber in 127/744-5; and a Sindhi one in 270/883-4; but none

of these survives.

Zweiner, Translations of the Koran, in MW, v (1915), 244-61; W. S. Woolworth, A bibliography of Koran lexts and translations, in MW, xvii (1927), 279-89.

1. Persian and Turkish. One of the oldest

surviving works in the Persian language is the translation of the large Arabic tafsle of Tabari (d. Baghdād 310/923), which was made for Abû Sālib Mansur b. Nüh, Sämänid ruler of Transoxania and Khurāsān (350-66/961-76). The precise date is not recorded, but the Persian preface explains how it came to be made. Abu Şalib, after questioning his 'wisma' about the legality of translation of the Holy Book into Persian, decreed that this should Mi done by learned men from the cities of this realm. Several MSS. are mentioned by Storey, the earliest, at Rămpūr, being dated ≀ss. 600/1203-4. There is ■ Persian translation in Roman characters in the Vatican.

Possibly not much later is the Persian text, translation and commentary, copied (and perhaps composed) by one Muhammad b. Abi 'l-Fath in 628/2231, which is preserved at Cambridge and described by

Storey lists 48 dated transletions and communita-

ries, and in an appendix, 74 titled or quasi-titled commentaries, as well as a selection of I miscellaneous unidentified commentaries and specimens of the numerous translations to be found in Persian, Indian and other MS, collections, and lithographs.

The Bregel-Borshčevsky Russian translation of Storey (Persidskaya literatura, Moscow 1972) records earlier MSS, of the Tabari translation (Bursa 552) 1166-7 and end of 6th/12th century), well as some 250 other translations and commentaries.

The Persian translation of Tabart's commentary was the basis for the first Turkish version, which Togan regards as its contemporary, but which Inan places in the first half of the 5th/11th century.

There are said to be over 70 translations into Turkish made from at least the 4th/xxth century onwards, existing in many hundreds of MSS, in public and private collections, and these have frequently been printed. These are in various forms of the Turkic languages, Eastern and Western, and in the Uyghur and Arabic scripts and in Roman characters, with at least four transliterations into Modern Turkish of the Arabic text.

Bibliography: E. G. Browne, Description of an old Persian commentary on the Kur'an, in IRAS (1894), 417-524; A. Bodroligeti, The Persian translation of the Koran in Lavin letters, in Acta Or. Hung. xiii (1961), 261-76; Zeki Velidi Togan, The cartiest translation of the Quran into Turkisk, in Islam Tethihleri Enst, Dergisi, iv (1964), 1-19; Abdülkadir Inan, Kur'dn-i Karlm'in türkçe tercümeleri üzerinde bir inceleme, Ankara 1961; J. K. Birge, Turkisk translations of the Koran, in MIV, xxvlil (1938), 394-9; J. Eckmann, Eastern Turkic translations of the Koran, in Studio Turcica, ed. L. Hamidullah, Kur'an-i Kerim lariki ve türkçe teretimeler bibliyografyası, İstanbul 1965.

2. Indo-Pakistani languages. Of the many Urdu versions, the earliest are said to have been made by Shah 'Abd al-Kadir [q.v.] and Shah Rafit al-Din, each of them mucle of the celebrated preacher and scholar Muhammad Isma'd Shahid [see ieni'il shaitid]. The British Museum Hindustani catalogue lists innumerable examples, including versions made by Christians and printed in Roman characters. Details also be found in the bibliographies of the Andjuman i tarakki-yi Urdû Pakistân (i, Karachi 1961) and of 'Abd al-Sattar Chaudhari (1974).

In the other Indo-Aryan and Dravidian languages, there are versions in Assamese, Bengali (innumerable; a 1908 version by Rev. Wm. Goldsack of 1908 is Illustrated in MW, v (1915), 254-5), Gujarati, Hindi, Kashmiri, Marathi, Oriya, Panjabi (often combined with Persian version and the Arabic text), Pashto, Sanskrit (Chauvin, x), Sindhi (surveyed by A. M. Schlimmel in Oriens, xvi (1963), 224-43), Sinhalese; and in the Dravidian languages, Malayalam, Tamil and Telegu.

3. South-East Asian. There are many translations into Malay and Indonesian mentioned in the catalogues and bibliographies, and into other Indonesian languages (Sundanese, Javanese, Macassarese and Buginese). A Burmese version with the Arabic text, by one Hādidjī Nūr al-Dīn known as Hādidjī Lū, published in 1938, may be found in the British Library (BM. Arab. cat., and suppl.), while Tinker mentions that a project to translate the Kur'an into

that language was initiated by U Nu while Prime Minister in 1955. Two translations into Thai (one with Arabic text) of 1968 and 1971 are in the Wason Library at Cornell University.

APL BURMA.

4. Far Eastern [Chinese and Japanese]. Several 19th and 20th century works contain selections in Chinese, sometimes with commentary. A MS. believed m date from about 2800 in the School of Oriental and African Studies, London University, gives "pieces from the Koran and prayers transcribed from the Arabic original in Chinese sounds", Translation into Chinese was recommended by Sakuma. a Japanese businessman and convert to Islam who, in 1925, founded the progressive but short-lived newspaper Mu Alang. Another source says that in that year a complete translation was under consider. ation by the International Muslim Association. The British Museum has a Kuo-yii ku-lan ching, with commentary translated from English versions by Shih Tzu-chou and others (Taipei 1958).

Japanese versions by Toshihiko Izutsu and Tanaka Shiro were published in several editions in the nine-

teen-fiftles, sixties and seventies.

Bibliography: Un commentairs chinois du Coran, in RMM, iv (1908), \$40-7; I. Mason, Notes on Chinose Mohammadan literature, in J. North China Branch RAS, lvi (1925), 172-215; R. A. Syrdal, Christ in the Chinese Koran, in MW, xxvii

(1937), 72-83.

5. Non-Islamic Near Eastern Languages. Three manuscripts of Hebrew translations exist (in Oxford, Cambridge and the Library of Congress), the first two made from the Italian of Arrivabene, the third from the Dutch of Glazemaker. All of these predate the translation of Hermann (Hayyim) Reckendorf, Leipzig 1857, made direct from the Arabic. Two further translations have since appeared: by Joseph Joel Rivlin (Tel Aviv 1936-41, 1963) and by Aharon Ben-Shemesh (Ramath Gan 1971).

Quotations from the Kur'an, in Syriac, appear mappelemical work against Jews, Nestorians and Muslims by the West Syrian writer Barsailbi (d. 1171), which exists in a manuscript now in the John Rylands University Library in Manchester, and in another in the Harvard University Semitic Museum. It is doubtful if a complete Syriac translation ever existed.

In the Bhopal State Library is to be found a Kur'an in classical Armenian, translated from the Latin by Stephanos of Ilov, a monk of Echmiadzin. This MS., in a "simply perfect calligraphy", lacks title-page and date but is thought to be of the first half of the 17th century. A printed translation, with a life of Muhammad, by Leron Larenc', made from the French versions of Savary and Kasimirski, was published in Istanbul (pt. 3 in 1912).

A Georgian version (Tiffis 1906) is in the Wardrop

Collection in the Bodleian Library.

Bibliography: M. M. Weinstein, A Hebrew Qur'dn manuscript, in Studies in bibliography and booklore (Cincinnati), x (1971-2), 19-43: A. Mingana, An ancient Syriac translation of the Kur'dn, in Bull. John Rylands Libr., in (1925), 188-235, and repr.; J. Rendel Harris, The new and of the Kur'dn, ibid., x (1926), 219-22; Mescob J. Seth, A manuscript Koran in Classical Armenian, in JASB, N.S. xix (1929), 291-4.

6. African languages. There are three trans-

lations of the Kur'an into Swahili: Christian, Ahmadl and Sunni Shafi's. The earliest, made by Godirey Dale, missionary with the Universities Mission for Central Africa, was published by the S.P.C.K. in London in 1923. It contains meet 700 masloso (explanatory comments or notes) by Dale or his colleague, G. W. Broomfield.

The Ahmadi version (Nairobi 1953, 1971) was made by Shaykh Mubirak Ahmadi, chief missionary of the Ahmadiyya Muslim Mission in East Africa, while the Sunni Shāifi version, by Shaykh Abd Allah Sālib al-Fārsi, was published in fascicules between 1976 and 1962 at Zanzibar, in a one-volume edition in Bangalore (1949), and by the Islamic Foundation at

Nairobi in 1956.

Other African-language versions exist in Yoruba (Rev. M. S. Cole, Lagos 1924), Ganda (Uganda Ahmadiyya Muslim Missiun, 1963) and Amharic (Artistic Press, Addis Ababa, 1964). Possible versions in Berber are discussed by Henri Basset, — Bibl.

Bibliography: H. Basset, Essai sur la littérature des Berbères, Algiers 1920, 63-4; G. Dale, A Swahili translation of the Koran, in MW, xiv (1924), 5-9; V. Monteil, Un Coran ahmadi en Swahili, in Bull, IFAN, xxix, B (1967), 479-95; J. D. Holway, The Qur'du in Swahili; three translations, in MW,

lxi (1971), 102-10.

7. European languages. The Latin paraphrase made by Robert of Ketton at the behest of Peter the Venerable, abbot of Cluny, and completed in 1143, exists in the autograph of the translator in the Bibliothèque de l'Arsenal in Paris. Robert is said to have been "always liable to heighten or exaggerate a harmless text to give it a nasty or licentious sting, a to prefer an improbable but unpleasant interpretation of the meaning to a likely but normal and decent one" (N. Daniel, Islam and the West, the making of an image, Edinburgh 1960, 🚃 Index, s.v. Ketton). The work of Robert formed the basis for several mediaeval varsions, but was apparently unknown to another early translator, Marc of Toledo. It was recopied in the 17th century by Dominicus Germanus, whose work exists in Montpelier, the Escurial and elsewhere, and published in the Cluniac corpus, together with various other works of Christian propaganda, by Theodor Bibliander (Buchmann) in three editions at Basel in 1543, and one at Zürich in 1550 containing a preface by Martin Luther,

The first translation in modern European language was the Italian version of Andrea Arrivabene, published in 1547. Though its author claims that it is made directly from the Arabic, it is clearly a manual lation map paraphrase of Robert of Ketton's text as published by Bibliander. Arrivabene's version was used for the first German translation made by Solomon Schweigger, preacher at the Frauenkirche in Nürnberg, which in turn formed the basis of the first Dutch translation, made anonymously and

issued in 1641.

The first French version by André du Ryer, "Sieur la Garde Malezais", came out in a great many editions between 1647 and 1775. All editions contain "summary of the religion of the Turks" and other documents. This gave rise to the first Koran in English by Alexander Ross, and also fathered versions in Dutch (by Glazemaker), German (Lange) and Russian (Postnikov and Veryovkin).

The second Latin version was made directly from the Arabic text by Ludovico Marraci (or Marraci), published first in 1698 and secondly, with additions and annotations, by Reineccius in 1721. It was

translated into German by Negreter,

The 18th century brought translations made directly from . Arabic original by Sale into English (first published in 1734), Savary (French, 1751) and Boysen (German, 1773). Sale's version was in vogue in the English-speaking world for nearly two centuries: his renowned preliminary discourse, based, according to Nallino, on Marracci and Edward Pococke senior, was translated into several European languages. It - even translated into Arabic by Protestant missionaries in Egypt.

Savary's version was, according to Chauvin, evidently made from the Latin of Marracci; it bears the distinction of having been published in Mecca in A.H. 1165 (or so the title-page of one edition states!). Kasimirski, whose translation has also had a long run, and indeed like that of Savary, is still being republished in our own time, was requested by Pauthier to revise Savary. He preferred, however, to make a new translation directly from the Arabic while consulting the works of Marracci and Sale.

Throughout the 19th century, the translations were mormally made without remove from the Arabic. In the 20th century, the first English versions made by Muslims appear, and the Ahmadiyya movement began to issue the Kur'an text with translations into European and even African languages. In recent times translations have been made by many of the most prominent Arabists and Islamic scholars into all the main languages of Europe, undeterred by the dictum of A. Fischer that only second or third-grade scholars dared to undertake this task.

(J. D. PEARSON) al-KÜRÄNİ, İBRAHİM B. AL-Shahrazüri al-HASAN SHAHRANI, AL-MADANI (1023-1101/1615-90), scholar and mystic, born in Shahrazer in the mountains of Kurdistan on the frontiers of Persia. studied first in Turkey, then in Persia, "Irak, Syria and Egypt before settling in Medina. In one of his works, Masālik al-abrār ilā ķadī<u>tk</u> al-nabī almuhhtar (Ms. Dar ai-Kutub, Cairo, Tal'at ff. 55-6), he refers to a period of 3 months at the Arbar in 2061/2550, where he studied with Shaykh Nur al-Din 'Ali b. 'Ali al-Shabramallisi, Imam of the Azhar until 1087/1677, the whole Taysir fi 'l-bira'at al-sab' attributed to al-Kurtubl, and with Shayhh 'Abd al-Rahman Shihadha al-Yamani the Tayribai al-nasht fi 'l-hird'di al-'asht of al-Diazart up to Sura IV, ex, fa-hayfa idhā dji'nd min hulli ummatin bi-shahldin, after which he travelled to Baghdad where he spent a year and a half. He was a member of several furuh, the most important among them being the Nakshbandiyya. In Medina, he was a student of al-Kush-àshi and succeeded him as head of his fariha on the former's death in 1071/1661.

He was a prolific author in various of the Islamic disciplines, and wrote on figh, toubid and tosourcuf. He was one of the last great exponents of the school of 1bn 'Arabl, and is of particular interest because of his and of the techniques of scholastic theology in his Ithaf al-ghakt bi-sharh al-tuhfa al-mursala ild "l-nabl (edition in preparation) in order to explain and defend the monistic tradition of Ibn 'Arabl. Yet despite his commitment to the Ibn 'Arabl tradition, he was by nature a conciliator, arguing that it me preferable to reconcile two opposing points of view than to choose one of them or the other. This did not save him from condemnation by the followers of al-Sanusi in Fas for his Kadariyya learnings on the question of hash, and for Muftazill influence in his views on the material character of non-being as well as for his views on the feith of Pharach, and his assertion of the historicity of and explanation of the so-called "Satanic verses" allegedly interpolated into Kur'an, LIII, 21.

Other Moroccans, however, thought highly of him and of his humifity and learning. He was esteemed by foreign students in the Hidiaz and was well-known among Indian scholars. He had an important influence on the development of Islam in the region now known as Indonesia because of his special relationship with the Achehnese 'Abd al-Ra'of of Singkel [q.v.] and with succeeding generations of Javan students referred to in the Faud'id al-irtifial wanată idi al safar of Muștefă al-Hamwi (Ms. Dâr el-Kutub, Tarikh 1093, Il. 166-7). His association with 'Abd al-Ra'ul was particularly close. They were friends in Medina, they corresponded across the Indian Ocean for thirty years after 'Abd al-Ra'uf returned to Acheh in 1071/1661, and 'Abd al-Ra'us made renderings of some of his works in Malay.

The number of works attributed to him ranges from forty-two (Brockelmann, s.v.) to over a hundred, only two of which have been published, sc. al-Lum's al-saniya and al-Amam li-life; al-himam (see Bibl.). The former in a brief treatise on the "Satanic verses", for which some of the Moroccans condemned him; the latter is a most interesting and important work, setting out in detail his intellectual credentials as a teacher.

KURAYBIYYA or, more commonly, KARIBIYYA the name of a subsect of the Kaysaniyya [q.v.] derived from its otherwise unknown leader Abû, more rarely Ibn Karib (or Kurayb, Karnab) al-Daris.

The heresiographical manus agreed that Abū Karib denied the death of Muhammad b. al-Hanaliyya, the Imam and Makdi of the Kaysaniyya. It is thus evident that he was active immediately after the death of Ibn al-Hanafiyya in 81/700 and probably played m major rôle in promoting Messianic ideas about him among the Kaysaniyya. The sources disagree, however, in regard to other points of his teaching. The Mu^etazill and Sunni sources attribute to him the belief that Muhammad b. al-Hanafiyya was alive hidden in the mountains of Radwa near Medina, guarded by a lion on his right and a leopard on his left and provided with food in the morning and the evening, until the time of his reappearance. Some of Abit Karib's followers held that Ibn al-Hanafiyya was punished by God with confinement in the Diabal Radwa because of his voluntary submission to the caliph 'Abd al-Malik. In the account of these sources, Abû Karib appears as the founder of what became the mainstream of the Kaysaniyya expecting the return of Muhammad b, al-Hanafiyya, and whose views were later expressed in the poetry of Kuthayyir [q.v.] and al-Sayyid al-Himyari [q.v.].

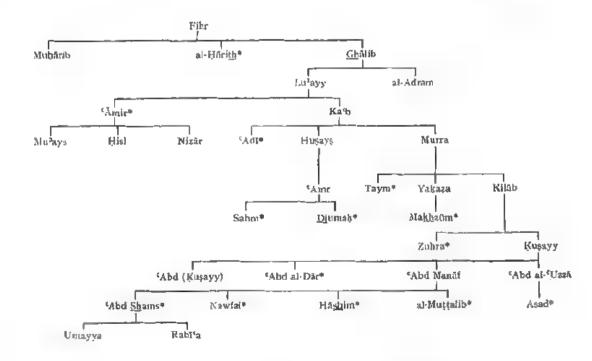

According to the Shift sources, on the other hand, Abn Karib and his followers asserted that the place where Muhammad b. al-Hanafiyya was concealed could not be known and they were distinct from those who believed that he was hiding in the mountains of Radwi. They maintained that 'All had named him the Makdi. Abû Hātim al-Rāzī adds to this that Abû Karib considered Ibn al-Hanafiyya the immediate successor of 'All in the imamate and opposed those who upheld the imamate of al-Hesan and al-Husayn before him. This view was in conflict with the position of the majority of the Kaysaniyya, expressed In verses by Kuthayyir, that the three sons of 'All were consecutively Imams and al-Makdist, representing the Mu'tazill account, expressly states that Abu Karib (Ibn Karnab) considered al-Hasan i the Imam after 'All. According to al-Nawbakhu, the extremest Shif Hamza b. Umāra al-Barbari of Medina was originally a follower of Abû (Ibn) Karib, and among Ramza's early supporters in Küfa were Bayan b. Sam'an [q.v.] and \$3'id al-Nahdi. The Karibiyya and all its extremist offshoots claimed that they would return to life at the time of the reappearance of Muhammad b, al-Hanafiyya. According to the account of the Mutazin Abu 'l-Kasim al-Balkhi, on the other hand, the doctrine of return (radj'a) was first taught by Hayyan al-Sarradi who, in contrast to Abū Karib, believed that Muhammad al-Hanafiyya had died and would return to life. While there is no external evidence supporting either of the two groups of sources, the Shiff sources, providing more specific details, appear to be generally better informed.

KURAYSH, the tribe inhabiting Mecca in the time of Muhammad and to which he belonged: the name, which may be a nickname, is mostly (e.g. Ibn Hisham, 61) said to come from takarrush, "a coming together, association"; but it is also possible (cf. Tabari, i, 1104) that it is the diminutive of birsh, "shark", and it could then be a totemic name like Kalb, etc. (A man called Kuraysh, other than Fibr. is mentioned in Nasab Kutaysh. 12.7-0.) The tribe is taken to consist of the descendants of Fihr. and he himself is sometimes spoken of as Kuraysh; but the name is mostly used only of the tribe, which is reckoned among the "northern Arabs" (cf. 'Annan and AL-CARAB, MAZIRAT, vi, p. 544b). The ancestry of Fihr is given as: b. Mälik b. al-Nadr b. Kināna b. Khuzayma b. Mudrika b. Ilyās b. Mudar b. Nizār b. Ma'add b. 'Adnan. The following table shows the main subdivisions of Kuraysh (for a fuller version, ci. Watt, Mukanımad at Mesca, 7); an asterisk indicates those commonly spoken of m "clans" in Muhammad's time.

nected with it remained in the hands of the tribe of Khuza'a. There probably little, if any, permanent settlement at Mecca at this period. The descendants of Fihr lived in scattered groups among their relatives of Kinana. A change came about through Kuşayy [q.v.], in the sixth generation from Fihr. He collected together the scattered groups of his kinsmen of Kuraysh (and this may be the occasion of their receiving the name), and, with help from certain men of Kināna and Kudāta (normally resident in Syria). he wrested the possession of the sanctuary from Khuzata and became virtual ruler of Mecca. He is also said to have assigned quarters of Mecca to the various groups of Kuraysh; those in the area round the Kaba were known as the Kuraysh of the Bitah, and included all the descendants of Kach b. Lulayy, and perhaps some others, while those on the outskirts were the Kuraysh of al-Zawahlr. In so far = this assignment of quarters implied permanent settlement, it must have been made possible by the development of trade. Certainly by 600 A.D. the leading men of Kuraysh prosperous merchants who had obtained something like a monopoly of the trade between the Indian Ocean and East Africa on the one hand and the Mediterranean on the other. They organised caravans which went to the Yaman in winter and to Gaza and Damascus in summer, and they were involved in raining and other activities along these routes. Victory in the war of the Fidjar [q.v.] against Hawazin and Thakif brought the routes of the Nacid under Kuraysh. In particular, they gained control of the trade of the town of al-Ta'ii.

Fihr is said to have been the leader of men of Kināna, Khuzayma and other tribes in fighting to defend the Ka'ba against an attack by Yamanī tribes, but the sanctuary and various privileges con-

which for m time had been m rival. Since al-Ta'if [g.v.] was much higher and cooler than Mecca, many Kuraysh acquired estates there. They had also stations in other parts of Arabia. The Kuraysh

became renowned for their hilm [q.u.] "steadiness" or "absence of botheadedness", and in practice this meant that they placed business interests first and maintained a measure of unity despite their rivalries.

On the death of Kuşayy (probably in the first half of the 6th century A.D.), his powers and rights passed to 'Abd al-Dar, but after a time he was challenged by 'Abd Manaf, and this me to a division of Kuraysh into two rival groups. And al-Dar was supported by Makhzum, Sahm, Diumah and 'Adf, and these were known as the Ahlaf or Confederates. The opposing party, known m the Mutayyahun, the Perfumed, consisted of 'Abd Manal, Asad, Zuhra, Taym and al-Harith b. Fihr. It is impossible to know how long these groups remained effective. There is a reference Muţayyabûn in a letter from Muḥammad to some men of Khuzaca written in I A.H. (al-Wähidi, ed. Marsden Jones, ii, 750). Long before this, however, about 605 A.D. (Manammak, 46), the Mutayyabun had been replaced by a confederacy, the Hilf al-Fudût [q.v.] (exact meaning uncertain), which consisted of Hashim, al-Muttalib, Asad, Zuhra, Taym and perhaps al-Harith b. Fihr. The essential change here is that 'Abd Manaf has split into four parts, of whom two. Hashim and al-Muttallb, have remained with their former allies, while the other two, 'Abd Shams and Nawfal, have abandoned them. This may mean that 'Abd Shams and Nawfal had become strong through commercial succes. It is clear that 'Abd Shams, though not fully identified with the Ahlaf, had developed close business relations with them. In all the stories of the pre-Islamic period there is admittedly a legendary element, but the main outline of events appears to be roughly correct, even if most of the dating in uncertain.

A man did not cease to belong to his clan when he became a Muslim, and in many of the events of Muhammad's career, and of the period up to 132/ 750, the influence of old rivalries alhances can be seen. As late as the reign of Mu'awiya I, an appeal against injustice was made by al-Husayn b. 'All (of Hashim) to the Hill al-Fudul, and me given a whole-hearted response from men of Taym, Zuhra and Asad (Ibn Hisham, &6 f.). The leaders of the revolt defeated at the Bettle of the Camel in 616 were from Taym and Asad. Of course, there were changes in the relative power and wealth of the clans. The clan of 'Abd Shams rose to pre-eminence through the Umayyad dynasty, since Umayya was a son of 'Abd Shams; and the early Shi'ls and then the Abbasids represented their old rivals, Hashim. Under the first four caliphs and the Umayyads, men of Kuraysh played wery important role in the organisation and administration of the empire, and without their skills in these fields the empire would probably not have endured.

On the death of Muhammad, the Ansar wanted one of them to be head of the community of Muslims, but they were persuaded by 'Umar to accept Abû Bakr as khalifa, on the grounds that only a Kurashi could hold together the federation. There are indications that the Ansar continued to feel strongly about this point for some decades (cf. Watt in MW, xlii (1952), 161, 164). A hadith must to be generally accepted, however, that "the imams are from Kuraysh" (e.g. Ibn Hanbal, Musnad, ili, 129, 183; iv, 421; cf. T. W. Arnold, The caliphate, Oxford 1924, 47). The Qur'anic verse IX, too/tot was also quoted in support. When the Sunni theory of the caliphate was formulated, it was generally insisted that the caliph or imdm should be from Kuraysh (e.g. 1ba Abi Ya'la, Tabakit al-Handbila, Cuiro 1952, i, 26, 34; ii, 21; alMäwardl, Altiam, 5; Ion Khaldun, Mukaddima, i, 350-4; Eng. tr., i, 396-401). A few scholars, however (e.g. Dirār b. 'Annt), held otherwise, and most of the Khawāridj considered that a pious and upright man of any origin could be imām (al-Ashfarl, Makaliti, 461 L.; al-Baghdādi, Uydi al-din, Istanbul 1928, 275-7; etc.). This matter caused a little difficulty in more recent times when the caliphate was claimed by Mughal emperors and Ottoman sultans, but most 'wlamd' found a way of circumventing the difficulty (Arnold, Caliphale, 162, 175).

The geographer al-Hamdani (d. 334/945) montions small groups of Kuraysh in various parts of Arabia, possibly remnants of trading stations (ed. D. H. Müller, 219, 122, 165, 194, 258); while al-Ya^{*}kāM (d. 284/897) reports a group of Kuraysh near Şaydā³ in the Lebanon (Buldān, Leiden 1892, 327). At the present day there are many Kuraysh living as Bedouin in the neighbourhood of Mecca, while in Mecca itself the key of the Ka^{*}ba is held by a clan of

Kuraysh called Shayba.

The misba is Kurashi, but this was not much used in the heartlands of the caliphate in the early centuries; if any misba was used it was mostly that from a clan. After a time, some men with have prided themselves in descent from Kuraysh. The following are some examples: In if Itals, 7/13th century; six II Egypt and Syria, 6/14th, 9/13th, 11/17th, 12/18th centuries; two in North Africa, 7/13th and 9/15th centuries (GAL, ii, 110, 111, 112, 449; GAL, S. i, 298 foot, 537, No. 20, 609; ii, 58; Ibn Khaldun, Eng. tr., iii, 126n.). In Pakistan, etc. it is common at the present time in the form Coreshi.

KURAYSH B. BADRAN [see UKAYL, Bann -] KURAYYAT AL-MILH, a group of villages in the extreme northwest of Safudi Arabia, in the northern section of the NW-SE depression of Wadi al-Sirhan (approx. long. 37° 40' E. and lat. 31° 25' N.). The largest settlements, (though none are larger than 2,000 inhabitants) 🗪 Ithra, al-Karkar, Manwa, Ghattl, Kall, and an-Nabk, which is the administrative centre and residence of the local Amir, who now reports to Mecca, but at the time of Enting's visit [1301/1883] reported to the Amir of Ha'il. Until the consolidation of the House of Ibn Sa'ad's power, the villages were frequently under dispute between the Shammar and Ruwala Bedonins, to whose leaders the inhabitants of Kurayyat al-Milh had to pay tribute. Aside from some meagre pasis agriculture (chiefly dates, alfalfa, and a little grain | good years), the principal income was derived from the caravan trade, particularly during the pilgrimage season, but most importantly from the area's extensive salt pans, which have been intensively mined for several centuries; hence its collective name of "Sait Villages". The sait was traded southeastwards to al-Djawf, Sakāka, and Hālil, and northwards to Jordan and Syria. By the mid-20th century the drilling of deep water wells and the spread of industrialisation had allowed regater diversification of agriculture and employment for

cash wages, me that the villages were much less dependent on trade and sait production.

Reputedly Nabataean, but certainly pre-Islamic ruins, pottery, and inscriptions attest to the anti-

quity of settled life in this area.

KURAYZA, Band, one of the three main lewish tribes of Yathrib (Medina), with lands towards the south-east of the oasis. As in the case of the other Jewish groups, it is not known whether they were descended from refugees of Hebrew stock or from Arabs who had adopted Judaism. They adhered firmly to the Jewish religion, but at the same time had adopted many Arab practices and had intermarried with Arabs. According to a genealogy given by al-Sambūdi, Kuravza, Hadi and 'Amr were of al-Khazradi b. al-Şarib, who was descended from Aaron (though only eight intermediate names wiven). The related tribe of al-Nadir was said to be al-Nadir b. al-Nahham b. al-Khazradi b. al-Şarib. Kurayşa and al-Nadir, with the related groups, after their settlement in Yathrib developed agriculture (palms and cereals) and dominated politically the previous Arab inhabitants. The Jews lost their dominant position, however, after the coming of al-Aws and al-Khasradi, though they appear to have retained a measure of independence. Both Kurayza and al-Nadir supported al-Aws at the battle of Butath [q.v.]. At the time of the Hidira, the two most important men of Kurayza sopear to have been al-Zabir b. Bata b. Wahb and Ka'b b. Asad; each of these had an upum or fort. These and fifteen others - named bostile to Muhammad (Ibn Hisham, 352). Kurayra are said to have had two assemblies (mudilisan), those of Danu Kath b. Kuraysa and Band 'Amr b, Kuraysa (ibid., for foot, 711).

It is reported that at the Hidira, Ka'b b. Asad, acting on behalf of Kurayza, made an agreement ('sad) with Muhammad, and that later during the siege of Medina (the Khandak) he was persuaded by Huyoyy b. Akhtab of al-Nadlr to break it, and the actual document was tom up by Huyayy (Ibn Hishām, 352, 674; al-Wāķidi, 456). This report is open to grave doubt, however. Ibn Ishāk does not name his sources. Al-Wakidi has two: one is a grandson of Kath b. Mālik of Salima, a clan hostile to the lews; and the other is Muhammad b. Ka'b (d. 117-20/735-8), the son of a boy of Kurayza, who was sold m a slave when they surrendered and later became a Muslim. Both these may be suspected of against Kurayza; and it is therefore probable that there was no special agreement between Muhammad and Kurayza. It is virtually certain, however, that Muhammad had a general agreement with the Jews that they were not to support - enemy against him (al-Wāķidī, 176); and something this was probably implicit in his alliance with the Arab clans of Medina, since the Jewish clans allied to one or other of the Arab class. The Constitution of Medina m given by Iba Higham (342-4) does 📰 mention Kurayşa or al-Nadir 🖿 Kaynuka' by name; but its present form almost certainly dates from after the execution of the men of Kurayan, and these Jewish groups were probably mentioned in an carlier version.

The question of an agreement affects the moral judgement on Muhammad's treatment of Kuravza. During the siege of Medina (Dhu 'l-Ka'da 5/April 642). Muhammad became anxious about their conduct and sent some of the leading Muslims to talk to them; the result me disquieting. Though Kurayza does not annear to have committed any overt hostile act, they had probably been involved in negotiations with the enemy. On this ground, as soon the besiegers withdrew, Muhammad attacked Kurayza and besieged them in their forts (alien) for twenty-five nights. After negotiations they agreed to surrender unconditionally. Sa'd b. Mu'adh, chief of the clan of 'Abd al-Ashhal, with whom they had alliance, was brought to give judgement on them. He decreed that all the men (who numbered between 600 and 900) were to be put to death and all the women and children sold as slaves. This decree was carried out (recently, W. N. Arafat in IRAS [1076]. too-7, has maintained that by no means all the adult males were killed, but his argument is not entirely convincing). Three young men of the clan of Hadl, who had been with Kurayza in the strongholds, slipped out before the surrender and professed Islam. One or two other also escaped. As part of his share of the booty. Muhammad received one of the women. Rayhana, and married her as a concubing, though she is said to have become a Muslim. Muhammad b. Kath al-Kurazi (mentioned above) gained distinction as a scholar.

KURBA [See MARÁBA]

KURBAN, sacrifice, sacrificial victim. The word goes back to the Hebrew korbán, perhaps through the intermediary of the Aramaic (cf. Mingana. Syriac influence on the style of the Kur'an, in Bulletin of the John Rylands Library, xi (1927), 85; S. Frankel, De vocabulis in . . . corano peregrinis, 20). The language of the Kur'an, as is well known, shows m preference for religious technical terms anding in an and some of them are not always used with their original significations. This is true of surban, which occurs three times in the Kur'an. In sursy III, 179 and V, 30 It obviously means sacrifice. In sura XLV1, 27, however, we read: "Did those help thom, whom they had taken for kurban as gods to the exclusion of Allah!" Here the word must be more or synonymous with "gods". Probably it has meaning which is connected with the Arabic 8-1-5 (see below); the commentators take the same view and the word - explained as "mediators" [see SHAFA'A].

The word hardly seems to occur in classical kadith. The Lista mentions two traditions which are striking enough: "The characteristic of the community (i.e. the Muslims) lies in the fact that their kurhān is their blood", i.e. that instead of sacrifice they have offered the blood of their martyrs. And the other: "The falāt is the sacrifice of every pious man". We may suppose there are apologetic tendencies in both traditions.

The term also came to be applied in Muslim ritual

to the killing of animal the roth Dhu 'l-Hididia and the whole celebration on this and the following taghtle days is called 'la at-Kurban [cf. 'To at-appt] in Turkish-speaking countries Kurban-bayrani (cf. BAYRAN).

In Christian-Arabic the word means the cucharist; ct. G. Gral, Verzeichnis arabischer hieldicher Termini* (= CSCO, 147), Louvain 1954; the consecrated elements, especially the hoat; *Id al-

Kurban - feast of Corpus Christi.

In conclusion it should be pointed out that there seems to be a genuine Arabic word kurbān, plur. karābin, which means the courtiers and councillors in immediate attendance on a king; the word probably comes directly from k-r-b "to be near".

Bibliography: Given in the article.

(A. J. WENSINGE)

KURBUSA, property Kor-Bugha (T. "stort-hearted bull, stallion") ABU SATO KIWAM AL-DAWLA, Turkish commander of Saldiak period and lord of al-Mawsil.

In the war waged by Tutush b. Alp Arslan, Berkyaruk's uncle [q.v.], against the two rebellious governors Ak Sonkor and Būzān, which ended with the capture and execution of these two, the amir Kurbuka, who had been sent to their help by Berkyaruk, was also taken prisoner. After Tutush had fallen in Safar 488/February 1005 (cf. BARKVAROK). Kurbuka was released by his Ridwan, and with his brother Altuntash collected a band of adventurers and occupied Harrin, Muhammad b. Muslim b. Kuraysh lord of Nasibin then applied to him for help against his brother 'Ali, who had been appointed governor of al-Mawsil by Tutush; Kurbuka made an alliance with Muhammad, but had him murdered after he had seized Nisibin and set out against al-Mawsil, which 'All had to surrender after a long siege (Dhu 'l-Ka'da 489/Oct.-Nov. 1000). After the capture of al-Mawsii he disposed of his troublesome brother Altuntash and occupied al-Rabla. In 491/1098 Berkyaruk sent him with a large army to retake Antakiya [q.v.], which had just been conquered by the Christians. Edessa, which had also just been taken from the Muslims, was besieged by Kurbuka on the way, but he had I give up the siege and I afterwards appeared before Antākiva. When the Christians made a bold sortie against the besiegers, he inflicted a disastrous defeat on them in spite of their superior numbers; Kurbuka's own conduct is said to have contributed towards the disaster, m his arrogance irritated his commanders so that they only awaited a tavourable opportunity to abandon him. In the battle between Berk yaruk and his brother Muhammad in Redjab 492/Mey-June 2200, which ended in the defeat of the former, Kurbuka commanded Berk-yaruk's left wing. In the following year he was sent to Adharbaydjan. Here he conquered the greater part of the country, but when he was nearing the town of Khay or Khol [q.v.], he fell iil and could not continue the campaign. He died in Dhu 'l-Ka'da 492/Aug. Sept. 1102, after appointing Sonkordia his SUCCESSOF.

(K. V. ZETTERSTÉER*)

**EURCI (from the Mongolian korči, "an archer", from kor, "quiver"; Tadkhirat al-mulik, translated and explained by V. Minorsky, London 1943, 32,

n. 2), a military term with a variety of different meanings: "he who bears arms, the sword, chief huntaman" (Pavet Tourteille, Diet. invs. er., 425; "armourer, sword-outler, troop of cavalry, captain of the watch; leader of a patrol, commandant of a fort, gendarmerie in charge of a city's security" (Sulayman Bukharl, Lughat-i Caghatay ve Türki Othmani, Istanbul 1298/1880-1, 233), "santry, sentinel, guard, inspector" (Vambery, Caghataische Sprachstudien, 316).

In Safawid usage, bardl denoted a member of the Turcoman tribal cavalry which formed the basis of Şafawid military power, and in this sense was therefore synonymous with kiril-bash [q.u.]. The kardia were clearly distinguished from non-kieli-bash units. which were termed laskkar-i umara"; sipakiyan; etc. Karcis with special functions were denoted by special titles (see index to Minorsky, op. cit., under aurchit for additional titles. | index to lekandar Beg Mamshi, Tärikh-i 'Alam-ārā-yi 'Abbāti, ii, Tebran 1335/1936, 1219-20); some of these titles [e.g. hurli-yi tarkash, "hurli of the quiver"; hurli-yi shamshir, "kurci of the sword"; hurci-yi ile-u-kaman, "Auril of the bow and arrow"), appear to denote ranks, but their relative importance is not certain. Kardis constituted the royal bodyguard, in this capacity sometimes being specially designated hio flyan-i hhassa-yi shahi (Taribh-i 'Alam-ard-yi Abbast, i. 00), or karčivan-i Szam-i shahi (ibid., i. 47).

The commander of the kardis = called karcibasti. This office is first mentioned in the Safawid chronicles in 912/1505-6, and seems from the first to have been distinct from the office of the amir alumarii (R. M. Savory, The principal offices of the Safawid state during the reign of Isma'll 1 (907-30) 1501-24), in BSOAS, xxili [1960], rot). At first overshadowed by the amir al-umara', the kardibashi became one of the most important officers of state under Tahmaso, Isma'll II and Sultan Muhammad Shah (q. vv), wielding great authority in both military and political affairs. It is noteworthy that for a period of forty years (ca. 955-95/2548-87), nearly all the purcibushis were drawn from the Afshar tribe. With the accession of 'Abbas I [q.v.], the importance of the kurlibashi declined pari passu with that of the buedis themselves, but he still "carried great weight in public affairs" (Minorsky, op. sil., 227).

Bibliography: In addition to the references in the text, see R. M. Savory, The principal offices of the Safawid state during the reign of Tahmdap I (930-34/254-76), in BSOAS, xxiv (1961), 79; G. Doerier, Thirtische und Mongolische Elemente im Neupersischen, i. Mongolische Elemente im Neupersischen, Wiesbaden 1943, 427-32, contains an excellent discussion of the various meanings of här and härth, with full textual references.

(R. M. SAVORY) KURD 'ALI, MUHAHMAD FARID, Syrian Journalist, scholar and man of letters, was born in Damascus in 1876, of a father of Kurdish origin and a Cerkes mother. From an early age, he showed an interest in nature and in books, and it was reading which, combined with his innate curlosity and gifts of observation, made the greatest contribution to his intellectual development. Already bilingual Turkish and Arabic, he learnt French from the Lazarist Fathers of Damascus, and this enable him to acquire, thanks to assiduous reading of books and periodicals a knowledge, extensive for his time, of Western civilisation, and in particular, of French literature. He perfected his Arabic-Islamic education as a pupil of some distinguished masters: Tabir alDiazabiri, Muhammad Muharak and Salim al-Bukhārī. In 1897 he joined the staff of the first Arabic newspaper of Damascus, al-Shdm, and at the same time collaborated in the Egyptian review of-Multaiaf. He also attempted to translate some French novels into Arabic. Four years later he decided to visit Paris, but while passing through Cairo he was detained there by the friends whom he had made by his collaboration in al-Musicial and he thus had the opportunity of becoming acquainted with the celebrities of the age, most notably with Muhammad 'Abdub (q.v.), whose lectures at al-Azhar he attended. Obliged m leave Egypt because of an epidemic, Kurd 'All returned to Damascus, but the atmosphere there seemed to him so oppressive that III returned to Cairo, where he stayed until 1908; during this second stay, he collaborated in editing al-Zākir, al-Musāmarāt, and al-Mu'ayyad, and founded the review al-Muktabas, a periodical which was always very close to his heart; after three years of publication in Cairo, al-Muklabas was transferred in 1908 to Damascus and continued to appear for a further six years, until the time when the Ottoman authorities, irritated by Kurd 'All's

frankness, forbade its publication. At the end of xgo8, Kurd 'All succeeded in realising the dream which he had first cherished eight years before and, passing this time through Lebanon, went to France and spent a year there; in the course of this visit, for which he had been preparing himself for a long time, he observed the people of the country and their way of life, visited the principal libraries, attended, theatrical performances and took a special interest in the Académie Française. Returning to Damascus via Istanbul, he continued to edit his review and then, at the end of the year 1913, undertook a second journey to Europe; he went first III Italy, where he had the good fortune to install himself in the library 🖿 prince Leone Caetani, whose Annali dell'Islam had revealed to him a method of working to which the Orient was not yet accustomed; it was here that he assembled much of the documentation which he required for the composition of a definitive history of Syria, the Khilal al-Shdm, a monumental work which is still the most complete study of this vast subject. In 1921-2, a third journey took him to the countries of western Europe, and it was on his return that he wrote the Chard'ib al-Gharb, a rible [q.v.], published in 1923, based motes taken in the course of his three journeys and reflections inspired by his observations. Immediately after the Great War, he had been appointed general secretary of the Committee for Public Education and it was in this capacity that he considered the creation of an organisation responsible for purifying and enriching the Arabic language, publishing texts and encouraging the literary and intellectual activity of his country. On | June 1919, he obtained authorisation to transform the Diwin al-Ma'arif, which had been founded a few months earlier, into an Arab Academy [see MADINA TIME. r. Arab countries); he was thus able to put into effect the project of which he had been inspired, ten years previously, by his visit to the Académie Française. The career of Kurd 'All was benceforward inseparable from the activity of his Academy, to which he devoted the greater part of his time and over which he presided until his death, on 2 April 1953; the only intervals in his work with the Academy were his two terms of office as Minister of Public Education and his third journey to Europe.

Kurd 'All was of a witty and playful nature; a

great conversationalist, he loved to joke and play with words, and his style is an accurate reflection of his personality. He left an abundant corpus which included, apart from the thousands of pages of articles published in the review in which he collaborated at the start of his career, in al-Muktabas and in the Madjallat al-Madjma' al-'Ilmi al-'Arabi (MMIA), editions of texts and original works of a historical or literary nature. He was largely responsible for making known the "epistles" of Ibn al-Mukaffa', of 'Abd al-Hamid, of Ibn al-Mudabbir [g.w.]., etc. in his Rasa'd al-bulagia', Cairo 1908, 1913, 1946, and he enriched the Arab Academy Publications with the Strat Ibn Tulun of al-Baiawi (1939), the al-Musta<u>di</u>ád min fa'alat al-a<u>di</u>wād of al-Tanü<u>kh</u>i (1946), the To'rikh hukamā' al-Isidm of al-Bayhaki 11946), the Kithb al-Ashriba of Ihn Kutayba (1947), and the al-Bayrara of Kushādijm (1953).

Among his original works, mention should be made of his contribution to literary history and criticism: Umara' al-bayan, Cairo 1937, and Kunus al-adidad, Damascus 1950. Apart from the Ghara'ib al-Gharb of 3923 and the Khilal al-Shām, Damascus 1925 (6 vols.), his major work, Kurd 'All collected in al-Kadim wa I-hadith, Calro 1925, a large number of the articles published in al-Zahir, al-Mu'ayyad and al-Mustabas and added an account of his travels in the Hidjaz and Palestine. In addition, he pleaded the cause of Arab-Islamic culture in al-Islam wa 'lhadara al-farabiyya, Cairo 1934 (2 vols.), published a critical study iii the morals and customs of the Orient in Akudlund wa-affalund, in Cairo 1946, devoted menograph to the easis of Damascus, Ghiffel Dimashk, Cairo 1949, and finelly published four volumes of memoirs, Mudhakkirdt, Damascus 1948-51.

Bibliography: Apart from the blographical data given at the end of the Khilat al-Shām and of his Memoirs, see Brockelmarn, S 111, 430-4; S. Dakhan, in MMIA, xxxi2, 211-52; Idem, in histogram Massignon, i, 370-94; idem and H. Laoust, L'oeuvre de l'Académie arabs de Damas, 7327-1951, in BEO, xili (1949-51), 161-219. (CH. PELLAT)

L - General Introduction

The Kurds, - Iranian people of the Near East, live at the junction of more or less lakised Turkey, Shifi Iran, Arab and Sunni Irak and North Syria, and Soviet Transcaucasia. The economic and strategic importance of this land, Kurdistan, is undeniable. Since the end of the First World War, the Kurdish people, like all the rest of their neighbours, have undergone considerable transformations as much in the political order as in the economic, social and cultural domain. Many works have been published, a few in every country, on these different problems. Some excellent general hibliographies exist: F. B. Rostopčin, Bibliografiya po kurdskoy probleme, in Revol. Vostok, 1933/3-4 (19-20), 292-326, (21), 159-73; O. Vil'čevskiy, Bibliografičevskii obsor sarubežnukh kuráskikh pečatnukh izdaniy = XX stolety, in Iranskie Yasiki, i. Moscow-Leningrad 1945, 147-81; M. M. Rudenko, Opisanie Kurdskikh rukopisay Leningradskick sobraniy, in Izdat. Post. Lit., Moscow 1961; N. A. Aleksanian, Bibliografiya k'tébéd k'ördieye Sovetie, Erevan 1962, in Kurdish and Russian; J. S. Musclian, Bibliografiya po kurdowdeniyu, in Isdat. Vost. Lit. 1963; C. J. Edmonds, A bibliography of Southern Rurdish, 1920-1936, in IRCAS, xxiv (1937), 487-97; idem, A bibliography of Southern Kurdish, 1937-1964, in JRCAS, xxxii (1965), 185-91; D. N. Mac Kenzle, A bibliography of Southern Kurdish, 1945-1955, in JRCAS, Ixiv (1957), 31-7; E. R. McCarus, Rurdish language studies, in MEJ (Summer 1960), 325-35; P. Rondot, Les Kurdes, le Kurdistan, la question kuede, Essai de bibliographie, in En Terre d'Islam, 1947/2; A. Bois, in BiOs, 1969/3-4, 184-87; Mistela Ehmed Nerlman, Kitebrane hurdt, Kirkuk 1960.

ii. -- The Kurds - Their Country: Kurdistân

A. The territorial extent of Kurdistän. If the ethnic term "Kurd" is of ancient usage, for it is known since the Arab conquest III one does not wish to go further back [cf. below, Origins], it seems that, historically, the name Kurdistän or "land of the Kurds" dates from the time of Sultan Sandjar (d. 552/1157), the last great Saldjükid, who created a province with its capital called Bahär, to the northeast of Hamadan. This province, situated between Adharbaydjan and Luristän, included the regions of Hamadan, Dinawar, Kirmanshäh and Senna, to the east of the Zagros and to the west of Shahranar and

Khuftiyan, on the Zab. The whole numbered 16 cantons, enumerated by Hamd Allah Mustawil (d. 750/1349), in his Nuthat al-bulüb (ed. Le Strange, 108; ed. Tehran 1957, 127). The nominal extent of Kurdistan varied however throughout the centuries. Sharaf al-Din, in his Sharaf-nama (1596), does not besitate to include the Lurs in Kurdistan, in chs. 3 and 4 of his 1st Book, as do all the Arab historians, who include everything in the province they call ai-Dibal [q.v.], cf. V. Barthold, Istoriko-geografileskiy obsor Irana, St. Petersburg 1903, 138. For his part, the Turkish traveller Ewilya Celebi (d. ca. 1093) 1682), in his Siyākat-nāme, iv. 74-5, enumerates the g milāyets which formed Kurdistān in his time: Erzurum, Van, Hakkāri, Diyārbake, Djazīra, 'Amādiya, Mawşil, Shahrazūr and Ardalān, and which required 17 days to traverse.

But the rivalries between the Ottoman sultans and the Shāhs of Persia broke up this unity. In the 17th century the Turkish administration gave no more than 3 limits to the 17th century the Turkish administration gave no more than 3 limits to the 17th century. Harnadān and Luristān detached from Kurdistān and the name was roserved for the region of Ardalān with Sinna as its capital. Today, Iran is the only country recognise a province by the first of Kurdistān. Everywhere else, Kurdistān has been banished from the language of the administration and the geographical atlases. In Turkey one speaks of Eastern Anatolia; in Irāk, of the provinces of the north; in Syria, of the province of Diazīra (Chassemlou, 14).

B. The ethnic and geographical extent of Kurdistan. From the above, it is clear that the historical and then political extent of Kurdistan does not coincide with its actual ethnic extent. So the frontiers within each of the countries concerned must

be defined were or less approximately.

In Turkey, the Kurds inhabit the whole of the eastern region of the country. According to Trotter (1878), the limit of their extent to the north was the line Divrigl-Erzurum-Kars. In the region of Errurum they are found especially to the east and the south-east. The Kurds also occupy the western slopes of Ararat, the districts of Kagizman and Tuzluca. On the west they extend in a wide belt beyond the course of the Euphrates (Ritter, xi, 144), and, in the region of Sivas, in the districts of Kangal and Divrigi. Equally, the whole region includes areas to the east and south-east of these limits. Some quite important colonies of Kurds = even found in Cilicia, to the south of Ankara, in Heymana and in the large towns of Istanbul, Ankara and Ismir. In brief, it may be said that if Turkey is at present divided administratively into 67 ils or provinces, Turkish Kurdistän numbers at least 17 of them almost totally: in the north-east, the provinces of Eraincan, Erzurum and Kars; in the centre, going from west to east and from north to south, the provinces of Malatya, Tunceli, Elaziğ, Bingöl, Muş, Karaköse (Ağri), then Adiyaman, Diyarbakir, Silrt, Bitis and Van; finally, the southern provinces of Urfa, Mardin and Columerik (Hakkari). The Kurds of Turkey are also linked on the east with their brothers from Irun.

The latter inhabit the north-west of Iran. Firstly in the provinces of Western Ariharbāydjān, to the east of Lake Ridā'iyya (Urmiya), the districts of Makû, Kotur, Shahpur, and to the south of the lake, Mahābād (ex-Sabla); in the province of Ardalān, called the province of Kurdistān, whose capital is Senna or Sanandadi, the districts of Bukan, Sakkiz, Sardasht, Bana, Bidjar (Garrus), Meriwān and

Hawraman; in province of Kirmanshah, Kasr-i Shirin. There are furthermore isolated groups of Kurds in Khurasan, at Budinurd and in Fars and Kirman, not to mention the numerous Kurds who live in the cities such as Tabriz and the outskirts of Tehran (Brugsch, Reise, ii, 496). Much further to the east and outside Iran, an important Kurdish tribe is to be found in Balúčistan,

In Trak, the Kurds occupy the north and northeast of the country in the Kwd's or provinces of Duhok, recently detached from the province of Mawsil, the nahiyas or districts of Zakho, Mazuri Dier, 'Amādiya and 'Akra. Left outside their administration are Sindiar and Shaykhan, peopled by the Yazidis [q.v.]; the lima's of Kirkük, Arbil and Sulaymani (entirely Kurdish) and, in the limb? of Divala, the nahiyas of Khanakin and Mandali, where they are neighbours of the Kurds of Iran to the west of the Zagros. The Kurds are equally numerous in Baghdad and Mawsil.

In Syria, they constitute three distinct belts, in the north of the country and to the south of the highway which forms a frontier and where they are in direct contact with their compatriots in Turkey. A belt of 40 km. width, in the Kurd Dagh; a group (60 × 40 hm.), to the east of the Euphrates where the river enters Syria near Diarablus; and finally, a belt of 250 km, in length by 30 km, in depth in the Djazīra, between the Khabur, a tributary of the Euphrates and the Tigris, with Ra's al-'Ayn, Darbisiyya, 'Amûda, Kamishil, Andivas and Dêrik. In this 'duck's beak", the Kurds of Trak and those of Turkey are juxtaposed (Rondot, 80). The Syrian towns of Damascus, Hamat and Aleppo count many thousands of Kurds.

Some still exist in Soviet Transcaucasia. In the Republic of Armenia, 35 villages in the reyers of Aparan, Basargečar, Huktemberia, Talin and Ecmiadzin; in the Republic of Adharbaydjan, 25 villages in the rayous of Kelbadian, Latchin and Kubatli (Aristova, 47-8, 64). There are numbers of Kurds living in Erevan, Baku and, in the Republic of Georgia, Tbilisi or Tiflis.

The imprecise limits of the frontiers of Kurdistan bardly allow 🗪 exact appreciation of the area. The Encyclopaedia Britannica estimates the length of Kurdistan at miles and its breadth at 150 miles. The Kamus al-falam, Istanbul 1896, which naturally is only concerned with the Kurdish wildyets of the Ottoman Empire, sets its length at 900 km. and its breadth between 100 and 200 km. At present, the different provinces of Kurdistan cover around 190,000 km2 in Turkey, 125,000 km2 in Iran, 65,000 km in Trak, and 12,000 km in Syria. The total area of Kurdistan then be estimated at approximately 392,000 km⁴.

While there me many Kurds who live outside ethnic Kurdistan, there are numerous non-Kurds who live in Kurdistan. In Turkey, there are some Turks everywhere, but also, in the north, some Ossetes and some Tcherkesses, and in the south predominantly Syriac or Jacobite Christians (Ci. Dauphin, Situation actuelle des communantés chrétiennes du Tar Abdin (Turquie orientale), in Proche Orient Chrétien, Jerusalem, zxii/2-3 [1974], 323-7]. The Armenians have in fact completely disappeared. In Iran to the west of Lake Rida'iyya and in 'Irak in the region of Duhok-Zakho and Kirkuk, some Nestorians and Chaldaeans are to be encountered, together with, in the towns, a few rare Armenians. The Jews, at one time relatively numerous, have all emigrated since 1948 (W. J. Fischel, The Jews of

Kurdistan a hundred years ago, a traveler's record, in Jewish Social Studies, vi [1944], 195-226; I. Ben-Zvi, The exiled and the redcemed host in Assyria, in The Javish Publication Society of America, Philadephia 1957). In Kirkük one finds some Turcomans (I. C. Vanly, Le Kurdislan irakien, 342-3).

C. Numerical extent of the Kurds. As the Kurds me not ordinarily registered as such in the consuses of the population carried out by the different states where the Kurds are resident, it is impossible to have exact statistics of the total population of Kurdistan. Besides, statistics require delicate handling, and they risk being manipulated for political motives. Cf. for 'Irak, N. Durra, 1st ed. 1963, 210 and 2nd ed, 1966, 225; for Turkey, E. Esenkova, 1967, 29. Here are a few examples, whose divergences, which show the complexity of the question, may undoubtedly be explained by the fact that their authors do not apply the seem criteria of ethnic adherence, religion and language. Hence the elimination of the Lurs. Account must also be taken of demographic progression, which works in favour of the Kurds, a fact which is at mean equally forgotten. Here are a few figures, in thousands, supplied by: (1) B. Nikitine, Les Kurdes, 1956, 42; (2) S. I. Brouk, L'ethnographie, 1958, 30; (3) A. Ghassemlou, Kurdistan, 1965, 23; (4) I. C. Vanty, Le Kurdistan irakien, 1970, 30; (5) C. J. Edmonds, Kurdish nationalism, in Journal Cont. Hist. vift (1971), 92:

	z	2	3	4	- 1
Turkey	4,500	2,500	4,900	6,600	3,200
Iran	1,500	1,800	3,300	4,250	1,800
'Irāķ	500	900	1,550	2,000	1,550
Syria	500	300	250	500	320
Transcaucasia	250	-	160	150	80
Total	7,250	5,500	10,160	13,500	6,950

(cf. Edmonds, 92 m 1).

D. The geography of Kurdistan

1. Physical aspect

Kurdistân is in its entirety a country of high mountains. Its skeleton, in its Turkish part, is constituted by the different chains of the Eastern Taurus. These chains begin to take shape from the shores of the Mediterranean at the latitude of the Gulf of Alexandretta, and radiate at first towards north-east. To the north of Maras, they form a fork whose northern line pivots away from the Engirek Dag and Nuruhak Dag (3,090 m.), continues by Akra Dağı, joins the chains of Mounts Munzur (3,088 m.), Mercan and Kargaparazı (3,388 m.), then curves in and crosses the mountainous chain of the Araxes and finally ends in the Ararat system.

From our point of departure a second chain, very clearly a crescent in shape, begins to the south of Malatya, continues by the mountains of Maden, the ridges of Hacres (2,689 m.) and Sasun (2, 590 m.) to the south of Mus, pursues its curve to the south of Lake Van, via Mounts Bitlis and Hakari (3.630 m.), with the Cito Dage which culminates in Mount Resko (4,170 m.).

Between these two lines is situated what is called the Armenian plateau, whose altitude comes down no lower than 1,500 to 2,000 m. Furthermore, some parallel chains on the northern border maintain quite a high level, such as the Cakmak Mountains and, to the south of Erzurum, the volcanic system of Palendöken Dagi (3,124 m.), to the south of which the combination of Mounts Bingol, Scrafettin and,

further to the west, the heights of Tuncell, constitute this natural fortress of Dersim. In this mass of crystalline rocks the Euphrates has hollowed out deep canyons, and the mountains with steep slopes clothe these inaccessible sites in fantastic thapes. But heaviful fertile plains extend to the north of Malatya (915 m.) to the south-east of Elazig (1,070 m.) and to the north of Mus (1,500 m.). All along this Anatolian scar frequent tremors shake the region and claim numerous victims. We may recall the earth-quakes of Erzincan in 1939 which killed 25,000 and those, less murderous meanwhile, of Varto in 1966 and Bingol and Genc in 1971.

To the south of the curve of the Taurus spread the vast flat regions of Adiyaman, Urfa (550 m.) and Diyarbakir (650 m.) which descend abruptly towards Mesopotamia with contours of 3,000 metres, always allowing for certain land movements, such as the volcanic of Karacadağ (1,915 m.) and the chain of Tur 'Abidin, which extends from Mardin (1,130 m.) and meets on the east with the much higher massifs of Herakol (2,943 m.) and Mount Cudi (2,080 m.) see artooth.

To the extreme east and more to the north is the supporting point for the Great Ararat or Ağrı Dağ (5,165 m.) and the Small Ararat (3,925 m.) perhaps considered as the pivot of a new system of mountains. Indeed, from this contre seem to radiate several points which, moue side, encircle Lake Van, with to the north the chain of the immense sulphur-spring which is the Tendurck (3,313 m.) and that of the Ala Dağ (3,255 m.); to the east, the Kuh Dağ (2,850 m.), the Mengene (3,610 m.) and the Ispiriz Dag (3,537 m.) and to the south the Vaviran Dag (3.550 m.) and the chain of Satak. Let us note, apart from the two Ararats whose structure is due to very ancient volcanic eruptions, two famous volcances on the shores of Lake Van; to the north, the Sipan (about 4,434 m.) and especially Mount Nemrut (Nimrud). whose highest peak has an altitude of 3,140 m. and whose crater has a diameter of 6,400 m. with an interior lake of fresh water 🔳 a height of 2,552 m. All this region me the south of Lake Van, which is itself at an altitude of 1,720 m., is in its entirety the highest part of the Kurdish-inhabited area of Turkey.

Elsewhere, other chains of mountains - connected with Ararat; these me clearly oriented north-south. lying between Lake Van and that of Urmia and also separating Turkish Kurdistan from its Iranian part. After having rejoined the almost inaccessible node of the Harki-Oramar country, they slant towards the south-west and also form this chains magistrals of the Zagros which, in a set of parallel lines, makes up for a good part, the portions of Kurdistan, the eastern faces being situated in Iran and the western faces in "Irāķ. As C. J. Edmonds remarks, it is not always easy to give a name known by all to designate the different chains, for their names vary with the informants, according to whom they are situated on suchor-such a slope, or close to a better-known peak, pass, village or the tomb of a famous saint.

We have, in Iran, some chains which tie, oriented north-west to south-east, with multiple ramifications and parallel series. Let us note in passing of the highest summits: the Dalenpar (3,748 m.) the highest summits: the Dalenpar (3,748 m.) the latersection of the three frontiers: Turkish, 'Iraiki and Iranian; the Spiraz, the Kandil or Kogiz (3,782 m.) the Galala (3,364 m.), further to the east the Cehol Ceshme ("at the forty springs") (3,416 m.) a real rampart of water of Iranian Kurdistän, and further to the south, the chain of Hawamār. (3,276

m.) and that of Cilo, whose average height is 3,500 m., up to the mountains of Luristan and the Pusht-l

On the 'Iraki side, to the south of the Turkish frontier, in the extension of the chains of the Cudi Dag, Seman Dag and Cilo Dag, but at the same time in a graduated descent towards the Mesopotamian plains, between the Tigris and the Great Zab, are the Bakhaye, Metina and Gara chains and, approaching the Iranian frontier, beyond the Zab, Mounts Ser-i Korawa (3,603 m.), Dolaresh (3,449 m.), and Khuwarabtë (3,168 m.). In this region of Bradost, if the frontier chains are still high, e.g. Mount Halgurd (4,013 m.), they tend to become lower as they approach the plains. Also, Mount Handrin to the southeast of Rawandiz [q.v.] is no more than 2,793 metres. As soon as one crosses the Little Zab, the chains stretch out in parallels from the dorsal column of the Zagros. The line Kurakadiaw-Godiar-Kurkur-Asis includes further numerous peaks between 2,950 and 1,960 metres high. A second line Azmir-Karasird is yet lower, between 1,870 and 1,608 m. high, with however, to the north-west of Sulaymaniyya, the remarkable ridged upthrust of the Pira Magrun (3,183 m.). A tast parallel chain Bingird-Beranan is still several hundreds of metres lower (between 1,739 and 1,477 m.). Further to the west, the long chain of the Kara Dag, from 1,378 to 2,017 metres, with multiple passes, henceforth separates the high country from the plains which now extend without an obstacle towards Altun Köprü, Kirkük and Tawk, to be bordered and limited further to the west by the Hamrin Mts. (1,640 m.) which, oriented transversely south-east to north-west, traverse the Diyāla, the Sirwan and finally the Tigris, quite near to where the Little Zab flows out.

Let us further note, although the new administrative division of 'Irāk leaves it outside Kurdistān, the Djabai Sindjār, where the Yazldīs, who themseives really Kurds, live. This chain, 60 km. in length and 15 km. In width and lying at m atritude of approximately 1,60c m., is situated in Mesopotamia to the west of Mosul and at the same latitude.

If Kurdistän is a country of very uneven relief, II is no less generously watered by numbers of clear springs and many watercourses and actual rivers.

Let us first note the Araxes or Aras whose source is clearly in Kurdistän in the plateau of Bingül, with a thousand lakes, between the Tigris and Euphrates, but in contrast in these two rivers which are directed towards the south-west, it flows first towards the north, bends towards the east and passes into Soviet Armenia.

The two great Biblical rivers traverse Kurdistân in particular. The Euphrates [see AL-PURAT] is formed by two principal branches which enclose a vast Kurdish region. The northern branch, the Kara Su (450 km, long) is made up at its source of numerous springs which come from the Dümlit Dag; then I flows in the plain of Erzurum where it receives the springs which rise in the Coruh Dag, directs itself westward in narrow gorges, waters Erzincan, slants towards the south and follows a capricious course which snakes in every sense. It waters Kemah, passes by Kemaliye, and runs into mountains on all sides which block its passage, to rejoin a little to the south of the Egil the southern branch or Murat Su (659 km. long). This last has its meet to the noth of Lake Van, at the foot of the volcanic Mounts Ala Dag and Tendürek; the Murat Su climbs up again a little to the north, passes by Divadia and Karaköse, turns off again to the south and waters Tutak and Malasgirt. Then, always following its sinuous course, it passes to the north of Mus, waters Genc, Palu and Pertek, finally joining the northern branch to the north of Keban. Thereafter the two branches form the Euphrates properly so-called. Although the only important tributary on the right bank of the Kara Su is the Tohma Su (194 km. long), which flows into it to the north of Malatya and then runs outside Kurdistan, the Murat Su has manned tributaries which, like the Peri Su (235 km. long), with their subtributaries, literally oriss-cross Kurdistan; no area is very far from materious.

The Tigris [see DIDILA], the other great river of the region (1,718 km. long), waters Kurdistän in its upper course. It has its source in the region of Lake Hazar to the north of the Maden Mts., waters for 300 km. of Turkish Kurdistan the towns famous in Kurdish history, sc. Ergani, Diyarbakir, Hasankeyf and Cizre/Djazfra. There are numerous tributaries, all on the left bank: Anbar, Batman, Gurza and especfally Botan (226 km.), fertifise the land. It passes the "Irāķī frontier at Pēsh Khābūr, where its tributary the Khābūr [q.v.] joins it, and whose sub-tributary the Hazil waters Zakho. There then develops a complete network of beautiful streams, all tributaries of the Tigris and which are actual rivers. First of all the Great Zab (192 km. long), which rises in Turkey in Mergene Dağı between Lakes Van and Rida'iyya. It waters Culamerik/Djulamarg, then in Irak the regions of Zibar and Barzan and, by one of its offshoots, the highly picturesque town of Rawandiz. It Joins the Tigris 45 km. south of Mawsil. The Little 22b (400 km. long) has its source in Iran, near Lähldjän, a land of lakes. Its tributaries are numerous in Persla as well as in Irak. After having watered Taktak and Altun Köprü, it joins the Tigris. On its lower course, at Dukan, an enormous dam was completed in 1958 with a capacity of 7 billion in of water, which stretches over 50 km. Its aim is firstly to regulate the flow of the Tigris, subject to catastrophic floods, but also to irrigate about 250,000 bectares. A hydro-electric plant with a capacity of 200,000 kilowatts is of importance in the region of Camcamal and will give the Kurdish provinces of Trak self-sufficiency in energy. The 'Adhaym (230 km. long) rising in the locality of Bazyan, with its various ramifications, waters Kirkük, Daķūķ Tuz and Khurmatu, and traverses the Hamrin Mts., burling itself into the Tigris 30 km, south of Daghdad. Finally, there is the Diyala (386 km. long) which rises in the mountains of the 'Irakl-Iranian frontier; its principal source in 'Irak is the Tandjaru which waters the plain of Shahrazur, and in Iran the Sirwan rising in Luristan. After Derbend-i Khan, where a great dam has been constructed which is intended to serve for irrigation in 'Irak, these two branches constitute the Divala, which flows into the Tigris south of Baghdad.

Iranian Kurdistān in also traversed by numerous streams of which several rise in the Cihil Ceshme, in great massif of 2,085 m. height in the Mukri country. Let us note only the Kizil Uzun, whose various ramifications water all the Ardalan country, not to mention the Diagatu (240 km.) and the Tatahu which both flow into Lake Ridā'iyya.

As with the mountains, the streams which run through Kurdistan may change their names according to the region traversed. Many watercourses, moreover, take their name very simply from the principal locality that they traverse.

There are also several takes in Kurdistän, of which the largest is Lake Van. Situated at an altitude of

1,700 m., ill has an area of 3,700 km.* Its salt waters are due to a volcanic barrier which deposits on its banks carbonate and soda sulphate. Only one kind of fish is caught there, a sort of large bleak with changing colours. To the north of Lake Van is Lake Nazik and to the north-east of Van is Lake Erock, Further to the north is Lake Balik lying to the east of Karakose. At the sources of the Tigris to the north-west of Maden is the Hazar Gölü, quite deep and with an area of about 50 km." Its waters are salt and cols caught there. In Iran one may cite Lake Urmia with Kurdish population bordering it. It is larger than Lake Van (5,700 km.*), 130 km. long and 40 km. wide in places; it is more salt than the Dead Sea, and no fish can live there. Not far from there and to the south are two small lakes, the Shor Göl and the Darvace-i Kopi. At the 'Iraki frontier to the west of Mari Van and south-east of Pendiwin is Lake Zrebar. In "Irāķī Kurdistān there are no iakes 🖿 all

Because of its altitude, the climate of Kurdistān is harsh. Snow covers the high summits for many months of the year. Precipitation is variable according to the regions. In the plains, rainfall varies between zoo and 400 mm. a year, although it may reach between 700 and 2,000 and even 3,000 mm. the plateaux between the different chains of mountains. But in the valleys of central Kurdistān, the climate is continental and even arid, and there are sometimes several months without a drop of water.

2. The living landscape and habitat

Harsh as Kurdistän may be, it is far from being a desert; its mountains are covered with pasture and vegetation, and its valleys with forests and meadows which, in spring, are dotted with multicoloured flowers. There makes 10 million hectares of forests in Turkish Kurdistän, 4 million in Iran and 1,720,000 in 'Irāķī Kurdistān, of which 50 km." are firs. The oak, of which more than 15 kinds can be counted, in the most widespread species up makes allituda of 2,700 m.; then there are the firs and other confers. Moreover, the forests makes are the survey dense and often have the appearance of scrub with many stands of junipers. The plane tree, willow and especially the poplar, flourish by the waters.

In the mountains, high mountain postures stretch over many kilometres and provide pasturage for herds of goats and sheep. In places, edible wild plants grow, sought after by shepherds and simple folk for their medicinal properties and carefully collected by old women. In spring, flowers cover in abundance the smallest corner of earth, whose richness of colours literally stupefies and whose perfumes intoxicate the passersby. All this flora is familiar to us, for the species of Europe are found there and travellers do not fail to record the names (see e.g. C. J. Rich, i, 284; Bishop, i, 290-x, 343, ii, 22, 24, 225;

Lynch, i, 18x, 190-1, ii. 208, 248, 253, 268, 269, 303, 362, 369, 239, 241, 242, 382; Freya Stark, 257, 273, 330; Hamilton, 141-3; Balsan, passim, etc.).

Only a part of the arable Kurdish lands is covered by cultivation and crops. If, in Turkey, there are 25 million hectares of cultivable lands, only 30% are cultivated, of which one-third lies fallow each year (Esenkova, 108). In Iranian Kurdistan, out of 5 million hectares of cultivable lands, 24% are cultivated and 16% lie fallow (Ghassemlou, 90). In the various districts of firaki Kurdistan, of an arable area of about 8 million hectures, one-quarter is cultivated (Khosbak, 43). Despite this, the cultivation of cerals in Kurdistan plays a good part in the economy of the respective countries: 15% in Turkey; 35% in Iran; in Trak, 50% for corn and 15% for barley (Ghassemiou, 89, n. 6). Les us add here the cultivation of rice, which supplies 'Irak with one-third of its production. Apart from this cultivation of foodstuffs, cotton and the newly-introduced sugar-beet give a good yield. The best tobacco of Turkey and 'Irak is cultivated in Kurdistan which, for Trak, supplies almost all of its needs (Khosbak, 45; Durra, 1963, 226, 1966, 245). If the vine grows a little everywhere in Turkey, Trak and Iran, it only flourishes in Kurdistan on sunny slopes; there are 12 million stands in "Irak (Vernier, 468) and the kinds of grapes are numerous and varied (see the names in Hawar, no. 34, 8; Wahby, Dictionnairs, 148). Some are reserved for the preparation of raisins used so much for food. Fruit trees also abound in Kurdistan: pomegranates, peaches, apples, figs, apricots and centenarian walnuts. Market-gardens are developed around the villages and even in the mountains where the Kurd, an ingenious gardener, constructs terraces supported by small walls in order not m lose any parcel of arable land. Of the vegetables in general use in the west, the onion, for example, so much appreciated by all the Kurds, is especially cultivated, and certain vegetables such as watermelous, cucumbers, melous, aubergines, corn on the cob, capsicums, etc., without forgetting the lettuce, held in abhorrence by the Yazidis.

Wild animals are far from having disappeared in Kurdistan. There were still lions at the beginning of the 19th century; if they in longer exist, the piling, a kind of leopard, survives. Bears are plentiful in Nebiraao III the south of Van, where they have "a table served from June to September" (Baisan, 229); the wild boar also abounds at Bingël (1,200 shot in 3 months in 1939 (ibid., 90-t), and 55 killed in a single round-up in 1963 at Barzan. Wolves, jackals, foxes and hyenas often approach the villages. But there are other animals called wild which are neither carnivores nor predators, but which - hunted either for their meat, such = the ibexes, = for pleasure, such m hares and rabbits. One also finds porcupines, which are edible according to the Christions of the region, agile squirrels, and martens and sables sought for their fur. So it is not surprising that the Kurd is a born hunter. Birds also plentiful. The high mountains shelter the majestic engles; streams and watering places attract ducks, teal and snipe. In 1972, 500,000 spent the winter on Lake Rida'lyya, nourishing themselves there on the small crustaceans which abound there, and at the same time Lake Van housed numerous colonies of pelicans (J. Vieillard, in Le Monde, 13 January 1973). Nightingales, storks and cranes are also found in the Kurdish countryside, much as in the songe of Kurdistan. Doves and pigeons frequent in thousands the innumerable grottoes and caves of the mountains. Partridges and quails are choice game. Fish abound in the streams of fresh and crystalline waters. But it is not always easy to identify them and give them name. A large fish is caught in the Zab, called by the Christians "Tobias's fish", which is two metres long and whose flesh is excellent. One may - photograph of it in Hamilton (between pp. 32-3). Apart from these pleasanter creatures, one must beware of the snakes, small but venomous, such as vipers, and of the yellow or black scorpions whose sting me be deadly, especially for the very young, although the numerous lizards, gecknes or varans and the chameleans are harmless, as are the tortoises. But in spring, flies, mosquitos and fleas are dreadful and constitute a real plague. The bee also stings, but produces a very tasty wild honey.

Apart from these creatures, who live wild, there are in Kurdistan many animals which have been domesticated and have been raised for profit since the earliest antiquity (cf. Ch. A. Roed, Animal domestication in the Prehistoric Near East, in R. J. Braidwood, B. Hove, etc. Prehistoric investigations in Iraqi Kurdistan, Chicago 1960, 119-45). Indeed, Kurdistân is a land of stock-breeding: sheep, goats, cows and buffaloes supply milk, butter, cheese and meat, skins, fleeces, guts, horns etc. of which the leather and wool serve to make clothes, shoes, felts, etc. and provide - obvious economic yield. In 1957, in the Kurdish regions of Turkey, there were 7,662,332 sheep; 4,176,016 goats, one-quarter of all Turkish stock-breeding, and 2,240,825 cows, onesixth. There also many buffaloes (Balsan, 128). In the Kurdish provinces of Irak there are 1,674,912 sheep or two-thirds of the 'Iraki breeding stock, 2,234,238 goats (two-thirds), 226,838 cows (onethird) and 4,287 buffaloes (one tenth). Apart from the large-scale breeding of the nomads (half the production in Iran; Staulfer, 291), each household has its small herd of a few animals, sheep or goats, four to eight (ibid., 200). The Kurdish villages of 'Irak studied by Barth (19) are richer. Each house also possesses a few chickens. There are different breeds of sheep with fat tails and goats with long hair, carefully watched by shopherds expert in their craft. Other animals indispensable in everyday life are also reared. Among the Kurds of 'Irak are found 22,289 horses (one-seventh), 52,336 mules, almost the whole production, 130,804 donkeys (one-third; Khosbak, 52). Also, let us not forget the Kurdish sheepdogs, a strong, imposing and redoubtable breed (Baltan, 236). Naturally, no pigs or rabbits [see ARNAS in Suppl.] = reared in Kurdistän.

The interior of the soil in Kurdistan is no less rich in minerals than its surface in vegetation and animals. But until now, its resources have been very little exploited. Quite abundant supplies of coal have been discovered in the region of Maden, Kiği, Kemah and Harput, where it has been exploited (several thousand metric tons in 1970), but not Zakho in 'Iraki Kurdistân. Near Sulaymânî timestone is extracted and, at Sar Cinar, a cement works has been producing since 1958, 350 metric tons of cement a day. Deposits of rock-salt can be exploited at Sindjär, Shaykhan and Tuz-Khurmatu. Sulphur is found in the province of Senna, at 'Amadiyya, and a Polish group plan to extract 250,000 metric tons of it a year at Mishrak In the north of Iraki Kurdistan, Iron is not lacking in Kurdistan and mined 11,600,000 tonnes in 1960 at Maden). But very rich, easily exploitable deposits of iron ore are found in the region of Rawandiz and Sulaymāni. Copper exploited (32,000 t.) at Ergani,

Diyarbakir and Palu, is also to be encountered in the region of Sakra. Chromium is found in the region of Barzan and at Diyarbakir, where it is extracted (270,000 t. annually). There is lead at Keban, Blazig and Maku, gold at Yergit and to the south of Kirmānahāh, and also silver at Kemah. At Kirkūk, the reserves of salts allow the manufacture of caustic soda and chloride. But it is petrol which is the chief riches of Kurdistān. The petrol of Kirkūk gushts forth in the midst of Kurdish territory and represents a good part of the Trāķi production (83 million t. in 1970). The same applies to the petrol of Batman in the Siirt region and the oil-fields of Karaçok in northern Syria. Natural gas is abundant and sulphurless in the region of Camčamāl.

3. The human aspect

This region which the Kurds occupy today has been inhabited since the most ancient antiquity, e.g. Berda Balka, the sum of Hazar Merd of the Mousterian period, not far from Sulaymani or that of Shanidar, near Rawandiz, where the first Palaeolithic human skeleton in 'Irâk was discovered. Diarmo, in the valley of Camdamal, may be the most ancient village in the Near East, for it was probably one of the centres where man cultivated for the first time various species of barley and corn, according to excavations of a team of researchers of the University of Chicago (cf. Braidwood, Hove etc., Prehistoric investigations in Iraqi Kurdistan). Today, the Kurd is settled throughout the land and has established numbers of villages there.

Originally, he man content in occupy the innumerable refuges, shelters under rocks and aumerous caves, some of which are difficult of and very picturesque with stalagmites and stalactites (Edmonds, 235), and which sometimes extend deep under the mountain. These caves always serve, an occasion, to shelter the herds, but sometimes peasants was still to be encountered living in them. Numerous legends circulate about some of these where treasures are said to be hidden and where the passing of djinn and ifrits is mentioned (Edmonds, 206-7, 246, 332, 368-9; Hamilton, chs. xiv-xv). Certainly, the nomedic Kurds, on the verge of extinction, and the seminomads live under their black tent, which should not be confused with the tent of the Bedonin Arab, the kibitha of the Mongols, the yurl of the Samoyeds and the kole of the Lapps (cf. C. G. Feilberg, La tente noire, Copenhagen 1944, 81-6; Bishop, i, 373; Lescot, 144-5; and KRAYMA). It is formed from a great awning made of woven strips of goats' hair 50 \times 60 cm, wide. The poles which hold it up are 2.50 by 3 m. in height; their number varies according to the size of the tent, i.e. according to the importance of its owner. There are no ridge poles. Reed partitions separate the corner of the women and provisions from the part of the tent where the men and visitors stay. All the furniture consists of a few mats, cushions and some carpets in the chiefs' tents. But the Kurdish peasant lives in rough houses. The construction materials are ordinarily unfired bricks in the plains, but fired ones at Sulaymani, for example, or rough stones, in the mountains joined together with mud. The walls are 2 by 2.50 m. high-In the rough stone walls are sometimes inserted poorly-hewn beams to make them stronger. Inside, niches are arranged in the walls to serve as cup-

The walls are rougheast with mud and sometimes whitened with lime. The door is of massive wood. There is no window on the axterior, but these exist looking out on the courtyard, with protective bars.

cannot be left open. The floor is of beaten earth, In the centre the hearth (tender) is covered in winter by the Aursi, a kind of wooden beach with a covering on which all the family warm themselves in the coldest regions. A hole in the roof serves as a chimney. Along the walls will a broad bank of earth where people sit during the day and where they sleep at night on mats, felts or mattresses. The terrace is made of poplar trunks spaced 50 cm, apart and covered with branches, leaves and dried grant and a thick bed of hard-pressed earth. If the room is too wide (more than 3 m.), poles hold up the beams and roof battens. For the water to run off, the terrace extends beyond the retaining walls or gutters for a metre, e.g. at Sulaymanl, facilitating the running off of rainwater. In any case, a roller is always to ill found on the terrace in order to press it down after downpours. One climbs up by a ladder or outside staircase. The house of the plain, where there is space, has a courtyard and a building principally composed of a rectangular living room, lengthened by a corner reserved for the animals. A solid annexe building serves me a kitchen and store for household utensils, tools and work implements. There is no cellar or attle, often not even latrines. In the mountain houses the stable is often in the courtyard, as are the annexes. The living room is situated above with, at the bottom, m small corner for the provisions. Often there is also a small veranda or loggia facing south. The terrace is the favourite place for the women, who perform their many daily occupations there. (For descriptions, plans, photos or drawings of different Kurdish dwellings, see: in Diaztra, R. Montagne, 53-66; at Sindjar, R. Lescot, 146-7; at Sulnymanl, Edmonds, 90-3; again at Sulaymani and at the village of Topzaya and Belkha, H. H. Hansen, 21-43; and in Iranian Kurdistan, Bishop, I, 88, II, 191, M. Mokrl, 89-91. See also Leach, 49; T. F. Aristova, 95, 97, 99 for Transcaucasia.) Naturally, man does not live isolated in his house, but in a group. Villages have grown up, and the Kurd, a man of the earth, lives more in the village than in the towns. Like all villages In the world, and especially those in mountainous countries, the position is chosen in relation to the sun and to water, a stream or spring. So it must be oriented to be at once well-exposed to the sun and sheltered from the wind, following the axis of the mountain chains. Exposure to the north is avoided. The south, the direction of Mecca (Mokri, 81), is preferred to the east. The importance of the village depends on their proximity to places of passage (mountain passes and bridges) and also on sufficient cultivable lands and pasturages. Many villages are built on a slope, the roof of the higher houses forming a terrace for the bouses below, and this occurs in all the regions of Kurdistan, e.g. at 'Akrs, Barzindja and Shar-i Hawraman. It is not rare to sight 🚥 a neighbouring peak some ruins of an old castle, a trace of the past glory of a local magnate vanished for centuries. Such as it is, the Kurdish village has a rather pleasing and sympathetic appearance, precisely because of the water, gardens and trees. The Kurdish villages are closer to me another or

Simple little lanterns light the place, when the door

The Kurdish villages are closer to another or more dispersed, according to whether the region is more or less exposed to hazards. In the whole of the 17 provinces of Turkey with all or a high proportion of Kurdish population, according to the official census of 1960, 8,817 villages were counted, of which 395 had less than 100 inhabitants, 513 from 101 to 500, 1891 from 501 to 1000, 372 from 1,001 to 1,000 and only 39 with more than 2,000 inhabitants.

Three provinces of Mus. Hakari and Van can be taken as criteria for appreciation:

	Area in km*	Inhab- itants	Density in km	Number of cantons	of
Muş	8,195	167,638	20	15	368
Hakârî	9,532	67,766	7	12	133
Van	18,619	212,034	21	21	557

Thus the villages are more or less dispersed. They are also unequally populated, as the table below

Inhab- itants	less than	101- 500	500- 1000	2000	+ 2000
Muş	9	280	64	r4	
Hakāri	5	84	40	5	D
Van	39	456	54	II	D

This average of small villages from 500 to 300 inhabitants is found in 'Iraki Kurdistan, in the region of Rawandiz (Barth, ii) and in other regions; 300 inhabitants is also the average of the Kurdish villages of Iran.

Altitude is also a very important factor in the establishment of the Kurdish village. By examining the snow contours on Hütteroth's may, e.g. to the south of Lake Van in the region of Hakari precisely, it may be ascertained that the villages are relatively very numerous between 1,000 m. and 1,500 m., quite numerous between 1,500 and 2,000 m., rare between 2,000 and 2,500 m. and that they disappear altogether above 2,500 m., apart from pasturing camps or zozan. Some agreable summer dwellings are found in the middle altitudes. Thus in 'Iraki Kurdistan, in the province of Duhok, we have Zawitha, at 1,422 m. in the midst of vast fir woods, Suwaretuka, at 1,675 m. among cypresses and maples, Sersing, at 1,046 m. with gushing springs, Sulav, at 1,150 m., and its waterfalls, Ser 'Amadiyya, at 1,905 m; in the province of Sulaymani; Ser Činar, with great plane trees, in its name indicates; in the province of Arbil, Şalāh al-Dīn, at 1,000 m., Shaklawa, at 565 m. with luxuriant orchards at the foot of Saffin, Gali 'All Bag, at the same altitude with . great waterfall, and especially Hadidil 'Umran, at 1,780 m., very fresh in summer and a ski resort in winter. In the province of Hakari, the high peaks of Cilo Dag, which are between 3,500 and 4,000 m., have for time attracted foreign mountaineers (cl. B. Amy, La montagne des autres. Alpinisme en pays kurde, 1972, with maps, photos and bibliographies of the last expeditions).

The smaller the village, the more its comfort in reduced. This is the case also in Turkish Kurdistan. where more than half of the villages do not have drinking water, a mill, school, a diyana (or cafe) or a special house for guests. The lighting there primitive, the hygiene deficient. The wells - near the latrines when these last exist. In winter, in view of the lack of means of communication, hundreds of villages are isolated from the rest of the world (E. Esenkova, 55-7). It is the same in the Kurdish villages of 'Irak, where electricity and running water only exist in 22 of them among the hundreds that to be counted in the provinces of Sulaymani, Arbil, Kirkük (Khosbak, 56-7). For a population estimated at 8,766,000 in 1962, in 1970 for the whole of 'Irak there were only 150 hospitals, 987 dispensaries and 18,256 bods with 2,890 doctors and 1,771 nurses (Ministry of Information, L'Irak va de l'avant). The same situation applies in Tuckish Kurdistan. In 1967, there were 12,275 doctors in Turkey, but only 2,500 for the whole of Anatolia, with a total of 60,196 beds, of which nearly half were for the towns of Istanbul, Ankara and Izmir alone. Malaria affects especially the Kurdish provinces of Diyarbakir, Siirt. and Hakâri (E. Esenkova, 87-8). In Irāķī Kurdistān, malaria, which was the cause of a quarter of the mortality in 'Irak (Dr. A. Ghalib, Malaria and malaria in Iraq, Baghdad 1944) has been practically eliminated since the campaign of the WHO in 1954-6 (cf. J. Manevy, Il est quatre heures docteur Malaria, in Réalités, no. 122, March 1956, 48-55). In Iranian Kurdistan, there are only 250 to 300 hospital beds = ■ for 10,000 persons (Ghassemiou, 32).

To move from one village to another, to enter into more | less intimate social relations of family, friendship, tribe or commerce, the Kurd follows either the paths or tracks which link the villages or else the larger motor roads of commercial or strategic value which have been constructed by the interested governments. In the mountains, the mule tracks of tenfollow either the stream which runs = the bottom of the valley, passing from one side to the other or the flank of the mountain, often precipitous and hazardous. They rise steeply to reach the mountain passes, at times quite high, e.g. in 'Irāķi Kurdistān, Paykuli, 1,000 m. and Sagirma, 1,700 m. To cross the streams, one fords them or uses trail-bridges or keleks [q.v.] at a fixed point, where the river is wider and the current less swift, or bridges. The Kurdish bridges are still rudimentary today and sometimes dangerous, being made of ropes and lianas (Layard, 1970, 156; Bishop, ii, 114) 🕳 else of tree trunks (Wigram, 288; Hamilton, 96). On the more important toads, the ancient bridges are of stone, hump-backed with one or several arches. Today, some modern iron bridges replace at many points these primitive bridges which are often, in any case, no more than foot bridges (Hamilton, 192). Many legends are attached to these ancient bridges (Edmonds, 201, 212, 247). In the plains, especially in Turkish Kurdistän, there still many simple earth tracks only usable in the good season. But modern metalied, tarred and macadamised roads have also been built. The roads through the mountains are often real works of

'Iraki Kurdistan is now furrowed with numbers of time roads which facilitate human relations. In Grak, some roads m good tracks link Mawsil to Zakbo, 'Amādiyya, Arbil and 'Akra. From Arbil one goes to Harir and Rawandiz and also to Kirkük and then Sulaymani. In Turkey, one road goes from Malatya. to Elazig, Tunceli, Erzinoan, Askala, Erzurum, and Kars. From Elazig a branch goes off for Bingol, Mus and Tatvan, and another towards Diyarbakir, Mardin and Nüseybin. From Diyarbakir, one may branch off for Silvan and Siirt, or Silvan in the direction of Bitlis, Tatvan and Van, by the road or by steamer on the lake.

Few railways cross Kurdistan, In Turkey one may pick out the line Erzincan-Erzurum-Kars, towards Armenia; the line Malatya-Elazig-Geni-Muş-Tatvan-Van by ferry in the direction of Tabriz; and the line Malatya-Sivrece-Maden-Ergam-Diyarbakir-Batman, towards Siirt. The Orlent Express from Istanbul goes to Aleppo, skirts the Kurdish populations me the Turko-Syrian frontier, and reaches Mawsil and Baghdad. In 'Iraki Kurdistan, a single narrowgauge railway goes from Baghdad to Kirkûk (320 km.).

Several military routes fan out from the airports situated in Kurdistân. The most important in in Turkey: Erzurum, Kars, Karaköse (Ağrı), Elaziğ, Malatya, Van and Diyarbakir; in 'İrāk: Mawşil, Kirkük, Semel, Ser 'Amādiyya and Bamerni; in north Syria: Kamishili; in Iran, Sanandaği, Kirmānshāh and Ridā'iyya.

E. An anthropological profile of Kurdistan. Situated as it is at the crossroads of populations as different = the Turkish, Persian, Caucasian and Arab peoples and in very intimate relations with most of them, does the Kurdish people possess characteristics such that it may be distinguished very clearly from the others? The question can legitimately be posed, and many scholars have tried to distinguish the anthropological aspects which would allow this process of discrimination. It is evidently not a matter of searching for a Kurdish race, since this notion of race can scarrely be applied to humans, although important genetic differences are ascertainable between more or less homogenous populations possessing such-or-such characteristic blood-group (Ruffié, 1972), Anthropological researches on the Kurds began more than a century ago with E. Duhousset (1863) and N. V. Khanikolf (1866). They have been carried out in all the regions of Kurdistan.

In Iran, first of m by the authors cited, then by M. Houssay (1887); in Transcaucasia by E. Chantre (1880, 1890) and Pantukhoti (1891); in Turkey in the valleys between the Euphrates and the Tigris (G. Pisson, 1892), to the south of the Black Sea at Karakus, at Nemrut Dağ, to the west of Lake Van, and at Zencirli (von Luschan, 1922); in Syria, at Damascus (Ariens Kappers, 1931). The Vazidis of the Caucasus were studied by Eliseyev in 1887 and in 1900 by Ivanovski; those of Sindjär and Shaykhan by Field (1934), m well m the Kurds of 'Irāk, of Zakho, Rawandiz, 'Akra, Kirkûk and Sulaymanl; these latter studies were not published until 1951 and 1952. All these recearches are only in fact sample surveys, given the relatively restricted number of individuals examined (some hundreds or more out of several thousands of inhabitants) and of the really scientific measures obtained. Some travellers have in their turn made certain records and added some typical photographs. Despite all this, and because the observations concerning the Kurds are of different regions, the results obtained do not always coincide perfectly. There has been an attempt to make anthropological classification of them (A. Bashmakoff). The Western Kurds (von Luschan) have been distinguished from the Eastern and Southern Kurds. The former was of a blond, blue-eyed, dolichocephalic type. The others are of a brown, black-eyed, brachycephalic type. The one group consider themselves of the same race as the Turks (Sekban, Inan) or the Iranians (Modi), the others regard themselves as close to the Arabs or Armenians. Certain photographs of Mark Sykes (322, 342, 373, 424-5, 427, 429) of Lynch (ii, 4-5) an of Soubrier (112, 113, 144, 160, 172) reveal at first sight types among the Kurds: Arab, Jew, Biblical, Nestorian and Turkoman. It is this which H. Field confirms and expresses in ■ more scientific fashion in the photographs of the individuals out of 598 examined, where he personally discovers Armenoid types (48), Balkan (12), Modified Mediterranean (26), Eur-Anatolian (38), pure or mixed Iranian (4), Alpinoid (12), Mongoloid (1) and Negroid (z). The proportions are not exactly the same among the 235 Yazidis examined, and the comparison with the Assyrians, the Shammar and Sulubba Arabs or the Turkomans also studied by the author is interesting. The resemblances encountered are doubt to be explained by intermarriage. But this does not prevent E. Duhousset (1863) from recognising in the Kurdish people a rare homogeneity with respect to its type and, for his part, Ariens Kappers (1931) admits that the Kurds, despite their anthropological differences, constitute a truly distinct race. Thus we can, in summarising the studies of H. Field, present m follows the portrait of the Kurd of 'Irals: "The Kurd is of medium height (1.66 m.) with a relatively long body and short limbs. The forehead is wide and the bead wide and round, The brachycephalics predominate. The height of the face is medium. The nose is quite often convex. The Kurd is summ hirsute than the Arab. His hair, rather wavy and pliant, is normally dark brown and the eyes black. But blond hair and blue eyes are also to be encountered, especially in the western regions. The colour of the skin is more clear than that of the Arabs, but less fine than that of the Assyrians. The teeth me normal and well-placed. The musculature is good, as is the health, in general, of those who have been observed" (Th. Bois, 18).

Despite everything, these anthropological researches on the Kurds are too fragmentary and uncertain for us to be able to conclude from them what may be the origin of this people. It is indispensable here to combine the study of the language with that of the history.

Bibliography: Maps. No complete scientific map of Kurdistän exists, The Carte III Kurdistan 1/4,000,000, Cairo 1943, aims especially "to give a graphic representation of that which the Kurds occupy in the Middle East"; a Note of 12 pp. which accompanies it is intended to explain it and to justify the different data. Die Kurden, Volke ohne Staat, 2/1,500,000; ed. Die Aktuelle Landkarte, no. 224, Munich 1966, clear and simplified, does not indicate the relief at all. For Turkey, the IIII maps of H. Kiepert, 1892, or better Türkiye, 1/2,000,000 of Faik Sebri, Istanbul 1948, La carte de l'Asie orientale 1/2,000,000 of the Troupes du Levant, Beirut 1939, or that of the War Office and Air Ministry, London 1961-2, 1/1,000,000, sheets NJ37 Erzurum, NJ38 Tabriz and NI38 Baghdad, of series 1301, GSGS, cover the whole of Kurdistan, More or less elaborate maps are often to be found in the different accounts of journeys. So much the more to be appreclated are the precise and detailed maps in the book and many articles of C. J. Edmonds.

Albums. To illustrate all this: M. Zikmund and J. Hanzelka, Kurdistan, country of insusrection, lagends and hope, Artia, Czechoslovakia 1962; K. Dettmann, Vertraue der Pranke ... Löwe die Heiligen werden dir nicht helfen, Hamburg 1966.

ili. - HISTORY

A. Origins and Pre-Islamic history.

The classification of the Kurda among the Iranian nations is based mainly on linguistic and historical data and does not prejudice the fact there is a complexity of ethnical elements incorporated in them. The type of the latter varies visibly from place to place. It is probable that the expansion of the Kurd element took place from east (Western Persia) to west (Central Kurdistān) but there is nothing in have prevented the existence in Central Kurdistān, before the coming of the Kurds, of a nationality of different origin but bearing a similar name (Kardū) which later amalgamated with the Iranian Kurds.

On two Sumerian inscriptions dating from about 2,000 B.C., Thureau-Dangin (Revus d'Assyriologia, v., 99; ví, 67) found a country Kar-da-ka mentioned (in which word the initial is II and not g and the function of the element ka is uncertain). This country was beside the "people of Su" (cf. ZA, xxxv, 230 u. 3), which G. R. Driver located south of Lake Van; there is an old fortress Sûy in the region of Bidlis (Sharafnama, i. 146). A thousand years later Tiglath Pilezer waged III people called Kur-ti-e in the mountains of Azu, which Driver (in JRAS [1921], 400) identifies with the modern Hazō (Sāsūn). The reading Kur-ti-e is not certain, however.

Herodotus in the 5th century B.C. mentions no name like this, but, according to him (iii, 93), the thirteenth none of the Achaemenid empire included next to the Armenians Information which Nöldeke (Gramm. d. newsyrischen Spr., Leipzig 1868, p. xviil) and Kiepert (Air. Geogr., I 81) have connected with the name of Bokhtän (= Bohtän).

The retreat of the Ten Thousand described by Kenophen (401-400 B.C.) made famous the name of the Karduchoi (Καρδούχοι) whose country lay to the east of the Kentritës (Bohtan). From this time onwards we continually find the name on the left bank of the Tigris near Mount Djudi [q.v.]. In classical authors, the country became Corduene (on the numerous forms of this name, probably produced by the difficulty of reproducing the Semitic &, cf. Driver, op. cil.). In Aramaic the district was called Beth-Kardu and the present town of Diazirat Ibn 'Umar, Gazartă of Kardū. The Armenians had the name Kordudh, the Arabs (Balādhūri, 176; Tabari, ili, 610) Bakardā (Kardai). According to Yākūt (iv, 56), who relies on the authority of Ibn al-Athir, the canton of Bakarda formed part of Diazleat Ibn "Umar, contained two hundred villages (al-Thamanin, Djūdī, Firūs Shūbūr) and was situated on the left bank of the Tigris opposite Būzahdā in the right bank (cf. the full analysis of the texts in M. Hartmann, Bohtan, 33-5). Later, the name, which was only applied to the district, disappears from Muslim terminology and is replaced by Djazkrat Ibn 'Umar, Bohtān, etc. To the Armenians and Arabs the territory of Kardū in the atrict sense had a very limited application. We do not know the exact frontiers of the province of Corduene; its three towns, Saraisa, Sataika and Pinaka (= Finik) isy on the Tigris, but the statement of Strabo (ix, x2, 4) is remarkable; according to this, the term Γορδωzία δρη was sometimes applied to the mountains between the modern Diyārbakr and Mūsh.

Now, who were the Kapdouyor whose name undoubtedly survived in the later names (the termination -yol must represent the Armenian plural in -\hat{e}h, which is perhaps explained by the fact that the Greeks learned this name from \(\boldsymbol{m}\) Armenian)? According to Nenophon (iv, 3, 1), the Karduchoi recognised neither the authority of King Artaxerres nor that of Armenia. When in the 1st century B.C. Corduene was conquered by Tigranes II, he had its king Zarbienus executed. In 115 A.D. the king of Corduene was called Manisarus. According to Hilbschmann, Die alternenische Orisnamen, 239, and Armenische Grammatik, i/2, 518-20, the province of Corduene was only superficially Armenicised.

There is nothing really surprising in finding at the time of Xenophon an Iranian tribe settled to the north of the Tigris, but we have nothing but the evidence of the from which to judge the ethnology of the Karduchol. The name has Semitic analogies (Akkad., Assyr, kardu, "strong", "hero", kardda "to be strong"); = the other hand, there is ■ certain consonantal resemblance with the name of people Khaldi, better known under the Assyrian form Urarțu/Urashțu, în Hebrew Ararat, among the Greeks Αλαρόδιοι, Χάλδοι and sometimes Χαλδαίοι. This people appeared in Armenia towards the end of the 9th century B.C. and afterwards established a powerful kingdom in the region of Lake Van which lasted until the beginning of the 6th century. C. F. Lehmann-Haupt, Mater. 2. alter. Gesch. Armeniens, Göttingen 1907, 123, sees in them Khaldl immigrants from the west; E. Meyer, Gesch. des Altertums, i/2, Stuttgart 1913, § 474, seeks their original home on the central Araxes. As a result of the arrival of the Armenians, towards the 7th century, the Khaldi were dispersed and driven towards the mountains (Cyropaedia, iii, 1-3). But their survived in the toponymy of the region north of Lake Van (the Byzantine theme Xahlia near Trebizond, the town of Khilat = Akhlat, etc.; cf. Beick and Lehmann, in ZA, ix [1894], 84; de Goeje, in ibid., x [1895], 100; Streck, in sbid., xiv [1899], 712). Parallels for the Khaldi have been sought on the other side of the Caucasus: the Georgians are called Kharthoels or Aharth-ul-i (in Svanian Ahyard; in Mingrelian, hhort-u); cf. N. Adontz, Armenia v spohhu Iustiniana, St. Petersburg 1908, 398,

Whether we identify the Kardin as Semites or as an indigenous people, it is certain that the land of the ancient Karduchoi is at the present day one of the principle centres of the Kurds. It has therefore been concluded that the Karduchoi were identical with the Kurds, and this view was still considered axiomatic at the beginning of the zoth century; cl. Grandriss d. Iran. Phil., ii, 464. Going a step further, the Kurds were directly connected with the Xaxbox; Reiske in his commentary — Constantine Perphyrogenitus,

De coremoniis, B. 13 (713, 11) said "Chaidi et Kordi vel Curti, Gordyaei lidem". A similar opinion is expressed in the title of F. Lerch's work, Rechercher sur les Kurdes iranions et sur leurs anchires, les Chaldiens septentrionaux (St. Petersburg 1856).

A new turn was given to the problem by the researches of M. Hartmann, Nöldeke and Welssbach, who showed the philological necessity of distinguishing between the stems Kurd and Karda. These scholars at the same time proposed to recognise the Kurds in the Kopriot, Cyrtli, mentioned by classical writers in Media and Persia (Strabo, xi, 13, 3, and xv, 3, 1). This hypothesis is confirmed by the presence in Pars of numerous Kurdish tribes in the Sasanid period (cf. Karnómak-i Artaháshir-i Pāpakān, tr. Nöldeke, Göttingen 1879, 37, 48, and the testimony of Arab writers).

The justifiable distinction between the names Kurd and Karda does not, however, decide the important question, how the Cyrtli (- Iranian Kurds) colonise lands west of the Zagros, the country of the ancient Kardu, and the mountains of the Anti-Taurus as far as northern Syria. The problem still requires careful research. In the first place, the Median and Persian conquests must have brought about considerable displacements of the Iranian peoples. We have an example in the migrations of a part of the Asagartiya whose original home was in Sistan. In the Assyrian period we find these Sagartians in Media (Zikerty or Zakred), cf. Streck, in ZA. xiv [1800], 146) and in the time of Darius (Bihistun inser, 2, 90) their capital was already in the Assyrian plain at Arbeia, where Darius had their chief Citrantakhma executed, whose portrait on the rock of Bisutun suggests a Kurdish type (L. W. King, The sculptures of Behistan, London 1907). Between 220 and 171 B.C. In find Cyrtli mercenaries taking part in the wars between Rome, the Seleucids and the kings of Pergamon (Livy, xlii, 58, 13; xxxvii, 40, 9; Polybius, v, 52, 5; cf. Weissbach in Pauly-Wissowas, s.v. Cyrtii, and A. J. Reinach, Les mercenaires de Pergame, in Kevne Archeologique [1909], 115-19). A very interesting state of transition is seen from the Armenian Geography of the 7th century, in the case of the province of Korčěkh (according to Adonta, Armenia, 418, Korčekh is from "kortič-aikh where koriil means "Kurd", as airpaid means "inhabitant of Atropatene"). In the time of Faustus Byzantinus (4th century) Korčěkh was only a canton near Salinās $[q,\nu_i]$. As a province, Korčēkh stretched from Dialamerg to Diazīrat Ibn 'Umar and included the following cantons: Kordukh, the three Kordrikh (Kordikh), Aituankh, Algarkh, Motholaukh (Othołaukh), Orsiraukh (Orisankh), Karathunikh (Saraponikh), Cahuk and Little Albak (Hartmann, Bohtan, 93; Hilbschmann, Die altermenische Orts-RAMEN, 255-9).

We the changes that gradually brought about. Of the three districts, Kordukh, Kordikh and Tmorikh, which Faustus mentions in place of the ancient Corduene, Kordukh had become a mere canton of Korčákh and Tmorikh disappeared altogether to advantage of Kordrikh (Kordikh), of which simply upper, middle and lower cantons were distinguished.

Hübschmann op. cit., 185), confines himself to distinguishing between the Kordrigh (Kordigh) of the Kúprtot, but in general the linguistic distinction established by M. Hartmann and Nöldeke does not preclude the existence of hybrid and corrupt forms (M. Hartmann, Bohtan, 92: "es gingen wohl schon früh die Namen durcheinander"). Nöldeke even

distinguishes a third group of names: Aramaic Kartëwayê (Arabic Kartawiya?), meaning the true Kurds; cf. G. Holfmann, Austüge aus sprischen Akten bersischer Martyren, Leipzig 1880, 207, n. 1640.

We thus find that about the period of the Arab conquest a single ethnic term Kurd (plur. Akrād) was beginning to be applied to an amalgamation of Iranian or iranicised tribes. Among the latter, some were autochthonous (the Kardů; the Tmorikh) Tamurayë in the district of which Alki = Elk was the capital; the Xobalraz [= al-Khuwayhiyya] in the canton of Khoyt of Sāsûn, the Ortāyē [= al-Artūn] in the bend of the Euphrates); some were Semites (cf. the popular genealogies of the Kurd tribes) and some probably Armenian (it is said that the Mamakān tribe is of Mamikonian origin).

In the noth century, the existence of an Iranian non-Kurdish element among the Kurds has been definitely established (the Güran-Zāzā groupe). In several districts a social stratification based on the political domination of newcomers has been established (at Sulaymāniyya [q.v.], at Sāwdi-Bulāķ [q.v.] and at Kotūr, where we find remnants of the Kitresinli [?] in subjection to the Shakāk). Systematic investigation may discover traces of ancient peoples overlaid by a Kurdish element giving an appearance of unity.

Genealogies and popular ctymologies. The Mustin sources and Kurdish traditions do not help us to solve the problem of the origin of the Kurds. Massudi (Muradi, iii, 251) already speaks of their descent from those Persians who escaped from the tyrant Dabbak. This legend is best known from the version of the Shah-nama (Macan, I, 27-8; Mohl, I, 71; Vullers, I, 36, verses 29-38). In 1812 Morter (Second journey, 357) mentions the celebration at Damawand (on 31 August) of a festival commemorating the delivery of Persia from the tyranny of Dabbāk, known in the 'Avd-i Kurdi, "The Kurd festival". On all other hand, the Kurds sought Arab genealogies for themselves. Some (Murūdi, iii, 253) claimed as their ancestor Rabl'a b. Nizar b. Ma'add, others Mudar b. Nizar, both eponyms of the districts of Divar Rabita (Mawsii) and Diyar Mudar (Rakka). They said that the Kurds had separated from the Arab stock as mesult of feuds with the Ghussanids. and, having retired to the mountains, intermingled with strangers and forgot their mother tongue. Of more interest is a series of ancestors among whom we find Kurd b. Mard (cf. of Maccol the neighbours of the Kurds) b. Şa'şa'a b. Harb b. Hawazin (Mas'ûdî, ibid., and Tanbih, 88-91: Kurd b. Islandiyādh b. Manüshahr; Ibn Hawkal, 185-7; Kurd b. Mard b. 'Amr). All these genealogies may contain a few grains of historical fact (iranicisation of Semites, intermingling of the tribes of the Zagros and of Fars).

Nor is there any lack of popular etymologies. The attempt has been made (Murūdi, iii, 249) to connect the name with the Arabic root karrada; the Kurds would thus be the children of young slaves and the demon Disasd ("driven out" by Solomon). Very frequently (cf. Driver, in JRAS [1923], 403) the name Kurd is connected with the Persian word gurd ("hero"), although this root really had a g in Pahlavi and goes back to the root war "to protect" (Horn, Namper, Elymol., 200).

In later times, the names of tribes were often explained by those of their eponyms. The Sharaf-nama, i, 158, makes all the Kurds (the Badjnawi and Bokht tribes) come from Badjan and Bokht; the former of these names may be connected with that of Basn-āw, with that of the tributary of the Tigris (Andreas, in Hartmann, 131).

while the second recalls the Πακτυική of Herodotus, in the "dragon-king" (Kurd?) Haftan-Bokht killed by Artakhshir-i Pāpakān; cf. Nöldeke, Gesch. der Perser und Araber, cs. According to another legend, especially popular in the north and west, the Kurds were at one time divided into two branches, Milân and Zilân, the former coming from Arabia and the latter from the east; the Zilân were regarded as inferior race (cf. P. II. Sykes, in fnal. R. Anthropological Inst., exeviti [1908], 470).

B. The Islamic period up to 1920.

We have detailed notices of the Kurds from the time of the Arab conquest onwards. During the live first centuries of the Hidira, the Kurds frequently played a considerable part in events and often took the initiative in them. Several Kurd dynasties arose at this time. Waves of Turk and Mongol invaders seem to have submerged the Kurds from the 6th to the 10th century A.D. But the period of the wars between the Ottoman Sultans and the Safawid Shahs produced a state of affairs in Kurdistan favourable for the growth of a feudal system, of which a faithful

picture is given in the Sharaf-name (1003/2506). The Turco-Persian frontier became gradually stabilised and the Persians IIII back behind the wall of the Zagros and its northern extension. Then Turkey began the work of strengthening the authority of the central power within her eastern provinces. Towards the end of the 10th century the last Kurdish orincipalities disappeared in Turkish territory (Hakkārī, Bidlis, Sulaymāniyya) and in Persia (Ardalān). But the great tribes still exist, and their cadres assure the preservation of the Kurdish element with its social and ethical peculiarities. Kādiār Persia hardly ever interfered in the domestic affairs of par-Kurdish tribes, while in the late Ottoman period Turkey tried to ■ the Kurds as a political support for the central authority. Sometimes the Kurds were overwhelmed with favours, and sometimes they had to resist attempts abolish and remnants of their ancient autonomy. Several risings of the Kurds took place in the 19th century, and towards the beginning of the 20th century | Kurd movement added one more element in the nationalist agitations within the Turkish empire. The revolution of 1908 drew the Kurds into politics; newspapers, magazines and Kurd societies began to multiply. During the First World War of 1914-18 the idea of an autonomous Kurdistan was first mooted by the Western Powers, but the plan was only partially and temporarily realised = = far as the part of the old wildyst of Mawsil attached to the new state of Sirak was concerned.

The Kurds after the Arab conquest, We shall find it useful to begin by collecting the information given by Arab authors regarding the distribution of

the Kurd tribes.

The term Kurdistan being unknown before the time of the Sakhuks, information regarding the Kurds is usually in the found in the Arab authors under such heads as Zawzan, Khitat, Arminiya, Adharbaydjan, Djibal, Fars, etc. (ci. Driver, The dispersion of the Kurds in ancient times, in JRAS

[1926], 363-72).

Mas'adi (about 332/943) and letakhri (340/951) are the first to give systematic information about the Kurds. In the Muradi al-dhahab (iil, 253) Masfudi enumerates the following tribes: at Dinawar and Hamadhān: Shuhdjān; at Kangawar: Mādjurdāu; in Adharbaydian (so the text should be emended): Hadhbani and Saråt (probably Shuråt - Kharidjis [g.u.]; cf. the story of Daysam below); in Diibal: Shādandiān, Lazba (Lurri?), Mādandjān, Mazdānakān, Bārisān, Khāli (Dialāil), Diabārķi, Djāwāni and Mustakan; in Syria: Dababila etc.; at Mawsil and Diudl the Christian Kurds: al-Yatkübiyya ("Jacobites") and the Diurkan (Diurughan). To this list, the Tanbik of the same author (88-91) only adds Bazindjan (cf. Istakhri, 115), Nachawira, Büdhikan and Kikan (at the present day found near Mar'ash), but he gives a list of the places where there were Kurds: the rumain (rumain?) of Fars, Kirman, Sidjistân, Khurāsān (Iştakhri, 282: a Kurd village in the canton of Asadabad), Isfahan (a section of the Băzandjân tribe and a Hourishing town described as Kurd, Ya'kubi, 275; Iştakbri, 225), Djibâl, notably Mah Kūfe, Mah Başra, Mah Sabadhan (Masabadhan) and the two Ighars (i.e. Karadi Abl Dulaf and Burdi), Hamadhan, Shahrizur, with its dependencies Darabid and Şamghan (Zimkan), Adharbaydian, Armenia (at Dwin on the Araxes the Kurds lived in houses built of clay and of stone; Mukaddasi, 277), Arran (one of the gates of Bardha's was called Bab al-Akrad and Ibn Miskawayh says that at the invasion of the Rûs in 332/942 the local governor had

Kurds under his command), Baylakan, Bab al-Abwab (Darband), al-Diaztra, Syria and al-Thughtir (i.e. the line of fortresses along the Cilician frontier).

Istakhri, of, particularly mentions five runum in Pars, this term being applied to districts over which the Kurds were distributed (in spite of de Goeje, BGA, ly, 250, it is preferable to keep the reading ramm-rumum [from Persian ramm, "flock", "crowd"] for it is improbable that some could have given a plural rumum). Each rumm had its town, its Kurd chief in charge of the kharddi and responsible for public safety. These rumum were: 1. Diiluya, ... Rămidiăn, bordered by Isfahān and Khūzistān; 2. Lawalidian, between Shiraz and the Persian Gulf: Diwan, in the hara of Sabitr; 4. Kāriyan in the direction of Kirman; s. Shahriyar, alongside of Istahan also called Bazandian after the principal tribe, a part of which had been transferred to the province of Isfahan. As a supplement to the list of rumum, lstakhri, 114, gives a list of 33 nomad tribes (keyy, plur. shyd') of Fars, based on the records of the dieses al-sadakit and reproduced by ibn Hawkal. x85-7 and Mukaddasi, 446: Kirmani, Ramani, Mudaththir, Muhammad . Bashar, Bakill (Mukaddasi: Tha labi), Bundadhmahri, Muhammad b. Ishak, Sabahi, Ishaki, Adharkani, Shahraki, Tahmadahni, Zabādī, Shahrawi, Bundādaki, Khusrawi, Zandil, Şafari, Shahyari, Mihraki, Muharaki, İshtamharl, Shāhūni, Furāti, Salmūni, Şiri, Āzāddokhti, Barazdokhti, Mutallabi, Mamali, Shahkani, Kaditi, Dialili, in all 500,000 families living in tents.

The Fars-name (ca. 500/1107) says (168) that the Kurds of the old large ramm of Dillaya, Dhlwan, Lawalidian, Kariyan and Bazandian, who formed the most brilliant element in the old army of Fars, all perished in the wars at the time of the introduction of Islam, with the exception of a single 'Alak, who became a Muslim and left descendants. Other Kurds were transferred from Isfahān to Fārs by 'Adud al-Dawla. It is difficult to admit that 500,000 (?) families of Kurds were exterminated, but we must recognise the possibility of regrouping among the tribes of Fars and of their denationalisation. The old ramm of Djilliya (Küh-Gilü) is now inhabited by Ltus; and do not know how long they have been there. For the rest, Istakhri's list mentions a tribe al-Lurriya (variant: Lazba?) among the Kurds of Fars. On the other hand the Fdrs-name distinguishes from the Kurds the Shabankara [q.v.] clans, who had become very powerful in Fars at the time of the last Buykis. The Masdith at-absdr of ai-'Umari speaks of the Shabankara under a separate heading, and the Sharaf-nama does not mention them among the Kurd dynasties. One of their clans, however (Ramani), bears the name one of the "Kurd" tribes of istakhri. Everything then suggests that the Kurds of Fars differed considerably from the tribes of Kurd-

istān (cf. saut and tun).

The term al-Zawzan, which corresponds broadly to central Kurdistán (rozón in Kurdish "summer pasturages"), is not well defined. According to Ibn Hawkal, 250, the king of al-Zawzan was called al-Dayrani [Deraniki, Armenian king of Vaspurakān). Mukeddasi, 137, regards Zawzān as a nākiya of Diazirat Ibn Umar. Later this region, which had a mixed Kurd and Christian population, became extended in area. According to Ibn al-Athic (in Yakût, ii, 257), al-Zawzān began at two days' journey from Mawail and stretched to the borders of Khil2; on the Ädharbāydjān side it extended to Salmās. Many strong places belonged to the Bashnawl and Bokhti Kurds; the former held Barka, Bashir [and Fanak]; to the latter belonged: Djurdhakil (Gurgfi), the residence of their malik Atil (Sharaf-nāma, i, 117: Nash Atil?), 'Allūs, Bāz al-hamrā. To the lords of Mawsil (the Zangids) belonged-Alkī (— Elk), Arwakh, Bakhawkha (— Bekūkl in Barwārī), Barkho, Kingawar (?), Nīrwa (east of Akr?) and Khawshab. The text of Yākūt is not very certain; in any case, the reference here may be to Kurd strongholds gradually annexed by the Hamdānids and the Zangids (see below).

The Kurds under the caliphs and Buyids. Masfüdl (Murudi, iii, 249) has preserved traditions from the pre-Islamic period of feuds between the Arab princes of Chossan [q.v.] and the Kurds. The Muslim Arabs came into contact with the Kurds after the occupation of Takrit and Hulwan in 16/637. Sa'd b. Abi Waigkas marched on Mawell, where the districts with a Kurd population were occupied (al-Mardi Ba-Nuhadhra, Ba-Adhra, Hibtua, Dasin etc.); cf. Ibn al-Athir, al-Kāmil, ii, 408. The conquest of the region was completed by 'lyad b, Chanm and 'Utba (Baladhuri, Futilh al-bulddu, 33t). The Batrik of M-Zawzan in 19/640 obtained confirmation of his authority on payment of kharādi (Fujūk 176). In Spaigna in 18/639 the Arabs fought against the Kurds, who had taken up the cause of al-Hurmuzan, Persian governor of Ahwaz (Kāmil, ii, 425). In Fārs, likewise, the Kurds supported the Persians in 23/642 at the defence of Fasa and Darabdiird (ibid., iii, 32), 'Umar had to send several expeditions against the Kurds of Ahwaz (Fulüh, 382, 389; Kamil, iil, 37). On the other hand, in the reign of Umar the Kurds invaded the region of the central Karkhi (Saymara, Māsabadhān), the language of which was still Persian in the time of Yackubi (Buildan, 236). The Arabs had reached Shahrizur before Islam (Ibn a)-Fakth, 130), but the final occupation of Shahrlzur, Dărabadh and Şamghan in 22/643 was only achieved after bloody fighting (Futah, 334; Kamil, iii, 29). In the south, Abd Musa ai-Ash arl [q.u.], governor of Basra, had to put down risings of the Kurds at Bérûdh and Balasdian in 25/645, but the Kurds, forcibly converted to Islâm, apostatised en masse (Kâmil, ii, 56, 76). Under the caliph 'Alf, the Kurds, along with the Persians and Christians, took part in the rebellion of al-Khirrit [g.v.] near Ahwaz and in Fars, but the chief was defeated at Ram-Hurmuz (ibid., iii. 309).

Al-Mukhtar, who had seized Armenia and Adharbaydian in the reign of the Umayyad caliph 'Abd al-Malik, appointed in 66/685 ■ governor at Hulwan whose task was to fight the Kurds (Kāmil, lv, 187). but the death of al-Mukhtar prevented the plan from being carried out. Under the same callph the rebel "Abd al-Rahman b. al-Ashfath (see 📖 AL-ASHFATH) made an alliance in \$3/702 with the Kurds of Sabur in Fars (ibid., iv. 352). In 90/708 the Kurds ravaged Fars and were punished by al-Hadidiadi. In 129/246 the Kurds of resisted the ally of the Kharidits, Sulayman, who had rebelled against the caliph Marwan II and had besleged Sabur (ibid., iv, 387, 341; v. 283). The caliph Marwan himself was the son of a Kurdish slave-girl (Tabari, iii, 51) whose blue eyes and fair complexion he had inherited (Sir William Muir, The coliphate, its rise, decline and fall, London 1891, 429).

In the reign of al-Mu'taşim, ■ Kurd rebellion is mentioned under 225/839; it broke out in the district of Mawşil, led by Dja'far b. Fahardjis, a scion of ■ noble Kurd family. Defeated at Bābaghēṣḥ, Dja'far took refuge in the mountains of Dāsin, where he defeated the troops of the caliph. A new army commanded by the Turk Aytākh [q.v. in Suppl.] put ■ end to the rebellion (Kāmil, vi. 360-1). A Kurd rising broke out in 231/845 in the regions of Işfahān, Djibāl and Fārs; it was speedily suppressed by the Turk general Waşif.

The Kurds of Mawsil in 252/866 joined the Khāridjī Musawir, who had seized Mawsil. In 262/875 they played a considerable part in the Zandil slave-revolt (cf. Nöldeke, A servile war in the East, in Sketches from eastern history, Edinburgh London 1892, 146-75) led by an 'Alid Kharidji (?) 'Ali Muhammad, called al-Khabith, and in the rising of Ya'kub al-Saffar, founder of the Saffarid dynasty [q.v.]. At Ahwaz, Yacküb appointed . Kurd lieutenant, Muhammad 'Ubayd Alfah b. Hazarmard, who, cherishing ambitious plans, engaged in secret negotations with al-Khablth. With reinforcements sent by the latter, Muhammad marched on Sus, but was defeated by Ahmad b. Laythuya; the latter, also a Kurd and commander of the Kurd levies, had been sent by the caliph to put down Ya'kūb's rising (Ibn Khallikān, Wafayat, ed. de Slane, iv, 304-8). When Ahmad had departed, Muhammad, after securing from al-Khabīth further reinforcements consisting partly of Kurds, seized Shustar where, according to the arrangement he was to have had the khulba read in the name of al-Khabith, but instead he did it in the names of the callph al-Mustamid and his adversary Yaskab al-Şaffar, His Zandi allies deserted Muhammad, and Shustar was reoccupied by Ibn Laythuya. Muhamnad retired to Ram-Hurmuz, but he was dislodged from it by al-Khablth's generals. As a result of difficulties with the Darnan Kurds, Muhammad again sought the help of al-Khahith. The latter sent him troops, which Muhammad sent into battle but suddenly left them in the lurch and attacked them. To avoid a breach with al-Khabith, Muhammad agreed to proclaim him caliph. The death of Yakub (265) 879) and of al-Khabith (270/883) put an end to these exploits (Kámil, vii, 264).

About 281/894 the Kurds were among the partisans of the Arab Hamdan b. Hamdûn (cf. ḤANDĀNIDS) when 📰 established himself in Mawşil. The Kurd rebellion raised in 284/897 by Abū Laylā did not last long (ibid., vii., 325, 337). In 293/906 the Hadhbani Kurds led by their chief Muhammad b. Bilai laid waste the region of Niniveh. 'Abd Alfah b. Hamdan, the new governor of Mawsil, pursued them, but suffered a reverse at Maftüba. Will reinforcements sent by the caliph he resumed next year the pursuit of 5,000 Hadhbant families. The Kurds began negotiations to gain time and retired III Ådharbaydjan. 'Abd Allah returned to Mawsii and with new troops set out once more against the Hadhbank, who had antrenched themselves at Diabal al-Salak (probably Lähidjan, cf. sawpj-bulag). The Hadhbanis were forced to surrender, and their pacification was followed by that of the Humaydi tribe and of the people of Diabal Dasin (ibid., vii, 371). In the reign of the caliph al-Muktadir, the Kurds plundered the environs of Mawsil but were punished by the Hamdanid government; the Dialati tribe put up a particularly stubborn resistance (ibid., viii, 118). Under the year 337/943 Ibn Miskawayh, Tadjárib al-umam, GMS, vi, 105, speaks of the expedition of the Hamdanid Husayn against Adharbaydian; on this occasion he

had as an ally Djafar b. Shakkūya, chief of the Hadhbanis who were settled a Salmās.

About this time, Daysam b. Ibrahim appeared on the scene, and his adventurous life is closely associated with the Kurds. He himself was the sam of an Arab by a Kurd woman. His followers were Kurds with the exception of small body of Daylamis. Daysam was a Khāridil. He seized Adharbaydian after Yusuf b. Abi 'I-Sadi and in 127/018 used his Kurds to drive out Lashkari b. Mardi, one of the lieutenants of the Ziyarid Wushmagir, But the Musăfirid Marzuban, m noted Shi'i, succeeded in taking Adharbaydian from Daisam and the latter took refuge with his friend Hadilk b. al-Davrant [the Armenian king of Vaspurakan Khadik or Gaghik, son of Deranik'). Then the people of Tabriz appealed to Daysam, but again he suffered a reverse and with the consent of the Musafirids fell back to Tarum. In 337/ 948-9. Marzuban was made prisoner by the Buvid Rukn al-Dawie, who sent a representative to Adharbāydjān. Marzubān's brother Wahsadan then thought of Daysam, to whom his Kurds had remained faithful, and sent him against Rukn al-Dawla's representative. Daysam was defeated, but held out in Ardabil and Bardha'a. When Marzuban returned from his captivity. Daysam had to take refuge first in Armenia and then in Baghdad, where the Buyid Mufizz al-Dawla treated him generously. As his friends were urging him to return to Adharbaydian. he went to the Hamdanids of Mawsil and Syria = ask for assistance. In the absence of Marzuban, Daysam returned to Salmās in 344/955-6, where he had the khulbs read in the name of Savf al-Dawla of Syria. Once more driven out by Marzuban, Daysam sought refuge with his Armenian friends. Ibn al-Dayrani (Deranik b. | Chacik) had to hand we over to Marzuban, much against his will. Daysam was blinded and died in prison in 345/956-7 [Tadjārib, ed. Amedrez, i, 345; ii, 148-51; Kāmil, viii, 289, 361, 375-7).

During Marsuban's captivity, in Rayy, several independent governors set themselves up in the northwest of Persia. One of them (about 340/951) was Mubammad Shaddad b. Kartu of the Rawwadi tribe, out of which later sprang the great dynasty of the Ayyubids. The principal fiels of the Shaddadids were Dabil and Gandia. The Shaddadids and allies the Byzantines and of the Saldings. In 465/1072 Abu Suwar bought And for his young son Manuce. From this time onwards, the dynasty was divided into two branches: that of Gandja and that of Anl. In 1124, Ani was taken by the Georgians but between \$20/1126 and \$57/1161 and again from 1165 to 1174. And again held by the Shaddadids. The Shaddadicis were enlightened princes and left a number of remarkable buildings. Cf. the articles ARRAN, DWIN, GANDIA and SHADDAD; the Armenian bibliography in Lynch, Armenia, I, 363-7; of. also Barthold in the appendix to his Russian translation of Lane Poole's Muhammadan dynastics, St. Petersburg 2899, 294; Barthold, Pers. nadpis' na .. Manues, Aniyakaya Seriya, No. 5; N. Y. Marr, Eshce e slove "celebi", in ZVOIRAO, xx (1922), 120; E. D. Ross, On three Muhammadan dynasties, in Asia Major, ii (1925), 215.

In 149/960 m pretender appeared in Adharbāydjān He was called īshāk b. 'Īsā, and was supported by Fadi, chief of the Kahṭānī (?) Kurds, while his asversary, the Musāfirid Djastān b. Marzubān relied on Hadhbānī support. Ishāk was min disposed of (Tadjārīb, li, 179). The Kurds and the Daylamīs also played a considerable part in the quarrels between Djastān and his brother Nāṣir al-Dawla and between

Ibrāhīm b. Marzubān and his cousin Ismā'il b. Wahsūdān (*Tadjārib*, li, 229, 229; Kāmil, vili, 220-2),

About 348/959, the second Kurd dynasty line in al-Djibal (Zambaur, Manuel, 211) founded by Hasanwayh (Hasanûya) b. Hasan (e.v.; cf. also the Sharaf-nāma, i, 20-3], chief of the Barzikani (Barzinii tribe, who had assisted the Buyid Ruka al-Dawla on his expedition to Khurasan, Rukn al-Dawla showed great tolerance to the Kurds, and when someone complained to him of their excesses he used to say: "Even the Kurds must live" (Tadidrib, ii, 281). Ibn al-Athir (viii, 519) praises the noble character of Hasanwayh, his prudent policy and the purity of his morals. When Hasanwayh died in 360/ 979, in his capital Sarmadi (south of Bisutun). Adud al-Dawla his possessions (Hamadan, Dinawar, Nihāwand) to bring them under his authority, but in the end he granted investiture to Badr b. Hasanwayh (369-405/979-1014), who remained loval to 'Adud al-Dawla and even fought against his own brothers who had taken the side of the rebel Fakhr at-Dawla. The caliph gave Badr the title of Nasis al-Din wa 'l-Dauda. The historians give mextremely favourable verdict on Badr; he had his tribe educated, distributed taxation fairly and protected the peasants (Rüdhrawari, in Eclipse, iii, 287-99, 327; Hilal b. Muhassin, in ibid., iii, 429, 449-54; 'Utbl. Kitāb-ı Yamini, tr. Reynolds, azal, Badr's successor Zāhir (Tāhir?) only reigned a year and in 406/1015 and driven out by the Bayid Shams al-Dawla. Hasanwayh's uncle Wandad, chief of the Ayahlyya section, died in 149/960, his brother Abu 'I-Ghana'im died in 350/96r, and a little later his Abū Sālim Daysam, the last of this collateral branch, was dispossessed of his castles (Kasan or Kasnan [Kaslān? near Bābā Yādīgār on the Zohāb], Ghānimābād, etc.).

"Adud ai-Dawia had to deal with the Kurds on several occasions, but he was much more severe with them than his father Rukn al-Dawia. In 368/978 the Kurd Ibn Baduya with the help of the Handanid Abn Taghlib [q.v. in Suppl.] became an independent ruler at Ardamusht (= Kawashi near Diabal-Diudi, Yakot, i, 199), but soon allowed himself to be setuced by the promises of 'Adud al-Dawia (Tadiārib, ii, 392). In 369/979 the latter sent = expedition against the Kurds of Shahrizur whom he wished to separate from the Baaû Shaybān Bedouins, who had business and matrimonial ties with them. The town of Shahrizur was occupied, and the Arabs went back to the desert (Tadiārib, ii, 398; Kāmil, viii, 516).

Another expedition was sent in 370/980 against the Hakkart Kurds, who were besieged and surrendered, relying on a promise that their lives would be spared. But the leader of the expedition crucified them along the side of the road for five farsakles between Ma'al-

thaya and Mawsil (Kamil, viii, 522).

Even in the lifetime of 'Adud al-Dawia, the Humaydi chief, Abū 'Abd Allāh Husayn b. Dushandi (or Abū Shudiā' Bādh b. Dustāk), known as Bādh had attained considerable notoriety. At first shepberd, he gradually rose to be lord of Ardish, Amid and Mayyāfārikin. It rising in Nişibin brought him into conflict with Samām al-Dawia. Bādh defeated the latter's forces I Bā-Djulā'iya (on the Khābūr al-Husayniyya in the canton of Kawāshi — Ardamusht), seized Mawyil and was planning a march on Bashdād to end Būyid rule when he was defeated by Samām al-Dawla. He fell back on Mayyāfārikin and, by I arrangement with the captain of the army sent against him, secured possession of Diyārbakr and the western part of Tūr

"Abidin (374/984). Bāgh did not relinquish his designs on Mawail and in 379/990, having collected a large number of Bashnawi Kurds, encamped under the walls of this town and engaged in negotiations with its inhabitants. But the Hamdanid princes, who had just regained possession of their hereditary flef, secured the help of the Banii 'Ukayi Arabs and attacked the invader. An accident put Bāgh hors de combat and he was stain. His body was crucified, but the people of Mawaii obtained his burial with the usual rites because he had fought against the unbelievers (Kāmsi, ix, 25, 27, 38, 49; Rūdhrāwati, iii, 83-4, 176-8; Abu 'I-Faradi, Mushtasar al-dunal, ed. Pococke, 321-3).

In 380-90/990-1000, Şamşām al-Dawla made an attempt to improve his position and with this object, made an alliance with Füläd b. Mundhir, who was supported by the Kurd cavairy mobilised at Shiraz. After the failure of the enterprise he sought refuge with the Kurds, but the latter betrayed him and he took refuge with Falhr al-Dawla, who was notorious for his haired of the Kurds (Rūdhrāwarf, ili, 184; on

Ibn Füläd, see 'Utbi, op. cit., 424-5).

The Kurd dynasty of the Marwanids (Zambaur, 136; Bosworth, The Islamic dynasties, 53-4) is closely connected with Badh. After the deleat at Mawsil, Abū 'Alī b. Marwān b. Dustāk, the son of Bādh's sister and his ally, withdrew to Hisn Kayfa [q.u.] where Badh's Daylami wife lived. He married her and took one of the strongholds that had belonged to Badh. He twice took prisoner Abū Abd Allāh al-Hamdani who had defeated Badh, but treated him generously. Ibn Marwan established himself in Diyarbake and by his conciliatory attitude won the sympathy of the inhabitants. The Marwanids reigned from 380/990 to 489/1096. Their power extended not only over Diyarbakı (Amid, Arzan, Mayyafarikin, Hisn Kayfa) but also to Khilat, Malazgird, Ardjish and the canton to the northeast of Lake Van. In the west they held Urfa for a time. Abû 'Ali Hasan in 381/ 99x invaded Syria and took It from the Byzantine Emperor Basil II. He was killed in 387/997 by the people of Diyarbakr, who had rebelled. His brother Abu Mansur Mumahhid al-Dawla, who after the death of Badh had seized Mayyalarikin, reigned there till 402/1011 (Abu 'l-Fida', Annales mosiemiti, ed. Reiske, il, 569). His brother Abû Naşr Ahmad (Ibn Khallikan, i, 257-8) succeeded him and reigned from 402/2022-22 🖿 453/2062. In 426/2025 he seized Urfa, but the Byzantines re-established their power in 422/1032 (Abu 'l-Faradj, 342). He carned the reputation of being a just and enlightened ruler, and able, though given to pleasure. In 442/1050 Abû Naşr had to pay homage to the Saldiuk Tughril Beg. His son and successor Abu 'l-Kāsim Nasr, called Nizām al-Dawis (453-72/1061-79), shared the power with his brother Said (d. in 257/2065, He added to his possessions Haman, Suwayda, etc. His successor Mansur b. Sa'd, who nominally reigned from 472-89/ 2079-96, but by 478/1085 the Saldjuk general Fakhr al-Dawla b. Djahir [see DIARIR, BAND] had taken almost the whole of his lands, which were placed under the authority of the Atabeg of Mawsil (Abu 'l-Fidā', iii, 77-9, 87, 121, 125, 249). On the Marwānids, ci. the special study by H. F. Amedroz, in JRAS (1903), 123-54.

On the eve of the Turkish invasions, we find frequent reference to exploits and expeditions of the Kurds. In the reign of the caliph al-Kādir (381-422/991-1031), the historians record the exploit of Kurd Ahmad b. al-Dahhāk, who killed the Emperor Basil II's general and thus stopped the Byzantine

advance (Rüdhräwari, iii, 247). Between 366/976-7 and 388/998 the Kurds took part in the struggle between the Büyids and the Ziyarids for the possession of Djurdjan ('Utbl, tr. Reynolds, 298-302; Ibn Islandiyar, abridged tr. E. G. Browne, 226-8). A lew years later we find Mehmüd of Ghazna using Kurds

against the Karakbanids ("Utbī, 336).

The Kurds took part in the civil wars of the Büyids, in the struggle of the Banü 'Ukayl for the possession of Mawyil, etc. In 411/1020 they fought against the Turkish troops who mutinied in Hamadān. In 415-20/1024-9 we find them lighting in Fārs and Khūzistān against the last Büyid, Abū Kālidjār (Kāmil, ix, 100, 134, 226, 234, 239, 247, 249, 265; Hilāi b. Muhassin, iii, 348, 376, 381). Thus the Kurdish element was exhausting itself in continual fighting when the Turkish bordes arrived who were destined to modify radically

the ethnical aspect of the Near East.

The Turkish conquest. When in 420/2029 the Ghuzz precursors of the Saldjüks reached Rayy, Tash Farrash, the Turkish general of the Ghaznawids, went to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds, being captured by the Ghuzz, sent message to his men to cease fighting. This caused a tumult and Tash was killed (Kāmil, ix, 268). In IIII same year the Ghuzz reached Maragha and executed many Hadhbani Kurds. The Kurds made an alliance with the ruler of Adharbaydian (Wahsodan II) and the Ghuzz had to retreat. Another body of Ghuzz, after a raid into Armenia, returned to Urmia and the lands of Abu 'I-Haydja' Hadhbani; the Kurds attacked the Ghuzz but suffered a defeat. In 432/1042 the Musafirid Wahstidan II b. Mamilia massacred a large number of Chuzz at Tabriz; the Chuzz of Urmin went into Hakkarl, a dependency of Mawail, and ravaged the country, but while they were involved in the mountains the Kurds attacked them, killed 2,500 men and took many prisoners and much booty (Kámil, ix, 270-2).

On the approach of Tughril Beg's troops, the Ghuzz took fright and pushed onwards. Kurdish guides led them through al-Zawzan to the Diazira. One section of the Ghuzz under Mansur b. Ghuzoghil remained to the east of the Diazirs, while the other under Buka marched on Diyarbakr, and going on pillaged the districts of Kardū, Bāzabdā, Husayniyya (Yāķūt, ii, 270: a town between Mawsil and Djazlra) and Fêşhâbûr, The Marwânid Sulaymân b. Naşr al-Dawla, ruler of Djazira, persuaded the Ghuzz to wait till the spring before traversing his lands to join the other Chuzz who had settled in Syria. Then by a ruse he seized Mansur, and with the help of the Bashnawl Kurds of Finik, pursued the Ghuzz. But the latter did not cease their depredations; they ravaged the district of Divarbake and seized Mawsil (Kāmil, ix,

Meanwhile, the dynasty of the Hasanwayhids had perished and the power in Dibāi had passed to a new family the Banû 'Annāz (see Zambaur, 212, and 'Annāz (see Zambaur, 212, and 'Annāzios. The Sharof-ndma, i, 22, has 'Ayyār), which is often called that of Abu 7-Shawk. Previously in 340/951 during m Turkish rising in Hamadān, the Bûyid Mu'izz al-Dawia had had recourse to the services of Ibn Abi 'I-Shawk, chief of Huiwān (Tadjdrib, il, 2). The real founder of the dynasty seems to have been Abu 'I-Fath Muhammad b. 'Annāz (Kāmil, ix, 158) who ruled 380-401/990-1011. His son Abū 'I-Shawk slew the last of the Hasanwayhids, Zāhir (Tāhir) in 406/1015-16. The possessions of the Banū 'Annāz included Shahriañr, Kirmānshāh (occupied in 431/1039-40; Kāmil, ix, 300, 316),

Bünwâr, Şamghân, Dakûka and Khuitidhakân. In 437, Tughril sent his brother Ibrābim Yināl to pacify Djibāi. Ibrāhim drove the Kākûyid Garshāsp out of Hamadân and he sought refuge with the Djüzkân Kurds. At Kirmānshāh there was a garrison of Abu 'l-Shawk's composed of Daylamis and Shādjandjān Kurds. Kirmānshāh was occupied and Abū Shawk died in 438/1046 at Sirwān. Ibrāhim took Ṣamirān (Ṣhamirān ? Ṣaymara ?) and subjugated the Djuzkān. Sa'dl, son of Abu 'l-Shawk submitted to the Saldjüks. The dynasty lasted till 520/1116 (Münedjdjim-bash).

The defeat of the Emperor Romanus IV at Malazgird (463/1071) delivered all Armenia into the hands of Alp Arslan. Under the Great Saldinks there arose in Färs the turbulent dynasty of the Shabankāra [q.v.], but it is very doubtful if this dynasty, the fortunes of which can be traced from 421/1030 to 756/1355, was strictly Kurdish (cf. above). On the other hand, the small Kurd dynasties were ruthlessly wiped out in favour of Turks. In 493/1100 the last Marwanid disappeared in the region of Khilat, where the Turk Sukman Kuthi founded the dynasty of the Shah Armans which lasted a century until the coming of the Ayyubids. Under the date 495/zzoz Ibn al-Athir (x, 238) mentions the killing of two thousand Kurds of Surkhab b. Badr, a scion of the Bana Annaz, by the Turkomans of Salghur Karabull. Other Turkomans later took all the lands of Surkhab except Shahrizur, Daķūķa and Khuftidhakān. In spite of these crushing blows, the Kurds are often mentioned in the 5th/1xth and 6th/12th centuries. In his struggle with Kawurd of Kirman, Malik Shah employed Kurdish and Arab forces, whom he later rewarded with fiefs at Kirman (Kemil, x, 53), where there were already colonies of Kurds (cf. Mas'adi, Tanbia, 88; Ibn Khalilkan, I, 516). Raids of Kurds took place at Dudjayi, Mardin etc. in 496/1103, 498/1105 and 503/1109-10. In Muhammad b. Malik Shāh's campaign against Syria (504/1110) there took part the lord of Maragha, Ahmadil b. Wahsudhau, a Kurd of the tribe of Rawwadl (cf. Kāmil, x, 391) and the "Shah of Armenia" Sukman. The campaign was # fiasco, and the Kurds left to lay siege to the Turk Suluman (Recueil des hist. des Croisades, documorientaux, ili, 542, 599).

During this period we often find the Kurds mentioned in Syria, where they came into contact with the Franks (cf. Derenbourg, Outsing b. Munkidh). Under Sandjar the province of Kurdistân of formed out of the western part of Djibâl. Sulaymân, the nephew of Sandjar, became its ruler with Bahār (to the north-east of Hamadān) in its capital. The province in a flourishing state. In the reign of Sandjar also the Kurds took part in the troubles of \$13/1119. In \$16/1122 in punitive expedition passed through the Hakkari, Zawaān and Bashnawi districts (Kānsil, x, 374, 377, 426), but shortly alterwards the Kurds seized the stronghold of the Christian patriarch at Tūr 'Abidin (Assemani, Bibl. or., il, 221)

The Atabaks of Mawsil. The Atabaks, the immediate neighbours of central Kurdistan, played an important part there. Imad al-Din al-Zangi several times invaded Kurd territory. In \$28/1234 he took Tanza (on the left bank of the Bokhtan) and to punish the Humaydis, who had supported the caliph Mustarshid when he was besieging Mawsil, seized their fortresses, al-'Akr, Shūsh, etc. (Shams al-Din, in Resneil, iti, 666-7; Ibn al-Athir, al-Atābakiya, in thid., it, 87). Abu 'l-Heydja', lord of Arbū, Āshib, etc., submitted to Zangi (was he perhaps a Hakkārī? At this period this tribe lived south of the territory which now bears im name; cf. Hoffmann, Assingi, 203).

After the death of Abi 'l-Haydja', Zangi intervened in the quarrels among his successors, seized Ashib and dismantled its defences; the fort of Djalab received the name of 'Amadiya (- 'Imadiya, in honour of 'Imad al-Din'. In 534/1139 Zangi took Shahrizur from Kifdjak b. Arslan Tash the Turkoman. In 337/1142 he sent a new expedition against the Hakkārī and took the fortress of al-Shahani (= Ashib?), which he rebuilt. In 538/1143-4 Irun and Khlzan were taken (Shams at-Din, in Requeil, iii, 685). 'All, lord of al-Rabiya (cf. Sharof-noma, i, 284, Rābiya-bulāk?), Farah and Alka (Elk?) joined Zangi of his own accord. The last expedition of Zangi was against the Bashnawi of Fanak (Finik), but the siege of this town was raised on the death of the Atabak in \$41/1146: (Ibn al-Athir, al-Athhakiyya, in Recueil, ii, 86, 114, 129, 188). Karādia Tādina, mukļa^t (?) of Hakkari, who was sent in 547/1152-3 by the Atabak of Mawail against the Atabak of Adharbaydian, seems to have been a Turk foreign to the tribe.

Later, after the death of Salāh al-Din (589/1193), the Zangide consolidated their position in cantral Kurdistān. In 6c//1211 'Imād al-Din, myounger son of Arslān Shāh Zangi, received as m fief the strongholds of the Humsydis ('Akr and Shūsh). In 625/1228 the same prince seized 'Amādiya and ''the remainder of the fortresses of the Hakkārl and Zawzān' which were ceded to him by Muzaffar al-Din Kökbūrl of Arbil (Abu '!-Faradj, 453, 438). It must have been these events that caused the Hakkārl to be driven back towards the lands at the sources of the Great Zāb.

The Artukids [q.v.], Atabaks of Divarbakur, several times came into conflict with the Kurds (Abu 'l-Fida'), ili, 583: Usāma, i, 321). The 'Abbāsid caliphs, freeing themselves from the tutelage of their protectors, negotiated with the Kurds (cf. the case of 'Isa Humaydi in 528/2134, and Kamil, xi, 7, 188) and sought to weaken the Turks. In 581/1185 under the caliph al-Nasir, a minor incident resulted in a war between the Kurds and the Turkomans (Kâmil, iii, 342) which extended over a vast area (Syria, Diyarbakır, Djazira, Mawşil, Shahrizur, Khilât and Adharbaydjan). Two years later the rivals stopped fighting in order to join against the Christians of Armenia, Assyria, Mesopotamia, Syria and Cappadocia, but new feuds soon broke out between the Kurds and Turkomans. After many fierce battles, the Kurds fought their way back into Cilicia. The Turks practically exterminated the Kurds of Cilicia and Syria. As the Kurds on leaving their old homes bad entrusted their goods to their Christian neighbours, and as the Christians concealed Kurds, the Turks finally fell upon the Christians at Thelmuzen(?) and Arabthil (= Arabgir?) (Michael the Syrian, in Recueil, doc. armen., 395).

The Ayyubids, The Kurdish origins of this remarkable dynasty well-established (Sharaf-sama, i, 55-82). The Armenian historian Hayton (Hethum) says on this point: "Postea Sarraceat amiserunt dominium Egipti et Medi, qui Cordins vulgariter dicebantur, regni Egipti dominium occupaverunt", Recaeil, does. arm., il, 225, 343). The grendfather of Şalāh al-Din Shādhi b. Marwān was Rawādī Kurd (Rawadl, Rawanda, o clan of the Hadhbāni) of Dwin [q.v.]; see Minorsky, Prehistory of Saladin, in Studies in Caucasian kistory, London 1953, 107-57.

The important fact is that it was from Dwin that the Shaddadi dynasty had come, the memories of which must have been still alive in the time of Shadhi Ayyûb [see Ayyûains] and Shirkûh [q.v.], son of Shadhi, were born in the old home (the village of Adjdanakān). Şalāh al-Din [q.u.] was born at Takrit, but Kurd traditions were certainly familiar to him through me father and uncle. The persistence of Iranian names in the Ayyobid family is significant. Nevertheless, the seem of the main activities of the dynasty Egypt and Syria. The families of the old Saldink Atabaks, even when they became vassals of the Ayyubids, continued to rule in Diyarbakr (Artukids), Mawsil (Zangids) and Arbli (the Begtegipids, at first deputies of the Zangids). By the treaty of 585/1187 with 'Izz al-Dln Zangi, Şalāh al-Din annexed only Aleppo and Shahrizur (Ibn al-Athir, al-Aldbakiyva, in Recueil, ii, 334; Kāmil, xi, 340; Baha' af-Din, in Recueil, iii, 85). In 585/1189 Salab al-Din gave Shahrizur to his mamiuk Keshtoghdi (?). a relative of Yackab b. Kifdjak. The only independent way by which the Ayyūbids penetrated into Kurdistan was that of Khilat. This district was at first conquered by Taki al-Din in 587/1191 (Kāmil, xii, 40), but it was only after the death of Salah al-Din that his nephew al-Malik al-Awhad Nadim al-Din Ayyûb installed himself there in 604/1207. Later, Khilåt passed to his brother Ashraf, who assumed the title "Shah Arman", and finally to the third brother Muzaffar who ruled there till 642/1244. The peace of this fief was several times broken by invasions of Georgians, of the Khwarazm-Shah and of the Mongols. The Georgian troops who perating round Khilat at this time were commanded by the Armenian princes Zakarê and Iwanê, whose genealogies make them descendants of the Khel Babirakan, i.e. of the Kurd tribe of Baphakan; cl. Marr in ZVO18AO, xx (1911).

The Ayythid forces were composed mainly of Turks, but the Kurdish element was by no means negligible. In 583/1187 Safah al-Din addressed appeal for a holy war to the Kurds on the upper Tigris. The Diazira forces and dishanded in 584/1188, but the Diyarbakr detachments and particular tribes often mentioned. These Kurds were sometimes abad terms with the Turkoraans (Bahā' al-Din, in Recneill, iil, 86, 313, 381).

Rurds were numerous in the civil and military service of the Ayyübids, but very often they acted against the dynasty's interests. When Shirkin died, there were Kurds who opposed the appointment of Salah al-Din as his successor (Ibn Khallikan, iv, 494).

An important part was played by the family of Abu 'l-Haydia' (Hadhbanil, hereditary chief of Arbil(?). He directed the defence of 'Akka against the Crusaders was appointed is fahsalar of the army and governor of Jerusalem. In 592/1196 he was transferred to Baghdad: he conducted an expedition against Hamadan and died at Dakhka. His nephew Kutb al-Din built the Kutbiyya madrasa Cairo. Another Kurd, of the tribe of Hakkari, Sayi al-Din b. Ahmad al-Manhidh, succeeded Abu 'l-Haydia' at 'Akka. His descendants had exciting careers; his son Ahmad ended his days in the prison of Harran; his grandson, the Kâdi 'Imâd al-Din plotted against al-Kāmii and had to go into exile.

The Khwārazm-Shāh Dialāi al-Din. In 614/
1217 the Kurds of Zagros inflicted a defeat on the troops of the Khwārazm-Shāh man from Hamadān to Baghdād. Dialāi al-Din's operation against Khilāt (623-6/1226-9) disorganised the life of the country, and the Kurds were decimated by famine (Kāmu, xii, 207, 308). Defeated and pursued by the Mongols, Dialāi al-Din took refuge among the Kurds of Diyārbakr and in 628/1231 was kilied, probably by one of them (Diuwayni, ed. Muḥammad Kazwini, ii,

190: Kāmil, xii. 325; d'Ohsson, Histoire des Mongols, iii, 62). In 634/1237 again the remnants of the Khwāraum hordes traversod and plundered the region of Kharpüt (Abu 'I-Faradi, 477). After the death of Dialāl al-Din, the Mongols laid waste the region of Diyārbakr and Khllā; Another horde had descended from Marāgha on Arbil; this latter region was three times invaded. In 645/1245, Shahrizūr was laid waste and in 650/1252 Diyārbakr.

The Mongo! Ithhans. The Kurds are rarely mentioned under the Ithhans. As these rulers—at first pagans and later Muslims—were on good terms with the Christians, and the latter had sufficient causes of complaint against their Muslim neighbours, the Kurds in recently involved in the wars of the Ayyabids had to remain confined to their mountains and to hope for success for the enemies of the Mongols.

The province of "Kurdistan" formed in the time of the Saldjüks, the capital of which was Bahar (near Hamadan), was conquered by Malik b. Tudan, father of the celebrated Amir Coban. Leaving Hamadan in 655/1257, Hülägö marched on Baghdäd. At Kirmänshall the Mongols began to murder and plunder (Rashid al-Din, ed. Quatremère, 225, 255, 267). Before the capture of Baghdād, Hūtāgū sent troops 🖿 take Arbil. The governor of this stronghold, Tadi al-Din Salāba (cf. Rashid al-Din, ed. Blochet, 251), submitted to the Mongols, but the Kurd garrison refused to follow his example. ArbII was taken with the help of the Atabak of Mawsil, Badr at-Din Ludu' (d'Ohsson, iii, 250). The taking of Baghdad resulted in the depopulation of Shahrizur (q,v_*) , and its Kurd inhabitants, according to Shihab al-Din al-"Umari, left for Syria and Egypt (cf. d'Ohsson, op. cit., iii, 309, 330, 337). An echo of these events is found in the appearance in Aigeria of two Kurd tribes: Lawen and Babin (Ibn Khaldun, Hist. des Berbères, tr. de Slane, ii, 461, iii, 413).

Returning to Ädharbäydjän, Hülägü set out for Syria in 657/1259. In the Hakkāri country, the Mongols put all the Kurds they found to the sword (Rashid al-Din, ed. Quatraère, 328). Diszira, Diyârbakr, Mayyāfāriķin (heid by the Ayyūbid al-Malik al-Kāmil Nāṣir al-Din) and Mārdin were taken in succession. After the death of the Atābak Badr al-Din Lu'lu', who had remained iaithful — Hūlāgū, his — Şālib went over to the side of Baybars, Sulţān of Egypt, and received confirmation of his investiture from him. The Kurds around Mawill — once fell upon the Christians. The garrison of Mawill consisting of Kurds, Turkomans and Shūla, courageously resisted the Mongols.

In Syria also the Kurds threw in their lot with the Mamilüks. In his letter to the Khan Berke, Baybars boasts of the number of his troops, who were Turks, Kurds and Arabs (d'Ohsson, iii, 385). In the time of Abaka, the Armenian Hayton tells how after an invasion of Egyptian troops (before 677/1278) the Kurds took 5,000 houses of Kurds (Gordins) living northern Syria (Recueil, docs. armén., ii, 179). But after the defeat of the Mongols in 680/1281, a body of Muslim troops, made up of Turkomans and Kurds, laid waste Cilicia. The rare cases in which Kurds found allied III the Mongols were generally in distant Fars. Under Oldjeyth there were Kurds in the troops that invaried Glian in 706/1306-7. A little later = Kurd, Müsä, who had proclaimed himself the mahili of the Shiffs, was executed by Öldjeytii. In 712/1312-13 Bade al-Dip, the Kurd lord of Rahba, resisted the Mongols.

The Kurd provinces were governed by the Mongol amirs. The fighting in Arbii never ceased. The

"Kayaci", Christian highlanders, forming part of the Mongol army and stationed in Arbil, brought a charge against their chief Zayn al-Din Balti and came into conflict with the Kurds, whom the Arabs supported. Incidents began in 696/1297 but the situation came to a height in 7x0/1310. With great difficulty, the Mongols drove the Christians out of the citadel. The Mongols had summoned the Kurds to help them in the siege, but their amirs, who were friendly with the Christians, wanted to use the Kurds to prevent the of the Christians by the Arabs. The massacre took place, but the Kurds had no share in it (Histoire de Mar Jabalaka III, tr. J. B. Chabot, Paris 1895, 152-77).

The country between Maragha and Arbii was a kind of high road for the Mongol armies; at this time the country south of Lake Urmia was still for the most part occupied by Turks and Mongols (cf.sawpj-mulak).

The capital of the province of "Kurdistan" under Öl<u>dj</u>eytű was moved from Bahár to Sultánábád (of Camcamál). The extent to which the province had suffered may be judged from the statement of the Hamd Allah Mustawii's Nushat ai-hulub (ed. Le Strange, 107), according to which its revenues = reduced to one-tenth of what they were under the Saldjūks.

When the likhans had disappeared, two families of Mongol chiefs of the tribes of Sulduz [g.v.] and Dialayir [q.v.] became rivals for power. By virtue of the division of the fiels between "the two Hasans" (in 738/1338), (Persian) Kurdistan and Khüzistan returned to the children of the amir Akran<u>di</u> or Akragh (?). In 784-5/1382-3 the Djalayir Bayand carved a fief for himself out of Persian Kurdistan and 'Irāķ 'Adjamī (Zambaur, Manuel, 253, and d'Obeson,

Iv. 747).

Table of the Kurd tribes in the time of the Mamlük Sultans. The Mongol conquest had completely eclipsed the political part played by the Kurd tribes, but in Egypt, where the Mamlük Sultans were cherishing secret plans against the likhans, much interest was taken in the fate of this Muslim element. The Matalik al-abşar of Shibab al-Din al-Umari (d. 749/1348) shows how exactly the chancelleries of the Mamiük Sultans informed about Kurd affairs. According to al-'Umari, there Kurds near al-Trak and al-Diyar al-Arab and in Syria and Yemen. The mountain country (al-Dibal) inhabited by the Kurds began near Hamadan and ended in Cilicia (bilad al-Takfur); to the west of the Tigris the Kurds of al-Diazira and Mardin were at the mercy 📰 all their neighbours. At Mardin, however, a certain Ibrahka al-'Ars Bala (?) had shortly before then proclaimed himself independent and had attained considerable power. The author then gives ■ list of twenty tribes living between Hamadan and the part al-Diazles that lies between Maweil and Kawar (cf. Kewar in the Sharaf nama):

r. The Gürani, who were warriors and agricultur-

ists (djund wa-rakiyya).

2. The Gilali (cf. the mountain called Gal@la among the Sohran; Sharaf-nāma, i, 286, and Rich, Narrative, i, 123: Ghellali). A portion of this tribe migrated to Syria. Their prince Sharaf al-Din was governor of Arbil under the Mongols, but was killed by a Mongol.

3. The Zangall (Zangana?).

4. The Kūsa and the Mabir (??) of Shahrizur

[q.v.] migrated to Syria and Egypt.

5. The Sabult (Suturd?), lived in Shahrigur and Ushnu. Near them lived the Kartawi (? cf. Hofimann, Auszüge, 207).

 The Hasnani (Khushnawi?), several thousand in number, divided into three branches, one of which living at Karkār alongside of the Kartāwi (?) levied toils on the pass Darband-i Karaboli (the defile of the Little Zab; cf. Hoffmann, op. cit., 253).

7. Near Karhin (= Kirkūk?) and Daķūk lived =

tribe of 700 men.

8. A tribe living "between two mountains" (bays al-diadalaya) on the territory of Arbii in winter sought the good graces of the Mongols, and in summer assisted the invasions of Egyptian troops.

 The Māzandjān [?] to the number of 500 lived near Arbil and Māzandjān, Nērwa and Bēkhma (these two latter cantons me situated on the Great Zab east of 'Akı). The chiefs of Mazandjan also ruled the related tribe of the HumaydI (of which there were 1,000 men). The chief of the Mazandian called Kak had received the title Mubariz at-Din from the Abbasids. The Mongols divided his lands into two and Kak remained ad his of Arbit. He was dispossessed for a time under Arghun, but according to the Subb al-a'sha' of al-Kalkashandi, his sons and his grandsons retained their fief ('Akr and Shush).

to. Near Tell Haftun was the land of the numerous

Sohri (ribe (Sohrān).

11. Their neighbours were the Zazzārī ("children of gold"). They also possessed Maläzgird (= Rūbār-i Barazgird) and Rustak (the southern part of Shamdinan).

12. The Dialamers, of Umayyad origin, numbered 3,000 men.

13. The Kurds of the district of Markawan (read

Margawar) were allies of their Diblamergi and Zarzārī neighbours. Near <u>Di</u>úlámerg was the canton of Gawár.

15. Near Djùlamerg beside 'Akr and 'Amadiya was the canton of Zibari inhabited by 500 men.

16. The Hakkarl lived at 'Amadiya and numbered 4,000 men.

17. Near the Hakkarl beside Mardi were the Djabai al-'Amrani and the cave of Kahi Dawud where lived the Basitki (??).

18. Near Djulamers towards Mawsii lived the

Bokhti, rivals of the Humaydi.

ro. The Dasini had been very numerous, but their chief Badr al-DIn came down to more accessible country and there were no more than 2,000 Dasini in the province of Mawsil; 500 Dasini lived at 'Akr.

The Dumbull (?) inhabited the high moun-

tains.

To this information given by the Masslik, the Subh al-a'sha, basing itself on al-Talhhif composed by Taki al-Din Ibn Nazir al-Djaysh about 748/1347, adds a list of 25 Kurd chiefs with whom the chancel-

leries of Cairo were in correspondence,

Timur and the Turkoman dynasties. After the Mongols, the rival Turkoman dynasties extended their power over Kurdistan. This period, of which little is yet accurately known, we of considerable importance for the Kurds. The Kara Koyanlu dynastics penetrated into the heart of Kurdistan, involved the Kurd tribes in political and religious quarrels (cf. the extremist ShFa of the Kara Koyunlu) and provoked considerable movements of the population: It was at this period that the Mukel Kurds seized the country south of the Lake of Urmia [cf. saw w-BULAK]. In contrast to this, the conquest by Timur which temporarily swept aside the Kara Koyunla had only m transitory character.

Many incidents in the history of Hisn Kayfa and Diazira between 796-897/1393-1491 are recorded in the Syriac Chronicle (written at Haytam) published by Behnsch, Rerum seculo XV in Mesopotamia gestarum liber, Breslau 1838.

Their had to deal with the Kurds in his campaigns of 796/1394 and 803/1400-1. After overrunning Baghdad and Diyarbakr, Timbr attacked Diazira, which was destroyed. The dependencies of Diazira were likewise computed. Timbr next crossed the mountains separating Diyarbakr from Müsh and gave a favourable reception to Sharai al-Din of Bidlis "renowned for his kindness and justness throughout all Kurdistän". In 803/1400-1 Timbr returned from Baghdad to Aftharbäydian and on the way was attacked by the Kurds.

After the death of Timur, Kara Yusuf Kara Koyuniu [see Kara Koyuniu] returned to Kurdistän and sought refuge at first with Shams al-Din of Bidlis. He gave him his daughter and with his assistance re-established his power. In \$20/1417 Kara Yüsuf by a nighdn confirmed the princes of Bidlis in their possessions. When in \$24/1421, Shahrukh, son of Timur, arrived in Armenia, homage was done to him by Shams al-Din of Bidlis, Malik Muhammad Hakkari, Malik Khalil of Hish Kayfa, the amirs of Khizan, etc. The Kurds of Khoy also remained loyal to Shahrukh's governor [Matlat al-sa'dayn, in Notices et estealis, xiv, 153).

The Ak Koyunlu [q.v.] (the Bayandur dynasty) whose principal centre was in Diyarbakr, conducted a systematic policy of exterminating the great Kurd families (Sharaf-mima, i, 164; istizāl-i khānawādahāyi Kurdistān), and in general they persecuted tribes who had compromised themselves by their attachment to the fara Koyunlu, like the great tribe of Camishgezek, Uzun Hasan's generals Şüfi Khalil and 'Arab Shih conquered Hakkari, which was later taken for a brief period by the Dumbuli tribs from Boltan, In 875/1470 (cf. Behnsch, op. cit., 14) Diazīra passed entirely into the power of the Ak Kovuniu. who appointed their own governor Calabi Beg, whose morits are recognised even by the Sharaf-nama, i, 123. The Ak Koyuniu general Sulayman b. Bizan drove out of Bidlis the Ibrahim Khan who was later put to death by Ya'kûb b. Uzun Hasan.

The Safawid Shāhs and the Ottoman Sultans. Shāh Ismā'li had invaded Armenia at the beginning of his war with the Ak Koyunlu. After the battle of Sharūr (907/1502) he won all the country between Baghdād and Mar'ash. Ismā'li I's policy with regard to the Kurds did not differ from that of the Ak Koyunlu. Like the latter, the Shāh relied on the Turkoman tribes, but being a zealous extrame Shi'l (cf. Kharā''i in EI') he was still more predisposed against the Sunni Kurds. When eleven Kurd chiefs presented themselves at Khoy to pay homags, Ismā'li imprisoned most of them and appointed in their stead governors chosen from the Kizli-bash tribes.

Henceforth, for about three centuries Kurdistân became the arena for the struggle between the Ottoman Sulfāns and the Shāhs of Persia. The defeat of Cāklīrān [g.v.] (920/1514) was a terrible blow to the prestige of the new Persian dynasty. In spite of the temporary successes of the successors of Shāh Ismā'll, their conquests never attained the importance of his early victories and Persian territory west of the Zagros melted away. Ismā'll's attempt to thrust Persian governors upon the Kurds was a marked contrast to the Ottoman policy instituted by the able Haklin Idris, himself a Kurd, which aimed at giving Kurdistân a leudal organisation securing the predominance of the Kurd nobility.

The battle of Caldiran deeply affected Kurdistan.

Malik Khalil (Sharaf-nāma, i, 155), the dispossessed prince of Misn Kayfā, had regained possession of Sifird and was trying to regain his hereditary fief. Muhammad Beg of Sāṣlin was fighting against the Perslans. Ahmad Beg of Mayylfārikin, Kāsim Bog of Agū, Diamṣhid Beg of Pālū, had declared in favour of the Ottomans. The governor of Diazīra had succeeded in repulsing the Perslans from Mawşil. Safid Beg Sohrān had taken Arbil and Kirkūk. Some twenty other chiefs was avering in their loyalty to the Persians. A personal visit by Idrīs to all these chiefs wan 25 of them over to the Sulţān.

Whem Selim had left Tabriz, Isma'll sent reinforcements to Diyarbakır and Hisn Kayla. Idris summoned to his flag the Kurd levies and defeated Kurd Beg, a former Persian governor of Kurdistån. The Kurds of Diyarbaker resisted the Persian attack until arrived from Blylkil Mehmed Pasha. Blyikli and Idris met at High Kayi's and defeated the Persians. Then, reinforced by 5,000 Kurds (from 'Amadiya i), the Turks relieved Diyarbakur and took Mardin, except for the citadel which remained in Persian hands. The Persian commander then executed a successful diversion from Baghdad and Kirkuk and the people of Mardis drove out the Kurds and invited the Persians to re-occupy the town. The two armies met on the Nisibin-Urfa road. The Persians were defeated, and Blylkli forced Sulayman Khan, who was still at Mardin, to surrender. The occupation of Nisibin, Dārā, Mayyāfārikin, Diyarbakir and Sindjār followed and Idris completed the administrative organisation of the sauding. In the province of Diyarbakır eleven sandiaks were put under Turkish officials and eight under Kurds (Ahrad beyligi). The walks confirmed the investitures of the new begs, but the latter were always chosen from the same family. Five hereditary (unkamous (Kurd hukümeti) retained their dynasties with the transmission of power direct from father son (cf. Tischendorf, Das Lehnwesen in d. moslem. Staaten, Leipzig 1872, chs. ii and iv. quoting 'Ayn-i 'All Mü'edhöhin-zäde who wrote at the beginning of the reth/17th century). A similar system was later applied throughout Kurdistan from Malāņiya to Bāyazīd and Shahrizār (cf. below the Sharaf-nama, and the very interesting remarks of Ewliya Celebi, iv. 176-80, 271-316, on the 37 sandials joined to Van by the law of Sulayman I and the order of march of the local army). Only the province of Kirmanshah remained to the Persians, Idris was liberally rewarded and the firmans of investiture were sent him with the spaces left blank for him to fill in the names of the recipients (von Hammer, GOR1, i, 749].

in 936/1530 Shāh Tahmāsp recovered Baghdād from Dhu 'l-Fakār, a Kurd of the tribe of Mūslū (Mosullu?). A long series of wars began again. Sulçān Sulaymān led armies against Persia in 1533, 1534, 1535, 1548, 1553 and 1554. In this last year the Baghdād troops conquered the Kurds of Belbās and Shahrizūr while the Persians were occupied in Georgia (von Hammer, op. cit., ii, 236).

By the peace of 999/x590 'Abbās I had to cede to the Turks the western provinces, including Adhar-bāydiān, Shahrizūr and Luristān (ibid., li, 559) but in 1010/1061 fighting was resumed and by the peace of 102x/1612 Persia regained possession of the lost provinces, except Shahrizūr (ibid., ii, 745). Shah 'Abbās transported 15,000 Kurds to the frontier of Khurāsān to serve as a bulwark against the Turkomans.

Towards the end of the reign of Shah Abbas, Turkish efforts were concentrated on Baghdad.

During Hafts Pasha's first campaign (1012/1624) his army included the Kurdistan troops. The Kurds fought bravely. The Persians, having defeated the attackers, sent punitive columns to Mardin. After the death of Shih 'Abbas, the grand visler Khosrew Pasha (q.v.) advanced on Baghdad in 1039/1629. Sayyid Khan of Amadiya, Mira Beg Sohran and the mixed Kurdi-Arab tribe of Badiilan took the side of Khosrew Pasha, while Abmad Khan Ardalan threatened the Turkish flank. Khosrew Pasha advanced as far = Sinna [e.v.] and Hamadan, On their way back, the Turks defeated at Camcamal and Dartang a Persian force. Baghdad still held out, and when Khosrew Pasin had retired, Ahmad Khan Ardalan reoccupied Shahrizur (von Hammer, op. cit., iii, 17, 23, 49, 86, 93). Not till 1048/1638 did Murad IV finally take Baghdad, and in the next year the treaty was signed with Persia which gresso mode fixed the Turco-Persian frontier down to the 19th century (Ta'rikh-i Na'lmd, i, 686). Persia was now completely behind the Zagros chain.

The great struggle between the Safawis and Ottomans made the Kurds conscious of their political importance. The <u>Sharaf-nāma</u> has preserved for us an accurate picture of the leudal life of the Kurd tribes and principalities at the height of its develop-

ment about 1005/1590.

Sharaf-nama. This book by the chief of Bidfis. Sharaf al-Din [see miblisf], finished in 1005/1596, occupies an exceptional place among the sources for Kurdish history. The history of the Kurds in the strict sense (vol. i. in Véliaminof-Zernof's edition) is divided into four parts (sakifa): the first of these deals with those Kurd dynasties which have actually enjoyed the privilege of royalty (saljanat); the second with those whose members have sometimes had coins struck and the highly recited in their name; the third enumerates the families of hereditary governors (hukkam) and the fourth is devoted to a detailed history of the chiefs of Bidlis, Part i. gives five dynasties, the Marwanids [q.v.] of Diyarbakr and Diazira, the Hasanwayhids [q.v.] of Dinawar and Shahrizur; the Fadluyids of Great Lur [see LUR-1 BUZURG], the princes of little Lur [see LUR-1 KOCIK] and the Ayvūbids lovel.

As the distinction between the second and third class of princes is rather subtle and the order in which Sharaf al-Din enumerates the dynastics is quite arbitrary, it is better to arrange these dynastics according to the geographical position of the fiels, taking Diazkrat ibn 'Umar as the centre. This list will be followed by that of the Kurd tribes in Persia. The fiels of the second class (including Bidlis) will be

marked with = asterisk (*).

Sharaf at-Din distinguished as far as possible between the tribes and the families of their chiefs, and it is necessary always to bear in mind the bases of feudal organisation in Kurdistan. Calefa of varied origins rule the Kurdish. Kurdicised and Christian tribes, with the help of warlike Kurd tribes ('agicat), which see sometimes settled, sometimes nomad or rather semi-nomad.

Group A. Between Diaxira and Darrim:

r. The chiefs of Djazira® claimed Umayyad origin, but gave m their ancestor Khālid b. al-Walld. In such confused genealogies we have a combination of memories of the Kurd alliances of the Umayyads with the local cult of the descendants of the famous general Khālid b. al-Walld [q.v], whose tombs are shown near Si'ird (Hartmann, Bohiān, 19, 124). These chiefs were at first Yazidis and only later became

converted to be orthodox Sunnis. After the death of Sulayman b. <u>Kh</u>âlid his three <u>and</u> divided his possessions: <u>Diagra fall</u> Mir 'Abd al-'Aziz, Gurgil <u>Mir 'Abd al-'Aziz, Gurgil to Mir Abdâli. These three branches each kept their own fiels in later times.</u>

The Sharaf-nama refers to the possessions of this family as wilfyst-i Bobyts (i. 320), and enumerates in detail but without system the 14 mahiyas forming this important fief: Gurgil, Arwakh, Pirûz, Bādān and Tanzē (Kalhûk) occupied by the tribe Kārsī; Pinīk; Tūr, Haytam (Hethum) and Shākh inhabited by the Christians; Nīgh Atil; Aramshāt the tribe of which (Brāspī) is the chief among those of Bokht; Kēwar or Kamīz (?); Dayr-dih which belongs to Tanzē.

In spite of the careful study by M. Hartmann, Bohide, in Mitteil, d. Vorderasiat, Gesell, (1896), No. 2, and (1897), No. 1, 1-163, the localisation of some of

these places in not quite certain.

The fief of Diaztrat Ibn 'Umar lay between the right bank of the Bohtan and the Tigris. It did not include the second of the Bohtan. Towards the east, the neighbours of the Bokht the Sindiyan (cf.

under 'Amadiya) settled m the Khabur.

2. The ancestors of the rulers of Khīzān, Is-bāyerd (Sparhet, Ispert; in Ewilyā Čelebi: Isba'ird) and Muks (Mukus) were three brothers who came from Balfojān (Khnis) iii the time of the Saldiuks Sharaf-ndma, i, 217). The tribe of the principal fiel was Namīran; this fiel lay along the right bank tributaries of IIII Bohtān and stretched as far in Marwānān.

3. Shirwan (on the right bank of ma Bohtan below Khizan and north-east of Sisird). The ancestors of the "Shirawi" chieft were in the services of the Ayyūbids and to Shirwan at the man time as the "Malikan" to Hish Kayfa. The Shirawi played even the rôle of viziers by the Malikan (op. cit., i 255). The capital of Shirwan was Kuira. The other dependencies were Awil, Shabistan (also called, Garni = Kirnik?) and Irûn.

Bidlis. The Rozagi (Rozagi) tribe is said to have taken its name from the fact that 24 clans, assembled one day (riss) in the village of Tab in the canton of Khoyt (now the hadis of Modki west of Bidlis), and formed a confederation which later became divided into two sections: Bilbasi and Kawalisi. Sharaf al-Dia (i, 361) enumerates the 24 (read 25) clans of Ruzagi, of which five were old settlers and the others newcomers: Bilbasi (to clans)

and Kawallsi (10 clans).

The Ruzagi took Bidlis and Hazo (Sasin) from the Georgian king Tavit (David the Curopalatus, 984root?). Later they brought from Akhlät two brothers of Sasanid origin. One became third at Birlls and the other at \$450n, 18 chiefs of the line of Diya' al-Din had ruled at Bidl's before 1005/1596. The only interruptions took place under the Saldiaks (534-76)1139-80) under the Ak Koyuniu (871-900/1467-95), under Shah lsma'll (913-207/1507-24?) and between 941/ 1534-5 and 986/1578. In this last year Sultan Sulayman wanted to exchange the hereditary fief - Amir Shams al-Din for that of Malatiya, Shams al-Din had to leave Bidlis, but learing new intrigues, went to the court of Shah Tahmasp, who treated him with generosity. Shams al-Din died in Persia in 965/2558. His son Sharaf al-Din, born in exile in 940/1533-4, was carefully educated at in court (the Shah even had him taught painting). He ruled several Persian provinces in succession, and was appointed chief of all the Persian Kurds. After the accession to the throne of Isma'll II, Sharaf al-Din fell under suspicion

and was sent to Nakhčuwan. From there he succeeded in reaching Van and received from Murad I investiture for Bidffs, to which Müsh was added in 991/ 1182. For the year 1065/1655 Ewliva Celebi (iv. 81-221) gives us a detailed description of Bidlis. The last prince of Bidlis, Sharaf Beg, was dispostessed by the Turks in 1849 (Lynch, Armenia, ii, 149).

The rulers of Şâşûn (Hāzo) were called '[zzin from their ancestor 'Izz al-Din, brother of Diya' al-Din of Bidlis. The 'ashirals of Sasun were at first Shirawi, Băbüsi, Süsani and Tamüki. The Rüzakl [see sipifs] arrived afterwards; later, after the annexation of Argan the clans of that district Khālidi, Dayr Mughāni, 'Azizān, who had at first belonged to Hisn Kayla, came to join those of Sason.

6. The Suwaydt chiefs claimed a Barmaki origin. Their ancestors were adopted by the Suwaydi tribe. The hereditary fiel of the Suwaydl was Gandj (this should be read for Kith in Veliaminof-Zernof, i, 260).

7. The Pazūki tribe, which Sharaf al-Din places among the tribes of Persta (i, 128), is said to have been of Suwaydi origin. According to the Sharafnama, i, 328, it had no definite religion and showed signs of heresy (ra/d wn-illidd). The tribe was divided into two branches, Khalid-beglu and Sheker-beglu, and one was under the Amirs of Bidlis. Khalid received in fiels Khnis, Malazgird and the canton of Uhkān (?) of Mūsh. They grew so pround that they thought of proclaiming their independence. After the battle of Caldiran, the Suwaydi dispossessed the Păzūki from many oi their fiels (ibid., i, 257). În the time of Shah Tahmasp, killidi Beg, appointed chief of the Pāzūki, received Zagam (near Tiflis). Later, Pázüki were transferred to Alashkert, where the tribe increased.

8. The Mirdasi chiefs (Mirdest in the Sellmnama) claimed to be descended from the 'Abblisids. Their ancestor was a religious leader who came from Hakkari to Agil and whose disciples the Mirdasl became. The tribe themselves said they were of Arab origin, being Banû Kilâb from around Aleppo, who migrated about 420/1029 to a result of troubles with the Fatimids [see KILAB B. RABI'A and MIRDASIDS]. The main one of the three branches, the Buldukani, lived Magli; it maintained good relations with the Ak Koyunlu, but under Shah Isma'll, Agil was occupied by the Persians. Of the two other branches of the Mirdasi, one ruled at Paiv, . Baghin ibelow Kighl) and at Kharput, and the other first at Bardandi and later at Diarmük (south of Arghanama'dan).

9. The rulers of Camishgezek claimed to be of 'Abbasid descent, but their names rather show a Turkish origin (Saldjük), Their 'ashirat was called Malkishī (Malik-Shāhi?). There were about 1,000 hearths of Malkishi in the Persian service (in Persia?). The lands of the Malkishi were so numerous that the name Kurdistan had become synonymous with Carnishterek (Sharaf-nāma, i, 163). They kept them in the Mongol period, under Timur and Kara Yusuf, but the Ak Koyunlu did all they could to weaken the tribes faithful to the Kara Koyunlu and sent the Turkish tribe to Kharbandahi against Camishgezek. Shaykh Hasan drove out the Kharbandalu and submitted to Shah Isma'll. The latter put a Persian governor in his place. Selim I restored the hereditary amir Pir Husayn.

Group B. Beimeen Diagira and Kilis:

to. Hasan-kayi* [cf. #15# KAYFA]. The local chiefs (malikan) claimed to be of Ayyübid descent, which seems very probable. Their ancestor was alleged to have received the fief of Hisn Kayfa from the ruler of Mardin. The first chief mentioned by the Sharaf-nama is Malik Sulayman who died in 736/ 1335. The Ak Koyuniu seized Hisn Kayfa, but Malik Khalil, who had taken refuge in Hama, later regained possession of his fiel. At a later date the Ottomans dispossessed the sons of Malik Khalil. Among the dependencies of Hisn Kayla, the Sharafnāma mentions Sifurd, Bishēri, Tür (which sometimes figures among the possessions of Diazira, cf. ibid., 127, 227, 157) and Arzan.

11. Sulaymani, rulers of Marwanid origin (i.e. from the later branch of the Umayyads) established. themselves at first at Khûkh in the canton of Chazali (between the Kulp and the Batman Su before they foin) and gradually captured many strongholds and territory as far as the Tigris. They ruled a powerful confederation of tribes, the majority of which were nomads and in summer moved to the Ala Tagh (Niphates). The chief of these tribes was Banûkî, but the more enterprising was Basiyan, 1,000 families of which migrated | Bayazid under their chief Shahsawar. A number of these tribes professed Yazidi doctrines. The Sulaymant lived on bad terms with their neighbours of \$450n. They were divided into two branches, that of Kulp and Barman and that of Mayyafarikin.

12. Zzaki (the modern pronunciation attested by Addai Scher, in [A [1910], 119-39); according to Sharaf-al-Din, Zrakl is a contraction of the Arabic Azraķī. The ancestor of the family, who was an Arab holy man from Syris of Alid origin, arrived in Mardin in the time of Artak [d. 516/1122; Abu 'l-Faradi, Mukhtasar, 379). The family formed connections by marriage with the Artukids and later with the Ak Koyunlu. There were four branches of Zrak!, the principal branches being those of Turdill (west of the Batman Su) and 'Atak. The two other branches were that of Darzini (an old Christian convent Dayr Zir?) and that of Kurdikan (between Diyarbakı and Mayyafarikin), the latter descendants of the marriage of a Zraki chief and gipsy woman. (du<u>kk</u>tar-i ksbuli).

13. Kills. The ruling dynasty believed it was related to those of Hakkari and 'Amadiya. Their ancestor Mand (Mantashā) had rendered services the Ayyubids, who gave him the canton of Kusayr (near Antioch). He united under his rule the Yazidis of Kusayr and those living between Hama and Marfash, as well as the Kurds of Diom and Kills. Under the Mamfük Sultans and under Selim I. disputes broke out between the Yazidis (Shaykh "[22 al-Din] and the family of Mand, which ended in favour of the latter; but the hereditary rights of this. north Syrian fiel do not seem to have been on a very solid basis.

Group C. Between Diazira and Khoy:

14. Hakkaris [see BARRARI and SHAMDINAN]. Sharaf al-Din does not seem to know the old quarters. of the tribe around 'Amadiya from which the Zangid Atabegs had driven them northwards. The amirs claimed to be of 'Abbasid descent.

The first amir mentioned in the Sharaf-nama is Tzz al-Din Shir (probably simply 🖿 arabicisation of the name Yazdan-Shir) who held out against Timur in 789/1387 in the fortress of Van. Under the Ak Koyuniu, the tribe of Dambuli (of Diazles) took possessions of Hakkeri, but the Christians of Diz (Asgri = Nestorians) went to Egypt to bring back the scion of the ancient family Asad al-Din Zarrin Cang ("Golden arm"). The restored dynasty received the name of Shambo (M. Carsoni, Grammatica della lingua kurda, Rome 1787, 4; Sciambe). In the time of Isma'll I, the Shambo chiefs lived in the castle of Báy (in Shamdhān); a member of the family ruled at Vostan (southwest of Van), but the possession of the nahiya of Kawash west of Vostan was disputed with the Hakkari by the Ruzaki. Hakkari rule extended to Albak in the north. The last representative of the Hakkarl house, Nur Allah Beg, was dispossessed by the Ottomans after the rebellion of Bedr Khan Beg of Bokhtan, and in 1845, Halime Khaulm surrendered Bash-kal'a to the Turks. The tribe of Pinyānish (ibid., i, 97, 100) which still exists is mentioned | living near the Hakkari,

15. The Mahmudl fief lies north of Hakkarl on the rivers which feed the lakes of Van and Arcak. The rulers (Marwanids or 'Abbasids of Bokhtan), who originally professed the Yazidi faith (Sharafname, i, 307) settled there in the Kara Koyuntu period and soon came into conflict with the Hakkar!

and Dumbuli.

16. The Dumbull are a tribe of Bokhtan (Sharafndma, i, 118, 310: Dumbul-i Bokht, which for long remained Yazidi). The Dumbull later came into Adharbaydlan where they received as a fief Sukmanabad (Sögmanabad) north-west of Khoy (now Zūrawā). Under the Ak Koyuniu, the Dumbuli bad selzed the castle of Bay (in Shamdinan) and a part of, Hakkari (ibid., i, 193). To their edias of Sukmanabad Shah Tahmasp added Khoy. Under Sultan Sulayman, the Dumbuli received Kotur and Bargiri; later they annexed Abagha, Sulayman-Saray (the modern Sarāy) and Caldiran. Zayn al-'Abidin Shirwani in his Bustan ai-sigdha (beginning of the 19th century) says that all the Dumbuli are Shi'ls (cf. the allusion in the Skaraf-nama, i, 323) and speak Turkish (1),

17. Bradget. The ruling family was of Garan [q.v.] or Hasanwayhid descent. Its lands lay west of Urmia. One branch ruled at Som ay [9.0]; another at Tergewer and at Kal'a Dawad. The remnants of the Bradost tribe now live south of Shamdinan on the Rubar i Bradost (a tributary of the Great Zab,

the sources of which lie west of Ushnu).

18. Ustuni. The chapter, which is wanting in the manuscripts, must certainly refer to the first dynasty of Shamdinan, whose headquarters were Sutunt in the adhiya of Harkik [see SHANDINAN].

19. The history of the Zarza (cf. the Zarzarl of Shihāb al-Din al-'Umari) announced in the preface to the Sharaf-nama is lacking in the text.

20. Tarzā. The paragraph is lacking in the manuscripts and me know nothing of the tribe.

Group D. South of Hakharl:

21. 'Amadiya" [q.v.]. We have seen that the town of 'Amadiya was built on the site of an ancient castle under 'Imād al-Din Zangi (521-41/1127-46). The local dynasty of Bahdinan mentioned in the Sharaf-nāma seems to have settled in the country after the end of the Zangids (7th-8th/13th-14th centuries). The chiefs of Amadiya were known for their fervour in religious studies. The Sharaf-nama gives their names for the Timurid period. Later (under Isma'91 I), the Bahdinan annexed the Zakho district inhabited by the Sindl and Sulaymani which had it ime formed a separate fiel (wildyat-i Sindivin, In this way the fiel of Bahdinan incorporated the greater part of the mountainous country north of Mawsii (Mount Gara, etc.).

 Tasini (Dāsini). The chapter dealing with this important Yazidi tribe is lacking in the manuscripts, but in the text we find a reference which shows that the amir's of 'Amadiya took Dobok from the sangial-i

Tasini (i, tog) and that in 941/1514 Sultan Sefun I gave the sandjak of Arbil and the whole wildyat of Sohran to Husayn Beg Daseni, a Yazīdi chief which provoked a bloody war with the Sohran (i, 274-7). The latter ended by regaining their patrimony and Husayn Beg was executed at Istanbul. On the region called Dasen, of. Hoffmann, Aussige,

23. Sohran ("the red ones"), descendants of Kalus, an Arab shepterd of Baghdad who had fled to the village of Hudiyan in the nahiya of Awan (in the Sohran territory). His son was proclaimed Amlr of Balakan (east of Rawandiz) and seized the castle of Awan. The capital of Sohran, which we embellished by their buildings (Rich, Narrative, i, 157) was Harlr (on tributary of the Great Zab below Rawandiz). The Sohran were still a powerful tribe about 1005/ 2596-7, but later succumbed to attacks of neighbours and the Baban (Narrative, i, 157) benefited by their decline.

24. Bābān. This name is really applied to several successive dynasties. Their principal fief lay south of the little Zab and had as its capital Shari-Bazer, but in 1199/1784 the Bábán built a new capital Sulaymaniyya [q.v. for details].

25. Mukri, who now occupy the region south of Lake Urmia [for details see sawng-surak] had broken

off from the tribe of Baban.

26. Bána. The Ikhtiyar al-Din chiefa bore this name because they had adopted Islam of their own free will (ikhtiydr) (for details see sawng-sulag).

27. Ardalan: see the articles, ARDALAN, SHAHrazūr,, einna, sīsar.

28. Gäl-Bägh! (Sharaf-nārna, ii, suppl. 36-45; the addition is dated rog2/1681. Their chief Abbas Agha of the Turkish tribe of Ustadjalu received a "spring of water" in Mariwan [cf. sinna] from Bigebeg Ardaisa (900-42/1495-1535]. Abbas Agha later settled Bilawar, a former fief of the Kalhur. His followers were recruited from different tribes. Shab Tahmasp confirmed him in his rule over Bilawar and the "Twelve Oymāķ".

Later, the Porte gave 'Ali Khān Gālbāghi the sandiak consisting of Kirind, Shaykhan, Čakaran (?), Khorkhora, Zend, etc., while Yar Allah received the timar of Erekle (?), Rangrazan and Sahbanan (?).

29. Kalhur (Kalhurr). The chiefs claimed to be descended from Gudara, son of Giw, in the Persian epic. The 'assistat of the Kalhur is called Goran (i, 327) but some manuscripts talk of and Gürin" (Sharaf-ndma, il, suppl. 6). There were three branches of the Kalhur; those of Palangan [cf. SINNA], Dartung and Mahl-dasht (cf. Kirmánsmán).

The possessions of the chiefs of Darna and Dartang (now Ridjab in the district of Zohab) according to Sharaf al-Din, i, 319, corresponded to the older Hulwan (q.v.). About 1005/1596-7, the power of Kubad Beg stretched from Dinawar and Bilawar to Baghdad. Mahldasht and Bilawar (south of the Murwari pass) formed the patrimony (edick) of the third branch of the Kaihurs. The Mahidasht branch was nomadic. All this perhaps explains the scantiness of the information given by Rashid al-Din. The Garan now keep their old patrimony, but the Kalhur tribe occupies the region south of the great Baghdad-Kirmanshah road.

Group E. The Persian Kurds:

The plan of the section (firks) of the Sharsf-name. devoted to the Akrād-i Irān is not very clear. The author was writing at a time when the Perso-Turkish frontier was not settled.

The principal tribes of Persia were three in number: Siyāh Mansūr, Ciganī and Zangana. Their eponyms were three brothers who came from Luristan or "Güran and Ardalan". Besides those tribes and the lesser ones mentioned by Sharaf al-Din, there were 24 tribes (yirmi dört) of Karabagh [q.t.] (in Transcaucasia), about 3,000 mm under one ruler, and the Gil tribe in Khurasan without counting tribes of minor importance.

The tribs of Siyah Mansur. In the time of Shah Tahmāsp its chief had become Amir al-umard? of all

the Kurds in Persia (over 24 tribes).

A part of the Cigani emigrated to Chardistan. The tribe of Zangana (Zengene) distinguished

itself in al-Träk and Khurasan.

From 1650 to 1730. "Great Kurdistan", as it has been described by Sharaf al-Din, and in so far it consisted of a series of autonomous Kurd chieftainships, had been already reduced in size by the introduction of Turkish rule in the sandiales of Diyarbake and Van. Not only did the treaty of 1049/ 1639 put an end to the Persian expansion westwards, but Turkey during the reign of the Safawid epigoni succeeded in re-occupying the western provinces of Persia as well as Transcaucasia (von Hammer, GOR^{n} , iv, 235). Practically all the Kurds in this way were reunited under Ottoman rule. Having no longer cause to fear the Persians, the Turks systematically undertook the task of centralisation.

As early as the reign of Murad IV, we find Malik Ahmad Pasha, appointed governor-general of Diyarbake in 1048/1638, making an expedition against the Yazldis of Sindjar. Later (1065/1655), the same Pasha after his transfer to Van subdued | the Kurds | this region.

In 1076/1666 Kurd, the son of a shaykh, declared himself the Mahdf, but was captured by the rulers of Mawyil and 'Aniadiya. The affair ended harmlessly by Sultan Mehemmed IV taking the soidisant Mandi into his personal service (von Hammer,

lli, 589).

In the reign of the feeble Shah Husayn, the Kurds of al-11rak in 1131/1719 besieged Hamadan and carried their deprodations up to the capital itself. In 1134/1722 by order of Shah Tahmasp II an attempt to retake Islahan, which had been occupied by the Afghans, was made by the Kurd chief Fandun (Feridun?), but it was confined to mattack mathe Armenian quarter. The Alghans drove off Fandun who went back to his lands and submitted to the Turks (J. Hanway, A Historical account of the British irads, London 1753, iii). Fortune deserted the Şafawids. Even 'Abbās Kull Khān Ardalān submitted to Hasan Pasha (von Hammer, iv. 211; cf. however, RMM, xlix, 87). His example was followed by the chiefs of Djawanrud, Darna, Djat, Harsin and finally by the sipaksālār 'All Mardan Bakhtiyari [Fayll?] (von Hammer, iv, 227).

The Afghans. During the bloody and transitory period of Aighan rule in Işfahan, Ashraf defeated the Turks (battle of An<u>di</u>idan in 1238/1726), who had in their ranks 20,000 Kurds under Bebek Sulaymanoghlu (Splayman Baban?). The Turks attributed their defeat to the conduct of the Kurds, upon whom Ashraf had lavished promises; indeed, shortly before some of the Kurds had gone over to the Aighans. In spite of his initial success, in the next year 1140/1727 Ashraf had to repurchase his sovereign rights by ceding to the Turks the whole of Persia, including the Kurd and Lur cantons.

Nadir Shah. Towards the end of the reign of Suitan Ahmad III, affairs began to change. By the treaty of 1144/1732 the Persians regained their western provinces, and soon Nadir invaded Ottoman territory and advanced up to the gates of Baghdad, The Turks tried in vain to check his advance with Kurdish troops until in 1146/1733 Topal Othman Pasha appeared on the scene with Kurd reinforcements which he had raised in Mawsil. Nadir was defeated. In 1147/1734, he operated with success in the Caucasus and took Tiffls, which had a garrison of 6,000 Kurds. By the peace of 1149/1736 the old frontiers of 1049/1630 were restored. In 1743, Nadir again invaded Turkish territory, but in spite of Kurd and Arab help was driven back to Sinas where he was finally defeated (von Hammer, iv, 317, 398-9).

Nadir was not popular with the Kurds, although there is an epic poem in the Gürani dialect m his struggle with Topal Othman Pasha. Among the Ardalán, Nádir replaced Subhān Verdi Khān by his brother, which provoked a popular rising (RMM, xlix, 88), lo 1137/1727 during a revolt of the Tuckomans, the Kurds of Khurāsān (Čamishgezek and Karačoriu) refused their help to Nadir, who punished them and transported them 🖿 Mashhad. Nādir was assassinated in 1160/1747, while on his way to punish once more the Kurd rebels of Khurasan (Jones, Histoire de Nadir, London 1770, 118-20). The Kurds (Dumbuli, etc.) played their part in the anarchy which followed the death in Nadir, but in Porte refrained from inter-

vention.

The Zand dynasty. After the death of Nadir Shah, Karim Khan Zand (q.v.], one of the best rulers Persia has ever had, ruled the greater part of the country. The Zand were a Kurdish tribe of secondary importance (Sharaf-nāma, (, 323) living between Hamadan and Malayir in the district formerly called Ighar. Under Nadir they had been transported to Khurasan, but after his death they went back to their old homes (Ta²15kh: Zandiyya, ed. Beer, pp. xi, xviii). With the death of Lutf 'All Khān in 1209/1794, the dynasty came to mend. The Zand tribe was certainly too weak to be a serious support to the dynasty, but Karim Khan, like his predecessors, had brought several Kurd tribes from Kurdistan to Shiraz (Ahmadawand, RMM, xxxviii; Körüni, who live in a particular quarter in Shiraz, O. Mann, Dis Tajik Mundarten d. Provinz Fars, Berlin 1909, p. xxix).

The Kadiars. On the death of Agha Muhammad Shah Kādjār (1211/1797), Şādik Khān Shakāki seized the crown Jewels and for some time tried to gain the throne (The dynasty of the Kajaes, tr. Sir Harford Jones Brydges, London 1833, 20, 27, 32, 37, 50, 78, 106; R. G. Watson, A history of Persia, London 1866, 107, 115, 125). In 1221/1805 - Persians had intervened on behalf of 'Abd al-Rahman Pasha of Sulaymāniyya (ci. Rich, Nerrative, i, 384; Watson, op. cit., 155, and the Mukri Kurd song in the collection made by O. Mann, No. xvi). In 1236/1821, as a result of troubles caused by the Kurd tribes of Haydaranlu and Sipkan, the Persians invaded Turkish territory as far | Bidlis and Müsh; at the | time they advanced as far as Sherābān Baghdad by the Kirmanshah road. The peace of 1238/1823 signed at Erzerün restored the frontier of rosofr639, but the Persians refused to evacuate the district of Zohāb peopled by Kurds. The fate of Sulaymaniyya remained in suspense. A new war was about to break out in 1842 when Great Britain and Russia intervened to mediate, and in 1246/1847 mem treaty was signed at Erzerům by which Zohāb and to be divided into two parts, while Persia gave up all claim to Sulaymahiyya in favour of Turkey. During 1848-5a, a mixed commission composed of representatives of four powers went over the frontier, but the attitude of the Ottoman delegate Darwish Pasha prevented an agreement being reached. Darwish Pasha not only had the canton of Kotür occupied by soldiers, but in a secret memoir (published at Istanbul in 1286/1869 and 1321/1903) developed the thesis that all the Kurd centons south and west of Lake Urmia belonged to Turkey.

Turkey in the 19th century. In 1826, the governor of Sīwās, Rashid Mehmed Pasha, was given the task of pacifying the Kurds and installing Turkish governors in Kurdistân. About 1830 a great Kurd rising broke out in several places. Its leaders were Badr Khan and Sa'ld Beg, Isma'll Beg and Muhammad Pasha of Rawandia. About 1820 (1830?) he had declared himself independent and attacked the tribes of Khushnaw; in 1831 he seized Arbil, Altun Köprü, Koy-Sandjak and Raniya. The following year he extended his power towards Mawsil; at Alkosh 172 Christians were put to death. 'Akra, Zībar and 'Amādiya were next taken. In 1833 the troops of Rawandia penetrated as far as Zakho and Djazira to re-establish Hadr Khan in power there. The Yazidis were severely punished on several occasions. Their chief 'All, who refused to become a convert to Islam, was executed (cf. the popular ballad commemorating this event, JA (1910) 134-6), and whole body of Yazidis were massacred on the hill of Koyundills. In 1835 Ottoman troops were sent against Rushid Mehmed Pasha from Baghlad, Mawail and Siwas, and in 1836 the Mir of Rawandiz was captured by a ruse. Risings and their suppressions continued for several years longer (cf. Poujoulat, Voyages, i, 373; Moltke, Briefe, Berlin 1841, 259-84).

The defeat at Nizib (1839) inflicted on the Ottomans by the Egyptians released new troubles in Kurdistán, In 1843 began the rising of Núr Allah Beg of Hakkari and of Badr Khan of Disztra. The Nestorians of Hakkari had lodged a complaint in Mawsil against the oppressions of Nür Allah Beg. In reply, the latter laid waste the Nestorian canton of Barwari. The massacres went on for several years and the number of victims is said to have reached 10,000. The powers made representations at Constantinopie, and in 1847 a large army under Othman Pasha attacked the Kurds. Badr Khan and Ner Allah, defeated in several battles, surrendered and were deported from Kurdistan (cf. Sir H. Layard, Ninevelt, vii; Reoue de l'Orient chrétien [1900] v. 649-53; Addai Scher, in JA [1910], loc. cit.; on Kurd-Nestorian affairs in general see: A. Grant, The Nestorians, New York 1841; G. P. Badger, The Nestorians, London 1832; J. Perkins, A residence of 8 years in Persia among the Nestorian Christians, New York 1852; C. Sandreczki, Reise nach Mosul und durch Kurdistan und Urumia, Stuttgart 1857; Riley, Christians and Kurds, in The Contemporary Review [Sept. 1889]; F. N. Heazell and J. Margoliouth, Kurds and Christions, London 1913; W. A. and E. T. A. W. Wigram, The tradle of mankind, London 1914; W. W. Rockwell, The pitiful plight of the Assyrian Christians in Persia and Kurdistan, New York 1916; H. C. Luke, Mosul and its minorities, London 1925).

The Russo-Turkish Wars. In 1804-5, the Russians came into contact with the Kurds and this new influence soon made itself felt. The Russo-Turkish wars of 1828-9, 1853-8, 1877-8, each had farreaching effects in Kurdistan (the question has been specially studied by Averlanov, Kurdi v winski Russian had

raised a Kurd regiment. As a result of the expatriation of Christians, the Kurds after the war began to spread considerably farther north and west. During the Crimean campaign, the Russians raised two Kurd regiments. On the other hand, when the Turkish troops had left for the north, a considerable rising was stirred up in Bohtan by the popular Yazdan Shir, nephew and a former rival of Badr Khān.

The most 1877-8 was at once followed by a rising among the Hakkari Kurds of Bahdinan and Bohtan directed by the sons of Badr Khan and later by the rebellion under Shaykh 'Ubayd Allah of the Nakshbandi order. The Kurd invaders in 1880 ravaged the Persian districts of Urmia, Sawdi-Bulak, bliyandoab and Maragha and threatened Tabriz itself. The chief victims were Shiffis. Russia sent a detachment of troops to protect the Araxes frontier. Persia mobilised considerable forces including the Maka [q.v.] cavalry. Turkey, which had barely finished the war with Russia, endeavoured to avoid complications. Finally, the Shaykh returned to Shamdinan, whence he was sent to Istanbul. He soon escaped from the capital, and via the Caucasus returned to Shamdinan, but he was again captured and in 1883 died in Mecca.

The Hamidiyya troops. The weakening of Turkey after 1878, art. 61 of the treaty of Berlin securing for the Armenians reforms and security against the Kurds and Circassians, the stubborn reaction of the Ottoman government against reforms, and from 1885 the development of the Armenian revolutionary movement with branches in Russia, Switzerland and London, brought complications into the hitherto quite peaceable relations of Kurds and Armenians, in as much as the latter had hitherto submitted to the authority of the Kurd feudal chiefs. About 1891 Shakir Pasha, later appointed to bring into operation the reforms in Anatolia, conceived the idea of creating irregular Kurd regiments, like those of Russian Cossacks. The object of the reform was train the Kurds and attach them to the Ottoman government. The attempt was not considered satisfactory, for later the Hamidiyya levies were transformed into regulars (Kha/If sumari). The creation of the Hamidiyya 🔳 any case, by the part given to the Kurds and **m** ambitions aroused, made a considerable stir. There was even bloodshed between the tribes

Armeno-Kurd relations. At the same time, relations between the Armenians and the Kurds (these "brothers of land and water" according to a phrase recorded by the European consule) changing for the worse. The summer of 1894 marked by bloody encounters at Sasan which ended by the devastation of five villages and the whole of the canton of Talori (Dalvorikh) inhabited by Armenians. The events at Sasun were the first of a long series of Armenian demonstrations and their guinary suppressions, in which the Kurds took active part. In 1895 an attempt at a rising had been made among the Hakkarl Kurds, but was speedily suppressed; it was not directed against the Christians. From the beginning of the 20th century to the World War, the relations between Armenlans and Kurds seem to have been fairly peaceful. On the question in general, see Abovian, Kurdi, in the Kaukas newspaper, Tiflis 1848, Nos. 46, 47, 49, 50, 51 (where the "father of Armenian literature" gives a very sympathetic picture of the Kurd character); Creagh, Armenians, Koords and Turks, London 1880; A. S. Zolenoy, Zapiska h harte raspredsleniya armiansh.

nasclenina, in Zapis. Kavhas. Old. Geogr. Obid. (Tillis 1895), xviii; A. Vambery, Armenier u. Kurden, in Deutsche Rundschau (1890), Innavi, 216-31; Rohrbach, Armenier u. Kurden, in Verhand. d. Gesell. Erdkunde (Berlin 1900), 128-33; Baron L. de Contenson, Chritiens et musulmans, voyages et études, Paris 1901; H. B. Lynch, Armenia, passim; Mayovski, Opisaniye Vanskago i Bitlis vilayetov, Tillis 1904 (the authoritative work); N. Y. Matt. Yeshice u slove "telebi", in ZVOIRAO, xx (1910); Zarzecki (consul of France at Van), La question kurd-arménienne, la La Revue de Paris, 15 April 1914, and the diplomatic correspondence, publ. in the "Livres Jaunes", the "Blue books" and the Russian "Orange book" of 1914.

The 20th century. At the beginning of the 20th century a new figure appeared on the Kurd horizon outside of the usual centres of Kurd movements: Ibrāhīm Pasha b. Maḥmūd b. Timawl b. Ayyūb, chief of the Millî (Milān) tribe in the canton of Shariwērān (between Diyārbakr and Aleppo). Ibrāhīm Pasha bad made himself an almost independent position. When the constitution of 1908 was proclaimed, he openly rebelled and retired to the mountains of 'Abd al-'Azīz where he is killed (M. Wiedemann, Ibrahīm Pascha's Glick und Ends, in Asien, vili, 1909, 34-7, 52-4, and Sir Mark Sykes,

The caliphs' last heritage, 317-27).

A considerable agitation was aroused among the Kurds when the question of the Turco Persian frontler was re-opened. After the check to the Russians in the Far East (Russo-Japanese War), Turkey in 1905 occupied the disputed cantons of Urmia and Sāwdi-Bulāķ inhabited by the Kurds. The latter were drawn into the very complicated political game. Turkish occupation only ceased at the beginaing of the Balkan War (in October 1912), but only make room for Russian troops sent into the districts of Khoy and Urmia. Scions of noble Kurd families travelled in Russia. On 17 November 1913 a protocol of delimitation was signed at Istanbul and just before the World War, . Four-Power Commission (Turkey, Persia, Britain and Russial succeeded in settling the frontier of the disputed regions by re-establishing generally the status que of the beginning of the 19th century (cf. Minorsky, Turdeko-perisdak, razgraniconiye, in Imestia Russ. Geogr. Obihl., Petrograd, Ill [1916], 351-92).

The War of 1914-18. In the course of the war from 1914 to 1918, the Kurds were between two fires. On the activities of Isma'll Agha Simko, March 1916) regarding Kurdistan, of the documents in Rasdet Asiatskoi Turisii, Moscow 1914, 185-7,

225.

After 1917-18, the situation was radically changed. Kurd committees were formed everywhere (cf. Driver, Report on Kurdistan, Mount Carmel, Palestine 1919; this publication is in the British Museum). Sharff Pasha assumed the role of Kurd representative in Paris and on 22 March 1919 and 1 March 1920 presented to the Peace Conference two memoirs on Kurd claims with map of "Kurdistan integral" (cf. L'Asis française, No. 175, 1919, 192-3). At the same time, on 20 December 1919, an arrangement was reached between Sharif Pasha and the Armenian representatives, and the two parties made conjointly declarations to em conference (cf. the text of the agreement in the newspaper Psyam i Sabee, Istanbul, 24 Feb. 1920; cf. also Le Temps, Paris, 10 March 1920). The Treaty of Sèvres of 10 August 1920 having created Armenia (Arts. 88-93) out of the four wilkyets (of Trebizond, Erzerüm, Van and Bidlis), provided in articles 6a-4 for "a local autonomy for the land where the Kurd element predominates, lying east of the Euphrates, to the south of the frontier of Armenia and to the north of the frontier of Turkey with Syria and Mesopotamia". If the Kurd population within the limits mentioned showed to the Council of the League of Nations "that a majority of the population of these regions desires to be independent of Turkey and if the Council then thinks that this population is fit for independence", Turkey agreed to conform to the recommendation, and in this case the Allied Powers would raise no objection to the voluntary adhesion to this "independent Kurd state" of the Kurds living in the enlayer of Mawell. As a result of later events, the Kurd question reduced itself to the fate of the Kurds in the eddings of Mawyit. The Turkish representatives held that "the Kurds differed in nothing from the Turks and that although speaking different languages, these two peoples formed a single bloc as regards race, faith and customs" (Conference at Lausanne, speech of 'Ismet Pasha at the meeting of 23 Jan. 1923). By the decision of the Council of the League of Nations on 16 December 1925, the wildyst of Mawsil was allotted to Irak, buth with a stipulation reserving to the Kurds the fulfilment of their desires, notably that "officials of Kurd race should be appointed for the government of their country, for the administration of Justice and for teaching in the schools and that the Kurd language should be the official language of all these services".

During the long negotiations concerning Mawsil, serious troubles broke out in the region of Kharpüt and Diyârbakr as a result of the insurrection of Shaykh Sa'ld Nakshbandl. Shaykh Sa'ld was captured on 16 April 1925 and executed at Diyârbakr. After the settlement of the Mawsil question, the Turkish government in Ankara enforced a policy, the tendency of which was to eliminate from Kurdistan feudal and tribal influences; cf. Gentizon, L'insurrection kurde, in La Revue de Paris, 15 Oct.

1925.

Bibliography: A history of the Kurds, the preliminaries of which have been outlined above would necessitate a great deal of preparatory work and research in Arabic, Persiaa, Armenian, Arameic and Georgian sources. A systematic ransacking of sources like the Sclim-nama of Hakim Idris and his son Abu 'l-Fadl and the Tabihk-i 'Alam-ara-yi "Abbasi would yield a rich reward. The basis of our knowledge of Kurd history is certainly the Sharafnama (down to 1005/1596). The text was published (mainly from a manuscript collated by the editor himself) by Veliaminof-Zernot, Scheref-namel, i (history of the Kurds), St. Petersburg 1860; ii (variants of volume I, and general history of Turkey and Persia from the beginning of the Ottoman dynasty to 1005/1596), St. Petersburg 1852. New editions of it exist by M. 'A. 'Awn!, Cairo 1931, and by M. A. 'Abbāsi, Tehran 1343/1965; Arabic translations by M. J. Bendi Rojbayani, with 📖 pious notes and comments, Baghdad 1372/1953; M. 'A. 'Awal and Yahya al-Khashshab, Cairo 1958-62, 2 vols.; a Russian translation by E. I. Vasil'eva, i. Moscow 1967; the French translation by F.-B. Charmoy, Cheref-ndman ou fastes de la nation hurde, in a volumes and four parts, St. Petersburg 1868-75, includes commentaries (including a translation of the relevant chapters in the Ditkan-numa of Hadidil Khalifa), but is in many respects out-of-date and lacks an index. Cf. also the works of H. Barb, Uber die Kurden-

Chronik von Scherel: Geschichtliche Skisse d. 12 verzohiedenen kurdischen Fürstengeschlechter; Geschichte v. 3 Kurden-Donastien; Gesch. v. weiteren Kurden-Dynastien; Geschichte d. hurdischen Fürstenhereschaft in Bidlis, which appeared respectively in SB Ak, Wien, x (1853), 258-76; xxii (1857), 1-28; xxviii (1858), 3-54; xxxi (1859); xxxii (2859), 145-50. The lost history of Kurdistan by Muhammad Efendi Shahrazuri (d. 1073/1662 at Medina. of, Tadi al-'ards, s.v. Kurd), had not come to light by 1027. For the histories of the house of Ardalan. of, SINNA, where should be added the history (to 1254/1844) of Khusraw b. Muhammad b. Minüčíhr. cf. E. Blochet, Catalogue des manuscrits persans de la Bibl. Nationale, i, 305, No. 498. On the Risalat Ansab al-Akrad, belonging to the Asiatic Museum of Petrograd, cf. Romaskevič in Melanger Asiafigue, new ser., Petrograd 1918, 392. The newspaper Zar-i Kurmandii (of Rawandia) published in Kurdish a short bistory Ghunda-vi Bahdristan (1026) and annonaced the early publication of the Ta'rikh-i Kurdan of Zayn al-'Abidlu Beg. (V. MINORSKY)

C. From 1920 to the present day.

The First World War (1914-18) led to many political upheavals in the Near and Middle East. The Arab countries (Syria, Lebanon, Palesting, Jordan and 'Irak) were detached from the Ottoman Empire. The sultanate was abolished in 1922, the republic proclaimed in Turkey on 21 October and the callohate. suppressed . March 1924, Finally, the Council of the League of Nations assigned to Trak the wildvet of Mawsil on 26 December 1925. For his part, General Rida Khan overthrew in Persia | Kadiar dynasty and founded the Pahlavi dynasty on 23 October 1925. These rectifications of frontiers resulted in rendering still more complicated the situation of the Kurds who. instead of living under only two governments, the Ottoman Empire and the Persian Empire, were henceforth to find themselves divided between five different countries: Turkey, Iran, Trak, with quite important minorities in Syria and several colonies in the lands of Soviet Transcaucasia. sc. Armenia, Georgia and Adharbaydjan. From now on, their destiny would evolve differently, according to the different states which sheltered

In TURKEY, from after the First World War and during the long negotiations concerning Mawait, Kurdish nationalists, disillusioned at seeing their hopes of independent Kurdistan vanish, Kurdistan foreseen by the Treaty of Sevres (10 August 1920) but suppressed by the Treaty of Lausanne (24 June 1923), provoked troubles. Shaykh Sa'id Nakahbandi Piran led a rebellion in the regions of Urfa, Severek and Diyarbakir, either through religious fanaticism and respect for the caliphate (Gentizon) or at the alleged instigation of Britain (Mustafa Kemai). The Shaykh was soon made a prisoner, judged by the Tribunals of Independence (April-June 1925) and hanged at Diyarbakir with 53 other insurgents. The whole trial was followed by the Turkish newspaper Vabit, from 20 April 1341/1925 to the 28 June, insisting upon the nationalist character of the movement. The failure of the attempt forced the leaders who had escaped to seek refuge abroad.

On 3 October 1927, the Kurdish National League

Hoybous ("Independence") was constituted by the fusion of all the old committees or associations. Ibsan Nurl Pasha of Hitlis was nominated commander-inchief and a civil administration was established. Some conversations even took place with the representatives of the Turkish government in September 1028 at Shavkh-i Köpru with the promise of a general amnesty for those who had been compromised. The few Kurds who came forward were massacred. After that, the revolt of Agri Dag (Ararat) (1930-2) broke out in the spring. Well-organised militarily, the Kurdish troops, who were supported by the tribes in the region of Diyarbakir, achieved some spectacular successes, but ended by succumbing under the blows of a Turkish army, 45,000 men strong and supplied with modern equipment in artillery and aircraft. The Second International, in its session at Zurich, published a resolution of its executive in favour of the Kurdish people (Vol. vii, no. 60, 30 August 1930). The attitude of the Soviets at the time has been interpreted differently by Agabekoff, in his Memoires, published in French in 1930, and by M. A. Kondkarian. in the Russian newspaper of Paris, Dni. of at August 1030, the former speaking of a Soviet activity among the Kurds themselves and led from Tauris by a certain Minotsian who represented the G.P.U. there, and the latter asserting to the contrary that the Turks found an aid and complete assistance from the Russian Bolsheviks outside. From 1021 to 1024, some periodic convuisions were felt at Menemen, Erzurum, Divarbakir, and, in a series of articles of the Hakimivet-i Mills, Burhan Assaf Bey denounces Armeno-Kurdish intrigues. Soon . Turkish law was promulgated on May 1932 which established a plan destined to organise an actual deportation of Kurds to the interior of Turkey. This law, however, was only to be applied after the visit of the Shah of Iran to Ankara in the summer of 1934. But henceforth, officially there were | longer Kurds in Turkey. All the inhabitants of the eastern provinces were from now on regarded = "mountain Turks".

This psychological error and the assimilation of the Kurds by force were to trigger off in 1937-8 a new revolt, in its centre, the mountainous region of Darsim, inhabited by the Zaza Kurds. It is Sayyid Ridā, shayāh of the Nakshbandi brotherhood, who headed it. This revolt was the most terrible for the Kurds, for it is suppressed with the utmost harshness by the Turks. After having hanged the shayāh and ten of his companions at al-'Azīr on 15 November 1937, the Turks crased Darsim from the map and replaced this lif-fated name with that of Tunceli. The Kurds disappeared from the official vocabulary, and the region remained under martial law until 1946.

After this, there we no more armed uprising in Turkey, Kurdistan stayed calm throughout the Second World War, during which Turkey moreover remained neutral. There followed a certain softening of the régime for the Kurdish regions, Meanwhile, intellectuals were always strictly watched; 49 of them were even arrested in December 1959 and accused of separatism. The military coup d'état of the 27 May 1960 was followed by a more liberal constitution. Despite some declarations by official personages (cited in the Swedish journal Dogens Nyheter, 16 November 1960; cf. C.E.K. Paris, no. 12, 8), some articles on Kurdistan and the Kurds were able to appear in the Turkish press and, between 1965 and 1968, some bilingual, Turko-Kurdish journals: Dicle Ferat and Deng, a Kurdish grammar, a Kurdo-Turkish dictionary, a play Biring res "The black wound", and the long classical poem Mess-o-Zis saw the light of day. But soon everywhere the journals were forbidden, published works confiscated and their authors prosecuted. In addition, to avoid all possible contamination by events in 'Iraki Kurdistan, which had been in revolt for several years. a presidential decree of 25 January 1067 and published in the official journal no. 12,527 of 14 February 1967 declared: "It is illegal and forbidden to introduce the country and to distribute, under whatsoever form, every publication, record or tape registered of foreign origin and in the Kurdish language". Some virulent articles against the Kurds appeared in the Turkish nationalist review Otüken (no. 40, April 2067, = 42, Tune 1067; cited in Vanly, Kurdistan irakien, 208-300). It was this which led to a retort by the associations of Kurdish students of 19 Kurdish towns, protesting that such m attitude was contrary to art. 12 of the Constitution and art. 37 and 44 of the Treaty of Lausanne (1923). In April 1970, brutal police operations in the town of Silvan, in the province of Divarbakir, provoked the condemnation of the Kurdish students and of liberal Turks (cf. Millivet, June-July 1970), as well as the question, on 24 July 2070, in the House, of a Kurdish deputy. Mehmet Ali Aybar, an old president of the Labour Party of Turkey (rit). The Fourth Congress of the TIP (29-31 October 1970), in m resolution, recognised the right of existence of the Kurdish people in Turkey (Vanly, Survey, 51-4). More than the ethnic and political side, it seems that from now on the economic and social question must play a role in the solution of the Kurdish problem in Turkey (Rambout, #3-44) Nikitine, 196-8; J. Blan, 35-40; Ghassemlou, 50-52; Arfa, 33-46).

In I wan, the situation of the Kurds has always been different from that which they experienced in Turkey. Indeed, 🔤 Iranian government often insists on 📟 affinities, as much racial m historic, which unite the two peoples. But this does not prevent political and social malaises appearing from time III time, and conflicts, often latent, sometimes bloody, must be recorded. Already during the Great War, the province of Adharbaydian in northern Persia had been troubled by the movements of the Turkish or Russian armies on this territory. The chief I the Shakak, Isma'll Agha Simko, profited from it to attempt to carve out for himself a small Kurdish state of which he intended to assume the leadership. He also succeeded in uniting under his command the Kurdish tribes of the north of the country, achieving several victories over the Turks, the Assyrians and the Iranian troops, changing camp according to the circumstances. He also became the only authority of the region, in the west of Lake Urmiya, finally to be assassinated at Ushnu by the Iranians me the 21 June 1930 (Arfa, 48-54), in the same manner in which he had murdered the Assyrian Patriarch, Mar Shimun Benjamin, on the 3 March 1918 (Joseph, 140-1).

For his part, further to the south, in the province of Kurdistan, Salar al-Dawla Kādjār, related by marriage to the great Kurdish families of Sanandadji, rose in revolt, but was defeated. Some Kurdish chiefs refused to be disarmed, and it was not until 1930 that Diafar Sulfan surrentiered (Aria, 64-7; Ghassemiou,

73-5).

But the Second World War was also bound to have a great influence on Kurdish nationalism in Iran. Indeed, the occupation of the provinces of the north and west of the country by the Soviet and British troops (25 August 1941), followed by the abdication of Rida Shah (16 September 1941) favoured, by the enfeeblement of the central power, the movements of emancipation, and, for several months, the Iranian army had to confront harshly Hama Rashki Khan of Banch who, aided by meeting tribes, had made himself master of the Sardasht-Bäneh-Marivan region in the summer of 1942 (Arfa, 67-70). But this was only the prejude to a real independence movement. First of all, the Kurds profited from the situation in form (September 1942) in the no-man'sland where central authority had disappeared an organisation Komelet jiyant Kurdistan "Committee for the Life (Resurrection) of Kurdistan" (Eagleton, 34). This nationalist but quite conservative committee was composed of city intellectuals and of petits bourgeois from Mahábád, the ancient Sawdi-Bulák [q.vv.], but to which the religious skaykks and chiefs of tribes soon railied. Soon Kādi (Kazi) Muhammad, from a family of rich notables and a jurist himself, adhered to it in his turn (October 1944) and after the end of the war, all these judged the occasion favourable and proclaimed on the as January 1946 the Kurdish Republic of Mahabad, in the heart of the autonomous Republic of Adharbaydian, which had been established at Tabriz. In fact, Kādi Muhammad wished rather for internal autonomy within the framework of the Iranian empire. This small state, with its limited area, to the west and south of Lake Urmia, was well-organised; schools and hospitals were opened, classical books and reviews in the Kurdish language were published, attempts were made to promote the development of agriculture, commerce, industry and hygiene. A small army was constituted of tribal elements with four generals, among them Molla Mustala Barzani, who came from Trak with his well-equipped contingent of armed men. But me the

departure from the Iranian territories of the Russian army (May 1946), who had helped the autonomous republic of Adharbaydjan, the government of Tehran was to recover the dissident provinces of the north of the country. Kadi Muhammad surrendered, but was hanged at dawn on 31 March 1947 together with several other chiefs. The Kurdish Republic of Mahābād had lasted eleven months. But this event had a great repercussion among all the Kurds (Arfa, 70-102; Ghassemiou, 76-82; Rambout, 94-108 and especially Engleton, passim). Then, in September 1950 and February 1956, for economic reasons, the tribe of Djavanrûdî was taken to task by the troops of the Shah and harshly repressed, on the pretext that it refused to pay its taxes, give up its arms and devote itself to the cultivation of hazitish. According to Rondot (Vie intel., 1956, 107-9), the efficacy of the intervention of the Iranian troops was the first positive result of the Baghdad Pact (1935). Since these last backwashes, the Iranian government, by constructive social reforms, attempted to gain the sympathy and even the help of its numerous Kurdish population. It published at Tehran, from May 1959 to May 1963, the weekly Kurdisides, in which literature, religion, sciences, history and even politics competently treated. Later on the 'Iraki government accused that of Tehran of having aided, materially and morally, the insurrection movement of the Kurds in Irak. But this political attitude has in no way changed the distrustful position of the Iranian authorities with regard to its week Kurds.

In Inak, the period from the end of the First World War to the revolution of 1958 saw the foundation of the new 'Iraki state and the establishment of the Hashimite monarchy. The British who, at San Remo (r May 1920) were to receive from the League of Nations a mandate over 'Irak and Palestine, were charged with organising the land which they had aiready occupied militarily. Few among them knew the Kurds and their problems, which rendered their task difficult. In December 1918, Major Noel installed at Sulaymani Mahmud Barzandji (1880-1956) 🖚 governor, bakeader, with authority over the Kurdish tribes situated between the Great Zab and the Diyala. At the end of six months, Shaykh Mahmud proclaimed the independence of Kurdistan [end of May torg), and the British army had to intervene to

overcome him. Wounded at the battle of Bazyan (17 June 1919), Mahmild was taken prisoner and condemned to death, but, with his sentence commuted, was sent into exile to India. Meanwhile, several British officers had been assassinated at Zakho, 'Amādiyya and 'Akra. Major Soane governed instead of the skaykh, and calm soon returned. Difficulties arose with the installation as king in Baghdad (23 August 1921) of the Amir Faysal of Arabia, who had been chased from Damascus by the French, and the intention of attaching to the 'Iraki' crown the wildyst of Mawsil, which the Turks continued to claim and which the Kurds wanted to organise for their own profit. The recent Treaty of Sevres (10 August 1920) recognised in effect the right of the Kurds to independence. Since agitation did not cease to spread over the whole of Kurdistan, Shaykh Mahmud was recalled to Sulaymaniyya (September 1922) and me no longer content with the title of huhmdar, but proclaimed himself king of the whole of Kurdistän (November). He set up a government of eight members, issued postage and fiscal stamps, levied taxes on tobacco and published mewspaper Roj-i Kurdistan "The sun of Kurdistan" which gives many details of all these events (Edmonds, A Kurdish newspaper: Rhosh-i Kurdistan, in JRCAS, zli [2925]). On 24 December 2922, His Britannic Majesty's government and the government of Trak recognised "the right of the Kurds living within the frontiers of Iraq to establish a Kurdish government within these frontiers, in the hope that the different Kurdish elements would reach agreement - as possible on the form to give to this government and the extent of its frontiers, and that they would send to Baghdad some responsible delegates to discuss their economic and political relations with His Britannic Majesty's government and the government Itaq" (Edmonds, Kurds, Tueks and Arabs, 312; Rambout, 58-9). But there were soon frictions between King Mahmud and his British protectors. - well as with meet Kurds who envied his authority. His intrigues with the Turks also triggered off raids by the R.A.F., who forced him to take refuge at Surdash (3 March 1923), where he published a newspaper, Bangé hage "The call of truth". He stayed there until 1930, the year which we the end of the British mandate.

This new political regime did not help the situation of the Kurds of Trak much, for the Traki government wanted immediately to withdraw from the Kurdish regions the local Kurdish officials in order to install Arabs and to suppress the teaching of the Kurdish language in the administrations of the north. Whence a malaise which degenerated into open revolt when 'Iraki soldiers opened fire on the civil population of Sulaymaniyya (6 September 1930). Shaykh Mahmud once more headed the movement. The Traki army was incapable of bringing it to an end (September 1930-April 1931), and asked for the intervention of the R.A.F. This was very severely criticised by a number of Britons, and especially in a Note of General H. C. Dobbs, former High Commissioner at Baghdad; Mahmud was sent into house arrest in Baghdad. In 1931, Shaykh Abmad of Barzān, - less balanced personage, - Longrigg says (86, 203), quarrefled with meighbouring Kurdish chief. In order to restore calm, the government undertook winter campaign which also necessitated the intervention of the R.A.F. (cf. Mumford and Wilson, The Crisis . . .). There was a new uprising in 1933-4. and Shaykh Ahmad and his young brother Molla Mustafa, who had helped him militarily, who forced

to reside at Kirkük and then at Sulaymaniyya. In 1941, during the abortive insurrectional adventure of Raghid 'All Gaylani and the "Golden cadre", Shaykh Mahmud, who had profited from it to escape from Baghdad, had tried to raise a levy of Kurdish troops to help the British (Longrigg, 295). In 1943, Molia Mustafa Barzani, in residence at Sulaymaniyya, unhappy with the food supplies and the social conditions of his supporters, succeeded in escaping = far as his territory of Barsan, accompanied by Shaykh Latif, son of Shaykh Mahmud, and raised the standard of the revolt. A Kurd, Madjid Mustafa, named 🚃 Minister of State, intervened to settle the affair. Barzani surrendered - condition that the Kurdish districts would be better provisioned, that Kurdish and non-Arab officials would be sont there, and finally that schools and hospitals would be opened in Kurdistan. These conditions, accepted by Nuri Sa'ld, the Prime Minister, who even foresaw the establishment of an entirely Kurdish limb (Longrigg, 325). were not agreed by the regent 'Abd ai-liah and, in the spring of 1945, the revolt broke out meet fiercely. This time it was more serious. The Kurds achieved several spectacular victories, while the army underwent heavy losses. Once again the R.A.F. to play its role of saviour of 'Irak and the Hashimite monarchy. At the end of August, the operation was completed. Molla Mustafa withdrew to Iran with a party of his troops and his plunder (Rambout, 74-80). Four of his officers who had had faith in governmental promises of amnesty, Mustafa Khushnave, Tasat 'Abd al-'Aziz, Muhammad Mahmad and Khayr Aliah 'Abd al-Karlin, tried and executed on 19 June 1947.

After these events determined by force, all that remained for the Kurdish nationalists of Trak was to go underground, and this is what they did. They founded the Democratic Party of Kurdistan (D.P.K.) with leftist tendencies, and published two bulletins Azadi "Liberty" and Risgari "Liberation". In its second issue (October 1946), the latter extelled an Armeno-Kurdish Union. At the same period, Colonel Elphinston, chief of the Intelligence Service in the Levant, asked himself if these efforts were not going to lead to the constituting of a Republic of the Soviet Union with an Armeno-Kurdish character. In any case, the calm returned, the Gurds profited from the liberty which had been left them to work with ardour in the cultural domain. Literary reviews saw the light of day. Collections of poetry and articles on the history of Kurdistan and famous Kurds of the past were published. Sulaymanlyya became a very active cultural centre and a lively seat of Kurdish nationalism.

'Iraki Kurdistan since the proclamation of the Traki Republic (24 July 1958) until 1970 underwent many vicissitudes. This Republic aroused the enthusiasm of the Kurds who, with the other political parties, had participated in the overthrow of the Hāshimite mosarchy. For the first time in history, the (provisional) Constitution of the state proclaimed in effect, "the Arabs and Kurds are associated in this nation". The Constitution guaranteed their national rights within the heart of the 'Iraki entity (art. 3) (cf. Orient, no. 7 (3rd quarter 1958), 191-9]. For his part, General 'Abd al-Karlm Kaslm [q.v.] reinstated the Kurdish officials suspended in 1947 and authorised (2 September 1958) Moliā Mustafa, who had taken refuge in the Soviet Union since this date, to return to 'Irak. He received him there with joy the 7 October 1958, while his companions in exile returned in April 1959. Kāsim gave him m personal guard and a house in Baghdad and, for some time, made him his counsellor to whom he paid attention. The Kurdish Democratic Party, which had prepared itself in secret for the great day and, from April 1959 published its weekly newspaper Xebat "Struggle" was authorised to appear. The Kurdish reviews and newspapers prospered, and from now on had a political aspect no longer simply a literary one. But this state of euphoria was not to im much longer, and the struggle of the Kurds for liberty broke out and lasted ten years, interrupted by arrests and by more and more terrible reprisals. Four periods may be distinguished here:

Difficulties-as much external as internal-were not lacking for the "Faithful Leader". His manner politics ended by his setting everyone against him-The Kurds themselves, impatient to see him fulfil the promises which were late in coming, ended up by taking up arms against his dictatorial régime. Naturally, Molia Mustafa headed the movement (9 September 1961). This uprising was in way tribal, for it was truly all the 'Iraki Kurds, pessants and townsfolk, intellectuals and feudalists, who formed a bioc against Kāsim. The riposte was terrible: a strict economic blockade to starve the north of the country; massive bombardments with napalm, burning villages and harvests and shooting women, old men and children well as combatants, but which only electrified the courage of the Kurds who, in March 1962, were the uncontested masters of all the 'Iraki north, with the exception of the cities where the government troops were garrisoned. The losses of the army quickly rendered this war in the finest colonialist style unpopular. The soldiers deserted or went over to the enemy; business and commerce were reduced to nothing. A coup d'état was afoot, and the Kurds-without whom nothing could be done-were kept well-informed. At dawn of 8 February 1963, Kāsim disappeared tragically from the political man and, from the next day, the Kurds declared the coasefire. The Baath (Bacth) took power in Bashdad. But when the Kurds reminded the

government of their neutrality, they were met with excuses. However, negotiations were embarked on and, on the 24 April 1963, the Kurds even presented a detailed Memorandum in which they expressed their desiderata (Orient, == 26 (2nd quarter 1963), 207-11). Meanwhile, _____ it considered itself quite strong, the Bathist government imprisoned the Kurdisk deputies, issued uttimatum (10 June 2969) and the same day resumed hostilities with an increased violence. As in the interval, the Bath had also assumed power in Damascus, the Syrians lent assistance to their "Irakl friends by sending aircraft and the Yarmük Brigade. The Kurds had soon climinated the latter. They multiplied their ambushes, seized military posts and convoys of munitions and took prisoners by hundreds. The 'Irakl' army, beaten and humiliated, then brought in the "National Guard", aid of the Bashist government, whose atrocities against the communists and all the opponents of the regime aroused universal reprobation. By a new coup d'état, aided by the army, General Abd al-Salam Arit ousted the Baith and took all power into his own hands (18 November 2963). Military actions did not continue any the less. Barzani launched mappeal to the international Red Cross (September 1963; Vanly, 319-21), and the Kurds addressed themselves to the Pope on the occasion of his journey to the Holy Land (2 January 1964; L'Orient, Beirut, no. 5240 (4 January 1964); complete text in C.E.K. no. 30, 82-8; cf. Mauries, 95, 96).

With a view to finally settling the Kurdish problem, Field-Marshal 'Arif negociated a ceasefire (to February 1964) which Molla Mustafa accepted without even consulting the political bureau of the D.P.K. The Kurds who, as much as the 'Irakis, needed a breathing space, profited from it to make known to the outside world the true situation, thanks to foreign journalists who came to visit them; they renewed their provisions in livestock and munitions. The 'Iraki government, occupied with still-born projects of Arab unity, left things to settle down, persuaded that in the end everything would be settled through weariness. Nothing came of it and the Kurds, disillusioned at seeing that no-one was seriously occupied with their demands, after October 1964 resolved to organise in effect their internal autonomy. They nominated administrative officials at 📰 levels, levied dues and taxes, meted out justice in their tribunals. Naturally too, their troops were better-and-better equipped and trained. For the Sixth Congress of the D.P.K. (2-7 July 1964), the general state of the revolution (9-70 October 1964) as well as the new organization of the Party and Constitution (17 October), cf. Vanly, 227-44 and texts: Constitution, 375-6, Administrative Law, 376-7. On the military organisation, ibid.,

244-8; Pradier, 210-23.

But the coasefire of February was bound to provoke a serious crists in the heart of the Kurdish insurrectional movement between Barrani and the political bureau of the D.P.K., which in a brochure published on the 19 April, L'accord 'Arif-Baridat, pair 🖿 use capitulation? accused him of having by this accord betrayed the objectives of the revolution-There was even a bloody engagement at Mawat, on 17 July, between antagonistic groups. At the Sixth Congress, 14 out of the 17 members of the political bureau were excluded from the party, among them Ibrihim Ahmad and Djalal Talabini, and took refuge in Iran. This crisis due to differences of view between theoreticians and realists, despite its miseries, did not have any repercussions on the later military

events (cf. Vanly, 218-25; Pradier, 203-9, Viennot,

95-111; Arfa, 149-52). But the ambiguity of the situation between Kurds and Irāķis was bound **——** to be dissipated. On 10 May 1964, the Traki government promulgated a new provisional Constitution which passed over in silence the rights of the Kurds explicitly recognised in the 3rd art. of the Constitution of 1958. This would not III for the Kurds who, for their part, had not disarmed their troops. The spring offensive was launched in the 4th March 1965 by almost the entire Traki army (infantry, armour, aircraft) with at its head General 'Abd al-Rahman 'Arif, brother of the President. It began by achieving some local (March-May), but in summer (June-September) murderous combats developed in the chain of Safin. The small town of Pendiwin, which had been destroyed, was occupied by the flenkis. Throughout this period, while the Kurds used artillery for the first time, the 'Irakis used toxic gases, but suffered heavy losses (4,194 killed, 2,201 wounded, 12 tanks destroyed and 5 aircraft shot down). Egypt helped Irak (Le Monde, 23 October). The winter campaign (22 December 1965-end February 1966) was resumed with intensity. On 1st January 1966, Barzanl sent a Memorandum to the U.N.O. (text in Vanly, 378-9). On 13 April 1966, Marshal 'Abd al-Salām 'Ārif === killed in a helicopter accident. His brother, the general, was chosen to replace him = head of state. The same day as this death a new offensive began to liquidate definitively the rebellion. This campaign, which lasted from 12 April to 15 June, was particularly notable in May for the battle of Rawandiz ... Hendrin, the "Kurdish Verdun", as me eye-witness called it, R. Mauriès (171-213), and metransformed into a rout for the Trakis who, despite intensive of napalm, lost 1,056 killed, 476 wounded, 600 mercenaries, the "cavallers of Saladin" were put out of action and an enormous booty taken. The Kurds for their part only had to fament 38 killed and 85 wounded. Despite proclamations of victory, after a new ceasefire demanded from the 15 June by the government, an accord negociated by the Prime Minister Bazzáz (d. 28/6/73) signed = 29 June 1966 (Vanly, 379; Viennot, thesis, ii, 189-92). Some secret clauses recognised in effect a certain autonomy for the Kurds of 'Irale; 'Arif made a visit to Barzani (28 October) to try to reach agreement with him, for the 'Iraki General Staff, unhappy with the "Bazzāz plan" did everything to torpedo it. Again, things dragged on for a long time. But the war of 5-11 June 1967 was bound to have its counter-effect in several Arab lands, as also in 'Irak, where a new coup d'état (17 July 1967) saw General Ahmad Hasan al-Bakr install himself as President of the Republic, followed by a second coup d'état (30 July 1968) in which al-Bakr took over all power and re-established the Bathist dictatorship, whose "National Guard" in 1963 had hardly left behind good memories. While the Kurds maintained their material and moral potential and made a great effort in the see of primary instruction by opening 300 schools in 1968, the government flirted with the Kurdish dissidents. created an (Arabic language) University at Sulaymaniyya and the new administrative division (liee!') of Duhok among the Kurds, but nevertheless prepared to resume hostilities. These, preceded by several skirmishes, began in April around Koy-Sandjak. The Traki troops had to abandon the towns of Kala-Diza, Pendiwin and Cwarta, and then attacked in June the peasant population of Arbil, Halabdia and Badinan, spraying the harvests with napalm and sulphuric acid.

In July, cholera broke out at Kala-Diza. In August there was the massacre of Dakan, at Shaykhan. In January (5 January 1970, L'Express mentioned that between September and December 1969, the Kurda had stopped the Trakt offensive outright; 151 alreraft had been shot down during the last six months. Also in January 1970, the Bathist regime opened negociations with Barzani and the executive bureau, A Kurdish delegation, headed by Dr. Mahmud 'Uthman, went to Baghdad and, on the 11 March, an accord on 15 points signed at Nawperdan, in Kurdistän, between the two parties, which put an end to a war of nine years (text in Kwedish facts, February-March 1970). The Kurds obtained their internal autonomy and the Vice-Presidency of the Republic. The Kurdish language became the second official language of ^clräk (Arabic text in *al-<u>Di</u>umküriyya*, Baghdad no. 704, of 12 March 1970; English text in Kurdish facis, February-March 1970; German text, Nebes, Kurdistan, 232-5). Five Kurds mamed as ministers, the amnesty was declared on both sides. Great festivities celebrated the event. However, all the problems were not solved. There was an attempt against Mollà Mușțafă (29 September 1972), troubles at Sindjär (summer 1972) and controversies over the attribution of the territories of Kirkük after the nationalisation of the I.P.C. (1st June 1972). In June 1973, . Appel on favour du Kurdistan irakien for the application of the accord of rx March 1970, emanated from combined groups and from Black Africa (Le Monde, 13 June 1973).

The Kurds Syria and Lebanon, apart from some great families and their entirely arabised dependants, such as the Barazi of Hamāt, the beys of 'Akkār, the Djumblat Druze chiefs (Djān Bulād "soul of steel"), have preserved their original characters, although some may often have been settled for several centuries and, in every case, well before the establishment of the French mandate. They posed practically no political problem to the mandatory

power and were able to develop freely a very lively cultural movement. They had a large share in economic prosperity of the Diazira (Rondot, Les Kurdes de Syrie, 94, 99 and passim; A. Mu'awwad, al-Akrād fl Lubnān wa-Sūriyā, Beirut 1945). difficulties of a political order arose under the various régimes after 1957 and I plan for the "Arab Belt" (1963). Then, on the protext of agrarian reform, the lands of the peasants were confiscated, and 120,000 Kurds forfeited their Syrian nationality, also loosing the right to become civil servants, to send their children to state schools and to be admitted to the public hospitals. All Kurdish books and music were forbidden. The names of villages were changed to give them Arab names and to settle Arabs there instead and expel Kurds (I. C. Vanly, Le problème kurde ... Syrie, 1966 (cf. Muhammad Talib Hilat, Dirdsa 'an muhdfaşaı al-Djarira min al-nawâhî al-hawmiyya aliditimā iyya al-siyāsiyya, 1963, ed. I. C. Vanly, and 1958); idem, La persecution du peuple kurde par la dictature du Baas en Syrie, Amsterdam, October 1968. (TH. Boss)

iv. - KURDISH SOCIETY

The social and economic life of Kurdistan is strongly structured. If a small part of the Kurdish people still leads momadic life, its great majority is now sedentarised in numerous villages, but "it survives as well today, and in the countryside Kurdish society is essentially tribal" (Edmonds, 12), as always among nomads. But in the detribalised villages the organisation of the group comes under the influence of the government administration, landiords and religious leaders. This leads to a certain number of transformations of fundamental structures at present clearly evolving in Kurdish society, family, tribe and landlord, which we are going to examine first before considering the religious impact, then drawing attention to the social customs which are attached = them.

A. The fundamental structures of Kurdish society.

2. The Kurdish family.

The normal Kurdish family consists of a cell or household composed of the father, mother and children. This household, founded on marriage, is ordinarily monogamous and not patriarchal. Marriage is essential. In Kurdistan there are no old bachelors or spinsters, and also no celibacy nor free love at all-Prostitution does not exist in the small Kurdish villages of Trak or Iran. Adultery is practically unknown because too dangerous. People marry young, the boys at 20, the girls at 12. But in the towns, and since the young Kurds prolong their studies, marriage is delayed. Cousins frequently marry one another. The agnatic cousin is preferred and has rights over his cousin. This way III doing things has many advantages, for the father of the bride knows IIII nephew better; who, himself, is more in a position to protect the girl. Moreover, in | | of tribal conflicts, especially in the past, this would make one rifle more. At the same time, the marriage portion is diminished. To renounce his cousin, the agnatic cousin will exact the price of his renunciation. If not, he will be able to abduct the girl or even to shoot her as well in her parents (Daghestani, 22-3). So abduction is not therefore unknown, with all its risks ('Akrāwi, 130; Daghestani, 17). Marriage can also be conducted by the exchange of sisters, berdelf (Avdal, 222; Dagbestani, 3). In this case, the marriage portion

is not exacted and only the costs of the wedding feast remain. Marriage can also be conducted between people who are not related, but there 🖺 a preference for the same village or the same tribe, more than for a stranger, so that marriage is always endogamous in the broad sense. Barth (6t) was able to ascertain a much greater frequency of marriage between cousins in the tribal populations (57%) than in the non-tribal populations (17%). Hence the importance of knowing lineage and names well (cf. genealogical table: Leach, 63; Barth, 31; Hansen, 116). Among the Yazidis and the Ahl-i Hakk strict endogamy is obligatory between some families (Avdal; Mokri, 44). The marriage portion, except in the cases cited, a exacted everywhere (Daghestani, 28; Leach, 44-5; Hansen, 123-4) and is not necessarily considered by the interested parties as being a sale, as it is often seen in the West. On the contrary, they like it as an appreciation of their value. This marriage portion, which varies according to the regions and especially the social situation of the family, is paid in kind, livestock, lands, a mill, etc., or in each, of which the sum main enormously, and its high sum may at times cause aspirant to despair. Despite the critics, among the Soviet Kurds, it has not completely disappeared. Cf. this subject some poems translated in Machrig, 1958. The virginity of the girl before marriage must not be in doubt and proof must be given on the night of the wedding and kept for myear at least (Nikitine, 109, 115; Hansen, 13-4; Mokri, 68).

Polygamy exists legally as much among the Muslim Kurds as among the Yazidis. Horizontal or simultentous polygamy was very frequent in the past, and was still so in the 19th century. The chiefs of tribes did not always keep to the four legitimate wives authorised by the Kur'an, Ibrahka Pasha, founder of Sulaymanlyya, had 40 wives (Campanile, 107); the great Bedir Khān had 14 and 99 children. At his death, 21 boys and 21 girls remained to him. These customs are now ended. In the past, polygamy was a luxury and a sign of power; today it is sometimes an economic need. It can still be encountered in the urban poorly-educated milieu (Hansen, 138), but also in the peasant milied (Barth, 25). In any case, where it is found, it does not exceed 2% in the Kurd Dagin (Daghestani, 79), 4% in Trak (Barth, 24), and there are never more than two wives. Among themselves, they are called head. In Turkey and among the Soviet Kurds, polygamy is forbidden by the civil faw. But vertical or successive polygamy always exists, thanks to divorce or repudiation, for three talaks suffice for husband to be able to repudiate a wife who no longer pleases him in order to marry another. Also, the shayah of Shadala at 70 had been married 19 times (Hansen, 138), and similarly old Ibrahlm, agha of the Dizai (Hay, 43). The wife can also be repudiated because of sterility or the impossibility of bringing male infants into the world. In this case, she may remain with her husband. If she is repudlated for other reasons, she returns to her father and has few chances of remarrying. A woman guilty or simply suspected of adultery will not only be repudiated, but will run a high risk of death, which her own father or brother or one of his parents will be entitled to inflict on her. The children of the repudiated wife remain with their father. The widow remains in the house of the father or brother of her husband (Barth, 29). The levirate in practised at times, and a little everywhere (Daghestani, 99; Avdal, 221; Barth, 29; Edmonds, 348; Hansen, 136), not = a rule of law, but for convenience. In the Kurdish family, the husband has great authority, but the wife also has her word to say. Speaking of the situation of limit two spouses, Mrs. Hansen (117) finds that of the woman inferior to that of the man in the humble villages, equal in the village aristocracy and the educated urban milieu, but superior in the meducated urban milieu.

The birth of a child is always desired, even if a son is not necessarily preferred to a daughter. Also, the children me numerous but decimated by a fairly infant mortality. The children always welltreated, but without excessive refinement, for life is harsh. The name is given at birth and ordinarily by the women (Nikitine, 206), but at times by the moliah (Barth, 112; Hansen, 108). This name is often that of an Islamic personage or a hero of history or national legend, or it may well be one of the virtues which one wishes is see possessed by the newborn, or the name of a flower, fruit, animal with qualities appreciated by everyone. Hypocoristic forms of the name are very widespread. Some names possess at the same time the desinence o of the masculine and the desinence c of the feminine. But curiously, the masculine forms are used to address individuals who are not noble, while the feminine forms are reserved for personages of distinguished birth (Celadet Bedir Khan, Grammaire 98). On names, diminutives, surnames, see Edmonds, 42.

Circumcision, sinet, is practised a few days after the birth, either by a specialist sinether or by simple barber (Barth, 112; Nikitine, 106). In some places, the ceremony may be carried out later, when the child is 5 or 2 years old and often with several children at the same time. The chief or notable whose son has to be circumcised organises small festivity, and offers a meal to the families concerned (Barth, 112).

2. Tribal organisation.

(a) Listings of the Kurdish tribes.

A fundamental element of Kurdish society is without dispute the tribe. We possess at present the nomenclature of all the Kurdish tribes. In 1826 Lerch already made a good summary of the Kurds of Turkey (63-87), the Russian territories (88-9) and the Persian territories (92-221). Jaba (1860) specified numbers of them (z-8 of the Kurdish text), A map of their habitat in Transcaucasia was published at Tiflis by E. Kondratenko (1896) and Col. Kartsov (2897). In 1908 Sir Mark Sykes recorded 305 names of Kurdish tribes of the Ottoman Empire, and G. R. Driver (1919) drew up Sykes' list differently and added the Kurdish tribes of southern Kurdistan (Trak) and those which remain outside the Kurdistan foreseen after the Great War (19-74). But the different political events which have occurred since then have led to many changes in the distribution and situation of the Kurdish tribes, in the Kurdish edition of his History of Kurdistan (1931), M. A. Zaki draws up a complete table iff all the tribes (329-98, Arabic tr. [1939], 373-468 with map). The Kurdish tribes of Syria were counted by the French services of the Levant in 1930 (5th part, 137-90), and with more care and exactitude by P. Rondot in 1939. The lists published in Kurdish in Roja and of the Kurdish tribes of Trak (No. 66,14-January 1946) and those of Iran (No. 68,4 of February 1946) are not of much use, given the few precise figures, in particular, M. Mokri in Persian gives information = the Sandiable tribes of Iran (1946), and A. 'Azzāwi presented in Arabic (1947) an excellent study on the Kurdish tribes of 'Irak (27-222). A good account of the tribes and sub-tribes of 'Irak, northern Kurdistan (18-27), and southern Kurdistan (45-51), is supplied for m by H. Field in his Anthropology of Iraq (1953), with their numerical importance, the names of the chiefs and the habitat. But in fact, his information is earlier than that supplied by 'Azzāwi. In Persian, the name of 490 tribes are to be found in Mardükh (1953), i, 75-119, and a long study on the tribes of Sanandadj, ii, 10-48. Finally, in B. Karabudat there are eight sketches of the position of the Kurdish tribes and clans of Turkey in the vilayets of Urfa, Mardin, Diyarbakir, Siirt, Bittis, Mus, Van and Hakkāri, and similarly in the border districts of Syria, 'Irak and Iran. As for the Yazidi tribes, they were in their turn enumerated and placed by A. 'Azzāwi I 1935 (90-110), and those of Sindlar and Diabal Akrad especially by R. Lescot (1938), 251-61). The interest of this vast table and listing is particularly to show the universality of the tribal phenomenon in the history and life of the Kurdish people. Clearly, it is not our concern to write at length on these different tribes. The fundamental work remains the Sharaf-nama (1596). Much historical and ethnographical information is to be found in the different works of Soane (1912-26). Longrigg (1925), Leach (1940), Nikitine (1950), Barth (1953) and Edmonds (1957). An exhaustive study of the Yazidi tribes, clans and villages with statistics is given us by S. Damlüdil [1949] in his work on the Yazidis in Arabio (224-60).

(b) The Kurdish tribe and its components.

"The Kurdish tribe is a community or a collection of communities which exists for the protection of its members against mexternal aggression and for the maintenance of the old racial customs and way of life" [Hay, 65]. It is evident that a land of mountains, such as Kurdistan, favours the birth and development of groups more or less closed and shut in on themselves, as perhaps was the tribe in its origin. Although constituted like every human grouping which is formed from a kernel like the family, it would be wrong to believe that the Kurdish tribe is an enlarged family, a little in the manner of which the Bible speaks of the Twelve Tribes of Israel (F. Millingen, 284). Indeed, some contemporary Kurdish sociologists are opposed to this way of seeing things. If the vertebral column of the Arab tribe (kabile) is a kinship line (nasab), among the Kurds it is the soil (and), i.e. the region inhabited by all and submissive to the chief of the group (Khesbak, 68; 'Akrawi, 18).

However, the western sociologists who have studied tribal organisation among the Kurds (Leach, 1940; Barth, 1953; W. L. E., 1956) seem to have remarked some differences among the nomads on the one hand and the sedentaries on the other. Barth also examined the political organisation of the Diaff, a powerful federation of tribes, almost entirely nomadic until very recently (34-44 and diagr. no. 3); political organisation among the Hamawend (45-9 and diagr. no. 4 and 5), where the economy is based on agricultural exploitation and where non-tribal elements **are** mixed with the population; and finally, the organisation and political structure of the Baban, a princely family (60-6 and diagr. no. 6). For his part, the anonymous W.L.E. (432) was able to distinguish in the rural population various types of social and economic organisation, e.g. the classical tribe under m agha claiming a common origin and divided into ties or fractions, such as the Girdi and the tribe under "feudal" chief of different lineage, such as the Dizai and Diaft. The influence and the social role of the landlords and religious shayths, who are not chiefs of a tribe, are another aspect of the problem (cf. Rondot, Les tribus montagnardes, 39-47).

Furthermore, real social classes are recognisable in Kurdish society. The most evident distinction exists between the villagers of tribal origin, estr (Sashira) and those who are not and me named after the regions and dialects, either kurdmandi), goran or miskin, some of them being sometimes almost the seris of the landlords of the village (Nikitine, 124). The last name miskin should be preferred, says Edmonds (123), for the two others denote different meanings (dialect or tribe). Perhaps they are to be and as the descendants of the autochthonous populations conquered by the warlike tribes? But even within the same tribe, there is no uniformity of rights and duties. There are the noble families, one might say, torin, such as the Begzadas; and the commoners who comprise firstly military caste, the zulam (ghuldm) (Nikitine, 125) or pigimala (Barth, 42), a kind of practorian guard of the chiefs who are recruited in all the live of the tribe (Barth, 46) and who, in the past, had almost the status of slave (Nikitine, 125), and finally the class of peasants.

Perhaps one may now give the classical scheme of the organisation of a Kurdish tribe according to Rondot (Tribus, 18 ff.) with regard to the Omeran-At the base is the house or household or family in the strict sense of father, mother and children. A group of houses form a bavik as mal, an extended family. The union of many baviks constitutes the clan or ber. The collection of all these clans gives us the tribe eşir ('aşlıra). The terminology is different in Barth, who divided e.g. the Diaff 'ashira into a certain number of tribes or ties, a political group not to be confused with the hos, a group of the same lineage. The tira is subdivided into many keel, each keel composed of 20 to 30 tents in households united by economic links as well as by family links. At the head of the 'askira there is, or used to be, a pasks of the family of Begzāda; each ties has at its head a rais (rais); and at the head of each had an elected chief of a village, the kikka. Among the Hamawend, the chief of a tire is called agha. For his part, Leach (13-14), distinguished the 'ageirs whose "name describes at the same time the people and the territory which occupies it". It is essentially descriptive of a political grouping. It is formed of was or several clans or table, descriptive of a kinship grouping and divided into several subsections or tira. He also finds, he says, the normal anthropological classification: aghira, fa'ifa and tira, i.e. tribe, clan and lineage. This divergence in vocabulary where Arabic and Kurdish words of different dialects mixed together hardly favours clarity of exposition.

Let us draw attention to the system of the oba (cf. the [hel], which is particular to the semi-nomadic tribes which makes its appearance towards the end of the 19th and the beginning of the 20th century. It is a temporary association of stock-breeders from different villages, formed in the spring to lead the herds to the pastures and to return at the end of autumn. Neither kinship nor tribal relations are necessary to be a member of the obs. The ser-obs or obs bast organises the transhumance on condition that he has dues appropriated in kind. There we still to be remarked the differentiations in the groups: the chief ser-opa and his family, the different more or less hisportant landlords and the simple shepherds. On this organisation of the obs, m Ereb Semo, Sivans hard (ed. Beirut 1947, 29), Nikitine, 149-52; Ghassemiou, 158-60. According to O. L. Vilevevsky, Economis de la communauté agricols ches les Kurdes, 1936, it is around the son that the "class struggle" is concentrated Kurdistão.

(c) The chief of the tribe, his obligations, his responsibilities and his compensations.

The chief of the tribe, whatever its importance, and ordinarily called aghs, a relatively recent title, at the earliest after the conquest of Baghdad by Sultan Murad IV in 1637 (Edmonds, 223). He always comes from the family of the chiefs. He normally acquires this rank by heredity, but not always. The eldest son generally takes the plane of his deceased father, but not necessarily, for a younger brother, judged able, because more competent better-liked, can supplant his elder brother. But the choice can also be made after the election of other chiefs or clans, or even, if necessary, by violence. In even, the central government can intervene and nominate the chief directly.

In the feudal age, the chief, almost autonomous in his tribe, had to supply the suzerain, sultan or shih, with levies in the form of troops or tributes which, naturally, he levied on his dependents, whom he had besides to aid protect in time of war and danger. But this is ancient history. Today the chief has other obligations, and especially it is to him or his representative, the chief of the village, that there falls the duty of sheltering guest travellers, Kurds = foreigners, more or less numerous according to the circumstances. To collect his expenses, the chief imposes me the people of his tribe certain dues, which bear the general name of the atha's right, axass, either taxes on all the revenues of the shepherd or peasant, - corvées, herewiz, days of obligatory work, not to mention some obligatory presents, Mani, in certain circumstances (marriages, feasts) and the rights of justice or fines in cash which he can exact for theft, abduction or murder, if recourse is had to his good offices and to his intervention to regulate the litigation (details of all levies due to the chief will he found in Th. Bois, Connaissance . . ., 36-8 or La vie sociale, 6xo-12 and notes 46 and 47 with the references). These tribal rights should not be confused with the other rights to which the Kurdish shepherds or peasants are obligated by the landlords.

3. The economic structures.

(a) Kurdish nomadism.

The nomads are essentially organised around the tribe and me devoted almost exclusively to stockbreeding in a fairly closed economy. The life of a nomed is harsh and is submissive to the heavy authority of the chief. But this way of life, both for social and economic reasons, is tending to be transformed and to disappear. On nomadism and its repercussions on the economy of Kurdistan, see J. Frölin, Les formes de la vie pastorale en Turquie, in Geografisha Stockholm Annalen (1944), 219-72; H. Christoff, Kurden und Armenier, Hamburg 1935; O. L. Viičevsky, Economie de la communauté agraire nomade kurde I la Transcaucasie et des districts environnants dans la 2º moitié du xixº s., in SE (1936), No. 4-5, 135-61; N. Bogdanova, L'exploitation Hodale des nomedes, in Arch. Hist. Acad. Sc. URSS, II (1939); I. P. Petrushevsky, Essai sur l'histoire des relations stodales en Azerbaidjan et en Armtnie, du zvi* an debut du ziz* z., Leningrad 1949, 389; W. D. Hütteroth, Bergnomaden und Yaylabasern im mittleren hurdischen Taurus, Marburg 1959, 190; T. R. Stauffer, The economics of nomadism in Iran, in MEJ (Summer 1965), 284-302; V. Monteil, Les tribus du Fars et la sedentarisation des nomades, Paris-The Hague 1966. Also, X. de Planhol, Les fondements giographiques de l'histoire 🖿 l'Islam, Parls 1968, 442; H. Carrère d'Encausse, Aperça sur le problème du nomadismo au Moyen-Orient, in Documentation française, Notes et Études, doc. No. 2095 (3 November

ross).

Some efforts at sedentarisation were undertaken between the two World Wars, in the different states where nomadic tribes, Kurds or others, were living; but both in Turkey as well as in Iran, with Mustala Kemal or Rida Shah Pahlavi, the methods used were not always well received by the interested parties. This is the reverse of Russian policy with the tribes of the Caucasus, according to R. J. M. Goold-Adams (Middle East journey, London 1947, 95), who says that the Russians succeeded better than anywhere else in the Middle East, "In fact, their way of approaching the problem was economic as much as political and military ... For they offered the nomads lands, water and the advice of agricultural experts to make them capable of augmenting the harvests necessary for their subsistance." Elsewhere, sedentarisation has been effected without violence and in stages, as for the Diaff, for example (Edmonds, 146).

(b) The Kurdish pentantry.

The Kurdish population is essentially rural. The Kurd is thus a peasant in a rough proportion of 65 to 80%, although industrialisation is beginning to take place. If such are the facts, it is understandable that the land must play a fundamental role in the life of the peasant. The land system in force among the Kurds poses more of a problem. Until the First World War, the major part of Kurdistan was contained in the Ottoman Empire, and the land system came under the Ottoman Land Code (1858), for military fiefs had been abolished in 1839. This system existed until around 1930, in the lands (Syria, Strak) which were inheritors of the Ottoman Empire (Warriner, 66). This Code recognised various kinds of properties: walk property, in the absolute form sahaba, recognised by a title deed or senet tapo, or in the form of usufruct, lagarruf; property of the state, mirl, absolute for state, with usufruct possible for some private individuals; properties of make or mainmorts, either Mayer if the beneficiaries are works of charity, such as mosques, schools or students, hospitals, or sati if the beneficiaries are minors; public properties for the use of all, matraka, e.g. roads, rivers, village commons etc.; and finally dead properties, moudt, desert and empty lands which all belong to the state. In Iran the chalise crown properties must be added here (Lambion, 238-58).

The extent of these different types of property varies between the countries, and in general leaves little room for the small landowner (2/a of the rural population in Turkey, 1/4 in 'Irak). Everywhere large landownership is the rule. In 'Irak, out of to million bectares of arable land, 4 millions belong to the state and 6 million to private landowners. In Iran 10% of the peasants possess 8% of the land, from 1 to 3 hectares or a cot per household. The cot is both the pair of oxen used for labour **in the work carried out** by the peasant in one day (Ghassemlou, 228). The great landowners, i.e. the state, the chiefs of tribes, the religious shapples and the great bourgeois businessmen, lease out me short lets their immense lands at = price which renders the situation of the peasant highly precarious. Indeed, the dues me heavy. If, in Iran, the annual revenue of the great landowners reaches 5,600 dollars - head, that of the average peasant only reaches 60 dollars (Ghassemlou, 268). In Irak, before the Second World War, the income of the Kurdish peasant came to f to a year (Khosbak). There are the dues in kind or in corvée labour (80%),

in kind (15%) and for the rest (5%), which fall = heavily on the peasant. In Turkey, several systems distinguishable: yarrank, where the peasant uses his own took, plough and livestock and gives half of the harvest; resimulik, where the amount of the rent depends on the situation and fertility of the soil, the manpower, the rentability of the cultivation and the degree of dependance of the peasant; and surabbacilik, where, in exchange for his work the farmer only touches 1/4 of the harvest (Moiselev, 13). In Kurdish Iran, the same servitudes under different names and rather similar systems are to | found: nimekare, in which the landowner leases out the irrigated lands and supplies the seed, and the peasant supplies the work, with the landowner taking % of the harvest and the peasant 1/s; séykbar, in which the landowner supplies the land, the water, the seed and the beasts of labour, and takes 1/ of the harvests; elqu!, in which the landowner supplies soil and water and receives ?, iii the harvest; and dawada, in which the landowner, in return for supplying earth and seed, takes 1/10 of the harvest (Ghassemlott, 132-8). In 'Iraşl Kurdistân the man problems are encountered. Thus for the summer harvests, tobacco or cotton, the landowner takes 1/4 and 1/2 in the case of the rice; for the winter harvests, wheat or barley, \$\frac{1}{10}\$ or \$\frac{1}{2}\$. In addition, there is that which is owned or levied: 7,5% for the serkal, the agent of the landowner, to% for the government, and in addition, all that there is set aside for the galaxasi or coffeemaker of the master, the mudhif or guest house, etc. (Khosbak, 48). Also, for the detribalisad villages under landlords, the revenues of the soil are distributed roughly as follows: " for the landowner, ", for his representative in the case of the landowners who do not always live on the spot but are settled in the towns, 1/e for the share-cropper or farmer, and 1/e for the agricultural worker who has neither land nor beast, but only his labour. If account is made at the end of the year, the poor Kurdish peasant is left with empty hands and overwhelmed by debts (Rossi, 86), for he is often forced to take on usurious loans in order to survive until the next harvest.

If such are the conditions of life of the Kurdish peasant, one can understand the rebellions which break out from time to time, e.g. that of the mouroud of the Kurd-Dagh (Syria) directed by Ibrahim Khalil between 1930 and 1940 (cf. Th. Bois, Les Kurdes, 15-115), and the revolt of 20,000 families of Dizai, in 1954, who demanded the reduction of the tax to % the first the harvest, we suppression of forced labour, and the suppression of gifts on the occasion of feasts or marriages (Gavan, 19).

To remedy this feudalism of the land which makes the Kurdish peasant a taxable serf, subject to forced labour at pleasure, some projects of agrarian reform have been envisaged by the governments of the regions inhabited by the Kurds, in all these lands however, the feudalists, chiefs of tribes or religious shayahs, privileged in the past, have been the stub-

born enemies of these attempts at reform.

In Iran, since 1955, a law provides for the distribution of the lands belonging to the crown and state (Muhammad Shāh, 205). In 1960, an agrarian law aimed at regulating the property of private lands by fixing the maximum \$\blue{\pi}\$ 400 hectares for irrigated lands and 800 hectares for non-irrigated lands. Provision was also made for rural co-operatives which, from 300 in the beginning, rose to 4,300 in 1965 and 8,000 in 1969. But above all, the Shāh proclaimed the "White Revolution" (26 January 1963), approved by referendum and which, in its

twelve points, was among other things to lead to the abolition of feudalism and the liberation of the peasant. In Turkey, since 1938, provision has been made for the purchase of the lands of the great landowners to distribute them to the peasants, but few have benefited from it. A legal project regarding agracian reform promulgated on the 21 June 1943, which envisaged the distribution of the lands of the state and of landowners whose area exceeded 500 hectares, but this art. 17 was abrogated in 1950. The price had to be paid within 20 years (Mouseiev, 14). A new agrarian project began in 1961. The deplorable situation of the peasants are acknowledged, bence it concerned with the distribution of the lands belonging to the Treasury, I million domines (in Turkey z donum = 1,000 m² approx.); those managed and cultivated by the state, quite extensive in the provinces of the east and south-east; those of makfs, of which there still remained I million donums to distribute; and finally the private estates, whose total area exceeded 35 million dônums (Vatan, 14-15). In 1965, out of 13,591,622 members of the active population, nearly ³/₄, i.e. 9,764,652 lived by agriculture (Esenkova, 116). They were also the most unprovided for (cf. M. Makal, Bisim köy, Fr. tr. Un village anatolien, eloit d'un instituteur paysan, Paris 2963, Eng. tr., A village in Anatolia, London 2954).

In 'Irik, the agrarian policy of the royal government was originally rather favourable to the chiefs of tribes, Arabs or Kurds. In 1932, law No. 50 (Dowson) assigned landed property, pasture or arable, to the tribes, then law no. 51 (called lazma) assigned to the chiefs the ownership of the properties of the tribe. In 1933, Law No. 28 forbade the peasant "in debt" to leave the land of his master, unless his house was destroyed. Finally, in 1954, Decree No. 21 allowed the Minister of Justice to assign the national properties. Furthermore, e.g. in 1952-4, 1,794,560 ddmins (in 'Irāk m downm = 'Ia hectare) were distributed to 6,863 peasant families from the region of Singliar, but the major part mm assigned to Ahmad al-Adjil,

shaykk of the Shammar (Warriner, 160).

Such a situation could not continue. After 30 August 2958, the new Republic published an agrarian law which was simed at putting mend to feudalism, to raise the social level of the peasant and develop agriculture. According to this law, the area of properties should not exceed 250 bectares in irrigated lands and 500 hectares in non-irrigated lands. The benefits of cultivation were strictly regulated. The lands thus freed had within five years to be distributed to the peasants, from 30 to 60 donums of irrigated lands or from 60 to 120 donums of non-irrigated lands. The landowners had to be compensated in goods from the Treasury at 3%, relimbursable in 20 years (Vernier, 108). There was suphoria among the peasants, who did not wait to help themselves, and a general outcry on the part of the landlords, and many rebellions had to III faced.

In these different lands, the Kurdish peasant was bound benefit from these agrarian reforms. But it is not sufficient to have the land; he still had to have the means to cultivate it. The means are lacking or insufficient: seed is expensive, the agricultural equipment rudimentary and primitive, everywhere mediaeval ploughing methods are still in use, the indispensable irrigation works are expensive and the co-operatives cannot answer all needs. The Kurds of Tråk, as Kurds, are the only ones to have their word today. Thus the D.P.K. but time of its Seventh Congress, in November 1968, published its programme whose long article 14 presents its views on the group

of projects which take account of the special needs of their region (Vanly, Le Kurdistan irakien, 363-6). A witness records a partition of lands at which the was present in Kurdistan in 1964, Joyce Lussu, Anche i Kurdi conquistano il loro socialismo, in Rinascità Sarda, an. ii, No. 9, 10 March 1964, 19.

These problems of the land are not posed in the same manner for the Kurds of Soviet Armenia. Indeed, the First World War was still not finished when the peasants of the Alagoz rebelled with the cry of: "We want the land. How long we to remain slaves?" They were excited by their young compatriot who relates it himself (Ereb Semo, Sivand kurd, Bairut 1947, 62). After many struggles against the kulaks, the dream was realised, but perhaps not in the fashion originally envisaged. From then onwards, property has been collective and the peasants enrolled in the kolkhoz (cf. Aristova, Kurdi Zakaukaz'ya, 1966, 64). Instead of the plough and cart of the past, it is the tractor and the combine-harvester which serve to cultivate the lands of the kolkkor. Hence the standard of living of the Kurdish peasant has been noticably raised. But perhaps this new life is somewhat idealised in the work (in Armenian) of Emine Evdal on IIII Manners and customs of the Kurds of Transcaucasia, 1937 [cf. Th. Bois, Le vie sociale des Kundes, 605-9; P. P. Mousoiov, Le problème agraire en Turquie, in Sovietskoie Vostokopedenie, 1956, No. 1 (Fr. tr. in Dog. Franc., Articles et Documents, No. 0.369, 14 June 1954, 8-13); Warriner, Land reform and development in the Middle East, a study of Egypt, Syria and Iraq, 1957. 1962; A. K. S. Lambton, Landlord and peasant in Persia, a study of land tenure and land revenue administration, London 1953, 1969; P. Rossi, L'Irak devant la reforme agraire, In Orient, vii/3 (1958), 81-93; La réforme agraire en Irak, in al-Bilad, Baghdad, x2 September 1960, Fr. tr. in Doc. Franc., Articles et Documents, No. 02027, 29 November 1960; Un projet (ture) de réforme agraire, in Vatan, Istanbul, of the 9 and 12 October 1960, Fr. tr. in Doc. Tavernier, Terre, paysans politique, Paris 196; Jaafar Khayyat, The Iraqi village, a study in its condition and reform, Heirut 1950 [in Arabic];, Notre question de l'Est aux yeux d'un sociologue, in You, 3rd yr., No. 90, 18 December 1964 (in Turkish); Ismail Besikçi, Doğu Anadolu'da geri birakilmişliği oluşumu ("The under-development of Eastern Anatolia"), in Ant, No. 10, February 1971, 46-73; idem, Doğu Anadolu'nun duseni: 20190ekonomik ve etnik temeller, ("The situation of Eastern Anatolia; its socio-economic and ethnic causes"); Iran-Shahr, a survey of Iran's land, people, culture, government, economy, Tehran Univ. Press 1963, published with the assistance of unzsco, i, 117 pp.).

B. The religious impact.

Kurdish society, based me the land (tribe and village) and blood (family), is coloured by meligious aspect which appears often in daily life (cf. Th. Bois, L'Ams des Kurdes, 47-8). The central kernel of the present Kurdish habitat, to the east of the Tigris, around Lakes Van and Urmiya, as well me in the north and east of Trak, was contained before Islam within the Sasdaid empire (224-642) where Zoroastraniam became the state religion. But already before that, in the time of the Parthians, Christian evangelisation had encountered there man Jewish groups against pagan populations who worshipped trees, had

a solar cult and sacrificed to the devil. Some of them were converted. The Acts of the martyrs of Persia (Syrize ed. Bedjan, Leipzig 1802) report that these autochthonous Christians suffered under Sapor II (309-63). But at the beginning of the 5th century the church was reorganised, bishops were installed in 📰 the Kurdish lands (cf. P. Labourd, Le christianisme dans l'Empire perse sous la dynastie sassanide (224-532}, Paris 1904, passim) and ■ number of monasteries were built, were of which were maintained until t'e invasions of Timbr (1336-1405); cf. Fiey, Assyria chreticana, passim. But the mass of the people followed the official cult, and the Kurds recognise that their ancestors could have been madins [q.v.] or followers of Zoroaster (Sir Mark Sykes, The caliphs' lasi heritage, 424).

The fall of the Sasanid dynasty (642) favoured the Islamisation of the country that the Arabs had begun to invade a decade or so previously. This happened neither without a blow without regret. But after many combats in which they allied themselves sometimes with the Sunnis, sometimes with the heretical Khāridjis, the Kurds ended by rallying collectively to the religion. Having become Muslims faithful to the Sunna, the Kurda follow almost in their entirety the juridical school of al-Shāfi'i (d. 204/820), as the Sharaf-nāma already recognised (i, 14) and also Ewliyā Čelebi (iv. 75).

In the course of history, the Kurdish chiefs of the community have shown a fine religious zeal without the national factor intervening, beginning with Salah al-Din or Saladin (1137-93). They immortalised their passing by building mosques, schools, hospitals or simple fountains (Sharaf-nama, ed. Cairo, 96-7). Alongside these builders, an intellectual élite, 'wlama' and fukaka3, devoted itself to the study of theology and law. Also to be noted me the famous madratas of Bitlis (Sharaf-nama, 455, 495), of Diazles (ibid., 271) and of Zakho (ibid., 147). At Akhlik, one of these scholars worked on the construction of the Observatory of Maragha in the 7th/13th century (ibid., 409). 'Amadiyya is also a centre renowned for its masters (cf. Damloodji, Imdrat Bahdlada, 59-61; al-'Abbāsi, Imarat Bahdinda). The famous university of al-Azhar 🔳 Cairo counts numerous Kurds es teachers of theology (cf. Nikitine, Les Kurdes, 210). The cometery of Eyyûb in Istanbul and that of Scutari contain the tombs of numerous Kurds who, in the Ottoman period, held the post of Shaykh al-Islam (cf. Th. Bois, La religion, 7).

But over against this official and institutionalised Islam, there has sprung up a popular Islam, often on the fringe of the authorities, civil as well as religious, and which leads a very active life. It is the world of the small folk, peasants or artisans, illiterate for the most part, a kind of secular tertiaries attached to a mystical fartha and linked directly to a shayth who serves them as spiritual guide, murghid. From the 6th/12th century onwards Suffs entered Kurdistan and prospered there (cf. Lescot, Enquête, 23-4). Today, the principal brotherhoods strongly implanted among the Kurds are the Kadiriyya, who trace their origin to 'Abd at-Kādir al-Gilānī (1078-1166), who died at Baghdad and was w Kurd himself, and the Nakshbandiyya, who claim attachment to Baha? al-Din of Bukhārā (1317-89) and are quite widespread in the Islamic world, especially in India and as far as China. This farika was introduced into Traid Kurdistan at the end of the 19th century by Mawiana Khalid after a journey to Dihli. He was of the Djaff tribe, born at Kara Dağ in 1779 and dying at Damascus in 1826 (cf. Rich, Residence, i, 140-1, 320-1; Nikitine, Les

Kurdet, 212-15; Edmonds, Kurde, 77-8). He was to encounter strong opposition in the part of Kadiri skaykks, but ended by supplanting some of them. In south Kurdistan, the disciples of the Kadirf order are ordinarily called darwish and those of the Nakshbandis are termed Suff (Edmonds, 63). The meetings of the brotherhood are held with the shayed in his residence, hhánhák or takiyya or simply takke, a kind of monastery-hospice where the shayth who keeps open table there dispenses his teaching to his murids. But in every place where mystical tekke is established, = tribe or in a village, tensions are going be produced almost automatically. For the shayah is rich, he is the owner of numerous villages, and because of that he is opposed to the agks of the tribe who sees there competition with his authority; he is endowed, it is believed, with supernatural and miraculous powers and also is regarded askance by the orthodox 'ulama' who have almost no faith in him and distrust him; finally, and above all, he often has the ambition to play a political role; whence the suspicion which he meets with from the government authorities. On the other hand, the credulity of the murids 🗏 well imaginable, and their fanaticism can lead to many manual and eccentricities. Hence from time to time some individuals with an inner light arise who claim to be their maidi, or who are reformers without mandate but preaching social revolution. Examples abound (Campanile, Storie, 91-3; Nikitine, op. cit., 221; Rondot, Les tribus montagnardes, 43: Th. Bois, L'ame des Kurdes, 52-3; Edmonds, Kurds, 74-6). A recent group of Nakshbandls, the Nurcular, was founded by the Kurd Sa9d Nürsi (1870-1960) in Turkish Kurdistän (cf. MW [1960], 232-3, 338-41, [1961], 71-4). The hand of the skayahs and their adepts, especially Nakshbandis, is to be found in many uprisings in Turkey and in 'Irak, with the bloody government reactions which follow, as e.g. the movement of Shaykh 'Ubayd Aliah of Nehri (1880) and that of Shaykh Safid of Piran (1925), which brought about the closure of all the mystical tekkes in Turkey, and also the insurrections of Shaykh Mahmud of Barzindja (1919 and 1922).

The teaching of certain thay the, in order not to be revolutionary, must be heard and followed with prudence. Such is the mystical doctrine and procedures for contemplation of Shaykh Muhammad Amla al-Kurdi al-Shāfifi al-Nakshbandi of Arbil (d. 1904) in his Tancots al-kulab, in numerous editions (7th in 1961), cited by A. J. Arberry, Sufism, London 1950, 129-32, and the French translation of his mystical technique of thike by J. Gouillard, Petite philocalis

de la prière du coeur, Paris 1953, 234-48.

But these different brotherhoods, despite all their excesses and political involvements, are always considered as integral parts of orthodox and official Islam. It is not the same with some sects who, pushing their theories me the extreme, have left Sunni Islam, such as the Yazidis [q.v.] who, born of the 'Adawiyya of Shaykh 'Adl b. Musäfir (ca. 1073-1162), have diverted their spirituality completely from it to the point of having forgotten their origins (cf. Th. Bois, Les Yazidis, essai historique 🔳 sociologique sur lour origine religiouse, in Mashriq, iv (1961), 109-28, 191-242). Similarly, the Ahl-i Hakk [q.v.] are really Shiff extremists. Dr. Mohammad Mokri has published numerous Gurani and Persian texts concerning them, e.g. L'ésotérisme kurde, Paris 1966. Edmonds studies the members of the sect of the "Irak-Iranian frontier, known by the same of Kakai, op. cit., 182-201; idem, The beliefs and practices of the Akl-i Hagg of Iraq, in Iran, Journ. Brit. Inst. of Percian Studies, vii (1969),

80-101. Also to be encountered among the Kurds are some aberrant small groups in Trais, such as the Saull who are connected with them and, around Mawail, the Shabak who are Kurdish Kizilbāsh, not without contact with the Behtāshis, formerly so

powerful in Turkey (Edmonds, 268-9).

Bibliography: In Nikitine, Les Kurdes, 228-33, is to be found an excellent account of the theories of N. Marr, Eshce o slove Celebi, in ZAP, xx (1912), 99-151; G. R. Driver, The religion of the Kurds, in BSO5 (1922), 197-215; Nikitine, Les Kurdes et le Christianisme, in RHR (1922), 147-56; idem, Une apologie kurde du sunnisme, in RO, vili (1923), il, 116-60; idem, Les thèmes religieux dans les textes kurdes de ma collection, in Actes du Cong. interu. d'histoire des religions, Paris 1925, ii, 415-34; idem, Les Kurdes racontées par eux-mêmes, in Atje francaise (1925), No. 231, 148-57; P. C. Customs and social traditions.

I. Deess.

Clothing is characteristic of man. The style of clothing changes from one country to another and varies with the social rank [see LtBls]. It also evolves with the times. So it is among the Kurds. Today, the costume of the Kurds tends to fall into line with Western costume, in order to conform with the law (September 1925) in Turkey, and to follow the fashions, especially the masculine ones, for the other Kurds of the towns. But all the Kurdish women and the men in the villages keep to the traditional national costume. The evolution of Kurdish clothing can be followed through the accounts of travellers and the sketches that they give us, e.g. Campanile (1810), 135-40; Rich (1820), i, 180-1, 287-9; Frazer (1834), i, 71, 85-7; m in addition Binder (1885), 172 a. t; Soane (19x2), 399-402 and Nikitine (1956), take up the descriptions of their predecessors. One must wait for women to have detailed information the modern dress of the Kurds, Mrs. Aristova (1965), 208-26, speaks of the Kurds of Transcaucasia and gives some photographs of the woman's jewels, and Mrs. Hansen (1961) has a very long chapter (65-98) to explain to us in detail the materials and colours of different parts of the clothing, with what is specifically Kurdish, what is the consequence of Islamic customs, and what derives from Western influence, together with measurements, diagrams and photographs, in that im may have an exact idea of the present national Kurdish costume, for men in well as for women. While Jeweis of every kind and in every material, gold, silver, precious stones, necklaces, bracelets and pendants, sparkle on the costumes of the women, the pride of the men is to be noted in their arms, cartridge pouches in damascened belts, chased diagrars and isthal revolvers. The pipe and the tobacco pouch also form part in the Kurd's accounterment.

2. Marriage and burial customs.

From the cradie to the grave, man is everywhere accompanied by customs or traditional rites, which vary with civilisations. Among the Kurds ____ to be found some customs very much alive which have been preserved from time immemorial. The choice of a flancée, her toilette before the wedding, the price of proauptial virginity, whose linea bloodied by the ruptured hymen will bear clear proof, the crossing of the threshold and introduction into her new household, the joys at the birth of the first baby, after confinement which has nothing of a story about it (cl. A. Brune), Gulasar, contes et légendes du Kurdistan, Paris 1946, 109-11). In the occasion of usages respected by all. It does not concern us to give a systematic and exhaustive account, but to indicate examples, according to the various Kurdish regions. Kurds in general: Campanile, 103-5; K. A. Bedir Khan, La femme kurde, in Hawar, 19 (1933), 6-8/294-6; Tawilsparez, Le mariage ches les Kurdes, in ibid., 50 (1943), 12-16/764-8. Kurds of "Irak: Berth, in op. eit., 24-9/29-37; Edmonds, 225-6; Hansen, 125-38. Kurds of Iran and the Urmiya region: ibid., 113-15. Kurds of Syrla and the Kurd Dagh: K. Deghesteni, La famille musulmane contemporaine en Syrie, Paris 1932, passim. Kurds of Azerbaidjan: Nikitine, 208-11. Kurds of Transcaucasia: E. Avdal, op. cit., 22-83 (cf. Nikitine, in L'Afrique et l'Asie, xlix [1960], 61-6). Kurds of the Alagoz: Ereb Somo, Sivand hard, The Kurdish shepherd, ed. Beirut, 44-7, 114-8. Kurds of Alamut: Freya Stark, The Valley of the Assassins, 1946, 270-1. Yazidi Kurds: Giamil, Monte Singar. Storia di un populo ignoto, Rome 1900, 45-9, Isya. Joseph, Devil worship, Boston 1919, 186-91; E. S. Drower, Peacock angel, London 1941, 17-25, 86; S. Damludji, al-Yatidiyya, Mawell 1949, 276-88. Ahl-i Hakk Kurds: M. Mokri, Le mariage ches les Kurdes, in L'Ethnographie (1962), 42-68.

The innerary rites are no less varied, whether in regard to the toilette of the dead, the funeral cortège or hotel, the ceremonies of mourning and the tree of the deceased, dara fin, or the collective meal of condelences. Descriptions of them found for the Kurds in general: Campanile, 82-6, with a fine clegy; Nikitine, 125-8; Mukri Kurds: O. Vilčevsky, Mukrishic Kurdi, in Peredneasiatshiy etnografičevskiy Shomik, i (1958), 214-18. Kurds of Turkey: Ahmed Mérart, Biraniyéd ("My memoirs"), Erivan 1966, 89-91. Yazidi Kurds: Lescot, op. cii., 154-6; Drower, 97-8, 185-6; I. Joseph, 192-3; Damiddji, 70-2. Children's funerals: Hansen, 139-43.

3. Festivals and seasonal rites.

Among the numerous festivities which punctuate periodically the life of the Kurdish people, the Islamic religious festivals me famous everywhere and so do

not merit special mention, with perhaps an exception for the mawlid or festival of the birth of the Prophet. Indeed, the brother-in-law of Saladin, Muzalfar al-Din Kökbüri, governor of Arbil, is perhaps at the origin of this festival which he had celebrated with much solemnity and gaiety in 604/1207. An account of it has been given by a native of Arbil, [bn Khallikān (d. 681/1282), French tr. J. Sauvaget, Historiens arabet, Paris 1946, 118-25. On the occasion of the festival, panegyric is read, of which numerous specimens are to be found in Kurdish. Let us cite simply the Mewildedness of Mela Ahmad of Bate (1425-95?) edited in Cairo in gos and re-edited in Istanbul in 1919 and always used; Biyisa Péxember, Life of the Prophet, edited in Damascus, - Kilebrana Haware, 4 (1933); Shaykh Mohammad Khal, Mewiadudme i new-eser ("The new account of the birth of the Prophet"], Sulaymani 1937; idem, Mewiadedene, in Kurdistan (Tehran) Nos. 166 H.; Mela Hasan Hartúşi, Merladname, m ibid., Nos. 43-134 (1960-2).

A very popular festival among the Kurds, and now official in thak since the establishment of the Republic (1958), is Noveus (see NAWRU2), or the festival of the new year, i.e. in spring (21 May). It is a sort of national festival of the Kurds. Moreover, it has always been celebrated by the Yazidis, who are supposed to have preserved many ancient traditions and who call it Serisal. There is also the Festival of the New Year (of. Lescot, op. cit., 71). The festival is in any case earlier than Islam, marmyth of the eternal spring" which was always celebrated in the Iranian world (cf. G. Widengren, Les religions de l'Iran, Paris 1968, 58-67). It is said to have been instituted by the mythical King <u>Di</u>am<u>sh</u>id (H. Massé, *Croyances et* condumes persones, Paris 1938, 143). Today, the official festival is accompanied by speeches, poems, dances and theatrical scenes, where the myth and struggle of the smith Käwe against the dragon Zahhāk or Aži Dahaka is mimed, a prefiguration of the struggle of the Kurdish people for its independence. In Sulaymani, the festivities are associated with all kinds of entertainment and masquerades with a jalse amir. It is a real carnival (Edmonds, 84-5; Taufiq Wahbi, The rock sculptures of Gunduk causs, in Sumer, w/2 [1948], Fr. tr. in BCEK, vii (1949), 2-13. Ereb Semo cites another form of carnival: Kose geldi, Berbang, in Berevek, Erivan 1969, 61-2. It is in connection with this festival that a special cake, samani pasan, is baked, which, by night, 'A'isha or Fatima will to bless by touching it with their hands. It is eaten in the family and with friends, with the aim of having offspring (Wahbi, 11-12). In Iran, on the eve of the New Year, magical rites are mixed with the rejoicings (M. Mokri, Les riles magiques dans les féles du "Dernier Mercredi de l'Annec' en Iran, in Milanges Massé, Tehran 1963, 288 ff.). The girls make vows then: Thirteen at the door, New Year. Husband in the house, baby 🖿 the lap (Massé, op. ett., 159), Abroad, the Kurdish students celebrate this national festival with gaiety (Deichi Delair, Nauros and the legand of Kawa, in The Kurdish Journal, U.S.A., 11/1 [March 1965], 3-5). Let us note further in Kurdistan, London, organ of the K.S.S.E., Nos. 7/8 (196x), the poem The festival of Newroz of Salih Karadaghi, 32.

Other seasonal festivals are calebrated above all by the shepherds on the occasion which concerns them particularly: the first lambing, samples; the departure for the some or summer pasturage, beroden; the ahearing of the aheap, berobir; and above all the releasing of the rams, beron berden. Ereb Semo, ibid., 58, has described these entertainments with many picturesque and lively details. Stig Wikander believed that he had discovered in this last festival reminiscences of ancient myths (Ein Feet bei der Kurden und im Aveste, in Orientalia Succana, in IngGo], Uppsala 1961, 7-10. The peasants also have their traditions. At the time of the harvest, the first sheaf reaped is offered to the stranger who passes by (Hamilton, op. cit., 51), and the gathering of the mulberries is the occasion of a festival with a special dance, gridan, the sweeping, which consists of sweeping the soil under the trees before the children climb them to shake them so to allow the women to gather the berries (Edmonds, 170, 1. 1).

Although it does not really concern us here as a festival properly so-called, let us indicate some or less superstitions practices which relate to the cycle of nature and whose origins stretch back without doubt into remote antiquity. If activities to make the rain stop are mentioned only rarely (cf. Nikitine, Une apologie kurde, 16), by contrast T. Wahby, op. ett., 7-9, counts no less than mind different rites, more or less laughable and doubtless efficacious, to combat drought and obtain rain. It the prayer noja berana does not suffice, a dervish is to be thrown into a water tank or women are to harness themselves to a plough and till the river. Still other singular acts are to be performed in order to have one's prayers finally answered (cf. S. Reinach, Charme pour obtenie la pluie (en Kurdistan), in L'Anthropologie, xvii [1906], 633).

4. Dances and music.

The Kurd sings always and everywhere. All the family festivals, birth, circumcision, and especially marriage, are accompanied by dances and songs, and equally the tribal or peasant gatherings and some religious caremonies. The name of the dances varies according to whether it designates the region or the tribe where it is danced, e.g. Botant, Serhedi, Şêxanî, or according to the different figures which distinguish them, edgavi, girani, royne, or the rounds govered and copi. The students have a special dence billio or bélûte, of which Tawûsparêz has given = some examples and has described the rhythm (Lo vie universitaire au Kurdistan, in Hawar, No. 53 [15 March 1943), 772-6). The old or more recent travellers admired the particularities of these Kurdish dances (e.g. F. Millingen, Wild life, 378-9, or Edmonds, Kurds, 84; Drower, Peacock angel, 130-4; Bois, Connaissance, 6x-2, cites the name of twenty dances). Let us note that those folkloric dances are mixed, which distinguished the Kurds from the other neighbouring Muslim peoples.

Kurdish music, inseparable from the dances and songs, is part of what it is convenient to call oriental music, but it cannot be confused either with Arabic music with Armenian Turkish music at all, although it has had an influence at times on the songs of the neighbouring countries, such as Iran or Mesopotamia (cf. S. Jargy, Chant populaire et musique savante au Proche Orient arabe, in Orient, vi/2 [1958], 108-9). Kurdish music today is not learned, but popular, and knows neither harmony nor polyphony. Its melodies, as numerous as varied, preserve a serious, pathetic, quite often melancholy character, as a consequence quite astounding among this warlike people (cf. Dulaurier, Chants opulaires de l'Arménic, in Rev. des deux Mondes, so April 1852, 224-35}. Western travellers have not failed to draw attention to the originality of this music. Some have felt the attraction and very palpable charm of these chants; others, an the contrary, e.g. Mrs. Hanson, 129-9, have found this music "flat and false" with its 17 tones. It was an Armenian priest, Vartabed Comitas (1869-

1935) who was the first to gather and note down some popular Kurdish songs (Ouelques spécimens des mélodies kurdes, in Recueil d'Emine, Moscow 1904, and re-edited in Erivan in 1959). In Erivan precisely, the Malikian School of Music is formed of young Kurds who study the traditional songs with the old denebli or troubadours. Thus Nura Cowarf noted 33 Chansons de danse kurdes, 1060, gathered at Tiflis. For we part. Cemila Celil has published two annotated collections Ehants populaires hurdes. The first, at Erivan (1964), gives Will Kurdish text and the musical annotation of 75 pieces; the second, at Moscow in 1965, apart from the Kurdish text, gives the musical notation and Russian translation of 100 varied songs. In Irak, since 1958, a society of Kurdish music has been organised with a view to preserving, standardising and developing in Kurdish music (cf. B. A. Ali, An approach to Kurdish music, in Kurdistan, K.S.S.E., z March 1958), 3-6; S. S. Gavan, Divided nation, London 1938, 15). But Europeans too are interested in Kurdish music (cf. Dr. D. Christensen, Tanzlieder der Hakkari-Kurden. Eine materialkritisch Studie, in Jahrbuch für musikalische Volksund Völker-Künde, Berlin i [1963], 11-47). This is a very serious study of the dance, instrumental and vocal music of Hakkari, whose melodies the author analyses and whose style and rhythms he studies scientifically. See also Edith Gerson-Kiwi, The Music of Kurdistan Jews. A synopsis of their musical styles, in Yuval, Studies of the Jewish Music Research Centre, il, Jerusalem 1971.

The Islamic religion does not authorise music at all in its liturgy, and music has taken refuge III the rites of the different faribas where its use probably dates from the foundation of these groups (cf. Trimingham, op. cit., 195, 196 and passim; M. Mokri, Le Soufitme et la musique, in Encycl. de la Musique, Paris 1961, 1014-15). From there, music has passed without any problems into the aberrant sects of the Vazidis, into their processions and their gatherings for same or religious recital. Three religious songs of the Yazidis had already been noted by H. Layard, Niniveh and Babylon, 1833, 507, Nos. 667-9. Similarly, E. S. Drower (op. cit., 118-19), recorded the thythm of the drums in the course of ceremony. As for the Ahl-i Hakk, Mohammed Mokri enlightens on their musical customs in his article La musique sacrée des Kurdes "Fidêles de Vérité" Iran, in Energl, des musiques sacrées, Paris 1968, 444-55.

Musical instruments among the Kurds and often manufactured by artisans. The most usual are, among wind instruments, the pipe, biller, which every shepherd carries in his bag, the sorus, a kind of clarinet or oboe which has a place in all the dances, and the dusals, a flute with two pipes of reed or bird bone, pierced with holes and whose mouthpiece has a kind of vibratory tongue. The sound resembles that of the Scottish bagpipes. The percussion instruments include the dehal or bass drum which is beaten on both sides, the tepil, a narrow drum, a kind of kettledrum in pottery covered with a skin which is beaten with the fingers; and the cymbals, sells, sometimes used by the Yazldis in their religious orremonies. Among the stringed instruments, there the ribab or monochord viol, the keman or kemanca, violin, and especially the tenbar, the lute, whose player plucks the strings in the sacred and heroic songs. The nomenclature of all these instruments varies with the regions. A description of some chansy impressions of musical instruments | found in Serincik le dermare-i faiklor-i kurdine, Notes for m introduction to Kurdish folkkere, Hewlel/Erbil n.d., 36-7.

5. Games, sports and hunting.

On the occasion of seasonal m other festivals. travellers have remarked among the Kurds the practice of certain popular games or sports, always in use. It is not possible to recount them all. Among the indoor games, cards, iskenbil, can be cited among the most frequent, especially among the townspeople; backgammon, nard; and above all chess, setrene, the noble game par excellence. Among the outdoor games are the certa or horseback fantasia; the ball game fowgen; a kind of hockey; and many games of pursuit or threwing, not to mention some modern sports like football and basketball and some games reserved for children. Worth noting - the lights of rama, buffaloes apartridges. Much information is to be found in Tawnsparez, Les jeux hurdes, in Hamer, 42 [25 April 1942], 654-6; Kurdl we Mêrlwanl, Kildb-i Yari, Baghdad 2932, 32; M. Mokri, Bartha-ye Kordi: Khurmayla, in Yaghma, and year, Tehran 1331/ 1951; Barika-ye Kordesian, in Tamaddon, and ser. 7. 317-20, Tehran 1332/1952. In his Kurdish dialect studies, i. Oxford 1961, 147, 218, D. N. MacKensie gives the name of several Kurdish games; Bois, La vie rociale, 32-3/628-9 and notes 136-41.

The abundance of game in Kurdistan, furred and feathered, already mentioned above, is at the origin of the Kurd's passion for hunting. The best way of learning about this national sport is to read the two articles of Osman Sabri, who explains in them the methods employed with the art of mexperienced hunter. Nectr ("Hunting") in Rosald, 17 (1 August 1943, 317-23, 18 (1 Sept. 1943), 347-50. The bear is hunted in three ways (317), also the hyena (317), the ibex (318), the lox (319) and the hare (319). There are five ways of hunting the partridge, with the spear, the decoy, the rifle or the running noose, depending on whether one wishes to capture it alive or to kill it (300). Game can also be hunted with the help of birds, sparrow-hawks or falcons of three different kinds and at a more or less expensive cost (321-2). The way in which these birds are trained II also indicated (347-8). O. Sabri very much appreciates hunting the hare with the help of a hound, of which there was several kinds (348-9). The author does not lorget fishing (319), which may be done with the net, hook or harpoon. Hamilton devotes whole chapter to the hunting of the fbex, m picturesque and so difficult (op. cit., 165-73). There also to be found patterns of different bird-calls - whistles, traps, nots, running nooses or used for certain forms of hunting, in Serinetk, op. eil., 99-102.

{TH. BOIS}

v. - Language

The many forms of speech known to outsiders as Kurdish do not constitute a single, unified language. Instead it can be said that the various Kurdish dialects, which are clearly interrelated and at the same time distinguishable from neighbouring but more distantly related Western Iranian languages, fall into three main groups. The differences between dialects generally proportional to their distance apart and beyond a certain distance certainly make them mutually unintelligible. The Northern group of dialects comprises all those spoken in the Turkish republic, the Armenian and Azerbaidjan S.S.Rs, the Mawsil lined of 'Irak (Bahdinan [q.v.]), and some areas bordering on these, together with those of Kurdish colonies in Khurasan and the Turkmen S.S.R. All these dialects are known as Kurmandii (Kismandii), as the speakers all call themselves Kurmandi. Within the group a sub-division into Eastern and Western Kurmandiji can be made, from each of which a literary language has emerged. The Central group is made up of the dialects spoken in the Arbil, Sulaymaniyya and Kirkuk Rud's of 'Irak and the neighbouring districts of Persian Kurdistan, Mahabad (Sāwdi Butāk) and Sanadadi (Sinna), These dialects are generally called Kurdi, but me also now known collectively - Sorani, from the name of the former principality of Soran. The dialects of Sulaymaniyya and Sanandadi, especially, have gained pre-eminence as literary languages. The remaining Kurdish dialects, a beterogeneous group spoken in the areas south and east of Sorani, of which Kirmanahahi is probably the most important, may be classed together as a

Southern group. Some of these dialects, e.g. Lakki, appear to marge with the neighbouring non-Kurdish dialects of Luri. Between the Central and Southern groups of Kurdish an istand of non-Kurdish speech, with mixed dialects in its shore, formed by the cocupied by the Güran (q.v.). Other Kurdish dialects are spoken by isolated colonies of Kurdish scattered throughout Iran.

Northern Kurdish is more archaic than the other dialects in both its phonetic and morphological structure, and it may be inferred that the greater development of the Central and Southern dialects has been caused by their closer contact with other (Iranian) languages, or, indeed, their absorption of such a substrate. On the other hand, Northern Kurdish appears to have been somewhat more open to the penetration of Arabic and especially Turkish loanwords. Traditionally Kurdish has been written in various modifications of the Arabic script and still is so written in 'Irak and Iran. The Armenian script has also been used on occasion, and in recent years alphabets based on both the Latin and Cyrillic scripts have been devised, especially for Northern Kurdish.

The common "Iranian" phonemic inventory of Northern Kurdish is: aiu, adlou, pick, bdf (di)g, $f_3\hat{s}(\underline{sh})x(\underline{kh})$, $vz\hat{s}(\underline{sh})y$ (\underline{sh}) , m is (flapped) if (rolled), hwy, to which most dialects add the "Arabic" phonemes q(8), A., and emphatic 4, 4, 4. In the north-east, probably under Caucasian (Armenian) influence, a further distinction between aspirated phonemes p^c , t^c , (t^c) , h^c and unaspirated p, t, (t), k is found. In a large part of the Kurmandil area é, è 🚃 replaced by é, 🕯 respectively. In Central and Southern Kurdish the distinction between v and er is lost, in favour of w. A new distinction is made, however, between palatal I and velarised I (though this coincides with r in Arbil), and y has acquired phonemic status in Sulaymäniyya and other more southerly dialects. In general, Kurdish is marked by a greater degree of phonetic development than Persian, notably of postvocalic stops to fricatives, e.g. av/w "water", P(ersian) ab; sav/w "night", P Jab. Many post-vocalic consonants, especially dentals, have been lost, e.g. bira "brother", P birādar; dan, datn "to give", P dadan; sipi "white", P safid; sa "dog", P sag; čiyá "mountain", P čakád. The development of the ending of the past participles of verbs is noteworthy, e.g. North, miri, Cent. mirda, South. mirdig "dead", cf. Cent. zinda, ziga, South, strig "alive", P. zinda.

There is single early historical sound change which characterises Kurdish, but a combination of two later changes and one conservative feature serves to identify a dialect as Kurdish, viz. (i) -m-, -śm-, -rm-> -r- (-m-), e.g. návju "name", P nám; čávju "eye", P čarm; tovju "seed", P turm; (ii) Iramim initial x- > k-, e.g. kar "donkey", P mar; hand "spring, source", P xani; kifin "to buy", P xaridan; (iii) Ir iy- > i- (other West. ir. > s-), s.g. cun "to go", P sudan. Kurdish shares many phonetic developments with non-Persian dialects, mg. sid, san-"know": P dan-; s:h, asik "deer": P ahu; I:s, hin "woman": P san; for "day": P raz, but others with Persian, e.g., y- > j-, fo, P Jaw "bartey"; hw- > zw-, zwe, xo, P xwad, xud "self"; -rd- > -l- (-l-), palew-, P pālāy- "to filter". Taken in conjunction with a number of characteristic lexical items, these isoglosses show proto-Kurdish to have been a close, if the closest, neighbour of Persian. There is no sound evidence to suggest a Median origin for Kurdish, though it has been suggested that the name Kurmandi may combine Kard with a form from Māda "Median".

Old morphological features preserved in North. Kurd, are a distinction of case (nominative and oblique) and gender (masculine and feminine) in nouns and pronouns and the "agential" construction of the past tenses of transitive verbs, e.g. as hatim "I came", but min amenak dit "I saw a dream (lit., of me ... seen)". Both case and gender have been lost in South. Kurd, and in the literary forms of Central Kurdish. In these dialects the pronominal suffixes, absent from North, Kurd., have largely taken over the functions of the cases, cf. min hdifm "I came" xawik-im di "I saw a dream". In some Central dialects, at least, the agential construction has developed in a remarkable way, with the verbal stem sometimes taking two personal endings, one representing = person only indirectly affected, e.g. im plus div-if "I have seen a dream about thee (-it, lit. "art")", and even the agential suffix as well, da-m-i-n-i "he (-i)" gave me (-m, lit. "am") to (-i) you (-n, lif. "are"). Note the 3rd person pronominal -i, plural -yan, in contrast to Persian -s. All dislects have an indefinite suffix, North. -ak, Cent., South -2k, but only Central and Southern share (with Gurani) the definite suffix -akā. In all dialects the idāfa (e.v., ii), appearing in various forms, plays a considerable rôle both as relative pronoun and simple connective particle, e.g. North. zaumak-a zwaš, Cent. zawěk-I róf "a pleasant dream", North. zawn-ā min dil, Cent. xawaka-y di-m "the dream which I saw". In the north-east, the idafa construction of both Northern and Central dialects has been contaminated, especially in the plural, by a particle da, -d, -t, probably of Aramaic origin, e.g. Cent. (Mukrl) pydep-I do pdid "the king's men", North, kuf-et rwa (- kuff di xwa) "his sons". (This is not, however, a "f-plural" comparable with those of Eastern Iranian, Ossetic, Sogdien, etc.). Central and Southern Kurdish, unlike Northern dialects, have developed a secondary passive conjugation of the verb, formed from the active present stem, e.g. kuštin, kuž- "to kill", Cent. kufran, kufre- South. kufyan, kufye- "be killed"

Bibliography: A comprehensive list of all studies and monographs on Kurdish to 1926 is given in Minorsky's (otherwise outdated) article on "Kurdish Language", in Elt, ii, 1153 f. This is supplemented by a select bibliography in D. N. MacKenzie, Kurdish dialect studies 1, London 1961. Fuller, but uncritical, lists of relevant publications appear in 2. S. Musaelyan, Bibliografiya po Kurdovedeniya, Moscow 1963, and S. van Rooy and K. Tamboer, ISK's Kurditk bibliography, Amsterdam 1968 ff. The following are most readily available: (t) History, D. N. MacKenzie, The origins of Kurdisk, in TPAS (1961), 68-86. (2) Grammars, dialect studies. D. N. MacKenzie, Kurdish dialect studies. i; . Kurdoev, Grammatika kurdskogo yazika (Kurmandii), Moscow-Leningrad 1957; DJ. Bedir Khan and R. Lescot, Grammairs kurde (diniecie kurmandji), Paris 1970; Č. Kh. Bakaev, Gover Kurtov Turkmenii, Moscow 1961; idem, Yazik Azerbaydianskikh Kurdov, Moscow 1965. (3) Dictionaries. A. Jaba and F. Justi, Dictionnaire kurde-français, St. Petersburg 1879; C. Kh. Bakaev, Kurdsko-Russkiy slovar, Moscow 1957; T. Wahby and C. J. Edmonds, M Kurdish-English dictionary, Oxford 1966.

(D. N. MACKENETE)

vi. — POLKLORE AND LITERATURE

A. Popular and folk literature.

As among all peoples whose scholarly instruction is little developed, the oral literature of the Kurds is superabundant and very rich; Prof. O. Vilčevsky able to speak of the "hypertrophy" of their folklore. A mass of documents has also been collected and published by foreign orientalists: A. Jaba, Recueil et notices 🔳 récits kurdes, St. Petersburg 1860: E. Prym and A. Socia, Kurdische Sammlungen, St. Petersburg 1890; O. Mann, Kurdische u. Persitche Forschungen, iv. Die Mundart der Mukri, Beriln, i., 1906, ii, 1909; H. Makas, Kurdische Texte (Mardin), Leningrad 1926; B. Nikitine, Kurdish stories from my collection, in BSOS, iv (1926), 121-38; idem, Quelques fables kurdes d'animaux, in Folklore, xl, (1929), 228-44; E. Lescot, Textes kurdes, i, Paris 1940, ii, Beirut 1942; Th. Bois, L'ame des Kurdes II in lumière de leue folklore, in Cahires E l'Est, Beirut, Nos. 5 and 8 (1946); S. Wikander, Recueil III textes kurmandji, Uppsala-Wiesbaden 1959; D. N. MacKenzie, Kurdish dialect studier, London 1961-a. Kurds theroselves, since the end of the First World War, have gone about collecting their treasures of folklore from the old folk or the decreasingly numerous professional storytellers and singers. Firstly, the Bedir Khan amirs from 1932 to 1946 in their reviews Hawar, Ronaki, and Roja ast; H. Cindi and E. Evdal, Folklora kurmança, Erivan 1936; Cindî, Folklora kormancis, Erivan 1957; and there is a comprehensive survey in 1. M. Resul, Edeb-i folklor-i kurdi. Lèkolmewe, Baghdad 1970 (cf. Th. Bols, Connaistance, 117-25).

This folkloric richness is found, firstly, in the proverbs, popular sayings, enigmas or riddles. The Kurd likes to embroider his conversation with thymed and rhythmic sentences which denote a real of observation. Proverbs also supply a racy summary of practical wisdom. Thousands of them have been published: E. Noel, The character of the Kurde as illustrated by their proverbs and popular sayings, in BSOS, iv (1921), 79-80; D. P. Margueritte and Emir K. Bedir Khan, Properties kurdes, Paris 1938; Lescot, Proverbes et énigmes kurdes, in REI, iv (1937), 307-50, reprinted and added to in Textes hurder, i, 189-237; Prampolini, Proverbi kurdi, Milan 1963; MacKenzie, Some Kurdish proverbs, in Iran, JBIPS, viii (1970), 105-13; Ismail Heql Saweys, Oise-i plainan, Baghdad 1933; Maruf Çiyawok, Hesar bėj 4 pend, Baghdād 1930; Cegerxwin, Gotina pēçina, Damuscus 1957; M. Xal, Pend-i piginan, Baghdid 1957; Daroll Kenna, Amikal kurdiyya, Aleppo 1957; O. Celli, Mesola & med'elohê cima'ta h'orda, Erivan 1969-71, 2 vols.; O. Celft and C. Celft, Kurdshie poslovići i pogovorki, Moscow 1972; J. Nebez, Sprichworter und Redensarten aus Kurdistan, Munich 1970. There are numerous proverbs and sayings cited in Cindl, Folkler, 1957, 249-81, and in the grammars of Jardins and Beidar, well as in the dictionary of Mardukh, ii, r-86.

The songs are infinite in number and variety: dance songs, dilok, songs of love, lawik, war, ser or delai; songs which accompany transhumance in the spring, sertle, or in the autumn, pahtsok; lullables, lort; epithalamia, hevall or sertisavano; also songs of mourning, sin or gewil, punctuate the daily life of the Kurds from the cradle to grave and throughout their days of hard labour. The reviews Hawas, Ronald and Roja ma have published hundreds of them, as have Gindi and Evdal, Folklor, 342-474; Cindi, Folklora këlrmancië, 189-248; was also Rondot, Trois

chansons hurdes, in Cahiers du Sud, No. 274 (1945), 817-24; Nikitine, La poésie lyrique hurde, in Ethnographie, xiv (1945-50), 39-53; Mokri, Gürânî yâ laranakê-yi hurdî, Tehran 1951; G. Chaliand, Poésie populaire des Tures et ... Kurdes, Paris 1961; Cindî, K'landd omac'tu K'ördaye lirîkie, Erivan 1972. Furthermore, see ... collections with musical notation mentioned earlier.

Stories and anecdotes (clrok) abound and are full of magination. The stories of marvels allow - lo forget the worries of life; the anecdotes are replete with humour: the satirfeal stories do not hesitate to criticise the faults of individuals, rival tribes, religious leaders, in the spirit of the fables of the Middle Ages. Above all, the Kurds are fond of animal stories which always contain a spiritual moral, M. Duiresne, in Un conte kurde de la région de So'ort, in JA (1910), 107-17; Nikitine and Soane, The tale of Sulo and Toto, in BSOS, ili (1923), 69-106; Nikitine, Kurdish slovies, in ibid. (1926), 121-38; Lescot, Textes, 1, 2-185; Cindf and Evdai, Folklor, 1936, 579-651; Cindt, Folklor, 1957. 161-88; M. Khaznadar, Aleman kurdi and other Kurdisk short stories, Baghdad 1960; A. Brunel, Gulasar, contes et légendes du Kurdistan, Paris 1016: Joyce Blau, Trois textes de folklore kurde, in Études, Brussels, vii (1965), 29-50; J. Nebez, Kurdische Marchen und Volkerzählungen, NUKSE, 1972.

Alongside these minor genres, the numerous much longer legends constitute choice morsels of Kurdish folklore. They can be classified in different categories which, however, are often combined. Some legends basically concern the supernatural, such as Mame Alan (Lescot, Textes, ii, 2-360) or Sévahacé or Hozbek; others are a purely idyllic form, such m Zeliza iii FatQl, Layla | Mejnún, Siyabend | Xace, Zambilficas, "the basket-seller", Xurşid & Xawer, Şirin û Xoşnew, Şirin û Ferhad, Faxir I Siliye, Manica & Bijan; finally, the epics with an historical plot, such as Dimdim, Julishif, the adventures of Rustern with Zoraw, Cihangir or Zendeheng and meet recently the exploits of Nadir and Topal, the Twelve Cavaliers of Meriwan, Abdul Rehman Baban or Ezdinsêr Bedir-Xan. These accounts were the glory of the denghéi or professional troubadours, whose class is on the point of disappearing. All these texts can be read in the collection of Mann, Socia, Cind! etc., and also Bois, Poètes et troubadours au pays des Soviets, in al-Machriq, Illi (2959), 266-99; various authors, Kurdshie spileshie pesni shael, texts and trs. Moscow 1962; V. Minorsky, The Gürda, in BSOS, x1 (1943), 75-103; O. Dt. Dtalilov, Kurdskiy geroileskiy épos "Zlatoruhiyhkan... Moscow 1967; O. F. Qazi, Mahr-o-Vafa, Tabrie 1966; A. Ayyubian, Çirike kurde, Tabria 1961; idem, Çirike Xec û Siyamend, Tabrîz 1956; Piromerd, Diwansde siware Meriwan, Sulaymani 1935; Gew Mukriani, Zembilfiros, Hewler 1967; Mokri, La legende de Blean-a Manifa, Paris 1966; idem, Le chasseur de Dien et le mythe du Roi-Aigle, Wiesbaden 1957; K. A. Bedir-Khan and A. de Falgairolle, Le Roi du Kurdistan. Roman épique kurde, Gap, n.d.; K. A. Bedir-Khan and Herbert Oertel, Der Adler von Kurdistan, Potsdam 1937; Cegerawin, Serpekatiya Resind Dart, Damascus 1956; J. Blau, Le kurde de 'Amâdiya et du Diabal Sindiar, thèse de doctorat du 3º cycle, Paris 1973.

B. Written and learned literature.

Alongside the mass of illiterate people, there has always been among the Kurds a highly cultivated intellectual filite. The fact was already mentioned by the Kurd Ibn al-Athir (d. 630/1233) in his Kamil (ix, 7-8) and taken up many times in the Sharaf-nama and

also by other witnesses, such as Hadidii Khalifa (2658) (cf. Adnan Adavar, La science ches les Tures ottomans, Paris 1939, 92, 106), or the traveller Ewliva Čelebi in his travel account (1682), who was justly ecstatic when confronted with the so well-stocked library of Abdal Khan, the lord of Bitlis, cf. A. Sakisian, Abdal Rhan, seignour hurde de Billis au XVIIª siècle et ses tresors, in JA, coxxix (1957), 253-76. Unfortunately, these men of letters preferred to write their scientific works either in Arabic, the language of the Kur'an, if the works were concerned to deal with law, theology or history. - did lbn Khallikan (d. 681/1282), author of biographical notices of famous men, or Abu 'l-Fida (672-732/2273-1331), historian and geographer; or else in Persian, as Sharif Khan BidBsi (a.v.) himself in his History of the Kurds or Sharaf-nama (1005/1506-7), as also Idris Hakim of Bitlis (d. 926/1520), who wrote the first history of the Ottoman Empire, Hasht bihisht, "The eight paradises" (see BIDLIST, IDRIS). The great poet in the Tuckish language Fuduli (d. 963(1556) [q.v.] was a Kurd, as was the modern sociologist Diya' Gök Aip (cf. J. Deny, in RMM, lxl [1925], 3). Even today, many poets in the Arabic language-al-Zahawi (1862-1936). Ahmad Shawki, the prince of poets (1868-1032), al-Rusaff (1875-1915). the sociologist Käsim Amin (1865-1908), the novelists al-'Akkād (1880-1964), Muhammad Taymūr (1802-1021) and his brother Mahmud (born in 1804)—are all of Kurdish origin. The following historians who write In Persian, such as Muhammad Mardükh Kurdistäni. Rashid Yasimi and Ihsan Nürl, or those who write in Turkish, such = M. N. Dersimli and A. Yamulki, are all Kurds. If the old writers knew and composed in the great Islamic languages, Arabic, Persian and Turkish, rather than their mother tongue Rurdish, the young authors of today use the European languages, English, French, German and even Russian, especially in Armenia, where they further add Armeindeed, the Kurds have been at all times polygiots - they have been polygraphs, the same authors exercising their talents as much in poetry in history, in the physical and human sciences and in journalism.

In 1860, A. Jaba, in his Recueil de notices et de récits hourdes, 3-11, gave a brief notice on eight poets, who used the Kurmanci dialect, and almost all originating from Hakari. Less than a century later, 'Ala' al-Din Sidjadi published in Baghdad a History of Kurdish literature (1952), a large volume of 634 pages in which, after an introduction on Kurdistan and the Kurds (3-66), he recounted the stages and forms of Kurdish literature (69-146), then gave substantial notices on twenty-four posts (147-534), followed by ■ rather dry list of 212 other authors (535-58). Even so, he confines himself to the no longer living poets of Irak and Iran, Since then, there have been two more recent works of Marraf Xiznedar, Essay on the history of contemporary Kurdish literature [in Russian, 1967, 232 pp.] and of "Izz al-Din Mustafa Rasul, Realism in Kurdish literature (in Arabic, 1968, 236 pp.], not to mention other studies which show the progress of Kurdology since laba's time and felicitously complete our information on this oriental literature still so little known in the West,

1. Origins and the classical period.

Jaba's informant gave the 15th century period in which the first poets flourished: Ell Heriri (1415-95), Şêx Ehmed Nigani, better-known under the name of Melayê Cizri (1407-81) and Mela Ehmed of Batê (1414-95), who were therefore contemporaries. Mir Mihemed of Mükis, surnamed Feqiyê Teyran, was

supposed to be even earlier than them (1307-75). All these dates are to be corrected and placed later. In fact. D. N. MacKenzie in his article Mald-2 Tizel and Faoi Tavrda, in Yad-nama-vi Irani-vi Minorsky, Tehran 1969, showed pertinently, thanks to the method of the abdiad, that Melaye Cizri lived between 1570 and 1640 and his disciple, Fegive Teyran, between 1500 and 1660. The most famous is Melaye Clari, later than Haik (d. 701/1389 or 702/1390) and Diám! (817-98/1414-92), whose Discin of more than 2,000 verses has remained very popular among the sharkly and mollahs, much than among the masses. It has always been read and commented in the Kur'an schools of Kurdistan, but its text in difficult. His ideas we those of Persian Sulism. His Dindn was published by M. Hartmann, Das kurdische Diman des Schieb Ahmed, Berlin 1904, in photocopy: by Mohammed Selfq Anwast Heseniye, Istanbul Lucisque; Qedri Comit Pasa, Dimana Melé, in Latin characters, in Hawer, Nos. 35-57 (1941-3), incomplete text; and above all, the fine edition of Shaykh Ahmad b. al-Mella Muhammad al-Buhtl al-Zivingl, al-'A&d al-diawhart fi sharh Diwan al-Shaykh al-Diirri, 2 vols., 943 Kamish!!, 1377/1938. Under the vocalised Kurdish text, at a lower level, are given, every two verses, an Arabic word-for-word translation, a more elegant total translation and finally a nivstical commentary. Melayê Batê is especially known for his Mewind, published by von Le Coq. Kurdische Texte. Berlin 1903. Fenive Teyran, who composed an elegy on the death of his master Cizri, is the author numerous works, in particular of the History of Shaykk San'an, published and translated into Russian by M. B. Rudenko, Moscow 1965, and in Persian by Q. F. Qazi, Tabriz 1967.

The succeeding generation of poets cited by Jaba is dominated by Ehmede Xani (1650-1706), who settled at Bayazid. He is the author of the famous Kurdish national epic, Memorin. In this work, which has been frequently re-published, the post adapted the popular epic Mamé Alan, publ. by R. Lescot, Beirut 1942, and by N. Zaza, Damascus 1957, which he recomposed according to classical literary rules, and also Islamising it more. This poem of 2,655 couplets is the real breviary of Kurdish nationalism. If the text of the popular epic Mame Alan has multiple variants which have been translated into German, French, Russian, Romanian, English, Armenian and Arabic, the classical poem Memosin has also had numerous editions: Istaubul 1338/1920, Aleppo 1947, Hewler (Erbil) 1954; translated into Mukri by Hejar, flaghdad 1960; with Russian translation by M. B. Rudenko, Moscow 1962; with Turkish translation by M. E. Bozarslan, Istanbul 1968. Many authors often confuse these two epics. Apart from numerous pieces of verse written in Turkish, Arabic and Persian, Ehmedê Xaul is also the author of a thymed Arabo-Kurdish vocabulary Núbukar "First frults" edited by Yusuf Diya' al-Din, al-Hadiyya al-Hamildiyya fi 'l-lugha al-Kurdiyya, Istanbul 1310/1892, 279-97, and also in facsimile by you Le Cog, Kurdische Texte, i. 1-47. His disciple and successor in his school of Bayazid, Ismalie Bayazidi (1654-1709), also left behind many Kurdish poems and a Kurmanci-Arabic-Persian glossary, Gultur "The rose garden".

In the 18th century, mention should be made of Serlf Xan (1682-1748), of Culamerg, of the family of the awirs of Hakari, author of numerous verses in Kurmanci and Persian, and Mürad Xan of Bayazid (1736-78), author of numerous lyrical poems.

the same period, but at the court of the malts

of Ardalán or the sultans of Hewraman, appeared a whole pteiade of poets whose lyrical or religious works are in the Gûrâni distect. One may cite Ehmedê Texti (ca. 1640) and Sêx Mistefa Besarani (1641-2702), whom Minosiky believes to be more recent (d. 1760). In this case, he would be contemporary with a whole group of poets, with Xânay Qubâdi (1700-59), author of a Salardi-ndisa, and with Mahauni (ca. 1783).

It is impossible to rite all the poets who lived in the 19th century and whose works have been printed between the two World Wars. Their names and the list of their works will be found cited in the literature of Xiznedar (218-20] and Resúl (228-32). On the poets in Garánl, cf. Minorsky's article, The Garán. Some have been studied at greater length by Sidjädl in his History of Kurdish literature, e.g. (247-76), Mewlewl (1806-82). It will be noted that the dates advanced by the different authors do not always coincide, and the taste of the Kurdish poets for choosing a takhallus or pseudonym will also be remarked.

Among the poets of the 19th century whose formation was purely religious, one may mention above all Nail (1797-1855), who travelled extensively, wrote verses in Kurdish, Persian and Arabic, and whose Kurdish Dīwān was published in Baghdad in 1911 and in Erbil in 1962; Salim (1800-66), and Kurdt (1803-49) (ed. Hewier 1961), whose lyricism blossoms into patriotism; the Nakshbandi filehwi (1830-1909) expiains Suff theories (ed. Sulaymäni 1922), likewise, too, Mirza Rehim Wefa'l (1816-02) ed. Hewlêr, 1911-61, 2 vols.). The greatest poets of the end of the century are Hacl Qadir Koyl (1815-92), whose patriotic poems still arouse enthusiasm in many young people (ed. Hewler 1953, Baghdad 1960); Sex Riza Talebani (1842-1010), agnostic and satirist, very popular still today and who composed verses in Kurdish, Persian and Turkish (ed. Baghdad 1935, 1946; cf. C. J. Edmonds, A Kurdish lamboonist: Shaikh Riza Talebam, in JRCAS, xxil [Jun. 1935]); Salih Herlq (1851-1907), writing in traditional forms and on Suff themes (ed. Baghdad 1938); Edeb, Evdelah Beg Misbah al-Diwan (1862-1917, Dłudn ed. H. H. Mukriani, Rawandiz 1936, ed. Gew Mukriani, Hewler 1960, and unpublished poems ed. M. Xiznedar. Baghdad 1970), a delicate and romantic poet.

Let us also mention some women who have played a role in literature: Mah Şerel Xanim of Ardelan (1800-47), Sira Xanim of Diyarbakir (1814-65) and Mibreban of Berwari (1858-1905).

2. The modern age.

The end of the First World War gave Kurdish literature an impetus which still continues, thanks to the numerous newspapers and journals which have allowed young talents to publish their poems and express their national and social ideas (see section 3. below).

It is extremely difficult to make a choice among the poets of this revival which extends from 1920 to our own days.

In the intellectual radiance of Sulayman, the real capital in 'Irak of Kurdistan, let = cite before all Piremerd "The old man" (2863-1930), pseudonym of Harl Tewflq, = original spirit, indefatigable traveller, journalist, who devoted the last years of his life to making known to the young Kurds, who adored him, the beauties of their land, their language, their history and their literature. The tortured Bakes, Falq Abdallah (1905-48), did not cease to encourage the youth and to exhort them to work and study and to exalt in them love of their homeland and of goodness. Ziwer,

Abdallah Mihemed (1875-1948), is full of lyricism and sensibility in singing of nature and the national soil.

Gora, Abdallah Suleyman (1904-63), one of the greatest contemporary Kurdish poets, has abandoned storeotyped forms and classical metre, for he is the partisan and practitioner of free verse, as he has been of liberty of ideas and | life; a poet with advanced ideas, who is not lacking in lyricism i criticise social abuses. Qani', Mihemed Sex Abdul Kerhn (born in 1900), published from 1951 to 1955 numerous small books which each evoke an aspect of the Kurdistäu which he celebrates with love. Let us further mention among the Kurdish poets of Trak, Ehmed Muxtar Caf (1807-1935; ed. Sulaymani, 1960); Hamdi (1878-1936, ed. Baghdad, 1958) and the younger Abdul Wahid Nürl (1903-44), Dildar (1918-48, Diman, ed. Hewier 1962) and Dilzar, born in 1920, who edited in 1957 the Ovatrains of Tahir, the 5th/teth century writer, whom some Kurds claim in their own.

In Iran, at the time of the Republic of Mahābād, two young patriotic poets came to the front: M. Hēmin and especially 'Abd al-Rahman Hejar (born in 1920), who was the official poet and who published thousands of verses to exalt love of the homeland and liberty, such as Alekok (Tabrīz 1945); in 1958, he published a collection of verse narratives and the comedy of the Dog and the Moon, Belli seremer a lassyf sag & mangesew; he presented a summary of his autobiography (142-85) and several poems (185-222), in the Kurdskiy dialekt Mukri of K. R. Ayyubl and I. A. Smirnova, Leningrad 1968, and published a translation of the Quairains of Khayyâm (Beirut 1968).

In Kurmanci, one may note Kamiran A. Bedir Xan, writer of romantic free verse, and above all Cegerxwin, Séxmus Hesen (born in 1903), author of two collections; Dirané Cegerxwin (Damascus 1945) and Sexra and "The revoit of liberty" (Damascus 1954); an extremely vibrant and patriotic poet, preaching the instruction of youth and the union of all IIII Kurds, and going beyond pure nationalist élan to hope for radical social reforms; his many verses, varied in their workmanship, often preserve a classical form, but also he knows how to use more modern techniques. His rhymes IIII very rich, He is well-known and loved by the Kurds of Syria and Turkey (cf. Ordixané Celli, Poésia Cegerxwin bejornanie, ["Civic poetry of Cegerxwin"], Erivan 1966).

But the great novelty is the vitality of Kurdish letters in Soviet Armenia, including Kurmanof. Those who were the pioneers in this field were mostly from the old Yazldis, illiterate by definition, immigrants from Turkey, who were to profit from their new social situation. Without the least Islamic culture and without any contact with the educated élite of the rest of the Kurdish world, their works are often ideologically oriented, but of a much more natural workmanship. They ignore classical prosody and their versification gains from simplicity. Lyricism is far from absent. They sing of love of the family and the beauties of nature, such as Casime Celil (born in 1908) and especially Mikalle Restd (born in 1925), who is rich in sensibility. Some of their strongly committed poems have social inspirations. Woman must be liberated, says Etaré Şero (born in 1906) in numerous quatrains. Usive Beko (born in 1909) criticises feudal exploitation; Qaçaxé Murad (born in 1914), Weziré Nadiri (1911-47) and Eminė Evdal (1906-54) are pleased to recall the heroic times of the war of liberation. Let us further cite Haciyê Chadi (born in 1908) and Sement Siyabend (born in 1908), hero of the Soviet Union, who clothed in a new form the fine popular lyric epic Siyaband & Xssd, 1939. The teacher Karlend Çaçant, a younger man, has published in particular animal fables which are not lacking in freshness. The paper Riya last of Erivan and various anthologies, not to mention numerous small booklets, make known these Kurdish poets of Soviet Armenia, all nourished by their rich folklore.

In fact, it is only since 1940 that prose has made its appearance in Kurdish letters. In order to enlarge the intellectual borizon and to enrich the vocabulary by allowing its progress and modernisation, the Kurdish men of letters have translated, at least in the shape of fragments, the works of foreign authors. In Syria and Lebanon they have translated from French; in Trak, from English and Arabic; in Iran, from Persian; in Soviet Armenia, from Russian and especially from Armenian. There have also been placed at the disposal of the potential Kurdish reader out of the plays of Shakespeare, The tempest, by Jamal Nebez (Baghdad 1957); of the stories of Voltaire, Zadig, by Mohammad Ell Kurdl (Baghdad 1954); of the pages of Victor Hugo, Garrocke and Daudet, Les Hoiles, translated by Zaza, or of Anatole France. J. Nebez has also translated The clock of Gogol (Baghdad 1958). But it is especially the Soviet Kurds who are the translators of Russian authors, Pushkin, Gorki, Tolstoy or Lermontov, not lorgetting Lenin and Statin, or Armenians, Abovian, Toumanian, Isahakian, etc. The principal names of the translators to be encountered are: C. Celil, H. Cindi, E. Evdal, Q. Murad, N. Esed and T. Murad. Some even write several of their works directly in Armenian, such -C. Celii, E. Evdal, Nadoyé Xido Mehmůdov and many others.

In Trak, many articles of scientific popularisation have been translated, e.g. Dr. Haşim Dixirmaci, and Naci Ebas have specialised in the translation of accounts of early British travellers in Kurdistan.

In the purely literary domain, the novel is the genre which seemed the best adapted to the mentality and art of the Kurds. In the review Hawar, one may read the stories of Nuredin Zaza (born in 1919), and the fables in prose of Mistefa Ehmed Bott. In these stories, Qadri Can (born in 1918) is concarned with religious fatalism and the feudal ascendancy. But one should note very especially Osman Sebri (born in 1909) who, whilst is poet when in the mood, is particularly a born storyteller, with a lively, simple and direct style.

In. Irdk, where the intelligentsia is more numerous, history is a privileged field, with the fecund Husayn Huzni Mukriani (1886-1947) = the author of varied studies: The history of the Kurdish emirates, 1929-31, Famous Kurds, 1931, The Soran emirs, 1935, The Kurds and Nadir Shah, 1934, The Zend Kurds, 1934, Mukriani Kurdistan or Atropatene, 1938, etc. General Mihemed Emin Zekf (1880-1948), published a Swmmary of the history of the Kurds and Kurdistan, 1931, History of the Kurdish states and emirates in the Islamic period, 1948, a History of Sulaimani and its district, 1939, and two volumes of Kurdish celebrities and Kurdistan, 1945-7. All these works have been translated into Arabic. Reflq Hilml (d. 1961), began the publication of his Memoirs, in fascicules of a hundred pages, beginning in 1956 and entitled them A recollection, Southern Kurdistan, the revolutions of Shaykk Mahmud (a work still uncompleted). Tewfiq Wehbl, pioneer of Kurdish grammar, 1929, 1956, is also a historian who has studied the Yazidis, 1962, and the origins of the Kurds and their language, 1965.

Literary criticism began with Yunis Reaf and Dildar, Kamuran and especially Marul Xiznedar, who in review articles and prefaces of enthologies presented many ancient and modern poets. Xignedar, apart from his History of Kurdish literature, also composed Kes & gajiyet le st'iri kurdi da ["Rhyme and rhythm in Kurdish poetry", Baghdad 1962). Cemli Bendi Rojbeyani, Arabic translator of the Sharaf-name in 1957, is especially interested in the posts and writers of the Zengene, Kelhur and neighbouring tribes. 'Ala' al-Din Sidiadi published not only his History of Kurdish literature (in 1952), Researchs on Kurdish literature (1968) and also the Value of knowledge (1970), but also five volumes of Necklacs of pearls (1937-72), a collection of literary narratives, stories and anecdotes, in which philosophy, beliefs and history are mixed, and his Journey in Kurdistan (1958). Let us finally cite (122 al-Din Rasul (born in 1933), for his works on literature and folklore (1968).

In 'Irak also, numerous authors, writers, journalists and militants, have published, in verse and prose, collections and articles in which they have pleaded the most urgent social causes of the disinherited, such as Sekir Fetah in The companion of the children (1948), The Kurdish woman (1958), The new life (1960); Ibrahim Ehmed (born in 1912), in Misery (1959) and many articles in newspapers; Miherem Mihemed Emlin (born in 1921), in Unite Omar (1954), The tranquil lake (1957) and The path of liberty (1954).

In Soviet Armenia, one also finds young literary critics who give in Riya lass their often severe appreciations of poetic works which appear. Among them are Mikaliè Resid, and especially Emériké Serdar, and Ordinane Cell) in an excellent critic. His books on Cegerawin, Dinidlm, on proverbs and his articles on folklore me the proof of that, and he has sho published Poems (1934) and Telf Hamse, a kind of epic (1963). But the prose writers there we less numerous than the poets. They do not enter into the domain of the dream, we even into history properly speaking, but most of their writings set forth the wretched life that they led in the past in the time of the Turks and the revival of their present social situation. At their head is their veteran Ereb Semo (born in 1898), who is also the most fecund. His latest compilation, Berevok (Erivan 1969), takes up the text of Berbang "Dawn" (1958), a rehash, revised and corrected, of Sixand hard "The Kurdish shepherd" (1935), retranslated and republished in Beirut (1946), in which he narrated with much freshness and simplicity the life of his childhood as a small herdsman, the picturesque events of the life of the tribes and the implantation of communism among them; there are also his Jina bestewar "The happy life" (1959) and the unpublished Hopo, which is its complement, in which is described the existence of the Kurds under the Soviet régime. Somo has also published Dimdim (1966), which is the romanticised history of this famous epic. He is furthermore the author of numerous articles in many Russian language newspapers on all the social and historical subjects which interest the Kurds, Ell Evdal-Rehman published in this same vein of social preoccupations, Xatl Xanim "Lady Xate" (1959) and Gunde Merzasan "The village of heroes" (1968), and Rehim Gazi, Hisyarbun "Awakening" (1960), which speaks of the resistance of the Kurds of Iran against their Turkish or Iranian oppressors.

Thus sees the true novel, as it is understood in the West, does not yet really exist in Kurdish literature. It is rather the new genres which Kurdish writers prefer, even in 'Irâk. The remark may be made with reference to the theatre. In Armenia,

from the beginnings, there were attempts with W. Nadiri, Reva find, "The abduction" (1935) and A. Mirazi, Zemané payé "Time past" (1945), and recently Ismaile Duko, Zewses be dil "Marriage without love" (1964). In all these cases, the theme is the struggle against the customs of the past age. Similarly in Irak with Burkan, Kie & quiebxane "The girl and the school" (1956), and Jirl, Afret & niwists "The woman and the talisman" (1956), plays performed in the schools. There are also critical themes in the comic scenes of Emin Mirza Kerim. In 1953-4, Goran published in his newspaper Jin several verse plays, including The poor man's dream, The voice of death, etc., which aim at waging a vendetta against the faults of the present society. But the Four martyrs (1959) is a patriotic play of Xalid Delair. Comal Abdul Oadir Baban published Nords (1960), a play in five acts in verse, and Zaki Ehmed Heneri, The late of the oppressor Dahak (1960). Let us mention especially, because it was published in Istanbul (1965), Birlan res "The black wound" of Musa Anter (born in 1920), in which the author calls attention to the misery and ignorance of the Kurdish peasant in Turkey. On Kurdish theatre, cf. Azad Kardo, The Kurdish stage, in The Kurdish Journal, 11/3-4 (1965), 13-5.

Bibliography: 'Ala' al-Din Sigladi, Mijo-i edeb-i Kurdi, Baghdad 1371/1952; Maruf Xiznedar, Očerk istorii sobremennov kurdskov literaturi, Moscow 1967; 'Lzz al-Din Rasill, al-Wāhi'iyya fi 'l-adab al-Kurdi, Sidon-Beirut 1967; Celadet Bedir Xan, Klasikin me an şahir u edibên mê en kevin ("Our classics and our ancient poets and men of letters"), in Hawar, 33 (October 1941), \$22-30; Th. Celli, Efrandined nvisk'arid k'ordes Ermenistaneye sovetil ["Works of Kurdish writers of Soviet Armenia"), Erivan 1961.

C. The Kurdish press.

The influence of the press is basic in the national and cultural life of a people. With regard to this, the development and transformations of the Kurdish press and characteristic of the political evolution of the Kurds. Of the rry recorded newspapers and reviews, whose periodicity is all relative, some have only had ephemeral life. The publishing centres have been moved from Istanbul to the different towns of Irak, Baghdad, Sulaymani, Hewiler and Kirkûk; Iran, Tehran, Mahābād and Tabriz; oven to Damascus and Beirut. Often these newspapers are bilingual. Most of the journals consist of a procious

and inexhaustible mine of information is language, folklore and the customs of the Kurdish land, and also on its history and geography. Furthermore to be found in them are numerous texts of poets, ancient modern, as well as fine ideas of literary criticism. Young talents are also exercised there.

The first Kurdish newspaper, Kurdistan, was founded in Cairo in 1898 by Midhet Paşa Bedir Xan and his brother 'Abd al-Rahmān and moved from Cairo to Geneva and Folkestone (31 nos.); republished in Baghdad, 197?, by Kamal Fu?ad, in Istanbul, there was the monthly Roja kurd "Kurdish day", which became "The Kurdish sun", in 1912 (3 nos.). In 1916, Sureya Bedir Xan published in Turkish the weekly Jin "Life" which proclaimed "Kurdistan for the Kurds", He also published there in 1917-18 the weekly Kurdistan (17 nos.).

Between the two wars (1920-45), the Kurdish press really began to flourish and develope. There appeared in Sulaymani in 1920-2, Piskeretin "Progress" (118 nos.); in 1922-3, Roj-i Kurdistan "The Sun of Kurdistan" (15 nos.), re-published in Baghdad in 1973 by Djamal Khaznadar; the weeklies Bange Kurdistan "The call of Kurdistan" 1922 (14 nos.) in 1923, Bange hage "The call of truth", the official newspaper of \$8x Mehmud (3 nos.) and Umidi istiglal "Hope of independence", edited by Reffq Hilmf (25 nos.). In 1925-6, Diyarf Kurdisten "The gift of Kurdistan" of Salih Zeki Sahibqran, in Kurdish, Arabic and Turkish, had 16 nos. In 1924-6, the weakly Jiyansws "The resurrection" an official newspaper (56 nos.) which took the name Jiyan "Life" 1926-38 (556 nos.), and that of fin. 1939-63, under the direction of Piremerd until his death (1950), exceeded a thousand nos. In 1938 there appeared the scientific review Zanisti "Science" of Will Quitan, who published in it historical and literary articles, but which only had a few issues, while the weekly Ziban "Language" 1937-9, published by the municipality, had 70 nos. In Rawandiz, Huseyn Huzni Mukriani published 1926-32 Zari kurmanel "The Kurdish language" which had 30 nos. Baghdad was to become important Kurdish cultural centre through the publication of the very numerous monthlies, Gelaudj "Sirius", 1939-49, directed by Ibrahim Ehmed and Dengl Geti-e Tasa "The voice in the New World" edited by the British Embassy and edited by Tewfiq Wehbt. Outside 'Irak, It is important to mention the major reviews, in Latin characters, Hawar "The alarm cry", 1932-5 and 1941-3, 57 nos., and its illustrated supplement, Ronald "The lamp" 1941-5, 28 nos., both published in Damascus by Emir Caladet Bedir Xan, and the weekly Rojs as "The new day" 1943-6, 73 and its supplement Silv "The star" which only had 3 issues, published by Emir Kamiran Bedir Xan in Beirut. These journals provide menormous mass of folkloric documents. Let us mention, in Erivan, the bi-weekly newspaper Rive tase "The new view", the organ of the Kurdish section of the Communist Party of Armenia, which appeared, in Latin characters from 1930 to 1938 (612 nos.), then in Cyrillic characters from 1955. It has now exceeded its 2,500th number. It is along with Jin of Sulaymani the best example of longevity of the Kurdish press.

The equivocal political situation in Iran between the years 1941 and 1946, especially after the proclamation of the independent Kurdish Republic (1945-6), brought about the blossoming of whole Kurdish press in Mahabad: Kurdistan, 1945-6, the official newspaper (113 nos.) and a literary review of the same name (16 nos.) Haware nightman, Awar, Gir &

gali mindalani kurd, Helais "The red poppy" only survived a spring. For his part, in Lithidian, Sex Latif, son of Sex Mehmud, published the journal Nistiman "Homeland" which had 3 issues.

After the War and until the proclamation of the Republic in Trak (14 July 1958), the journals normally appeared in both Kurdish and Arabic. In 1948-9, in Baghdad, Eladin Sécadi published Nisar "The rock" (22 nos.), and in 1957-63, Hafiz Mistefa Qazi published there Hims "Hope" (36 nos.). In Erbil, from 1954 to 1960, Gew Mukriani published the bi-monthly Hetaw "The sun", which had 188 nos. Under the Republic, in Kirkuk, 1959-62, Ray gel "Popular opinion" (34 nos.); 1959-61, Azadi "Liberty", organ of the 'Iraki C.P. (56 nos.). In Sulaymani, the Teachers' Union published the monthly Billish "The flame", 1959-50, with to was In 1960, appeared Roj-i nawe "The new sun" with 18 nos. and the communist political and literary daily, Birnes "Belief", from July 1960 to January 1963 brought out 95 nos., while Baghdad, the bilingual daily Xebat "Effort", organ of the D.P.K. brought out 462 nos. in 1939-61. The Ministry of Agriculture published from 1959 to 1956, in Arabic and Kurdish, Careser kirdins hist fi hal (22 nos.), and the Ministry of Orientation. Iraqi name (24 nos.). In the course of the year 1960, the lawyer Omer Colal Huwaizi published 69 non of the democratic political daily Dengé kurd. One cannot pass over in silence Kurdisten, a weekly, published in Tehran under the auspices of the Iranian Government from May 1959 to May 1963 with 205 aos., political, scientific, literary and social; this very interesting weekly was only circulated abroad.

The internecime Kurdl-Traid war from 9 September 1961 to 13 March 1970, diminished the activity of the Kurdish press. Nevertheless, in Erbit the municipality published (1962-3) its newspaper Healer, with 76 nos. In Baghdad there appeared in 1964 the first Kurdish issue of the ceasonal journal Tutin, published by the tobacco administration, and, in 1967, Biyarett "Fraternity", a political newspaper of Şalih Yüsuft. It I this period which saw the appearance in Turkey, in Turkish and in Kurdish, several ephemeral reviews: Dieled First (1962-3) in Istanbul with I nos.; Deng, in 1963 and in 1965 Dengé taxe "The new voice" which only had 4 nos. before it was immediately stopped and the directors prosecuted.

The end of hostilities in Kurdistan saw the birth, from 1970 = 1973, of 29 periodicals, of which 2 were in Kirkûk, 6 in Hewlêr, only 4 in Sulaymani, but 16 in Baghdad, which seems to indicate that the Trak! capital has now become the intellectual and cultural centre of the Kurds in 'Irak. In Sulayman', there is Birayest (1971-2, 18 nos.); Deng-i mamosta (7 nos.); fin, since 1971, presented as the continuation of the newspaper founded by Piremerd; and since 1972, the monthly Estere "The star", intended for children. In Baghdad, there is Birayett, supplement of the daily Ta'akhi (1970-1, 18 nos.). Since 1970, the Philatelist Club has published Geti-i pill "The world of stamps", in Arabic, Kurdish and English. The General confederation of trade unions has as its official organ Hispar-i kirékaran "The awakening of the workers" which, since its no. 189 of December 1972, has a Kurdish section. One should mention as manual publication The Journal of the Kurdish Academy, 1/3 (1973), a great volume of 800 pages whose editor-inchief is Ibsan Shirzad, Minister of Municipalities, and of which one section is in Arabic. In Iran, one should note the name Rega-i yahiti "The path of unity", monthly publication of the Iranian Government, whose no. I came out in April 1971 and which continues to appear regularly (in 1978).

The different Kurdish groups abroad publish ephemeral bulletias, at times simply typed. In 1949, there appeared in French Dengé Kurdistan "la Voix du Kurdistan", organ of the D.P.K. in Europe. Since 1958, the Association of Kurdish Students in Europe has published in English each year Kurdiston, in Kurdish and in Latin characters, some annual issues of Hiviya wallt "Hope of the homeland" in 1963-5, and similarly Ciya "The mountain" in 1965-7. The Commission for the Advancement of Kurdistan (CAK) of the United Kingdom published in English a single issue of Kurdica. In English also there exists one of the best publications of this genre, The Kurdish Journal, from December 1963 to September 1969, published by the Association of the Kurdish Students in U.S.A. Finally, in Kurdish and Turkish, Ronahl, "The lamp", organ of the Kurds of Turkey in Europe, since August 1971; this is now (1978) at its 8th issue.

Vanly, Le Kurdistan irakien..., 394-5; and especially, Jamal Khaznadar, Kurdish journalism guide, in Kurdish, Arabic and English, Ministry of Culture, Baghdad 1973, published on the occasion In an exhibition of the Kurdish press for the 75th anniversary of the first Kurdish pewapaper. (Th. Bois)

AL-KURDI, MUHAMMAD AMIN (d. 1332/1914), one of the leading figures in the recent history of the Nakshbandi order, and author of several influential works.

Born in Irbil, he made early acquaintance with Süfism, for his father, Fath Allah-zāda, was a Kūdirl shayah. His own initiation was at the hands of Nahahbandi shayah of the city, Shayah 'Umar, who was separated by only one link in the initiational chain from the great renewer of the Nakshbandiya in the western Islamic lands, Mawiana Khalid Baghdadl (d. 1242/1826). After several years spent in the company of Shaykh 'Umar, Muhammad Amin received a licence himself in initiate disciples into the Nakshbandi path, and he left his homeland, never to return. He retained, however, a certain mode of reverential awareness of Shaykh 'Umar's spiritual presence through the distinctive Nakshbandi technique known as rābiţa. He spent many years in Mecca and Medina, enjoying numerous mystical and visionary experiences; he compared his state while in Mecca to that of Ibn 'Arabi when he began the composition of al-Futihāt al-Makkiyya. Inspired by a desire to visit the tembs of the Aklal-Bays in Carro, he left the Hidias for Egypt, which was to be his residence for the rest of his life, with the exception of a return visit to the Holy Cities in 1323/1905. He lived first in the rowds of the Kurdish students at the Azhar, later moving to the village of Ambaba outside of Cairo, and finally to Bulak, Initially he concealed his Nakshbandi affiliations and Soft interests, concentrating on the study of hadith, taftir and fifth at the Azhar. Later he began to proclaim the path, and to accept each year a small number of disciples. Upon an indication from Shaykh 'Umar contained in a dream, he then decided to accept all who came to him, and indeed vigorously to propagate the Nakebbandi order throughout Egypt, travelling widely to numerand viliages. He encountered opposition from the followers of other orders and from adherents of the Salaff movement, but soon came to gather a large following. In his instruction, he placed emphasis on two particular elements of Nakabhandi practice; silent dhibr and the recitation of littary known as the hadman the diagram. He died in Büläk in 1332/1914 and was buried in the Karafa cometery of Cairo.

He left behind him numerous thalifas, the most prominent of whom me Shaykh Muhammad Yusüf al-Sakkā; many contemporary Nakshbandis of Egypt are descended from him. The best known of his numerous writings is Tanuir al-fulith fi mu'amalas fallām al-fulith, a compendium of religious knowledge of which the third part is devoted to Sūlism. The eighth edition of this book was printed in Cairo in 1368/1949. He also wrote a biographical dictiorary of Nakshbandi saints (al-Mawāhib al-sarmadiyya fi manāhib al-Nakshbandiyya, published in Cairo in 1320/1911, as well as manuals of Shāfi'i and Mālikī fiệh.

Bibliography: A comprehensive account of Muhammad Amin's life is given in a 55-page preface by Shaykh Salama 'Azzami
Tannir alikulah (8th ed., Cairo 1368/1949). Some mention is made of him by A. J. Arberry in his Sufism, London 1950, 129-32, where Muhammad Amin's description of Nakshbandi practices of ghibr is summarised. The same passage from Tannir alkulah is also to be found in French translation as an appendix to Joan Gouillard's version of La printe philocalie. (Hamto Algan)

AL-KURDAL, GURDA, GURDAISTAN, the in Islamic sources for the province of Georgia in western Caucasia. Georgia comprises four distinct regions: Mingrelia and Imereti in the north-west; Samtaskhe in the south-west (adjoining the Black Sea. coastal region of Laxistan (see taz), inhabited by a people closely related to the Georgians); Kartli in the north, with the capital Tiffis [q.o.], Georgian Tbilisi; and Kakhetl in the east. Topographically, much of Georgia comprises mountains, hills and plateaux, with lowland only on the Black Sea coastal plain and in the valleys of the River Rioni and its tributaries, draining westwards into the Black Sea, and of the River Kura (Georgian Mtkvari, Islamic Kur [q.v.]) and its tributaries, draining eastwards into the Caspian.

The Georgian people (who refer to themselves as Kartvel-ebi and their homeland as Sa-kartvel-o. after a mythical, semi-divine ancestor Kartios) are linked with the Svans of northern Mingrelia and the Mingrelo-Laz in the so-called "Ponto-Zagros" group of Caucasian peoples, although over the millennia their blood must have been much mingled with that of other peoples who have invaded or have passed through their country. Linguistically, the Georgian language forms with Svanetian and Mingrelo-Laz the southern or Ibero-Caucasian group of Caucasian languages; for details, 📖 AL-KABK, languages. It is written in an alphabet of considerable phonetic exactness, which is traditionally considered to be the creation of St. Mesrop, inventor of the Armenian alphabet, but which apparently had two forms originally; these must at all events have been derived in the first place from Aramaic-Pahlavi scripts (see D. Diringer, The alphabet, a key to 🖿 kintory of mankind, New York 1968, 252-4).

Early history. From earliest times, Georgia has been a meetingpoint for the cultures of East and West and a place where the products of European AL-KURDJ

and Asian commerce were exchanged. In Homerica times, the western Georgian coastal region, Imeretiand Mingrelia, formed the famed Colchis, land of the Golden Fleece sought by Jason and the Argenauts, whilst the lands to the cast, Kartli, Kakheti and Samtskipe, formed the Caucasian Iberia, with its capital at Mtskheta-Armazi, an the River Kur just upstream from modern Tiflis. The campaigns of Pompey in the 1st century BC brought Georgia into the sphere of Roman political and cultural influence. and to classical geographers like Strabo we owe a description of Iberia, and the fourfold class-division of its society, a division not dissimilar from that of ancient Iran. The Iberians did indeed have close cultural links with the Parthians, and me find therian kings and nobles with Iranian names like Parnavaz and Asparukh, together with a certain spread of the Zoroastrian religion within Iberia, a process only arrested by the adoption of Christianity within Georgia ca. 330 AD, during the roign of the Emperor Constantine the Great and through the missionary efforts of a Cappadocian slave woman, St. Nino. The consequences for the future history of Georgia and its people of this conversion to Christianity were incalculable. Georgia, and Armenia [see ARMINIVA] to the south of it, heaceforth became bastions of the new faith against the pagan regions of the eastern Caucasus and against the Sasanids of Persia, the enemies of Byzantium. At first dependent on the Patriarchate of Ansioch, the Georgian Church, like that of the Armenians, espoused Monophysitism and rejected the formulae of the Council of Chalcedon, and at the Council of Dvin of the Armenian and Georgian Churches in 506, the Georgians secreted from Orthodoxy and set up their own national church of St. George, with its Catholicos-Patriarch resident at Tiffis.

The period of Byzantine-Persian rivalry. The old capital of Georgia Mtskheta (Ptolemy, Geography, 5.10 Meorλήτα — Μεσχήτα) was sometimes called by the Arab geographers by a popular etymology Masdjid Dhi 'l-Karnayn (Mas'ūdi, bhis'ūdi, il, 56; cf. Marquart, Steelfzüge, 186). According to the Georgiaa Chronicle, Persian evistav ("ethnarch") against Varaz-bakar (379-93?), king of Georgia (of the Khosroid dynasty, descended from the Sāsānlds), built Tillis "between the Gates of the Caucasus" (i.e. between Darlal and Darband) "to serve as a bulwark against Mtskheta" (Brosset, Histoire de la Géorgie, i. 140).

During the wars of king Wakhtang Gurgasal (446-99?) with the Persians, the fortress (kaia) and the viltage (sop*sit) of Tiflis were destroyed. Wakhtang laid the foundations of a town at Tiflis and his son Dači (499-514) completed its walls inp. cit., 180, 196-201).

After 523, the Persians, having suppressed the ruling dynasty of eastern Georgia, maintained a Persian markhan in Tiflis, beside whom representatives of the Georgian nobility had a nominal share in the administration of the country (Brosset, i, 226; Marquart, op. cit., 397, 431-2; Djavakhov, Khrist. Vostok, i [2912], 110). The governor of Miskheta was under the markhas. Theophanes of Byzantium (6th century) is the first Byzantine author to mention in Tiptkic (Tipkic) phytpómokic under the year 571 (Theophanes apud Photium, in Migne, Patrologia graeca, clii, 139; cf. Muralt, Essai de chronologia byzantine, St. Petersburg 1855, i, 156).

The wars with the Turks and the Byzantines having distracted the attention of the Persians from Iberia, the Georgians asked the Byzantine emperor to give them a king and the Bagratid Guaram (575-600) was set up at Miskheta. To this king tradition attributes the "restitution of the foundations of the church of Sion in Tiflis" (i. 222).

487

After the victory gained over the Byzantines by Khustaw Parwiz (after 606), the son of Guaram, Stephanos I (who was content with the title of cristicus — "ethnarch"), joined the Persians. Later, when in 624 Heraclius and his Turkish allies laid siego to Tiflis, Stephanos defended the town bravely. Heraclius appointed as milians ("chief") Adarnases of the old Khosroid family and associated with him the cristicus Djibghu (Theophanes: Zufhy); according to Marquart: Tong Yabghu Khakan). The citadel (kala) was taken and Stephanos stain.

The Arab conquest. The Arabs confounded Armenia and Georgia (cf. Baladhuri, Futili, 104; and Yākūt, ii, 58, where Djurzān is a nahiya of country of Arminiya). According to the Georgian chronicle (Keart lis takhorreha), the Agarians invaded Somkhetia ("Armenia", a rather ambiguous term, for "Somkhetia of Karti" began to the south of the river Khram, about miles south of Tiflis) in the reign of Stenhanos II (630-63?), son of Adamases, who lived in Tiflis. On the death of this king, his sons Mir and Arčil withdrew to Egris in Mingrelia. In the period of their joint reign (663-8) Georgia was visited by the ferocious Murwan Kru ("Marwan the Deaf") sent by the Amir al-Mu'minia Eshim (- Hisham whose dates a actually 105-25/724-43!). Such mistakes and anachronisms may be explained by the fact that at this period, the national life of Georgia had taken refuge far to the west in lands not easily accessible from Corokh (Klardjetla). The thread of events may, however, be pieced together from Arab and Armenian statements (see ARMINIYA).

In reality, Arab expeditions penetrated into Transcaucasia in the reigns of the early callphs. According to Tabars, 1, 2666, in 22/643 Suraka, having made peace with Shahr-Baraz (king of Bab al-Abwab [q.v.]), sent Habib b. Maslama against Tiflis. To the same year Tabari, i, 2674, puts the peace with the people of this town, but it was actually made in 25/ 645 in the reign of 'Uthman (Ya'kohi, Historiae, 194; Baiadhuri, 198). When Habib b. Maslama had = quered Armenia, he turned his attention to Georgia. A Georgian ambassador (Nk)y = Nicolas? Tfly = Theophilus?) appeared before him to testify that the batrik of Diurzan and his people were well-disposed. Habib's answer (cf. the versions in Baladhurl, 201 and Tabarl, i, 2764; Yakût, i, 857, rather follows Balaghuri) was addressed simply to "the inhabitants of Tiffis, in [the rustak of] Mandjalis (now Manglis) to al-Diurzān (= Georgia) in illi land of Hurmuz'

Habib guaranteed the people the exercise of their religion, but he sent to Titis the learned 'Abd al-Ralman b. Djaz' to expound the law of Islam, and indeed the people of the town soon converted to Islam.

After reducing Tiflis, Habib extended his conquests or his treaties of peace over other regions inhabited by the Georgians and their neighbours (Baladhurt, 202-3; rf. the attempts manalyse them in Ghazarian, Armenien unter der arabischen Horschaft, in Zeitschr. f. armen. Philologie, ii [Marburg 1903], 149-225]. Among these, the Sanāriya play m prominent part Ptolemy, 5.8.13: Exwapatot; in Armenian: Tsanarkh], a very warlike Christian people who lived in Kakheti and the high Alazan and who, according to the hypothesis of N.Y. Marx, were identical with the modern Taush, whose language is related to that of the Cedens (cf. Isv. Akad. Nauk., x/12 [1926], 1379-1408).

From the time of Habib's expedition to the reign of al-Mutawakkii (232-47/847-62) the Diurzan (eastern Georgians) and the Abkhaz (4.v., here in the wide sense of "western Georgians of the valley of the Rion", i.e. of Imeretij paid tribute to the Arab military commander in Tillis (Muradi, ii, 65; Yakūt, ii, 583). From the time of Yazīd II (201-5/720-4) we have a letter in which Diarrab b. 'Abd Allāh confirmed to the Diurzan the guarantees given by Habib b. Maslama (Balādhuri, 202; there is a reference there also to the rusaif of Mandjalis, but several placenames we still unidentified).

As to the "Nurwas Kru" of Armenian and Georgian tradition, two personnages seem to have been confused in this figure (Marquart): Muhammad b. Marwan, of whom the Georgians seem to have beard the Armenians speak, and his son Marwan b. Muhammad who in the reign of Hishām mm fighting mainly in Dāghistān, but whose expedition against the "Gate" of the Alān [q.u.] must have passed through the region of Tiflis. His headquarters were at Kisāl(?), 20 farsakhs from Tiflis and 40 farsakhs from Bardha'a (probably Kesala below Tawas, which satisfies the description; see below). A dirham is known of 'Abd al-Mailk struck at Tiflis in \$5/704.

The 'Abbāsids, in 141/758 the Khazars (q.v.) under Ra's Tarkhān invaded Armenia (Ya'kūb), il, 446). Tabari (iii, 328), speaking of the sum event under 147/764, says that during the invasion of Astör Khān al-Kh-vārazmī (sie), many Muslims and thirmnis were made prisoners and the Turks entered Titlis. Ya'kūbi immediately after 141/758 mentions a rising of the Şanāriya. The latter were defeated by 'Amir b, Iamā'll, who then returned to Titlis and

executed his prisoners there.

Another Kharar invasion took place in 183/799. Their king came as far as the bridge over the Kur and ravaged the country, but the taking of Tiflis is not mentioned by the Arab writers (Ya'kübl, ii, 518; Tabarl, iii, 648) while the Georgian chronicle says that in the joint reign of the brothers Ioane and Djuansher (718-867) the Khākān's general Blučan (in Armenian Bult'an) took Tiflis and conquered Kartti.

Of the governors whom Hārin al-Rashid (170-93/786-809) sent to Armenia, the harshest was Khuzayma b. Khāzim (Balādhuri, 210). The Georgians called him Cictum-Asim. Ya'hūbi, ii, 210, confirms the cruelty of his second governorship. The Diurdian (read Diurzān) and the Sanāriya rebelled. Khuzayma's geoeral Sa'd b. Haytham defeated them, drove them out of the country and then returned to Tiflis.

Under al-Ma'mûn (198-218/813-33) a certain Muhammad b. 'Attāb established himself in Armenia. In 214/829 be conquered the land of the Diurzān and the Sanāriya joined him (Ya'8ûbl, ii, 540, 565-6). Khâlid b. Yazīd gave amān to Muhammad b. 'Attāb and defeated his allies, the Şanāriya, but the disturbances in Armīniya went (Ya'kût, ii, 566; Balādhurl, 210-11). In 215-39/830-53, Ishāk b. Ismā'il carved himself out a principality in Georgia.

Ishāk b. Ismā'il. According to Mas'ndi, Muriidi, il, 65, he was of Kuraysh origin. His father Ismā'il the mo of Shu'ayb, a client of Marwān II (126-32/744-50); he had settled in Georgia in the time of the caliph al-Amin (193-8/809-13) and had had skirmishes with the governor Asad b. Yazid (Ya'gūbi, ii, 528). The uncle of Ishāk, 'Alī b. Shu'ayb, mentioned in the Georgian chronicle, i, 260, 265, is said to have received Tillis from Khālid, probably after Muhammad b. 'Attāb. But already in the governorship of Hasan Bādhshīsi, the second resecutor of Khālid, we find the name of Ishāk. When the Byzantine troops

of Theophilus (829-42) reached Wanard [near Kars), they "were cut to pieces by Sahak, son of Ismael' (cf. Stephen Asolik, ich. 5., tr. Dulaurier, 171]. As a result of such exploits, the caliph al-Wāihik (227-32/842-7) recognised Isbāk as lord of Armenia, but this did not last long. Muhammad, son and successor of Khālid, defeated Isbāk and drove out the Şanāriya. According to the Georgian chronicle, the Georgian princes (who had less fear of the central government so far away) supported Muhammad against Isbāk and his allies, the people of Kahbeti and the Sanāriya.

Finally, in the reign of al-Mutawakkii, the Turkish commander Bughā al-Kabir al-Sharābi (q.w.) seem sont to Armenia. In Rabis 1 238 (August-September 852), he left Dabil for Tiflis, Bughā watched the operations from the high hills beside Sughdabil (the reference me to the heights of Makhatha to the north of Isani = Sughdabil).

Ishāķ made a sortie, but Bughā's nafjāţān (throwers of Greek fire) set fire to the town. Ishāķ's palace was burned. He and his son 'Amr were taken prisoners by the Turks and 🌃 Maghāriba. Ishāk 🚃 decapitated and 50,000 (?) men lost their lives in the destruction of the town by fire. The Maghariba took the survivors prisoners and mutilated the dead. Ishāk's wife, daughter of the lord of Sarir (- the principality of the Avers in northern Daghistan), was at Sughdabil, which was defended by the Khuwaythiya (people of Sasun; cf. mayyärännkin). Bughā granted them amés on condition that they laid down their arms and he continued his operations in the direction of Djardmān and Baylakān (Tabari, iii, 1224-16; cf. Thomas Artsruni, iii, chs. 9-10, ed. Brosset, St. Petersburg 1874, 140-50. A Georgian inscription the church of Ateni gives the Islamic date 239 for the taking of Tiflis by Bugha; cf. Diavakhov, Khrist. Voslok, i [2922], 284). The destruction of the Muslim principality of the former clients of the Umayyads, which was a focus around which local elements gathered, was an irreparable mistake for the caliphata. The Arab authors (Mascadi, ii, 67; Yakut, ii, 58) date the decline of Arab power in the Cancasus from this. Bughā was soon recalled; cf. Brossot, op. cit., i, 266-8, and Thomas Artsuni, ibid.

There was "Abhāsid mint for dirhams at Tiffis till 331/942 (pieces are known of 210, 248, 250, 294, 298, 304, 507, 311, 312, 314, 330, 331); cf. Tienenhausen, Monnaues des khalifs orientanx, St. Petersburg 1873; Pakhomov, Monet Grusii. i. Domongolskiy period, in Zap. Num. Old. IRAO, il4 (1910); E. von Zambaur, Die Münsprägungen des Islams seitlich und örtlich geordnet, i, Wiesbaden 1968, 89-90.

The aid which Bagrat (826-76) had lent to the caliph against Ishāk did not bring the reward desired by the eastern dynasty. The rival dynasty, called of Abkhazia (cf. the explanation of this term above), seized Kartli. Thus Mas'ūdī (writing in 332/942), Muradi, ii, 69, 74, says that the Kur left the possessions of Djurdjin (Bagratid of the lateral line, d. 941; Marquart, op. cit., 176) crossed the land of Abkhāz (sic) and arrived in front of Tiflis, the inhabitants of which, although surrounded by infidels on all sides, still retained their courage and were numerous. The founder of the Armenian Bagratid kingdom Ashot (885-90?) also intervened in the affairs of Kartli (Brosset, i, 270, n. 12). Mas^cild! gives Mas<u>di</u>ld <u>Dh</u>i 'l-Karnayn (= Mtskheta) as the residence of the king of Diurth (al-januaghi, ingeniously emended by Marquart, op. cit., 186, to the Armenian *mambagki > mamphali, a Georgian title).

The Sadjids, the Salarids and the Shaddadids. In the meanwhile, there arose in AdharAL-KURD] 489

baydian the first Muslim dynasty that owned the suzerainty of Baghdad, the Sadjids (276/889 or 279-893 to 317/929; sknitos and R. Vasmer, O monetakh Sadjidov, in Izvettia Obshe. und. Azerb. (Baku 1927), No. 5, 22-51). Abu 7-Kasim Yusuf went to assist the isolated Muslims in the north. In 299/912 (?) he came to Tillis, the amir of which was then called Djafar b. All (cf. below), and seized the fortresses of Udjarmo and Bočforma (on the upper fora) (cf. Brosset, i, 275, m. 2). The chronicle also mentions another expedition (between 305/918 and 311/923) of the "Saracens called Sadl", in the course of which Mtskheta was taken. The Muslim sources are silent about these expeditions, immediately afterwards the chroniclo mentions the appearance of the Musatirkis [q.o.] or Salarkis at Bardhafa and in Adharbaydian.

Bagrat III and Bagrat IV. The series of reigns "shows the greatest confusion" (Brosset), until the king Bagrat III (980-1014?) reunited Kartli, Abkhazia, Tao (on the C'orokh) and Ardanudi. In his time, the Shaddadid [q.u.] Fadiun invaded Armenia, but was defeated by the Georgians, and Mtskheta was always regarded as the royal city, although the rulers resided in Kutais (K'ut'at'isi). In 421/1030 the Georgian and Kakhetian notables, with the help of the amir Diaffar of Tillis, undertook an expedition against the Shaddadid P'adlon (Fadlun of Gandja). But when the latter died, Liparit Orbeliani, the powerful lord of T'rialet' (on the upper Khram), captured Diaffar by m ruse and only released him on the appeal of the young king Bagrat IV (1027-72), who evidently did not wish Tiflis to be annexed by the turbulent Liparit. Dia far was re-established at Tiflis, but a few years later the king himself laid siege to Tillis. The siege had lasted for two years when suddenly the king at the suggestion of Liparit made peace with Diafar. After the death of the latter, the elders (ber) of Tiflis offered the keys of the town to Bagrat, who occupied the citadel Dar al-Djala! and the two "towers" Tsekalkin and Teaber. The inhabitants of the isan quarter on the left bank of the Kur, however, destroyed the bridge, and Bagrat had to turn his ballistas upon them.

The Saldinks. In 439/1048 the troops of Ibrahim Yinal (in Georgian Bahram-Lam) appeared for the first time in Basian (Pasin on the upper waters of the Araxes). In 445/1053 (?) the Saldinks undertook an expedition against Gandia, but a countermovement by the Byzantines, who were allies of Bagrat IV, saved the town. Thereupon the people of Tiflis again invited Bagrat, but as a result of Liparit's lattigues, the Byzantines kept Bagrat prisoner in Constantinople for three years. Then Bagrat recovered the greater part of his fortresses, when suddenly Alp Arsian (455-65/1063-72) invaded Georgia (Brosset, i. 326). On 10 December 1068, Alp Arslan, accompanied by the kings of Armania and Kakheti (Aghsar'an, son of Gagik, of the dynasty of Korikoz (Chorepiscopi), which ruled from 787 to 1103), as well as the amir of Tillis, marched against Bagrat. All Kartli occupied and many Christians slain 🖿 taken prisoners. The Shaddadids were given compensation. Tiffis and Rustaw were given I Fadlûn of Gandja, and Ani to Manucibr b. Abi 'I-Aswar. In the spring of 461/2069, Bagrat returned to Kartli. Fadlun encamped at Isan (a suburb me the left bank) and with 33,000 men ravaged the country. Bagrat defeated Fadium, who took the road through Kakheti, but was taken prisoner by Aghsart'an. At the price of conceding several fortresses on the Iora, Bagrat tansomed Fadius and received from him the surrender of Tillis.

where in the meanwhile a certain Sithlarabe (Sayyid al-'Arab?) was proclaimed amir. This plan (alled, for Alp Arshae obtained the liberation of Padiún, Giorgi II, son of Bagrat (reigned 1072-89, lived to 1125), lived in Kutais. In Kakhet Aghsart'an retained his possessions on condition that he adopted Islam.

Dawid II. The revival took place under Dawid II Aghmashenebeli (the "Restorer") who took the title of king "of Kartli and Ablihazia" (1089-1125). Dawid brought into Georgia through the pass of the Alans (Darial) 40,000 Kipčaks (Polovisi) and 5,000 slaves converted to Christianity. In spite of their unruliness (Brosset, op. cit., i, 379), these warlike elements enabled Dawid to throw off Saldjük domination. He ceased the payment of the theraft and put an end to the seasonal migrations of the Turks into Georgia. He gave his daughter T'amar in marriage to the Shirwan-Shah [g.v.] Akhistan (in Georgian, Aghsartfan) and treated him as his vassal.

The capture of Titlis in \$15/1121. On the complaints of the Muslims of Titlis, the Saldiuk Mahmad b. Muhammad (511-25/1118-31) sent an expedition into Georgia in which the Artukid Nadim al-Din Ghāzi, the Mazyādid Dubays b. Şadaka (Durbez of the Georgian chronicle) and the brother of the Sultan Tughril (lord of Arran and Nakhičewan) with his atabeg Kun-toghdi, all took part. On 18 August 1121 this army entered T'rialet' and Manglis, but was destroyed by Dawid and his Kinčaks, after which in 525/1222-2), Dawid stormed Tiffis, - that the town might become "for ever an arsenal and capital for his sous"; Brosset, i, 365-7, and Additions, i, 230, 236-41; cf. Ibn al-Athle, x, 398-9 (= Defrémery, Fragments, 26); (Kamā) al-Din, Tabrīkk Halab, in Revueil des hist. des croisades, iii, 628; Yakūt, i, 857 (s.v. art. Taffis). The Arab historian al-'Ayul (761-854/1360-1451), who utilises sources, some of which are no longer accessible (Brosset, i, 241), admits that Tiffis was burned and pillaged but, contrary to the other sources which emphasise the atrocities committed by Dawld (Matthew of Edessa in Brosset, Add., i, 230), says that the king respected the feelings of the Muslims more than Muslim rulers had done. Dawid is also said to have promised to strike coins with Muslim legends; the colns however of the king (cf. Pakhomov, Moneti, etc., 77-81) bear the image of the Virgin. Great caution in dealing with the Muslims was necessary because, as the Georgian chronicle acknowledges, the fighting between Muslims and Christians was still very bitter (cf. Brosset, i, 380).

The Band Diaffar. Dawid succeeded in Tiflis to the Banu Djaffar, of whom it is we known whether they were of Arab or purely Georgian origin. While the Georgian Chronicle (i, 367) puts at 400 years the period of Muslim rule in Tillis, al-'Ayrd gives the Banu Djaffar alone a period of 200 years. Indeed, we have seen that in ca. 300/912 the amir of Tiffis was already called Diaffar [b. 'All'] (Brosset, i, 275). His successor struck coins at Tiflis; dirhams are known of Manşûr b. Dja'far, dated in 342 and 343 (with the name of the caliph al-Muti' li 'llah), and of Diafar b. Mansûr, dated 364, 366 (al-Tā'i' li 'llāh). In the time of Bagrat IV (1027-72) the amir of Tiflis was called Diafar this father 'All had carried off the property of the Sveti-Tskhovell church of Miskheta). The Chronicle calls him Mukhat' Gwerd Djap'ar (Mukhat' Gwerd is a place near Misigheta). During the 40 years before the conquest of Tiflis by Dawid, the town was governed by the young members of the Banu Dia far family, each of whom in turn held power for a month (al-'Ayni).

AL-KURDI

The strong kings. The reign of Dimitri (2225-54) was occupied with a civil war with the Orbeliani family. The Muslim rulers contemporary with him : in Adharbaydian, the stabes Isdeniz ... Bldiguz [q.v.] (in Georgian Heliguz); at Ani, the scions of the Shaddadids; at Khilat, Zahir al-Din Shah-i Arman (\$22-20/1128-82); Erzerum, the amir Saltuk b. All, whom the Georgians defeated near Ani in 548/1153; cf. Ibn al-Athlr, xi, 126, year 548/1157; Münedidjim-bashi, il, 577; Defremery, Fragments, 40. It was Dimitri who, taking advantage of the earthquake III 1230 at Gandia, carried off the famous from gate of this town and took it to the monastery of Gelat'i (cf. Fraehn, Mim. Ac. St. Pitersbourg, ser. 6, Sc. morales, iii, 531). The position in Tiflis is described by Ibn al-Azrak, the historian of Mayyafarikin, who visited Tiffis in 48/1153. He says the Muslims were in a favoured position. Every Friday Dimitri came to the mosque and sat | dais (dahka) opposite the hatib; cl. Amodroz, Three Arabic manuscripts . . . , in JRAS (1903), 791 (al-Arrak may have been the source used by al-tAynt).

Under Giorgi III (1156-84), the Muslim kingdome around Georgia remained the same, and the king conducted vigorous campaigns against Erzerum, Ani, Dwin, Nakhičewān, Gandia, Bardha'a and Baylakān. To assist his cousin the Shirwin-Shāh Akhisitān, son of Tamar, Giorgi's auat, the king even went to Darband (cf. Brosset, i, 385-403, and 4dd. i, 253-7, 266; Ibn al-Athir, years 556, 557, 539, 561,

569).

The reign of Tamar (1184-1211 or 1212), the "Sun of Kartif", is the culminating point in the history of Georgia, now on the threshold of terrible trials. Having forced the diadochi of the Saldinia to accept peace, the Christian kingdom assumed the offensive and surrounded itself with Muslim vassals. Tamar played m important part in the creation of the empire of the Commenci of Trebizond (Kunik, Osnov. Trapez, imperii v 1204, in Ulen. Zap. Akad. Nauk, ii [1853], 705-33). The troops operating from Erzerum and Erzindjan inflicted defeats on the lidefizids of Adharbaydian. The sack of Ardabil by the Georgians (Brosset, i, 469-73) finds confirmation in the Silsilat al-nasab-i safawiyya, Berlin 1843, 43; cf. Khanykov, Mel. Asiationes, i (1882), 580-3. The Chronicle also mentions in 1210-12 mexpedition through the whole of northern Persia as far as Romguaro (= Ramdjär men Nishäpür!), but beyond Tabriz the stages in this march seem to be quite fanciful (Brosset, i, 469-73). In spite of the brilliant success of the generals Zakbaré and Iwané of the Mkhargrdzel family (Armenian of Kurdish origin; cl. Brosset, Add., i, 267), the Georgian victories were not lasting and of all her conquests. Tamar could only retain Kars (Brosset, i, 467). At home also (Diavakhov), the growing power of the feudal lords demanded the attention of the queen. Muslim customs penetrated into Georgia; the general Iwané was given the title of Atabes ("used among the Sulfans"; Brosset, i, 474). In the reign of Tamar, we find mention of a rebel, Gozan son of Abu 'l-Hasan, "amir of Tiflis and Kartli" (is this a scion of Banu Diafar?).

The Mongols. The son of Tamar, Giorgi III Lasha ("splendid" in the Abkhazian language) who ruled from 1212-23, levied the kharddi of Gandia, Nakhikewan, Erzerum (Kamukalak) end Khilāt, but in 517/1220 the Mongol troops of Subutay and Diebe (in Georgian: Suba and lame or Ceba) made their appearance in Persia. The Georgians were several times defeated; the Chroaicle (Brosset, i, 493) considers the defeat at Berdudi (on the Bordala) as the

turning-point in the fortunes of the Georgian armies, hitherto invincible.

Glorgi died suddenly and the throne passed to llis sister Rusudan (1223-47) (Kis-melik, the "maiden king" of the Muslims), in beautiful princess devoted to pleasure, whose hand was sought by her Muslim neighbours (Brosset, i, 493). In the end she chose the son of the Saldjük of Erserum, Mughith al-Din Toghrill (in Georgian Or'ul) who by his father's orders became a Christian (Ibn al-Athir, xii, 270: kādithaim gharibaim lam yūdjad muthluhd). In the letter from Rusudan to the Pope Innovent III (which reached Rome in 1244), the king speaks of the Mongol invasion at an insignificant episode, but in meneray at the safe.

The Khwarasm-shah Dialal al-Din defeated the Georgians at Garni in Shaban 622/August 1225; (Ibu al-Athir, xii, 283; Nasawi, ed. Houdas, 112; Brosset, Add., i, 309). The Georgian commander Shalwa (Djuwayni, ii, 159: he and his brother) taken prisoner. Tiflis was occupied on a March 1226. thanks to the treachery of the Persians who lived in the town. According to Djuwayni, Dialal al-Dia spared the inhabitants and allowed them to withdraw M Abkhazia, but destroyed all the Christian places of worship. Ibn al-Athir on the other hand says. that the town was taken by storm ('annual's wa-kahr's min ghayre aman's and all those who did not accept Islam were maracred. Nasawi (122) also confirms the massacre of all Georgians and Armenians in Tiflis (cf. Brosset, i, 504-7). The vizier Sharaf al-Mulk was appointed governor of the town. When he left for winterquarters at Gandia, the Georgians returned to Tiflis and burned the town, knowing that it was impossible for them to hold it (Nasawi, 125). Dialal al-Din, occupied elsewhere, did not return to Georgia till 625/1228 when at Mindor (in Georgian "field") near Loré, he scattered the forces of the commanderin-chief Iwané, made up of very diverse elements: Georgians, Alāns, Armenians, people of Sarir (- the Aver of Daghistan), Lakz, Kipčak, Svan, Abkhaz, Dianit (= Can-etyl; cf. taz), men from Syria and Asia Minor (cf. Djuwayni, ii, 170). The Georgian Chronicle (Brosset, i, 510) says that after the victory at Bolnis (= Mindor?), Dialai al-Dir committed fresh atrocities at Tifffs.

Second coming of the Mongols. Dialal al-Dia disappeared from the scene in Shawwal 628/August 1231), but the remnants of the Khwarazmians disturbed the eastern part of Georgia and shut the feudal lords up in their castles. Tifils, however, was still in possession of Rusudan, when the Mongols of Diurnaghan entered Georgia via Gandia. This took place in 1236 (Brosset, i. 333; according to d'Ohsson, ill., 75; ca. 632/1235). Rusudan left Tifils for Kutais, and the governor of Tifils burned the town (Brosset, i. 314; "thus me ruined the city of Tifilis").

The notins, of whom the Chronicle always mentions four (Carmaghan, Caghtar, loser and Biduy) occupied the country and restored Tifils. Rusudan's rule was

confined to the valley of Rion.

The Mongols broke up the political organisation of the country: the Georgians pressed into the Mongol service (expeditions against the Saldiuks of Rum, Ghiyāth al-Dlu, against the Ismā'lis of Alamot, against Baghdād etc.). The country was divided into six tumans and the Georgian feudal lords (m'awar) whose fiels underwent changes, were divided among the noins. The people in note had to go to Batu-Khān and then to the Great Khān in Mongola, where they were kept for years. In this way the heir to the throng, Dawid (called in Mongol Narin 'splendid'),

was removed from the country. A certain Egarsian tried to unite the country against the Mongols ("he only lacked the name of king"; Brosset, i, 542), but the Mongols set up against him Dawid, son of Georgi Lasha, who was crowned at Miskheta. He also had to go to Batu and to Karakorum. The "two Dawids" are mentioned among these present at the kurullay of Güyük-Khân in 643/1245 (cf. Djuwayni, i, 205, 212; Rashki al-Din, ed. Blochet, 242). Returning to Georgia, after the accession of Möngke (1248-59), they ruled together at first.

As Hülegü did not like Dawid Narin, the latter escaped to Abkhazia. "It was thus that our country became two principalities", says the Chronicle (Brosset, i. 446). Eastern Georgia owned two suzerains; on the one side, Batu-Khān, ford of the country north of the Caucasus, wished to extend his authority over Georgia; on the other side, the 11-Khans of Persia asserted their rights over it. Dawid, son of Lasha, exasperated by the exactions of Khodja 'Azīz, collector of Mongol taxes (Rashid al-Din. ed. Quatremère. 305, calls him "one of the governors of Georgia"), fled to his cousin. The no'in Oyrat Arghun occupied Tiflis. A reconciliation only took place when the of Lasha had fought beside Hülegü against the troops of Berke, successor of Batu who had invaded Shirwan in 2162 (d'Ohsson, iii, 182). In the reign of Abagha or Abaka, Berke returned to Transcaucasia and reached Tillis, where many Christians were massacred (in 1266; cf. ibid., 418).

The successor to Dawid, son of Lasha, was his son Dimitri II (1273-89), who took part in the numerous campaigns of Abagha and Ahmad, but in the reign of Arghun his treasures were confiscated and he himself beheaded after being bastinadoed at the ordu. The Georgians call him Teav-Dadebuli, "he who gave

his head as a sacrifice".

Several further kings were nominated and deposed by the Mongols. In vain Dawid VI (1292-1310) endeavoured to negotiate with the Khān of the house of Batu (Otakha = Tokhtoghu); he had to send to Charan an embassy consisting of the Orthodox Catholicos and the kādi of Tiflis (cf. Brosset, i, 615; this last detail is evidence of the revival of Islam as = result of the accession of Charan!). The Georgians continued to take part in all the campaigns of the Mongols, which however saved them neither from persecutions (cf. the activity of the Muslim no'in Nawràz in the reign of Ghazan: Brosset, i, 617) nor from attempts to convert them (e.g. after the Gilân expedition of 1307).

Giorgi V. After the death of Öldjeytü (717/1317), Giorgi V (Brtskinwale, the Splendid''') was placed on the throne (1316-46) under the patronage of the amir Coban. Giorgi profited by the troubles in the last years of the dynasty of the II-Khāns to drive out the Mongols. He exterminated the rebels, went with his army into Imereti, and united under his rule not only the Georgian lands in far is Sper (now Ispir) but all the lands from "Nikophsia (15 miles from Sukhum

on the Black Sea) to Darband".

Timür. It was during the long reign of Bagrat V (1360-95) that Timür mede his appearance. The official historian of his reign represents his campaign in Georgia as a dishad. Timür set out from Kars in the winter of 788/1386 (Zafar nāma, i, 401). Bagrat had shut himself up in the citadel of Tiffis. The town captured and the King and Queen taken prisoners. The Chronicle and Thomas of Metsop' (Nève, Exposé, 37) mention the apostasy of King, but represent it as a clever ruse which enabled him to exterminate 12,000 of Timür's soldiers and regain his

lands. His son Giorgi succeeded him in 1395. The Zafar-nāma, i, 705, 720, does not give these details. In 796/1394 it only mentions the despatch of four generals to the district of Akhaltsikhe (Akhiskha [q.v.]) in order to apply the law of ghast?. Timbr in person finally chastised the Georgians called Kara-Kalkanlik ("with black bucklers" — the Georgian mountaineers, the Pahaws and Khewaurs) and returned via Tiflis to Shakkī [q.v.].

In 298/1395 the Georgians, allied with Sidi 'All of Shakki, inflicted a defeat me the troops of the Timurid Miran-Shah who was besieging Alindiak (near Nakhičowan) and delivered Sultan Tahir Djalayir, who was shut up in It (ibid., II, 203). This event brought about its reaction in winter 802/1300 when Timur took Shakki and mercilessly ravaged the wooded defile of Khimsha (?), probably in northern Kakheti, where a Khimshia family held a fiel at Mareli, to the east of Tionet'i (Brosset, 11/2, 464). In the spring of 802/1400 Timur marched on Tiflis and demanded that King Giorgi (Gurgin) should hand over Stiltan Tähir. On receiving an evasive answer, Timur laid the country completely waste (ibid., ii, 214). Tiflis received a Khurasanian garrison, but Giorgi retired again to the mountains. After the voluntary submission of a Georgian prince named Diani-Beg and the capture of the fortress of Zarit (?). Timur's troops set out in pursuit of Giorgi and laid Svanethia waste. Glorgi went into Abkhazla and sent Tähir back to Asia Minor, Through the intermediary of a Muslim named Isma'll (Brosset, i, 668) he offered to Timur to pay the kharadi. Timur accepted the offer. Next the land of the Georgian Ivané (the stäber of Samtskhel was converted to Islam and that of the Kara-Kalkanilk plundered. After resting for two months in the summer quarters of Min-göl ("1,000 Lakes") near Kars, he sent troops against the Georgians who had concentrated at Farasgird (P'anaskert, on the upper C'orokh); ibid., il, 250.

In 804/end of 1401 Timür returned to Transcaucasia via Siväs-Baghdüd-Tabriz. His delegates (muhassa) went to collect the tribute (sāw wa-kharādi wa-diisya) from Glorgi, who sent his brother with the contributions. Timür gave Glorgi anas on condition that he supplied him with troops and treated the Muslims well (ibid., ii, 379). In the summer of 804/1402 Timür went from Karabāgh (g.v.) to Min-göl and took the fortress of Tortum occupied by Kurdilk, lieutenant of a certain Tadji (?).

When, in 805/1403, Timur returned to Erzerum, he decided munish Glorgi for not having come to present his congratulations in his victory in Bayazld. At Min-göl, Ivané, son of Ak-budiá, arrived with gifts as did Kustandil (Constantine), brother of Giorgi, who was then on bad terms with his brother (ibid., ii, 512). Shaykh Ibrahlm of Shirwan went to estimate the revenues and expenses of Georgia (ibid., ii, 521). Giorgi sent new presents, but Timûr refused them and summoned Giorgi to appear in person. In Muharram Bo6/August 2403 be himself laid siege to the impregnable fortress of Kürtin defended by Nazkl or Nazwal (the Chronicle calls it Birthwis on Alget) and took it in nine days (ibid., ii, 524-32). The troops then laid waste the country round (atra/) Georgia = far as the borders (hud@d) of Abkhazia: "which is the end of this country". Seven hundred towns and villages were destroyed, and the historian of Timur waxes eloquent over the _____ and destruction (ii, 536). Timur only stopped them when the 'ulama' The Georgians sent 1,000 tanpossible to grant aman. The Georgians sent 2,000 tanges of gold struck in the

name of Timür, 1,000 horses, a ruby weighing 18 milkkais, etc.

Timbr passed through Tible, destroyed all the monasteries and churches and went to Baylakan (winter of 806/1403-4). All the country from Baylakan in Trebizond was given as an appanage to the prince Khalil Mirzā (il. 545).

Post-Timürid period. The general disorder, after the havec wrought by Timur, is reflected in the part of the Chronicle which gives a brief account of the reigns. The Muslim sources (Majlot al-satdays, in Notices and extraits, ziv, 235 and Mickh"and; of. Defrémery, Fragments, 245) mention an expedition of Shaykh Ibrahim of Shirwan, a friend of the dynasty of the Djaläyirids against the Kara-Koyunlu Kara Yūsuf in which Kustandli, king of Gurdilstan, took part. The allied forces were defeated to the north of the Araxes, and Kara Yusuf slew Kustandll with his me hand. This happened in 815/1412-13. Also, 300 and Brs (Georgian nobles; cf. Armenian are "race") were massacred. Vakhusht (Brosset, i, 689) alone mentions Constantine as king and puts his death in 1424. In 1413 (1416?) on the invitation of the Persians (= Muslims) of Akhaltsikhe, Kara Yüsuf invaded this region and laid the country waste (Thomas of Metsop'; cf. Neve, loc. cit., 96; Brosset, Add., i, 399). The Chronicle confesses that down to the accession of Alexander (1413-43) "no consoler arose from anywhere". The king gradually drove out the invaders, restored the cathedral of Sveti Tskhoveli (at Mtskheta) and repaired the fortresses. The Georgian envoys who greated Shah-Rukh in 823/1420 Kara-bagh (cf. Mickh "and, in Defrémery, op. cit., 251) must have been sent by Alexander, and when in 841/1437 Shāh-Rukh arrived in Somkhetia (cf. abova), Alexander sent him rich gifts, after which the son of Timur left Georgia. In 1444/848 the Kara-Noyunhi Diihan-shah made a raid to Akhal-tsikhe (cf. Brosset, i, 683; according to Thomas of Metsop", Djihan-shah took Tiffis in 1440; cf. Nève, 149).

The partition of Georgia. At this period, Georgian tradition becomes exceedingly difficult to umravel (Brosset, i, 679-89). The history of Vakhusht, which continues and corrects the Chronicle and agrees better with the statements of the Muslim historians, begins with the reign of Constantine III (1469-1505), during which Georgia was divided into three main kingdoms (Brosset, ii/I, II-I8, 147, 208, 249): Kartli, with capital Tiffis; Imereti, with capital Kutais; and Kakheti, with capital at Grem! (Persian Girlm) and later at T'elav. In addition, the atabes of Samtskhe (with capital Akhal-tsikhe) rebelled and founded the independent principality of Santabago (consisting of Samtskhe, on the upper course of the Kur, and of Klardjet a on the Corokh), the princes of which from Manucar III - Safer-pasha (1625) had become Muslims (Brosset, ii, 228). A number of local princes also became independent of Imereti (the Guriels of Guria, the Dadians of Mingrelia, and the Gelovani of the Svans; cf. Aamakz). In Kartli also, Constantine III's reign was disturbed by the invasion of Bagrat II of Imereti.

The Ak-Koyuniu. In this period Uzun Hasan comes on the stage. According to Münedidiim-bashl, ili, 160, he went to Georgia for the first time in 871/2466, when ill instant the Muslim prisoners and took the fortress of Cemiliar (7). Civil complications prevented him taking Akhal-tsikhe, but he returned to the attack in 877/1472. King Bakahti (read: Bagrat II of Imereti) was dethroned (hake) and 30,000 prisoners taken from Georgia. According to Vakhusht's version, Tiflis was surrendered to Uzun

Hasan by Constantine, evidently to prevent Bagrat getting it. Uzun Hasan left a garrison in Tiflis but entrusted its government to Constantine (cf. Brosset, ii, 13, 24). The Ta'rith's Amini, however, calls the governor (iydiat) left by Uzun Hasan, Şufi Khalij Beg, who stayed there till the death of Uzun Hasan in 882/1478, when the Georgians re-occupied the town.

Sultan Yackab Ak-Koyunlu inveded Samtskhe in the autumn of Egz/1486 I chastise the Alaber Evarivars. In the next year, Ya@ub seat Sulf Khall Beg to conquer Georgia. The construction of the forts of Aghdia-kalfa and Kaozani was begun by the Turkomans on the lower course of the Debeda (Bordala) at the place which commands the approaches to Georgia from the south (cf. the Geography of Vakaushi), Kustandil (Constantine III) withdrew from Tiflis, Sufi Khalil began the siege with the help of reinforcements which arrived in the winter; he took first of all the fortress of Kudjir (Kodjori, south of Tiftis). In mill fighting around Tiftis, the Muslims suffered beavily but finally Wall agha eshikci-aghasi took the town (3 Rabis 1 894/4 February 1489) (cf. the unpublished history of the reign of Ya'kūb, Tu'rikh-i Amini, MS. Bibl. Nat. Paris, 101, fols. 101a-5a and 155a-9a). The Chronicle (Brosset, fi, 326-7), which confirms many of the details, denies however that Titlis was taken and adds that the people of the fiel of Sabarat'iano (called Barât-ili by the Muslims) on the Alget inflicted a defeat . the Turkomans.

The Safawids. In 907/1301 a detachment of Ismāfl's forces under the command of Khādim-Beg invaded Georgia (Shāhimshāh-nāma, quoted by Dorn). The invasion by Diw Sultān in 926/1320 was stopped by the embassy of Ramaz, == of Dawid VIII, to Ismāfl I (cf. flabib al-sīyar, Bombay, iii, fins' 4, 92). In 929/1322-3 the founder of the Safawid dynasty seized Aghdia-kal'a and by making certain promises obtained the surrender of the citadel of Tiflis; he descrated the churches and built a mosque "at the corner of the bridge"; cf. Vakhusht, in Brosset, ii/s, 23 (the mosque is still standing on the right bank).

Iskandar Munahi mentions four expeditions on a large scale sent by Shah Tahmasp against Georgia. In 947/1540 Tahmasp seized Tiflis, the governor of which (for Luarsab I) submitted in the Persians and became a Muslim. Next, the fortress of Bartis (? Birtvis) was taken (*Alam-ara, Tehran 1314, 63). The second time was in 193/1546 when the Georgian princes came to pay homage to Tahmasp in Shuragel (near Glimri in Alexandropol in Leninakan). The third expedition in 958/1557 was sent from Shakki on the appeal of the addeg Kay Khusraw, son of Kurkura (Kwarkware) who complained of the injuries done him by Luarsab (Iskandar Munghi writes Lawarsab, but the neme is Iranian: Luhrasp; cf. Mirāli al-buldān).

According to Islandar Munshi, "Alass-ård, 65, by the Turco-Persian peace of 951/253 the territories of Mask (Meskhi = Samtskhe), of Kärtil (Kartil) and of Käkhit were allotted to Shäh Tamhäsp, while Suiltän Sulaymän received those of Bashi-ačuk ("with head uncovered", m nickname of the king of Imereti), of Dädiyan and of Gürlyan (Guria) as far as Trebizond and Trablus (Tire-boli). Luarsab I, however, continued to worry Tiflis. This provoked the fourth expedition. Barat-ill (Sabarat'lano), Gori and Ateni were occupied and the king himself fel in battle. Vakhasht dates the four expeditions to 1536, 1548, 1553 and 1558 respectively. Brosset, ii/1, 452, considers these very probable as they coincide very well

with the visissitudes of Turco-Persian war. King Swimon 1, son of the indomitable Luarsab, had a troubled reign (1558-1600). He was defeated by the Persians and replaced by this brother David (Dāwūd Khān), who purchased the throne at the price of apostasy. Swimon was imprisoned in Alamūt, from where he was released by Ismā'd II (984/1576-7) to checkmate the activity of the Ottomans.

Ottoman domination 986-1011/1578-1603. In 986/1376, during the reign of the weak Shah Khudabacda, the Ottomans under Mustafa Lala Pasha penetrated Into Georgia via Samtskhe, and in August seized Tiflis, from which Dawild Klian had fled. The Turks put a garrison of 200 men with 100 guns in Tiflls. Muhammad, son of Ferhåd-Pasha, was given the sandfak (pashallk?) of Tillis (von Hammer, GOR1, ii, 483). Two churches were turned into mosques. In October, Gori received a Turkish garrison and was given as a sandjak to Swimon. When Mustafa Pasha returned to Erzerum, Imam Kull Khan, see of the Shamkhal stain by Özdemic-Pasha, and Swimon laid siege to Tiflis. Supplies were brought to the garrison by Hasan Pasha (ibid., 489), but the struggle around the town continued. In 1580 the new ser asker Sinan Pasha arrived in Titlis and appointed as Beglerbeg # son of Luarsab who had adopted Islam under the name of Yusuf (?). Swimon made advancer to the Turks which were me accepted. In Radiab 990/August 138: Muhammad Bey left Erzerum to bring supplies to Tiflis, but was deleated at Gori by the Persians and Georgians. Ferhad Pasha put himself at the head of a new expedition (Dhu 'l-Ka'da 990/December 1582) intended to strengthen the towns held by the Ottomans. In 992/1584, Ridwin Pasha left for Tiflis. Dawud Khan on further reflection went over to the Turks, Swimon attacked Ridwan but without success. Ferhad Pasha's Janissaries mutinied at Akhal-kalaki, which forced him to retire. After the campaign of 993/1585 against Tabriz [c.v.], the Ottomans obtained from Persis the cession of Adjarbāydiān and of Transcaucesia including Georgia (treaty of 25 Djumādā 1 999/March ar, 1590); cf. the Chronicle of the Psalter of Meshki (1559.87) in Takaish. vill, op. cit., 183-214; von Hammer, ii, 481-97 (Brosset has given an annotated translation, il/r, 4rr-19). The principal second used by you Hammer is the Nugretname of 'All (Jan. 1578-Jan. 1580). On the other Turkish sources, cf. Babinger, GOW, 217, 181. Soon after the accession of Muhammad III (1003/1595), Swimon was taken in a skimnish and sent to Istanbul, where 📰 died in 1600. Ottoman rule, more or less undisturbed, lasted from 999/1591 till 15 Djumādā I 1012/21 October 1603 when Tiffis was retaken by Shah 'Abbas I. The Turco-Persian treaty of 1021/1612 re-established the situation as it had been under Sulțăn Selbn (918-26/1512-20).

Shah 'Abbas I and the Muslim Kings. The worst misfortunes fell upon Georgia (and especially on Kakheti) in the region of this monarch. Aithough Glorgi of Kartli and Alexander of Kakheti had fought under his banner at the siege of Eriwan in 1602, 'Abbas after his victory took Lore from Georgia. He married the sister of Luarsab II (1605-16) bu: brought the latter to Persia and had him strangled at Gillab-kalfa. In ro25/r6r6 Abbas came in person to Georgia and granted Kartli to the Muslim Bagrat VI (r616-19). He then punished Kakheti. According to the official history of the reign, Alamara, 635, the number of those put to death was 60-70,000 and the number of young prisoners of both sexes 100,000-130,000: "since the beginning of Islam no such events have taken place under any king". In 1033/1623 Karcika-Khān on being sant to Georgia called to the colours 10,000 men of Kakhetl and instead of leading them against Imereti had them massacred "as if at a battue" (shikāri-wār; 'Alam-ārā, 719). Exasperated by such treachery, the mourov ("governor of lower rank"; Brosset, li/1, 148; the Persians write mikraw) Glorgi Saakadze (a Muslim and till then a faithful servant of the Shāh) raised a rebellion in Kartli which the Persians did not overcome till 1035/1626 (Iosselian, Žien mouraira G. Saakadze, Tillis 1848; Brosset, ii/1, 53-9, 489-97). In spite of all these disasters, the part played by Georgians in the life of Persia becomes more and more important, and Shāh Şafi, successor to 'Abbās 1, owed his throne to the support of Khusraw Mirzā, brother of the King Bagrat who was darugha of Isfahān.

When Swimon II perished in the civil war (1629), Teimuras I of Kakheti (1605-64, a very troubled reign marked by all kinds of misfortunes; his mother Khet'ewan was put to death at Shiraz in 1624; Brosset, ii/x, x67) to Kartli, where he reigned from 1629 to 1664, after which the Kay Khusraw already mentioned arrived from Persia and sat himself up in Tiflis under the name of Rostom (1634-58). The old King, brought up in Persia, took the Persian title of bullar-aghasi and ordered his court in the Persian fashion. Persian garrisom were installed at Gori and Suram. The Georgian prisoners who had become converts to Islam returned from Persia; Persian manners and customs became the fashion. On the other hand, as if to celebrate the fusion of the two cultures. Rostom celebrated his marriage both in the mosque and in the church, and restored the cathedral of Mtskheta, etc.

In 1045/1636 Murad IV took Eriwan and by the treaty of 1049/1639 Persia renounced her claims to Kars and Akhal-tsikhe (Ta²rihh-i Na⁴Imd, 686); according to Vakhusht (Brosset, ii/1, 68), the Sultan received Imereti and Saatbago and the Shah kept Kartii and Kakheti.

Vakhtang (to Muslims, Shah Nawaz I), adopted son of Rostom, succeeded him (1658-76). The Persophile policy continued. Shah 'Abbas II (1052-77/ x642-66) married the daughter of Shah Nawaz. The latter, although a Muslim, favoured III Christian religion and even restored the confession and the communion of which the people "had been ashamed" in the reign of Rustom (Brosset, ibid., 79). In order to give more support to Shab Nawaz, the Muslim tribes of Adharbāydjān and Karabāgh (15,000 Djawanshiri and Bayats) were settled in Kakheti (ct. the History of Shah Abbas II by Muhammad Tahir Wahld, in Dorn, tog, III - Brosset, il/I, 503-4). Shah Nawaz fought in Imereti, but when he set his son on the throne there, the Shah restored the situation as guaranteed by the treaty of 1049/1639.

Giorgi XI (Shāh Nawaz II) received investiture from Shāh Sulaymān. II 1688 he fell wictim to his own intrigues in Kakheti and the Shāh replaced him by Erekle I (1688-91, 1695-1703). This King, who had been brought up in Russia, became a convert to Islam under the Islam Under the Nazar All Khān.

The Aighan Invasion of Persia. When the Baluc and the Aighans began to disturb eastern Persia, King Giorgi with a body of Georgians was sent against them by Shah Husayn. He restored order in Kandahar, but in 1121/1700 mm treacherously slain by Mir Ways [cf. AFGEANISTAN. v. History (2)], who then deleated the new Georgian forces led by Giorgi's successor. Kay Khusraw (1709-11). These events paved the way to the Aighan invasion of Persia.

Vakhtang (governor of Kartli 1703-12; king,

494 AL-KURDJ

1711-24 with interruptions) was at first m Christian. The Persian garrisons with the connivance of certain Georgian elements went in for slave trading. Vakhtang tried to put down this traffic (Brosset, ii/s, 97, 201, 105) and in general "humbled the Muslims, especially those who garrisoned the citadel of Tiffis". Between 1714 and 1716 he was replaced by a fervent Muslim feec (— 'All Kull Khōn) and only regained the throne at the price of professing Islam.

After the decisive victory of the Afghans at Gunabad, near Isfahan (1134/1722), Shah Husayn sought help from Vakhtang, but in November 1721 the latter had offered his services to Russia (Brosset, 11/1, 117). Peter the Great, who reached Darband on 23 August 1721 had to return at mee to Russia. On the other hand, the King of Kakheti Muhammad-Kull Khan (Constantine III) took the field on the side of the Legis against Vakhtang and in 1723 took Tiflis,

which was plundered for three days.

The second Ottoman occupation (1135-47/ 1723-34). The troubles in Persia and the Russian advance disturbed Turkey. War against the Shi'lls was declared permitted. In Ramadan 1135/June 1723 the ser'asker Ibrahim Pasha, who had been negotiating with Vakhtang, installed in Tillis the latter's son Bakar (in Persian Shah Nawaz and now given in Turkish the name Ibrāhim Pāshā). The Janissaries occupied the citadel. Bakar men rebelled, but the Turks to Tiflis reinforcements under lese, uncle of Bakar (who now assumed the name of 'Abd Allah). In the meanwhile the Russe-Persian treaty of 12 September 1723, was signed by which the provinces on the Caspian were ceded M Russia. As a counterpoise, through the good offices of the French ambassador, a Russo-Turkish treaty was concluded at Constantinople on 12 June 1724; Russia kept Daghistan and the narrow strip of literal; Turkey obtained all Transcaucasia in far as Shamakha, including the Georgian territory (von Hammer, GOR, iv, 206-14. The Ottoman historian of these events is Celebi-zade; on the other sources, cf. Babinger, GOW, 289; Nami, Feth-name der bakh-i Guedjistan).

The deposed King Vakhtang went to Russia with retinue of 1,400 (August 1724). The Turks, having taken possession of Kartli, took meansus and levied taxes on the inhabitants. The stay at Tiflis of the noble Othman Topal Pasha alone has left a pleasing memory among the Georgians (Brosset, iift, 129). Iese did not bear the title of king, and the real power passed to Ishāk Pasha, a hereditary ruler of Akhalsikhe established at Tiflis. After the death of leve (1727), Ishāk Pasha was appointed governor of all Georgia (Brosset, iift, 236). In 1228 he divided Kartli among the feudal lords (mifassi) whose dissensions made it easy for him to control them. The Lezgis continued to ravage Georgia (cf. Brosset, I.e.; von Hammer, iv, 223, 237, 235, 280, 313).

Nādir Shāh. In 1143/1730-1 after a war in which he won little glory, Shāh Tahmāsp recognised the Araxes as the frontier between Persia and Turkey (Mahdi Khān, Tarrihi-i Nādiri, Tahrīz 1264, 90 = tr. Jones, i, 141; von Hammer, iv, 227 dates the peace to 5 February 1732). Nādir dissatisfied, dethroned Tahmāsp and resumed the conquest of Transcaucasia. While he mm operating against Dāghistān (1147) autumn of 1734] Isbāk Pasha of Tiflis set out with an army to the help of Gandja. Teimuran, son of Nazar 'Ali Khān (= Erekle 1), and his nephew 'Ali Mīraā = Alexander (son of Imām Kull = Dawid III) attacked Ishāk Pasha and forced him to shut himself up in the citadel of Tiflis. Nādir, highly gratified, gave presents to the two princes (bid., 114 = Jones, 1,

200). At the siege of Gandia, Nädir ordered Şefi Khān Bughār'irl to lay siege to Tillis with the help of the Georgian nobles (maurāušu ma azadararān; ibid., 116

Jones, 205).

When 'Abd Allah Pasha was defeated at Baghaward near Eriwan, Ishak Pasha surrendered the citadel of Tiffis on 22 Rabif I, 1147 = 17 Sept. 1734 (ibid., 123). Nadir summoned the nobles (tâmidām wa-aznāwurán) of Kartli and Kakheti among whom Tahmurath (= T'eimuraz) had most importance and privileges. Nadir however appointed as well of Kartii and Kakheti, 'All Mirza, because he was a Muslim, and his brother Muhammad Mirzā (= Leon) had fallen in battle against Othman Pasha. Tahmurath was allowed to go to Kakhetl to bring his family (kit') to Tiffis. Now he was ■ "man of the sword and rapid decision"; he fled to the mountoins of "Karakalkhān (Pshaw), Rūs (Rulis, west of Gori?) and Cerkes". Nadir sent his troops in pursuit of him, and arrived himself at Tillis ... Diumādā I, where he distributed punishments and rewards, 6,000 Georgian families of the Kavkul (Abots) transported to Khurāsān (ibid., 124 — Jones, 219). In 2149/1736 Sall Khan captured T'eimuraz and sent him to Persia. At the beginning to the Indian campaign. Nadir released Teimwaz but kept his young son Erekle with him.

In 1156/end of 1743, Talmurath Khan captured the pretender Sam Mirza and later (1157/1744) along with "All Khan Kilidia (? the Georgian sources call him Khandiat, Kiziidiali), new begiorbegi of Tlifts, defeated near Ru'ls on the Aragwi Yusuf Pasha of Akhaltsikhe, who by order of the Porte went to Daghistan W work for another pretender Sail Mirza. Arriving at Gori, Nadir, = 2 reward for Tahmurath's services, transferred him to Karli and gave Kakhati to his son Erekle (ibid., 202 = Jones, ii, 164; cf. Brosset, ii/t, 77 (Papuna Orbeliani) and ii/2, 208

(Kharkhaulidze).

in 1158/1745 Nådir levied an impost of 50,000 fumans on Georgia. Teimuraz went to obtain meduction, but me reaching Tabris he heard of the death of Nådir. The latter's successor was 'Ali Kull Khån, husband of Khet'ovan, daughter of Teimuraz.

The Bagratids of Kakhet'i. The period of troubles after the death of Nadir (1162/1740) and the reign of Karlm Khan, a prince of a peaceful disposition, whose influence did not extend north of the Araxes, secured a respite for Georgia. The opportunity skilfully exploited by T'eimuraz (king of Kartli 1744-61) and by his son Erekie or Irakli II (king of Kakheti 1744-61; king of Kartli and Kakheti 1761go). The reign of these Christian kings is one of the happiest periods in the history of Georgia. They conducted numerous expeditions into Transcaucasia. In 1752 the Alghan Asad-Khan, a rival of the Zand dynasty, was deleated by Erekle near Eriwan and in 1760 captured at Kazakh and sent to Karlm-Khan. The Kurds of Eriwan were chastised in 1765, 1770 and 1780, and the Georgian troops pursued them over the district of Bayazid. Almost every year the Georgians drove back successfully the incursions of the raiding bands from Daghistan (the most dangerous leader of whom was 'Umar Khan Awar). Only the Khāris of Shakki, Ḥādidii Čelebi and Agha Kishi (in 1752-3), ever succeeded in inflicting reverses on the Georgians.

In spite of all these success, the situation of Georgia was precarious, and in 1760 Teimurat went to Russia to seek assistance. But he only arrived a few days after the death of the Empress Elizabeth, and he himself died in St. Petersburg on the 8th/20th

January 1762.

AL-KURDJ

Erekle, becoming king of the united kingdoms, continued the policy of rapprochement with Russia. At the beginning of the Russo-Turkish war, a Russian force under the command of General Totleben arrived in Georgia (in 1769) and with Erekie marched against Akhal-tsikhe. The allies did not agree (cf. the letter from Catherine II to Voltaire of 4 December 1970) and the Russian troops returned to Russia in 1772. But, left alone, Erekle gained a considerable success at Aspindaa and, with Solomon of Imereti, besieged Akhal-kalaki. Sufaymān Pasha of Akhal-tsikhe soon assumed the offensive. The Russo-Turkish treaty of Kücük-Kaynardia (1774 [q.v.]) brought no territorlal change in the lands of Georgia. The Porte only renounced the tribute of youths and maidens and other levies (art. 23). But after the treaty, Sulayman Pasha of Akhal-tsikhe had to send a representative to Istanbul. On the other hand, he renewed his appeals to St. Petersburg and asked that his kingdom should be united (prisorokupleno) to Russia (Tsagareli, Gramott, No. 144). Russia gave an evasive answer, and it was not till 24 July 1783 that the treaty establishing a protectorate was signed. Russia guaranteed to Erekle his lands and left him full control of domestic policy, but the management of foreign affairs passed to Russia. A Russian force was sent to Tiflis but recalled in 1787.

The Kādiārs. During this period the Kādlārs had succeeded the Zands. In 1795 Agija Muhammad Kādiāt laid siege to Shūsha in Karabāgh and then turned against Tiflis, which was taken == 11 September 1795 and pillaged in dreadful fashion; cf. Brosset, if/2, 260; Olivier, Voyages en Orient, fii, 78 (testimony of an Hungarian physician who was an eye-witness). The Fersian invasion was followed by an invasion by Daghistanis. In 1795 two Russian battalions arrived in Georgia; in March 1796, Russia declared was on Persia. But on Nov. 6/x8, Catherine 11 died and her - Paul I at once recalled the Russian troops. Agha Muhammad set out again for Transcancasia, but was assassinated near Shasba (15 June 1797). The aged King Erekle died on 12/23 January 1798.

His son Giorgi XII succeeded him. Fath 'Alt Kādiār — occupied in dealing with his rivals. From Kars, Giorgi sent a force of 2,000 Lezgis under the command of his two sons; dynastic intrigues in the King's family rendered his position very difficult. In 1799 he sent an embassy to St. Petersburg, the object of which was as follows: Georgia should be placed not under a protectorate, but under the full power of the emperor, like the other provinces of Russia. On the other hand, the throne was to be guaranteed to the dynasty.

On December 1800, Paul I signed the manifesto of amexation (prisoyadinantys) of Georgia, which was proclaimed 18 January 1801 after the death of Giorgi on 28 December 1800. On 11 March, Paul I put to death. In April the Georgian envoys begged the emperor Alexander I to appoint a Georgian prince as governor with the title of imperial lieutenant and king of Georgia. On 12 September 1801 Alexander I, alleging the impossibility of re-establishing the old government under a protectorate, confirmed the manifesto of Paul I and affirmed that Kartli-Kakheti were henceforth to be an integral part of the Imperial Russian dominions. The remaining members of the old Georgian ruling house 2 exiled forcibly to Russia.

Georgia under Russian rule. Russian possession of Georgia facilitated the extension of Russian power in Transcaucasia. The Commander of the

Caucasus, Prince Tsitsianov (himself the scien of the noble Georgian family of Tritsishvill and governor 1802-6), had to preserve Russia's latest acquisition against several open enemies, including the Lesghlan tribesmen of Muslim Däghistän and the Muslim khāns of Bakû, Shakki and Gandja 🖮 Ādharbāydjān, nominal vassals of Persia. He now carried the war into the enemy's camp and in January 1804 captured Gandja, killing its ruler Diawad Khan, who had helped the Kädlär Agha Muhammad to invade Georgia and sack Tiflis in 1795 (see above); Gandle [q.v.] was renamed Elizavetapol in honour of the Tsar Alexander I's wife Elizabeth. But when Tsitsianov marched on Baku in January 1806, he was killed in battle by local Persian troops, although # further expedition later in that year **we** to the capture of both Baku and Darband. Pressure was also exerted on the Ottomans, and the Black Sea port of Poti captured in 1809, Sukhum-Kalfa in Abkhāzia in 1810 and the strategic centre of Akhalkalaki in south-western Georgia in 1811; it was only now, in 1810, that the local ruler of Imereti submitted to the Russians after strenuous fighting.

Meanwhile, Russian rule in Georgia had speodily become hated, and mass revolt of the Georgians came in 1812, when a Bagratid prince was proclaimed King of Georgia, before and outbreak suppressed. However, a general peace in Transcaucasia was now made between the exhausted warring parties. The Treaty of Bucharest of 1812 restored Potl and Akhalkataki to the Ottomans. The Treaty of Finkenstein of 1807, by which the Emperor Napoleon Sonaparte had recognised Persia's rights over Georgia, had never had any practical effect, and in the Guiistan Treaty of 1813 Russia was now confirmed in possession of Georgia, together with Daghistan and the Muslim khanates of Karabagh, Gandia, Shakki, Shirwan, Darband, Baku and Kuba [g.op.]. Naturally, the Persians were unreconciled to these serious losses of ancestrally-controlled territories in the eastern Caucasus, and in 1826, taking advantage of the death of Alexander I and the Decembrist conspiracy in St. Petersburg, Persia invaded Georgia and Karabagh. The attack was nevertheless repulsed by General Paskevich, and by the Treaty of Turkmancay in 1828, the Russian frontier was firmly fixed at the Araxes and Porsian influences in the Caucasus finally eliminated. An important consequence of this was that Persia was now out off from direct contact with the Muslims of Dåghistän, Paskevich now turned to deal with Turkey in the west, aiming at the reconquest of the former Georgian province of Samtskhe, and Russian troops penetrated as far as Erzerum; the Treaty of Adrianople in 1829 handed Samtskhe over to Russia and also the Black Sea ports of Potiand Anapa, thereby cutting the Ottomans off from direct access to Circassia and the north-western Caucasus.

Muslim alarm Russian aggrandisement in the Caucasus showed itself in the outbreak in 1829 in the eastern Caucasus of the Murid movement under the Imâns Kādi Molla and then Shamil [g.v.], who for a quarter of a century kept large numbers of Russian troops tied down in the region. Rebellions against the Russians also broke out in the western Caucasus, in Circassia and Abkhāzia, with Turkish and British encouragement. During the Crimean War (1854-6), Georgia was the base for Russian attacks on Turkey, leading to the capture of Kārs in 1855; meanwhile, Turkish army under Ömer Pasha landed in Abkhāzia and invaded Mingrelia.

Internally, Georgia stagnated in the first decades

AL-KURDI

of Russian rule, an especial cause of resentment being the suppression in 1811 of the independent Georgian Church, as m focus for national Georgian loyalties, in defiance of the guarantees of the 1781 Russo-Georgian Treaty, and its forefble incorporation into the Russian Orthodox Church, with the Catholicos-Patriarch Autoni 11 exiled to St. Petersburg. The Russian administration cut down the feudal rights of the Georgian publity, and taxation for the numerous wars impoverished the land. In 1830-2 Georgian conspirators, grouped round such figures as Prince Alexander Bagration, an exile in Persia, made at last attempt to throw off Russian rule in Georgia: but when this failed, all hopes of a Barratid restoration ended, and Georgia sank into what D. . Lang has called "a mood of torpid acquiescence" for two or three decades. Only during the viceroyalty in Georgia of Count Michael Vorontsov (1845-54) did Georgia at last enjoy a measure of prosperity, educational and cultural encouragement and commercial development, with the beginnings of industrialisation in the Tiflis district as part of the distinct industrial revolution in Russia as a whole during Nicholas I's reign (1825-55). It was during Vorontsov's time that the doven of modern Georgian studies in the west, Marie-Félicité Brosset (1802-80), visited Georgia and worked there under his encouragement. The old Georgian pobility suffered a general decline in this period of transition, accompanied by an increased disinclination on the part of the peasantry to endure their former subjugation, Outlying parts of Georgia, which had retained some autonomy, were now brought under direct Imperial rule. In 1857, the Regent of Mingrelia, Catherine Dadiani, was deposed, and in 1867 the youthful heir, Nicholas Dadiani, was compelled to code his sovereign rights to Russia. The mountain region of Upper Svanetia was annexed by military force to the viceroyalty of the Caucasus. In Abkhāzia, a region half Christian and half-Muslim, with the Muslims looking to the Ottomans for support, the ruling prince Michael Sharvashidze was decosed by force of arms in 1864, leading speedily to the final subjugation of the hitherto indomitable Circussians and the consequent emigration of 600,000 Muslim Circassians to Ottoman territory in preference to living under Russian rule [see CERKES]. In 1864 the seris were liberated in Georgia, and those of Mingrelia, Abkhāzia and Svaneti in the following years, although the burden of redemption payments imposed on the former seris meant that their emancipation was formal rather than real.

There was another period of enlightened rule under the Grand Duke Michael, Alexander II's brother, Viceroy of the Caucasus 1862-82, during whose tenure of power Russia recovered during the war with Turkey of 1877-8 substantial more of ancient Georgian territory which had been under Ottoman control since the 15th century. By the abortive Treaty of San Stefano and then E Congress of Berlin (1878). Russia acquired the port of Batum and retained her conquests of the important fortresses of Kars and Ardabān [q.vv.], commanding the routes into eastern Anatolia (these last two districts were not recovered by Turkey till 1920 and 1921 respectively). The latteryears of the Grand Duke's governorship were howmarked by the intensification of Pan-Slavist feeling which characterised Imperial policy at this time and which was ominous for the non-Russian minorities of the empire, seen e.g. in the banning of 1872 of the ma of Georgian mi instruction at the Titlis Theological Seminary, the main centre for the training of the Georgian priesthood and a focus for

Georgian nationalist and anti-Russian feeling ione of its future students was to | Joseph Djugashvill, the later Stalia). One aspect of the Georgian cultural seaction and re-awakening in these years was the appearance of anarchism and the Populist or Marodnik movement in Georgia from the 1870s unwards. together with the Marxist so-called "Third Group". one of whose leaders we Noc Zhordania, the future Meashevik and president of independent Georgia (1918-21). The ending of seridom and the break-up of feudal estates in Georgia, and the growth of rallway and oil-producing industries in Transcaucasia at places like Baku, Batum, Tiflis and Kutaisi, created propitious conditions for the spread of these movements, aimed in the first place at the Russian Imperial government (which was in fact by far the largest landowner in Georgia). The 1905 revolutionary period was preceded in 1902 by peasant unrest in Guria in southwestern Georgia, where holdings were especially fragmented, and in 1005 itself, the Georgian (Marxist) Social Democratic Party organised strikes and communes. Subsequent repression by Russian and Cossack. troops drew the attention of the West to Georgia's claims as a nation, seen for instance in Britain by the formation through the efforts of the Georgian scholars Oliver and Mariory Wardrop of the Friends of Georgia Committee, which worked on lines parallel m those of E. G. Browne for the Persian Constitutionalists.

During the First World War, Georgian emigres organised themselves in Central Europe, under German patronage, and in 1915 m Georgian Legion was formed to fight on the Black | coastal front. In the Russo-Turkish fighting | the western Caucasus, the Muslim Georgian Laz [q.v.] and Ačars supported the Ottomans, and Armenian irregulars the Russians. With the fall of the Tsarist government in April 1917, the Georgian Mensheviks assumed power, but the crumbling of the imperial Army allowed Turkey to recover her occupied territory in eastern Anatolia and to advance on Transcaucasia, wreaking vengeance on the local Armenians in regultal for Armenian slaughter of Muslims. The Muslims of Adharbaydian refused to continue fighting against Turkey, and now, cut off from Russia itself, Transcaucasia on 12 April 1918 declared itself independent federative republic, comprising Christian Georgia and Armenia and Muslim Adharbaydian. The Ottomans still pressed for the retrocession of territory in Georgia lost to Russia in the 19th century, and had taken the offensive and occupied Batum. Centrifugal forces thus soon made the Transcaucasian Republic dissolve into its three component parts, and on 16 May 1918 an independent Georgian Republic, under German protection, was set up; peace was made between Georgia and Turkey in June, with Turkey regaining Batum, Kars, Ardahan, Akhaltsikhe and Akhalkalaki. Hence from 1918 to 1921 a Menshevik or Social Democratic régime governed Georgia, headed by Zhordania, with m great upsurge of Georgian nationalism (Georgia's first university being opened at Tiflis in 1918) and hopes of the following of m peaceful policy of democratic socialism. After the Armistics of November 1918, British troops replaced the German ones in Georgia, with Oliver Wardrop as Chief British Commissioner to the three Transcaucasian republics, with his headquarters in Tiflis. On 27 January 1921 France and Britain recognised Georgia diplomatically as a sovereign state. However, the new was under pressure, having to fight off Armenian claims to Georgian territory, the Kemalist Turkish forces in the south, and above all, the Bolsheviks. In February 1921 the Bolsheviks were threatening Tiffis itself, and it fell after a heroic resistance = 25 February to m fearful sacking by the Red Army, Zhordania fleeing with his government by sea to Islanbul.

Georgia under the Soviets inevitably suffered from the recrudescence of Great Russian chauvinism and imperialism, the excesses of Russian troops provoking a guerilla resistance movement in Georgia akin to the Basmači movement [q.v.] in Central Asia, culminating in a general uprising in 1924, ruthlessly suppressed. For the next two decades or more, up to 1953, Georgia groaned under the repression of Stalin and his heachman Beria, himself a Mingrelian and who excercised dictatorial powers in Transcaucasia 1932-8. Until 1936, Georgia was deprived of its autonomy and became part of a Transcaucasian Federated SSR, of which Tiflis - the capital, but in that year it became the Georgian SSR, and now forms one of the constituent republics of the USSR and includes the Abkhaz and Adzhar Autonomous SSRs and the South Ossetian Autonomous Oblast, with a total area of 27,000 sq. miles/70,000 km².

According to figures from January 1970, the total population of the republic is 4,686,000, 48% of these being town dwellers and 52% rural, the main towns being Tillis (pop. 907,000) and the much smaller centres of Kutsisi, Rustavi, Sukhum and Batum. Ethnically, the population in returned as being 67% Georgian, but with considerable minorities of Armenians, Russians, Azerbaijanis, Ossetians and Abkhazians (see BSE*, vii, 360-92). What proportion of all these may still be described as Muslim is unclear, but in 1921 the capital Tiflis had a fair number of Turks in its population, and in 1922, under Soviet rule, there was still being produced a local Turkish newspaper, Yesi fiker, and a journal, Dan yildlel (see Mirzā Bālā, Adharbāydjān tūrk maļbū'dtl, Baku 1922); but the 1922 ceasus enumerated only 3,255 Azerbaijani Turks and 3,984 Persians, presumably all Muslims. The Azerbayjani Turks in Georgia are naturally to be found mainly in the extension of the Adharbaydjan plain to the east and south-east of Tiflis, in such districts as Bordall and Karayazi, and they formed part of the Kazak-Shams al-Din tribal group (see Bala, IA art. Gäzcistan).

Bibliography: The older bibliography is given at length in Minorsky's EP art, reguls. The basic standard work still remains M.-F. Brosset's Histoire 4s Is Géorgie, St. Petersburg 1849-57. On general bibliography, see D. M. Lang, Catalogue of Georgian and other Caucasian printed books in the British Museum, London 1962; D. Barrett, Catalogue of the Wardrop collection and of other Georgian books and manuscripts in the Boilleian Library, Oxford 1973; and the Bibl. given in Mirza Bala's IA art. Gurcistan. KURH, At-KURE, a town and district of mediaeval Islamic times in the northern Hidiaz, mentioned in early Islamic sources as of prime importance, but not now known under this name.

It were likely that the place had a role in the pre-Islamic history of the Wadl 'I-Kura [q.v.], where the settlement of later Kurh was situated, although the principal towns then were Dedan (modern al-Khurayba) and al-Hidjr [q.v.] = Madabia Sālih (modern al 'Ulā). According W Yākūt, Buldān, Beirut 1374-6/1955-7, iv, 320-1, and al-Sambūdī, Waja' al-waja', ed. M. M. 'Abd al-Hamid, Beirut 1393/1971, iv. 1288, there was a well-known fair at Kurb in the Djahillyya, and popular tradition located there the destruction of the people of Hud, sc. 'Ad [g.v.] As the culture of Dêdan and Llhyan decayed in the northern Hidjaz. Kurb seems to have become the main settlement of the Wadi 'l-Kurā around the time of the coming of Islam, and muhhadram poets like Ibn al-Mukbil (g.e. in Suppl.) and Umayya b. Abi I-Salt mention it. The tribe of 'Udhra [q.v.] lived in the district; the Prophet prayed in Kurb, and a mosque was built there (see Madid al-Din Ibn al-Athlir, al-Nihāya fi gharib al-hadīth wa 'l-athar, ed. M. M. al-Tannāhi, Cairo 1383/1963, iv, 36, and H. Lammens, L'aucienne frontière entre la Syrie et le Hifas, notes de géographie historique, in L'Arabie occidentale avant l'Hégire, Beirut 1928, 304-5).

Following a well-known process in Islamic geographical nomenclature, the name Kurh was applied both to the town, the administrative and commercial centre of the Wadi 'i-Kura, and to the surrounding district, in effect, the Wadi 'l-Kura itself, Hence al-Mukaddasi, 69, says that Kurh is one of the four regions (nawāhī) of Arabiz and also one of the towns of the Hidjaz; al-Bakri, Mu'djam mā 'sta'djam, ili, 2056, describes it as the kasaba of the Wadi 'l-Kura, with a variant form of the name as al-Kurah (loc. cit. and i, 247). It obviously flourished highly at this time. Al-Mukaddasi, 83-4, says that it was populous and much frequented by traders, and had many amenities; it had a strong citadel, a defensive ditch and walls; and Jews were - decisive element (al-ghālib) there (cf. Lammens, op. cit., 307), though elsewhere (96) he states that Kurh (here meaning the district) was essentially Sunni in faith.

Where exactly, then, was the town of Kurb located, since the toponym is not in use today, although that of al-Hidir (pace Vidal, in E/s s.v.) does in fact survive? C. M. Doughty (1876-7) enquired among the local people, but could find an memory of it, although he was shown a rulned site "el-Mubbiat" six miles south of al-Ula; he nevertheless thought that the mediaeval Kurh lay much further south towards Medina (Travels in Arabia deserta, London 1926, i, 161-2). Subsequently, A. Musil definitely identified Kurb with al-'Ula (The northern Hefax, a topographical itinerary, New York 1926, 295; but elsewhere, 217-18, n. 52, be placed it, more correctly, to the south of al-4Ula). It has now been convincingly argued by 'Abd Allah al-Nasif, himself a native of the region, that the site of mediaeval Kurh should indeed be located at the present-day ruins known

locally as al-Mabyātļal-Mābyāt (cf. mabit "place where one halts for the night") along the main route down the Wādl 'l-Kurā m Medina, iii m extensive plain, a spot welf-ditted to be a flourishing commercial centre and market and a convenient staging-post, 12 miles/18 km, south of al-'Ulā (al-Naṣlī, The identification of the widi 'l-Qurā and the ancient Islamic site of al-Mibyāt, in Arabian studies, v [1979], 1-19). Jaussen and Savignac saw ruins there, and in 1968 the expedition of P. J. Parr, G. Lankester Harding and J. E. Dayton made a striace survey of the site (see Prelimmary survey in N.W. Arabia, 1968, in Bull. of the Inst. of Archaeology, London, viii-ix [1970], 199-204, section on "Ma'abiyat"). Excavation of the site may well settle the question finally.

Bibliography: given in the article, but see also Abdullah al-Wohaibi, The Northern Hojar in the writings of the Arab geographers 800-1150, Beirut 1973, 220-1. (C. E. Boswonth)

EURHUB B. Diam at-Kruzk's, the ardent eulogist of the Zirid princes of al-Kayrawan and of their governors, the Band Abi 'l-'Arab, and a virulent and thameless satirist. He dominated with verve the pootic contests stirred up by his strong personality and his biting aggressiveness in the literary sessions of al-Kayrawan, owing his success as much to his lack of scruple as to the swiftness of his replies and his improvisations.

However, Kurhub remains a poet with a ready talent able to adapt himself to the thematic and formal extgencies of the genres employed by him. Variety of the series forms, suppleness of verses and purity of language combined in due course to place him in the clite of the poets of Ifrikiya during the Zhrid period. He died at al-Kayrawan in 420/1020.

(Ch. Bouyahia)

KORLTAY, Arabic orthography of Mongol burilta from burn "to collect, gather together", an assembly of the Mongol princes summoned to discuss and deal with some important question such as the election of a new khān. Dinwayni describes the buriltâys that preceded the accession of Ogedey, Güyük and Höngke. John de Plano Carpini was present in person at the buriltây held in the Khangay mountains at which Güyük was elected and methroned. The institution still survived in the time of Timur, when however it seems to have become little more than a parade. The very word has disappeared from the modern Mongolian language; it has been resuscitated by the Turks in the form burnlay and used in the sense of "assembly, congress".

RÜRIN, designation used by the Ottomans in the 10th/16th century and by the Russians in the 18th-19th centuries for the Lozghins [g.o.]. Kürin (Russian: Kurinskiy yazik) is also the former designation for the Leighin language, and appears as such in the 1926 Soviet census. (R. WIXMAN)

KÜRIN KHÄNATE (see LEZGEIN).

MORIYA. KAWRIYA, the Arabic name for modern town of Coria in Spain, municipio of the province of Caceres on the banks of the Alagón River. It is the Caurium of the Romans, who built its walls, as was noted by ai-filmyari ("strong walls of main construction"). Al-Idrisi states that Coria belonged to implement the construction of al-Kaşr, and was then "an attractive, well-built and spacious town, whose surrounding countryside was fertile and highly productive of fruit". Al-Istakhel's itinerary (43-?) places it at 12 days' journey from Cordova.

When the Muslims withdrew to the line of Coria. after the famines of the post-136/753 period (Akkbar madimata, 62/67), the town was thus left in the frontier zone, and must have been one of the main centres of the Berber settlement of the north-west of the peninsula. There were frequent rebellions there, In 170/286 Abd al-Rahman I attacked there the rebel Abu 'l-Asward Muhammad b, Yüsuf al-Fihri (ibid., 216/106). Muhammad b. Tādjit al-Maşmudi rebelled there during the amirate of Muhammad 1, and in alliance with Ibn Marwan al-Dilliki made Coria one of his main centres (1bn Hazm, Diamhare, ed. Lévi-Provençal, 466; ibn Khaldun, 'Ibar, tr. de Siane, iv, 289). It is in this region and around this same period that the Christian sources place the revolt of Zeith/Zeiti (Cron. Alfonso III. Valencia 1961, 62-3). The town became much fought over; it was taken by Ordono I in 860, but recaptured by the Muslims in 862. Alfonso III besieged it without success in 868, but ended by taking it some years later. Yahyā al-Tudilbi, sent by al-Hakam II, attacked the King of Navarre and the Count of Castile near Coria (Makkarl, Analostes, 1, 248). Al-Mangar [a.v.] passed by Coria on his route into the Christian territories during his campaign of 187/007. The town was taken by Alionso V! (472/1079), and he fled there after the defeat of al-Zallaka (q.v.). Al-Mutawakkii b. al-Aftas mourned the loss of Coria in a letter to Yüsuf b. Tashfin (al-Hulai al-maushiyya, ed. Allouche, 23). It was occupied by the Almoravids in \$13/1119-20, but definitively taken by Alfonso VII in 1142.

FURKÜB, a town in Khūzistān, in the road from Wāsit to Sūs (Susa). The statments regarding distances given by the Arab geographers were collected and arranged in P. Schwarz, fran im Mittelatter nach den arab. Geographen, 1922, iv. 396 ff.; cf. also 431. The town was noted for its carpets; there was also a sum firār [q.v.] manufacture there. A material called sāsandjird was made there, cf. de Gooje's glossary in BGA iv, s.v. Al-iştakhri and Iba hiawkal say that the sāsandjird of Fasā [q.v.] was better than that of Kurkūb; the latter was a mixture of silk and cotton, while in the former wool was used; cf. on the textiles of Kurkūb, R. B. Serjeant, Islande textiles, material for a Aistory up to the Mongol con-

quest, Beirut 1972, 45, and J. Karabaček, Die persische Nadelunderei Susanschied, Leipzig 1881.

(M. PLESSHER)

EURRA? Political organisation. The term furra? sing. kāri' [A.), occurs in Arabic historiography referring to a group of 'Irāh lans rising against 'Ummān and later on against 'All, after he had accepted the arbitration. In European research, furrā' has been usually rendered as "reciters of the Kur'ān" (kurrā' < k·r.' "to recite").

Brunnow was the first historian to try to assess the role of the kurra' as independent group acting within a heterogeneous Khāridjīto [q.v.] movement. Brünnow's results were partly rejected by Wollhausen, who held that the hurra' were not an autonomous movement which was merged in Kharidjism at a certain date. He claimed that the kurni? had been in close connection with the learned fugality, forming a wider circle of pious men around those fukaka', the supposed nucleus of men of religious learning. It was the kurra's religious zeal, unhampered by scrupulous deliberation, which according to Wellhausen led them to act against an Islamic authority which in their opinion had failed to carry through the commandments of the Holy Book. Their ardour for the sake of Islam became obvious for the first time, when they took part in fighting against the Ridda [q.w] rebels (Battle of the Yaniāma or of 'Akrabā' [q.v.]). During 'All's war against Taiba and al-Zubayr, they threw in their lots with him, and they supported 'All in his abortive warfare against Mu'awiya. When the Syrians proposed to resort to the judgement of the Kur'an, they at first approved of 'All's compliance with this proposal, but later on, when the disastrous consequences of the arbitration had become obvious, they turned against All, blaming him ruthlessly for having preferred human decision to God's judgement. In the Khāridijite rebellions against 'All, and later on against the Umayyads, the kurrd' are said to have been the most fanatical instigators. Wellhausen's account of the kurra? shows his general view of the early flusling parties as resulting from a politico-religious conflict. This view, which aimed at studying the development of political and religious thought in Islam, has proved very fruitful, but it impedes us in realising the social conflicts concomitant to religious strife. Therefore, until recently the character of the gurrd' was described vaguely or even misleadingly. If the kurra? actually had been a group of people applying themselves to a peculiar form of reciting the Kur'an, or holding a certain view concerning the validity of the Kur'anic commandments, why do we not find any trace of such a group in treatises on hereslography. on recitation of the Nur'an? Besides this argumenfun I silentio, one doubts whether Wellhausen's almost generally-accepted assumption was right that only after 'All's political defeat did the hurra', repenting of their imaginary failure, become the fanatical partisans of the Kur'an. For according to the sources, they had never been wholehearted followers of 'All's cause; hence they had no reason to consider themselves in traitors because they had urged 'All to accept the appointment of the two arbiters.

Recent research into the matter has tended to take the social groups into consideration, resuming in principle Brunnow's idea. In a detailed study on Küfan political aliguments, G. M. Hinds has drawn an entirely new picture of the known. He states that a group of people called kurra' first acted jointly against Sand b. al-'As, 'Uthman's governor in Kula until 33/653. The evidence adduced by Hinds proves that most of them were people who had settled in southern Trak at the very beginning of the conquests and thus had acquired some privileges. But under 'Uthman, the political situation in southern trak was changing rapidly; those early-comers who could not stabilise their position by amalgamating with an influx of population belonging to their respective tribal entities gradually lost their influence. Al-Ashtar and Yazid b. Kays, who were to play a prominent part in the subsequent troubles, were among these early-comers who teared lest they be ousted from their position. Their situation was even aggravated when Uthman allowed the fighters of al-Kadisiyya now resident at Medina to exchange their shares of 'Irakian land for landed property in the Arabian Peninsula. To carry through this measure meant first of all a careful distinguishing between the sawafi estates and dhimmaland. The early-comers suspected that they would be the losers by these administrative measures. Fearing a blow m their preteaded rights, they succeeded in removing Saild b. al-As from his post. They then elected Abi Mūsā al-Ash'ari governor of Kūfa. During the events which led **iii** the murder of 'Uthman, the kurni' played only a secondary part, though al-Ashtar figures in the list of the assassins. When 'All arrived in the neighbourhood of Kufa, the powerful tribal leaders did not join him. They seem to have favoured a neutral position, which would have served their interests best. All, pursuing an egalitarian Islamic policy, did not even want to attempt a compromise with them. A coalition between him and the disappointed early-comers therefore came into being. Al-Ashtar, Hudir b. 'Adl, and 'Adf b. Hatim are said to have been kurrd'; now they were Shift leaders. During the fighting at Siffin, the burrd? are mentioned as separate para-tribal entities supporting 'All. When Mu'awiya suggested settling the points at issue by raeans of arbitration, the gurra? urged "All to accept the proposal, because they envisaged a peace in which 'All would be able to accomplish an Islamic policy checking an ascendancy of the new-comers. When they felt that their dreams would not be realised, they turned against 'All, who refused to withdraw from the agreement. 'Ail tried to placate this dangerous internal opposition by giving high appointments to the most prominent kurra', but the majority of the kurra' became his irreconcilable enemies. In the Khāridite movement of the first century they are often mentioned as one of the most active groups.

In the light of these new results, it seems rather absurd m refer to the gurra' m "Kur'an-readers". Shaban was the first m suggest new interpretation. lie holds that kurrā' "villagers" (ahl al-kurā). denoting those participants in the early man (all al-ayyam) against the Sāsānid Empire who had occupied the vacated estates of southern Irak and whose de facto privileges had been threatened since Uthman's reign. Shaban and G. H. A. Juynboll have adduced evidence corroborating this thesis, but it still remains speculative. The rendering of kurra2 in "Mur'an-readers" seems to be a result of the wellknown fact that Muhammad used to appoint reciters for stumulating the zeal of the Muslim fighters (see Shih Ahmad al-'All, al-Tanzimāt al-idilimā'iyya wa Tiklisadiyya fi 'l-Basra, Beirut 1969, 56 (f.); furthermore, the 'Irâkian hurra' had appealed to the Kur'an. But they did so, not because they hold some special doctrine concerning it, but because they wanted meniore the judgement of the Kur'an in that actual issue, where the reference made in the Siffin agreement to an ill-defined "practice" (sunne) seemed dangerous for their interests.

(T. NAGEL)

**EURRA B. SHARIE B. MARTHAD B. HAZIM AL
"ABS! AL-GHAYAFANI, governor of Egypt 90-6/

709-14 for the Umnyyad caliph al-Walid b. 'Abd al
Malik.

Kurra came from the group of North Arab tribes which had settled extensively in northern Syria and the Dinzira and which were in the forefront of the warfare stong the Taurus Mountains with Byzantium. He himself came from the region of Kinnasrin [q.a.] to the south of Aleppo, and was thus a member of the experienced and capable cadre of Syrian Arabs whom the Umayyads liked appoint to high civil and military office; the fact that al-Walld's mother Wallada bint al-Sabbās and also from the tribe of Abs may well have helped further Kurra's career.

The early part of this last is very obscure. From indications in Michael the Syrian's chronicle, Lammens inferred that he may have served as governor of Khmaarin or possibly of Armenia; it is obvious that he would not have been appointed to such an elevated post as the governorship of Egypt without considerable administrative experience previously.

Kurra was appointed governor of Egypt 'ala' 'lsalāi wa 'l-kharādi, i.e. as amir and m'āmil m financial director, in place of the caliph's own brother 'Abd
Allāh b. 'Abd al-Malik, whose governorship had been
rendered difficult by economic hardship through
failure of the Nile to rise sufficiently. Kurra accordingly reached the capital of Egypt, Fusiāt [g.v.],
on 3 or 13 Rabi' I go/ro or m January 709 or shortly
afterwards, and took up his duties there. The Arabic
general chroniclers give woefully little information
about Kurra's governorship, if indeed they mention
it at all: Tabari merely records the dates of his
appointment and of his continued tenure of the office,
and then records his death (il, 1200, 1208, 1266, 1305;
repeated in Ibn al-Athir).

m condemnatory view which is expressed in both the Muslim and the Coptic Christian sources. Thus one of repeated saying attributed to 'Umar b. 'Abd al-'Azlz runs "al-Walld in Syria, al-Hadjeljādj in 'Irāḥ, 'Uhmān al-Muzani in Medina, Khālid al-Kesrī in Mecca and Kurra in Egypt! By God, the earth has become filled with iniquity!" (cf. the biography of Kurra in Ziriklī, al-A'lām, vi, 36-7). Another libellous story is that after the completion of the rebuilding of the mosque of 'Amr b. al-'Āṣ in Fuṣṭāṭ (see below), he called for wine and music-making and held an orgy thare.

Amongst the occurrences of Kurra's governorship is mentioned a plot against his life staged at Alexandria by a group of Ibadi Kharidiis under al-Muhadiir b. Abi 'l-Muthanna al-Tudjibl, which failed, and the rebuilding of the mosque of 'Amr. At the beginning of 92/autumn 710, the caliph ordered Kurra to demolish some additions made by 'Abd Allah b. 'Abd ai-Malik and to rebuild the mosque entirely. Yahya b. Hanzala al-'Amir' was appointed supervisor of work; the mosque was enlarged at the north-east end and in the hible direction, which Kurra caused to be corrected from 'Amr's slightly inaccurate alignment. Whilst the work of rebuilding was in progress, the Friday prayers beld in Kaysirivvat al-Asal. and the mosque was completed in Ramadan 93/ June-July 712 (see K. A. C. Creswell, Early Muslim architecture, Oxford 1932-40, i, 99-100, with extensive bibliography). Yet much of Kurra's governorship was necessarily taken up with the linancial administration of Egypt and the economic and agricultural regeneration of the province, and it is here that the papyri give valuable information. The serious famine of 86-7/705-6 in the preceeding governorship of 'Abd Alfah (see above) had left a legacy of hardship in the land. Kurra was therefore concerned to increase agricultural production and to bring disused land (ard mands) into cultivation once more. The chronicles mention his restoration of the Birkat al-Habash as an instance of this work of thya", this being planted with sugar cane [see KASAB AL-SUKRAR] and Suhsequently known as "Kurra's stable".

A further, controvertial problem was that of the imposition of the poli-tax or dissys [q.v.] | new Muslim converts from the Coptic community. The papyri show Kurra as keen to exact the full dritys from these mawall, to collect arrears of taxation and generally to safeguard the caliph's financial rights. Egypt suffered, like 'Irak and other of the conquered provinces, from the flight of peasants to the towns in order to escape taxation, a process which had aiready been discernible in Byzantine Egypt; these fugitives were now rigorously pursued and brought back to their villages wherever possible. However, Kurra was equally concerned to punish tyraunical local officials, and he maintained control over the provinces by means of an efficient intelligence system barid [q.v.]. The billingual (Greek and Arabic) papyri also mention the levying of special taxes (lifurgia) for the building of ships for kourses or ghare, presumably against the Byzantines in the eastern Mediterranean. Finally, Kindl notes that Kurra re-organised the dissons of Egypt in 95/713-14, being the third person (after 'Amr b. al-'As and 'Abd al- Aziz b. Marwin) to do this. As Becker observed (Beitrage, ii, 224-5), this doubtless increased the Arab element in these departments; the official language there had already been changed from Greek and Coptic to Arabic just before Kurra's time [see Diwan].

Kurra died of the piague whilst still in office in

Safar 96/October-November 714 (Tabarl, ii, 1305) m on 23 Rabi' I 96/6 December 714 (Makrizi, i, 302), and was succeeded (as amir al-satif only) by his trusted deputy 'Abd al-Malik b. Rifa' al-Fabrul, who had been Shirib al-Shurks or police chief under Kurra; Usama b. Zavd became head of finances in Egypt.

(C. E. BOSWORTH) KURRAM. KURAM, the name of a river which flows down from the western end of the Safid Küh 🚥 Spin Ghar range of the Hindu Kush-Koh-i Baba massif of eastern Afghanistan and which joins the Indus River in modern Pakistan just below 'Isa Khél. The lower course of the river flows through Bannû (q.v.), and the middle reaches through the northernmost part of Waziristan [q.v.]. The upper valley, beyond the railhead of Thal, forms what in British India and now in Pakistan is the administrative region of the Kurram Agency, a thin wedge of territory some 70 miles long and covering 1,305 sq. miles. From the headwaters of the river, the fairly easy Shutargardan Pass leads towards Khost and Kabul [g.vv.], with the village of Paiwar Kotal marking the present frontier between Afghanistan and Pakistan; this has always been one of the historic routes by means of which migratory peoples and armies from Central Asia and Alghanistan have

descended to the Indian plains. Little is known of the early history of the region of Kurram, though the Chinese pilgrim Fa-hien was there in the early 5th century A.D. Rurram is certainly mentioned in Ibn al-Athir, xi, 89, as the place (here spelt Kurraman) to which the Ghaznavid sultan Bahram Shah fled ignominiously in 543/2248 when the Ghorid chief Sayl al-Dln Surl temporarily occupied his capital. Djůzdjání (7th/13th century) further records that Kurraman was granted an istat, together with S.n.k.ran (? Shalozan, the name of a modern left-bank affluent of the Kurram River. in the surmise of Raverty), by the Ghurid ruler Musizz al-Din Muhammad in 572/1176-7 to his slave commander Tadi al-Din Yildiz; Mucizz al-Din used regularly the Kurram valley route for descending from Ghazna to the Indus valley (Tabakā; - Nāṣiri, ed. Habibi³, Kabul 1341-3/1962-4, i, 411-12, tr. Reverty, London 1881-99, i, 498-500). The original Pathan inhabitants of Kurram were Sunni Bangash,

but co. 1500 normads of the Türi tribe of the Karlânri group of Pathans appeared as vassals (kamsāya) of the Bangash and gradually came to control all the villages of the upper Kurram vailey. The Türi shift in faith, and claim popularly to be of Persian origin; in the early 12th/12th cantury they participated, with other Pathan tribes, in the general movement of the Röshaniyya sect [q.m.] against the attempted domination of the Mughal Emperors of Dibit.

In the early 19th century, Kurram ____ formed part of the Sikh empire of the Pandiab, but the Durrant and Barakzay rulers of Kähul claimed m vague suzerainty over the region. In 1845 they affirmed their claims by appointing a resident governor in Kurram, the later amir in Kābul Muhammad Aszam Khān. In 1856 a British expedition was sent into the valley after Turl raids on the people of Köhät [q.v.]. In autumn 1878 Lord Roberts entered the valley and temporarily occupied the region as advance base during the Second Afghan War, pushing on from there to capture Khost. The Shiff Turi began to complain of oppression by Afghan officials, and this created a centiment in Kurram in favour of a British presence there or at least of some degree of British protection, especially as the Treaty of Gandamak made with Muhammad Ya'kub Khan in x879 declared Kurram to be an assigned district, to be administered by the Government of India. together with the Khyber and the Pathan districts of northern Balüčistan, Hence in 1802 British forces moved up from That at the request of the Turi, and in the next year the border with Afghanistan was delimited along the Durand Line at the head of the valley. In 1894 it became a political agency, and then at the time of Lord Carzon's creation of the North-West Frontier Province in 1901, Kurram became one of the five tribal agencies. British garrisons were withdrawn, and replaced by two battslions of the Kurram Militia, organised on the same lines as the Khyber Rifles (see ERAYBAR PASS). It was down the upper Kurram valley that Nadir Shah briefly penetrated with an Aighan force during the Third Afghan War of 1919.

Kurram now within Pakistan, and has its administrative centre in the town of Pāračinār. The Pakistan government gives the Kurram Agency the same degree of autonomy as the other tribal areas, except that it enforces certain regulations identical with those prevailing in the directly-administered areas along the Indus, including the collection of land-tax; in fact, a negligible amount of taxation is collected from this economically poorly-endowed region, and the Agency receives back far more from the central government by way of subsidies and salaries of local militiamen and officials. It nevertheless forms the only tribal area along the Frontier where the central government's authority goes right up to the Afghānistān border. Administratively, Kurram is divided into two mastls, an Upper Valley and a Lower Valley. The 1961 census estimated the population of the whole Agency at 200,552, with the population of Páračinár as 22,953.

(C. E. Bosworth)

KURRAT AL-FAYN, FÄTIMA UMM SALMÄ, also
known m Dhaldya, Zarrin-tädi, Tähira (see below),
Persian poetess and Bäbi martyr, was born in
Kazwin in 1231/1814, the eldest daughter of a famous
mudjiahid, Hädidi Mullä Muhammad Säith Baraghäni.

She was educated in Kazwin, and became proficient in the Islamic sciences. She me married to Mulla Muhammad, the son of her uncle Mulla Muhammad Taki, by whom she had three sons, Shaykh Isma'll, Shaykh Ibrahim and Shaykh (shak, and one daughter. While staying with him in Karbala, she joined the Shaykhl sect, together with her sister Mardiya and brother-in-law, Hadidi Mulla Muhammad All, an action that earned her the fierce hostility of her husband and father-in-law, though her own father remained neutral. She studied with Sayyid Kāzım Rashtl, then living in Karbala', who was so impressed by a risele she wrote on Shaykhi doctrine, that he gave her the lakab of Kurrat al-'Ayn. Her sectarian activities led finally to her divorce, by which time she had returned to Kazwin, It was here that she first heard of the Bab, and when Mulla Husayn Bughruya left for Shiraz to seek out the Bab in Rabic I 1260/April 1844, he took with him a letter from Kurrat al-'Ayn which so impressed the Bab that he nominated her among the eighteen Hural al-Hayy ("Letters of the Living"). Later, in a letter addressed to certain Bable who had expressed doubt about the propriety of Kurrat al-'Ayn's activities, he described her as Diamib-i Takira, whence the name by which ahe came commonly we be known amongst the Babis and Baha'ls. By this time she was back in Karbala, where she is reputed to have preached without a veil, to have claimed to be the incarnation of Fatima, and to have proclaimed the abrogation of the Sharl'a. Her preaching of Babi doctrines eventually alarmed the Ottoman authorities, and in 1263/1846 she arrested and exiled to Iran. She travelled by way of Kirmaushah and Hamadan, preaching openly on the way, and in due course arrived in Kazwin, where she found herself subjected to the man family hostility as before. Matters came to a head when her uncle, Hādidi Mullā Muḥammad Taķī, a strenuous opponent of Babism, was found murdered (x5 Dhu 'l-Ka'da 1263/25 October 1847). Widely suspected of complicity, it was no longer possible for her to remain in Kazwin, and she left for Tehran, and thence for Mazandaran, where she joined the great gathering of leaders at Badasht. Here she preached constantly (sometimes unveiled, though this has been denied), and took an active part in the decisions taken there. After the break-up of the gathering by local villagers, she went to Mezandarán with some of the other leaders of the community, and stayed for some time in Nûr. In 1266/1850 she was arrested and taken to Tehran, where she was detained as a prisoner in the house of Mahmud Khan Nurl, the Kulantar [q.v.] of Tehran, for the next four years. After the attempt on the life of Nasir al-Din Shah in 1268/1852 by three Babis, Kurrat al-'Ayn, together with at least twentyseven other Babis, was cruelly put to death by means that have been variously reported but are still unknown, the only evewitness account-by Dr. Polakmerely stating that "she endured her slow death with superhuman fortitude".

By a strange twist of fate, Kurret al-'Ayn was the only one of the eighteen "Letters of the Living" never

to meet the Bab. She was famous both inside and outside the Babl incomment for her beauty, eloquence, and devotion to the minus. Her poetry, a fair amount of which has survived, is said to have been widely read by the Babls long after her death. Though doubts have been cast on the stories of her discarding of the veil, it cannot be denied that her way of life was extremely emancipated for her time, and she has remained a symbol of women's liberation in Iran over since.

(L. P. ELWELL-SUTTON and D. M. MACEOIN) KURSAN (A.), pl. kardsina and also kardsing hardsin, "corsair, pirate", stems from Italian corsule, which has further given forms closer to the original but less commonly-found, such as \$urs@i, pl. kardsilikarāsil, and kursāli, pl. kursāliyya. In turn, Arabic has formed the abstract noun harsana "privateering, piracy", still in use today, in is also kursdn, sometimes conceived of m plural. In the colloquial there is further the verb karsan "to raid, act as a pirate", and the dialects also given to kursan the double sense of "corsair" and "boat". This latter term was an Andalusian one (cf. Pedro de Alcala, ... De lingua arabica libri duo, Göttingen 1683, 158). and it is uncertain whether one should link with the Spanish corsario the adjective hursariyyat used by al-Sakatī, ed. G. S. Colin and E. Lévi-Provençal, Un manusi hispanique de hisba, Paris 1931, 50, to denote women who are supposed to have recovered their virginity (the two editors prudently suggest the translation "carried off by the corsairs?", and P. Chalmeta, in al-And. (1971 if.), \$ 111, translates this term as corsarias).

The necessity felt by the Arabic language, probably in the course of the 3rd/oth century, to use a loanword shows that, even if piracy had long existed in the Red Sea and Persian Gull, the Arabs (who called a pirate list al-bahr "sea-robber") had a distinct feeling that privateering will a different character. They

KURŞĀN

nevertheless adopted term to denote two distinct forms activity, which are indeed often enough confused, even by Europeans; in fact, privateering consists of attacking enemy ships with the more or less explicit connivance of the authorities, whilst piracy proper is purely private enterprise involving the capture and pillaging any vessels encountered.

i. The Western Maditerranean and the Atlantic

It was in the Mediterranean, "the sea of adventures" [Ch. E. Dufourcq, L'Espagne catalane et le Magheib aux XIII et XVI e riècles, Paris 1965, 574), that the Muslims most continuously practised karsana from moment onwards when they established themselves along its shores and had to face attacks from the Christian powers there. In reality, the Arabs-and very soon, as will be seen, adventurers of European origin, renegades and captives-were merely participating in a traditional practice of the Mediterranean basin since the most early antiquity, whilst at the men time giving it, men or less consciously, a religious aura, since it was often in the name of Islam that the corsairs of the southern shores of the Sea acted, just as those of the northern shores acted at times in the name of Christianity. It was for this reason that privateering, if not piracy, soon came to be considered as an integral part of the holy war, djikad (q.v.), and it is as part of this that the question is treated in the works on law.

Given the fact that it is impossible, in an encyclopaedia article, to go into detail and to trace the entire history of privateering and piracy in they were practical by men based on the coasts of the Muslim lands, what follows is a sketch or the broad features of the topic. Reference should be made to those sources which are in general well-documented and which have been utilized for this present article, and also to the articles ant. Lya and sarina, especially for technical details; the article riph? in the Supplement should also be consulted for the topic of the ransoning of captives.

From the sst/7th century onwards, there were added to the attacks against the islands and the abores of the western Mediterranean by corsairs coming from the Near East, raids undertaken by the people of Ifrikiya, whose regularly-organised fleets succeeded in gaining control, in the first decades of the 3rd/9th century, of Malta, Sicily and Pantellaria [see gawgara], whilst the Balearic Islands definitively taken over by the Spanish Umayyads in 200/2022.

However, from the and/8th century onwards, what one may properly call organised pirate activity began to take shape both in North Africa and in Muslim Spain. One notable action is that in which, after the suppression of the "Revolt of the Suburb" in Cordova [see Al-ANDALUS and EURTURA] in 202/818, a group of émigrés who practised piracy in the central and eastern Mediterranean gained control of Alexandria and in 212/827 seized the island of Crete, which they made into a Muslim possession and a centre for their further activities [see realTrsH]. It was likewise from Spain that there set out the Muslims who, between 278/891 and 281/894, established themselves at Fraxinetum [q.v.], where they founded a pirate state which lasted for 80 years. As early as 227/842, other corsairs sailed up the Rhone to Arles, and they renewed their incursions in 235/850 and 255/869; under the Umayyads of al-Andalus, the sailors of Péchina acquired a great notoriety in this respect (cf.

Lévi-Provençal, Hist. Esp. Mus., i, 244, 349, 352, 355, il. 154-60], Some centuries later, Ibn Khaldun, Hist. der Berberes, text, i, 659, tr. de Slane, fii, 117, summarised the two essential forms which the activities of the karasina took, "A more or less aumerous group of corsairs gets together. They build a ship and choose as its crew men of proven valour. These warriors go oif and descend on the coasts and islands where the Franks dwell, arriving there suddenly and carrying off everything they can find. They also attack the infidels' ships, frequently capturing them, and then return home, laden with plunder and prisoners". This text is not the ones rarely encountered on this subject in the Arabic sources, which dwell at much greater length on the Christiant' naval enterprise against the Muslim lands, - the spectacular attacks from the Atlantic made on ai-Andalus by the "Northmen" from 230/844 to 355/066 [see AL-MAD10s]. In the Mediterranean, violent attacks by the Christians was difficult, for a defence system had been established along the coasts, whether in Spain (see R. Arié, L'Espagns musulmant au temps des Nasrides, Paris 1973, 273-6) or from Alexandria to Tangier (see M. Talbi, Emirat aghlabide, 395).

Concerning the situation obtaining on the high seas, Ibn Khaldun's remark (Muhaddima, ed. Quatramère, ii, 35, tr. de Slane, ii, 42, tr. Rosenthal, ii, 41) alleging that "the Christians could not even launch a plank on the Mediterranean" is probably correct for the 3rd/9th and 4th/10th centuries, when the Muslims did have command of the seas. Economic necessity accordingly compelled the states to try and assure the salety of navigation along the various commercial routes (see Chr. Courtois, in Mélanges G. Marçais, Algiers 1957, il, 52-9), but the international agreements made with this end in mind were not always respected by the pirates. The activities of these last were however controlled, and there are extant some interesting falwas on these. M. Talbi has published one of them (in Cahiers de Tunisie, 1955), pronounced by Sahnun (d. 240/854 [q.v.]) and concerning three associates who had organised a pirate enterprise but had then fallen out over the division of their booty. More interesting still is a fatteri of Muhammad b. Sahnün (d. 256/870 [q.v.]) analysed also by Talbi (Emiral aghlabide, 534-3); it emerges from this that seizure was legal in the case of a Christlan merchant ship making for a non-Muslim country, but illegal when it was a me of a building utilised for commercial exchanges between Christendom and Islam. Thus, whilst hindering freedom of navigation, pirate activity tended to divert traffic into a pattern favourable to the Muslim lands.

After the beginning of the 5th/12th century and during all the Crusades period, privateering may be regarded as more often than not assimilable to the dithid. The Zirids (see H. R. Idris, Zirides, index) organised it on a grand scale and sowed terror in the western Mediterranean, whilst the island of Diarba [q.v.], already an important base, became a real haunt of pirates, who were not content with attacking Christian ships but also infested the coasts of Ifrikiya. Diarba was conquered in 510/1116 by 'All b. Yahya, but soon resumed its traditional cole, until it captured in 529/1135 by the Normans of Sicily; it to remain the plaything of Christian and Muslim rivalries until the end of the 8th/14th century, and then was to play a leading part in the events of the soth/roth century.

Various dockyards built along the coasts of the Maghrib and al-Andalus (see DAR AL-SINA A.), especially at La Calle (Marsà 'i-Kharaz), Bône and Bougie,

KURSĀN

provided local pirates with galleys which skimmed the coasts of the Mediterranean Islands and swept the seas in search of prey. As well as the cargos and crews and on the open seas, the raids on the Sardinian and Corsican coasts secured slaves of both sexes which man much in demand.

Dufoureq (op. land., index) has gathered together considerable material on the 7th/13th and 8th/14th centuries. From this, it appears that, despite the rulers' detires to make maritime commerce safe, the occasional prohibition of privateering warfare and concluding of international treaties, the Mediterranean remained for adventurers of all varieties a special field of activity. After having died down somewhat, from the Muslim side, in the 7th/13th century, burgana revived with fresh force, and the islands and shores of the Christian world were often ravaged. On the Christian side, their exploits yielded nothing in scope or violence to the Muslims; Sicily was a fine jumping-off base and arsenal, and Diarba was neutralised for a while by Roger de Lauria and Ramon Montaner.

The other bases in the Maghrib remained active, but the situation hardly changed in the course of the next century. On the other hand, it took a completely new turn in the roth/roth century, when there began the so-called "Barbary corsairs", whose activity was to last until the 19th century. This is the period in which such figures as the Barbarossa brothers [see "ARODI and KHAYR AL-DIN], Dragut [see TORGHOD], Sinan Pasha, Aydin, and many others for whom there is not space here to recount the prowess, distinguished themselves. The articles devoted to the most famous of them should be consulted, and one should merely note that 'Arudi chose Tunis as his base and from there, was able to defy the power of Charles V and to seize Algiers. After his death in 924/1518, his brother Khayr al-Din (d. 953/1546), who had offered the province of Alglers to the Ottoman sultan, resumed his pirate activities against Mediterranean shipping and his attacks on the Christian towns. For his part. Dragut (d. 972/2565) set up his base in Diarba, and then succeeded Murad Agha, whom he had helped, together with Sinan Pasha, in seiting Tripoli from the Knights of Malta; he may III considered as the founder of the new regency.

It is, it is true, difficult to distinguish between naval warfare, privateering and piracy in the activities of these corsairs, whose common feature is that they succeeded in founding "Barbary" states in more or less nominal dependence on the Sublime Porte and that they established pirate organisations which necessitated interventions by the Europeans. The battle of Lepanto in 979/1571 [see AVEA-BARRY] put mend to privateering, but made to difference to pirate activity, which continued to rage until the conquest of Algiers.

Amongst these pirates, Murad Ra'is was especially notable. He was the first, in 993/1585, to venture into the Atlantic (if one excepts the expedition of Khash-khash (see al-Mas'adl, Muradj, 1, 258-9 = § 274) and his companions from Cordova in the 3rd/9th century, see Lévi-Provençal, Hist. Esp. Mus., i, 354, iii, 342). Murad went on to plunder the Canary Islands, and en route, put in at Salé, which was not as yet the nest of corsairs of which later history was to have a burning memory.

It should also be noted that, at the mement when these Barbary states mentioned above came into existence, there was an event of highest importance happening in Spain, so the reconquest of Granada, followed by the exodus of the Andalusians and then, in 1610, by the expulsion of the Moriscoes [q.v.]. Like their predecessors, these last groups settled in various parts of North Africa where, without always openly proclaiming diskdd, they constituted a fresh impotus and a new pretext for the Barbary pirate activity, seeing in this a mounting a revanche. Algoria and Tunisia remained very active centres (see M. de Epalza and R. Petit (eds.), Études pur les Moriscos andalous en Tunisie, Madrid 1973, index), but it is from this point onwards that piracy based on the port of Salé comes into prominence, and the history of this is well-documented for m (see H. de Castries, Les corsaires de Salt, in Revue des deux mondes, xv/2 (1903); L. Brunot, La mer dans les traditions et les industries indigènes à Rabat et Said, Parls 1920, 152-72; and R. Coindreau, Les corsaires de Salé, Paris 1948). During the 8th/14th and 9th/15th centuries, Salé (see sald) had been a centre for privateering on a relatively modest scale only, like other ports of the Moroccan littoral like Tetuan [see TITTAWIN], whose corsair fleet had however been destroyed by the Spaniards in on. 803/1400, or al-Mahdiyya [q.v.], which on occasion gave refuge to pirates, whose captured booty was sold to the sultans. In the 17th century, however, the twin town of Rabat became, under the influence of Andalusian emigrants, a real corsair republic, im which certain strong personalities stand out, these being used for diplomatic missions (e.g. the Bénache and vers. -Sidi 'Ali b. 'A'isha, who was charged by Mawlay Isma'll with a mission to Louis XIV for the band of the Princess de Conti). These Salé corsairs, called "Turks" by the Europeans, were generally m more Turkish in origin than were the "Barbary" pirates; they included in their ranks Andalusians and Moroccans, to be sure, but also Greeks, Russians, Portuguese, Spaniards, Frenchmen, Dutchmen, etc., renegades and even Christians. The diverseness of the polyglot allowed them to hoist false colours and to make ships under attack by addressing the enemies in the tongue of their own nation. One notable feature of the Salé pirates was that, being right on the spot for combing the North Atlantic seas, they were bold enough to sail as far I lceland, to reach the fishing-grounds of the coasts of the New World and Nova Scotia, in to enter the Channel and reprovision themselves in the Netherlands, where they had accomplices. For almost a century, from 1668 to 1757, privateering was organised by the sultans, and may be considered in taking the place of a national fleet.

There is no need here to dilate upon the various types of vessel employed by the corsains and pirates, nor upon their arms, for these questions will be studied under mulica and sariwa. It should merely be noted that until the end of the 16th century, the pirates in the Mediterranean used galleys propelled by a large number of oarsmen (sometimes more than 200) and that the lateen sails of these ships - only auxiliaries; on the other hand, in order to secure speed superior to that of the merchant ships, these galleys were slender in shape (the proportion of length to breadth reaching up to 9 times) and hence instable. In 1606, a Dutch renegade called Slmon of Danser taught the Algerians to construct and to operate sailing ships, and Salé, which, because of the bar and shallow waters, could only used light vessels, benefitted particularly by this innovation, and built so-called "round" (i.e. with a proportion of only 3 or 4) ships, which were much more stable.

Finally, thanks to the anonymous author of La connaissance des Pavillons ou Bannières que la plupari des Nations arborent en mer, The Hague 1737 (cf. KURŞÂN 505

Coindreau, op. Isud., 211-22), we have information about several of the flags of the Muslim corsains.

Bibliography: The above account, inevitably brief, we only give a slight sketch of karsana in the western Mediterranean and the Atlantic. Outside the archives, some of which have been used by the authors cited above, and the Sources inédites de l'histoire du Maroc, reference should be made to the works cited in the text, which usually have detailed bibliographies, and to the following basic works: F. Dan, Histoire de Barbaris et de corsaires, Paris 1649; J. Morgan, Histoire des Étals barbaresques qui exercent la pirateris. Paris 1757; L. de Mas-Latrie, Relations et commerce de l'Afrique zeptentrionale avec les nations chrétiennes au moyen age, Paris 1886; S. Lane Poole, The Barbary corsairs, London 1890; P. Gossee, The history of piracy, London 1932 (Fr. 18. P. Teillac, Histoire de la piraterie, Paris 1933, and edn., 1952); Ch. Pena, Les captifs français du Maroc au XVIIº siècle, Rabat 1944; G. Marçais, La Berberie nuesulmane et l'Orient au moyen age, Paris 1946, 225-8; I. de las Cagigas, La cuestión del corso y de la pirateria berberisca en el Mediterraneo, in Curso de conferencias sobre la política africana de los reyes catolicos, i, Madrid 1951, 127-49. (CRL PELLAT)

ii. In Turkith waters

Within a decade of the Saldjük victory at Manzikert (Malazgird (q.v.)) in 463/2072, the Turkish invaders had extended their raids to the Asgean. In 474/1081, or shortly afterwards, the Turks of Nicaea (Iznik [q.v.]) constructed | fleet at Kios (Gemlik (g.v.]), possibly for the transport of troops. However, the Bysantine Emperor, Alexios I Comnenos, burned it before it could put to sea. A more formidable Turkish maritime force appeared in 481-2/1088-9, when a Turkish chieftain called Tzachas (this name is probably a Greek form of Caka), with the aid of a Smyrniot Greek, built a fleet at Smyrna (Izmir [q.v.]), which harried the Aegean coast of Asia Minor. from Smyran to Adramyttion (Edremit [q.n.]) and captured the neighbouring Islands of Chios (Sakiz), Lesbos (Mytilene), Samos (Susani), and possibly some other islands. The unexpected appearance of Tzachas, so soon after the Byzantine destruction of Arab pirate bases in Cilicia, led to the construction of m new fleet at Constantinople im 484/1091, and the expulsion of Tzachas from the islands, His rival, the Saldiük Kille Arslan, poisoned him in 489/1096.

After the defeat of Tzachas, Alexios I ale able to recapture the coastlands just to the Turkish invaders and built a number of coastal fortresses between Abydos (near Canak kata [q.o.]) and Syria. Muslim corsairs did not disturb Byzantine waters again until the last quarter of the 6th/12th century, when Arab pirates reappeared in the eastern Mediterranean. This does not mean that piracy in general diminished. In fact, it increased with the growth of commerce in the Levant following the Crusades. A pattern arose of professional pirates to the Aegean and Mediterranean finding employment in the Byzantine and other fleets. The same phenomenon was to occur with the

growth of Turkish fleets.

The Latin occupation of Constantinople in 602/2204 did nothing to prevent piracy, despite the presence of Venetian fleets in the Aegean. In 633/1236, the Despot Manuel of Epiros could claim that pirates made the sea too dangerous for his bishops to from Greece to the Laskarid capital at Nicaea. The Latin conquest seems merely to have increased the number of Latin pirates, such as the Lombard Licario, who was to serve Michael VIII Palaiologos - Admiral after the Byzantine recapture of Constantinople in 659/1261. Muslims, however, were not In evidence. The Laskarid administration effectively fortified the boundaries with the Saldjüks in Asia Minor, preventing the Muslim access to the Aegean coast. ibn Bibl [q.v.] refers to an amir-i samahil, possibly commanding Saldjilk vessels in the Mediterranean, but there are no further references to Muslim maritime activity.

Despite Michael VIII's construction of a powerful Byzantino fleet after 659/1261, his reign saw the foundation of Turkish naval power in the Aegean. Pro-occupied with regaining Byzantine territories in the west and warding off the threat of Angevin invasion, Michael neglected his eastern frontier. Turkish raids and settlements followed and, in the 5th/12th century, the invaders soon took to the sea. Already in 676-7/1278, there are records of pirates, including the obviously Muslim "Saladinus" at Ania to to south of Ephesus. In 681-3/1284, Michael VIII's successor, Andronikos II Palaiologos, disbanded his father's fleet, which he evidently regarded m an unnecessary expense after the removal of the Angevin threat. The results were disastrous. Not only were the seas unprotected against burgeoning Turkish piracy, but unemployed Greek sailors now defected to the Turks. After 682-3/1284, Turkish sea-raids extended to the Cyclades and meet into the Sea of Marmara and Black Sea. By 700/1300, the Turks had occupied the Aegean coast and, according to the Catalan Muntaner, were pillaging Chios and the surrounding islands.

It was these years in the late 7th/13th and early 8th/14th centuries that saw the establishment of the Turkish emirates in the Aegean coast. Since these states sheltered corsairs and used their own vessels simply to collect booty by harrying foreign settlements or commerce, rather than to protect trade or acquire new lands, they may be described as "piratestates". The most notorious was Aydin [see Aydinoghil), especially in the days of Umur Pasha [q.v.] but ships from other maritime emirates of Menteshe, Sarukhan and Karasi [q.vv.] also engaged in sea-borne raids. In the Black Sea, Ghazi Celebi (d. ca. 724/ #324?) established an emirate around Sinop [g.v.], whence he made raids on Genoese and Trapezuntine commerce and settlements. The Ottomans do not seem immediately to have taken to the sea as corsairs. When Orkhan [q.e.] gave lands to Kara Mirsel after the conquest of Nicomaedia (Iznikmid, Izmit [q.v.]) in 1737/1337, his purpose appears to have been to protect the shores of the Gulf of Izmit against Byzantlae raids.

During the 8th/14th century, Turkish raids became a feature of life in the Aegean. In 718/1318, corsairs from the mainland of Anatolia ravaged Santorin, and in 726/1326 Marino Sanudo reported how the Turks infested the Cyclades, their attacks made easier by the disunity among the Latin Lords of the islands. in 739/1328-9, Umbr of Aydin occupied the harbour of Smyrna and began his attacks on Christian ships and on Islands and territories in the Aegean and mainland Greece. In 736/1335, however, he signed an agreement with Andronikos III Palaiologos not to attack Byzantine shipping. It was possibly in part to compensate them for loss of booty that Andronikos employed Umur's troops mercenaries in Albania. With the death of Andronikos III in 742/1341, Umur again began to raid throughout the Aegean and, between 742/1341 and 745/1344, intervened in the Byzantine civil war on behalf of his friend and ally John Cantacuzene.

KURSĀN

Piracy particularly affected Venetian and other Latin commerce. In 732/1331, Venice had imposed . treaty on the Catalans of Athens, forbidding them to help or employ Turkish corsairs, although this did not prevent the Catalans calling on Umur to defend the Duchy of Athens against the claims of Gautier de Brienne. The activities of Umur and other Muslim corsairs eventually led Pope John XXII to assemble milest under the command of the Venetian Pietro Zento which Venice, the Papacy, France and the Knights of St. John contributed vessels. This force did much damage to the Turkish corsairs and defeated the fleet of Yakhshi Beg of Karasi in the Guif of Edremit in 735/1334. However, it disbanded after the death of Pope John in the same year, and piracy continued as before. More effective was the Latin occupation of the port of Smyrna in 745/1344, and the death of Umur in 746/1348, after which Khldr of Aydla signed a treaty with the Latins, according to which he undertook to burn all the ships in the emirate, forbid all acts of piracy and offer no help to corsairs. Largescale raids may have ceased, but in a letter dated 751/1350 the Dodge Andrea Dandolo indicated that Turks from Aydia continued to attack Christian shipping. Piracy based on other emirates seems also to have flourished. After 671-2/1360, Ahmed Ghazl of Mentashe prayed on shipping between Cyprus and Rhodes

Ottoman raiders began to appear on the Aegean im the 1900s. They seem to have infested the Sea of Marmara considerably earlier, leading the Emperor John VI Cantacurene to clear the old harbour of Heptaskalon in Constantinople some time after 750/1349, as m base against Turkish pirates. The annexation by Bayezid I [g.v.] of Sarukhan, Aydin and Menteshe brought the western Aegean shoreline under Ottoman control by the 1390s. With Bayezid's construction of an arsenal at Gallipoli, the Ottomans were able to build sizeable fleets. In 793/1391 an Ottoman fleet of 60 vessels ravaged Chios, the Cyclades and the coasts of Enboea (Negroponte, Ighribox) and Attica. To meet this new threat, Venice aliotted a fleet to Francesco I Crispo of Naxos.

The defeat of Bayezid by Timur in 804/1402 and the subsequent restoration of the extrates put an end to the depredations of an Ottoman fleet under the Sultan's auspices, but did not otherwise prevent piracy. In 806/1403, the restored ruler of Menteshe, Ilyas Beg, signed a treaty with Venice in which he undertook to prevent acts of piracy. He was evidently unsuccessful, since in 813/1410 - Venetian fleet appeared off the ports of the emirate as a forceful reminder of the beg to adhere to the terms of the treaty. It made no difference. In 819/1416 vessels from Ottoman territory raided the Cyclades and, at about this time, the Florentine Buondelmonti reported Turkish raids on all the Aegean islands except Patmos. Perhaps the shared reverence for the shrines of certain saints, such as St. George of Levitha, called Koč Papas or Koč Baba in Turkish, led the Turks to leave the monks of Patmos in peace. Piracy remained endemic throughout the oth/15th century, and measures such as the imposition of direct rule on the Venetian Duchy of Naxos in 899/1494 only temporarily deterred the corsair floots of Kara Hasan and others.

There were, however, significant changes in the Aegean in the late 9th/15th and 10th/16th centuries. Under Mehemmed II and his successors, the Ottoman fleet became an instrument of conquest and a weapon of imperial polloy rather than simply prirate fleet of the Sultan. Mehemmed II's fleet, for example,

played an important part in the conquests of Constantinople in 857/1453. Sinop, Trebizond (Trabzon [a.v.]), and Leshos (Midilif) in 865-7/1461-2 and Euboea in 575/1470. Under his successor Bavezid II. Ottoman fleets appeared in the Ionian Sea during the war with Venice between qualitage and qualitage. As the frontiers of naval warfare moved south and westwards from the Aegean, Turkish pirates such as the famous Kemāl Relis [a.v.] extended their activities to North Africa and the western Mediterranean. By 947/1540 most of the Aegean coasts and islands were Ottoman possessions, and the odd exceptions such as the Venetian Timos (Istindin) and the Genoese Chios, which in any case fell to the Ottomans in 974/1566, did not threaten Turkish hegemony in the агеа.

The Aegean was now an Ottoman sea and the Sultan had wish to encourage piracy in his own waters. The Ottoman government attempted to control the activities of corsairs, forbidding the construction of privateer vessels without special permission. In 967/2560, the hadi of lanikmid received instructions to seize an illegally-constructed ship; whereas in 972/2563, the levends [q.v.] of Rhodes (Rodos [g.r.]) and Menteshe were encouraged to build ships and serve in the Imperial Fleet. The squadrons permanently based in the Aegean at Kavalla, Lesbos and Rhodes presumably guarded the seas against pirates as much as against enemy action. In the 990s/ 1580s Mustafā 'All of Gallfooli or Gelibolu [0.v.] looked back with nostalgia to the mid-century when the Imperial Fleets kept the sea free of corsairs.

It is, however, most unlikely that Muslim pirates ever disappeared from the Aegean. The western shores of Anatolia seem, in fact, in the roth/r6th century to have been a forcing ground for pirates who, after acquiring sufficient ships and booty in their native waters emigrated to Algiers (al-Diazalir [q.v.]), or later to Tripoli (Tarabulus al-Gharb [q.v.]] or Tunis [q.v.], where their raids on non-Ottoman Christian shipping changed them, in Ottoman eyes, from pirates to warriors of the faith. The famous Khayr al-Din Barbarossa [q.u.] and Salih Re's of Algiers, for example, originated from the west coast of Anatolia, found fame in North Africa and, like many lesser known corsairs, later served in the Ottoman Imperial Fleet, Mustafa 'All specifies Kazdagh! in particular as an area from which many North African pirates originated.

In the late 10th/16th century, piracy man to have increased throughout the Mediterranean, and the Aegean too was affected. It is most likely that the disorders in Anatolia in this period found their

counterpart on the sea.

Bibliography: There are no modern studies of Turkish pirates in the Aegean. The only coherent account, relating to the 16th century only, appears to be Gelibolulu Mustafā 'Ali, Mewa'id ill-nefa'is Ji kawa^cid ül-medjälis, facs. edition, Istanbul 1956, 54-9. For Tzachas, see The Alexiad, Books VII, VIII, IX, XI, and A. N. Kurat, Coha Boy, Ankara 1966. There are scattered references to piracy in Pachymeres, De Michaels el Andronico Palaiologia, ed. iii. In the Persian Gulf

Piracy has been endemic in the Persian Gulf since ancient times, which is hardly to be wondered at in view of the poverty, until very recently, of the peoples dwelling around its shores and the richness of the commerce which has at various periods passed through its waters. Piracy has flourished most in time of war or in its wake, when authority has broken down and the predatory instincts of the maritime tribes have been given full rein. Thus, for example, the Karmatian revolt, the Mongol invasions and the collapse of the Abbäsid caliphate were all accompanied or followed by maritime depredations on an extensive scale.

To all intents and purposes, piracy in the Gull was indistinguishable from maritime warfare, which in turn originated in political, dynastic, sectarian or racial conflict among the littoral principalities. Hostilities at were apt to degenerate swiftly into the indiscriminate plunder of any and all shipping, not only in **Gull** but in the adjacent seas also. Such was the with the first great piratical campaign modern times, that waged by the sealaring tribes of 'Uman against the trade and shipping of the Gulf, the Arabian Sea and the western indian Ocean in the late 11th/17th century. After the expulsion of the Portuguese from Maskat, Suhar and their other footholds on the Umani coast by the Ya'rubl imam, Sultan b. Sayl (1059-90/1649-79), the Umanis pursued their vendettu against the Portuguese by attacking and plundering their shipping and their settlements on the coasts of India, Persia and Rast Africa. Under Sulțăn b. Sayf's successors, and especially the fourth Yatrubi inidm, Sayi b. Sultan (ca. 1103-23/2692-1711), 'Uman became a formidable maritime power; and commonsurate with the increase in her naval strength the scope of her marauding activities widehed to embrace vessels under any flag wherever they might be encountered. The depredations of the Maskat and 'Umani pirates only ceased when civil strife broke out in 'Uman over the succession to the Ibadi imamate following the death of the Ya'rubi imam, Sultan II b. Sayf, in 1131/1718-19.

A wave of piracy followed the Afghan incursions into Persia in the 11305/1720s and again after the death of Nadir Shah in 1160/1747. On both occasions, during the height of the 'Uman' piratical campaigus, some of the chief sufferers were the Europeant trading establishments on the Persian coast. The most notorious pirate of the 12th/18th century was Mir Muhanna b. Nash of Bandar Rig, whose family, an oif-shoot of the Za'ab tribe dwelling on the south-

ern shore of the Gulf, had migrated to the Persian coast earlier in the century, intermarried with Perslans, espoused Shi'lism and settled at Bandar Rig. While still a youth Mir Muhanna had helped contrive the murder of his father, and when his mother reproached him with his crime he slew her in a fit of rage. He likewise put to death his two sisters for receiving offers of marriage, and exposed his firstborn child, a daughter, to die on the seashore. The greatest triumph of Mir Muhanna's career was the capture and destruction of the Dutch trading settlement on Kharg or Khark I island (see Kharag) in Radiab 1179/December 1765-January 1766. Eighteen months later he despoiled the Maskat coffee fleet on its way to Başra in the of 1181/1767. It was bls finel coup. Driven from Bandar Rig by his own people, who had finally sickened of his monstrous cruelties, he sought rafuge in Dhu 'l-Ka'da (182) March 1769 at Basra, where he was unceremoniously put to death by the Ottoman mittesellim.

An outbreak of piracy by the KaD of the lower Karûn followed the siege and capture of Başra by the Persians in 1189-90/1775-6. A far serious upsurge, however, was that which occurred after the death of Karim Khan Zand [q.v.] in 1193/1779. The coastal tribes of Fars, most of whom were of Arab descent, threw off the authority of Shiraz and became I law unto themselves, plundering any vessels that within their reach. Their depredations shortly to be overshadowed by those of the Kasimi tribal confederacy [see AL-KAWASIN] of Shardia (al-Sharika) and Ra's al-Khayma [q.vv.], who took advantage of the disturbed state of Persia to reestablish themselves at Linga [g.m.] (which they had first selzed after the death of Nadir Shah and from which they had been expelled by Karlm Khan in 1179/1765) and 🖼 prey upon shipping—European and Indian as well as Arab and Persian-off the Persian coast and in the Straits of Hurmuz.

Part of the impulse for the Kawasim's marauding derived from their persistent quarrel with the Al Bu Said rulers of Uman, a quarrel which in the last two decades of the 18th century came to focus upon control of the stretch of coast to the north of Şuhâr, which the Kawasim endeavoured—with some success-to wrost from the Al Bu Sa'ld with the object of commanding the approaches to the Gulf and waylaying vessels passing through the Straits of Hurmuz, It was largely the exploits of the Kawasim that were responsible for the southern shore of the Gulf, from Rams to Dubayy, becoming known to European mariners in these years as "the Pirate Coast". A new twist, and added strength, was given to the Kawasim's piratical activities, and to their foud with the Al Bu Sa9d, by the assertion by the Wahhahis of Nadid of an ascendancy over the Pirate Coast in the first decade of the right century. The conversion of the Kavasim and other maritime tribes to the Wahhābi practice of Islam injected an element of fanaticism into their piratical forays, me that the campaign of depredation that ensued took = the character of a seaborne djihād.

The Käsimi war fleet, operating with Wahhābī encouragement, if not under actual Wahhābī direction, was rackoned in 1223/1808 to number some 70-80 targe dhows; Ill fishing and pearling vessels were included, the Kāsimi confederacy's total strength was said to exceed 800 vessels manned by 18,000-25,000 fighting men. [Another estimate, made in 1233/1818, put the resources of the Arabian maritime tribes at 89 large dhows and 161 smaller craft, manned by 10,000 fighting men.] Controlling Linga and part of

Kishm Island, and with bases at Khawr Fakkan, Dibba and Khawr Kaiba, facing the Gulf of 'Uman. the Kawasim were able to strike at will at any ships entering or leaving the Straits of Hurmuz, Often they would lie concealed, waiting for their prey, in the deep winding inlets of Khawr al-Sharm (Elphinstone's Inlet) and Ghubbat 'All (Malcom's Inlet) on the western and eastern sides respectively of the Musandam peninsula (Ra's al-Dibal), the existence of which was not known to European seamen until the first survey of the Gulf was undertaken by the Bombay Marine (the armed maritime service of the English East India Company) after 1235-6/1820. Hence the Kawasim were able on a number of to clude pursuit by the cruisers of the Bombay Marine by slipping into these hidden anchorages.

With the passage of time the Kawasim grew bolder, ranging as far afield as the coasts of Kutch and Kathiawar, the ports of the Hadramawi and the lower reaches of the Red Sea. They sailed in squadrons of up to twenty dhows, taking their prizes by closing stongside, grappling and boarding. As often as not they would put the entire orew of a captured vessel to the sword-generally amid clamorous avowals of religious fervour. Women, children and slaves taken captive were afterwards either distributed among their captors or, in the case of the first two, held for later ransom. A fifth of all booty taken was reserved for eventual consignment to the Satudi intens at Dirfiyya [q.v.], the Wahhabi capital. A good portion of the remainder was customarily disposed of Bahrayn, which served as the principal clearinghouse for the proceeds of Kasimi piracy.

After the capture of a number of European and Indian ships by the Kawasim the British authorities in India dispatched m expedition to attack Ra's al-Khayma, Linga and the Kasimi outposts on Kishm I, and at Shinas, on the Umani coast, in the autumn and winter of 1809-ro (Shashan-Dhu 'l-Hididjah 2224). The expedition had only partial success in crippling the Kawasim's naval capabilities. Many Kāsimi dhows were absent from their home ports piratical or trading voyages, while others had been hidden, after word of the expedition's objectives had leaked out ahead of its sailing, in the inlets of the Ra's al-Dibal. The expedition's commanders were also inhibited by the orders given them not to cross swords with the Wahhabi ruler. A second expedition, dispatched in the winter of 1819-20 (Muharram-Djumādā I, 1235), after the defeat of the Wahhābis and the destruction of Dirsiyya by Ibrahlm Pasha previous year, was far more effective in subduing the Kawasim. Ra's al-Khayma and the other piratical ports were reduced, the Käsiml war fleet was burned or prized, and the Käsimi chieftains, along with the other principal staybis of Ti Pirate Coast, were made to subscribe to a treaty (the General Treaty of Peace of Rabit I, 1235/January 1820) outlawing piracy for mer.

Neither the expedition of 1809-to nor that of 1819-to had attempted to bring to book the man who was undoubtedly the most reckless and ferocious free-booter in the Gulf in the entire 19th century—Rahma b. Djähir, head of the Ål Djähilma branch of the Utüb, whose base for more than thirty years was located at Khawr Hasan in north-western Katar [q.v.]. Rahma's blood-stained career had its origins in his falling out with the Al Khalifa of Bahrayn [q.v.] over the division of the spoils from their joint conquest of the island in 1197/1783. From that time until the end of his life he conducted unarelecting

of attrition, marked as much by fierce during as by atrocious cruelty, against the trade and shipping of the Ål Khalifa and their kinsmen, the Ål Şabab of Kuwayt. His most remarkable single feat was his capture in Dhu 'l-Katda 1224/December 1800 of twenty large Kuwayti dhows, whose crews he massacred to a man. He escaped the attentions of the British expeditionary force at that time in the lower Gulf, partly because of confusion over his status (he was a Wahhābī protēgē) but mainly because his stronghold at Khawr Hasan was deemed too difficult of access to attack from the min Some time later (in 1227/1312 or 1231/1818—the accounts vary) he fell out with the Wahhabis and was forced to abandon Khawr Hasan. He established a new lair in 1234/inte tõis, after the Wahhābi collapse, at Dammām, 🚃 the Hasa coast, from which he continued to harry the seaborne commerce
Bahrayn.

Rahma b. Djabir was again spared retribution at the hands of the British expedition of 1819-20, less because he had now assumed the guise of Persian dependant than because his vendetta against the Al Khalifa, however, brutally it might be conducted, was reluctantly conceded to come within the category of legitimate warfare and not that of piracy. As a consequence of the improved security established by the British expedition and the subsequent system of "watch and cruise" operated by the Bombay Marine, Rabma b. <u>Di</u>ábir's fortunes steadily declined, until by 1741-2/1826 his fleet has been reduced to a single dhow. Now seventy years of age and totally blind, he had his last fight with the Al Khalifa war fleet off Dammām in Diumāds II, 1223/December 1826-January 1827. Surrounded and outnumbered, 🖿 calmly set fire to the magazine of his ship and blew her, himself and everyone aboard to the gates of Paradise.

The last serious piratical outbreak in the Gulf occurred in Shawwal-Dhu 'l-Hididia 1250/February-April 1835, when the Banu Yas of Abu Dhabi (Abu Zabi), hitherto little given to piracy, made a wholesale attempt upon the trade of the Gulf | desperate bid to recoup their economic fortunes, which had been severely depressed by prolonged wartare with the Kawasim and the loss of the annual pearl fishery for several years running. Brought action off the Tunbs by the Bombay Marine sloop Elphinsions on 18 Dhu I-Hididia 1250/16 April 1835, the Bana Yas war fleet was outlought and scattered. The following month British political resident II the Gulf, Captain Samuel Hennell, persuaded the rulers of Abb Ithabi, Shardia, Ra's al-Khayma, Dubayy and 'Adiman to agree to a suspension of hostilities at sea among themselves for the duration of the coming pearling season. The maritime truce signed = 22 Muharram 1251/21 May 1835 ran for a period of six months, to 29 Radjab 1251/21 November 1835. It was renewed every spring for the next seven years, being gradually extended in length to cover the full twelve months of the year. In 1259/1843 it was renewed for a ten-year period, at the expiry of which it was made permanent, in a treaty signed by the principal Trucial Shayahs on 25 Radiab 1269/4 May 1853. Though isolated outbreaks of piracy were to occur at intervals up to this century, notably in the narrow waters between Bahrayn and the Hasa coast, the institution and consolidation of the trucial system brought to end the great age of piracy in the history of the Gulf.

KURSI, an Arabic word borrowed from Aramaic (Syriac form husseys), in Hebrew: hissi; see Th. Nöldeke, Mandäische Grammatik, 128; Fraenkel, De vocabulis peregrinis, 22; L. Koehler, W. Baumgarten, Lexicon in Veteris Testamenti libros, 446) which can signify seat, in a very general sense (chair, couch, throne, stool, bench). In the daily life of modiaeval Muslims it refers more specifically to a stool (i.e. seat without back or arm-rests), and there a number of other terms which are applied to a throne

(sarir and takht, for example).

Kursi is found on two occasions in the Kursan (II, 256, XXXVIII, 33), and the commentators (al-Tabarl, Diami' al-bayan, Cairo 2323, iii, 7; al-Zamakhshari, al-Kashshaf, Calcutta 1856, i, 170; Ibn al-Djawzi, Zad, Cairo 1964, i, 304; al-Baydawi, Anuae, Leipzig 1846, i, 139; Ibn Kathir, Tafsir, Cairo 1952, i, 309-310; al-Suyūtī, Tafsīr al-Djalālayu, Beirut 1969, 56; sl-Kāsinī, Mahāsin, Cairo 1957, iii, 659-67) tend to accord it the sense of throne, since its function (in the first verse, the throne of God which encompasses both Heaven and Earth, in the second, the throne of King Solomon) is to bestow a particular majesty it the one who sits there. In opposition to an apparently anthropomorphic concept of God "sitting" on a seat, another explanation has been put forward according to which, of the seven heavens encircling in universe, the two furthest from the globe will be carsi (see below) and kursi (the commentators and the Rasa'il Ikhwan al-safa', Cairo 1929, ii, 22; Iba Sina, Risdial al-Arsh, Ms. Nuruosmaniye 4894, fol. 494 b -495 b). Kursi (in the Kur'an) need not therefore indicate a seat in the usual sense 🖿 the word. There are other interpretations of the term, some allegorical (kursī = | | | absolute knowledge of God, or his kingdom), some literal, for example: 'argh (Kur'an, XVII, 44; XL, 25; XLIII, 82; LXXXI, 20;) = throne of God, while hursi = footstool, a bench set before the throne. This throne of God has been an object of debate among theologians [A. J. Wensinck, The Muslim creed, 67, 90, 93, 115 and especially 148, concerning 'arsh and kursi). The rite of a certain Shiff sect, at an early period in Muslim history, attributed a particular sanctity to an empty hers! (al-Baladhurf, Ansāb, ed. S. D. Goitein, vi, 242; J. Wellhausen, Die religios-politischen Oppositionsparteien, 85).

The distinction between throne ('arch) and footstool (hursi) probably reflects the tendency of mediaeval Muslims to indicate by means of the term hursi all kinds of supports; the word mirfe', which, among other usages (including that of footstool!) indicates an ink-stand and the base of the small oriental table, may be replaced, in certain texts, by hursi [J. Sadan, Lo mobilier as Procee-Orient middled, Leiden 1976, 91-4]. To this meaning of "support", that of "lectern"

should also be added. Many examples, designed to support copies of the Kur'an (with straight or crossed legs) adorn mosques and me to be found in various museums (ibid., 124-5, n. 470; J. A. Jaussen, in Mélanges Maspero, iii, 29-23 and especially O. Kurz, in Islamic art in the Metropolitan Museum, ed. R. Ettinghausen, 299-314). The term tends thus to become loaded (especially in colloquial speech) with senses which, in richer and more exact terminology, are covered by distinct terms. Among the other objects designated by kurst the following are examples: a support (stool) on which the turban is deposited during the night (Dozy, Suppl. ii, 455-6); # chair of particular design used by women in childbirth (ibid.); a stool for daily ablutions (al-Tanükhl, al-Mustudjad, 108); in mediaeval Egypt, a seat for flour sellers (Maimonides, Teharot, ed. Derenbourg, i, 237); astrolabe-stand (Dozy, loc. cit.); a slab into which a pointed instrument in implanted, through the base (ibid.); in Mecca, a kind of moving ladder (or staircase) near the Karba (ibid.); among the Persians, a kind of stove (a low "table", under which a fire is fit; blankets are laid on this table and than wrapped round the knees to provide warmth, ibid.); the base of a column, pedestal (Beaussier, s.v.); a plate supporting the powder compartment and percussion mechanism of the flint-lock rifle (ibid.); in Spain, small pieces of silver or gold worn by women in their collars and known in Spanish as corci (Dozy-Engelmann, Glossaire des mots espaçuois, 93); hursi is the seat of a bishop, his see, diocese etc. (Dozy, Suppl., loc. cit.); in orthography, each of the characters (alif, waw, ya") on (or under) which the kamza is placed; in calligraphy, a kind of embellishment in square form (Huart, Calligraphes, 352).

In certain miniatures illustrating an Arabic astronomical work, which represent dhat al-kurst (Cassiopeia) in the form of a woman scated on a chair with back and arm-rests, we find the shape of a genuinely "classical" chair [E. Welless, in Art Orientalis, iii, 8-9 and figs. 6, 44, 47, 51), which, copied from one manuscript to another, tends to become modified to the point where it is adapted to the mediaeval Muslim concept (Sadan, op. cit., 125-6). In general, the kursi is nothing were than a stool. But, surrounded by other lower seats (cushions for example), such a stool can draw attention to the person who is seated there (see the dimensions indicated by M. D. Lutli in Sumer, xvi, 129-30, in the Arabic section, unless it is lecterns that are in question). These knowi-stools were of various heights. Some had straight legs, others crossed legs (they are illustrated by a rich iconography, as well as by texts: O. Kurz, joc. cit.; Sadan, op. cit., 123-33). In the modern period, hurst is also applied to various chairs of

Bibliography: given in the article.

western-style" form.

(CL. HUART - [J. SADAM])

KURTURA, Spanish Córdosa, French Cordour,
English, Italian and German Cordova (Kordova),
Latin Corduna, a town of southern Spain
situated at 370 feet above sea-level on the right
(north) bank of the central course of the Guadalquivir
(from the Arabic al-Wädl al-Kabir "the great river"),
the ancient Bactis, with 1,234,000 inhabitants, is at
the present day the capital of the province of the
same name which lies on both sides of the river in
the heart of Andalusia.

The southern and smaller half of the province, practically the famous La Campiña [see Kambanta], rising in the south-east to a beight of over 1,200 feet, is more level, hot and fertile, being especially devoted

510 KURTUBA

to viniculture, while the northern, larger half which begins in the Sierra de Córdoba immediately to the north of the town, rises to heights was 2,900 feet high in the central Sierra Morena (Mariani Montes) with the plateau of los Padroches which inclines in northerly direction to the Zujar valley in the west and the Guadalmez valley in the east; this plateau is called I klim al-Baldinja by al-Idrisl and by others Fals al-Ballat "Field of Oaks", and in it lies the little town of Pedroche, known to the Arabs as Bitrawdi or Bitrush (whence al-Bitrudi) (q.e.)). The north has a more temperate climate and includes great stretches of hill country, suited for sheep and horse breeding (caballos cordobeses) and rich deposits of coal and minerals. The name Córdoba has frequently been explained as from the Phoenician-Punic 7210 57P. "good town" since Conde first suggested this etymology in his Descripcion de España de Xerif Aledris, Madrid 1799, 161 (for even rasher etymologies, see Madoz, vi, 646 and al-Makkart, i, 355). The name is certainly not Semitic but Old Iberian (cf. Salduba, the Old Iberian name for Caesar-Augusta, whence Saragossa, Zaragoza; there is a Salduba = Marbella in the south between Málaga and Gibraltar). After the Second Punic war it became known as an Important and wealthy commercial city (ass Cordubense) under the name Κορδύβη or Κορδυβά or Corduba. It was finally taken for Rome by C. Marcellus in 152 B.C., colonised with Roman citizens and as Colonia Patricia raised to be the capital of the Provincia of Hispania Ulterior. As Cordoba had taken the side of Pompey, it was severely punished by Caesar after the battle of Munda in 49 B.C., but in Imperial times it remained the capital of the province (it was the home of the two Senecas and Lucan) alternately with Hispalis (Seville) and Italica (later the Arabic Taliba).

Towards the second decade of the 5th century A.D., Cordova was devastated when the Vandals morphered Baetica in route for North Africa. In 554 it passed to the Byzantines, who had come into the Iberian peninsula to help King Athanagild of the Visigoths, and the Greeks spread all through southern Spain. They probably took upon themselves the rebuilding of the limit protective wall of the Roman wrbs quadrals and the enlargement of this enceinte in a southwards direction, in far as the northern bank of the river. In 57t, King Leovigild, Athanagild's successor, recovered it from the Byzantines; but although it was in episcopal see, it remained a place of no importance under the Visigothic domination.

At the time of the Muslim conquest of Spain, Cordova was leading a precarious existence; its protective enceinte was partially ruinous on the west side, and a heavy surge in the river's height had destroyed its bridge. The freedman Mughith al-Rüml. lieutenant of Tarili b. Ziyad, occupied the town without resistance in Shawwal 92/July-August 711, and three months later, in Muharram 93/October-November 711, the fortified church of San Acislo to the south-west of Cordova, where 400 knights of the Cordovan nobility had held out against the invaders, surrendered to al-Mughith; he treated the Cordovan citizens with clemency and entrusted the guarding of the town to the Jews. The governor al-Hurr b. 'Abd al-Rahman al-Thakail transferred the capital of al-Andalus from Seville to Cordova (97-200/716-19). His successor, the governor al-Samb b. Mālik al-Khawlanf (100-2/719-21) restored the old Roman bridge and the ruinous part of the protective enceinte, and he founded the first Muslim cemetery of the town, sc. the Makbarat at Rabad or "Cometery of the Suburb" the northern bank of the river. In sa. 133/750, the

governor Yūsul b. 'Abd al-Rahmān al-Fihrī expropriated the church of San Vicente, where he established the first cathedral mosque (al-Djāmi') in Cordova. This governor (x29.38/747-56) was overthrown by the Umayyad prince 'Abd al-Rahmān I b. Mu'āwiya al-Dākhil [q.v.], the only Umayyad who had escaped from the manual of his house in Syria; the great period of prospectity of the city now began, and lasted throughout the Umayyad dynasty [q.v.] of Cordova, which was independent of the 'Abbāsids in Baghdād (138-403 or 422/756-2013 or 1031).

This incomparable period of splendour of the western rival of Baghdad, the city of the caliphs, is uniquely perpetuated in the great mosque lying just in front of the lofty ancient Moorish bridgehead, the Christian fortress-tower of La Calaborra (Arabicised from the Iberian Calagurris), the Kaba of the west; although, at the reconquest in 1236, it became a Christian cathedral and was disfigured by alterations. it has on the whole faithfully retained its Arabic character with its forest of pillars, its outer court (Patio de los Naranjos), the wall which encircles it as if it were a fortress or monastery, and the bell-tower, which is a work of the 16th century constructed from the remains of the ath/roth century Arab minaret. Also, the name of La Mezquita or "The Mosque" has remained the popular one for this building. However, all the other splendid buildings and monuments of this world-lamed period of splendour in the early middle ages have disappeared except for a few wretched fragments. When the shrewd 'Abd al-Rabman I had laid the foundations for the supremacy of his dynasty in circumstances of exceptional difficulty, by attaining some success in putting a stop to the rivalries and quarrels of not only the Arabs of North and South but also between them and the Berbers of North Africa, the Spanish renegades and the Mezarabs who remained a constant weakness to Arab rule in Spain and brought about its ultimate fall, he began the building of the great mosque in the last two years of his life 171-2/787-8. His son and successor Higham I (172-80/788-06) completed it, and built the minaret (often called in Spain samma's and mandr = manara), but 'Abd al-Rahman II (206-38/ 822-52), son and successor of the Amir al-Hakam I (180-206/796-822), found himself forced to enlarge the building; by extending the 11 naves southwards he added 7 transepts with 10 rows of pillars and built the second milital into the south wall, where was later constructed the chapel of Nuestra Señora de Villaviciosa (833-48), while his son and successor Muhammad I (238-73/852-86) had in 852-6 thoroughly to overhaul the older building, which had been too hurriedly put up; he devoted particular attention to the decoration of the doors and walls, railed off the maksara reserved for IIII A mir and the court in front of the sugrab by a wooden screen and built a covered passage (sābāļ) from Alcāzar, the palace to the west of the mosque, to provide a direct and private entrance to the makeura at the daily prayers. 'Abd al-Rahman III, al-Nășir (300-50/912-61) [q.n.] who marks the zenith of the Arab epoch in Spain, rebuilt the minaret, which had been severely damaged by the earthquake of 880, in splendid lashion. He enlarged the sales or courtyard in a northerly direction, demolished the ancient sames's and built another one, the forerunner of the great Hispano-Moorish minarets of the 6th/seth century, which support an actual bell hidden behind a stone revetment. It was this same prince who was the builder of the celebrated country estate Madinat al-Zahra' (now called Cordoba la Vinja) for his beloved al-Zahra', one-and-a-half hours' journey north-west of Cordova at the foot of the Sierra (cf. al-Makkari, i, 344 ff.). In 1853, Pedro de Madrazo identified the remains of this town, and in 1923 the whole of its enceinte was declared a national monument; since then, excavations have restored some of the spleadours of the great caliph al-Nasir's creation, and especially, the great hall called the "Salon Rico", which is at present to a considerable extent restored. The most beautiful extension of the mosque proper (almost doubling it) was carried out by the learned and scholarly callph al-Hakam al-Mustansir billah (350-66/961-76), son and successor of the great "Abd al-Rahman III, who ordered his Prime Minister or Grand Vizier (called kādiib in Spain) Dia ar al-Saklabl to extend the colonnades in the mosque to the south by the addition of r4 transepts, and built a splendid new maksura, a new saba; and the third noble mibrab, which alone has survived in its entirety. The last great extension was made by Hisham II al-Mu'ayyad's (366-99/976-roog) powerful vizier, the regent al-Mansur (Almanzor, d. 302/2002), who added seven colonnades to the whole length of the building in the east and thereby raised the total number of naves (previously rr) to 19, but threw the militab out of its proper place at the end of the central axis of the sanctuary (on account of the precipitious slope down to the Guadalquivir it was found impossible to extend the building further to the south). Like al-Zahrā' in the north-west, al-Madīna al-Zāhira ("the flourishing city"), founded to the east of Cordova by al-Mansur to be the seat of the government and its offices, was destroyed in the period of revolution in the beginning of the 5th/11th century and has now quite disappeared.

After the complete extinction of the Umayyads with Higham III al-Mu*tadd (4x8-2z/1027-3t), Cordova became a republic under the presidency of three Diahwarids: Abu 'l-Hazm Diahwar b. Muhammad b. Diahwar (1031-43), Abu 'l-Walid Muhammad (1043-64) and 'Abd al-Malik (1064-70). In the latter year it passed to the 'Abbadids of Seville; in 1091 to the Almoravids, who in \$17/1123 built the protective enteints of the eastern part of the town; and in 1148 to the Almohads. With its conquest by Ferdinand III of Castile in 1236, it was doomed to inevitable decline.

Of the countless Arab scholars who belonged to Cordova, we will only mention here the Hazm (d. 456/1054 [q.v.]), Averroes (the Rushd [q.v.]) (d. 595/1198) and Malmonides (d. 601/1104 [see 1111 MAYMON]).

Bibliography: Makkari devotes m whole book to Cordova, i, 297-462 (apitomised in Gayangos, History of the Mohammedan dynastics in Spain, i. 200-49), though it contains many literary and historical notes referring to other places; Idrisi, L'Afrique et l'Espagne, 1866, 208-14 (Arabic text) = tr. 256-66; Yakut, iv, 58-61; al-Kazwinl, Athor al-biled, 370; Madoz, Discionario geogr. estudist. hist., vi, 646-60; Schack, Poesie und Kunst der Araber in Spanien und Sicilien*, il, 182-224; Contreras, Estudio descriptivo de los monumentos drabes de Granada, Sevilla y Córdoba ó sea La Alhambra, El Alcázor y la gran Mesquita de Occidente, Madrid 1885 (2nd ed. 1878) (with drawings and plans), 40-108; Rodrigo Amador de los Rios, Inscripciones deades de Coedobal, Madrid 1879, 3rd ed. 1892; idem, Una excursión a las ruinas de Medina Az-Zahra in La España Moderna (1. (C. F. SEYBOLD - [M. OCARA JIMENEZ])

AL-KURTUBI, ABO 'ABD ALLER MURAHNAD D. ARMAD S. AST BAKE B. FARADI AL-ANSART AL-Knazrami at-Annalusi, Muslim scholar of the Malik, law school, an export on badtih and wellknown for his commentary on the Kur'an. He is the subject of an article in the Dibadi of Ibn Farhan, which is devoted to biography of the Mālikī fullakā? of Spain and the Maghrib up till the 8th/rath century. He also features in an article in Neft al-th of al-Makkarl. Very little information is known concerning his life. Born in Spain, he was one of those who travelled outside this country (al-Makkari). Al-Dhahabt is said to have written of him: " travelled, he wrote and he took lessons from the masters." In fact, he made his way to the Orient and settled at Munyat Abi 1-Khuşayb in Upper Egypt (Minat Bani Khasīb in the version of Ibn al-Imād, Shadharāt, v. 335); he died and was buried there in 671/1272.

Al-Dhahabi says of him, in his Ta'rith al-Islam, that he was an imam versed in numerous branches of scholarship, an ocean of learning whose works testify to the wealth of his knowledge, the width of his intelligence and his superior worth. Al-Kutubi, in his 'Uyan al-landrith, refers to him in approximately the same terms. But in addition to being a conscientious scholar, he was remembered as a pious man, inclined towards asceticism and towards meditation on the life after death. He appeared in public attired in a single garment and wore a small cap (tahtyya) on his head.

Among his masters, the best known is Abu 'I-'Abbā's Ahmad b. 'Umar al-Kurtubi whose commentary on Muslim, al-Mufkim fi ghath Muslim, he studied. This man was an eminent Maliki fakih, born in Cordova in 578/1173, and died in Alexandria in 656/1259. (He was a teacher of traditions and a foremost expert on the Arabic language. He travelled in the Orient where his reputation became wide-spread. Al-Nawawi quotes in Mufkins in a number of places in his own work.) There is mention of two other masters from whom he learned hadith: the hafi's Abu 'Ali al-Hasan b. Muhammad al-Bakri, and the hafi's Abu 'I-Hasan 'Ali b. Muhammad al-Bakri, and the hafi's Abu 'I-Hasan 'Ali b. Muhammad b. 'Ali b. Haf's al-Yabşubl.

Among his works, his biographers first mention his commentary on the Kur'an intitled ai-Diams' liakkām al-Kur'ān wa 'l-mubayyin li-mā tadammana min al-summa wa-ayat al-furkan. Then they refer to the following titles: al-Assa, on the interpretation of the most beautiful names of God; al-Tadklar fl afdal al-adhkar, where "he followed the pattern of the Tibyan of al-Nawawi, while producing a more complets work and making use of greater learning"; Kitāb al-Tadhkira bi-umūr al-āhķira [see Al-MAHDI]; Shork al-Takaşşî; Kitâb Kam' al-hirş bi 'l-sund wa I-hand's wa-radd dhill al-su'al bi 'l-hutub wa 'Ihafa'a, which Ihn Farhun considers the best example of writing in this genre; and _ Urdj@sa, where the names of the Prophet were brought together. All these titles testify eloquently to the religious preoccupations of al-Kurtubl.

His commentary is of great richness and of great utility. All the authors who have spoken of al-Kurtubi acknowledge it and insist on the benefit which may be derived from it. From the introduction onwards, he puts emphasis on the worth of the Kur'an, on the elevated rank of those who make its "bearers", on the eminence in the eyes of God of those who make an effort (iditiAdd) to derive from it by istinAds teaching which conforms to the matins, that is to say, to that which God wishes to signify: "what is known with certainty by the knows the Book of God, is that he is to reject that which He forbids and to remember that which has been explained to him in this Book, to fear God and stand in awe of Him, to hold himself under His protection, and to abstain from disobeying Him through shame in respect to Him; then he is charged with the burdens of the prophets (fa-innahu humorila a*bà'a "I-rusul) and he must become a witness to the Resurrection before adepts of religions of a different persuasion (milal)." Such is the high estimation lasced by al-Kurtubi on the role of the commentator.

placed by al-Kurtubi on the role of the commentator. The entire Introduction is divided into chapters which constitute a sort of ethic, methodology and theology of the commentary. Attention is drawn to the superior qualities of the Kur'an (fadă'il al-Kur'an) which comes from the light of the essence of God (fa-huza min nür <u>dh</u>ätihi); God gives his servants the strength to bear it (4 lf.). Then (10), al-Kurtubi turns to the manner of reading the Book of God (kayfiyyat al-tilawa li-Kitab Allah) in a chapter which may be compared with that of al-Ghazall in the Itya', intitled Adab kira'ut al-Kur'an; he discusses at length the problem of knowing whether the Kurbanic text may be chanted m set to music: he maintains that it is impious to believe that the Kur'an requires embellishment by the human voice. An important chapter (17) concerns the inward dispositions of men who pursue knowledge of the Kur'an: they must rid themselves of all hypocritical consideration of the self-(takdhir wie al-riya?) and, turning towards God through femba and inaba, attain with self-purification to perfect sincerity (ikhlās). This could be interpreted, account of the opposition of the two terms right? and ikilās, well-known in Sūfism, - a sign of deep mystical piety, and this is confirmed by the passage which follows (20) dealing with that which the soul must observe and not neglect. Then comes a technical chapter (23) on the i'rab of the Kur'an and the effort which must be made to read and recite it correctly. A few more headings may be noted: Value of commentary and commentators (26): That respect for the Book and its sacred character is an obligatory requirement of the reader and of the "bearer" of the Kur'an (27); Against a commentary based on personal point of view (raby) (31); On interpretation (rabyin) of the Book through the summa of the Prophet (37); How to study and understand the Book and the sunna (30); and On the meaning of the saving of the Prophet: "This Kur'an has been revealed according to seven letters" (or readings:) unterla "ala sab"at obruf); "therefore read according to that which is the easiest for you" (41). Particularly interesting is the chapter (40) on the unity (diams) of the parts of the Kur'an; it comprises a precise and concise history of the text, as far as the recension of 'Uthman, with a study of the arrangement (fartib) of the suras and verses (59). After which, al-Kurtubi defines the meaning of the words sura, aya, kalima, karf (65), and be replies to the question in to whether there in the Book words foreign the Arabic language (68), which leads him III speak of the inimitability of the Kur'an (1'djas al-Kur'an) (59), of which he examines ten aspects: 1. the extraordinary stylistic arrangement (al-nasm al-badi'); 2. the method (usiab), different to all those followed by the Arabs; 3, the penetrating eloquence (diazila) which cannot be that of any created being; 4, the information regarding events of the past since the beginning of the world until the revelation given to Muhammad; 5. the power to handle the Arabic language in a way that no Arab has been able to do, which has led to the unanimous consensus on the fact that God "has

placed every word and every letter in its correct place"; here al-Kurtubi refutes the Mu'tazili concept of f'djär; 6, the fulfilment of promises, whether absolute, or accompanied by a condition; 7, information concerning the future; 8, the teaching of skhdm, the permitted and the forbidden constituting the sustenance of all men (kindim djami' al-andm); the sonorous phrases (al-kikam al-bdligha) of which the number and the nobility are beyond the abilities of a human being; and me the coherence (tandsub) between all that is contained in the Book whether of manifest me arcane nature, without any contradiction. The introduction ends with reflections on the intradaction and the basinals.

The commentary of al-Kurtubl is principally distinguished by the recourse to a very great number of hadiths. Many are found here which are not mentioned by al-Tabari and, unlike his eminent predecessor, al-Kustubi is more interested in the content (main) than in the process of transmission. The hadtiles are therefore assembled for the purpose of the reply that they offer to the question raised by the verse under discussion. Above all, the work consists of exegeses designed to clarify the meaning and implication of the Law. On this point, his work approximates to the composition of a treatise of usul and of furil, and it can be understood how Ahmad 'Abil al-'Alfm al-Bardoni, in the preface to the second edition of the Tajstr, should write: "This work is such that the reader can almost dispense with the study of works of fikh."

Al-Kurtubi also devotes considerable space to philological and stylistic commentary, founded on the vast knowledge that he had of the work of grammarians, of works of rhetoric, as well as of books of adab. In addition, there are brief references to the theological ideas of kolām, accompanied by discussion of doctrines. For example, with regard to the verse (11, 7) "God has set a seal on their heart", he gives the Sunni interpretation and rejects that of the Kadariyya. Bot, unlike Fakhr al-Dia el-Rāzi, al-Kurtubi does not attempt to derive philosophical notions and conceptions from Kur'anic verses. Thus, when explaining the word sayvam (11, 255) in the verse the Throne, al-Razi interprets it at once as denoting kāžim li-dhātiki (existing through blimseif) as Ibn Sinā defined it in the Ishanit, and he draws from this all the metaphysical consequences: al-Kurtubi simply gives it the sense, according to Katāda, of al-ho'im bi-tadbir mā khalaha (He who concerns Himself with the government of His creation), or, according to al-Hasan al-Basri, the sense of al-ķā'im 'alā kulli nafs bi-mā katabat, 📰 who exercises His surveillance over every soul and that which it acquires, with a view to recompensing it according to its actions.

Finally, al-Kurtubi reduces considerably, but not entirely, the dependence on interpretations and especially elucidations based on accounts furnished by rabbinical legends, apocryphal gospels and other equally turneliable sources. Thus he makes very little use of the israllivyai [q.v.], uplike al-Tabari and al-Razi.

Bibliography: Given in the article. The Taisir is quoted according to the 3rd Cairo edition (Där al-Kutub), 1387/1967. (R. ARNALDEZ)

AL-KURTUBI, YANVA B. UMAR B. SAPON AL-AZDI, poet and Māliki jurist, born in Cordova in 486/1093. He travelled extensively in the east, visiting Cairo, Baghdād and Damascus for the purpose of study. He died in Mawell on the 'Id al-Fitr in 367/1172. His chief surviving literary works are Daid'il al-ahkām, 'Ahidat al-Imdm 'Ali, and the poem on Muslim religious observances, the Urgiuzat al-aridda, also known as al-āuhaddina al-Kurpubiyya, for which he is best known. The Urgiuza sets out in summary form the basic observances of the five "Pillars of Islam" in rhyming couplets designed to be easy for children to memorise, but the contents of the poem are in a way simplified for the juvenile reader. The eighteen abade into which the Urdiusa is divided deal both with the obligatory rul (farā'id) connected with each observance, and with rules which the recommended but not obligatory (sunan).

The Urdista has been the subject of two commentaries, those of Ahmad b. Zarrūk al-Fāsī (died 898/1493) and Muhammad b. Ibrūhīm b. Khālid al-

Tata'l (died 941/1535).

Bibliography: Ibn Khalikkn, Wafaydi, ed. M. M. 'Abd al-Hamid, Cairo 1949, v, 219-22; Brockelmann, GAL, I, 551, S I, 763; Kabbâla, Mu'ğiam al-mu'allifin, xili, 216. For the text of the Urifizzat al-wildan, with an English translation, see R. Y. Ebied and M. J. L. Young, The Urifizzat al-wildan of Yahya al-Qurubi (486-567/1093-1172), in IQ, xviii (1976), 13-32; Les Ned'mou de Ebnou d'chir ei de el K'orlobi, ed. Si Salah el A'nteri, Constantine 1846.

(R. Y. ERIED and M. J. L. YOUNG) KUS, a town of Upper Egypt situated on the eastern bank of the Nile, some 30 km. to the north of the ruins of Thebes (al-Aigsur/Luxor) where the course of the river is at its closest point to the Red Sea, or about 200 km. from Kusayr [q.v.].

This large village with a Coptic name, first called Ksu = Ksi (H. Gauthier, Dictionnaire des soms géographiques contenus dans les textes hiéroglyphiques, v. Calro 1928, 178) seems to have become a more important place with the name Apollinopolis Parva in the Ptolemaic age, when the Greek sovereigns of the and and 3rd centuries A.D. undertook to develop commercial contacts between Egypt and Arabia Felix and the Indian Ocean through the ports of the Red Sea, and favoured the building-up in this region of various centres to the detriment of what was left of Thebes. The remains of the small Ptolemaic temple are still visible in the town. Under the Roman domination, Apollinopolis Parva was, like Coptes/ Kift [q.v.], although to a lesser degree, the terminus of the caravan route from Berenice; it took the name Diocletianopolis towards the end of the 3rd century A.D. A bishop of the town is mentioned among those present at the Council of Ephesus in 431. The Greek residents would appear III have been in II minority, and when the pressure exerted by nomadic peoples between the Nile and the Red Sea brought to an end contacts with the east and caused a decline of urban life, the town reverted to its Egyptian name (in Coptic form, Kôs) more than a century before the Arab conquest; this name was retained, transcribed into Arabic as Eds. In the organisation of Arab Egypt, it belonged first to the Aura of Kift and al-Aksur. A rampart was constructed in about 212/827 to protect the urban area against the attacks of the Bedja [q.v.].

Subsequently the town developed: al-Ya'hûbî noted towards the end of this century that it had taken the place of al-Aksur (Buldin, BGA, vii, 334, tr. Wiet, 188) and according to al-Mas'ndi, in the first half of the 4th/10th century, it had taken the place Kift (Muradj, iii, 50 = \$893). The reason for this prosperity must doubtless be attributed to the trading of its merchants with Nubia; its administrative status, however, clid not change, because the

population of the town was basically Christian, and the Muslim community was comparatively small, Under the Fatimids, the restoration of contacts with the Indian Ocean through the ports of the Red Sea, especially 'Aydhab [q.v.] brought advantages, at first most notably to Uswan (q.v.), where goods unloaded 'Aydhab joined the Nile. But at the time of the serious crisis experienced by the Fatimid caliphate in the mid-sth/xxth century, the occupation of the region of Uswan by the negro troops who took refuge there after being expelled from the capital, after 450/ 1067, and the revolt of the Arab tribes of Upper Egypt, disrupted commercial traffic until the restoration of order by the vizier Badr al-Djamāli [q.v.] in 469/1077; the traders then adopted the praction of joining the Nile at Kus, thus avoiding the extreme south of Upper Egypt, where Uswan began to decline. The governor of Bell Upper Sa'id, given the task of maintaining order in the region, installed himself in the town which became the new capital of the south and a point of surveillance on the situation in the Red Sea. Kûs was henceforward an important market on im major trade-route with the Far East. frequently mentioned in the documents of the Ganiza of Cairo m account of m presence of a Jewish community providing a staging-post for these exchanges.

The establishment in Palestine of the Latin kingdom of Jerusalem, which cut the normal route of the Pilgrimage to the Hidjåz, deflected towards Küş mlarge proportion of the pilgrims (who used to embark at 'Aydhåb, which lies opposite Mecca) and added still further to the increase of traffic. A mint was established there in 516/1122 (al-Makrizl, Itit'ās, iii, 93) and no doubt continued to function there until the arrival of the Ayyūbids. In the troubled times that marked the decline of the Fāṭimid caliphate, the role of the governor of the Upper Ṣāʿīd was seen as "the most important post after the vizietate" (Ibn al-Athīr, xi, 191) and an ante-room of power, to which the careers of the viziers Ridwān and Shāwar also bear witness.

In \$50/1155, Talà'i' b. Ruzzayk ordered the construction of the mosque and gave to the town one of the finest minbars of the Fâtinid epoch; the Muslim community grew, apparently through the installation of families from Uswan and Jana; but the town continued to have a Christian majority.

The abolition of the ShI'l Fatimid caliphate seems to have been strongly felt; from 562/1167, Kus was besieged by the Sunni troops of Shirkah, who did not succeed in capturing the town, and it seems to have been affected by the revolts in Upper Egypt that followed Saladin's accession to power in Cairo. However, when the Ayyübids reverted to the policies of the Fatimids in the area of the Red Sea, the growth of Kus continued. It served as a point of arrival for Yemeni traders in Egypt and III was a staging post for the merchants of the "Alexandrian Karim" (al-Nuwayri (see KARIMI)). This flow of wealth into the town was reflected in the agricultural prosperity of the surmunding countryside, where the growing of sugarcane was developed, and Küs became a centre for sugar production. The urban area outgrew its fortifications, and in the 7th/13th century Yakut considered it the third city of Egypt, after Cairo and Alexandria (Mushtarik, ed. Wüstenfeld, 362). Cultural life developed; the poets Ibn Matrub and Baha' al-Din Zuhayr spent part of their lives in Kus. The town nevertheless unable to play the part of a regional capital because the minds of the growing Muslim community of Kus were not reconciled to Sound Islam: the influence of the SunnI counter-reformation promoted by the pietist school in the neighbouring town of Kinā [q.v.] led in the founding of the first madrass of his in 607/1220. Henceforward his became in its turn a centre for the propagation of SunnI Islam in Upper Egypt.

It is under the Bahrl Mamlüks that the town seems to have reached its zenith, even though the inclusion of Egypt in a political unity embracing the Syrian states had iong ago deprived the governors of Küs of the power that they had enjoyed in the last days of the Fatimid caliphate. The expeditions mounted against the Christian kingdom of Nubia in the last quarter of the 7th/13th century and at the beginning of the 8th/14th one contributed to the maintenance of a strategic role for the town, its main function being to control the highways of the South.

Doubtless following the collapse of the Latin kingdom of Jerusalem, and especially the start of the Mamilik period, the pilgrims to the Hidiaz for the most part reverted to the route via the Gulf of Suez, but a certain number continued to use the 'Aydhab route, and traders still frequented it. Kus was then known to Europeans as a staging-post in the transporting of spices. The profits from largescale commerce, but also from urban craftsmanship (textiles in particular), created the wealth of its markets. The Christian community continued to be important and perfectly integrated into the Mamilik state (they were employed in the administration of the funds of the sultans and amars); it was during this period that Athanasius of Küs drafted in Arabic his grammar of the Coptic language. But the Muslim community now played a dominant role. Nothing, however, of an architectural nature remains of the Muslim city which seems to have developed around the ancient town, never penetrating the Christian enclave with its thurches, grouped round the Pharacnic temple; this is because the severe postmediaeval decline affected this peripheral zone first. The names are known, however, of some fifteen places of education, saadrasas or mosques, including # ddr al-hadith, whose Sunni Muslim teaching was felt throughout Upper Egypt, eliminating the last traces of Shi'ism which in the Mamilik period continued to hold out only in Udio, creating a movement of people from the minor centres of the province to Kus, and from Kus to Cairo, and ultimately spreading Islamic culture in Upper Egypt to an unprecedented extent. The Shafi'l chief kadi Taki al-Din Ibn Dakik al-I'd al-Kughayri, al-Nuwayri and al-Udfowl were the products of this social and cultural phenomenon.

The factors which had assisted the expansion of the town disappeared altogether towards the end of the Bahrl period and at the beginning of the Circassian era. The fight against the Arab tribes, constantly growing in strength since the disappearance of Christian Nubia permitted them useful access towards the upper Nile valley and Sudanese Africa, necessitated the dispatching and then the maintenance of military units at other points of the valley, especially at Asy0; [q.v.], from the middle of the 8th/14th century. On account of changes affecting the equilibrum between the Arab tribes controlling the highways, the use of the route from 'Aydhab to K0s came to be endangered following the disorders of 767/1365-6; goods still had to be transported to Kos via Kusayr until, faced with the instability prevailing over Mamlak territory as a result of the decline of the administration of the Bahri Mamlüks, the traders decided to avoid Upper Egypt, unloading their wares at Tur in the Sinai peninsula, closer to the Mediterraneau. This occurred perhaps from 776/ 1374-5 onwards, the date at which m serious drought affected Kus and the surrounding region. (al-Makris),

Khilat, ed. Wiet, iii, 300).

Henceforward, the major commerce of the spice trade only occasionally passed through Kūş. The town, living on its assets, nevertheless remained probably the most important urban centre of Upper Egypt until the catastrophic crisis at the start of the 9th/15th century: famine, epidemic and political upheaval. According to al-Makrial, the plague of 808/1405-6 killed 17,000 people at Küş (Khijaj, ed. Wiet, iv, 124), or a large section of the population. In the unfavourable demographic context of the 9th/ 15th century, and in view of the total transformation of the regional framework which had formerly promoted the prosperity of the town, this destruction of the fabric of the town proved irreparable. When the Mamfuk state had succeeded in surmounting the problems of the early decades of the century, at least from the time of the sultanate of Barsbay (q.v.) onwards, the governor of Kus was nothing more than a secondary figure under the authority of the kāṣhif of Asyūṭ. A section of the Muslim élite apparently left this declining city, and the proportion of the population formed by Christians began to rise once more, in an Upper Egypt in longer invigorated by commerce of any kind and henceforward less Islamised then the rest of the country. Commercial relations, on a reduced scale, with the Red See through the Kusayr highway, now tended to be directed from Kinā, and not from Kūş; it was to Kina that the keds was transferred after the Ottoman conquest. The major regional centre was henceforward Gizga [q.v.], where the Hawwari Bedouins [q.v.] settled; their hegemony was gradually established over the region in the course of the 9th/15th century and was to be maintained until the end of the 18th century. The material ruin of the mediaeval Muslim urban cadre seems to have been essentially brought about during the 17th century, a period when the city, although the seat of a kdshif, appears to have sunk to its lowest depths of degradation and disapidation. It only recovered a certain degree of vitality in the second half of the 18th century, although the population numbered only 5,000 at the time of the French expedition.

The renewal of the town dates from the end of the 19th century. The swelling of the population following the rural exodus to towns, the opening-up of the town towards the outside world by means of education dispensed by foreign missions and the Egyptian state, and the installation of a modern sugar-producing industry, have brought about the tebirth of a expansive urban area, where, apart from a few isolated remains, nothing bears witness to the ancient mediaeval centre.

(J.-CL GARCIN)

KÜS OWASÎ (see koşowa). KUSANTÎNA (see koşowa).

AL-RUSANTINI (in dialect Ksentini, in French Ksentini) Rashito, Algerian dramatist, comic actor and song-writer. Under his real name Ibn al-Akhdar (pronounced Bel-Lakhdar) he was born on it November 1887 at Bouzarea (a surburb of Algiers). His father, a shoemaker, was a native of Constantine. As a child he attended a Kur'anic school, where his

progress was mediocre, and he learned French in the street. Some years later he was apprenticed to a cabinet-maker. In 1909 he married one of his cousins by whom he had two daughters, both dying in infancy. Having grown up in a class of petty Algerian artisans, nostalgic for the past and constantly on the verge of poverty, al-Kusantini inherited a dual legacy of bitterness and failure. He felt ill at case in his milieu, from which he brusquely broke away in 1014, abandoning his wife and setting out to travel the world. During the first months of the war he worked as a merchant seaman; Marsoilles, Malta, Salonica, India, China and America were all to be visited in turn by this son of the Mediterranean, this bit of a "card", insatiably curious, interested in everything but attached to nothing.

Four years later he returned in France, where he worked for a while in a factory in Normandy and married a Frenchwoman. In 1920 he moved in Paris and obtained employment as a cabinetmaker in the workshop of a large store. It was at this time that he began attending theatres and he even played a number of walk-on parts, in particular at the Alham-

bre, the Châtelet and the Odéon.

Returning to Algiers in 1926, he rapidly became friendly with some amateur comic actors ('Altala, Dahman, Bash Diarrah), and, in few months later, he appeared in public for the first time in a play by 'Altala, Bou Akline (Bi 'Aklin), a play which ewed its success to his flair for energetic bulconery. From the very start he made a powerful impression, with his inmate acting talent and his unusual gift for improvisation, expressing himself not only with his face but with his whole body, from head to foot; he all movement. His silhouette, his mime, the twinkle of his eye, the unexpected laugh gave in sharp edge to each response emphasising the word, with an incomparable shaft of humour. To call him a comedian would be an understatement; he was a spectacle.

In fact, he was still not sure at this time how to make his own entry into the threatre, and his first attempt—ai-this ai-wiff, "The promise kept", with drama in three acts performed in Algiers in March 1927, was far from being a masterpiece. After this failure, he was luckier the following year with a comedy (Bis Börma), which was warmly received by

the Algerian public.

Over the next ten years, al-Kusantini was to compose, stage and act in twenty-five plays, as well a number of farces, most of which have been lost. In this brief space of time he chalked up a number of important dates in the history of the young Algerian theatre. In fact, his successes were as varied — were the responses of the public and the critics, and the coaditions under which the plays were staged. Even the settings varied: sometimes the municipal theatre of Algiers, Constantine — Oran, sometimes a cinema auditorium, sometimes, in a rural district, a hastily-adapted barn. Furthermore, these performances generally gave only a meagre profit to the author and his colleagues, actors, singers, dancers and musicians.

During this same period, al-Kusențini played minor roles în French films like Sarati le Terrible and Pept le Moko, alongside Harry Baur and Jean Gabin.

After 1938 he practically stopped writing for the stage, but, deeply attached to his profession, he was acting in the plays of his successor, Mubyl T-Din Bash Tarzi, almost to his last day. He died in Algiers on 2 July 1944, having lived for close twenty years the somewhat austers existence of the milieu to which he belonged; he was however, a straight-

forward man, generous and sincere, an enemy of all forced pretence and all hypocrisy.

Written in Algerian dialect and almost entirely unpublished, al-Kusantini's work covers a wide variety of genres. But in spite of the diversity of form, the central core is one of powerful originality. His work comprises:

(a) Approximately two hundred satirical songs, for the most part on moral and social themes, often written as parodies of well-known Arabic and French songs. About a hundred have been recorded on disc. The most successful of these are: Mon table lookide, "Under the vell"; Wild lobda, "The father's son"; Kala hund "The gossips"; Bin grello "That gives him the itch"; Liari Sid-Ahmed "My cousin Sid Ahmad";

Z-smān theddel "Times have changed";

(b) About thirty sketches, composed of series of humorous and entertaining scenes with two or three charactors, accompanied by songs, in a realistic setting, that of the Algerian petit-bourgeoisie, whose foibles wices are energetically satirised. Half of these have been recorded on disc: the peasant before the judge, the rustic and the man-about-town, the drunkard, the old man and the old woman, the old woman and the ghost, the mysterious table, the

unwilling sportsman Bachir, etc.

(c) Twenty-five stage-plays, listed below in chronological order: 1. al-'Abd al-wafi (see above); 2. Bu Böyma, comedy in three acts, Algiers, 22 March 1928; 3. Zeghirebbane ou les deux mangeurs de haschisch et la fils du roi (Zrisabban), comedy in three acts, Algiers, In February 1929; 4. Tunes w-el-Diasabir, "Tunis-Algiers", revue in two acts, Algiers, 11 March 1929; 5. Khadh klabi "Take my book", comedy in three acts, Blida, 13 November 1929; 6. Bibd Kaddür əf-fəramat "Bābā Kaddour 📟 Envious", 🖿 "My cousin from Istanbul", comedy in three acts, Algiers, 20 December 1929; 7. Lundja 'l-Andalusiyya, comedy in five acts, Algiers, 28 February 1930; 8. Shedd rubok "Take and", comedy in three acts, Algiers, 25 January 1931; 9. Thukba f-st-ard "A hole in the ground", comedy in three acts, Algiers, 18 February 1931; 10. Čzavć "Carry on talking!", comedy in three acts, Algiers, 11 January 1932; 11. Bil Sabsi "Tho man with the pipe", comedy in three acts. Algiers, t8 January 1932; 12. 'Ayska w-Bénda, comedy in four acts, Algiers, 22 January 1932; 13. al-Mursida, "The lunatic asylum", comedy in three acts, Algiers, 25 January 1932; 14. Fākš "They woke up!", revue in two acts and twelve tableaux, Algiers, 5 February 1932; 15. Yā rāsi yā rāskā "It's her or it's me!". comedy in two acts, Algiers, 7 February 1932; 16. Zid a'lik "Outdo him!", melodrama in three acts, Algiers, a January 1933; 17. Allah yastatud, "Allah protect us!", comedy in three acts, Algiers, 23 January 1933; 18. Bābā Shīkh, comedy in three acts, April 1933; 19. Takhir ar-sman, "The time is ripe", comedy in three acts, Mascara, 1933; 20. Khūdnī b-25-sif, "Take me by force!" comedy in one act, Djidjelli, 20 November 1934; 22. Sbábí djárí "It's my neighbour's fault!", comedy in one act, Djidjelli, 20 November 1934; 22. Shodd mlih "Hold tight!", comedy in two acts, Orléansville, May 1935; 23. Kasba Oill, comedy in two acts, Fez, 1936; 24. Yd hasra 'llk, "All this trouble you're causing me!", melodrama in three acts, Bougie, | July 1936 (inspired by Marcel Pagnol's film Angile); 25. Ask bald "What are they saying?", comedy in three acts, Blida, 19 February

The theatrical work of al-Kusantini thus presents m rich variety. It is in fact possible to classify his plays as: drama (1); melodramas (2); revues (2); farces (8), which were performed at public festivals and whose essential object was to entertain the spectators; moral comedies (7), where the author satirises Algerian society; and finally, comedies of character (5), which describe the failings and vices of humanity. But it is clear that such a classification. cannot be absolute, since all these elements, or at least the majority of them, combine, to varying degrees, in each play: there is a plot, simple to the point of being negligible, a depicting of morals and a description of human nature in general, set in motion with the full panoply of sarcasm, with man a prev to a quasi-tragic contradiction, represented by the blunt and malicious rustic, or one of his rivals. the vagabond, the insenure, the unfortunate, condemned to do battle in the jungle of society and struggling there in his way, clumsily, nervously, sometimes craftily, his conscience never easy, but at the same time anxious for respectability, secretly longing to integrate himself in the world which rejects him, always ready to accept the situation that presents itself, and even more than this, to be excited by outward appearances, as a means of approaching reality; in short, . Charlie Chapita figure, drinking anisotte and munching Barbary figs.

The comedy of al-Kusantini depends to some extent on the characters, but more frequently on the situations, and also on the wit of the dialogue, which in most cases is not included simply for its own sake, but with the object of throwing light on a character.

However, without being totally pessimistic, the thernes tackled by al-Kusantini are not primarily light-hearted-a fact not uncharacteristic of a humorist. We find here the patve provincial cheated by flatterers and mischievous servants, vain bourgeois merchants exploited by swindlers, egotistical parents sacrificing the well-being of their children for their own interests or for social traditions, etc. But this gloom, which should not be exaggerated and which al-Kusantini, a keen observer, has drawn from his own experience of life, is always concealed beneath his comic sense. At the moment where comedy is in danger of turning into tragedy, farce intervenes, with its sometimes rather crude elements, and brings back the laughter. Predictably, under these circumstances, the dénouements tend to be happy. Al-Kusantini is no concerned than Molière in making his endings plausible. Often, in fact, the denouement should logically be an unhappy one; but then it would no forger be a comedy.

Al-Kusan [In] is comic author and not a philosopher. It is vain to attempt the discovery of a coordinated doctrine in his works. However, it is not impossible to draw from his plays a group of ideas which make up what might a called a system of morality.

Everything which is contrary and bostile to reason is anothema to al-Kusan(Iul: the prejudices which trap Algerian society in a stifling traditionalism, the superstitions which divert the faithful from true piety, the hypocritical distortion of religion to favour the machinations of corrupt individuals and profiteers, and the greed which transforms man into kind of moral monster. Conversely, he is eager to spring to the detence of the young, even when they are not totally irreproachable.

It is clear that such a philosophy might appear to be a somewhat superficial approach to the problems; nevertheless, the fact remains that it is a philosophy closely linked to the life experienced by the mass of Algerians between the First and Second World Wars, concerned with the images that people saw around them every day, in the street as well within their families, and this is fairly remarkable.

Al-Kusantini confined himself in general to making rough drafts, sketching out his ideas, laying down the simple foundations of what was in become a play on the stage. His style also reflects this improvisation: it is a comedy style, meaning that it commends itself better to performance than to reading. It is admirably suited to its purpose, natural, alive, full of ingentous features and significant images, always pleasing and witty, often provocative.

In his satirical verses, which by contrast were written before being sung, the phrases and short and staccato, punctuated by exclamations and rhetorical appeals; it could be said that they represent an almost breathless approach to the pursuit of emotion.

In conclusion, it iii thanks to al-Kusantini that Arabic comedy rose for the first time in Algeria to heights similar to those attained, for example, in Athens with Aristophanes, in Rome with Plattus and Terence, and in France with Georges Courteline.

For his high qualities of theme and of form, in drama as well as in his satirical songs, al-Kusantfal deserves to be long remembered.

KUSAYLA B. LAHZAH, III KASILA WER, in the tradition of the Massinissa and of Jugurtha, one of the most eminent figures in the struggle of the Berbers to preserve their independence. in 55/674, at the time when the manda Abu 'l-Muhādjir Dinār came from Egypt to replace 'Ukba b. Nalis as governor of the recently-conquered province III the Maghrib, Kusayla was certainly "king" of the Awraba, a broad alliance of tribes of the Baranes group, for the most part sedentary. The territory of the Awraba was centred at that time on the region of Tiemcen, called Pomaria in antiquity. and it probably stretched from west of the Aurès range to Walifa (- Volubilis) to the north of Fez. It may be recalled that Idris [q.v.] was brought to power by the Awraba of Wallis. At the time of the conquest, the majority of the latter were no doubt Christianised. In fact, according to al-Bakel their capital Tlemcon maintained, along with the features of its ancient civilisation, a large Christian population until the 5th/11th century. It was at Tlemcon that Abu 'l-Muhāḍjir was confronted by Kusayla, The new governor, preferring a policy of conciliation to one of force, took the opportunity of making an alty of the "king" of the Awraba. Kusayla became converted to Islam and henceforward lived with Abu 'l-Muhāḍjir at Taherwān which had replaced the capital founded by 'Ukba b. Nāfi', and the second which, by its prefix, symbolised a full scheme of Arab-Berber agreement.

The death of the founder of the Umayyad dynasty, Mu'awiya, led to a change of policy. In 62/681 'Ukba set out once again for Ifrikiya, dreaming only of vengeance and great dillad. With him, the policy of subjugating the Berbers by force took on a new lease of life. His first act was to put Abu "l-Muhādjir In frons, to take Kusayla prisoner, and to re-instate at the capital, with its former name, the place which he had initially selected for the purpose during his first term of authority. Subsequently, forcing Abu I-Muhadjir and Kusayla to accompany him, he embarked on the major expedition which was supposed to take him-there is no serious reason to doubt it-as far as the Atlantic. On the way, in spite of the warning of Abu 'l-Muhādjir, he went out of his way to humiliate the Berber "king". We are familiar with the typical scene, described in all the sources, where Ukba, as a means of humiliating Kusnyla, forces him to skin a sheep in his presence.

In the early stages, the lightning campaign that he initiated, the more unexpected in that it followed the policy of peace and conciliation of his predecessor, seems to have had the advantage of surprise, which explains, in part at least, his initial decisive success. But resistance soon became organised. In fact, "Ukba made no major conquest. The Baranis, the most romanisad of the Berbers, altied themselves with the Byzantines. The Awraba secretly made contact with Kusayia, their chief. He-it is not known from where escaped from detention under 'Ukba, and assumed leadership of the resistance. Over-confident in his successes, all 'Ukba for his part, as all the sources assert, commit the foolish error of sending the bulk of his troops towards al-Kayrawan, keeping with him only a handful of men, and of three hundred horsemen? Was there an over-riding need to relieve the capital threatened by the Byzantines? Or was this more simply a question of an act of indiscipline on the part of soldiers exhausted by a long and tedious compaign? Whotever the may have been, to the south of Biskra, at Tahuda (= Thabudece), 'Ukba found himself confronted by Kusayla at the head of powerful Baranis and Byzantine contingents. Here he found, along with all his men, including Abu 'l-Muhādjir, the epic and spectacular death of which he dreamed and which perpetuated his legend. A mausoleum, that of Sidi 'Ukba, was erected m the site of the battlefield and became a centre for pilgrimage which is still revered today.

At al-Kayrawan, there was panic, which illustrates the importance of Kusayla's victory and especially the strength of his forces. The idea of evacuating the country, proposed by Hanash al-San'ani, finally prevailed over that of resistance, supported by Zuhayr b. Kays al-Balawi. So the army withdrew. But al-Kayrawan did not lose the whole of its Arab and Muslim population. It had already advanced beyond the status of a simple military camp, a fact which deserves underlining. Between the years 64-9/683-8, it became the capital of a huge Berber kingdom

ruled by Kusayia. Ibn 'libari (Bayān, i, 31) notes that: "Kusayia granted andn to the Muslims who had stayed in al-Kayrawan. He established himself there sovereign (amb) of all the inhabitants of liftkiya and the Maghrib, including the Muslims present in that area." Hence no xenophobia, no persecution, no religious fanaticism. We may underline this fact, reported by witnesses who had no cause to flatter their adversaries. Kusayia himself, we are assured, took man not to renounce Islam after his victory. These measures are sure evidence of a political programme designed to deprive the Arabs of any religious pretext for invading the Maghrib once again.

But the wave of conquest was not yet exhausted. When the crisis which will in the East with the revolt of Ibn al-Zubayr had abated, Zuhayr b. Kays al-Balawi set out for Ifrikiya with a strong army. Kusayia, who was not sure of the conditions prevailing at his rear in al-Kayrawan, chose to go and wait for his enemy at Mams, 50 km. to the west of the capital, thus in a region where mountains could offer refuge in the event of defeat. The battle, in which he lost his life, want against him. But it should not believed that it was as decisive as our sources olaim. In fact, although victorious, Zuhayr preferred to avacuate the region again, so most to succumb to the good things of this world, so - told. In turn, he met his death on the return journey, at Barks where the Byzantines had effected a landing. Was this supposed to be a combined operation, designed to eatch the Arabs in the Ifrikiyan trap, a plan which failed because of poor co-ordination? If Kusayla's attempt to found a great empire governed from the city founded by 'Ukba b. Nafit had succeeded, the history of the Maghrib would certainly have taken a different turn. But were the Berbers ripe then for such a scheme? With al-Kähina [q.v.], the torch of resistance passed subsequently to the Butr, but with no more lasting success.

KUSAYR, a port situated on the African

shore of the Red Sea, a little to the north of lat. 26°. A gap in the madreporic barrier which runs along the coast (A. Prompt, La vallée du Nú, in Bull. de l'Institut Égyptien, 3rd ser., 2891) has allowed at various periods of history the utilisation of this anchorage which, by virtue of the sweep described by the Nile towards the east at the level of Kift, Küs and Kink [q.m.], is in fact the nearest access from the sea to the Nile (about 200 km.).

Remains of works from the period of the Middle Kingdom and from Ptolemaic times (P. Jouguet, in Histoire de la nation égyptienne, iii, 94-5) show that the site was used from ancient times onwards, although it lost its importance in the Roman period when, because of difficulties in navigation through the Red Sea . Suez, landing was preferred on the coast further to the south, at the port of Beronico, in the neighbourhood of the future 'Aydhab, despite the increased distance along the track between the sea and the Nile thereby required (G. W. Murray, The Roman roads and stations and the Eastern Desert of Egypt, in Inal, of Egyptian archaeology, xi [1925]). Towards the end of the Romano-Byzantine period, inadequate control of the regions through which this more southerly road passed probably brought Kuşayr an increased importance, and at the opening of the Islamic period it served as a port of embarkation for pilgrints travelling to the Hidlar.

However, when the Fätlmid caliphate in Cairo revived the ancient traffic of Greco-Roman times with the Yemen and the Indian Ocean shore lands, the security which was re-established in the mountainous desert between the Nile and the Red Sea favoured the use once more of the southerly route to Aydhab, a port which was moreover more or less opposite the hely places of the Hidlar. From the and of the 5th/12th century, the installation of the capital of Upper Egypt at Kus nevertheless brought a certain amount of traffic to Kuşayr, even if it was still much less important than that of 'Aydhab. Whilst 'Aythab was over two weeks' journey from Kûs, Kusayî is given as only three days' journey from it, and is described as "the port of Kus". In the Mamfük period, naval units intended to maintain Mamilik control over the Red Sea were stationed there, and some commercial operations were conducted through Kusayr. The western portolans of the 14th century mix up, however, Kus and Kusayr (which last they pinpoint correctly but call "Chos"). The revival of Rusayr increased in tempo after 767] 1365-6 when the abandoning of the 'Aydhab road, by now increasingly unsure, brought about the decline of the latter port, from which large scale commerce now turned away; but after meet fifty years, it was Tur, on the Sinai peninsula, which inherited the role of 'Aydhab as the main spices port on the Red Sea.

The local importance of Kuşayr continued to grow in the 9th/15th century. Apart from the fact that the spice merchants sometimes still used it as a port of disembarkation, Kusayr became the main outlet for Upper Egypt on to the Red Sea. Corn exported to the Hidjaz travelled via Kuşayr, which had become the departure port for the Pilgrimage and whence one could also travel to the ports of Ethlopia. The inconspicuous Christian missions which tried to establish relations with the Negus of Ethiopia set off from Kuşayr, and Fra Mauro's map of 1460 gives it the name of "Cuser" (the site of 'Ayrinab further to the south symptomatically received that of "Chaser"). Kuşayr's primacy was all the more firmly established because the economic centre of gravity of the Upper Sa'ld was from this time onwards fixed in the northern part of the province. The beginning of the Ottoman occupation saw the rise of Kina, which raplaced Kus as the regional centre and also, it seems, as the main departure point for Kuşayr. The greater part of commercial traffic continued to consist of corn, continuously despatched to the Hidiaz, and of coffee imported from the Yemen. In the 18th century, Hawwara control over Upper Egypt did not harm the port's traffic, in fact the reverse, since Kuşayr's situation along the route to the Indies attracted the attention of the French and British as much as that of the Beys of Cairo. Bonaparte's soldiers found at Kusayr an agglomeration essentially made up of stalls open to the sky, with a very scanty permanent population (this being also the case with 'Aydhab in his time), and with Hidlazl influence very strong (Description de l'Egypte, Etat moderne, i, 193-202). Under Muhammad 'All, buildings for the Egyptian government were again sot up at Kusayr. The small town became one of the district centres of the province of Kina. The pilgrim traffic remained each year the main source of activity for the port, but after 1859 the Pilgrimage traffic was deflected to Suez. At the time of the 1897 census, Kusayr had me 1,802 inhabitants.

KUŞAYR 'AMRA [see ARCHITECTURE].

RUSAYY, an ancestor of Muhammad in the fifth generation and restorer of the pre-Islamic cult of the Ka'ba in Mecca.

His genealogy is unanimously given in all sources as Kusayy b. Kilâb b. Murra b. Ka'b b. Lu'ayy b. Fibr or Kuraysh b. Ghālib (Ibn al-Kalbi-Caskel, Gumhara, Tab. 1), and his life and exploits are recorded by our sources in three recensions which only differ from each other in triffing details; these go back to Muhammad al-Kalbi (d. 146/763-4), Ibn Işhāk (d. 150/757) and 'Abd al-Malik b. 'Abd al-'Aziz b. Djuraydi al-Makki (d. 150/767). Kusayy is represented, like the usual legendary type III hero who founds a city, as having passed his childhood and youth far from his native land and in obscurity: a younger son of Kilâb b. Murra, a descendant of the Kuraysh whose supremacy in Mecca had been replaced by that of the Banti Khuzā'a, he loses his father soon after his birth and is taken by his mother Fatima bint Said b. Sayal who had married again, her second husband being a member of the tribe of Bana Udhra, to that new husband's tribe R the north of the Arabian Peninsula (in the neighbourhood of Saugh, according to Ibn al-Kaibi (in Ibn Said, 1/1, 36, 26] a place on the Syrian frontier of the Hidlaz, near Tabûk (Yâkût, iil, 77), or right into Syrian territory near Yarmük [al-Bakrt, 773]); here his original name of Zayd was changed to Kuşayy from the root b-s-y, "to go far away". Having learned his true origin from his mother, he returned to Mecca where 45 a result of his marriage with Hubba, the daughter of the Khuza'i chief Hulayl b. Hubshiyya, who controlled all arrangements for the worship iii the Ka'ba 📰 the pilgrimage, he soon acquired an important position in the city. On the death of his father-in-law, Kusayy managed to succeed him in his offices, either after a long struggle with the Khuza'a, or as a less reliable tradition has it by means of a tricky bargain which he made with (Ab0) Ghubshan, with the son or only some more distant

relative of Hulayl (cf. Ibn Durayd, al-Ishrikdk, 277, 7 with 282, 2). The detailed narrative of the events which brought Kusayy to fame is given in the article Knuzka.

Becoming with of Mecca and guardian of the Kaba, Kuşayy rebuilt the latter and organised its worship; he united the clans of the Kuraysh, who were previously scattered, into a solid body which assured them the mastery of the town for the future; indeed it is even said that it was on this account that the name Kuraysh (from takawasha, "to combine") replaced the old name Banu 'l-Nadr; Kuşayy is said to have been called al-Mudiammit "the re-unitar". On his death, the sacred offices that had become his perquisites, were inherited by his four sons 'Abd al-Dar, 'Abd Manaf, 'Abd al-'Uzza and 'Abd Kuşayy, the second of whom through his son Hāshim was the direct ancestor of the Prophet. The house which Kusayy had built himself quite close to the Kaba was henceforth the centre of the civil and religious functions of the Kuraysh under the name Dar al-Nadwa. To Kuşayy is also attributed the discovery and digging of well of al-'Adial (Kuth al-Din = Chron. Stadt Mekka, ed. Wüstenfeld, iii, 107, below; Balādhuri, Frdūķ, 48; Vāķūt, iii, 19-20; al-Bakri, 646, cf. 766).

From what has been said above, it is evident that the Kuraysh regarded Kuşayy as their true founder and the founder of the Kaba. The antiquity of this tradition is attested by a meet of al-A'sha (al-Bakri, 489) and by several of Hassan b. Thabit. Later historiography has tried to harmonise this old native tradition with the genealogical system which later became established and according to which Kuraysh = Fihr b. Malik b. al-Nadr (Wüstenfeld, Geneal. Tabelles, N.) well as with the tradition quite different in origin and character of the Abrahamic cult of the Katba and its vicissitudes under the Djurhum and the Khuza'a. Kuşayy is therefore to Mecca "what Theseus was for Athens and Romulus for Rome" (Caetani). In the present state of our knowledge, it is impossible to say whether he should be regarded as a historical personage transformed into a hero or the mythological transfiguration of a hero. His name is found, although by no means commonly, in the Arab commasticon: Nahik b. Kusayy al-Salull, a contemporary of Muhammad, is mentioned by Ibn al-Athle, Usd, vi, r4-15; Ibn Hadjar, al-Isdba, ed. Cairo vi, 257; the Diamhara of Iba al-Kalbi (Caskel, Tab. 114) mentions a Kusayy b. 'Awl and (Tab. 125) a Kusayy b. Mālik. The fact that this is to be recognised in the YEP of the Nabataean inscriptions and probably also in the Koooa; of a parchment from Dura on the Euphrates (cf. Cumont, Les fauilles de Doura-Europas, Paris 1926, 320) does not justify us in concluding that it is of northern origin, since as we have seen, it is found among different tribes. The tradition which makes Kusayy pass his childhood in Syria is in favour of the hypothesis which makes the worship of the Karba introduced, or at least renewed, as a result of influences from the north; perhaps in statements of tradition (e.g. al-Kalbi, quoted by Ibn Said i/r, 39, 1-11) we have an echo of an actual fact, namely that on the old cult of Hubal (q.v.), "the ido! of the Khuzā'a" there was super-imposed that of al-'Uzzā and Manaf-Manat, for which we have definite evidence in Northern Arabia in particular.

In any case, the figure of Kuşayy soon became legendary; his story, as we have seen, has the characteristic features of the legends of eponymous heroes; his alleged sons are only symbols of the part played by Kusayy in the religion of Mecca. If it is not quite true that he was the object of regular divine worship (the name 'Abd al-Kusayy borne by one of his sons does not accessarily imply the divine character of the father), he was undoubtedly venerated according to the ancestor worship, which certainly existed in pre-Islamic Arabia, although we know very little about it. The eponymous hero of the people of al-Ta'if, Thakif, is analogous in character to Kusayy. The latter's memory remained particularly associated with the Dar al-Nadwa [q.c.].

Whatever the origins may be, it is certain that at the beginning of the 6th century A.D. the control of the Karba and of the andidi was in the hands of a clan claiming descent from Kusayy and that the Kuraysh were agreed that he was the founder of their tribal unity. It is to be noted **==** the other hand that even if this clan included among its members some of the recognised chiefs of the Kuraysh, among others the Banû Umayya, it was far from baving complete political and fluancial control in its hands; the Banû Makhzûm, for example, one of the most powerful families in Mecca, were not descended from Kusayy. It seems probable then that the Meccan "republic" was constituted on the initiative and under the direction of the Band Kuşayy, but that the latter were forced - admit into their social organism other clans having the same rights and privileges - themselves, although the prestige of noble blood and supremacy in religious matters always remained the exclusive prerogative of the Banû Kuşayy.

(G. Levi Della Vida)

KUSDĀR, Kuzdār, the name of m town in mediaeval Islamic Balūčistān [q.r.], modern town and district of Khuzdār in the former Kalāt staie [see kulāt] in Pakistan. It lies in lat. 27' 48' N. and long 66' 37' E. at an altitude of 4,050 feet, some 85 miles south of Kalāt; the long, narrow valley of the Kolachi River in which it is situated is strategically important as a nodal point of communications, from Karāči and Las Bēla [q.vv.] in the south, from Kachh in the east, from Kalāt in the north, and from Makrān and Khārān [q.vv.] in the west.

Kissdär was first raided by the Arabs under Sinän b. Salma al-Huilhall, who was appointed governor over the Indian marches early in Musawiya's caliphate by Ziyād b. Ablhi, and then by al-Muidhir b. al-Djārūd al-Abdī (Balādhurī, Futāh, 433-4). The 4th roth century geographers mention it, together with Kizkānān or Kīkān [see Kilār] as one of the towns of the region of Tūrān or Tuwārān, which must have lain in the east-central part of Balūčistān (see Minorsky, FP art. Tūrān), and as being 80 farsakhs from al-Manstra in Sind. Kizkānān is meutioned in he middle years of this century as being the residence

of the local ruler, but Kuşdar II described as the chief town, with a citadel and a flourishing mercantile quarter, to which traders from Khurasan, Kirman and India resorted, and with fertile agricultural lands around it (Ibn Hawkall, 324-6, tr. Kramers and Wist, 317-20; Mukaddasi, 476, 478, 486; Hudud al-'alam, 123, 373; Yakut, ed. Beirut, iv, 353; Le Strange, The lands of the Eastern Caliphate, 331-2). Kundar me certainly the seat of the local ruler by the later years of the century, the time of the rise of the early Chaznawids, for in 367/977-8 Schüktigin reduced the ruler of Kusdar to obedience. However, his son Mahmud of Charna had to come once more and attack Kuşdar in 402/1011 and make its ruler tributary ('Utbi, in Nazim, The life and times of Sulfan Mahmud of Ghazna, 74), and his son Mas'ad in 420-1/1030-1 also sent his uncle Yasuf b. Sebuktigin to Kusdar and Makran on a punitive expedition (Bayhaki, in R. Geloke, Sultan Mas'ad I, von Gazna, Die drei ersten Jahre seiner Herrschaft (422/1030-424/1033), Munich 1957, 87 fl.).

Thereafter we hear little about Kusdar. In recent times it fell within the Khanate of Kalat. 11. Pottinger visited it in 1810 and found it a small town of co. 500 houses, it being the summer residence of Mir Murad 'Ali of the Brahui Kambarani tribe, brother in-law of Mahmud Shan of Kalat (Travels in Beloochistan and Stade; accompanied by a geographical and historical account of those countries, London 1816. 35-7). C. Masson noted a large tope north of the town of Khuzdar, with the remains of mud walls, presumably relics of the mediaeval Kusdar (Narrative of various journeys in Balochestan, Afghanistan and the Panjab, London 1842, ii, 41-4). In 1870 a fort was constructed there and a garrison placed in in by Mir. Khudadad b. Mihrab Khan of Kalat in the course of his warfare with the Djam or local tuler of Las Bela [q.v.]. Khuzdar town and district now form a tabsil of the Djahlawan Subdivision of the Kalat District of Pakistan, with a population in 1961 of 26,476.

Bibliography: In addition to the sources tioned above, see Imperial gazeteer of India, xv. 298-9, and Population census of Pakislan 1961. District census reports. Kalat, 1-24-5, 1V-2.

(C. E. BOSWORTH)

KÜSH, a Biblical personage whose appears in ch. - of Genesis in the genealogical lists of the posterity of No+h (Nüh). According to the information in verses 6-7, Kugh, the eldest son of Ham, is the brother of Misrayia, Put and Kena'an (Kan'an). the father of Soba', Hawilah, Salita', Ra'mah and Sabiska' and, by Ra'mah, the grandfather of Sh*ba* and D*dan. Miyrayim is Egypt, Put doubtless Libya, Kena'an, the land of Canega (Palestine and Phoenicia). Most of the names of the descendants of Kush are to be attached to the maritime regions of the Red Sen, Scha' has been identified hypothetically with the port of Saba in the Bay of Adulis on the south-west of the Red Sea, which is mentioned in Strabe (xvi, 4, 8, ro); Hawilah, which is given in Genesis xxv, 18, for the western border of the Ishmaelites' territory, has been associated with the name of the South Arabian tribe of Khwhi; is Sabtah the Eastern of Strabo (xvi, 42), the Sabota of Pliny (vi. 155, xii, 63), the Sabbada of the Periplus of the Erythraean Sea (27)? Whatever may be the case. it is to be located in the Arabian peninsula, as Ramah is placed by various authors in Hagramawt, Sh'ba', which is not the Kingdom of Saba, is situated in the north-west of Arabia. As for 12 dan, this is the oasis of al-'Ula, near Mada'in Salib, in the north-east of the Hidjaz.

Thus Kush appears to be linked by this genealogy with Arabia and the Red Sea. But in verse 3 of the man ch. of Genesis, which man to reflect another tradition, he is presented as the father of Ninröd (Arabic Namrud) with whom Mesopotamia is associated.

Indeed, in the whole text, Kush, as an ethnic term, in the ordinary way designates neither Arabia nor Mesopotamia, but the neighbouring populations of Egypt, on the south-west borders of the land, i.e. precisely the region which the Egyptians called K'sh (see also Babylonian hūshu, Assyrian hūsu, Old Persian kilsha). An oracle of Ezekiel (xxix, 10) also announces the destruction of the land of Egypt "from Migdel to Syene (from the extreme north to the extreme south) and as far in the frontier of Kush". In a Kings xix, 9, the Pharaoh Tirhāqāh, of the socalled Ethiopian dynasty, is called King of Küsh. Everything leads us to suppose that Kush is the name of ancient Nubia, i.e. of the region which extends as a whole from the first to the fourth cataract of the Nile. The Septuagint translates it in general as Ethiopia, which, because of the value placed on the word "Ethiopian" in antiquity, III at the source of the erroneous interpretation of Austi as "black" or "African"

In the Kur'an, Kûsh is named no more than the tons of Nüb. Islamic tradition, which knew his name, however, supplies pieces of evidence which do not agree totally with one another or with the evidence of the Bible. They are all reported by al-Tabari. According to some, Kūsh, son of Ham, is the brother of Misrayim, Kût (Biblical Put) and Kanfan (Annales, i, 212, 217). But elsewhere Küsh appears as the son, and not the brother, of Kantan, himself presented as a fourth son of Ham (i, 219, 220; see also i, 192; Ibn al-Athle, 1, 50). He is given finally as the predecessor of Kantan as king of the universe after the disappearance of the sons of Afridan (Chronique, French tr. H. Zotenberg, I, 120). In all the traditions, he is the father of Namrod, tyrant (midadjabbir) of Bābil, conforming with Genesis, x, 8. But if, in the general way, the paternity of the Habasha as well as those of the peoples of Smd and Hind are attributed to him, the Nubians on the other hand are never explicitly associated with him. In the genealogy supplied by al-Tabari (i, 223) on the authority of Wahb b. Munabbih, it is from Kan'an, brother of Kush, and his wife Krabyl, great-granddaughter of Yafith, that the Nubians are descended, together with the populations of Fezzān, the Zandi, the Zaghāwa and all the Blacks (or, according to another passage, the blacks with fuzzy hair). Elsowhere (i, 216), it is Ham who is the only one named as the ancestor of these peoples.

The Kushitic languages.—It is from the name Kush that the word Kushitic is derived, under which are grouped a body of Hamito-Semitic (but not Semitic) languages spoken by about fifteen million people, the majority of them Muslims, scattered over a vast territory of almost 2 million km², within which are included the populations speaking the Semitic languages of Ethiopia. The area is constituted basically by the Horn of Africa and spreads in the north into Sudanese and Egyptian territory to around the first cataract of the Nile and in the south into Tanzania, as far as the 4th degree of latitude.

Bedja (Tu-Bedawiye) is spoken by Muslims in the north of the area, in the northern part of Eritrea, and stretches between the Nile on the west (where it is in contact with Nubian and Arabie) and the Red Sea (where it is in contact with Semitic Tigré) as far as the environs of Kuşayr. It is true that in the northern522 KÜSH

most part, the Muslim 'Ababde tribes are today almost entirely Arabised. At the same time, in the south, a part of the Beni Amer (Banti 'Amir) nomads have abandoned Bedia for Tigré. Between these two groups are to be distinguished, with their particular dialects, in the centre the Bishari and Hadendowa, and in the south the Halenga and Arteiga.

Still further to the south, on the shores of the Red Sea, there is the area of Saho and 'Afar, other

Kushitic languages.

Saho is the language of an almost entirely Islamised population leading a pastoral existence in the south of the Massawa region in Eritrea. The Irob-Shao Christians, who constitute an enclave on the Abyssinian plateau, have partially abandoned Saho in favour of Semitic Tigrinya.

The language of the 'Alar (Arabic Danākil) is spoken in the south of Eritrea, in the north of the region of Djibouti, and extends towards the west as

far as the Awash River.

The Somail-speaking tribes who inhabit the extreme shore of the Horn at the mouth of the Tana River are also almost entirely Islamised. The most important dialects are those of the Iski who inhabit the shore of the Gulf of Aden and the Darod tribes at the edge of the Indian Ocean as far in the north of Kenya and who also inhabit the province of Ogaden in Ethiopia. In the north, in the territory of Djibouti and as far as Dire-Dawa in Ethiopia, it is the dialect of the Isa which is widespread.

In the valley of the Webi Shebelle as far m Khamar (ancient Mogadishu), it is Hawiya which dominates, while m the south, in the province of Benadir, Digil is spoken, a dialect of the Sab, also widespread in Aden among the emigrant foreigners called Diaberts

[900 DJABART].

The Oromo (whom the Europeaus, adopting an Abyssinian word resented as pejorative by the natives, call Galla) at present occupy wast territory from the centre of the Abyssinian plateau as far as the centre of Kenya (to the north of Mombasa and along the Tana River). These are on the whole pagans, Islam, however, has conquered a part of the northernmost populations. Of the dialects of the Oromo, Mača in the west, Tulamā in the north-east and Boranā in the south-east, are very close to each other. They are opposed to wouthern dialect group, so, that which constitutes the speech of the Bararetta and Kofira in Kenya.

Agaw, in the north of Ethiopia, occupies no more than a limited and fragmented territory, having for the most part given place to Semitic, sc. Tigrinya and especially Amharic. A northern Agaw dialect, Bilin, is spoken by a small Muslim population. Other dialects still in use are Khamir, Khamta, Kwara, Kamant and

Awngy or Awiya.

To the west, a group of languages reintively close to one another covers the region of the lakes (from Zway to Shamo and Lake Rudolf) and extends into the adjacent mountainous zone (the province of Sidamo). These are Gudella — Hadiya and Kambatta in the north-west of the region in question, Alaba, Sidamo, Darasa, Burdii and Konso in the east. Generally connected with them, but without any totally compelling reason, are Gidole — Gardulla, Arbore, Galaba etc. On the other hand, there is a tendency today to consider Rendille in the north-east of Kenya, on the edge of Lake Rudolf, and Bayso in an island to the north of Lake Abaya, as projections of Somali.

In the region of Ome, one can distinguish Ometo, Dawro = Kulle, Goba, Walamo, Maruro or Gatsamba, Badittu, Zaysse, Basketto, Doko, Čara, <u>Di</u>so<u>diero</u>, Kaffeto, Anfilio, Shinasha or Gonga, etc.

In the same region, some languages, which probably Kushitic, are spoken by Nilotic peoples, rc. Gimira, Majji and Gunza.

A Kushitic extension in Tanzania is possibly represented by Irakw and less probably by Mbugu.

There may be seen from this simple inventory, although it remains incomplete, the immense linguistic variety of the vast area generally considered as Kushitic. It is still very inadequately explored, and numerous tongues are known to us only by a rare and insignificant documentation. There result from this problems of classification which lead at times to calling into question the very membership in the group of some of the most anciently recognised languages. There has also been a proposal to detach from the Kushitic ensemble an Omotic group consisting essentially of the languages of the region of the Omo, and from this some authors have come to consider Bedia as a particular division of Hamito-Semitic without any special connection with Kushitic.

In m far as the existing documentation allows one to judge, such questionings appear excessive. The existence of common traits peculiar to a body which be called Kushitic do not appear capable of being explained by simple phenomena of diffusion. But It is no longer as possible today to admit the traditional division into two groups: Lower Kushitic with Bedja, 'Afar, Saho, Somali and Oromo, Upper Kushitic consisting of Agaw, Burdli, Sidamo and the western languages. Without attempting here to propose a real classification, for which the state of studies still gives no authority, one may to some extent rely on the characteristics of these languages to discern particular affinities. The linguistic information which is to be supplied below can justify the following table:

A. Northern Kushitis: Bedla:

P. I. Eastern and southern Kushitic: 'Afar, Saho, Somali and Oromo:

 Coural Kushitic: Agaw and languages of the region of the lakes;

C. Western Kushitic: languages of the region of the Onto.

The group of Eastern and Southern dialects and that of the Central dialects are closer to one another than each of the two others.

Linguistic characteristics.—These are the principal common traits in the Rushitic languages or

in the majority of them.

(i) On the phonetic plane.—The predominant syllabic type is of the consonant + vowel form, at the beginning of a word; closed syllables of the consonant + vowel + consonant type are present especially as final syllables. In the intervocalic position, the best-tolerated consonant groups have a first liquid element are constituted by a nasal — an oral homorganic consonant (mb, m, etc.).

The consonant system mediades in general "emphatics", most often glottalised in effect, which complete, at the same point of articulation, the orders formed by an unvoiced stop and a voiced stop, without always participating themselves in correlation of voicing. The majority of the languages also present post-palatel order: k, g, k, but none opposes a g to k. However, mm must take account of the very frequent present of a voiced cerebral g which can adjoin the "emphatic", unvoiced dental.

Except in ____ Agaw dialects which are innovative on this point, there is no distinction in the labiai zone between the spirants and occlusives. Where there is KÜSH 523

an f, it is not opposed to p, and the voiced equivalent is in general b, never c. The following table, in which still phonemes are put in parentheses, being frequently, but not in all cases, represented, will give in idea of the Kushitic consonant system:

labials: pff, b, m, w; dentals: t, d, (f), d, m; sibilants: s, (m); palatals: k, g, h, y; layngals: h, ?; liquids: l, r;

The pharyngals k_i , the labin-velars k^{μ} , g^{μ} , at times k^{μ} , the prepalatals ℓ , $\underline{\ell}i$, at times c, the emphatics i and i, are only attested in certain languages. The minimal vowel system is triangular, with five vowels: i, s, o, o, u, with most often an opposition of

ouantity.

The majority of languages are familiar with tonal opposition, in various degrees of development. In a language fike Bedia, only a small number of lexemes of the CVC-form seem to bear a characteristic descending tone, capable of constituting a distinctive morphological mark, cf. det "mother": det "mothers". Andt "sister": Andt "sisters"; but in Awiya and in Moča for example, tones play as important a role in the morphological plan as in the lexical one: (Moća) bino "ashes"; bino "coffee"; (Awiya) adil "I give"; adjé "he gives". Unlike the tonal schemes, the accentual schemes are not generally distinctive, except possibly in some forms where phonetic evolutions have accidentally conferred on them a differentiating role: (Bedja) ha'ddb adir "I killed = lion", 'hadab adir "I wood lious"

(ii) On the morphological plans.—Lexemes are constituted in Kushitic by constant radicals with variable morphomes, generally suffixed: (Sidamo) min:min:no "he built", min-t "house", (Ometo) med:min:so "he forms", med:a "form"; (Somali) deb:deb:da "environment", deb:de' "to be between, among", deb:dddi "between". Despite phenomena of apophony in some languages [Bedja dir "to kill": dar "to massacre", rimid "to avenge": rimed "to be revenged", the radical vowel may be considered stable in every series of derivation, as may be seen

from the preceding examples.

By far the most frequent form of radical is CVC: 90% of the verbal radicals in Kaffeen, 67% in Somali. In Bedia, however, and uniquely in Bedia, it yields prodominance to radicals of type CVCC or CVCVC. But analysis reveals that these roots are often derived from Semitic, and particularly from Arabic. The verbal system is based in general on the fundamental opposition of two aspects: the incompleted and completed. Conjugation is of two types. In some languages, a certain number of verbs are conjugated by means of prefixed signs. This is the case with Afar, where this type of conjugation represents more than a third of all verbs, and especially with Bedia, where it represents nearly two-thirds; but Somali and Agaw have only four verbs with prefixal conjugation. For all the other verbs and in all the other languages, conjugation is suffixal. Thus the verbal forms are constituted in principle according to one of the following two schemes:

A. Prefixal conjugation; sign of the person + sign of the aspect/mode + verbal root + desinence of the gender and/or number. Example 'Afar: 1-n-figé "you know" incompleted indicative; 1-i-figé "you knew"

completed or perfective indicative).

B. Suffixel conjugation: root + sign ■ the aspect/ mods + desinence of the gender and/or number. For example Bedia: tâm-t-in-i "you (fern.) eat" (incompleted indicative) tâm-ta-i "you (fem.) ate" (completed = perfective; tam-ti-i "(if) you were eating" (modal).

These schemes are capable of minor modifications in various languages. In particular, attention is drawn to newly-developed forms by means of suffixed morphemes. The most frequently used variable morphemes are:

- for the gender and number: I for the feminine

singular and is for the plural;

— for the aspect: m as the sign of the incomplete is often opposed to an antecedent vowel (a, s, t) for the completed or perfective, while the modal form is characterised by u; certain languages however, such as Bedja or Agaw, present some slightly different

situations from this point of view;

— for the expression of the persons, the paradigm is the following: Sing. 1. (3.) 2. 1. 3. masc. (y-), fem. 1.; Plur. 1. 1., 2. 1., 3. (y-). (The forms between parentheses are often represented by 1.) The identity of this system of signs with that of Semitle and Berber conjugation, whose very characteristics it presents (the same form in the singular for the 2nd pers. and the 3rd fem., distinct forms for the 1st pers. sing. and plur., the 1st pers. pfur. being in addition deprived of the sign of number) has led to the positing of the probable hypothesis that the morphemes of aspect/mode which in the scheme follow these marks, are no more etymologically than short auxiliary verbs conjugated by means of prefixes.

The completed: incompleted opposition, with possibly a modal form, does not exhaust the complexity of the Kushitic verbal systems. Periphrastic forms, constituted by means of auxiliaries, often serve to add the expression of different aspective-temporal nuances such as the near past, the pluperfect and especially the "continuous-progressive" or "concentiant". Examples: "Afar: thell fine (incomplete + complete of në "to be") "you were engaged in looking, you were looking"; Somali: "hu-a "he eats (will eat)", "ún-ay-a "he is engaged in eating".

As regards their conjugation, the languages of the Ome have a separate place in the Kushitic group. The scheme there is also suffixal, but the morphemes used and their modes of combination are peculiar to them. For example, Ometo: and sing, incomplete er-dsa "you know", complete er dd-asa "you know".

The Kushitic languages distinguish various secondary verbal themes by added signs. A first method of derivation is partial or total duplication of the radical which gives the roots intensive or frequentative value: Agaw (Bilin): \$\delta b^{\text{to}}\$ 'to cover'': \$\delta b \delta b^{\text{to}}\$ to cover completely''; Sidamo; \$\kappa b^{\text{to}}\$ is shake'': \$\kappa b \kappa b^{\text{to}}\$ shake strongly''; Bedja: \$\kappa^{\text{to}}\$ is turn'': \$\kappa b \kappa^{\text{to}}\$ is turn and turn again''; Oromo: \$\kappa k^{\text{to}}\$ to know well''.

One should also mention a type of verbal composition widespread in the majority of the Kushitic languages and which consists in the juxtaposition of 524 KÜSH

an invariable element (plain verbal radical, noun, interjection, concuratopoela, etc.) and of a verb meaning "to say": 'Afar: I y "to say ho" = "to rear", Sidamo: suia y "slowly + to say" = to act tlowly"; Agaw: yik y "down + to say" = "to lower"; Oromo: of gett "to say + up = to mise"; Ometo: shi'i ga "hush + to say = to be silent".

The Kushitic languages of the centre and east have various series of pronominal forms. One of them, called "emphatic", is used especially III act as II subject. Other forms generally suffixal serve to express the complements of the verb and noun. The following tables will show both the common bases and the developments peculiar to the various languages:

"Emphatic" pronouns

		omali Benad		Oromo	Awiya	Sidemo
Sing.	2 3 mas.	ані adi (4339)	anû alû dssuk	dui dti inni	dn out oi	āni, und ālī, alē isi, isó
Plur.	fen). 1 2 ■	iyyo anu idin iyyu	issi namd issim ussim	i <u>sh</u> in nd(i) isin(i) isan(i)	gi onnödji onlödji gdd <u>i</u> i	use ninke kin²e insc, insa

Attached pronouns

Somali	Afar	Oronio	Sidamo
-key	-9i	-ho, -hiya	-150
-Aā	· her	-67	- jiz gʻ
-kā	-kā(y)	-62	-liti
Ais	·fû	*\$G	-કાર્ય
-kēd	-#ä	- <u>zh</u> (, - <u>sh</u> e	-25
-leepon	-93,62	-Admir	-nke
-itin	-seut	-hēsan(i)	-91 ² 6*
-kōđ	·kān	-kësan(i)	-1180
	-koy -kä -kä -kis -kėd -keyn -kin	-key -yi -kā -ka -kā -kā(y) -kīs -fā -kēd -fā -ktyn -na -kln -sēn	-key -yi -ko; hêya -kê -kê -kê -kê -kî -kê -kê -sa -kêê -tê - <u>sa</u> -kêu -keyn -sa -kêua -kên -sîn -kêsan(i)

In Northern Kushitic (Bedia) the "emphatic" forms, apart from the first persons, appear to be clearly constituted by an invariable base with personal suffixal signs added: Sing, 1. ani 2. mas. bar-i-ak, fem. bat-i-ak, 7. mas. bar-i-ak, fem. bat-i-ak; plur. 1. ani, 2. mas. bar-i-dk, fem. bat-i-ak, 3. mas. bar-i-ak, fem. bat-i-ak, and bar-i-ak, fem. bat-i-ak.

The languages of the west have a system of their which is well illustrated by Ometo: Sing. 1. 1d., 2. 1d., 3. 1; plur. 1. 111, 2. 1116, 3. 116.

All the Kushitic languages recognise a distinction of gender between masculine and feminine, at times in a vesticial state, as in certain languages of the west, for example. Among the varied signs which are used, the frequency of the sufficial morpheme -i- for the faminine should be noted. On the syntactical plane, the essential fact is the agreement of the majority of the languages on the order determinantdetermined. The only exceptions are Somali and Oromo which regularly present the inverse order; in Bedja, the qualifying adjective follows the qualified notes when the latter has a definite article. But in all the languages, the dependent proposition precedes that on which it depends (except, in certain particular cases, in Bedia and Somali) and the verb is placed at the end of the phrase after the subject and the various complements.

On the lexical plane, the certain cognate forms are still relatively few in number, above all because of inadequacy of the theory of phonetic correspondences. Nevertheless, the existence of m common vocabulary can be established in several forms. Here are manufactured in several forms. Here are examples. Bedja: sim, Agaw: shun, Sidamo: shum'a, Ometo: sun-fa, Mandjero: sun 'name'; Somali: wadne, 'Afar: rodana, Oromo: ounc, Sidamo: wodana, Ometo: worana 'heart'; Somali: daw, Oromo:

dandi, Sidamo: doga. Burdii: dana, Agaw: doke, Ometo: age, Kaifa: dag "way". For some words, the tenguages of the west present forms which distinguish them from the rest of the Rushitic group: Bedja: ltli, Somali: dl, 'Alar: il, Oromo: ig-ia, Sidamo: tlle, Somali: dl, 'Alar: il, Oromo: ig-ia, Sidamo: tlle, Agaw: yil, but Ometo: ayfe, Djandjero: afa, Kaifa: afo "eye"; Bedja: yaf, Somali: af, Sidamo: afe, but Djandjoro, Kaifa: nond "mouth".

Bibliography: in Ernest Renau's Histoire générale el système comparé des langues sémitiques (1st part only appeared, 1855; other editions revised with additions 1858, 1863, 1878), the term "couscaite" is already used in relation to the East-African languages: "One may believe that, among the non-Semitic languages (of Ethiopia), the remains of the ancient language of the Kushites have been preserved" (2nd ed. 1863, 339). But it was R. Lepsius who first recognised the linguistic group and definitively gave it its name in his Nubische Grammarik mit einer Einleitung über die Volker und Sprachen Afrika's, 1880. Rushitic appeared there to be constituted by Bedia, Shoho (or Saho), Falasha (an Agaw dialect), Agaw, Galla (or Oromo), Dankali (or 'Afar), Somali to which is added Hottentot. In = earlier work, Standard alphabet, and ed. 1863, he had grouped under the of Ethiopian, the majority of these languages with Semitic Harari, but without Hottentot, For the recognition of their membership in the Hamito-Semitic family, - the information supplied by M. Cohen, Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique, Paris 1947, 3 ff. For Kushitic in general: A general overview of the distribution of the languages and their linguistic structures is to be found in M. A. Bryan, The distribution of the Semitic and Cushitic languages, London 1947, completed by A. N. Tucker and M. A. Heyan, The non-Bandu languages of North-Eastern Africa, London 1966; J. Greenberg, Studies in African linguistic classification. New Haven 1955; idem, The languages of Africa, The Hugue 1966. For recent perspectives, see F. R. (D. COHEN)

KUSHADJIM, MAHMUD B. AL-HUSAYN = AL-Sindi b. Shahak, Abu 'l-Path, post of the 4th/10th century whose death is variously given in the sources between 330/941 and 300/971, but which must have taken place so. 350/961. Originally from a family of Sind (see thrants a. AL-SINDI), he was born at al-Ramia and lived at al-Mawail at the court of Abu-I-Haydia' 'Abd Allah b. Hamdan (see HAMDANIDS), and then at Aleppo, in the entourage of Sayf al-Dawla [q.v.]: he also made several journeys to Egypt, Baghdad, Damascus and Jerusalem. His are described by R. Blachere, Motanabbi, 134, as "excessively florid and enjoying a contemporary vogue" which is confirmed by al-Mas'ūdī, who in his own tifetime, devoted long passages to him in his Muradi (see index). IIII was closely associated with his son-inlaw at Sanawbari [q.v.], and he is one of the creators of nature poetry in Arabic, in which he evokes visual pleasure by his descriptions of gardens, flowers and trees. But he was also a halib, m astrologer and master-cook to Sayf al-Dawla; he excelled in so many branches of knowledge and activity that his surname Kushādiim is said to be an acrostic formed out of the initial letters of the subjects in which he excelled, or out of various adjectives-a ka/ for kitaba/katib, skin for shi t/sha it, alif for adabladib or for insha, difin for diadalidianda, min for mantikimunadidiim. It is even said that, after having studied medicine, he added a f4' (for fibb) to his name, which became Takushādjim, but had hardly any success.

He has left behind a Diwan, first published at Beirut in 1313/1895-6, then at Baghdad in 1970 (by T. Kh. M. Mahfüz); a collection of Rasa'il (Fibrist, 200], an Adab al-nadimjol-nudama', ed. Bùlak 1298, Alexandria 1329; ii K. Khasa'is al-lasab; a K. al-Tabikh; ii Kanx al-hultib (al-Kalkashand), Subh, i, 154, 162-3; a K. al-Masa'yid wa 'l-mafarid (partial ed., carelessly done, Baghdad 1954) comprising in the K. al-Bayzara (cf. F. Viró, La traité de l'art da volerie, Leiden 1967, 2), in the Diwan and in vol. x of al-Nuwayn's Nihūva.

AL-KUSHASHI, SAPI AL-DIN ANNAD B. MUHAMmad b. Yonus, al-Madani al-Da<u>di</u>ani, Sufi mystic and scholar, b. Medina 991/1583. Little is known of his life. His family on his father's side migrated from the village of Dadjan near Jernsalem and settled in Medina. He spent part of his life as a soldier. In tort/1602-3 he travelled with his father to the Yemon, where he studied with various of the religious teachers, especially those with whom his father, Muhammad b. Yunus had studied. An incident not specified in the sources disturbed him deeply, causing him to return hurriedly first to Mecca, and then to Medina, where he continued to study from some of the great mystics of Indian origin, especially at-Shinnawi and Sibghat Allah, and through them, the works of al-Chawth al-Hindl. He was affiliated to several mystical orders, including the Nakshbandi, the Kâdirl and the Shattari. He attracted numerous students, and enjoyed it reputation for extraordinary humility. He is of particular importance because of the character of his transmission of the doctrines of the school of Ibn al Arabi [q.v.], particularly as reformulated by 'Abd al-Karlın al-Dilli [q.v.] to various parts of the Muslim world, including Sumatra and Java. Among his students for almost twenty years (1051-70/6141-60) was the Sumatran 'Abd al-Ra'ul of Singkel, and numerous Diawi associates of whom we do not know the names. His pupil and successor = shaykk of the Shattariyya order, al-Küräni[q,v,], maintained his wide circle of students, and gives much information about him in 📟 al- A mam (see Bibl.). It is worthy of note that Tahir, the son of his greatest student al-Kūrāni, was a teacher of Shab Wall Allah [q.v.].

His works include Soff interpretations of hadith, rare among Soff authors, who devote most of their exegetical skill to the Kur'an. He was noted for the extent to which he associated Kur'anic and hadith quotations with his views, and his skill in presenting the isnād of every hadith that he cited. A commentary on his rhymed credal statement al-'A hida al-manjūma by his student Ibrāhīm al-Kūrānī entitled Kaşa al-sabīl was rendered into Malay, possibly by his student 'Abd al-Ra'ūī.

His books on hadith, usul and tasawouf number more than filty. One has been published (al-Sim) almodist fi talkin al-dhihr, Haydarabad 1327). Other works, listed by al-Baghdadt, Include Haghiya 'ala 'l-Insan al-hamil li-'Abd al-Karim al-Dill. al-Kalima al-westa fi shark hikam Ibn al-'Afa', and al-Kamaldi al-lähiyya. He died at Medina in roys/1660-1, and was buried in the Baki' cemetery.

Voll, An analysis of an intellectual group in sighteenth-century Madina, in BSOAS, xxxviii (1975), 32-9. (A. H. Johns)

KUSHAYR, = Arab tribe forming part of the great group of the Banu 'Amir b, Şa'şa'a [q.v.] whose fortunes we find them almost continuously sharing

in the period before as well as after Islam.

They had particularly close associations with the tribes of 'Ukayl and Dja'da, whose genealogical table makes them brothers. Their genealogy is Kushayr b. Ka'b b. Rabi'a b. 'Amir b. Sa'sa'a. Tradition makes the mother of Kushayr Rayta bint Kunfudh b. Milik of the tribe of the Band Sulaym [q.v.]. During the pre-Islamic period, the Band Kushayr settled in al-Yamama were involved in all the wars of the 'Amir b. Sa'sa'a, especially in those against the Tamim, the Shayban, whose chiel Hadjib b. Zurara was made prisoner by Målik b. Salama al-Khayr b. Kushayr, called Dhu 'l-Rukayba, at the battle of Djabala, and against the kings of al-Hira (cf. Naká)id, ed. Bevan, 70, 404-5). After Nuhammad's successes in central Arabia, the Kushayr joined with the other tribes of the 'Amir in sending him envoys and coming to an arrangement with him; it is to this time that tradition dates their conversion Islam (cf. the texts in Castani, Annali, 1/1, 297 (9 A.H., § 78)). Later they took part, without particularly distinguishing themtelves, in the wars of conquest in Syria and Trak, and settled particularly in the eastern parts of the Arab empire. In the Umayyad period they were very numerous and powerful in Khurāsān, of which several Kushayris were governors (among others Zurara b. Ukba, whose family possessed a very highly esteemed broad of horses). This Kushayri colony has as its founder and common ancestor Haydo b. Mu'awiya b. Kushayr, a half-mythical personage who is said to have lived to a fabulous age and to have had a thousand descendants (Ibn Hadjar, Isaba, Cairo 1345, il, 56, No. 1890; Abû Hâtim al-Sidjistâni, K. al-Mu'ammarin, in Goldziber, Abhandlungen sur arab. Phil., ii, 97). On the other hand, we find in Mubarrad, Kāmil, ed. Wright, 273, a similar longevity attributed to Dhu T-Rukayba, the Kushayri chief mentioned above, and indeed almost all the Kushayris of note settled in Khurāsān recorded by history, belonged to the clan of Salama al-Khayr to which Dhu "1-Ruhayba belonged, and which seems m have been the aristocracy of the tribe.

The Kushayr did not number many poets of note among them; the best known is Yazid fbn al-Tathriyya who lived between the end of the Umayyad period and the beginning of the 'Abbasid period.

The genealogical sources, and in particular Ibn al-Kaibi, also mention other ethnic groups bearing the name Banu Kushayr, two of which belonged to the southern tribes of the Asiam and the Aws (Ansar).

Bibliography: Ibn al-Kaibl-Caskel, Gamhare, Tab. 101 and Register, ii, 473; Wüstenfeld, Genealogische Tabellen, D. 117 (Register, 140-1); Ibn Durayd, K. al-Ightiphh, ed. Wüstenfeld, 181; Ibn Kutayba, K. al-Matarif, ed. Wüstenfeld, 43, ed. Ukisha, 89 and index. (G. Levi Detla Vida).

VISHAVEL the side of two point (Kuta).

AL-KUSHAYRI, the mishe of two noted ichura-

zānian scholars.

z. Anu 'l. Kasın 'And al-Kanın n. Hawazın, theologian and mystic. He was born in 376/986

in Ustuwa (the region of actual Kūčān [q.v.] on the upper Atrak), the son of a man of Arab descent (from B. Kughaya) and a woman from an Arab (from B. Sulaym) dishān family. He got the education of a country squire of the time: sdab, the Arabic language, chivaky (furüsiyya) and weaponty (stis'mdi al-silāh). When as a young man he came to Nayabbir with the intention to get the taxes on one of his villages reduced, he became acquainted with the \$\tilde{\text{the Sulayh}}\$ Abā 'All' al-Dakhāk, who became his master on the mystical path. Later on he married Abā 'All's daughter Fāṭima (born 391/1001).

Besides his mystical exercises, he studied fifth with the Shāti's jurist Abū Bakr Muhammad b. Bakr al-Tūsi (d. 420/1029) in nearby Tūs; he mann also to have visited the city of Marw fi talab al-tim (Suhki, v, 158). In Naysābūr he studied halām and aṣūl al-fiệh with the Aṣḥ'arī scholars Abū Bakr b. Fūrak (d. 406/1015-16) and Abū laḥāk al Islarā'lni (d. 418/

f027).

After the death of Abū 'Alī in 403/1015, he seems to have become the successor of his master and father-in-law as leader of the mystic sessions (madjālis al-ladhālis) in the madrasa of Abū 'Alī (built in 301/1001), which henceforth was known as al-madrasa al-Kushayriyya (later m as madrasat al-Kushayriyya, "the madrasa of the Kushayri family").

At mindeterminable date, al-Kunhaysi performed the Pilgrimage in company with Abû Muhammad al-Djuwayni (d. 438/1047), the father of the India di-Haramayn, and other Shāfi's scholars; during these travels he heard hadila in Baghdad and the highest Probably after his return to Naysābūr he held his first madilis al-imid's, i.e. session for the teaching

of hadith, in 437/1046.

After Naysabar had passed under the control of the Saldjüks in 429/1038, al-Kushayri mi involved in the struggles between the Hanaff and Ash'arf-Shāfi'i factions in the city. In 436/1045 he issued a manifesto defending the orthodoxy of Abu 'l-Hasan al-Ash'ari; the document (preserved by Ibn 'Asākir, Tabyin, 132-24; cf. Subkl, iii, 374 f.; Halm, Der Wesir al-Kunduri, 214 ff.) was signed by the most renowned Shali'l scholars of the city. When in 446/1054 the Hanafi-Shafi'l conflict broke out into a violent func, al-Kushayri was imprisoned by his adversaries, but was rescued some weeks later by his partisans by force of arms. As a reaction to these events, he wrote his famous "Complaint", Shikāyat ahl al-sunna bimā nálahum min al-mihna (preserved by Subkl, iii, 399-423; separately ed. by Muhammad Hasan, see below), by which he delended al-Ash arl against the slanderous accusations of his adversaries (analysed in Halm, Der Wesir al-Kundurt, 224 ff.).

In 448/1056 al-Kushayri went to Baghdad, where the caliph al-Ka'im commissioned him to teach hadith in his palace. After his return to Khurasan he left Navsabur, now dominated by the Hanaff faction, and emigrated with his family to Tus, where he stayed until the accession to the throne of sultan Alp Arslan in 455/x063. When the visier Nighm al-Mulk re-established the balance of power between the Hanafis and the Shafiffs, he returned I Naysabur where he lived until his death. He will on Th Rabic II 465/30 December 1072 and was buried in his madrasa besides his father-in-law Abū "Alī al-Daķķāķ. He left six men and several daughters; some of his numerous descendants (cf. the pedigrees in Bulliet, Patricians, 180-4; Halm, Ausbreitung, 61) officiated as Akafib of the Shaifi Manifi mosque in Na ysabb

Even if al-Kushayrl's studies covered the whole scale of the traditional Islamic sciences, his writings mostly deal with mystical topics. His great mystical tafsir, the Luid'if al-ighārāt, was composed before 4xo/xotg; the Tartib al-sulah is m introduction to the practice of tafaravarf, and the famous Risāla (composed in 438/xo45) is a most important compendium of the principles and terminology of Sūfism (analysed by R. Hartmann). In all his works (cf. Subki, v, 159; Brockelmann, I, 556 f.) al-Kushayri tried to reconcile mystical practices, suspected by so many scholars, with the principles of the Sharifa.

2. ABU 'L-NASR 'ABD AL-RARIM B. 'ABD AL-KARIM B. HAWAZIN, SON of the former; Shāfi'i-jurist and Ash'arl theologian. Born in Naysābūr before 434/1043, he studied tosir and nsal with his father and with the India al-Haraniayn al-Dinwayni. When in 469/1077 he publicly taught Ash'arl kalām in the Nizāmiyya madrasa in Bagndād, he provoked the wrath of the local traditionalist Hanbuli faction supported by the masses, and caused a violent fund. The vizier Nizām al-Mulk, who protected the young scholar, had to summon him to Islahāu, from where he sent him back to Naysābūr. There Abu 'l-Nasr died, after a peaceful life, in 514/1120, in his eighties.

¥USHBEGI [see man segi].

AL-KUSHDJI (see 'ALI AL-KUSHDII).

KUSHIYAR B. LABAN B. BASHARRI, ABU 'L-HASAN AL-Dift.I. Persian astronomer and mathematician. He was born in Gilin, to the south of the Caspian sea, in the first half of the 4th/20th century, probably between 322/934 and 332/944. The date of his death is equally obscure, but was probably in the first quarter in the sthirth century. Very little is known of his life; most of it was spent in Baghylad, with the peak of his career in ca. 990/1000.

His principal works comprise two rides, the z. aldjämi' and the z. al-bâligh, as well as an arithmetical treatise, the Unid histo al-Hind. His astronomical tables mark an advance to those of Abu 'l-Wafa' and al-Battäni. Whereas the latter only indicate the values of sines and the cotangent, Kushiyar also gives those of the tangent, and the values of these functions are given by him to the third sexagesimal.

His other great work, the Upid hisab al-Hind, contains the first description of the "Indian system of calculation", i.e. of the system of numeration by position (the value of the figures depending on their place in a number), which brought about a revolution in the ways of calculating used in the Near East. The work is divided into two parts. In the first, the author works out logarithms for the four basic arithmetical operations and for finding the square root. Whole numbers are treated within the decimal system, and fractions in the sexageshmal one. The second part deals with this latter system, already used by the astronomers, but set forth by Kushiyar in a way of numeration by position. He shows how whole numbers can be converted from the decimal into the sexagesimal system, and then sets forth logarithms for the basic arithmetical operations, for finding the square root and for finding the cube root. Finally, he gives material famous multiplication table, called "the table of sixty", for multiplying within the sexagesimal system. In these various calculations, he already makes of the elementary rules for multiplying and dividing both positive and negative whole powers. As for the figures which he uses, for calculations made in the sexagesimal system he uses the Arabic alphabetical characters, the buruf al-diumal; but for those in the decimal system, the so-called "Indian" figures, the origin of what were later called "Arabic numerals". Kushiyar's system of logarithms for finding the square root forms the basis for the theory of decimal fractions which was subsequently to be elaborated by al-Karadif and al-Samawial.

(K. JAOUICHE) KUSKUSÜ (A.), a word probably of Berber origin meaning conscous, a culinary preparation containing semoling which in the national dish of the peoples of North Africa. It appears with the article and with a final man in an anecdote depicting Oriental being advised by the Prophet, in a dream, to treat with al-huskusiin a sick Maghribl; this anecdote, related by Dozy (Suppl., s.v.) is very well known and is probably responsible for leading Moroccan scholars to adopt the form attributed = the Prophet. L. Bauer (Wörlerbuch der arabischen Umgangsprache¹, Wiesbaden 1957, 402), heard kusukson/kuskusan in Palestine, describing it as "Teigkugelchen in Fleischdampf gekocht", Couscous was known in Spain, and the word kuskusii is provided with the article in the Kitab al-Tabihh published by A. Huici Miranda (Madrid 1965, 181), but this is a case of an arabisation which is not found in vernacular Arabic, where the word never takes the article; sekso, ksēkso, huskus, husksi, etc., which betrays its nou-Arabic origin. The equivalent term among the majority of the Bedouin tribes of Algeria and at Themcen is f'dus used alone, elsewhere it is 'aysh, m'ash, m no'ma, all of which illustrate the importance of couscous in the minds of the people, especially those in rural areas, who make it the invariable staple of their evening meal.

The quality and the weight of the grains as well ■ the presentation of the dishes offer a considerable diversity, which is covered by the generic terms cited above but which is expressed by means of a detailed and extremely varied vocabulary according to regions. We contine ourselves here to a description of the general processes.

Couscous may be prepared at any time, but it is exclusively the work of women; some chose out of preference the nights of Monday and of Friday to take advantage of the baraka [q.v.] which is attached to them. The housewife makes an invocation and she must not see or hear anything that might constitute a bad omen; on the contrary, it is the custom to speak in her company only of saints, of the prosperity of the land, etc.

To make her conscous, the woman sits on the ground, places in front of her mwooden plate called dis/na, gas'a, kasriyya, etc. and, to one side, a receptacle containing lightly salted water and a sack of semolina; in some regions, a little flour is also used and to the salted water are added a few drops of nisán water (rain of early May preserved in a flask). The housewife takes a handful of semolina, puts it in the plate, sprinkles it with salted water applied with the hand or with a spoon and proceeds to roll it (verb fish with the flat of her hand, until small grains are formed with the size of small buckshot. When the stock of semolina provided is exhausted, the grains are passed through a sieve, and the bigger ones are rolled again until they acquire the desired dimensions or set aside to make a coarse couscous called mhammsa, barkuks, brekukesh, mardad, etc. The grains are then cooked in steam and may be kept for some time.

When they are to be eaten, the housewife cooks them for a second time. In a cooking pot (hadra), she boils water to which she adds vegetables (chick-peas, turnips, wild teasels, etc.) and/or mutton or beef sometimes browned in a little oil; she puts the couscous grains in a special receptable (keshās), a conical vessel made of earthenware or plaited alfalfa, the perforated, smaller base of which is placed over the cooking-pot and sealed by means of a twist of straw. Escaping, the steam passes through the holes and cooks the couscous. The housewife takes care that curds are formed, when the grain is cooked, she tips it into a bowl, garnishes it with a little butter and covers it with gravy. The vegetables and the meat are most often laid out on the grain. The diners make pellets with their thumb, index and second fingers, and flick them dexterously into their mouths.

In the preparation of couscous with sugar (soffa, ms/uf), the cooking-pot contains only water; once cooked, the grains, which are generally finer, garnished with rather more butter, and the cone which they form in the dish is decorated with ground

sugar and cinnamon.

Among the other varieties, we mention barbukh, with fine grain, eaten cold, without butter, and moistened with a little milk; barbuska, made with barley semolina; this is called sikuk in Morocco. The Kildb al-Tabikh gives the recipe of fitydni which is prepared by cooking grain in gravy and which is sprinkled with chanamon; it also mentions conscouswith chicken.

Conscous is quite widely known at the present time, especially in France where it is found commercially produced in food factories and sold "pre-cooked": conical atensils ("conscoussiers") made of metal are also produced. Restaurants serve several varieties of this Maghribi dish accompanied by a sauce strongly seasoned with pepper (marga hārra; harīsa).

KUSS a. SAIDA al-Ivant, a semi-legendary character of Arab antiquity pictured as the greatest orator of all the tribes (al-Dahiz, Bayda, i, 52) and whose eloquence has become proverbial (ablagh min Kuss: al-Maydani, Madima', i, 117-18; 'Imad al-Din al-Isfaháni (q.v.) even formed 🖿 adjective thyming with kudsi in the title of his history of the conquest of Jerusalem by Saladin, al-Fath al-bussi "of Kussian inspiration"). He is also an heroic figure, described m being also the poet, sage, judge, etc. par excellence of the Arabs of his time. His genealogy cannot be established with certainty, but the nearest to reality seems to be: Kuss b. Sa'ida b. 'Ame b. Shande b. 'Adl b. Malik b. Ayda'an b. al-Namir b. Wāria b. al-Tamathan b. 'Awdh Manat b. Yakdum b. Afså b. Du'mî b. Iyad (cf. Ibn al-Kalbi-Caskel, Tab. 174 and Register, ii, 473). Moreover, his very name poses a problem, since it is unique (cf. however the toponym Kuss al-Nāţif, in Yākût, iv, 97-8); although it is given without the definite article, it could well be connected with hass and hissis and point therefore to a relationship more or less close to the Christian clergy. It is not impossible that Russ had relations with the Christians of Nadiran, but it is wrong to take him, as has sometimes been done, as the bishop of that town, perhaps on account of an assimilation brought about by the phrase "eloquent as the bishop of Nadiran" (see e.g. al-Djāhiz, Hayazen, ili, 88). Legend, which also credits him with a number of miracles, has it that he presented himself at the court of the Emperor of Byzantium, but he seems to have delivered his orations in the regions between 'Irak (where the lyad [q.e.] had been established, but had lost however their independent existence by the end of the Djahiliyya), the Hidlas and Syria. Nothing is known of the date of his death, which Cheikho (Shu'ara' al-Nasrdniyya, 211) fixes arbitrarily in 600 A.D., and, it is at Rübin, one of the dependencies of Aleppo, that his tomb was fixed, becoming the goal of a still much followed pilgrimage in the 7th/13th century [al-Harawl, Ziyaril, 5/10; Yāķūt, ii, 829; D. Sourdel, in Syrıa, xxxi [1953], 89-107). Interred beside him were supposedly the two friends to whom he is said to have devoted an elegy (in taws) metre, and the rhyme-dkumd) which is often

mentioned but attributed to various poets (al-Baghdad, Khizana, ed. Bulak, i, 261-8 w ed. Cairo ii, 66-79, of which whilked 92 is taken from this piece of verse, lists the possible authors in his long commentary; see also D. Sourdel, op. land., 200-1).

In fact, well as his eloquence—the specimens which are extant of this, in rhymed prose, being of very doubtful authenticity—tradition further ascribes to him a poetle talent and attributes to him an extensive couvre whose remnants are equally suspect (they have been gathered together, with extracts from his homilies, by L. Chelkho, <u>Shutard</u> al-

Nagramiyya, 211-18).

He is counted amongst those who enjoyed longevity, baving allegedly fived between 180 and 700 years, so that in the view of certain people he had even known the Apostles; but we have here the manifestation of a tendency of the traditionists to prolong considerably the lives of certain personalities of the past [see mu'anmanun]. Although al-Suyût] (al-La'elt al-masnifo fi 'behadith al-maudifa, i, 95-100) criticises the legend of Kuss, no-one doubts his historical existence, which seems to be attested by an hadith often given on the authority of Ibn Abbas. When receiving a delegation from the Bakr b. Wa'n (whom the Iyad had joined), the Prophet is said to have enquired about Kuss, and learning that he was dead, to have recited a passage from a speech which he had heard delivered at 'Ukas and to have had someone (Abû Bakr or another person) remind him of some lines of the orator-poet's which he had forgotten. He is even said to have exclaimed, "I hope that on the Day of Resurrection, he will return to life and form a people of his own". Al-Diabit, who is usually fairly prudent, remarks (Bayan, i, 52) that if the Prophet repeated his words, it was because Kuss uphald the concept of monotheism and believed in the resurrection. This is why he was quickly included in the list of the hanifs [q.v.] and of the "people of the interval" [see FATRA], and even considered as ascetic (al-Djahis, Boyan, i, 365). Thu al-Athir (Usd. iv, 204) and Ibn Hadiar (Isaba, No. 7340) cite him in their biographies of Companions, and although Ibn Ishak and Ibn Hisham do not mention him, All b. Burhan pays some attention to him in his Sira Halabiyya (1, 210-12, 216-18).

Finally, tradition attributes to him the merit of being not only the first to believe in the resurrection, but also to have been the first to preach mounted a camel or leaning on a sword a staff [see 'ANAZA] and to the formula animal ba'du and write at the beginning of a letter (1) min Fuldu ila Fulda (cf. Goldziher, in Abhandi. zur arab. Philologie, ii, 56). He is even said to have formulated the juridical rule that "proof is incumbent on the plaintiff and the defendant who denies his guilt must speak on oath". All these legendary details the evidently simed at exalting the prestige of a personage considered to

be a precursor of Islam.

KÚSTÁ a. LOKÁ al-Ba'labanki, mediaeval scientist and translator. He was of Christian origin, from the town of Ballabakk (g.v.). In Baghdad, where he worked for some time as a doctor, scientist and translator, his reputation was as high as that of Hunayn b. Ishāk [q.v.]. He was fluent in Greek, Syriac and Arabic, being particularly noted for his excellent style in Arabic. The last part of his life was spent in Armenia, where he was induced to take up residence by the prince Sanharlb, According to *Ubayd Allah b. Dibra*ll, he came into contact with a certain Abu 'l-Ghitrff al-Batrik, for whom be composed a number of scholarly works. Kusta died in Armenia ca. 300/912-13; a shrine me erected over his grave, which was accorded the same honours as the graves of kings and other eminent personages.

It was, of course, usual for Arabic scholars to be well versed in ■ wide range of subjects, and Kustā was no exception. He is said to have been skilled in medicine, philosophy, geometry, arithmetic, astronomy, and music-all these subjects m included in the lists of his works given by the biographers. Ibn al-Nadim (Fibrist, 410-11), having first stated specifically that he has excluded translations, lists over thirty of Kusta's original works, and Ibn Abl Usaybi'a adds a further thirty works to 📟 📟 ('Uyun alanbe', ed. A. Müller, Cairo 1882, i, 244-5). Medical works, which preponderate, include the following treatises: on gout; infectious diseases; insomnia; knowledge of fevers, types of crises in illnesses, the pulse; paralysis-types, causes and treatment; the four "humours"; and phlebotomy. Non-medical works include several treatises on philosophy and logic; on astronomy, me the celestial sphere; two commentaries on Euclid's Elements, a treatise on algebra, a commentary on the book of Diaphantos == algebra; on the steelyard (karasjūn [q.v.]); on weights and measures; and on burning mirrors. Some of Kusță's translations are extant, e.g. those of Diaphantos, Theodosios, Autolykos, Hypsikles, Aristarchos, and Hero. For a list of his works, both originals and translations see Suter, 40-2 and Index, and Sezgin, GA5, iii, 270-4, v, 285-6, and Indexes). Both writers give locations of extant manuscripts.

No comprehensive study of Kustā's works has yet been undertaken, nor has there been made any detailed evaluation of his contribution, certainly a significant one, to the progress of science. His services as a translator must surely rank at least equally with his original works. The biographers are unanimous a praising his skill as a translator of Greek works into Arabic, and in the light of the surviving translations their esteem seems to be fully justified. For example, although the original of Hero's Mechanics is lost, an examination of Kustā's Arabic version (Carra de Vaux in JA, 9 Série [1893], Tome i, 386-472, Tome ii, 152-269, 420-514 — Arabic text and French translation) leaves us with little doubt that this is a faithful and sensitive rendering.

BUSTANTINA, RUSANTINA, CONSTANTINE, a town in Algeria and the chief town of middle (department) of the same name. It lies 330 miles east of Algiers and 50 miles south-east of Skieda (former Philippeville), which is the port for Constantine, with which it in connected by railway, in lat. 36° 22' N. and long. 18° 56'. The population in 1965 was 23' N.000.

The situation of Constantine makes the town a natural fortress. It is built on a rocky plateau in the form of a trapezoid, bounded on the south-east. north-east and north-west, by deep ravines and connected with the surrounding country on the southeast only by a narrow isthmus. The plateau itself declines rapidly from north to south. The Kasha on its highest point is 2,500 feet above sea-level, while the Marabout of Sidt Rashid not a mile away is only 2,170 feet high. Of the ravines which represent the moats of this natural fortress, the most remarkable in that which runs along the south-east and north-east faces of the plateau, at bottom of which the Rummel (Wadl 'I-Rami) flows. This river runs along a narrow gully, a real canon, the walls of which rise sheer upright to a height of 500 to 500 feet, disappears for 11/2 miles under three subterranean passages which the water has hollowed out, makes its exit in waterfalls and descends to the verdant plain of al-Hamma. Across this gorge, above which on the right bank rises the plateau of Mansara (2,340 feet), the Romans threw a bridge which existed for several centuries after the Arab conquest, Al-Bakri (Description de l'Afrique, ed. and tr. de Siane, Ar. text 63. tr. 131-2) mentions it, and al-Idrial (ed. de Goeje, 111. ed. Naples-Rome, iii, 265) describes it as one of the most remarkable works which it had ever been granted him to see. Consisting of two rows of arches. one above the other, 217 feet high, a read and an aqueduct bringing the water necessary for the town ran it. It collapsed in the 7th/23th century, was rebuilt in the 18th by order of Salin Bey under the supervision of a Spanish engineer, and on finally breaking down in 1947, it was replaced by an iron bridge 423 feet long crossing the Rummel at a height of 528 feet. Another bridge is, farther up me river, to connect the plateau of Mansura with the quarters previously in existence to the southwest of the town.

This last preserves an originality of aspect which is in striking contrast to that of other Algerian towns. It resembles a great Kabyle village rather than a oriental city. It is an agglomeration of houses with clay roofs, penetrated by an irregular system of narrow, tortuous streets, which sometimes descend like stairways to the edge of the ravine, the beights of which are crowned by houses. A few monuments recall the past history of Constantine. The great mosque dates from the time of the first Hafsid sovereigns (7th/13th century). The mosques of Sük al-Ghazāl, of Sidl Lakhdar and of Sidl al-Kattīni, all of which were built in the 18th century, belong in the Turkish period, as does the palace built by Ahmad, the last Turkish Bey, just before the French conquest.

The origins of Constantine are obscure. But in all probability, the site must have been occupied at a very early period by autochtonous peoples. The classical texts mention the existence of a town named Cirta at this place. The origin of the name (kart "town" (see Karra)) would lead one to suppose that the Carthaginians had established m colony there. In any case, Cirta appears in the period of the Punic Wars as the capital of the kings of Numidia; Syphax

had a palace there. Maxinissa and his successors. erected important buildings in it and invited Greek and Roman merchants thither. During the civil wars of the 1st century B.C., P. Sittins Nucerianus, an adventurer, seized Cirta and on the latter's ultimate triumph received the town and territory. Cirta then became a Roman colony under the name of Colonia Cirta Julia or Cirta Sittianorum. Juha 11 made it his capital after the restoration of Mi kingdom of Numidia by Augustus and lived there for seven years (24-17 B.C.), till be was forced to exchange Numidia for Mauritania, Cirta, still remained the capital of the republic of the "four colonies", then in the 3rd century A.D. it became that of the province of Numídia Civilia or Numidia Cirtensis established by Maximianus Herculus in 207. In the course of the givil wars which followed the abdication of Diocletian. the inhabitants recognised the authority of the usuroer Alexander and gave him asylum after m had been driven from Carthage and thus brought upon their heads the wrath of Maxentius. The latter took Cirts and rased the town to the ground in trr. It was rebuilt in 313 by Constantine, the conqueror of Maxentius, and received the name of Constanting which it has retained to the present day. At the Vandal invasion, Constantine occupied by the barbarians, but given back in 442 by Gaiseric to the Emperor. After the destruction of the Western Empire, Constanting remained independent, till the Byzantines, victorious over the Vandals, brought Northern Africa under their sway in 533. It remained subject to them till the invasion of North Africa by the Arabs.

The chroniclers are silent in to the date at which It fell into the hands of the Muslims. It is probable, however, that it was not affected by the first Arab incursions but was only occupied at the end of the ist/7th century at the me time as Carthage and the other Byzantine strongholds which were the last to surrender. Included in the province of liftkiya, Constantine owned the rule successively of the governors of Kayrawan, the Aghlabids, the Fatimids, then the Zirids. The latter retained it even after the Hammadids had deprived them of a portion of the eastern Maghrib. They lost it entirely at the Hilall invasion. The Hammadid al-Mulias took advantage of their troubles to seize the town and include it among his own possessions. The successors of al-Mucizz retained the town for a century in spite of a revolt instigated by the uncle of the amir al-Nasir. After the capture of Bougle by the Almohads, Yahya, the last king of Bougie, sought refuge in Constantine, then giving up any idea of further resistance, surrendered to 'Abd al-Mu'min whose troops took possession of the town. Attacked unsuccessfully by 'All b. Ghāniya in 381/1183, Constantine remained faithful to the Almohads till the final colleges of the empire founded by 'Abd al-Mu'min.

At this period, Constantine was m very prospecous city: "Kustantina", says al-Bakri (op. cit., 63, tr. 131-21, "(is a) large and ancient town with a numerous population; ... it is inhabited by various families who were originally part of the (Berber) tribes established at Mila, in the land of Nafzāwa in that of Kastīliyā, but ill belongs to certain Kutāmī tribes. It has rich bazanrs and a prosperous trade". Al-Idrīsī describes Constantine (Kusantīnat al-hawā', "of the ahr", because of its position) as m populous and compercial town. "The inhabitants, he continues, "are rich; they have agreements with the rural population (al-'Arab) and co-operate with them for the cultivation of the soil and the preservation of the harvests.

Their siles are m good that corn may kept in them for a century without suffering any deterioration. They collect large quantities of honey and butter, which they export to the outside..." (loc. cit.).

When the Almohad Empire broke up, Constantine recognised the authority of the Hafsid Abū Zakariyya, who was proclaimed at Tunis in 628/1230 (see HAFSIDS). The history of the town under the Hafsids (7th-20th/23th-16th centuries) is very confused and disjointed. The rulers of Tunis attached great importance to the possession of Constantine; they frequently lived there and delighted in improving it; they usually entrusted its government to princes of their own family. Nevertheless, in spite of their precautions and trouble they lost it on several occasions; in 681/1282 for example, in the reign of Aba Ishak, the governor Ibp at-Wazir rose against the sovereign of Tunis, who had to send his son, Abû Faris, to retake the town by force. In 683/1284, its inhabitants opened their gates to the pretender Abû Zakariyyā² of Bougie; in 704/1305 at the suggestion of the governor Ibn al-Amir, they submitted to the Hafsid sovereign of Tunis, whom they cast off almost immediately afterwards, however, to place themselves again under the authority of the king of Bougle, Abu 'l-Baka'. The latter succeeded in restoring to his own advantage the unity of the Hafsid kingdom in 709/ 1309 and for some years maintained peace in the eastern Maghrib. But new troubles were not long in arising. From 712/1312 to 719/1319, Constantine was almost independent under the authority of the vizier Ibn Ghamr, who succeeded in placing on the throne of Tunis a prince of his own choosing, Abū Yahyā. In 725/1325, the revolt of another vizier, Ibn al-Kātūn, exposed the inhabitants m an attack, which proved unsuccesful, from the 'Abd al-Wadids. The wars which then broke out in the eastern Maghrib between the Marinids and the 'Abd al-Wadids, as well as the good government of the governors Abu Abd Allah and Abù Zayd, son and grandson of Abû Yahya, king of Tunis, gained Constantine a few years of respite. But peace, which had only been established with dilficulty, was again broken in the middle of the 8th/14th century by Marinid expeditions. Abu 'i-Hasan entered Constantine without striking a blow and supplanted Hafsid authority by his own in 748/1347. The defeat of Abu 'l-Hasan at Kayrawan brought about a revival in favour of the Haisids and one of them, al-Fadl, took advantage of the occasion to seize the town. He held it for only a short time, The former Halsid governor, Abû Zayd, set at liberty by Abu 'Inan, retook Constantine, then abandoning his protector, proclaimed as Sultan a son of al-Hasan named Täshfin. Soon afterwards, Abū Zayd's brother, Abu 'i-'Abbas, overthrew him and dethroned Tashfin. He in his turn took the title of Sultan, repulsed the Dawawida and Sadwikash Arabs, who had laid siege to Constantine in 736/1355, but could not prevent the town being taken by Abû Inan, who make in person against it. He regained it from the Marinids in 761/1360. Becoming Sultan of Tunis 🔳 772/1370. Abu 'I-'Abbās maintained peace in the province of Constantine till his death. His successor Abû Fâris had on the other hand twice to reconquer the town from his brother Abû Bakr, who had seized it with the belp of the Arab tribes

We have no exact details on the history of Constantine in the 9th/15th century. Rebellions against Haisid rule were, it seems, less frequent than in the preceding century, but its authority me more nominal than mal. During this period, the real masters of Constantine were the chiefs of the Awild Sala, a section of the Arab tribe of Dawawida. In the town itself the exercise of authority was in the hands of a few families, clients of the Awiad Sala. Such, for example, were the family of 'Abd ai-Mu'min of Marabout origin, whose chiefs exercised by hereditary right the functions of the share and Amir al-Rahab (leader of the caravan of pilgrims to Mecca); the family of the Banû Bâdis, whose members had arrogated to themselves the duties of hādī; and that of the Banu 'l-Faggān (or Lafgūn), famous melgal authorities.

The arrival of the Turks in Northern Africa reopened an era of troubles for Constantine. There were two parties in the field. The one, led by the 'Abd al-Mu'min, was favourable to the maintenance of Hafsid suzorainty; the other, led by the Lafgun, invited the Turks thither. According to Vaysettes, a first attempt by the Turks to occupy the town was made as early as 923/1517. According to Merclar, Hasan, one of Khayr al-Din's lieutenants, forced the people of Constantine to recognise his master's authority in 925/1519 or 926/1520. The submission of the town was only an ephemeral one, however, for in 932/2526 a representative of the Hafsid sovereign of Tunis was residing in the town. It is not till 940f 1534 that the establishment of ■ garrison definitely marks the occupation of Constantine by the Turks. Their authority was not firmly established without difficulty. The belated partisans of the Halalds did not bow at once to the Turkish yoke, but sought to rid themselves of their new masters. In 975/2567-8 they massacred the Turkish garrison and expelled their supporters. To restore order, the Pasha Muhammad had to lead an expedition against Constantine, the inhabitants of which did not dare resist but opened the gates without showing fight. Another rebellion broke out in 1572 and was suppressed with the greatest rigour. The 'Abd al-Mu'mins who had instigated it, were deprived of their privileges, and from that date ceased to play a predominant part in the affairs of the town. They resigned themselves to their fall with a very bad grace. We find them again in 1052/1642 taking advantage of the difficulties caused to the Turks by the revolt of the Kabyles and the insubordination of the great Arab chiefs to stir up risings again which were, however, speedily put down. After being selected as the capital of the beylik of the East in the roth/roth century, Constantine enjoyed complete tranquility for the half century following the period of government of the Bey Farhat (1046) 1637). But the intervention of the Algerlans in the affairs of Tunisia ended in exposing Constantine to the reprisals of its neighbours. In 1112/1700, Murad Bey of Tunis, victorious in two battles against 'All (thodia Bey of Constantine, laid slege to the town and blockaded it for three months. The Dey of Algiers at length received warning of the precarious situation of the town by a messenger, who was succeeded in escaping from Constantine after being let down the cliff by a rope, and sent an army to its help, the arrival of which the Tunisian general did not dare await.

The 18th century marks the zenith of Turkish domination at Constantine. The beylik was held during this period by men of energy and intellect, ruling like independent sovereigns rather than as docide representatives of the Dey of Algiers. Such man Kalyan Hasan Bey, caffed BC Kamya (1713-36), Hasan b. Kusayn called BC Hanak (1736-54), Ahmad al-Kulli (1756-71) and above all Şâlib Bey (1771-92). Constantine owes to them many public works and buildings of general interest. BC Kamya built the

mosque of Sûk al-Ghazāl; Bū ḥianak made new streets and built the Mosque of Skill Lakhdar. Sālih Bey rebuilt the bridge over the Rummel and the Roman aqueduct bringing the waters of the Diabal Wabsh to the city; he also built the mosque and wadrass of Skill al-Kattānī and commissioned Italian artificers we built him a palace adorned with faiences and marble columns purchased in Italy.

A period of anarchy and disorder succeeded this brilliant epoch. Salih Bey himself, deposed by the Dey of Algiers, to whom he had given oftence, tried to stir up a rebellion but perished miserably. Seventeen Boys ruled Constantine in the period 1702-1826. Some of them only and office a few months or even a few days; almost were distinguished by their cruelty and rapine. Constantine suffered much from this state affairs. To the internal disorder were soon added attacks by the surrounding peoples. The Kabyle hordes of the Marabout (Ibn al-A'rash Sulayman Kahya) rose against the Turks and advenced up to the walls of Constantine in 1804. A Tunisian army commanded by Sulayman Kahya besieged the town three years later. It was blockaded for two months (April-May 1807) and was once bombarded. The approach of a relieving army from Algiers caused the Tunisians to raise the siege, and in their retreat they lost 1,167 prisoners and all their artillery.

Ahmad, the last Bey of Constantine, possessed those qualities which were lacking in his predecessors, Intellectual, active, ambitious and energetic, he unfortunately made himself hated by his acts of crucity and by the exactions levied by him to raise funds to built a palece in Constantine to replace the old Dar al-Bey. After the French occupation M Algiers, he sought to profit by the disappearance of the edials to create independent principality in the east, and had the title of Pasha given to him by the Ottoman Porte. Deposed by a decree from General Clausel on 15 December 1830, he nevertheless retained possession of Constantine. The hesitation on the part of the French government, which tried to come to terms with him for his voluntary submission and after the failure of these negotiations IIII not wish to enter on a dangerous campaign, delayed his fall. But in 1836. Marshall Clauzel, then rovernor-general of Algeria, obtained permission - undertake an expedition against Constantine. Leaving Bone ... 2 November, the French troops arrived without difficulty in sight of the and took up a position the heights of the Mangura and of the Kudya. Two sorties by the besieged, led by Ibn Isa, hhallfa of the Bey, were repulsed; on the other hand, two attacks by the French in the night of the 22-3 December also failed. Clauzel decided I raise the seige and returned to Bone after a retreat which was rendered very difficult by bad weather. This check was made good the following year. An army under General Damrémont laid siege to Constantine on 6 October 1837. He was killed = 12 October; but his successor, General Valée, ordered an assault on the 13th. The town taken after fierce fighting by columns led by Colonels. Combe and Lamoricière. Ahmad Bey, who had left Constantine on the approach of the French troops, retired to the south where he held the country against the French for eleven years longer. It is said that the slege of 1837 was the ninetieth that Constantine had to endure.

After the French occupation, Constantine, the administration of which had been entrusted to a kakim under the supervision of the military authorities, became the headquarters of a commandement

supérsur and the base of French operations in the eastern province. At first under military law, it was not given a municipal government till 1848 and became the capital of the department in 1849. Since then the town has developed considerably. It has in fact remained a market and centre of supplies for the tribes of the east; its native industries have survived and supply the population of the surrounding country with cotton stuffs and articles of leather.

(AL-)KUSTANTINIXYA, Constantinople, 1. To the Ottoman Conquest (1453).

The city, which Constantine the Great on 11 May 330 raised to be the capital of the Eastern Empire and which was called after him, was known to the Araba as Kustantingya (in poetry also Kustantina, with or without the article); the older name Bytantion (Busantina and various spellings) was also known to them, as well — the fact that the later Greeks, as at the present day, used to call Constantinople simply \$\frac{\pi}{\pi}\pi\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\pi}\tilde{\p

The campaigns of the Arabs against Constantinople. It is said that the Prophet himself had foretold the conquest of Constantinople by the faithful. The Ottoman historians adduce the following hadith "You shall conquer Constantinople; peace be upon the prince and the army to whom this shall be granted!" ("All, Künk al-akhbar, v. 252; Solakzáde, 194; Ewliya, I, 32, 73; 'All Saţi', Hadikal al-diewāmi', i, 2); Suyūţi's al-Diami' al-saghir is given as authority; older references are wanting. As a matter of fact, the Umayyads set about this enterprise with the energy and valour that inspired the early warriors of Islam. In the year of the world 6146 (beginning a September 653), according to Theophanes, 345, a fleet was equipped in Tripolis "against Constantinople", which under the leadership of Aβουλαθάρ (i.e. Bust b. Abl Artat) defeated the Greek fleet at Phoenix (Finika) on the Lycian coast [see phat AL-sawari in Suppl.], but did not reach Constantinople; at the same time, Mu'awiya had invaried Byzantine territory by land.

In the year 44/644 took place the campaign of 'Abd al-Rahman b. [Galid, who advanced I far as Pergamon; the admiral Bust b. Abl Artas, according to Arabic sources, is said to have reached Constantinople (Tabari, ii, 86).

In the course of the next years, Fadela b. Ubayd advanced as far as Chalcedon, and Yazid, son of Muchwiya, sont after him (according to Theophanes, in the year 6259 of the world, beginning t September 666; according to Elias of Nisible, Yazid

appeared before Constantinople in \$1/672); a fleet commanded by Bust b. Abl Arthi supported this enterprise. In 672 a strong fleet cast anchor off the European coast of the Sea of Marmora under the walls of the city. The Arabs attacked the town from April to September: they spent the winter in Cyzicus and renewed their attacks in the following spring until they finally retired "after seven years' fighting". A great part of the fleet was destroyed by Greek fire: many ships were wrecked on the return journey (Theoph., 353 ft.). There are difficulties in the chronological arrangement in Theophanes of the various phases of this seven years' blockade. The land army seems to have appeared before Constantinople in 47/667 and the fleet to have finally retired in 52 673. The Arab historians vary between the years 48 49, 50 and 52 and place the death of Abû Ayyûb in the year 50, 51, 52 m even 55. As the fighting around Constantinople was spread over several years, the difference in the estimates is not so unaccountable.

This siege has acquired particular renown in the Arab world, as the Ausari Abu Ayyub Khālid b. Zayd fell in it and was buried before the walls of Constantinople; the finding of his tomb during the final siege by Mehemmed II was an event only comparable to the discovery of the holy lance by the early Crusaders at the siege of Antioch. (The grave of Abu Ayyub is first mentioned by Ibn Kutayba, 140; according to Tabari, iii, 2324, Ibn al-Athir, iii, 381, Ibn al-Diawat and Kazwini, 408, the Byzantines respected it and made pilgrimages to it in times of drought to pray there for rain (istiska); the Turkish legend is given very fully in Leunclavius, Hist. Mus., 4x ff. and in the painstaking monograph by Hadidii Abd Allah, al-Athar al-madildiyya fi 'I-manahib al-khalidiyya, Istanbul 1237.)

There was a truce for over 40 years between Byzantines and Arabs until in 97/715-16 Sulayman b. Abd al-Malik came to the throne. A hadild was at this time current according to which a caliph who should bear the name of a prophet was to conquer Constantinople. Sulayman took the prophecy to refer to himself and equipped a great expedition against Constantinople. His brother Maslama led the army which was equipped with siege artillery through Asia Minor, crossed the Dardanelles at Abydos and surrounded Constantinople. The Arab armada anchored partly near the walls on the coast of the Sea M Marmora and partly in the Bosporus; the Golden Horn was barred by a chain. The siege began on 25 August 716 and lasted a whole year; Masiama then found himself forced to retire owing to the attacks of the Bulghars and the scarcity of provisions (Theophanes, 386-99; full details in Ibn Miskawayh, ed. de Gooje, 24-33; cf. also Tabarl, li, 1314 ff.; Ibn al-Athle, iv, 17 if.; cf. the vivid account in Gelzer, Pergamon unter Byzantinern und Osmancu, 49-64). There are many references to Masiama's hazardons march among the later Arabs. Even several centuries later they knew of "Maslama's Well" at Abydos, where he had encamped (Max'ūdī, li, 317 = 1738; Ibn Khurradādhbih, 104), and the mosque built by him there (Yakut, i, 374). 'Abd Allah b. Tayyib, the first Muslim to lead an attack on the "Gate of Kustantiniyya" was one of Maslama's comrades (Ibn Kutayba, 275). Maslama is said to have made the building of a house near the Imperial palace for the Arab prisoners of war one of the conditions of the treaty of peace and to have built the first mosque in Constantinople (Mukaddasi, 147; Ibn al-Athir, x, 18; Dimashki, 227); finally, he is credited with building the Tower of Galata (Dimashki, 228) and the 'Arab

Diamis in Galata (Hādjdjī Khalifa, Tahwim al-tawāriāh, year 97 A.H.). Ewliyā and his sources have sieges out of Maslama's campaign and embellished their narrative with incredible stories. Nerkesi (d. 1044/1634) discusses Maslama's campaigns in the fourth section of his Pentas, following, in he says, Muhyi 'I-Din al-'Arabi's Musamurāi.

Only on me other occasion dld an Arab host appear within sight of Constantinople, namely = 165/782. Harun, the son of the caliph al-Mahdi, had marched through Asia Minor unopoosed and encamped at Chrysopolis (Scutari). The Empress Irene, who acting as Regent for her son Constantine, hastened to make peace and agreed to pay tribute (Theophanes, 455 ff, under the year 6274 of the world [781-2]; Baladhuri, ros; Tabari, iii, 504 ff.; fbn al-Athir, vi, 44: year 165/781-2). Ewliya and his authority (Mubyl 'I-Din Diamali, died 957/1550 according to Ricu, Catalogue, 46 ff.) have made no less then four regular sieges of Constantinople out of the campaigns of the Arabs under al-Mahdi and Härim against the Greeks. After the second, Harim gained a quarter in the city by a trick similar to that by which Dido gained the site of Carthage (Leunclavius, op. cit., 54; Ewlivs, 1, 81 - Travels, etc., 1/2, 25); the same story is given by Clavijo, 23, of the settlement of the Genoese in Galata, and Ewilya, Travels, i/2, 66, of the building of Rumeli Hisar by Mehemmed II.

The Arab accounts of Constantinople date from the 3rd/9th century. They considered the Dardanelles, the Sea of Marmora and the Bosporus as a single "canal" (khalidi), connecting the Mediterranean with the Black Sea, Istakhri and others mention the great chain which prevented the entrance of Arab ships; this is probably the chain, which was stretched between Galata and Constantinopie in time of war, that is referred to. The high double walls of the city with their towers and gateways, including the Golden Gate, the Aya Sofya, the Hippodrome with its monuments (notably the Egyptian obelisk), the four brazen horses at the entrance to the palace, and the great equestrian statue in bronze of "Constantine" (really of Justinian, the so-called Augusteus) described by them in greater or less detail. Ilm Hawkal and Mukaddasi devote particular attention to the Praetorium where their countrymen, prisoners of war, were kept under a mild custody and to the mosque attributed to Maslama (Yākūt, i, 709, s.v. Balail, and Constantine Porphyrogenitus, De ceremonits, i, 592, 767). The most detailed account is that of 1bn al-Wardi (8th/rath century); he mentions the bronze Obelisk of Porphyrogenitus, the Pillar of Arcadius and the Aqueduct of Valens and also knew that the Golden Gate was closed. Ibn Battuta (il, 432-44) described from his most observation the monastic life of his time; the latest notices me given by Firûzâbādī (d. 817/1415) | his dictionary the Kamas.

Apart from prisoners of war, numerous Muslim merchants and envoys from the caliphs and other Muslim rulers sojourned in Byzantium; the Muslim rulers sojourned in Byzantium; the Muslim rulers sojourned in Byzantium; the Muslim soccasionally banished thither troublesome persons with their families; Salgjük Sultáns and pretenders (Mildj Arslân II, Kaykhuaraw I, Kaykåwûs II) repeatedly spent long periods in Constantinople; remarkable details of their life in the capital are given by Byzantine writer and in the Saldjük historians.

No minite traces have as yet been discovered of the two sieges by the Arabs and the residence of Arabs and other Muslims in Constantinople; in particular, the mosque of Maslama has not come to light; it is first mentioned by Const. Porphyr., De adw., ch. xxii (Boan Corpus, 101, l. 22); it was destroyed in a popular rising in 1200 and pilitaged by the Crusadera in 1203 (Nicetas Choniates, 696, 731, ed. Boan). According to Ibn al-Ahlir, ix, 381, cf. x, 18 (whence Ahu 'l-Pida derives his information), it was restored in 441/1049-30 by Constantine Monomachos at the request of the Saldjük Toghril Beg. According to Makrizi (i, 177, ed. Quatremère), Michael VIII Palaeologus built a mosque about 660/1267-2 which the Mamlük Sultan Baybars equipped in splendid style. The accounts of the 'Arab Djämi' and other buildings by the Arabs in Constantinople belong to the domain of fable.

2. AFTER THE OTTOMAN CONQUEST [see ISTANBUL].

KÜSTENDIL, KÖSTENDIL (in Serbian: Custendil), a town of some 35,000 inhabitants in Western Bulgaria. It was in the Serbo-Bulgarian Middle Ages a small fortified stronghold on a hill above the wide plain of Küstendil, serving as a princely residence, and was known as Veibund. In Ottoman times it was capital of the sandide of Küstendil, and was an Islamic cultural and administrative cenure of some importance. The town is the indirect successor of the Roman Pautalia, of which substantial remains have been impartabled.

The Ottoman chroniclers Sa'd al-Din and Munedidilmbash! mention that the ruler of the land of Konstantin (the me of the Serbian nobleman Dejan) accepted Ottoman overlordship in 273/1371-2, after the latter had captured the strategic fortresses of Ikhtiman and Samokov. Neshri mentions Konstantin among Murad's vasals during the Karaman Campaign. Achikpashazāde, Orne Beg and the Anonymus Giese do not however mention the acquisition of the land of Konstantin. This prince married Helena, the daughter of the Bulgarian Tear Ivan Alexander (their daughter married Manuel Palaeologus, emperor of Byzantium), and died = a loyal Ottoman vessal in the Battle of Rovine in 1395 assisting Bhyesid l against the Walachians (797/1395). He left 📺 suitable heir behind. The memory of the princely couple is perpetuated by the monestery of Poganovo in the ravine of the Erme north of Küstendil, today just across the Yugoslav border. Konstantin's lands, including the towns and castles of Stip, Radomir,

Petric, Melnik, Vranje and the rich silver mines of Kratovo (places today partly in Yugoslavian, partly in Bulgarian territory), were transformed into an Ottoman sandidk known - Kostadin-ill, the land of Kostadin. There are traditions that the Bulgarian population rose in revolt in the difficult years. of the Fetret Dewri and around the time of the ascession of Murad II. The fortified town had allegedly to III retaken, after which it was dismantled. The unreliable population was transferred to the neighbouring villages. Whether true or not, it is at least certain that in the time of Murad II a new open. town was founded below the "Castle Hill", grouped around a mosque, a caravanseral and a school. The new settlement became known as Illdia-vi Küstendil. or Ilidia in Turkish, Konstantinova Banja or Velbuzka Banja in Slavic. The Turkish form Küstendil appears to be a corruntion of Kostadin-ili.

At the end of the 8th/14th century and the beginning of the oth/15th century, important groups of Turkish colonists from Asia Minor were settled in the sandiak of Küstendil. According to an Ottoman census from the beginning of the roth/roth century. these groups numbered 6,640 families. The Christian section of the population then comprised 56,088 families. According to the census of 925/2519, the city itself counted a Muslim population of 293 families and 60 bachelors, as well as 47 Christian families, six bachelors and right widows, perhaps altogether 1,800 civil, non-administrative inhabitants. In spite of this relatively small size, Küstendil appeared in 1499 to the widely-travelled Rhenish knight Arnold van Harff as "eyn grosse schone Stadt". This source also remarks that "Wruskabalna" (Velbužka Banja) had a palace where the sultan kept a number of his wives. At the beginning of the 20th century, Jordan Ivanov still saw a "Seray Kulesi", situated next to a basin (hand) built and paved with large slabs of marble. Tower and basin were situated in the 'Seray Mahallesi"

In the 10th/16th century, Küstendil witnessed a rapid expansion. In 966/1550 an anonymous Italian traveller described it as a town with "about a thousand houses, built in the Turkish manner, many mosques and quite a number of baths. The town is inhabited by Turks and some Jews . . . " We passed the night in a Khan, called Imaret, which in our language is an inn. A Sandjakbeg ordered the construction of this very convenient building for the traveller and stranger, for the salvation of his soul." During this century, a number of military commanders and members of the administration erected a considerable number of mosques and caravanserais, and opened up mineral baths. Mehmed-i 'Ashfk in his Managira'i-'audim (Halet Elendi, No. 616, I, fol. 212a) noted in 997/1580 twelve mineral baths, many with stone-built domes over the disrobing section and over the bathroom proper, others even with separate rooms. The most beautiful we the so-called Beg ilidiasi. In 894/1489 the begierbegi of Rumeli, Khadim Süleymän Pasha, had erected a large domed mosque and a double bath in the city, and had laid === a water supply system which brought good drinking water from the village of Bogoslov, 15 km. away, to the town. The viliagers of Bogoslov received a privileged status as su-voldil. The laterir defleri of 925/1519 also attributes an 'imaret and a number of shops to this governor. (The mosque, very similar to that built by Khādlm Süleymān Pasha on the banks in the Tundja in Edirne, we demotished shortly before the Second World War.) Other important buildings were the 'Imaret Diami'i, with

caravanseral, madrata and bath, erected in 937/1531 by Mehmed Beg (the building was often confused with the mosque of Murād II; see Ayverdi, Osmanis mimarisinde Fatik deni, iv. Istanbul 1974, 806, which enumerates and continues the old mistakes). The mosque was demolished in 1949. Other roth/roth century buildings, happily preserved, are the Dervish Banya from 973/1566 and the large mosque of Ahmed Beg from 983/1575-6, this in now serving as a local museum.

According to the Ottoman ocusus register of oSr/1573, the town then numbered 623 Muslim households, on Muslim bachelors, 84 Christian households, 28 Christian bachelors, 14 widows and a Jewish community of four families. The whole population, including the members of the administration and their families, amounted perhaps to 4,000 souls. By then the number of Muslim makalles had risen from six (in arrivate) to zr. the number of imams of mosques from seven to seventeen. An Ottoman Diciob register (Turksi Irvori za Bălearskala Istoriia, iii, Solia 1972. 129-50) from 981/1573 gives a fair cross-section of the composition of the town's population. A total of 57 Muslim dislobs are registered against six Christians. all given by pame, patronymic and profession. Both groups were almost all craftsmen, leatherworkers, smiths, mulafs, helvadils, goldsmiths, shoemakers, soapmakers, cartwrights, etc. Out of the number of dictebs in the villages of the kadd' of Küstendil, 558 were Christian against 20 Muslims, from which may be concluded that the Bulgarian Christian element continued to be the bulk of the rural population.

In the 11th/17th century, the development of Küstendil apparently stagnated. The city had suffered badly from earthquakes in 993/1585 and 1051/1641. Ewilya Čelebi (Srydhat-nāme, vi), who visited it in 1071/1660-1 and left his signature on the front wall of the Ahmed Beg Mosque, counted eleven small mahalles with 1,100 houses, and he further made important notes on the Islamic buildings of the city, among which he mentions a number of mosques, three madratas, five lekkes, six schools and twelve mineral baths "with lofty vaults and many basins".

In March 1690 Rüstendil was occupied by Mastrian force under Antonio Valerio Žić, which led to a considerable diminishing of the Muslim population. In about or after that year, the entire settlement was surrounded by meall with towers and gates, and the Castle Hill was again fortified. A picture of these works, made at the end of the 17th century by the Dutch artist Harrewyn, is preserved in the "Prenten Kabinet" of the Amsterdata Rijksmuseum.

In the early 19th century, Kustendil recovered slowly. St. Denis gives the number of inhabitants in 1807 as 2,000. J. Hütz (Beschreibung der europäischen Türkei, Munich 1828, 250-1) gives the mumber. Ami Boué (Requeil d'itinéraires, i, Paris 1836) counted 9,000 inhabitants, Bulgarians and Muslims. The Sal-name of the Tune Wilayett of 1285/1868-9 mentions 16 mosques in Küstendil, three madrasas and 16 tekkes. When in 1878 Küstendil came within the frontiers of the newly-established Bulgarian state. most of the Muslim Inhabitants emberated. In 1800 Jireček (Das Fuestenthum Bulgarien, Prague-Vienna-Leipzig 1891) counted in 1890 10,680 inhabitants, of which only 581 were Turks. Jireček still saw nine lead-covered mosques. Jordan Ivanov noted in 1908 ten mineral baths. Today (1979) only two mosques and one of the baths remain preserved, and the Muslim element is reduced to a handful of families.

Küstendil produced some Ottoman scholars and men of letters, such as Sanüberzäde Häleti (d. 973/

1560): Shem'i Mehmed Efendi Küstendil, scholar, poot, and calligrapher who me for a long time wells of town (d. 1272/1855-6); and especially, Küstendill Molläzäde Süleymän Sheykhi Efendi, for a long time glaykh of the Nakshbandi convent of Küstendil, who left behind some 26 works including a History of Küstendil. The Nakshi Dergäh, bulit by Süleymän himself, and in the yard of which he was huried, medendished shortly after Hulgaria became independent.

KUSÜF, Khusüf, eclipse of the san mother moon. As regards linguistic usage, it may be noted that al-kusāf is used alike for the eclipse of the moon (kusāf al-kamar) and for that of the sun (kusāf al-siams), e.g. in al-Farghān], Kusīā b. Lūkā, al-Battāni, al-Birūni; but they are often distinguished mal-kausāf, eclipse of the moon, and al-kusāf, of the sun, e.g. by al-Kazwini (on the linguistic usage, it should be noted that according muthe Mafālik al-wlūm, ed. van Vloten, 222-3 the viith form, m in inkasafat al-shams, should not be used, although this is very often done; e.g. by al-Kazwīni and others).

The eclipse of the sun and of the moon have from the earliest times attracted the livelest attention. Ptolemy, following Hipparchus, studied the theory of eclipses, and following him the Arabs and Syrians, etc. We shall deal first with the eclipse of the moon. It must be premised that the apparent path of the moon—we must adhere to the geocentric view—cuts the ecliptic in two opposite points, which however in course of time come to move on to the

536 KUSÜF

ecliptic. These points are called al-giauxahar (Persian diaux tihr, nut-shape, or less correctly guy tihr, globe-shape); they are also called al-timuta, "dragon" (see below). All the planets have of course such diauxahar; without an addition the word always refers to the ______ Their positions are given in the Ephemerides. The massive ball into which, according to Ibn ul-Haytham, the moon is inserted, and which carries it along as it moves, is called falsh al-diauxahar.

The eclipse of the moon is caused, as was early recognised, by a dark body coming between the sun and the moon. It was at me time thought that this was a dragon, which ended at two opposite points on the globe of the heavens and had the same motion the nodes of the moon. Eclipses occur when we cannot see the moon, because the head or tail of the dragon comes between us and the moon. From this idea comes the seem for the crescent and waning nodes, i.e. the points where the moon passes through the ecliptic, "head, al-ra's" and "tail, al-dhanab" which were retained long after the "dragon" had disappeared. The sign Ω for the length of the node is a distorted dragon. The astrologers credited this dragon with certain influences on the horoscope. But Severus Sebukht (ca. 650) (F. Nau, Notes d'astronomie syrienne, in JA, Ser. 10, AVI [1910], 15) long ago denied this, as there was no dragon and 📰 calculations in question referred to the movements of the modes. But we still find in al-Birani's Talkins, etc. the assertion that head and tail have separate natures. The head is hot, auspicious, and indicates increase (of property etc.). The tail is cold, brings misfortune, and indicates diminution of wealth, etc., Eclipses of the sun or of the moon me really caused by the earth coming between the sun and moon or the moon coming between the earth and the sun. Instead of dismusher we often have the word "node" 'akd and 'adda used, also in combination with ra's and dianab.

The abadow of the earth arising in the first instance, because the sun is considerably larger than the earth, consists of a cone-shaped convergent shadow (the shadow) on one side and a divergent shadow (penumbra) on the other side. Only in the shadow is there absolute darkness. As the diameter of the shadow at the place of the moon's path is considerably greater than that of the moon at the moon some time in the shadow and therefore be perfectly eclipsed for the period. Ibn al-Haytham, for example, investigated these conditions very fully (E. Wiedemann, Beitr. xiii, Uber sine Schrift von Ibn al-Hailham, "Uber die Beschaffenheit der Schatten", in SBPMS Eri. [1907] xxxix, 226).

If earth, sun and moon were very well bodies, mere points, eclipses would only take place when the sun and moon were exactly in the nodes. But as they are large, eclipses also occur when these bodies have passed beyond the nodes, i.e. have experienced an alteration in latitude and longitude. A total eclipse occurs when the breadth is smaller than the difference between the diameter of the shadow and that if the moon, a partial eclipse when it is larger than the latter but smaller than the sun of the diameters; if it is however equal to the latter, there is only a contact but no eclipse.

Taking into consideration the shadow alone, the making (cone) or sanarbar (pine-cone)—its cross-section is called dā'irat ai-sili—we have the following: the entrance into the shadow is called bad' al-kusif, beginning of the eclipse; the phase from the beginning of the eclipse, to the beginning of totality, is

called swital (falling, the impresence of Ptolemy), the middle of the path covered in shadow in called wast (middle). The phase which corresponds to complete emergence is called tandm ad-ingilit? ("the completion of disappearance"); al-math ("stop. stay") means the phase in which the moon is eclipsed; in a partial eclipse there is no such stop. A kusaf kull al-kamar bild makh, a total eclipse without ill stop, is said to occur when the moon's path is such that the darkened moon touches the cone of the shadow at only ill point; then ill total eclipse exists at this point only. For the case of total eclipse, the place where it begins is called award al-makh and where the moon begins to emerge from the shadow, ākhir al-makh.

A diminution of light but no complete extinction also occurs when the moves through the halfshadow. In his classical work on the shadows Ibn al-Haytham (see above) discussed the theory of this question and checked it by observation. In very rare cases, however, the whole of the eclipsed moon does uppear quite bisck but shows different colours. especially a dark red; this was observed by various early astronomers and minutely described by Ibn al-Haytham (his statements agree with modern observation, e.g. Joh. Müller, Lehrbuch der kosmischen Physia, § 9, p. 196). Al-Birani further studied these colours (al-Kanun al-Mas'ūdi, maķāla vii, bāb vii, fașt lit; he also examines critically earlier views and particularly Indian ideas on the astrological significance of the colours icf. E. Wiedemann, Ober die verschiedenon bei der Mondfinsternis auftretenden Farben nach Birans, in Eders Jahrbuch für Photographic, sic., 1914). This light on the completely eclipsed moon is explained by the fact that the sun's rays are diverted in passing through the earth's atmosphere and thus enter the shadow and illuminate the moon. According the amount of moisture in the atmosphere, these diverted rays are more or less coloured. For the possibility of a solar eclipse, the conditions are the same as for a lunar one.

Solar Eclipse: As the angle at which the moon appears to m is smaller, eithough only slightly, than that at which the sun appears, the moon can never completely cover the sun. Therefore even at a socialled total eclipse of the sun, even if the centres of sun and moon and earth all lie on a straight line, a narrow rim of light still remains. Bright formations, the corona and the protuberances radiats from this. They are described by al-Birini in al-Kānān al-Masūdi, mašdia viii, bāb xi (cf. E. Wiedemann, Erscheinungen bei der Dämmerung und Sonnenfinsternia, in Arch. f. Gesch. d. Med., xv [1923], 43}.

The local times at which the same lunar or tolar eclipse appears at different places are obtained from the difference of their geographical longitudes. The calculations are made difficult by the fact that these bodies show a considerable parallax. This partly explains the great differences between the calculated and true values.

It would take us too far to go into the details of the theoretical considerations, for example when each eclipse begins, how long it lasts, its periodicity, etc. In the works of ai-Farghāni, Kustā b. Lūkā, al-Kazwini, ai-Djaghmini, ai-Khiraki, and particularly in that of Abu 'l-Faradi, Le Livre de l'accession de l'esprit, ed. F. Nau, Paris 1899, also in mi Kitāb al-Tafhim etc. of al-Birūni, we find more mi less full general descriptions, while the works on astronomical theory like the Zidi (tables) of al-Khwācazmi, of al-Battāni, the Kānūn al-Massūdi of al-Birūni, the Zidi of Nașir al-Dīn al-Ţūsi, etc., giwe information about

mathematical considerations and the particular observations to be made (on the above scholars, cf. H. Suter, Die Mathematiker und Astronomen der Araber, in Abhandt. zur Gesch. der math. Wissensch., m

[tgoo]).

To obtain a standard for measuring the amount of the eclipse, the diameter of the sun m of the moon, was divided into twelve equal parts, called "fingers" (isba* or isba* al-kus@f) and the number of these that were eclipsed was calculated. In the West one spoke of "digits". In the same way, the surface is imagined to be divided into 12 equal parts and it is calculated how many of these are eclipsed. The latter may acalculated from the former which refer only length. Al-Battani, for example, gives tables in connection with this. The diopter of Hipparchus was to the magnitude of a lunar eclipse. Two rods are fixed at right angles to a rod. The one with a small round hole is fixed and the other with a larger round hole I moved towards the other. The second hole is so placed that at an appropriate distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second hole. The amount a of the shifting of its edge from one side of the hole, which bounds the dark side of the moon, to the edge of its bright part, is measured, and the magnitude b of the shifting over the whole surface of the and their relation expressed as a:b. The amount g in fingers of the eclipse is $g \Rightarrow \frac{a}{b}$ 12.

Bibliography: Given in the article. For details of eclipse computations, mm now E. S. Kennedy, A survey of Islamic astronomical tables, in Transactions of the American Philosophical Society, N.S., xlvi/2 (1956), 123-77, esp. 143-4.

(E. WIEDEMARK)

KÖT AL-AMĀRA, a place in al-'īrāķ (lat. 32° 30' N., long 45° 50' E.), on the left bank of the Tigris, between Baghdad and 'Amara, 100 miles south-east of Baghdad as the crow files. Ket is the Hindustant word hot meaning "fortress" [see kof wat] found in other place-names in al-Irak, like Kot al-Mu'ammir; Kut al-'Amara is often simply called Kut. Kut lies opposite the mouth of the Shatt al-Hayy, also called al-Gharraf, the old canal connecting the Tigris with the Euphrates, which has several junctions with the Ruphrates, e.g. at Nasiriyya and Sok al-Shuyukh. The plains to the north of Kut are inhabited by the Banu Rabifa, a division of the great tribe of Band Lam [q.v.]. Kut is not an old town; it has been proposed to identify it with al-Madhar mentioned by Yākūt (iv, 275; cf. Le Strange, Lands, 38, and H. H. Schaeder in Islam, xiv, 17). In the beginning of the century and down to 1860 it was a miscrable little village surrounded by walks of terre pisée (Keppel in 1824, according to Ritter; Petermann, Reisen im Orient, Leipzig 1860, il, 150). But after Messes. Lyuch obtained a concession for a line of steamers between Baghdad and Başra, Küt became important station on the river and the result was a considerable increase in its population. In the last period of Turkish administration (beginning 1861). Kut was the capital of a kada? of the same name in the sendrak of Baghdad. About 1800 the population was estimated at 4,115 (Cuinet), almost all ShI's (but including about 100 Sunnis and 100 Jews). The hadd' extends northwards as far as the mountains of Luristan [q.n.]. The plain at the foot of the mountains is watered by the river Kallal and contains several villages, the Turkish ownership of which was disputed by the Persian authorities. The population of the kada' likewise grew after 1861, and about 1890 numbered 30,000, all Sunnis (except the population of Küt itself).

Kut was first taken by the Sixth British-Indian division under Major-General Charles Townshend In Dhu 'l-Ka'da 1333/late September 1915. Continuing his advance northwards, in an ill-judged attempt to occupy Baghdad, Townshend was repulsed at Ctesiphon in late November by the Turkish Sixth army under Yusuf Nur ad-Din Bey and forced to retire on Kût. Here I decided to stand, for the ostensible purpose of blocking a Turkish advance down the Tigris to 'Amara, m by way of the Shatt al-Ḥayy to Nāṣiriyya. In fact, however, his troops were exhausted, he was burdened with many wounded, and the Turks, under their new commander, <u>Kh</u>alli Bey (later Pa<u>sh</u>a), **-----** hard **---** his beels. If he had not halted at Küt, his division would almost certainly have been caught in the open and destroyed.

KOt was invested by the Turks on 27 Muharram 1334/5 December 1915. Townshend's force consisted of Just under 13,000 infantry and artillerymen (he had sent his cavalry south before Kut was encircled) and over 3,000 Indian non-combatants (cooks, drivers, etc.). A quarter or more of the fighting troops sick or wounded. The Arab population of the town, which Townshend allowed to remain, numbered about 6,000. The besieging force was made up of one-and-a-half divisions (about 7,500 men) of the Turkish Sixth Army, whose total effective strength of something under 30,000 men was mainly disposed between Kut and Shaykh Sa'd, 30 miles to the east. Its tactical direction lay with Field-Marshal von der Goltz, head of the German mititary mission in Strak.

Desperate endeavours were made by the main body of the British expeditionary force between January and April 1916 to relieve the garrison at Kût. In a series of severely fought actions, notably at Shaykh Sa'd, Hanna and Dudjayla, the British and Indian troops suffered 23,000 casualties, while Turkish losses were estimated at 10,000. The British efforts were in vain, and in the last week of April Townshend asked Khalil Pasha for terms. When the Turkish commander indicated that he would not be content with anything less than unconditional surrender, Townshend suggested, with the concurrence of the Cabinet in London, that the Kut garrison | feeed on parole in exchange for its guns, stores and one million pounds sterling. On the orders of Enver Pasha [q.v.], the Turkish Minister of War, the offer was rejected, and the fact of its having been made was afterwards used to good effect by the Turkish government to discredit Britain's reputation in the Middle East. A last-minute attempt to persuade Khall Pasha to change his mind was made by Colonel W. H. Beach, head of military intelligence in Trak. and Captains Aubrey Herbert and T. E. Lawrence of Military Intelligence, Cairo, who were authorised to double the ransom offered. The attempt failed, and twenty-four hours later, after destroying his guns and stores, Townshend surrendered, under a solemu guarantee from Khalil Pasha, which was afterwards reaffirmed by Enver Pasha that his troops would be treated as "the honoured guests of the Turkish nation".

During the siege, the garrison at Küt had suffered

casualties of 1,818 men killed or died of wounds (278 of them Indian non-combatants) and 2,500 wounded. Nearly 250 of the Arab inhabitants had been killed and over 500 wounded, though more were to die after Turkish forces had re-occupied the town. The Turks allowed the worst cases among the British and Indian wounded, 1,475 in all, to be sent down to Basra in exchange for Turkish prisoners of wac. Nearly 12,000 British and Indian troops, along with their Indian camp followers, went into captivity in Anatolia and elsewhere. By the end of the war anore than 4,000 of them, including 70% of the British rank and file, had died from disease, starvation and inbuttan treatment at the hands of their Turkish captors.

Kut was retaken by the Mesopotamian expeditionary force in Diumādā I 1335/late February 1917, opening the way for the occupation of Baghdād a fortnight later. After the war, in the administrative reorganisation that accompanied the institution of the mandate, Kut was made the principal town of a

new had?.

W. Millar, Kut: the death of an army, London 1969) is of any scholarly value.

(J. H. KRAMERS - [J. H. KELLY])

KUTADGHU BILIG ("Knowledge that brings happiness"), the first long narrative poem in Turkic literature as well in the oldest monument of Turkic literature as well in the oldest monument of Turkic literature literature. A relatively long (6,645 distichs) didactic work, it in in Karakhanid, the earliest variety of Eastern Middle Turkic and the first literary language of the Muslim Turks. Its author, Yusuf Khāṣṣ Hādjib of Balāsāghūn [q.v.], a Muslim Turk educated in the Arabic and Persian languages and in the classical Islamic sciences, completed his work in 462/1069-70 in Kāshghar and dedicated it to Abū "All al-Hasan Tabghač Bughra Khān (d. 495/102), ruler of the eastern Karakhānids [see ilekanthānids].

The Kutaaghu bilig has come down to us in three manuscripts: the Harat ms., dated 842/1439, which is in the Uyghur script and was made from an unknown version in the Arabic script; and the Farghana and Cairo mss., both undated and in the Arabic script.

It is essentially a political essay which, in an Islamic setting, describes an ideal monarchy of the Sāsānid type. The main goal of this monarchy if the public good, which is conceived of as the strength

of the king and the happiness of his subjects. This ideal kingdom is based on dedicated service rendered by highly-qualified state officials and servants to a wise and noble ruler of royal descent, who properly rewards those who serve him. Islam, of an Avicennan and Fărăbian hue, has a vital role in it. Every individual must possess the faith and act la accord with it. He should not renounce this world: services readered by ascetics in sectusion are of little value, since they produce no public good. Through his services to God and men, he should rather aspire to obtain both this world and the hereafter.

The author presents his views in m series of dialogues, in which the chief participants are a king, Kün Toghdi; his ministers, first Ay Toldi and, after his death, his son Ögdülmish; and the asceito Odghurmish, a relative of Ögdülmish. The author uses these characters symbolically: Kün Toghdi represents the true path; Ay Toldi, happiness; Ogdülmish, reason; and Odghurmish, destiny.

No one source or model for the Kutadghu bilig has been discovered. Frequent references in it, however, indicate a broad spectrum of still-unidentified sources: poetic works (shā'ir sōzi); sayings of elders (ōrāng başhligh ār, hōhōin, atrūgha), the learned (biliglig, bōgū, bilgā), the wise (ukushlub), and notables (sastlar bashl, ōtūkān begi); as well m proverbs (tūrktā maihal). Some of these references appear to be direct quotations, especially those in the form of quatrains.

The Kutadghu bilig follows the rules of Arabic-Persian prosody, but also includes a few elements of the traditional Turkic syllabic versification. It is in the mathiaut form and in the mathiaut metre {\(\sigma - \sigma \sigma - \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigma \sigm

The language is very closely related to Late Uyghur, although the Persian language—collequial and classical—has left an imprint in the form of loantranslations and direct borrowings, both on its

grammar and vocabulary.

Philological research in the Kutadghu bilig is at a fairly advanced stage. The three extant mss, have been published in facsimile. There is also a good critical edition, translation into Modern Turkish and thorough philological analysis by R. R. Arat (Kuladgu bilig. I. Meten. Istanbul 1947, II. Tercune, Ankara 1958). Its language has been described, very sketchily, by M. Mansuroğlu (Das Karakhanidische, in Philologiae Turcicae Fundamenta, i, 87-112). Most of the lexical material of the Kutadghu bilig, with illustrations, has been included in the Old Turkic dictionary, prepared by Nadelaev and his | Dreund purkskiy slover', Leningrad 1969). The best content-analysis of the work to date is that given by A. Bombaci in his book on the history of Turkish literature (La letteratura turca, Milan 1969, 83-96).

(A. J. E. BODROGLIGETE)

EUTÄHIYA. modern KCTARVA, a town of norch-western Anatolia, lying at an altitude of 3,251 feet/99r m. in lat. 39° 25' north and long. 29° 59' east. It is in the south-western corner of the well-cultivated plain of the Porsuk Çay, which eventually runs into the Sakarya river; the old town nestles on the slopes of the hill called 'Adjem Dagh, which is crowned by the ruined citadel. In classical times it was Cotyaeum, the city of Cotys, and the largest city of Phrygia Salutaris, an early centre of Christianity and then in Byzanline times the seat of an arch-

bishopric. Kutāhiya was taken by the Turkmen Sulaymān b. Kutulmush in co. 472/1080, in the aftermath of the battle of Mantalkert or Maläzgird (q.v.), and until the battle of Dorylaeum remained under Sakijük control. It then reverted to the Greeks for a brief while as a frontier fortress subject to Turkmen attacks, and was retaken in 579/1183 by the Saldiuks under Kilidi Arslan II [q.v.]. It later passed once again to the Byzantines but was finally regained by the Saldicks in 63:/1233-4. In the 8th/14th century it formed the centre of the beylik of the Germiyan oghullar! [q.w.]. Süleymän Shah Celebi (ca. 763-90/1363-98) transferred Kutabiya, with others of his towns, to the Ottoman prince Bayezid Ylidirim when the latter married his daughter Dewlet <u>Kh</u>ātān. Süleyman's son Ya'kûb Čelebi tried to recover it 🖿 the death of Murad 1 (791/1389), but was regained by Bayeald in the following year. After the Ottoman defeat at Ankara (804/1402), Kutahiya was taken over by Than, who installed his son Shah Rukh as governor whilst he himself went on towards Ephesus. In 📟 subsequent period of succession squabbles in the Ottoman ruling house, Kutahiya fell briefly into the bands of the Karamanid Mehmed I [see MARAMAN-OGHULLARI] (814/1411), but me recaptured by Ya'kûb Germiyânî with Ottoman help. When Ya'kûb died at Kutâhiya in 832/1429, the principality of the Germiyân-oghutlar! passed, according to his bequest, to the Ottoman Murăd II.

Under the Ottomans, Kutahiya was the capital of a sandjak of Anadolu, and then in 1841 a sandjak iii the province of Khudawendigar [q.v.]; in 1902 it comprised the kada's of Kutahiya, Eski Shehir [g.v.], 'Ushāk [o.r.], Kedus - Gediz and Sīmāw, Kutāhiya was the farthest point reached by the Egyptian army of Ibrahim Pasha b. Muhammad Pasha [g.o.] in its advance on Istanbul (1833), and his camp at the nearby hot springs of Yenidie was the scene of diplomatic negotiations which followed the intervention of the European powers. In 4s. 1890, Cuinet numbered the population of the town at 22,266, including 4,000 Greeks and 3,000 Armenians; there were 24 mosques, 21 madrasas, 16 dervish tekhes, 4 churches, 9 caravanserais, 11 baths and 12 potteries. Kutāhiya was indeed formerly an important centre for the production of glazed, polychrome pottery with floral decorations, the so-called Rhodian ware, and this is still produced today in a somewhat crader form; carpet weaving has also been an important lamily craft. A standard-gauge railway will from Balikesir to Kutahiya and Joins the Eski-Şehir-Aiyon Rarahisar line a few miles further on. Kutahiya is today the capital of an il ((ormerly vilayit) of the same name; in 1975 the town's population was 82,442 and that of the if 470,423.

The monuments of Kutahiya, from the Germiyan and early Ottoman periods, are significant, and include the Kutahunlu Diamis (1777/1375-6), the Ulu Diamis (814/1411), the Yangub Celebi Diamis (837/1433-4) and the Karaguz Ahmed Diamis (915/1509); notable is the use of tiles for roofing rather than lead. There are also some interesting old houses remaining.

EUTAI. now a *kabupaten* (regency) in the Indonesian province of Kalimantan Timur (East K.) (see Borngo in Suppl.] which stretches along the Mahakam river. It covers 40,000 km.* and bas 250,492 khabitants, among them 137,229 Muslims (1971). It is rich in oilfields (near Balik Papan), gold, and timber.

The population consists of: Kutainese, probably originally Malays who immigrated pagans, and whose Malay language now bears the influence of Javanese, Buguinese and Banjarese; Buginese, from South Sulawesi, and especially from the old kingdom of Wajo, who appeared as sailors, shipbuilders and traders since the first half of the 17th century; Banjarese, who may have participated already in the colonisation of Kutai by Hindu-Javanese Banjarmasin, which later on kept close contacts with Kutai; Bajau, who originate from the Sulu Islands and who came first sea-

normads until they finally settled on the coasts; several Dayak tribes, living mainly in the interior and up-river areas; and some 245 Chinese and 246

Indian traders (1971).

In the hillside area of Muara Kaman, some plates with votive inscriptions in Sanskrit from the 4th century A.D., which belong to the oldest known Hindu relies in the archipelago, have been discovered. The Hindu kingdom of that area, which in the course of time moved more to the interior, obviously developed independently from the Hindu and Buddhist empires in Java, and only conquered and consequently Islamised by Kutai around 1530 A.D.

Kutai Itself appears in history = a dependency of Majapahit at the time when Gajah Mada was patik of that kingdom (1331-64), as is stated in the Naga-

rakriāgama (14, 1).

According to the Salasila raja-raja di dalam negeri Kutai Korta Nagara, or Chronicle of Kutai, Islam was first introduced during the reign of Raja Makota by Tuan di Bandang (in Buginese sources known as Dato' ri Bandang), who only stayed for a short while, and Tuan Tunggang Parangan, both of whom arrived from Makassar, most probably in the first years of the 17th century. In his effocts to spread Islam, Tuan Tunggang Parangan extensively used magical means, as the Salasila, composed under the reign of Raja Makota's grandson Pangeran Adipati Sinum Panji Mendapa ing Martapura before x635, eloquently narrates.

This Salastia reveals a still-existing attachment to the animistic and magical mentality which is stronger here than in other Malay chronicles. It tries to avoid anachronism, such in the mentioning of Islamic terms or customs in its narratives about pre-Islamic events, and although it shows in remarkable familiarity with the moral and legal prescriptions of the Tādj al-salājin, or Makota segala raja-raja, and the Javanese Panji narratives as well as the wayang, it gives the impression that the adat law [see \$\frac{1}{2}\text{LDA}, iv. Indonesia] which remained in use even at the sultan's court at Tenggarong, was to a large extent the old, indigenous one.

An important role in the history of Kutaj was played by the Buginese settlers, most of whom originated from Wajo, and who were centred on Saraarinda, forming the strongest "foreign" colony and enjoying some kind of internal autonomy under the Pua Adu or Maioa elected from among their own nobility, but reconfirmed by the sultan (until 1860). In 1726-7, prince Aru Singkang from Wajo conquered for a short time Pasir and Kutai, but usually the Buginese supported the sultan, especially in his fights against the pagan Dayaks will the pirates. The relations with the Dutch, who first appeared in 1635, were, generally speaking, smooth, and these preserved to the sultan a considerable degree of internal jurisdiction based on Islamic and adat law.

(O. Schumann)

BUTAMA or Ketama, one of the great Berber families; when Islam was introduced into North Africa, they occupied all the northern part of the region of the Constantincis, between the Awras [q.v.] and the sea, that is the region containing the towns of Ikoján, Selíf, Bagháya, Ngaus (Nikāwus), Tiguist (Tikist), Mila, Constantine, Skikka, Djidjelli, Bellezma, and also Lesser Kabylia. One legend

flattering the national pride makes them to have been descended from the Himyarites brought there by lirikus. Katām, the eponymous ancestor of their race, was said be the son of Bernes. He had two sons, Gharsen and Issūda, from whom are descended all the tribes of the Kutama. They do not were to have played a part in the civil and religious wars which desolated North Africa from the time of 'Ukba to the days of the Aghlabids; - do not find them among Khāridjis. When 'Ubayd Allah gave himself out to be the Mahdi, his emissaries met some Kutāma pilgrims in Arabia and converted them to Isma'll doctrines. The principal convert was Musachief of the Sakvan, a branch of the Dlamila whose name survives in the town of this name. The mis. sionary (da%) Abû 'Abd Allah al-ShIT [q.v.] settled in lkdian and succeeded in maintaining his position there in spite of the efforts of the Aghlabids. From there he was able to extend his conquests and to deliver the Malds, who was a prisoner at Sidjilmiss.

The empire of the Fätimids was thus founded with the help of the Kutama. It was they who furnished its main strength and supplied the means of conquering Egypt. But these continual efforts exhausted them. Those who remained in the Maghrib after the departure of al-Mu'izz were forced to submit to local rulers, as Ibn Khaldun tells us. In our day the principal representatives of the Kutama are the Zuwāwa of the Djurdjura and the population around Diidielli and in Lesser Kabylia. We do not know at what date Ismāfiii doctrines disappeared from among them, but long afterwards their attachment to this teaching was regarded a subject of obloquy, and for this the powerful tribe of Sedwikish, of Kutāma origin, renounced all connection with this family. At the present day, all the Berbers of this region are Sunnis.

Bibliography: Ibn Khaldun, Kitāb al-Tbas, iv, 32 ff., vi, 142-52 (Hist. des Berbères, tr. de Slane, i, 297-9, it. Append., 520 ff.); M. Taibi, Emirat aghlabide, index; F. Dachraoui, Le califat fājimide au Maghreb (in the press); H.-R. Idris, Zirīdes, index; R. Brunschvig, Kafsides, index.

(R. Basset)

AL-KUTAMI ("the lakeon"), the name of several poets (including one from Dubay'a b. Rabi'a and another from Kalb; see al-Amid, Muhhtali, 166); the best-known of these was 'unayr B. Shuyayr B. 'Ame, who probably came from the Dusham b. Bakr of Taghlib (see Ibn al-Kalbi-Caskel, Register, 474). On account of of his verses, he was also given the name of Sari' al-Ghawani "the one felled by beautiful maidens". Like his fellow-tribesman and maternal uncle (?) al-Akhtal [q.e.], he was involved in the quarrels of the second half of the rst/7th century between the Taghlib and Kays 'Aylan in the region of the Khabur [q.e.].

In opposition to late sources which depict him as a convert to Islam, it seems correct to follow the author of the Aghāni, who states that he remained a Christian. The verses favourable to Islam figuring in piece No. — of the Diwān could have been added later or could have resulted from — attitude dictated by gratitude; the culogies of the Umayyads, and especially of 'Abd al-Malik b. Marwan (No. 29), prove nothing about his adhesion to Islam. This point has been discussed by Father L. Cheikho, with strong arguments (Sān'arā' al-Naṣrāniyya ba'd al-Islām, 191-203).

Al-Kuţānu's Diwān published, with notes, by J. Barth (Diwān des 'Umeir ibn Schujeim al-Quiémi, Leiden 1902), together with anonymous com-

mentary, and has also been the subject of a somewhat enlarged edition by I. Samarra's and A. Matlub (Beirut 1960). The first edition contains 35 pieces of varying length (the longest of 200, 72, 66 and 58 verses) and | isolated verses, making a total of 764 verses, to which should be added 52 homistiches of rodjas.

Al-Kutāmi was a Bedouin poet who detested the townspeople, and who hymned his own military exploits and those of his tribe, together with the virtues of sayyids like Zufar b. al-Harith. According to Hadidil Khalifa (iii, No. 5619), he died in 101/719.

Bibliography: In addition to the references given above and the introds, to the editions of the Diwan, was 1bn Salläm, Tobahat, ed. Shakir, 452-7 and index; Ibn Kutayba, Shi'r, 453-6; Aghāni, xx, 218-31 (ed. Beirut, xxii, 175-236); Abd Tannnani, Hamása, 1, 128-9; Baghdadi, Khizána, ed. Bülak, l, 391-4 - ed. Cairo, ii, 320-6 (shākid No. 143); Brockelmann, S I, 94-5; R. Blachère, HLA, 474-5. (H. H. Bräu - [CH. PELLAT])

KUTAYBA B. MUSLIM, ABD HAFS KUTAYBA n. Abt Saleh Muslim b. 'Amr al-Bantil, Arab commander under the Umayyad caliphs. He was born in 49/669 into a family influential at the court and with extensive possessions in Başra. His father Muslim was the boon-companion of Yazid b. Mu'awiya, and during the revolt of al-Mukhtar [o.v.], he was in charge of the prison at Basra; but he later sided with Mus'ab b. al-Zubayr and was killed in 72/691-2 when Muş'ab's dominion in 'Irâk was ended, after having failed to secure a pardon from Abd al-Malik. The family nevertheless continued to be important in Başra, and a tribal mosque of their branch of Bahila, the masdid Bant Kutayba, is mentioned (see Balaghuri, Ansib, ivb, 11, 87, 91-2, V, 341-2).

Kutayba himself attracted the attention of the governor of Trak and the east, at Hadidiagi b. Yusuf, after participating in the warfare against the rebel "Abd al-Rahman b. Ash ath (see 188 AL-ASH ATH). He was given the governorship of Rayy in 83/702 after he had expelled from there the rebel 'Umar b. Abi 'l-Şalı (see G. C. Miles, The numismatic history of Rayy, New York 1938, 9). Then at the end of 85/704 or beginning of 86/705 he was appointed by 'Abd al-Malik to succeed el-Mutaddal b. al-Muhallab as governor of Khurasan under al-hfadidiads, thus reversing the position III Khurasan, where the Yamani Muhallabis had previously been dominant, for the Bahila tribe [q.v.] generally allied itself to the KaysI or North Arab interest in the Marwanid period.

There thus begins the ten years' governorship of Kutayha, which contributed much to the extension of Islam in what is now Afghanistan and Central Asia, and which forms was aspect of the wave of Arab expansionism which characterised al-Walld's caliphate. Kutayba's administrative talents, backed by the authority of al-Hadidiadi, had full play in the consolidation of Arab rule in Khurasan, although the momentum was not maintained after his death. An appreciable factor in his success here seems to have been some recognition of the position of the indigenous Iranian population, and some care to use their administrative talents. There were in his time perhaps as many as 7,000 mandli troops registered in the diuds and receiving regular pay, and in addition to these regular forces, Kutayba required ad hoc levies of soldiers from the towns of Khurasan for his spring and summer campaigns into Central Asia; in Tabari, ii, 1245, the contingents from Bukhārā and

Kh * årazm besieging Samarkand in 93/712 described as "the slaves" (al-fabid). Also, he left the local Persian dibbans in power on payment of fribute, apart from the planting of Arab garcisons in Bukhārā, Samarkand and probably Kath in Kh arasm. With regard to the Arab tribesmen in Khurasan, Kutayba organised these, on the Başra model, into the five groups of the Azd, Tamlin, Ahl al-Aliya, Bakr and 'Abd al-Kays; at least, it is in his time that such a division is first mentioned, (See for general reviews of Kutaybo's political and social policies, Gibb, The Arab conquests in Central Asia, 29-31, and Shahan, The Abbasid resolution, 63 (L)

The military campaigns of Kutayba's governorship have been divided by Gibb, op. cit., 31 ff., into four periods: firstly, the recovery of Badghis and Tukharistan in 86/705; secondly, the conquest of Baykand and Bukhārā from the local Soghdians, 87-99/706-9; thirdly, the consolidation of Arab authority in the Oxus valley and the securing of Khwarazm and Samarkand, 91-3/71-12; and fourthly, expeditions into the Jaxartes valley from Shash against Isfidiab and Farghana, 94-6/713-15. Many of these undoubtedly remarkable successes were achieved through Kutayba's blend of military skill and ruthlessness, combined with a willingness to use treachery, if need arose, and to exploit local divisions, as amongst the princes of Tukharistan and Sogadia and amongst the rival claimants to the throne of

Kh warann.

In 86/705 Kutayba moved against the princes of the upper Oxus valleys of Shuman, Akhrun and Caghāniyān, and he also persuaded Tarkhān Mzak, ruler of the northern Hephthalite principality in Badghis [see HAVATILA], to submit to the Arabs and accompany Kutayba on the ensuing campaign against Bukhārā. The campaigns of 87-90/706-9 against Baykand and Bukhara were long and arduous. Kutayba's savage sacking of Baykand stiffened the resistance of the Soghdians under Wardan Khudah, but Bukhārā was in the end stormed against fierce local resistance, apparently backed up by Turkish help. A tribute of 200,000 dirhams was imposed on the city and an Arab garrison placed in it; in 94/712-13 Kutayba built a mosque inside the citadel, but had at the outset to pay the local people to attend the worship. In 91/709-10 Kutayba and his brother 'Abd al-Rahman b. Muslim were occupied with suppressing the last rebellion of Nizak, now in collusion with the Yabghu (Arabic form <u>Di</u>abbuya) or local ruler of Tultharistan. On capturing Nizak, Kutayba had him killed, despite his earlier promise of aman or quarter; and although in the poetry quoted by Tabarl, II, 1225-6, we find Nahar b. Tawsi'a praising Kutayba's hebaviour as salutary for the interests of Islam, like that of the Prophet towards the Tews of Medina, we also find a verse by Thabit Kutna warning against calling perfidy "resolute action". However, for the first time, Arab rule became reasonably secure in lower Tukhāristān, and Balkh now developes as a centre of Arab power and Islamic culture; a subsequent governor of Khurāsān, Asad b. 'Abd Allah al-Rasrl, was to move temporarily the provincial capital from Marw to Balkh (118/736).

In 92/711 Kutayba was in Sistan, which was at that time under the subordinate governorship of his brother Amr. Here, the Arabs in their strongpoints of Zarang and Bust faced the powerful ruler of the southern Hephtalites, the Zunbils of Zabulistan (see gunsial. Kutayba's presence scared the Zunbil into temporary submission, but as always happened, once the Arab forces departed, all obedience was

renounced. The conquest of Kh wararm in 93/712 was a spectacular feat of Kutayba's, and it led to the tentative implanting of Islam there, though it was several decades before the people of the province or their Shahs were fully converted; for details, see EH"ARAZM. In the last years of his governorship, Kutayba's attention was focussed on Soghdia again. In 93/712, on the way back from Khwarazm, he attacked Samarkand and imposed a fresh peace treaty on its ruler Ghurak; the breaking thus of an earlier agreement considerably ternished Kutayba's reputation in Soghdia amongst the Iranian population. It may we that it was me this point that the Western Turks Turgesh intervened in Transoxania at the request of the Soghdian princes; at all events, Kutayba endeavoured to secure the regions of the Jaxastes adjacent to the steppes of Turkistan. moving into Shaah and Ushrusana, and in 94-5/ 713-14 be led a series of raids into Farghana. Whether Kutayba had expressly in mind the securing of the trade route through Central Asia towards China is uncertain, and the report in Tabari, it, 1276, that his troops crossed the Tien Shan Mts. to Käshghar was rejected by Gibb = a fabrication, see his The Arab invasion of Kashghar in A.D. 715, in BSOS, il (1923), 467-74.

The fall of Kutayba in 96/713 and ultimately the result of the change of régime in Damascus from al-Walld to Sulayman, the death of Kutayba's patron at-Hadidiādi, and an expected reversal of the favour previously shown to the Kaysl elements in the empire. Kutayba was campaigning in Farghana when he heard the news of al-Walld's death, and though the new caliph confirmed him in his governorship, he leared an imminent change of attitude. He therefore proclaimed rebellion against the caliph's authority, but was supported only by his own family, the inadequate power base of his fellow Bahill tribesmen. and his bodyguard of Iranian archers; the mass of the Arabs musinied and refused to support him, - also did the Persian mawdii troops under Hayyan al-Nabati, formerly his faithful supporters. He and several of his family were therefore killed by their soldiers in Dhu 'l-Hididia 96/August 715, or according to some sources, later in that autumn at the beginning of 716, and Wakli b. Abi 'I-Sud al-Tamimi assumed power in the east in his stead.

Kutayba's death meant a halting for several decades, and indeed, a definite regression, in the momentum of Arab conquest beyond the Oxus; the Soghdians and their Turkinh allies were now able to mobilise their forces for counterstrokes. He in undeniably one of the heroic figures of the age of Arab conquests, even if the series tribal tradition enshrined in Tabari tends at time to exaggerate his exploits, and this halo placed around his head brought about much confusion in the sources over the events surrounding his death.

The descendants of Kutayba continued to be influential in both the later Umayyad and the early 'Abbāsid periods, with various of IIII sons and grand-sons attaining official posts; his son Muslim (d. 149/766) was twee governor of Başta, and his grandson Abū 'Amr Sa'id b. Salm (d. 217/832) was governor of Armenia, Mawşil, al-Djazkra, Sistân, Sind and Tabaristân.

AL-KUTB (A.), pole.

z. As an astronomical term

In Arabic, \$46 covers nearly the same field of semantic aspects as Greek δ πόλος: a pivot around which something revolves (in Arabic, especially the pivot for mill stones), which was extended to the revolution of the sky, designating the axis of the releatial east-west movement and, more specifically, its two "poles" (LA, Beirut 1955, i, 68rb f.; Lane, Lexicon, s.v. \$44b; Liddell and Scott, Greek-English lexicon, s.v. πόλος). Hence later, in Arabic translations of Greek works, \$44b was often used as a rendering of πόλος, (e.g. Ptolemy, Almagest, i, 3 (both translations, al-Hadichad) b. Yûsuf b. Matar, and Ishâk b. Hunayn; but Aristotic, De cado, has al-falak in all instances, cf. Badawi's edu., Cairo 1961, 232 f., 230, 204).

The celestial pole was a known feature among the Arabs already in their "pre-scientific" period, i.e. before their contact with the scientific literature of the Greeks. Certain traditions concerning the location. and nature of the pole have been transmitted in philological and astronomical books (the Kutayba, K. al-Amed', Hyderabad 1956, 122 f.; Abû Hanifa al-Dinawari, apud al-Marzūķi, K. al-Asmina wa 'lamkina, Hyderabad 1332, it, 7 f., 371 ft.: Ibn al-Adidābi, al-Armina ma 'l-anmā', Damascus 1964, 65 f.; Ibn Mangur, K. Nithar al-askar, Istanbul 1298, 146, 173; Abu 'l-Husayn al-Şüfi, K. Şwwar alkawakib, Hyderabad 1934, 27 [. (repeated by al-Kazwini, Kasmagraphie, ed. Wüstenfeld, i, Göttingen 1849, 29; tr. H. Ethé, El-Kanwing's Kosmographie, Leipzig 1868, 52); 21-Biruni, K. al-Tafbim, ed. and tr. R. R. Wright, London 1934, 77 [§ 163]; idem, al-Kanun al-Mas'idi, Hyderabad, iii (1956), mm f.). Here it is stated that the (north) pole was not a star, but merely a spot (nutta, but a) in the sky. Its place was assumed to be in the middle of the figure of a fish (samaka; al-Biruni has instead; shaki hakiladil, "an elliptical figure") formed by two curved lines of stars, one consisting of the five stars β, ζ, ε, δ, π Ursae Minoris, and the opposite one of very small and faint stars (most of them not registered by Ptolemy in his Almagest), which Fl. 5 and 4 Ursae Minoris and 32 H Camelopardalis. In some places, this statement is corrected, with the addition that the true place of the pole is not in the very middle of that figure, but more in the direction of a Ursae Minoris, near one of the small stars in the curved line of faint stars, (al-Marzūki, Ibn al-Adidābi, al-Sāli, locc. cit.), This difference in location obviously reflects the effect of precession, due to which the place of the north pole was near the star 32 H Camelopardals in A.D. 1000, and stiff more southwards in A.D. 300. It was also observed that the opposite point of the sky, the south pole, was invisible in the fands of the Arabs (Ibn Kutayba, ioc. cit., 172). Ibn Marzer, ed. cit., 1730

After the introduction of scientific astronomy, it was known that this pole belonged to the equatorial system, hence it was occasionally called kuth muladdil al nakar, "pole of the equator", besides its other designations, such as simply al-kuth or al-kuth alshamālī (and al-d:amābī respectively), kutb al-d)udayy, kuth banat nach, kuth al-falah, kuth al-hull, etc. Al-Birini seems to be the first to declare a Ursae Minoris (= "Polaris") to be the nearest bright ster to the [north] pole, at his time, and hence to serve as a substitute for the pole wa-yandbu 'ani 'l-kutbi li-annahů fi zamaniná akrabu 'l-nayyirati ilayhi (Tafhim, 77 [163]). At the same time, the ecliptical system was assigned two poles, as well, which were called kulb[a] falak al-burndi and kulb[d] da'irat al-burndi, "pole(s) of the coliptic" (al-Soft, loc. eit., 25 f.; al-Biruni, Tafhim, 55 f. [\$ 139]; idem, h'anun, iii. 993, 995 ff.; al-Kazwini, op. cit., 27, tr. 59, and 52 f., tr. 108).

North and south pole became of actual value for the Islamic navigators of the Indian Ocean (co. A.D. 1500), who used both of them for altitude measurements in order to fix their position and determine their routes. In their terminology the north pole was generally called al-diah (a word of Persian origin, used both for the pole itself and for the Pole Star). Travelling south of the equator, they also acquired a complete knowledge of the south pole, kuib subayl ("the pole (in the region) of the star of Carinae"), simply ai-hufb (as opposed to ai-diah), which they observed-in contradistinction to the north polenot to be marked by a bright star near it, but having the two Magellanic Clouds at some distance (Ahmad b. Mādjid and Sulaymān al-Mahrl; in English tr. see G. R. Tibbetts, Arab naugation in the Indian Ocean, London 1971, the glossaries and indexes, 518 and 347 [8.v. al-didh], 538 [s.v. \$u[b], 609 [s.v. Polaris; Pole, North South 1).

The poles also seem to have excited the fantasy of astrologers, for two lists of magic virtues (kharāys) appertaining to both of them are repeated by Ibn Manzūr (op. cit., 146-53; partially also in al-Kazwini, op. cit., i, 30 f. tr. 64 l. and 40, tr. 83 f.).

In modern terminology, the terrestrial poles are also called \$\text{sub}\$ (with adjective \$\text{sub}\$), "polar").

Apart from this, in the construction of the astrolabe al-sufb signifies the central pivot, or axis (elsewhere also called al-mihwar), which keeps together its different dises, the spider, and the rule (Albidade), latinised (since the noth century) as Alcholob, Alchitob, Alchitoth, etc. See ASTURLAB; al-Kh "arazmi, Majātik al-fulum, 235; al-Bettani, Opus astronomcum, ed. Nallino, i, Milan 1903, 141 and 319; al-Birunt, Tafhim, 195 [§ 325], etc. Letin: J. M. Millas Vallicrosa, Assaig de história de les idees fisiques i matemátiques a la Catalunya nudieval, i, Barcelona 1931, 278, 66; 288, 4; 289, 29, 32, 36; N. Bubnov (ed.), Gerberti postea Silvestri II papae opera mathemalica, Berlin 1899, 123, 20; Herimannus, De mentura astrolabit, in Migne, Patrologia latino, caliù, Paris 1882, 387 A; (Ps.-) Messahalla (Mäsha'allah), De compositione astrolobii, ed. R. T. Gunther, Chancer and Messahalla in the astrolabe, Oxford 1929, 201. 202, etc.

(P. KURITESCH)

a. In mysticism

In Islamic mysticism, this term flit, "pole", "axis") denotes either the most perfect human belog. al-insan al-kamil [a.v.], who heads the saintly hiererchy [see al-GHAYB and WALT] and is also referred to as al-kuth al-hissi ("the [temporal] phenomenal kulb"); or else al-hahika al-muhammadiyya [see HARIKA] which manifests itself in al-insan al-hamil and is sometimes referred to al-kuth al-mathanel ("the [cosmic] noumenal kufb"). Both meanings of the term are covered by 'Abd al-Razzāk al-Kāshāni's definition: "the place of God's appearance in the world at all times" (Kamāl al-Din Abi 'l-Ghanā'im 'Abd al-Razzūk b. Djamāl al-Din al-Kāshī (al-Kāshānī al-Semarkandī, Kitāb Islilāķāt al-sūfiyya, ed. A. Sprenger, London-Calcutta 1845, 141; cf. Mubyl T.Din b. al-'Arabi, al-Futühat al-Makkiyya, Bülak 1274/1857, ii, 6).

The conception of the temporal kuto (A. kuto alwakt, sähib al-wakt, sähib al-saman; P. mard-i wakt). referred to by some authors as al-ghazeth ("the beloer") (a.e. in Suppl.], who exists by virtue of the cosmic kuto or kuto al-aktab, manifest in him, has been traced back to al Halladj [q.v.], whose huma huma (i.e. the image of God with all his arma? [q.v.] and sifff [g.v.] in Adam) may be considered as the prototype of the conception of al-insan al-hamil (cf. A. E. Aliff, The mystical philosophy of Mukyid Din Ibaul Arabi, Cambridge 1939, 79, 189), and also further back to pre-Islamic ideas, in particular to Iranian, Neo-Platonic and early Christian thought isee T. Andrae, Die Person Muhammeds in Lehre und glaube seiner gemeinde, Upsala 1917, 333 ff.; and H. H. Schaeder, Die islamische Lehre vom Vollkommenen Menschen, thre Herkunft und thre dichterische Gestaltung, in ZDMG, N.F. iv [1925], 192-168).

The notion of the kuth as head of the saintly hierarchy is found in the teaching of al-Hakim al-Tirmight [q.v.] outlined by 'All b. 'Uthman ul-Hudiwirl in his Kashf al-mahdido (see R. A. Nicholson, tr., The Kashf al-Mahjub. The oldest Persian treatise = Súfism, Lelden-London 1911, 214, 228). The scriptural justification for the belief in this hierarchy, of which the different forms mentioned by a variety of authors are discussed by E. Blochet, Études sur l'Asolerisme musulman, in JA, = (1902). 77 ff. (in addition, m Hasan al-Cldwl al-Hamtawi, al-Nafahat al-Shadhiliyya fi Sharh al-Burda al-Businiyya, Cairo n.d.; Sayyid Hayder Amull, in La philosophie Shifite, ed. H. Corbin and O. Yahia, Bibl. iranienne 16, Tehran-Paris 1969, 446, and H. Corbin, En Islam tranien. Aspects spirituels et philosophiques, Paris 1971-2, i, 118 ff.), is a hadith attributed to Ibn Mas'ud (cf. Abu Muhammad 'Abd Allah ai-Yafi'i, Raud al-rayahin fi kihayat al-salihin wa 'l-awiya' wa 'I-akābir, Cairo 1286/1869-70, 10; Yūsuf b. lamā'll al-Nabhāni, Sharākid al-kakk fi "I-isti<u>zhāth</u>a bi-tayyid al-hhalb, Cairo 1323/1905-6, 101; Dialal al-Din al-Suyūti, al-Khabr al-dāll falā mudjūd al-kulb wa 'l-au lad wa 'l-nudjaba' wa 'l-abdal, Cairo 1351/1932-3, 27). The reliability of the sanad of this hadith was discarded by Muhammad Rashid Rida (al-Manar, xl (1908), 50 fl.). Other ahádilh, all without isnád, mentioning the existence of a saintly hierarchy headed by the kufb, are listed in al-Yafift's Rand al-raydhin, 10 (see also al-Zamzami al-Şiddik, al-Abdāl wa 'l-mudjabd' wa 'l-akhyār fi hadith sayyidinā Rasal al-Mukhtar, in al-Muslim, il/6 [Calro, September 1952], 18 f.), including the most frequently cited one attributed to Dhu 'l-Nûn al-Misel [q.v.].

The tentative suggestion by R. A. Nichoson (The

AL-KUTB

idea of personality in Sulfism, Cambridge 1923, 44 fl.) that al-mufa*, mentioned in al-Ghazāll's Miskkāt al-anuair, is identical with the kufb as al-hakkāt al-anuair, is identical with the kufb as al-hakkāt al-unufanmadiyya was discarded by W. H. T. Gairdner, Al-Ghazāll's Miskkāt al-anuair ("The niche for lights"). A translation with introduction. London 1924, 23 ff., who had earlier questioned L. Massignon's suggestion that al-mufa* is an obscure allusion to the doctrine of the kufb as the head of the saintly hierarchy (idem, Al-Ghazāli's Miskhāt al-anuair and the Ghazāli-problem, in Isl., v [1914], 144).

Each of the various ranks in the saintly hierarchy has also been conceived of m being headed by a kuth. From these aktāb the saints who belong to these different ranks receive their knowledge, which they owe in the last resort to the supreme (temporal) kuth (ci. 1bn al-'Arabl, Fuinkat, il., 7; Ahmad Diyh' al-Din al-Gimushkhanti, Pidmi' al-usai ii 'l-awiiya', Cairo 1328/1910, 4; 'Ali Salim 'Ammar, Abu 'l-Basan al-Shādhili, 'asruhu, ta'rikhuhu, 'ailamuhu, ta;awwufuhu, Cairo 1951, i, 192; Ahmad b. Muhammad b. 'Ayyad, al-Mafakhir al-'faliyya fi 'l-ma'dhir al-Shādhiliyya,

Cairo 1964, m lf.).

For Muhyi 'l-Din b. al-'Arabi [q.v.], the universal rational principle, the rill Mulammad, m al-lafika al-makammadiyya through which Divine knowledge is transmitted all prophets and saints, finds its fullest manifestation in and if identical with the hulb, who is al-intan al-hamil. He is the cause of creation, for in him alone creation is fully realised. He is al-barrakh [q.v.], the habitat al-haba'ik, or in other words he is Muhammad as the inward aspect of Adam, i.e. the real Adam (Mankind) = al-likel [q.v.], which is forever manifesting itself on the plane of al-nāsāi (q.v.) in prophets and saints (i.e. in akļāb) who come within the category of al-insan al-kamil, since they are perfect manifestations of God and have realised, in mystical experience, essential oneness with Him. This makes actab infallible, and there is only one kutb at a time (al-kutb al-makid), he is God's real khalifa [q.v.], who is the preserver and maintainer of the universe, the mediator between Divine and human, who passes on knowledge of the mandril (degrees of mystical perfection [see MANTIL]), which cannot be entered by anybody else except by him, through virtue of his being in the manzilat lausik al-tawkid (absolute transcendence of God); cf. lbn al-'Arabi, Fiduldi, i, x68 ff., 201 ff., 253 ff.; ii, 7 ff., 77, and in particular iv, 80 ff.

These ideas were further elaborated by 'Abd al-Karlm al-Diff (cf. Nicholson, Studies in Islamic mysticism, Cambridge 1921, 86 ff.). They were rephrased and/or simplified by other authors (cf. Blochet, 86 ff.) and have remained part of the mainstream of Islamic mystical thinking ever since.

An identical conception of the hufb as the active principle (or interior, bājin; cf. al-Kāshānī, 141) in all inspiration and revelation, comparable to the vouc Neo-Platonism and manifesting itself to the form (sars) of a prophet, is found earlier with 'Umar b. al-Färid (cf. Muhammad Muştafā Hilmi, Ibn al-Färid wa 'l-hubb al-ilahi, Cairo 1945, 273). This idea as noted by Rilmi, ibid., 277, has a striking similarity to the Isma'lit (q.r.) belief in the personification of al-taki al-annal in (al-imam) al-ndfik. Other authors have equally drawn attention to the similarity between the Shift conception III the Imam as a manifestation of the Divine Logos and the conception of the cosmic keth in Islamic mystichm, or the possible identity of both concepts (see e.g. Kämil Muştafa al-Shaybi, al-Şila bayın al-taşanını ma 'ltashayyu⁴, Calro 1969, 463, and Corbin, En Islam isanien, i, 92). Several authors have noted the analogy between the Isma'lli (Fatimid) da'usa hierarchy and the mystical hierarchy under the buth (see e.g. af-Shaybi, 457 if. and Y. Marquet, Des Ituda al-Safa' à al-Haff 'Umar (b. Sa'ld Tall), marabout et conquirant toucouleur, in Arabica, = (1968], 27) or have regarded the mystical hierarchy = derived from it. The historical possibility of such a derivation == discarded by W. Ivanow, An Alt-Haki Fragment, in Collectanea, i, The Ismaili Society, Series A. No. 2, Leiden-Bombay 1948, 166.

Among the Shi'l scholars, some have stated explicitly that hufb and Imam are terms which have the same meaning and which refer mone and the same person (Amol), La philosophie shifte, 223; Allama Sayyid Muhammad Husayn Tabataba'i, Ski'ite Islam [tr., ed., introd, and notes by Seyyed Hossein Nasr), London 1975, 114; Corbin, En Islam tranien, il, 76). The notion of the saintly hierarchy headed by the but is considered by H. Corbin = basically | Shra idea which has been appropriated by Sunni mysticism (see e.g. his En Islam fransen, i, 229, iii, 279; cf. at-Shaybi, 213). Several of his publications contain phenomenologically-inclined analysis of the hermeneutics involving conceptions of \$146 in a perspective of Iranism (see e.g. his L'homme de lumière dans le soufisme transien, Paris 1971, passim, and his En Islam iranien, î, 186 fî.).

Conceptions of a saintly hierarchy headed by the swib and distinct from the hierarchy headed by the Imam are found in the works of 'Aziz al-Din Nasafi (cf. M. Molé, ed., 'Aziroddin Nasafi, Le livre de l'homme parfait (Kitab al-Insan al-Kamil), Bibl. franienne xi, Tehran-Paris 1962, 20, 26) and 'Ala' al-Dawla Simnāni (idem, Les Kubrausyya entre Sunnisme et Shifsme aux huitième et neuvième siècles de l'Hégere, in REI, rxix (1961), 107 f.; cf. Corbin, op. cit., ii, 74). Similar conceptions are held in contemporary ShIP mysticism (cf. R. Gramlich, Die Schittischen Derwischorden Persiens, Zweiter Teil: Glaube und Lekee, Wiesbaden 1976, 160 ff.). Shift mystics have referred to the twelfth Imam = kufb al-akfab (Corbin, En Islam iranien, ii, 74-5, (v. 357) 🖿 kulb-i Bamsī (Gramlich, op. cit., 158), and to the all of a farika [q.v.] = hufb, bufb-i humari and hufb-i samds (idem, 159 ff. for further references and additional detail).

Belief in the existence of alfab and in the whole caintly hierarchy was denounced by 1bn Khaldun (cf. 1bn Khaldun, ed. de Shane, ii, 164; iii, 74, 105-6; 1bn Haldun, Sifd'u '2-Sd'il litekethi '1-Mead'u, ed. M.B.T. al-Tanji, Istanbul 1958; H. S. Nyberg, Kleinera Schriften des Ibn al-Arabi, Leiden 1979, 113 1.), and has been under attack by those adhering to a non-mystical conception of Islam up to the present day (see e.g. 'Abd al-Rahman al-Waku, Hadhihi hiya

"I-pūfisya, Cairo 1375/1955, 124 ff.).

The kufb is regarded as being able to perform distinct karāmāt, which reveal his makām (cf. Ibn 'Ață' Allâh al-Sakandări, Laja'if al-minan, Tunis 1304/1886-7, 57 f.; and 'Ammar, i, 193), to know the meaning of the letters at the beginning of the siras, which he has received from God directly-this qualifies him for al-khild/a (al-Idwl, op. cit., ii, 98), which is known as hhildfat ülä 'l-istifa' (see e.g. 'Abd Allah b. 'Alawl b. Hasan al-'Attas, Zuhar al-haha'ih fi bayda al-jard'ik, Bombay 1312/1894-5, 263; Mustafa Yüsuf Salam al-Shadhill, Diamakir al-iflat wa-durar al-intifa" "ală motn al-Isfahânî Abi Shudia", Cairo 1350/1931-2, 270)-and to incorporate the sife! of the nutable, the nudiable, the abdal and of all those who belong to the saintly hierarchy (al-Gilmushkhanll, Didmi' al-u; al, 4; 'Ammar, i, 192), in consequence of the fact that he is the means by which al-kakk his own names and sifet (cf. 'Abd al-Karim al-Dilli, ol-Insan al-Kamil fi ma'rifat alaucākhir - 'l-aucā'il, Cairo 1328, ii, 48). All sectet beings and every animate and inanimate body have to give him their oledge (bay's) except for the following three classes of beings; al-atrid, who belong to the angels and are independent of the kith (cl. Ibn al-'Arabi, Futühât, i, 223); the drinn who are under the authority of al-Khadir (a.c.) (cf. Muliyi "l-Din b. al- Arabl, Kitāb Manāzil al-kuth wa-mahalihi wa-hālihi, Haydarābād 1948, 4); and those belonging to the tenth stratum of ridial al-ghayb (see AL-GHAYEL namely al-huhand' or al-wasilan (cf. al-Slowl, on, cit., li, tox). According to Daw0d al-Kaysarl in his Sharh Mutaddima al-ta'iyya al-kubra (the relevant section is published in al-Tirmidht, Kitab Khatin al-autiya', ed. 'Cthman 1. Yahya, Beirut 1965, 404 (.) only the anylad (a.v.) do not come under the authority of the kuth they are equal to him in rank, they owe to God everything they are but they have not been granted the makam al-khilafa (ibid., 495). In another treatise, Mallas Alustis al-kilam, al-Kaysarl states that al-Khadir was the kufb in secret at the time of Musă before the latter became kulb on the plane of manifest being (see Andrae, 145).

Belief in al-Khadir as a mortal being identical with the temporal kufb is reported as being held by contemporary Shift mystics (Gramlich, 146). The possibility of such an identification is implicit in the conception of a mortal Khadir, calcated by Ibn Hadiar al-Askalāni, al-Isāba fit iamyiz al-Sabāba, Cairo 1381 1939, i, 434-5. This scholar, however, expresses himself in a fatra to the effect that the orthodoxy of the belief in the kufb (al-ghauth) cannot be established

(cf. al-'IdwI, il, o8).

Early belief in the existence of a saintly hierarchy headed by the kuth (cf. Nicholson, Studies, 78 f.) seems in the course of time to have been elaborated into a conception of a secret assembly (dia an batini) where the saints presided over by the kufb directed the affairs of the man and unseen worlds (see Ahmad b. Mubarak al-Sidjilmāsi, al-Ibris min kalām 'Abd al-Aziz, Cairo 1292/1875-6, i, z ff. Al-Sidiilmāsl relates the sayings and ideas of his thaykh, 'Abd al-'Aziz al-Dabbagh, Al-Dabbagh's description of the composition and functioning of the diwan has found its way into the works of Muhammad al-Makki b. Mustafa b. 'Azuz, al-Sayf al-rabbanl fi unk al-mu'tarid 'ald al-ghanth al-Deilant, Tunis 1310/1892-3, 74; and 'Ubayd Aliāh Şālih b. Muhammad al-Kusantini al-Hansall, Fath al-Rahim al Rahman bi-tharh nosihat al-ikhuan, Cairo 1312/1894-5, 176). This conception is prominent in certain mystical traditions to the present day (see Muhammad Zaki Ibrāhim, Ma' al-Badawi al-muftari 'alayhi, in al-Muslim, xv)7 (Cairo, June 1965), 15; and idem, Ma' kadiyyat al-akidb al-arba" wa-maratib ahl al-ghayb, in al-bauslim, xx/xx (August 1970), 11 i.: and 'Abd Rabbibi b. Sulayman al-Kalyubi, Fayd al-Wahhab fi bayen ahl al-hakk weman kalla 'an al-sawah, Cairo 1964, v. 57 fi.).

Opinions as to the whereabouts of the suit vary. According to Ibn al-Arabi (cf. Futübāt, i, 168; Manārii al-ēutb, 4), the butb is corporeally present at Mecca; according to Ahmad Muhammad Ridwân, al-Nafābāt al-rabbāniyya, Cairo 1390, 270, his bodily presence is conlined to Upper Egypt. Popular belief in Egypt held him to be miraculously present in m niche behind one of the doors Mab al-Zuwayla, the southern gate of Cairo (see E. W. Lanc, An account of the manners and customs of the modern Egyptians, London 1860, 231 I.; and H. H. Hatrison, The Bab il

Metawalli, in MW viii [1918], 141-4), which was a site for veneration and votive offerings (cf. J. W. McPherson, The Moulids of Egypt, Cairo 1941, 141). In contemporary Islamic mysticism, the dominant view seems to be that only his spirit is seen at Mecca, i.e. at the Ka'ba, which is the makém [q.v.] of his spirit and the throne of his heart (see Muhammad Zaki Ibrāhlim, Kulaymāt muhammilāl li-mamātā al-ahfāb, in al-Muslim, xyl8 [] une 1969], 3).

A few cases are found where a jarika teaches explicitly that the knth will always belong to this particular jarika. Examples are al-'Azāziyya (see the relevant section in F. de Jong, The Safi orders in post-Ottoman Egypt, fortheening) and al-Shādhillyya (see Ibn 'Ayyād, 105). The latter jarika teaches that God gave Abu 'l-Hasan al-Shādhill the bay'ar al-kuthiyya after the death of Abu 'l-Hadjidādi al-Ukṣurī (b. 'Ayyād, ibid., 35). The silsila of the jarīka I referred to as the silsilat al-aktāb (Abū Bakr b. Muhammad al-Bannāni, Madāridi al-sulūk ilā I al-blulūk, Cairo 1330/1912, 90) going back to 'Alī b. Abū Tālib through his son Nasan, who is considered the first kuth (al-Sakandārī, 50: Ibn 'Azūz, 75: al-

Kusantini, 181). Distinct cosmological systems revolving around a conception of hulb and derived from the ideas outlined above, and presenting or incorporating a modified version, have been developed and have gained some degree of significance at distinct times and places. Notable are, in chronological order, Abu 'l-Fadl Allami's [q.v.] presentation of the Mughal emperor Akbar [e.v.] as insan al-hamil or temporal hulb around whom the world revolves in his Akbar-nama; Abmad SirhindI's [a.v.] conception of the kayvan -the vicar of God on earth to whom the kuth is a servant under his rule, a rank which he ascribed to himself and which was claimed by four of his descendants (S. A. A. Rizvi, Muslim remealist movements in Northern India in the sixteenth and seventeenth centuries, Agra 1965, 266 ff.): this belief seems to have influenced the teaching of Mir Dard (cf. A. Schimmel, Pain and grace. A study of two mystical writers of eighteenthcentury Muslim India, Leiden 1976, 81); and Tidjani doctrine centred upon the belief that Ahmad al-Tidjuni [q.m.] was khalm al-wildys and kuth al-ahtab simultaneously (J. M. Abun-Nasr, The Tijaniyya. A Sufi order in the modern world, London 1965, 27 ff.).

Before and ofter Ahmad al-Tidiani, Suffs claimed or were considered to be abiab. Some examples from among the earlier mystics are listed in Gramlich, 168, n. 910). Other notable examples among the later mystics are Abû Sa'ld b. Abi 'l-Khayr (see Mubammad Nor al-Din Munawwar b. Abi Sa'd As'ad, Asrar al-taubid fi mahamat al-thaykh Abi Safid, ed. Phabih Aliab Şafā, Tehran 1348, 352 f.), 'Abd al-Rahim al-Kinawi (cf. Ahmad Husayn Diabaruh, Kalima mutawidi'a 'an kufb Kind sidi 'Abd al-Rahim al-Kina'l, n.p. Kina) 1388/1968); Abu 'l-Hadidiadi al-Ukşuri (see Ibn 'Ayyad, 35); Abu 'l-'Abbas al-Mursi (see al-Sakandůri, 68); 'Abd al-Kādir al- $m{D}$ iliâni (q.v.], Ahmad al-Rifa's, Ahmad al-Badawi [q.n.], and lbrähim al-Dasûki [q.v.]. The last four of these are frequently referred to as al-altab al-arba'a (see Muhammad Mahmud al-Sutübl, al-Tasawwaj waahlabuhu, Cairo 1970, 15, 14; cl. Muhammad Zakl Ibtāhīm, Ma'hadiyyat al-akļāb al-arba'a, 6 ff.). 🖿 some mystical cosmologies they are presented as occupying a position of pre-eminence in the successive stages of pre-creation out of al-nur al-muhammadi before their birth, as successors to the four khulafa? al-roskidan during their lifetime, and m continuing forces is the world of the unseen after their death

(see 'Akil Mathur, Kutra min bahr al-Kur'an; darint Abi 'l-'Aynayn, in Sandhi = (Cairo-Kafr al-Shaykh, April 1967), 41; and Muhammad Zaki Ibrāhin, Ma' al-Eadawi, 8 ff.; cf. idem, Kulaymāt mukammildt li-mawdā' al-ahfāh, || ff.).

In some mystical traditions, those belonging to the manathy hierarchy, including the hulb, are held to be identical with the serious mystical trachers present at a certain time but whose splritual rank remains undivulged to those outside this hierarchy (cf. 'Imran Ahmad 'Imran, al-Taibiya fi undial shayhk al-tarbiya, Asyût 1354/1936, 14). This tenet may imply the belief that potentially everybody can become hulb by means of following the fartha, i.e. by means of the method prescribed by a distinct mystical tradition (cf. Sulayman al-Djamal, al-Futahdi al-tiahiyya bi-laadih Tafsir al-Djamal, al-Futahdi al-tiahiyya bi-laadih Tafsir al-Djaldlayn bi 'l-dahû'ik al-khafiyya, Cairo 1913, l. 214).

The statement by J. S. Trindugham, The Suficorders in Islam, Oxford 1971, 163 i., that the conception of the Sufb has gone through a process of vulgarisation would seem to be in need of further sub-

stantiation.

Bibliography: given in the article.

KUTB AL-DIN (see MAWDOD B. ZANGI; AL-

MARRAVALII.

KUTB AL-DIN AYBAK, the first culer of the Indo-Muslim state which arose after the death of the Ghurid Shihab al-Din (Musizz al-Din) Muhammad b. Sam in 1206 and was subsequently to be based at Dihli. Brought as a slave from Turkestan first to Nishapur and then to Ghazna, he was purchased by Muhammad, then engaged in the reduction of the independent Hindu principalities to northern India, and rose to be amir-i akhar (master of the horse) and mukțat of Kohram (now Ghuram in Patiala) and Sâmâna. The manual for this period, composed either under Aybak's begemony or under his successors, ascribe to him personally the capture of Meerut, Dibli, Köl ('Aligarb), Thankir (Bayana), Gwaliyar, Bada'an, Kanawdi and Kalindiar, between 587/1191 and 599/1202-3, and the sack of Nahrwaiz in Gudjarat (593/1197).

On III master's assassination in 602/1206, he moved from Dihli to Lahore, where he is said to have ascended the throne on 17 Dhu 'l-Ka'da/25 June, and which became his permanent residence. Aybak's precise status is problematical. No coins of his a extant, and the statement of Hasan Nizami that the khufbs was read and coins struck in his name is not corroborated elsewhere. Djûzdjanf on the contrary specifies at one point that these prerogatives were retained by Muhammad's immediate successor Ghiyath el-Din Mahmad, who now reigned at Firazkuh, though elsewhere he says that Mahmud conferred in Aybak the title of Sultan. In view of Aybak's slave rank, it is most likely that he was simply manumitted by the new Ghürid sovereign, as we read in Ibn al-Athlr, and remained his subordinate, receiving a diploma and canopy of state as malik of Hindustan. Aybak's attentions appear to have been absorbed by the situation in the north-west, where the Ghurid empire was succumbing to pressure from the Kh vārazm-Shih Muhammad b. Tekish, will it is significant that no efforts me extend the Muslim conquests in India are recorded for his reign. He engaged in hostilities with another Ghurid slave officer, Tadi al-Din Ylidiz, who was at Gharna and who endeavoured unsuccessfully to take Lahore in 605/1208-0. Aybak's own subsequent occupation of Ghazna, however, was merely temporary, and he was expelled by the citizens in favour of Yildiz. He died in Lahore in 607/1210-1, of wounds sustained in a socident during a game of polo (faugda), and his successor Ārām Shāb, whose retationship to him is uncertain, was soon set aside in favour of the muktat of Badā'un, Aybak's soo-in-law litutnish (q.v., and in also direct sutranate).

Aybak, who has achieved renown as the builder of the Ruth Minar (q.r.] at Dihlt, was a patron also of the literary arts. Fakhr-i Mudabbir (q.r. in Suppl.), author of a manual of war, the #dab al-lassb, dedicated to him his book of genealogies, and it was probably under Aybak's régime that Hasan Nizāmi (q.r. in Suppl.) began writing his florid Fati al-ma'ātķir, which was completed under litutmish. Both are important sources for the early period of Muslim rule in Hindústán.

Forlong Fund, iv); Hasan Nizāmi, tr. in Elliot and Dowson, History of India in told by its own historians, London 1867-77, ii, 212 ff.; Ihn al-Athlr, xii, esp. 163-5; Djözdjönt, tr. H. G. Raverty, Tabakát-i Násiri, London 1873-81 (Bibliotheca Indica), 398-9, 469-71, 502-3, 512-31, 605-5; A. B. M. Habibullah. The foundations of Muslim rule in India, 2nd ed., Alláhábád 1961, 61-92. (P. Jackson)

KUTB AL-DIN BAKHTIYÂR KÂKÎ, 2 Şufi who settled m Dihli during the reign of litutmish

[q.v.].

Kh*ádja Kuth al-Dio Bakhtiyar (Ahmad b. Mūsā al-Kāki al-Ushi) was a native of Ush, a town in castern Farghana. The tadhkira literature depicts him as the disciple of Mu'in al-Din Cish (d. 634/1236), the founder-figure of the Cishti affiliation in India. The accounts disagree on whether the two contemporaries first met at Ush, or at Isfahan, or in the San circle of Abû Hafş "Umar al-Suhrawardi (d. 632/1234), or in the mosque of Aby 'l-Layth al-Samarkandi at Baghdad. After years of wandering, Kutb al-Din came to Multan early in the 7th/13th century during the rule of Naşîr al-Din Kabaca (d. 625/1228). There Farid al-Din Mas'ud (d. 664/1265) sought his company, while Babá' al-Din Zakariyyê' (d. 666/1268) to have encouraged his departure for Dihll. Kutb al-Din settled outside the walls of Dihll near the tank, haird-i shams!, during the reign of Htutmish (607-33) 1211-36), but declined the office of Shaykk al-Islam offered to him by the Sultan. Kuth al-Din was wellknown for his Suft practice of listening to music (samif), and is said to have will during a samif performance = 14 Rabi^c I 633/27 November \$235. His tomb is in the vicinity of the Kuth Minar at Mihrawli. The Kuth Minar [q.v.], completed by Htutmish in 629/1229, is believed to derive its name from Kuth al-Din Bakhtiyar (not from Kuth al-Din Aybak].

The Cighti affiliation venerates Kutb al-Din as one of the ontstanding members of its founder-generation in India, and records him in its silvida — the link between Mu'in al-Din and Farid al-Din. Kutb al-Din is the alieged compiler of the apocryphal mulification Mu'in al-Din, entitled Dalil al-Zirifia (Lucknow 1868), whereas his own sayings supposedly have been collected by Farid al-Din in the spurious Fauri'id al-silvidia. A more reliable source, however, appears to be the Mijidh al-plitin, which was compiled in the immediate circle of Kutb al-Din's associates at Dillit.

RUTB AL-DÎN AL-IZNÎRÎ, MURAMMAD AL-ROMÎ, early Ottoman Hanafî scholar and father of Kuth al-Dîn-zâde Muhammad (q.v.). He was born at lanîk [q.v.] and died there on il Dhu 'l-Ka'da Szziy December 1418. Popular story puts him in contact with the conqueror Timûr when the latter occupied Anatolia, and he was the author of commentaties on the work of the great Spanish mystic Ibn al-Arabi [0.v.).

Bibliography: Tashköprüzäde, al-Shakā'ık alnu'māniyya, Belrut 1395/1975, 24, German tr. O. Rescher, Constantinople-Galata 1927, 18-19. (Ed.)

KUTB AL-DÎN MUBĂRAK (see KMALDI'IS) KUTB AL-DÎN MUHAMMAD (see KM*ARAZM-SHÂHS),

KUTB AL-DIN SHIRAZI, MAHMOR B. MAS'OD B. MUSLIE. Persian astronomer and physician, was born in Safar 634/October 1236 in Shiraz and died in Tabriz on 17 Ramadan 710/February 1311.

Like many Muslim medical men, Kuth al-Din belonged to a family of distinguished physicians; at the same time, bowever, he was not only a prominent medical man, at least as regards his writings, but he distinguished himself also in astronomy, philosophy, and the treatment of religious problems. This versatility induced Abu 'l-Fida' to give him the name al-mutafaunin "experienced in many fields". He received his medical training with his father Diya' al-Din Masfud al-Kazaruni, i.e. of Kazarun (to the west of Shiraz), in the hospital of Shiraz. He lost his father at the age of 14 and then became a pupil of his uncles Kamai al-Din Khayr al-Kazaruni and Sharaf al-Din al-Zaki al-Rushkani (Suvüt! has Rukshawi) and Shams al-Din al-Kutubi; he then went to Naşir al-Din al-Tûsî, studied with him and surpassed everyone. It was probably Nașir al-Din who stimulated him to study astronomy. While still quite young he conceived the idea of editing the Kullivyát, the first theoretical part of the Kanun of Ibn Sina. He next sought instruction with the physicians in Shiraz and then studied deeply the works of earlier scholars. He then travelled in Khurasan, the two 'Iraks, Persia, Anatolia, and Syria. Everywhere, as he tells us in the introduction to the commentary on the Kullivyat, he sought the acquaintance of scholars. It was probably after these journeys that he became associated with the Mongol rulers of Persia, the Il-Khans; in what year and under which ruler this happened, we do me know. In any case in 681/1282 he was kad: of Siwas and of Malatva in Anatolia under Ahmad Nikudár (680-3/1281-4). There he was still engaged on the Kullivyat; he must have played a part in politics, as Ahmad sent him with his uncle Kamal al-Din to Egypt to the Mamtak Sultan al-Manşūr Sayf al-Din Kalawūn (678-89/ 2279-90 [q.v.]). He was sent to report the former's conversion to Islam, no doubt the result of Kuth al-Din's influence, and to conclude a peace between the Muslims and the Mongols. The latter part of his mission was a failure. In Egypt also he collected material for the Kulliyyāt. He dedicated the work, probably finished shortly after his return from Egypt, to Muhammad Sa'd al-Din, Ahmad Khān's vizier, and called it al-Tuhfa al-Su'diyya, "the present to Sa'd", or Nuthat al-hukamd' wa-rawdat al-ahbbā', "the delight of the wise and garden of the physicians".

In his later years Kuth al-Din retired to Tabria. Towards the end of his life he ardently studied hadith and made critical notes on the subject, e.g. on the Diam' al-usili ("Encyclopaedia of principles") and to the Shash al-Sussia ("Commentary on the Sunna"). Ibn Shuhba and al-Subid give a sketch of the character of Kuth al-Din. He had a brilliant intelligence. combined with unusual penetration; at the same time his humour was innocent: he was known as "the scholar of the Persians". It is evidence of his efforts to preserve his independence that, in spite of his prestige with princes and subjects, he lived remove from the court. He also led the life of a Suff. It is emphasised that he had many pupils; among these was Kamāl al-Din al-Fārisī (see below), who cannot praise him highly enough; he also induced al-Tabtani (d. 766/1364; see Brockelmann, III. 271, S II. 201-4) to come to critical decisions (muhikamat) = the Ishārāt of Ibn Sinā on points disputed between Nasir al-Din and Fakhr al-Din al-Rāzi (Hādjdji Khall(a, No. 743). He neglected his religious duties; nevertheless, al-Suyūti mentions that in Tabrīz he always performed his saids with the congregation, He loved wine and sat among the scorners. He was a brilliant chessplayer and played continuously; he was also skilled in the tricks of the conjurer and played the small viol (rababa). His commentary the Hikmat al-ishrak ("the philosophy of illumingtion") of Suhrawardi is undoubtedly connected with his religious attitude. Nevertheless, - Hadidh Khalifa (No. 1169) emphasises, Kuth al-Din distinguished himself in theology. He annotated the Kur'an very thoroughly and in a fashlon that won recognition in his Fath al-manuan fl tafstr al-Kur'an; in the Fi muchhilat al-Kur'an he also dealt with passages in the Kur'an difficult to reconcile with one another. He wrote a commentary on al-Kashshaf 'an haka'ik al-tenzil of al-Zamakhshari. Kuto al-Din played a special part in the history of optics, because he called the attention of his pupil Kamāi al-Dīn al-Farish [q.v.] (d. co. 720/1320) to the Optics of Ibn at-Haytham [q.v.], with which he had become acquainted on his travels, and procured a copy for him. Al-Farisi wrote a commentary on it and extended it by his own observations. It is noteworthy that Kuth al-Dla so completely forgot Ibn al-Haytham's expositions that he based his observation not on rays of light will the latter, but me rays of vision.

In the two comprehensive astronomical works Nihāyal al-idrāk fi dirāyas al-aflāk, the "highest intelligence in the knowledge of the spheres", and al-Tuhfa al-ghāhiyya fi l-hap's, which are very similar to each other, Kuth al-Din has given what is ecivably the best Arabic account of astronomy (cosmography) with mathematical aids. It closely follows the al-Tadhkira al-nasiriyya, the memoranda of Naşir al-Din al-Tüsi, his teacher. But Kuth al-Din's works are very much fuller and deal with many questions which Naşir al-Din did not touch; they are therefore much more than commentaries. The

Nihdya discusses, for example, details of the cosmography of al-Khiraki or Ibn al-Haytham, which are again found in Roger Bacon. Passages from these works and discussed by E. Wiedemann in: Zu don optischen Kenntnissen von Kufb al-Din al-Schirdsi, in Archiv für die Gesch. der Naturwissensch., etc., iil (1912), 187-93; Uber die Gestall, Lage und Bewegung der Erde, sowie philosophisch-astronomische Betrachtungen - Kufb al-Din al-Schlidzi, in ibid., 395-422; Beiträge, xxvii, Auszüge aus al-Schiedzis Werk über Astronomie, in SBPMS Erl. xiiv (1912), 27-35, reprinted in Aufsätze 🚃 arab. Wissenschaftsgesch., Hildesheim 1970, i, 802-10; Erscheinungen bei der Dammerung und bei Sonnenfinsternissen nach arabischen Quellen, in Archiv für Gesch, der Medizin, EV (1923), 47-8; Inhalt eines Gefässes in verschiedenen Abstanden vom Erdmittelbunkt, in Zeitschr, für Physik. miii (1923), 59-60.

One work is entitled Shark al-tadhkira al-nasiriyya. As an appendix to the Nihäya, Kutb al-Din wrote the FI harakal al-dahrada wa "I-misha bayn al-mustawi wa "I-munhani," On the motion of rolling and the connection between the straight and the crooked". Other works are al-Tabyira fo 'l-hay'a and m work with a very peculiar title, Kitāb fa'altu fa lā talum fi 'l-hay'a, "Work on astronomy; I have composed

it but blame it not".

Besides the works by Kuth al-Din already mentioned, there are also recorded a treatise on diseases of the eye and a commentary on the Urdiaza of Ibn Sinā; — work on medical ethics, the K. Bayān albādia ilā 'l-tibb wa-ādāb al-ajibā' wa-wazāyāham; commentaries — the work, mainty grammatical of al-Sakkākī and on — work of Ibn al-Hādiib, and an encyctopaedia of philosophy, the Durrat al-tādi, written for one of the Isbākwand amīrs of Gilān [see FOMAN], which includes an important section on music.

After his death, Zayn al-Din Ibn al-Wardi wrote verses on Kutb al-Din, in which he expresses surprise that the mill (10kd) of knowledge still turns after it has lost its min (8ufb).

According to Brockelmann, there is also biographical information in Khwandamir, Habib al-siyer, lith. Bombay 1857, iii. 1, 67, 112, and Suyûţi, Bughyat al-wu'dt, 180. (E. WIEDEMANH)

KUTB AL-DIN-ZADE, MUNYI AL-DIN MUNAN-MAD B. KUTS AL-DIN IZNIKI, Ottoman scholar and mystic. He was born in the early 9th/25th century, the see of Kuth al-Dln landel (d. 822/1418 [q.v.]), himself a scholar and the author of works on tafsir and fikk (see Othmanli mil'ellifleri, i, 144, romanised version, i, 124-5). He was in his early years the pupil of the famous mufti Shams al-Din Muhammad, Molla Fanari (d. 834/1431) [see FENARIzadz], and later became interested in Süfism. He wrote several works, many of them commentaries, e.g. on the mystical works of Ibn al-'Arabi and his pupil Şadr al-Din Muhammad al-Künawi, and others on the interpretation of dreams (table al-ru'yd), He died in 885/1480 and we buried in the Tatar Khān cemetery at Edirne.

KUTB KHAN LODI [see LODIs].

KUTB MINAR, a lofty tower of red sandstone, said by Fergusson (ii, 206) and Diez (165) to be one

Reconstruction of the area of the Kuth Mosque. From left to right: 'Ala'i Darwara (705/1305), Kuth-Minār (591/1108) and unfinished tower 'Ala'i Minār (after A. Volwahsen, Islamisches Indien, Munich 1969, 40).

of the most beautiful buildings of its kind in the world. It situated about 17 miles from the modern city of Dihit [q.e.], in the rains of the first city of that name, and about too feet from the great mosque which exected by Kutb al-Din Aybak [c.v.] in 589/regs, just after the capture of the city from the Hindu king, Prithviradj. Like the Minar at Ghazna [g.v.] and the Minar at Koyl [g.v.] (no longer in existence). It is an isolated structure, from which the muladadain gave the call to prayer, and is 238 feet in height; it is not attached to the mosque, but stands in the southeastern corner of the southern outer court, which was added in 622/1225 to Aybak's mosque by Iltutmish [q.n.]; it mot straight, but tapering, and divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richlysculptured bands of inscriptions below them. The basement storey appears to have been built while Aybak still recognised the overlordship of Mu'izz al-Din Ghurl (i.e. before 601/1205); the second, third and fourth stories were built by Iltutnish, but during the reign of Firds Shah Tughluk [q.o.] the building see struck by lightning, and this king in 769/ 1368 had it repaired and added a fifth storey. The two appennest stories, both of which in their present form are probably the work of FIruz Shah, have plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the tower is entirely of red sandstone, and is not round but made up of flutings, which in the basement story are alternately round and angular, in the second rounded only, and in the third angular only. The line of each fluting is carried up unbroken through each story. The inscriptions are partly historical in character and partly made up of quotations from the Kur'an; they have been reproduced and translated in Epigraphia Indo-Moslemica (1911-12).

Recently, the prototype of this Mnár was discovered in the ruins of the tower at Khhádja Siyāh Pūgli in Afghān Sistān: in the ground plan of the regularly alternating 8-rounded and angular flanges, we recognise the transition between the Eastern Iranian stellate plan, continued for example at Chazna [see GHAZNAWIDS. Art and monuments] and the round plan of Djam [see GHŪRIDS] in Central Afghānistān (K. Fischer, ed., Nimruz, pls. 252-4).

The tower derives its name from the saint Kh*adja Ruth al-Din Bakhtiyar Kaki (d. 634/1235 [q.v.]), who me held in high honour by Ittutnish.

RUTB SHAHI, the name of an Indo-Muslim dynasty that dominated the eastern Deccan plateau as one of the five successor states to the Bahmani kingdom. Basing their power in the city and hill-fort of Golkonda [q.w.], the Kutb Shahi kings achieved de facto independence with the decline of the parent Bahmani kingdom in the early roth/t6th century, maintaining effective rule until Mushal armies under Awrangsib conquered and annexed the kingdom in 1098/1087.

The founder of the dynasty, Sultan Kull Kuth al-Mulk, was a Turkoman adventurer of the Kara Koyunlu clan [q.v.] who, baving migrated from Persia to India as a youth, rose in Bahmani service until in gox/1496 he was appointed governor over the easternmost Bahmani dominions. Although be never claimed legal sovereignty during his long rule, Sultan Kult managed to carve out for himself and his descendants the broad territorial outlines of a kingdom over which they held effective sway for nearly two hundred years. He also gave the dynasty ideological definition by declaring Shiffem the official creed, following the precedent set by Shah Isma'll of Persia in 907/ 1301. This orientation, continued by all of Sultan Kuli's successors, caused the dynasty to identify ideologically with Persia as its link with Dar al-Islam, rather than with the Ottoman or Mughal empires. which were Sunni. The sequence of Kuth Shahl kings is as follows:

Kuit Kutb al-Muik 901-50/1496-1543

Djamshid b. Kuii 950-7/1543-50

Subban W. Jamshid 957/3550

Forahim b. Kuil 988-1020/1580-1612

Muhammad-Kuil b. Ibrahim 988-1020/1580-1612

Muhammad-Kuii 7020-35/1612-26

Tabd Aliah b. Muhammad tuii 7035-83/1626-72

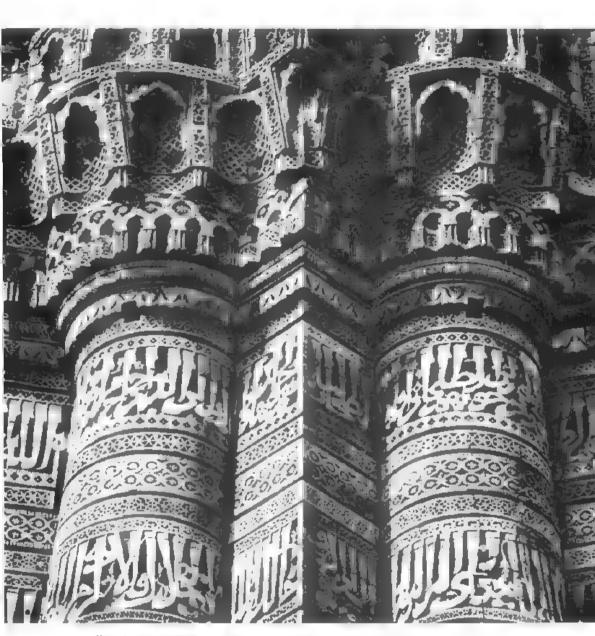

Abu 'l-Hasan, son-in-law of

Abd Allah 1081-08/1672-87 Throughout most of the roth/16th century and the early 12th/17th century, the Kingdom of Golkondi engulfed in constant warfare either with the most powerful two of its sister successor states to the west, Bidiapur and Ahmadnagar, or with the Hindu state of Vijayanagar to the immediate south, These conflicts sustained by mutual Jealousies and potty intrigues, resulting in constantly shifting military alliances among these four principal states of the Deccara-Thus, although Golkonda, Bldjapur and Ahmadnager were able to band together in 972/1565 to crush Vijayanagar and sack its wealthy capital in the battle of Talikota, immediately after this battle the three Muslim states resumed their mutual hostilities. This situation prompted increasing intervention in Deccan affairs by the Mughal empire, which was expanding its imperial interests in the rrth/17th century. Finally, in 1045/2636 Diaban forced Abd Allah Kuth Shah to recognise the Mughal government's ultimate suzerainty over Golkonda a "Deed of Submission". By clarifying Golkonda's relationship to Dihli, however, this arrangement relieved 'Abd Allah of further unxisties about Mughal aggression so long as tribute was paid. and freed him to expand Kuth Shahi arms southward as far as the Palar river (near Madras), absorbing number of petty Hindu principalities formerly dependent upon Vijayanagar.

But the reign of 'Abd Allah's successor, Abu 'l-Hasan Kuth Shah, witnessed a dramatic transformation in the internal ruling structure of the kingdom as a number of Brahmins, especially the brothers Madanna and Akkanna, acquired the reins of central authority. This development, combined with the

1. Dihlt, Kuth Minar (594/1198) and 'Ala'i Darwaza (705/1305). (A. Volwahsen, Inde islamique, Fribourg 1971, 17)

2. Kuth Minar, decoration and inscriptions. (A. Volwahsen, Inde islamique, Fribourg 1971, 19)

state's official Shiff ideology, arrears of unpaid tribute to the Mughals, the general chaos in the Deccan prompted by the rise of the Markthas, and renewed expansionist sentiment in the Mughal government now under Awrangzib, 🔤 to a determined Mughal effort to end Golkonda's subordinate but semiindependent status and annex it to the Empire. In 1098/1687, after a protracted siege of Golkonda fort, the Mughal conquest and annexation of the

kingdom was accomplished.

In its two centuries of rule, the Kuth Shahl monarchy sank roots deep into Indian society and culture by successfully integrating multiple groups into its political fabric, by founding an efficient economic basis for the kingdom, and by forming a distinctive Indo-Muslim culture that accommodated itself in important ways with the pre-existing Hindu culture. On the political level the dynasty, faced with the choice of dislodging or absorbing the indigenous class of Hindu warrior chiefs (ndyaks) already dominant in Telugu society, adopted the latter alternative, employing ndyaks in garrisons throughout the kingdom and even in the royal guard at the capital. The other indigenous elite group, the Brahmins, were likewise absorbed into the dynasty's political structure, especially in the central revenue administration as clerks, accountants, and even chief administrators. On the local level too, virtually the entire revenue system was entrusted to Brahmins who functioned as agents, brokers or accountants. In fact the more important members of this rural gentry received royal orders guaranteeing their tenure, frequently hereditary, and assuring them of royal support against rivals.

By far the greatest share of the kingdom's was derived from the land tax, collected in cash through a highly-organised and ruthlessly efficient bureaucracy. Further contributing to the kingdom's economic stability, and also its notorious wealth, was the successful exploitation of a number of diamond mines discovered in the Krishna river valley during the early years of the dynasty's history. The diamond enterprise became a vast state monopoly that involved several hundred thousand labourers, officials, and merchants, and made Golkondå the world's most important dismond market

in the 11th/17th century.

A distinctive aspect of the dynasty === its composite culture that combined Islamic and Indian styles, as reflected in the nature of its rule, in the flourishing of Telegu, Persian, and Dakhni literature, and in painting and architecture. Having lived seven years in exile in Vijayanagar, where he learned Telugu and acquired a Hindu wife, Ibrahim Kuth Shah set the see of this syncretic culture. He adopted not only the usual symbols of Muslim sovereignty (sikka, khufba, etc.), but also the style of a traditional Hindu rajah, reserving tax-free lands for the support of Brahmins and temples, erecting pillars on which the sworn loyalty of nayaks was inscribed, patronising Telugu poets, and reviving the ancient Telugu monarchical tradition of building large irrigation works, Moreover, extensive contact between Hindus and Muslims III the Deccan gave rise to a new language, Dakhni, which achieved its first literary expression in Golkonda in the roth/16th century, with Sultan Muhammad-Kull himself being one of the foremost writers in the language. A blending of Hindu and Muslim styles is similarly reflected in contemporary painting and architecture, especially the architecture of Haydarabad. Planned in 999/1690r by Muhammad-Kuli Kuth Shah as a suburb of

Golkonda fort, 🖿 city of Haydarabad [q.v.], with its gardens, basears, palaces, and such architectural masterpieces as the Carminar, has indeed remained

the dynasty's most lasting legacy.

EATON) comprehensive study).

KOTHA, a very old town of 'Irak, on one of the canals foining the Euphrates and Tigris and one stage from Baghdad on the Kufa road. The town as well as the canal are often mentioned in cuneiform inscriptions (cf. the references in Meissner, Babylonien und Assyrien, 2920-5, Indices, s.v. Kutů and the map by Schwenzner in vol. i). The town is said to be identical with the place mentioned in a Kings, zvii, 24, from which came a part of the people whom the king of Assyria settled in Sameria in place of the deported Israelites. The course of the canal, at least for western part, coincided with that of the modern Habi Ibrahlm; on modern maps, this last ends in the Shatt al-Nol; the Arab geographers make no reference to this, but make this canal flow direct into the Tigris (cf. Le Strauge, The lands of the Eastern Caliphate,

Map II facing p. 25).

The Arab geographers distinguish two places called Kütha Rabba and Kütha al-Tarik, but only give further information about the former. (The distances from other places are collected in Streck, Die alle Landschaft Babylonian, 11.) The geographers also mention the bridge of boats over the canal at Küthå, which gave it the further name of Disr Kutha, and the Abraham legends, which are associated with the town; al-Mukaddasi (BGA, iii), 121) actually calls the town Madinat Ibrahlm, and I this day the rulus of the town are erroneously located in the Tell Ibrahlm which lies approximately on the site of the encient Küthå. Abraham is said to have been born at Kutha, and the name of the town comes from that of his maternal great-grandfather. When his mother ther name is very variously given; Yakut writes Būnā bint Karnabā b. Kūthā; the Talmud, Bābāā bathes, gr", אמלתאיבת כרובו for other names, see Eisenberg, El' act. IBRAHIM and The life of the prophets according to Arabic legend. ii. The life of Abraham [in Hebrew, 1912], | n.) was about to give

him birth, she had to take refuge from Ninarod in a cave outside the town. Later, Nimrod threw her into a fiery furnace; therefore, in the time of the Arab geographers, many heaps of ashes were still pointed out which came from this fire.

Kūthā is also the name of the fassaidi around the town, which comes within the district of Ardashir Pāpakān and is in turn divided into to rustides. According to al-Mas'ūdi (Tanbih, BGA, viii, 79), Ur Kashd (the Biblical Ur Kasdim) from which Abraham migrated is a place min bibād Kūthā. The nisba from Kūthā is Kūthā or Kūthāni.

Besides Küthā in Mesopotannia, Yākūt and al-Bakrī also mention ≡ place of pilgrīmage of this name

in Mecca.

KUTHAM B. AL-'ABBAS B. 'ARD AL-MUTTALIB AL-HASHIM!, Companion of the Prophet, son of the Prophet's uncle and of Limm al-Fadi Lubāba al-Hilāijyya, herself Muhammad's sister-in-law. Although the Sira brings him into contact with Muhammad by making him one of the inner circle of the Hashimi family who washed the Prophet's corpse and descended into his grave, and although his physical resemblance to the Prophet is also stressed, he was obviously a late convert to Islam, doubtless following his father al-'Abbas [q.v.] in this after the conquest of Mecca.

Nothing in heard of him during the reigns of the first three Orthodox Callphs, but then 'All on his accession made Kutham governor of Medina (36/656).

In the next year, when menaced by his rivals for the caliphate, Talha, al-Zubayr and 'A'isha, he made him governor of Mecca and al-Ta'if. He seems to have retained this office all through his cousin's caliphate, leading the Pilgrimage in 38/659 (cf. Ibm Hisham, iii, xor8, 1020, tr. Guillaume, 687-8; Ibn Sa'd, ii/2, 70, iv/z, 2, 22, vii/2, 100; Baladhurf, Ansab, 1, ed. Hamidullah 447, 369, 577-8; Tabarf, i, x830, 1833, 3092, 3306, 3390, 3343; Mubaumad b. Habib, al-Mubabbar, 27, 46; Ibn Mallikan, cd. Ihsan 'Abbas, vi, 35z; etc.].

After this comparatively undistinguished career, Kutham achieved fame through the manuer of his ostensible death. He was with the army of Khurāsān under Sa'ld b. 'Uthmān b. 'Aftān when the latter invaded Transoxania in 50/676 (cf. Gibb, The Arab conquests in Central Asia, 19-20), and was allegedly killed (thus in Muhammad b. Hablb, 107, and Zubayrt, Nasab Kuraysh, 27) or died a natural death (thus in Balādhurī, Futāk, 412) at the siege of Samarkand in 57/677. Tabari makes no mention of Kuthan's death in his account of this campaign, and Ya'kūbi, Bukhārā, 298, (r. Wiet, 119, and Narshakhī, Ta'rīkh-Bukhārā, tr. Frye, 40, state that he in fact died at Marw.

Whatever the truth of the matter, the supposed tomb of Kufhan at Samarkand subsequently became a shrine and pilgrimage place; Barthoid plausibly surmised that this cult was probably built up by his family, the 'Abbasids, when they came to power. It is, however, equally possible that some existing pre-

Islamic cult of Soghdia islamicised and transformed into the cult of Kutham. In the inscriptions of the later buildings making up the shrine complex of Afrasiyab, the citadel area of Samarkand and the heart of the pre-Mongol invasion city (see Samarkand), Kutham is generally referred to the Sadh-island "living prince" or Shah-i djaminam "prince of the youths", and I. I. Rempel has suggested that Kutham is a syncretistic figure incorporating elements of the Islamic prophet Khidr (see AL-RHAPES) and of Siyawush and other ancient Iranian heroes (in G. A. Pugačenkova, ed., Is islavii vslikogo gorada, Tashkent 1972, 16-52).

The shrine flourished greatly and was added to in Karakhanid and Saldink times, so that a whole complex was formed there, and during Sandjar's sultanate, probably in the 520s/1130s, a Madrasa Kuikamiyya was founded. When Ihn Battata visited Samarkand two centuries later, in the reign of the Caghatayid 'Ala' al-Din Tarmashirin (726-34/1326-34), he found the shrine opulently appointed and much visited by the local people of Samarkand plus the Tatars of the region. It had a sineive (q.v.) or hospice attached to it for pilgrims and travellers, and a scion of the Abbasids, the amir Ghiyath al-Din Muhammad b. 'Abd al-Kädir, great-great-grandson of the penultimate Baghdad caliph al-Mustansic (623-40/1226-42), who had migrated from Stak to Transoxania, acted as nasir or superintendent of the shrine (Ribia, iii, 52-4, tr. Gibb, iii, 568-9). The shrine continued to attract royal patronage, including from the Timurids; mauscleum, possibly to be ascribed to Kutlugh Aka, one of Timur's wives, was built in 762/1361, and in the next century, Ulugh Beg [q.v.] added \blacksquare it. Alterations were, indeed, made to it up to the early 19th century.

KUTHAYYIR B. 'ABD AL-RAHMAN (better known **KUTHAYYIR 'Azza and often called al-**Mulahl after Mulayb, a sub-tribe of Khuza'a, or Ibn Abl Djum'a, after his maternal grandfather), poet of the 'Udhri school of the Umayyad period. Like other poets of the seem school, his life was a favourite field for the imagination of story-tellers who wrote entertaining asser literature. In such cases, legend plays such havoc with history that it becomes almost impossible for later critical studies to separate one from the other. Legends were introduced to suggest pseudo-historical occasions for some poems, and some poetry was made to sait stereotypes of the ideal lover. Other factors, both political and sectarian, made it easy for the rawat to shroud Kuthayyir's character with ever thicker layers of legendary material. Nowhere else does authentic poetry stand in sharp contrast to the alleged character of its writer as it does in the case of Kuthayyir. When stripped of such accretions, the biography of such a poet becomes a mere skeleton.

Kuhayyir's parents were both from Khuzā'a, and lived in Medina or in the adjacent hills to the east. If believe al-Marzubāni, who states that the poet lived 80 or 81 years (Mu'djam, Cairo 1960, 242), then he must have been born ca. 23 or 24/643 or 644 (since

there II m doubt that he died in 105/723). This date of birth seems very early if we consider that there are no traces of his poetical activities before 60/670. a fact which makes one think that he could not have been born earlier than 40/660. Although Kuthayyir's father died when he was still in need of a guardian. be is nevertheless accused of being an unduliful son this is more likely a reflection of much later sectarian. prejudice). When his father was afflicted with a sore in one of his fingers, Kuthayyir considered that as a heavenly punishment for the father, who used to raise that same finger whenever he swore falsely. The pious interpretation here is ignored, and the sharp comment is taken indicating an unfilial attitude. Kuthayyir's uncle became a watchful guardian who, to keep the boy away from the vices of urban life, sent him to tend a herd of camels in the outskirts. At that stage, so the legend says. I brass figure trudging heavily appeared to him and ordered him to begin to recite poetry. Thus his inspiring diseased disclosed himself in him at an early age. Yet it was not this diant, but the author of the legend, who reduced the camels to sheep and took Kuthayyir to al-Diar on the Red Sea coast where, on his way, he met a group of women, from among whom a young girl approached him in order to buy a sheep. The lad, who in his manhood became known for his proverbial stinginess (Diable, al-Bughala? Cairo 1948, 165), gave her a sheep and refused to accept payment. This girl was inevitably 'Azza, the daughter of Humay' from the Dhamra tribe, who entangled Kuthayyir with her beauty-According to later evidence from a woman who knew 'Azza, 'Azza is described as a "sweet", pretty, clean and pale-skinned woman, whose conversation was most enchanting. 'Azza's family must have previously given her a wife to a first sufter because, shortly after that heady meeting, Kuthayyir's poetry became very embarassing to them. That same husband is referred to in his poetry as a jealous, impotent old man (acweal), who used his authority over his wife to make her scold her lover and abuse him. It is also probable that the migration of 'Azza and her husband Egypt (ca. 67/680) was not only due to a drought that broke out in the Hidlaz, but also represented the husband's wish to avoid embarassment. Nevertheless, Kuthayyir, who cared but little about the feelings of his rival, found in travelling to Egypt a good opportunity to see both 'Azza and his friend Abd al-Aziz b. Marwan, governor of Egypt. Through the latter, the poet's attachment to the Umayyad caliphs and amers was strongly established, an attachment which endured until his death.

Yet at a date previous to these travels, Kuthayyir is said to have met a see called Khandak who attracted him to the Kaysani beliefs. In its early stage, the Kaysāniyya sect [q.v.] must have been compatible with the belief in the right of 'Ali's son. Muhammad b. al-Hanafiyya, to the imamate, as sucto his half-brother, Husayn. The poet's relation. with Ibn al-Hanafiyya is a historical tact, to which Kuthayyir's own poetry atlests, ibn al-Hanafiyya was imprisoned by the rebel and anti-catiph 'Abd All5h b. al-Zubayr, and that imprisonment was strongly resented by the post (Dieda, Beirut 1971, 224). As for the other Kaysand beliefs, such as those of the occultation of Ibn al-Hanatiyya in the mountain of Radwa, near Medina and his final return (radi'a), = the transmigration of souls, nothing is explicitly or implicitly expressed about them in Kuthayyir's poetry. Even his two surviving elegies for his friend Khandak are completely silent about any doctrines or beliefs. Yet the poet was later identified with the extremist Kaysani poet, al-Sayyid al-Himyari (d. 173/789), and some of the latter's poems ascribed to hum. The rimdyas about his Kaysani beliefs hardly conform with the accepted Kaysani doctrines. Ludicrously enough, instead of believing in the return of his imam, Kuthayyir, according to these ringyes, believed in his own radifa. In examining similar traditions, one can discover not only contradictions but also a humorous strain which men intended to mock Kuthayyir's own character. Kuthayyir's attachment to the Kaysaniyya must have been a short, emotional interlude, to which he me driven by his friendship with Khandek and his pity for Ibn al-Hanafiyya's imprisonment. When the latter acknowledged the caliphate of 'Abd al-Malik in 69/688, the post felt no ambivalence in his allegiance and became - Umayyad partisan till the end.

Some traits in Kuthayyir's character made it easy to ascribe rather ridiculous beliefs or modes of behaviour to him. He was a very short, ugly, red-faced, long-necked, huge-headed and very slender man, who adopted a haughty and conceited manner to mask his limitations. His naiveté and lack of urban sophistication are easily detected in his poetry. In one of his poems he bridles at "Azza's humorous comment that he has become pale and rough in manner of late, and accuses her of ridiculting him only to please her husband (Diman, 379). Yet he explicitly acknowledges, in the same poem, that he had really become a shadow of a man, "like the remnants of a rope" totally bony but, in spite of all that, naturally handsome, without adornment, "like a Byzantine distor". Madness, which must be taken to mean no more than eccentricity, becomes an easy accusation. But no mad person, in reality, could have enjoyed the durable favour and esteem which the poet gained from his Umayyad patrons, or could have become well-loved that nearly all the men and women of Medina would throng his funeral in order to bid him | final farewell. Kuthayyir was also accused of being insincere in his love. Considered as a 'Udhrl lover, this accusation might be true; at a certain time, he was temporarily attracted to another woman called Zallāma, whose "magical tie" easily broken by 'Azza. Other tales about his unfaithfulness in love are more elaborations in the same theme by assade writers. His poetry, in a way, gives credence to such an accusation because it shows a sober restraint which falls short of a passionate abandonment | love. Love, in Kuthayyir's poems, is conceived in the terms of friendship. Let it III also remembered that he, unlike other 'Udheilove poets, like al-Madinûn or even his tutor Djamil, did not restrict himself to love-poetry. Not only his eulogies, but also his harsh satirical poems against his beloved's tribe, testify that love, in his heart, was rivalled by other strong emotions. His elegies on his friends, Khandak and 'Abd al-'Aziz, are not less warmth than his love poems. His eulogies, though not so warm, we lengthy and symmetrical. In them, the poet's hard Bedouin life or the pangs of his forlorn love, we sharply contrasted with the luxurious life of the patron (mamdid), and this latter is also drawn in contrast to the hardships which the patron faced in inevitable war. Although the Umayyad amir is an Arab chief who has, sometimes, the eyes of a snake and who seized sovereignty by force, it seems as if the poet resorts to a special set of distinguishing Umayyad attributes in his eulogies. Friendship, rather than financial benefit, is the stronger incentive for such poems. This feeling of social equality helped the poet to preserve much of his dignity. But when such a feeling it exploited in love-poetry, it reduces the sense of sacrifice to a minimum. The lover even, in moments in self-esteem, acquires the awe of the sovereign when he describes how admitting woman feel towards him and how he enjoys the sight of entreating "subjects". It is true that this is not always the case, but, being there for once, it is outwelgh all his other expressions of total absorption in love.

Kuthayyir was a prolific poet. During his long life, he appears never to have stopped writing poetry except for a certain period, after the death of 'Azza and 'Abd al-'Aziz (86-99/705-17); the poet's use of m simple and direct style of composition helped that profuseness. When writing on love or praise, or combining both themes in one poem, his vivid descriptions of the scenes from the Hidjaz or those on the route to Egypt — Syria add much to the length of his poem. It is said that, of landyydt, he wrote 30 of considerable length. However, all that has survived of that poetry, scattered through the available sources, does not exceed 2,000 lines.

KUTLUGH-KHANIDS. I. a dynasty in Kirman [q.v.] in the 2th/13th century, descended from the Kara-Khitay (g.s.) of Transoxania. The dynasty, successively vassals of the Khwarazm-Shah, the Mongol Great Khans and the dynasty of Hulagu Khan (likhans), lasted from 619/1222 = 620/1223 to 706/1305-6, but never had more than local importance. It entertained close relations with the neighbouring dynastles of the Atabegs of Yazd, the Salghurids of Fars and the Muzaffarids [q.v.] and came into occasional contact with the caliph and with India. The founder of the dynasty (from 619 or 620) was Nast al-Dunyā wa 'l-Din Abu 1-Fawaris Kullugh Suitan Burak-Hadib [q.v.], son of Kulduz (?), d. 632/1235. His title Kutlugh Sultan was given him by the caliph, although his conversion to Islam was of a very recent date. He had a son Rukn al-Din Khādjadjūk (or Muhārak Khwādia) and four daughters, of whom Sawindi Turkan was married to Caghatay Khan, Khan Turken to her cousin Kuth al-Din and the two others to members of the family of the Atabegs of Vazd.

Burák appointed m bis successor his nephew and son-in-law Kuth al-Dia Abu 'l-Fath Muham-

mad Khān, whose father Khamitūn Tāyangū b. Kuldūz (variants: Khamitūūr, Khamitūn Tānkū) is perhaps identical with the Kara-Khitay chief caplured by the Khārazmians in 607/1210; cf. Barthold, Turkestan, 364. Kutb al-Din at the end of a year had metire into Mongolia on the approach of Rukn al-Din, me of Burāk and Ukā-Khātūn, who after spending some time at the Mongol court received from Ögedey investiture for the fiefs of Kirmān and Narmashir. He ruled for 16 years. He was not well disposed to the Tādjūks and men of letters, according to the Sint al-Julā.

In 550/1252 he had in turn to make way for Kut b al-Din, who had in the interval been serving in China under Mahmud Yalawac and upon whom Möngke after his accession conferred the yarlik over Kirman. Kuth al-Din - authorised by the Kā'ān to put Rukn al-Dln to death as he was suspected of intriguing with the caliph. - suppressed a rising by a pretender who claimed to be the Khwarazm-Shah Dialal al-Din. He severely punished the Kūć and Balūć (see BALŪČISTĀN and KUFS). His successes attributed to the advice of his wife, Kutlugh Turkan Khatun, whose wisdom is highly praised by the historians. Some doubts exist as to her origin; according to the Tarrich-i gurida she had been the concubine (surresym) of Burak (according to the Habib al-siyar, that of Chivath al-Din, brother of the khwarazm-Shah Dialal al-Din) and would thus be a different person from Khan Turkan, daughter of Barak; this fact might explain her feud with the sons of Kuth al-Din.

Kuth al-Din died in 655/1257. His son Hadidiādi being ≡ minor, the notables asked the Kå²ān to entrust the government to the widow of Kuth 21-Din 'Ismat 21-dunyā wa 'I-Din Kutlügh Turkān who ruled 555-81/1257-81 (in 662/1264 her powers were confirmed by Hillāgū; cf. Rashīd 21-Din, ed. Quatremère, 403).

Hadidiādi when he grew up sought to get into touch with the sons of Ögedey and acted with little regard for Kutlugh Turkān, but the latter, strong in the support of her daughter Pādshāh-Khātūn, married to Abaka-Khān, forced Hadidiādi to retire to Dihli in 656/1267-8. Then the other son of Kuth al-Din, Suyurghatmish, successfully disputed Turkān's power and she went to Tabriz, where she died in 681/1282-3. Her daughter Bibl Khātūn, who had matried the smir 'Adud al-Din Hādidii, removed her remains to Kirmān. Marco Polo went through Kirmān (cs. 1272) in the reign of Kutlugh Turkān.

Dialai al-Din Abu Muzaffar Suyurghatmish (681-91/1282-94) received his investiture from the Il-Khan Ahmad, but could not agree with his sister Padshah-Khatun. She had been brought up among her brothers under the name of Hasan Shah (cf. MIRKHWAND) to enable her to escape compulsory marriage with a Mongol prince. She became, however, the wife first of Abaka and after his death, of his son Gaykhâtů. The latter on coming III the throne in 690/1291 gave Kirmán to Pádsháh-Khátún. The princess, who was a poetess of talent, was of a vindictive and passionate nature. At first, Suyurghatmish governed the province in the name of the Pādshāh, but she later threw him into prison. He was freed by his wife Khudawand zāda Kardudin, daughter of Mengu Timur b. Hulagu and the Salghurid [q.v.] princess Abish, ruler of Fårs, and by his daughter Shāh 'Alam, Gaykhātā, however, handed him over to Pådshåh-Khåtūn, who had him strangled. His death was followed by the execution of his vizier, who was captured by stratagem. In 694/1295 Baydu, husband of 'Alam Khātûn, became king, and Pādshāh man handed over the vengeance of the wife and daughter of Suyunghātmish. In the reign of Pādshāh Marco Polo (ed. Yule-Cordier, 23, 93) passed through Kirmān m his return journey

(ca. 1203).

In 695/1296 Muzaffar al-Din Abu 'l-Harth Muhammad Shah Sultan b. Hadidiad succeeded his aunt by command of Ghazan Khan, but his brother slew his vizier and rebelled in Kirman. The troops of Fars and 'lrak besieged Kirman for 18 months. Muzaffar al-Din from Tabelz, forced the town to surrender and executed the ringleaders. His methods must have been summary, for his new vizier left him in terror. Muzaffar al-Din, who loved wine, died in 703/2303-4 as a result of his excesses.

His nephew Sultan Kuth al-Din 11 Shah Diahan b. Suyurghatmiah succeeded him and ruled for two years and a helf (until 706/1306-7). As he wery cruel and did not pay his dues regularly to the Mongol treasury, Öldjeytü deposed him and appointed a simple governor to Kirman, Năşir al-Din Muhammad b. Burhan. Kuth al-Din II retired to Shiraz to Kardudita, wife of his father. His daughter Kutlugh Khan (willidat al-saldiin) in 729/1328-9 became the wife of Muhariz al-Din Muhammad, the real founder of the Muhariz al-Din Muhammad, the real founder of the Muhariz al-Din Muhammad, the real founder of the Muhariz al-Din Muhammad.

Before the earthquake of 1896 there still existed in Kirman the Kubba-yi saba (remains of the madrasa of Turkanābād) bearing the date 640/xx21-3 [i.e. contemporary with Rukn al-Din]. This "green mausoleum" was the family tomb for the dynasty (cf. P. M. Sykes, Ton thousand miles in Persia, London 1902, 60-2, 194, 264). Turkān Khātim founded the little towns of Sar-asiyāb and Catrūd, to which she brought a water supply. Suyurghatmith built the madrasa of Darb-i Naw, where he was

buried.

Bibliography: The special history of the Kutlugh-Khānids is the Simt al-tula' li 'l-hadrat al-fulya, written in 716/1316-17, cf. Storey, I, 358, 1297. The author Nasir al-Din was the son of Khyādia Muntadjab al-Dîn Yazdl, the trusted adviser of Kuth al-Din (cf. the Paris ms., B. N. Persian No. 1377, f., 125). 2. The title Kutlugh-Khān em conferred in 629/1231 by Ögedey m Abù Bakr b. Sa'd, the Sal-

ghurid [q.e.], cf. d'Ohsson, fii, 398.

(V. MINORSKY)

KUTLUCH-SHĀH NOYAN, ■ notable Mongol amir in Ilkhānid Persia, especially during the reigns of Ghārān Khān and Oldieytü (694-716/1295-1316). He was ■ member of the Manqut tribe, and a descendant of Cingiz Khān's general Diedey Noyan.

After the accession of Ghazan. Kutlugh Shahled the pursuit of the amir Nawrūz, besleged Harat,

where Nawrüz had taken refuge, and captured and executed him in 606/1207. He was also charged with the execution of the fallen waste Sade al-Din. In 698/1299 he was sent by Ghāzān to Rum to suppress the revolt of prince Shlamish. In 699/1299 he accompanied Ghāzān's invasion of Syria, and subsequently appointed by him skelpes of Damasous. He commanded the right wing of the Ilkhanid army when the Mamiûk forces were defeated at Hims. During the Syrian campaign of 203/1303. Kutlugh-Shah was less successful; he was defeated by the Mamlüks at Mardi al-Şuffar. He among others was held responsible by Ghazan, and together with his fellow-general Cübăn he was sentenced to be beaten with rods at the judicial enquiry (ydrahii) which followed his precipitate return to Pensia. Any eclipse that Kutlugh-Shah may have suffered as a result of this defeat was only temporary, however. On his accession in 704/2304, the Ilkhan Öldjeytii appointed him commander-in-chief. But in 707/1307 Oldjeytü's armies invaded Glian, and during the campaign Kuthigh-Shah was defeated and killed. His death cleared the way for the later ascendancy of Cuban in the Ilkhanid state.

Kuthugh Shah's eminence among the amirs of his time is amply attested in anecdotes concerning him. Kāshāni records that during a disoute at court between Hanaffs and Shafifts during the reign of Öldjeytu, Kutlugh-Shah urged in his exasperation that the Mongols should abandon Islam-of whose tenets he is represented as having a very curious conception—and return to the yasak and yasan of Čingiz Khān (Ta'rikā-i Uldjāytū, ed. M. Hambly, Tehran 1969, 98 = Aya Sofya MS 3019, f. 178a). On the other hand, in Ibn Bazzāz's Safwat al-safā, near-contemporary life of Shaykh Safi al-Din of Ardabil, he is shown as a devotee of Suff shayaks, and there is mentertaining account of how in a contest of piety and abstinence, Kutlugh Shab's favoured shayh was besten by <u>Ch</u>āzān Khān's candidate, <u>Shaykh</u> Zāhid Gilān' (ed. Ahmad b. Karlm Tabrizl, lith. Bombay 1911, 38-9 - Aya Sofya MS 3000, f. 28b).

KUTN, KUTUN (A.), cotton.

In the mediaeval Arab and Perstan lands.

In the period of the Arab conquests cotton had already been propagated from India to eastern. Persia and the neighbouring lands. It was cultivated everywhere and a flourishing industry produced cotton goods there. The Arab geographers, in describing the economy of these lands in the 'Abbāsid period, speak especially of the production of cotton goods, but there is good reason to suppose that these factories used the cotton planted in their own regions.

In modern Afghanistan, Kābul and Herāt had cotton factories which were known for the excellent quality of their products. Kābul exported cotton goods as far as China. Marw and Nīshāpūr were the most important centres of the cotton industry in Khurāsān. The province of Marw also exported large quantities of raw cotton, much appreciated for its softness. The cotton materials produced at Marw, especially mulham, a cotton and silk fabric, were so renowned that, according to al-Thafailbi, in all countries fine materials originating from Khurāsān were called ghāhidjāni (after the name of Marw).

The industry of Nishapur was known for the material called bail! The cotton goods of these two towns passed in the caliphal empire, according = observation of al-Diabiz cited by al-Tharalibl, as the best in the world. Transoxania man produced large quantities of cotton. From the province of Shash it was exported into the Turkish lands. Samarkand the small town of Wadhar not far from it, Bukhara and Tawawis were the most important centres of the cotton industry there, whilst Bukhard was renowned for its beavy cotton goods, whose firm fabric was praised. The cotton plantations had even heen introduced into cold lands such as Khyārazm. Factories for cotton goods were also developed there, whose products, such m those called arandi and amiri, enjoyed a great reputation.

Djibal itself produced cotton and had factories which worked it, although on a smaller scale than those of Khurāsān. The Arab geographers of the athiroth century relate that the cotton of the province of Ravy was exported if far as frak and Adharbaydian. Speaking of irrigation by means of subterranean canals in the province of Islahan, Ibn Hawkal remarks that it served for the cultivation of cotton. In Kirman, there was a flourishing cotton industry at Bamm which doubtless used the raw material produced in the province. As for the province of Fars, there is no room for doubt about its presence there, for Ibn Hawkal points out to us the rate of tax levied in the cotton plantations in the district of Shīrāz. Yazd and Abarkūya themselves had factories which certainly worked the cotton cultivated in their provinces. However, in this part of Persia. the cultivation of flax and its manufacture prevailed over that of cotton.

At the end of the 3rd/9th century and beginning of the 4th/10th century, there were already cotton plantations in Upper Mesopotamia, Syrla and Palestine, but in these lands they constituted a new sector of agriculture, Al-Islahhri, writing in the first half of the 4th/10th century, relates that in most of the lands of Ras al-'Ayn, in Upper Mesopotamia, cotton was cultivated, and Ibn Flawkal speaks of the cotton plantations and cotton goods groduction in the town of 'Araban, in the same province. Al-Mukaddasi, for his part, mentions cotton plantations in the district of Harran, Later on, Yakut mentions cotton goods' production at Harga, a small town near Ras at- Ayn. In the 4th/10th century much ontton was also planted in the province of Aleppo and Palestine, in the region of the Hula and in the Djawlan, near Baniyas. To judge by the description of Palestine by al-Mukaddasl, it was also cultivated near Jerusalem. A passage in the description of Upper Mecopotamia by Ibn Hawkel reveals that the cotton plantations increased considerably in the 4th/10th century in this land, when the new lords, who had replaced the caliphal régime, established large estates and introduced the cultivation of industrial plants such as cotton. Ibn Hawkal speaks of the Hamdanids, but there is reason to suppose that other dynasties were also involved. Whatever may be the case, the cultivation of cotton as yet only played a modest role in this period within the total agricultural production of these lands. Indeed, lbn Hawkal specifies that cotton goods were imported from Upper Mesopotamia into Syria.

In Egypt, the cultivation of cotton constituted, in this period and also later, under the domination of the Fățimids, still more limited agricultural sector. Several papyri, it is true, testily to the cultivation of cotton in Egypt, in the 2nd-4th/8-xoth

centuries, and other documents refer to cotton plantations in Egypt under the Fatimids. According to al-lidrid it was even exported in this period from Egypt to Libya. On the other hand, numerous Judaeo-Arabic documents preserved in the Cairo Geniza from the second half of the 5th/11th and first half of the 6th/12th century show that cotton and cotton goods were imported from Sicily and perially from Syria and Palestine.

The observation will be made as to the cultivation of cotton in the Maghrib in this period; it was planted almost everywhere but on a relatively small scale. Ibn Hawkal mentions the cotton plantations in the districts of Tunis and M'sila in Algeria. Abû 'Ubayd al-Bakri mentions too the cotton plantations in the province of M'sila and speaks of them further in his description of Mostaganem in western Algeria. In Morocco, cotton was planted, according to the reports of the Arab geographers, in the districts of Fez, Tadia, Başra and Kurt. In Islamic Spain it was cultivated, in the 4th/roth century, in the province of Seville and also in the district of Guadia, to the east of Granada.

In the period of the Crusades, the entrivation of cotton developed to a great extent in Syria especially in its northern provinces. Several treaties concluded between Venice and the Ayyubid princes of Alepho and Sahyan report the export of cotton from their states. However, the great rise of cotton cultivation in Syria was to begin later, after the fall of the Crusader states. When the farmers lost the great markets provided by the Crusaders' towns, there was a glut of cereals and they went over apparently to the cultivation of cotton. Already in 1304, some Venetian emissaries went to visit the Mamilak governor of Safad, doubtless to negotiate with him concerning the trade in cotton, the plantations of which had increased considerably in his province. The depopulation following the Black Death and the still further diminished demand for cereals accelerated this development, so that the export of Syrian cotton became an important sector of the Levant trade.

The connection between the reduced demand for coreals and the increase in cotton production emerges clearly from the development of agriculture in Upper Mesopotamia and Armenia. Marco Polo relates, at the end of the 13th century, that the provinces of Mush and Mardin produce enormous quantities of cotton which worked there. Hand Allah Mustawfi, writing in the first half of the 8th/t4th century, also speaks of the cotton plantations in the district of Mardin and still others in the districts of Bazabda, Bartalla and Irbil in Upper Mesopotamia and in the environs of Walandjird in Armenia. The Venetian ambassador Gizzaia Barbaro, who travelled across these lands in 1474, also mentions the cultivation of cotton and the cotton goods' factories at Mardin as well - plantations in the district of Hisn Kayfa. The fiscal regulations of Usun Hasan, then ford of this country, refer to the cotton industries of Urfa, Arabelr and Erzindjan, towns today forming part of Turkey. In 'Irak cotton was cultivated then in the districts of Baghdad, Kufa and Hilla. The accounts of Hamd Allah Mustawii of the agricultural production of several provinces of Persia are particularly significant in this regard, in me far they mention cotton plantations in some districts which do not figure as producers of cotton in earlier sources. He speaks of large harvests of cotton in several districts of Adharbaydjan, Djibal, Kühistan and Kirman. There is no doubt that the diminution of the population and consequently of the demand for

555

cereals after the Mongel conquests led also the farmers of these regions to go —— to the cultivation of cotton. Al-Mawsil and several other towns then became centres of the cotton goods industry and their products were exported to other lands, such as Egypt.

In this latter country, the production of cotton also increased from the middle of the 7th/13th century, although it was still imported from the Sudan. The Irish pilgrim Simeon Simeonis, who in 1323 passed by Fuwwa in the western delta, describes the plantations of cotton which he had there and later, at the beginning of the 9th/13th century, Emmanuel Piloti relates that cotton is the most important product of the province of al-Gharbiyya. Arnold von Harff, m German traveller of the end of the 9th/13th century, saw cotton plantations on his way from Katya to Chazza. In the late Middle Ages, Egypt was also able to expect cetting to Furnish.

also able to export cotton to Europe. Nevertheless, in no other country of the Near East was the role of cotton, in the late Middle Ages, as important as in Syria, nor was the volume of its production as considerable in relation to other crops; Syria exported large quantities of cotton to Europe, where it served as the raw material for the flourishing fustian industries in Lombardy and southern Germany. The great centres of the plantations were the region of Aleppo, the province of Hama and the northern districts of Palestine. In northern Syria cotton was cultivated especially in the districts of Diabala, Azāz and Sarmin (called Siamo by the Italians, by confusion with al-Sham), and in Palestine In the environs of Acre and in the valley of Jizreel. But cotton was also planted in the province of Tripoli and on the coasts of Lebanon, near Bayrut, Sayda and Tyre. In the travel books which pilgrims in the Holy Land have left for us, there is mention of cotton plantations near Jaffa and Ramla. In Transfordania cotton was planted in the district of 'Adjinn. Accordding to the Merchants' Guide of Pegolotti, the cottoo of Hama was considered the best, and this statement is corroborated by numerous price lists of the Yenice market. But all varieties of Syrian cotton were more appreciated in Europe than the cotton orlginating from other countries, such as Turkey, Cyprus, Egypt or Malta. It was appreciated for its longer fibres and for being more flexible. Part of the Syrian cotton fed the cotton goods' industry fespecially "bocasin" from the Turkish bughast which flourrished at Batlabakk, in the villages of the Lebanon, to the east of Tripoli and in the villages near Aleppo. It appears however that this industry only worked up a small part of the cotton produced in the country and that the greatest part of it was in fact destined for export. From the end of the 15th century, the Venetians made the largest purchases, while the Genoese traded especially in the cotton originating from the Balkans or Turkey, where there existed important plantations in the provinces of Konya and Siwas. The Catalans, who, at the end of the 14th century, still bought on a large scale in Syria, were supplied in the 13th century especially in Sicily. Venice sent each year two convoys of cogs to Syria, one in February and the other in August. Numerous documents which have been preserved in the archives of Italy allow us to evaluate the volume of the export of Syrian cotton by the Venetians. It will be concluded that in some periods of good (political and economic) conjuncture, the Venetians exported each year from Syria 6,000 sacks of raw cotton (apart from relatively small quantities of cotton thread) and in others, 5,000. Since m sack contained, mm average, 150 kg., the value of these exports may be evaluated at 90-140,000 ducats a year. But when the price of cotton rose, at the beginning of the 15th century, from 24-5 ducats a fender (of northern Syria) to 30-5 ducats, the Venetian investment rose to 200-250,000 ducats and more. Also, there were some years in which the Venetians bought Syrian cotton for 300,000 ducats.

The registers of fiscal returns made in Palestine in 1525-6 and 1555-6 indicate the large volume of cotton production in Galilee and also in the district of Jaila after the conquest of the land by the Ottomans. Indeed, Syria still exported cotton to Egypt and other countries until the end of the 18th century. In Egypt cotton was cultivated, at the beginning of the 19th century, near Damankur on the western branch of the Nile and in the provinces of Sammanud and Mangure on its eastern branch. But these plantations were not of great extent. Then, in 1818 = 1819, the French engineer Louis Alexis Jumel discovered in Cairo a species of cotton which was distinguished by its long, strong fibres and began to cultivate it with the help of Muhammad 'AlI. As the new species fetched a much higher price in Europe than the others, it was cultivated from 1822 a large scale, principally on the eastern bank of the eastern branch of the Nile. Always under the sponsorship of Muhammad 'All, experts on cotton cultivation were invited to Egypt and in 1830 a type of agricultural code (latitut ziratat al-/allah) containing detailed instructions for the cultivation of cotton was published. However, the great rise of Ite cultivation in Egypt only began in the 1860s, when the Civil War in America made the price of Egyptian cotton rise and the plantations were greatly enlarged. It is from this time that cotton has come to occupy a place of the first rank in the agriculture of Egypt.

z. In the Ottoman Empire.

In western Turkish dialects, pan(m)buk, pamue, bannah um marraik (see G. Clauson, An etymological dictionary of pre-thirteenth century Turkish) "cotton" is derived from Middle Persian pambak, while in eastern dialects cotton is pagita, bakhta, or bakta (Radfolf, Versuch eines Wörterbuckes der Türkdialecte, iv) and cotion cloth bodhtiy (Mahmud Käshghari, Dinanti Lugat-it-Turk, lacs. ed. B. Atalay, 350; in Chinese postic, see J. R. Hamilton, Les Ouigiours, Paris 1955, 57-8). In Uyghur, keber designated cotton. The word bds (bes) is a common word for coarse cotton cloth in various dialects (also in the forms of bos, bis, or bos, with a theory of its derivation from the Greek Bootoc, Assyrian busa, W. Bang, Vom Köhturkischen zum Osmanischen, Berlin 1021, 14 n. z, now challenged; see G. Doerfer and S. Tezcan, Worterbuch des Chaladsch, Budapest 1980, 91; H. Ecsedy. Box, an exotic cloth in the Chinese imberial court, in Alt-orientalische Forsohungen, ift, 145-64).

Continuing a long tradition of cotton growing and industry in Central Asia, the Uyghur Turks produced cotton and exported cotton textiles to China, as recorded in the Chinese sources of the 9th century (Hamilton, op. cit., Index, s.v. po-net. Under the Saidjuks [q.e.], conton production and manufacture had apparently a considerable development in Asia Minor, in which principal towns had cotton bazaars (for inscance, punbah furushun in Konya, Aflaki, Manakib, 618) and caravanserats of cotton textiles (for al-Khān al-Bazzāzī in the Sak al-Bazzāzin in Kirshehir, - A. Temir, Caca oğlu Ner el-Din, 23). "Cotton fabrics edged with gold embroidery" of Lädhik (Laodicaeaon-Lykos, today Denizli) noted by the Battuta in 733/1322 (tr. Gibb. ii, 425) were famous all over Anatolia and referred to as late as the 9th/15th century (see 'Ashik-Pasharade, ed. Giese, 52).

Although European markets preferred betterquality northern Syrian types (Hama, Aleppo) and those of Cilicia and Cyprus (in the 1330s, Pegolotti: cotone: Heyd, Histoire du commerce du Levant, ii, 463), a substantial part of the cotton imported into Europe in the 8th/14th and 9th/25th centuries from western and southern Anatolian ports-Ayasoluk (Ephesus), Baiat (Palatia), Alanya ('Ala'iyya, Candelore), Antalya (Satalia), and Ayas (Lajazzo) (Heyd, ii, 463; H. Wescher, 2335; M. Mazzaoui, ch. 2). Cotton was grown in the immediate hinterlands of these ports. The island of Chios became the main entrepot of the Anatolian cotton exported by the Genoese in this period. In the mid-15th century, the value of the annual export of cotton via Chios was estimated at 600,000 ducats. Turkish cotton was re-exported by the Genoese to other European countries and even to the Maghrib (J. Heers, 393).

Over the course of time, Venice tried to monopolise the import and distribution of imported cotton in the West. Venetian annual cotton trade with Lombardy alone was estimated to be worth 250,000 gold ducats in the 9th/15th century (Wascher, 2337; M. Mazzaoti, ibid.). By the end of the 10th/16th century, Venice imported an average 4,000 tons annually from the Levant (8,000 sacks from Cyprus and 6,000 from 1zmir). The expanding Swiss and German fustian industries were dependent on the cotton imported from the Levant.

Although first known in Germany in ca. 978/1 570,

cotton from Brazil and the West Indies became a serious competitor only after the mid-18th century. At that time, the cotton industries in France and England began to experience rapid growth. Favoured by special trade privileges [see thirty2227] granted by the Ottomans, France, England, and the Netherlands were then directly importing cottons from the Levant, and superseded Italy in cotton industries in the xtth/x7th century. The war of Cyprus (1570-1) can be taken as a turning point for the Venetian decline.

Cotton-producing areas in the Ottoman Empire before 1215/1800. Ottoman survey books, customs registers, guilds and price regulations, as well as \$ddt court records, attest to a very active cotton manufacturing industry with export capacity in Anatolia, both in the small towns near main cotton producing areas as well as in the large cities with extensive dye-houses in the 9th/15th and 10th/16th centuries.

Apart from a growing demand by the Europeans and from internal trade, the state's need of cotton products for the navy and army too appears to have become one of the factors contributing to the extension of cotton production and that of certain kinds of cotton tabries. According to the tax regulations of the 9th/15th and 10th/16th centuries (see O. L. Barkan, Kanunlar, Index, s.v. panbuk, penbe), tithes on cotton produce collected in the provinces of western Anatolia (Khudawendigar, Karast, Kütahya, Aydın), of the Aegean Sea and Greece (Triccala, Morea, Euboea, Chios), of southwestern Anatolia (Karaman, Hamid-ili, Iĉ-il, Adana, Sis, Özer) and south-eastern Anatolia (Malatya, Behlsni, 'Arabgir, Kemakh, Ergani, Mardin, Urfa, Diyarbakir, and Mawsil). Northern limits of cotton cultivation on the southern Mediterranean coast reached as far as north E Egirdir lake (X, de Planhol, De la plaine pamphylienne, fig. 7). Today, the cotton cultivation is concentrated in the valleys of Gediz and the two Menderes rivers, and in the Cukurova (Cilicia), and to a lesser degree, in the Antalya, Hatay, Martash, and Diyarbakt areas (Atlas of Turkey, map no. 75).

The Ottoman survey of the Aydin province dated 859/1455 (Basvekalet Arsivi, Istanbul, No 11 t M), which included the Küçük-Menderes and Bitviik-Monderes valleys with the Izmir (Smyrus) area, attest to extensive cotton cultivation in the region, In many villages (Adakitlü, Yüsuflu, Bozdeghan, Haydara, Orta-Seyid, Calisho, Kalu-beglu, Kutilidi, etc.) cotton production was near 🖿 sometimes exceeded wheat production. Kalu-beglu, for example, where two Türkmen nomad groups had settled, produced about 8.44 tons of cotton against 5.83 tons of wheat in 858-9/1454-5. These were flooded lands and mostly settled by Türkmen nomads by the mid-15th century. Obviously, cotton production in this area was oriented to supplying distant markets as well = to supplying towns and cities exporting cotton goods in the region. In the interior, the Beypazarl-Mikhalicelk area in the Sakarya-Kirmir valley, m number of villages (Celtük, Karaköy, Sürmeli, Kayalar, Sobran, Kizlidja-viran, Bash viran, Yarimdja-Avshar, Čay, etc.) showed a different structure with a much more limited production of cotton compared to other crops-wheat, barley, and rice (see the tabrir and make registers of Khudawendigar province, ed. Ö.L. Barkan). Apparently, this area supplied cotton to the nearby towns as well as to Ankara, the important centre of from industries in this region. The area of Tokat, another important centre of cotton industry, displays a similar situation, Here, Venk, Karabisar, Niksar, Felis,

Katar, and Karakush in particular, cotton cultivation constituted only a small percentage of the overall agricultural production (H. Islamoğlu, Dynamics of agricultural production, ch. 2) The general trend, however, showed mulacrease in cotton production, over ten times in some areas. In no case is there mushift to monoculture in the period before the 13th/10th century.

According to the Ottoman surveys of the 10th/16th century (Soysal, 32), 6,506 hectares or 19% of the cultivated land in the sendiah of Adapa was devoted to cotton, while barley and wheat cultivation took an area four times larger. By the middle of the 32th/18th century, the cotton production of the Cukurova appears to have been quite important. O'Heguerty (200) tells us that in the good harvest years, "cotton of Adapa" was exported from Izmir.

Varieties of Indian gossypium kerbaceum, the socalled yerli ("native") cotton, were well suited to the climate and soil conditions, and were known only varieties cultivated in Asia Minor until the 13th/10th century. Yielding a coarse fibre, thick, short, and of unequal length and curl, this variety was not considered suitable for fine cotton fabrics. However, in the Kirkaghaë area in the Bakirëay valley, in the Hamid-ili, Gelibolu (Gallipoli) the Cukuzova (Adana, Cilicia), and Tokāt areas, superior varieties were produced for making fine boghast fabrics. It was in the second half of the Inth/Inth century that American and Egyptian varieties were introduced and cultivated in Asia Minor and the Balkans. In 1333/1941, however, 90-95% of the cotton production in western Anatolia and the Adana region still from the yerli varieties (W. F. Brück, Türkische Boumwollwirtschaft, tr. C. Issawi, The economic history of Turkey, Chicago 1980, 242-6; Türk zirant taeihi, 129-35)

At the exhibition of Islanbul of 1270/1863, many qualities of cottons from various parts of the Empire were displayed: 24 varieties from western Anatolia, 4 from icel (le-il), 3 from Adana, x from Marfagh, z from Märdin, z from Diyarbakir, 7 from Amasya, 6 from Serez, 4 from Filibe, 3 from Edirne, 3 from Drama, 1 from Trikkala, 1 from Rhodes, 9 from Syria, and 4 from Egypt. Egyptians cottons were considered the best quality, while those of Aydin, though of short libre, were preferred for their colour and strength (Tirk ziraat tariki, 166). Of the varieties of western Anatolia, that of Subiča and Kirkaghač rated first, with those of Akhisar, Kasaba, Klulk, and Bayladir coming next. Kirkagbač and Akhisar, as well as Gelibolu, were the chief suppliers of the Istanbul cotton industries in the 11th/17th century (Esnaf misamiant, in the Muftuluk Arsivi, Istanbul).

Cotton-producing lands were listed among the best quality lands, and a higher land tax was imposed (Uluçay, doc. 41). Tithe m cotton was, as m rule, one-tenth, while in grain it was one-eighth.

In Ottoman Egypt, cotton was grown on irrigated land in parts of Middle Egypt and the Delta, Egypt, however, had to import cotton from Syria to meet the needs of its cotton industries. By the end of the 22th/18th century, the imports of Syrian cotton reached 2,000-3,000 bales (Raymond, i, 100, 250, 273, 317-16). A special mukdinia [q.v.] was established on the cotton trade in the ports of Rosetta and Bulak in 1132/1720-1 and 1161/1740 respectively, which provided evidence of the growing importance of cotton in the Egyptian economy. During the same period. the cotton markets at Bulak, Damietta, Rosetta, Mahallat al-Kubrā, Mansūra and Semenūd, united under one mukāja'a, brought 2,103,000 baras per year in tax revenues collected on cotton grown in Egypt or imported from Syria. The total amount of this cotton was approximately 24,000 bales I bale = 325 rati or 143.0 kg). The mukdtata figures show an eight-fold Increase in the period 1169-82/ 1755-68, falling to half that amount in the following period 3183-1213/1769-98 (see S. Shaw, Ottoman Egyet. Index, s.v. cotton: for the following period. see E. R. I. Owen, Cotton and the Egyptian economy. Oxford 1959).

Already in the 9th/15th century, the coastal plains between Drama and Karaferve (Verroia) and Vodena formed important cotton producing area in Rumili. In 1164/1751, the Venetian consul Choidas estimated the total amount of raw cotton exported from this area to be \$3,000 bales (7,000 for France, 4.000 for Venice; in Salonica, 2 bale was equal to 110, sometimes 100 okkas, see 5voronos, 249), while = 1212/2797, Felix de Beaujour's estimate was 60,000 bales of both raw cotton and cotton yarn exported (40,000 to Germany, 10,000 to France). In 1211/1705. de Beaulour gives a record 98,500 bales for the total export of raw cotton (50,000 to London and Amsterdam, 30,000 to Germany and 12,000 to France). De Beaujour that only 10,000 bales were consumed m the area itself.

The cotton boom in the second half of the reth/r8th century was apparently responsible for the structural changes in the area, so, the shift from rice cultivation to cotton, the reciamation of new land for cotton agriculture, the extension of big liftlike and commercialisation of agriculture, and the growing prosperity of the big a'yans with increasing control of the land and peasant labour.

The organisation of cotton trade and industries. The \$ddi court records and market regulations provide us with quite detailed information on the processes of cotton trade and manufacture in the Ottoman towns (see *Iktisab regulations in Tarih residular, nos. 5, 7, 9; for court records == Eluçay).

In cotion producing areas, &orak, i.e. cotion bolls, and cotton cleaned from its seeds, were brought m nearby town markets, usually by camels (Uluçay, doc. 22). In towns, special markets, pende parars, were reserved for sale. Most of the crop was purchased in small quantities by local divilahs or bulkhs, spinners who were poor townstolk, mostly women. Usually, foreign merchants from the port cities tried to reach producers in local markets through their agents. In order to get the bost grade cottons, the merchants, in keen competition among themseives, used a system of advanced payment for a crop directly to the producers through their "factors". The system of a future contract was bitterly denounced by the French, since they said it caused scandalous competition, resulting in higher prices (Masson, ii, 435). Also, native middle-men or speculators in the cotton trade, mostly consisting of mambers

of the Ottoman chite along with Jews and Armenians in the Izmir area, bought the next season's produce in advance. Such contracts, called salam, widely practised in Islamic countries, were strictly regulated in Islamic law because of the uncertainty about the subject of contract (see al-Tabāwi, Kitāb al-Shurāj al-habir, ed. J. A. Wakin, New York 1972).

The customs registers provide definitive evidence that there group of Anatolian merchants who specialised in the cotton trade and who took their cotton goods as far in the northern Black Sea ports (Inalcik, The Black Sea, 92-107). The cottons in hairsacks or bales were taken in caravans into centres such as Kayseri, Ankara, Bursa, Kastamonu, Tokat and other parts of the Empire or by sea to Europe. Public regulations provided that all cotton imported for sale in the large citles had to be brought into a special building, called the penbe kabbani. Cotton was to be weighed, taxed, and distributed there. For accomodating caravan merchants with their cotton goods, special caravanserais (penbehhāni, makālat al-ķuļn in Egypt) were built (Raymond, il, 640).

In the penbe habbanl, each member of the guild of halladis purchased his share of cotton in the officially-fixed price (nanhh-i djäri) under the supervision of the hadhuda and yigii-bash of the guild. The halladjist, or carders, separated the fibre from the seed by beating (atma or talma) the cotton with a hemān or yay, a bow-like instrument, to make the cotton clean and fluffy. The halladjin were also cotton dealers in the cities. According to a regulation dated 1138/1717 (Islanbul esnāj nizāmlari), there were 104 hallādjis in Islanbul, 15 in Galata (Pera),

o in Dakudar and | im Eyup.

Each group of artisans was responsible for a stage in manufacturing. They were organised in hiefets, guilds, and their shops occupied the same street

OT MAAN.

For example, in Magnisa, a relatively small town but important centre of production of cottons, we find pamnhdjular (cotton dealers), diullählar or beidgiles (weavers of coarse cottons), boghasidillas (weavers of fine cottons), and besides (dealers of cotton stuffs) directly involved in cotton trade and industry, while boyndillar (dyers), takyedjiler (capmakers), yorgkandillar (quilt-makers), and tersiler (tnilors) were considered as related crafts. In 980/1972, there were 500 halladis, 220 dyers, and 150 bezzázs in Magnisa (Uluçay, doc. 64). Each craft guild elected its governing body, a shaykh, a hadkhuda, ■ yigit-baght, and a committee of experts (chl-i khibra) responsible for the supervision of the guild regulations, called nijām or ķānān [q.v.]. <u>Di</u>ullāhs in Magnisa had an akhi baba [see AKH1] = the head of the guild (Uluçay, doc. 38, dated ro44/1634). In important cities, these men obtained through local kādis the Sultan's diploma empowering them to exercise authority over their guild members and to get the support of the local law-enforcing bodies.

In Istanbul, the guilds using cotton goods were khayyāfān (tailors), kuwukdinyān (makers of wadded headgear for men), lāhyadiiyān (makers of headdress for women), yorghandiiyān (quilt-makers), gönlekdiiyān (shirt-makers), dülbenddiiyān (dealers of muslim turbans), yaghlkdiiyan (dealers of napkins and handkerchiefs), and badirdiiyān (tent makers); for Cairo, Evliyā Celebi (x, 370-x) gives a similar list of crafts and dealers. In both cities, guilds dealing with cottons were included in the group of 14 crafts connected with clothing or home furnishings, headed by the

chief tailor.

Bazzāzs (in Turkish bazzāz), textile deulers, can be classified into two groups: big merchants of international or interregional connections; and local traders (see Edirne askeri kassamı, ed. Barkan, 143, 261, 303, 305, 308, 325, 344, 352, 406, 421). The former dealt with costly goods, cottons, silks, and woollens, products of Anatolia, Aleppo, Damascus, Yemen, Egypt, Baghdad and India. Their stocks and credits amounted to big sums, sometimes over one million aktas or about 16,000 Venetian ducats in the 10th/16th century. They supplied the local guilds of dressmakers, cap makers, etc. with imported materials or re-exported them is distant areas usually on credit. These big merchants usually had their shops in the barrariyya or barraristan (in Turkish, bedestan or bedesten) in the cities (see Insicik, The hub of the city: the Bedestan of Islanbul, in International Journal of Turkish Studies, i, 1-17), and were the wealthiest and most respectable members of the society. As far as their social background was concerned, many of them came from the ruling élite (ibid.).

The second group included those dealers of modest capital, dealing only in local trade in the city. Their stocks usually consisted of cheap cottons, and a large variety ill textiles in small amounts. In Edirne, we find former Janissaries among their ranks (Barkan, op. cit., 306, 308), but also a big merchant of Janissary origin (270).

Some of the big betses specialised in importing

or selling particular kinds of cotton goods.

Market dynamics. Artisans and dealers in cottons had a variety of difficulties as a result of shortages of raw materials, competition from other centres of production, and intrusions by related guilds in procurement of raw materials and marketing. It was in large cities or export-oriented production centres with a dynamic economy that strains and conflicts were particularly acute and recurrent. There was a kind of delicate balance established by custom and regulation among the guilds which performed successive stages of manufacturing. If one guild in cotton crafts or some members of it diverged from the standards or marketing rules laid down in the regulations, the other guilds were disturbed and the whole system affected. Consequently, the government was usually scrupulously conservative in keeping the old standards and regulations, and often intervened authoritatively to restore the established norms. However, should the public interest require modifications, the innovations were accepted and introduced into the regulations. It was usually through the local bad? (q.v.) that the government changed the regulations; he consulted with the guild officers and elders in making these changes.

In the regulations, the quality and measures of each product were laid down. Prices were fixed periodically, every three or six months, by the hadfin consultation with the representatives of each guild. Distlidhs, for example, were required to make extron fabrics called baladi, three eights or 2.04 metres long, and bullet re rub or 49.5 cm wide, with 1,600 threads at warp (Burse ikitsab, 11 7, 33, 908/1502).

It must be duty of the officers of the guild, vigit-bash and ald i hibra, in particular, to supervise the standards during the process of manufacturing. The goods were also inspected by the multiasib [see 11188] when marketed. Periodically, the government conducted inspections using special inspectors (multitish sent from the capital (see Bursa ilitial), for, cit.). In larger cities, growing demand and the

import of cheaper grades of cottons caused difficulties for the town handlerafts under regulations with strict standards. Despite the periodic inspections, the regulations and standards for town handlerafts were often ignored in order to produce cheap products so as to compete with imports (see ibid.).

Not being organised as a guild, spinners of cotton yarn in cities came from among the poorest segments of the population, mostly poor women and children. They purchased cotton at the cotton market directly from the peasants or from the halladjs. This group of spinners, the real proletariat in the Ottoman cities, was particularly vulnerable to the speculation which caused unfair competition and unemployment among them. They often claimed that the merchants caused shortages and high prices by purchasing and re-exporting the imported cotton. Also, since too many spinning wheels depleted quickly the cotton supply at the market, the government restricted the number of the wheels in a town in that hand spinners could find enough raw cotton for their use (Uluçay, doc. 25). Sensitive to the complaints of the poor masses in the towns, the government repeatedly ruled that merchants could purchase raw cotton until after the town spinners and weavers had completed their purchases at the cotton market.

Cotton manufacturers in large cities distant from the cotton producing areas were usually supplied with imported cotton yarn (Bursa ikisiā), 11-7, 33) as opposed to bulky raw cotton with high transportation costs. Under regulations, imported yarn to be available to the weavers directly from the importers. The regulations forbade the dealers of cotton yarn of the city to re-sell imported yarn to merchants—a measure taken to prevent the prices of cotton goods from going up and disrupting the price system set up by the regulations. Actually, better prices offered by the Europeans tempted local merchants to engage in smuggling with the foreigners. The government acted energetically to prevent this (Faroqhi, \$shirlesme, ch. 2, 73-4).

The important issue for besides, sellers of cotton textiles, was to protect their monopoly of sale in the city. Both weavers in the city or merchants from outside (in Magnisa, native Armenians or those of Persia) sometimes sold their wares in the bazars of hidns (caravanserals) or as peddiers in the bazars of hidns (caravanserals) or as peddiers in the bazars of hidns (caravanserals) or as peddiers in the bazars of hidns or imported, had to be sold under regulation to the dealers of cotton in the city (Uluçay, docs. 16, 44, 43, 46, all belonging to the 11th/17th century). In Magnisa the bezades obtained the Sultan's order, which protected their monopoly and banned Armenians of Persia from having shops and competing with the town dealers (Uluçay, doc. 6x; cf. A. Refik, Istanbul 1100-1200, 40-1).

Bessess were also concerned with keeping up the standard in the size of the cottons and the quality of cotton and dyes used in the fabric. The finished goods were to be inspected and stamped by the government agents at a specified place in the cotton textile market (boghast-pasari). Those products found short of standards were fined one ages for each two parmaks (1 parmak - 2.83 cm.) of coarse boghast and for one parmas of fine quality (Uluçay, doc. 3). The resm-i tamena m stamp tax was a ablas for each two dhird's (z dhird' of the bazuar - 68 cm.) of fine cotton fabrics such as clude, aladia and white boghasi and for each ten ghird's of astarile, a kind of coarse cotton fabric (this rate was valid in the provinces of Sarukhān, Aydla, Menteshe, and Sughla in Ramadán 1070/1659; Uluçay, doc. 46).

Concentration in cotton loom industries. In the 12th/18th century, the makers of towels of all kinds (pethlemal, hawlu, and siledjeh), kerchiefs (mahrama or mahrama), white "raw" aladja, and bundle wrappers (boghla) were permitted to work only in the workshops in the three hiddes in the district of Kiz-tashi in Istanbul (Sidki, Gedikler, Istanbul 1323/1907, 17).

Again in Istanbul, the makers of printed cottons (basmadil), all located at Westr-khani, were organised in 27 gadiles or workshops with patent. In 1138/1725, there were 192 basmadils in the gediks, each gedik consisting of one master, one associate (shorih) and several journeymen (hhalifa or halfa). Thirty-three of them were Muslim and the rest were Armenian. The kadhhuda, or head of the gulld, was Mushim, while his associate was an Armenian. Considered as "workers" ('amele), they worked for merchants or individual citizens in return for a fee (Esnaf niedmiari). Such centres of manufacturing activities were created, as a rule, as part of the wah! [g.v.] establishments and were reated to the members of the guilds (see A. Refik, Istanbul 1200-1200, 98). Thus the state or the members of the ruling elite became instrumental in constructing "factories" (hde-Mane) or workshops which brought together the artisans of the same manufacture in me place. The conlessed purpose for it was to the public by making goods abundant and cheap (rd vegdin ve rakhis). The leases for the shops included the provision that the leasers acquired the monopoly of the manufacture of a specific product. In 1102/1690 the basmadils obtained such a monopoly in an area from the Black Sea mouth of the Bosphorus down to the mouth of the Dardanelles on the Aegean. Also, the Ottoman government sent orders to the main production centres for large quantities 🖾 sailcloth for the navy (Uzunçarsili, Bahriye, 515) and coarse cottons for lining and underwear for the soldiery in Islambul (Uzunçarpili, i, 282-4).

Government orders involving the output of large quantities of cotton goods in milimited period of time appear to have generated changes in the volume, prices, and even in the organisation of manufacturing in the centres of cotton production. The areas most affected by this situation were those closest to the Ottoman capital mithose connected with it by sem—Geliboha, Bergama, Cyprus, Livadia, Athens, Euboca, Stifa and Aleppo (Uzunçarşih, Bahriye, 525; Faroqhi, Şehirlesme, 65-73).

Expert centres. It can safely be said that, next to leather manufactures, the cotton industry with a large export capacity was the most important of all the industries in the Ottoman dominions, particularly in western Anatolia, Syria, upper Mesopotamia and southern Macedonia. It constituted the foundation of economic prosperity and urban development in the empire until the tath/right century. The high cost of transport of the bulky raw cotton accounted for the concentration of cotton industries in districts near cotton production areas, whereas finished goods, costly cotton textiles, boghast and dilibend, as well as cheaper cottons, hisbas and aster, and cotton yarn were sent by sea or land to all part of the Empire and to Europe.

First among the main areas of cotton industries with large export capacity was western Anatolia during the 9th/15th and toth/16th centuries. The most active towns in this region at this period were Bergama, Magnisa, Menemen, Tire, Uşak, Gördes and Denizli. Tire specialised in making pillow and mattress cases, aladia, m well as cotton thread, called

Cottons imported in the northern Black Sea lands in = 1164/1750.

(2 grouph = 40 para = 120 akča; 1 arshin = 68 cm; 1 okka = 1,2828 gr.)

rishie-yi Tire or simply Tire. Bergama specialised in sailcloth for the navy. The Hamid-ili was known in the 9th/15th century for its large exports of begiest from such centres as Ulu-Borlu (Borlu), Egirdir, Burdur and Isparta. Products from this were sent to the great transit centre of Bursa, where they were dyed and re-exported (on the dependence of the area on Bursa market, see Tarth ussikalari, II-7, 32). The Hamid-ili appears to have dramatically increased its production of cotton fabrics by the mid-10th/16th century (Faroohi, Schirlesme, 96).

During the 10th/16th century, the Antalya and the Silifke-Mut areas on the Mediterranean coast appear to have been among the most important areas of cotton growing and processing (Faroqhi, Schirlesme, 96-7). The Karaman-Konya area, with centres at Konya and Laranda, exported fine cottons, diilbends, hoghasis and ordinary ber to istanbul and the Black Sea region. The boghasi of Karaman was found among the imports of Buda (Hungary) in 980/1572 (L. Fekete and Gy. Kaldy-Nagy, Rechnungsbilcher fürkischer Finanzstellen in Buda, Budapest 1962, 227).

Aleppo, along with Antakya (Astāki cottons), Kilis, 'Ayntab (Gaziantep) and Mar'ash made up another major area of cotton industries with large capacity for export to the other parts in the Ottoman lands, Egypt, and Europe. Halebi cottons were among the imports to Kalfa as early as 892/1487 (Kaffa Customs Register). The habband penbe, cotton scales tax Maleppo, amounted to 13,000 akéas and dues at dychouses to 50,000 aktas in 926/1520 (Tapu defteri, 93). Half-a-century later (Tapu defteri, 544), the increase to 38,360 and 71,274 respectively be taken as a proof of the development in cotton trade and industries in Aleppo. III the 1091/1680s and 1102/1690s, the costly cotton fabrics of the area, white and blue "daman" (of Ḥamā), handkerchiefs and cotton yarn were among the imports to France (Masson, i, table VIII). Ḥamā is described as "a city where the population made cotton yarn, closks for women, and towels" (Evliya, iii, 60). Aleppo was also a transit centre for Indian clothe coming via Basra-Baghdad in the 11th/17th century (Sahilliofly. Belgelorle türk tarihi, ix, 67), la Aleppo, imitations of the Indian cottons were made, while halchi fabrics were imitated in Bursa and Istanbul.

Further east, Märdin (Göyünç, Mardin, 139, 169) and Diyârbakir were important centres of cotton loom industries. Coarse cottons and red cotton yarn of Diyârbakir were exported to Istanbul and Europe.

In northern Anatolia, the Kastamonu-Amasya-Tokat area developed as 📰 important centre with large outlets in the northern Black Sea countries. According to the customs registers of Kaffa and Akkerman about 1x00/1500 (Inalcik, The Black Sea, 95, 105), these lands imported large quantities of cotton textiles as well as cotton yarn and raw cotton. The imports included varieties of cotton cloths, such as kirbds, boghast, aladja, and kalebi, as well as quilts, handkerchiefs, aprons, bath wraps, covers, thread, beits, and tents. Judging from the merchants taking these goods to Kaffa, one can conclude that western and southern Anatolian centres of cotton industries too took part in this trade also. Moreover, merchants came from large centres of the cotton trade and industries: Istanbut, Kastamonu, Sinope, Amasya, Merzifon, Tokat, and Bursa in northern Anatolia, and Bergama, Uşak, Gördes, Menemen, Tire, and Denith in western Anatolia (ibid., 101). Merchants from Bursa imported cotton manufactures of Hamidili; those from Istanbul cottons of western Anatolia, and those from Kastamonu and Sinope cottons of the Amasya-Tokat area.

Altogether, cottons exported from Anatolia to northern Black Sea countries amounted to over one million groush in the mid-18th century. It appears that foreign cotton imports were negligible in this period.

The pattern of cotton trade between Anatolia and the north did not change much, as demonstrated by a comparison of this table with the data from the customs registers of Kaifa, Akkerman and Kili of the 1500s.

Indian competition and the Ottoman cotton from industries. Apparently it was the Levant market that originally contributed to the expansion of Indian cotton industries. India began to manufacture the

Ottoman types of cotton or cotton and silk labrics much in demand in Turkey—aladja and kaini—in in the roth/roth and rrth/roth centuries (allejaes and cultaness in the English East India Company documents, Chaudhuri, 502, 504). Aladja and kuini were varieties already popular in Turkey before 906/1500 (Customs Registers of Kaifa, Akkerman and Käi).

Indian textile imports to Turkey go back to the 9th/15th century. In \$75/1470, Mahmild Gawan [4.0.] sent his agents from India to Bursa "with ahmigha (cloths)" to trade there and in the Balkans (Balleden, xxlv, 6g, 75, 95). The list of the Indian textiles, as found in the court records of Edirne; includes Indian dark-blue fufut (Kuful-i Hindi lädji-ward) (960/1553). Indian napkins (paghkir i Hindi [977/1569], Indian kerchiels (mahrama-i Hindi) (970/1572 and rox6/1608), kerchiels of Sar-hindi and Bi-hāri and Indian boghasi, turbans, quills, and girdles (Edirne askerl kassāmi, ed. Barkan, 120-3, 138, 147, 224, 335-8, 432). Home made füla and būfta were used in Turkey in much earlier times than in Europs (phalaes and baftas in English, see Chaudhuri, ibid.)

It is possible that while the Indian industries, alert to the demands of the Levant market, made necessary adjustments in fashion and varieties (Chaudhuri, 239-40, 247), the original Indian luxury fabries became popular in the Ottoman lands, as in Europe, particularly from the mid-17th century onwards. The fashion and use of Indian textiles became so widespread in the Ottoman lands that an Ottoman bistorian, Nafimā (iv. 293) claimed in the 1112/1700s that bullion sent to ladia to pay for Indian luxury textiles, had reached an alarming point for the whole economy of the Empire. He recommended the use of home-made products instead. At any rate, it was before European cottons dominated the Ottoman market in the 13th/19th century that Indian cottons, fine muslims, prints, aiadia and kujui types, as well as Indian cotton yarn, invaded and apparently threatened the Ottoman native cotton industries. It was during the period 1071-1164/1660-1750 when India became the chief producer and exporter of cotton textiles in the world that Indian cotton labrics began to be imported in great quantities into the Ottoman markets.

By 1102/1690, the Indian exports to this area were estimated at five times as many calicoes to the British and Dutch markets (Chaudhuri, 245-16) although no figure is available. Indian textiles ceached the transit centres of the Empire, Baghdad and Aleppo via Hormuz and Başra 🖿 the Persian Gulf and Didda and Mecca via the Red Sea. In the spring of 2019/1610, in a caravan from Baghdad to Aleppo with 120 merchants, there were ten Indian merchants, all Moslims. Most of the merchants in the caravan were carrying indigo, drugs, silk, and Indian textiles. Although Arab and Persian merchants made up the majority of the merchants in the caravan, there were also Turks, Armenians, Christian Arabs and Italians (five persons). Two Persian merchants from Hamadan had Indian wares, including indigo, drugs, and three bales of cloth of Lahore, all estimated to be worth 12,000 groush (H. Sahillioglu, Bir Iticcar kervani, 63-5.

In the Persian Guli, Başra and Bandar 'Abbas (Gombroon) were two outlets through which Indian textiles entered the Ottoman and Şafavid territories (R. W. Ferrier, The trade between India and the Persian Gulf and the East India Company in the 17th century, in Bengal: past and present, IXXXIXIA, NO. 168 (Calcutta, July-Dec. 1970), 189-98). An

East India Company memorandum dated 1107/1695 tells us that "the Moors drive a great trade from hence (sc. from Surat) to Percia, Bussora, Aden, Mocha, and Judda, where they dispose of those goods which from hence are carried throughout the Grand Signor's Doudlions" (Chaudhuri, 195). Gudiarat was the main emporium of Indian textiles to Basra, Turkey also received luxury fabrics from the Pandjab by the land route via Labore and Kandahar or Sind (Chaudhuri, 242-45).

Also, an important part of the cotton fabrics imported by the Dutch and British from India was re-exported to America, West Africa, and the Levant (K. Glamonn, Dutch-Asiatic trade, Copenhagen 1958, 133-4, 143). In the last three decades of the sath/a7th century, however, the European market showed a great demand for Eastern textiles when the use of Indian cotton textiles became fashionable, beginning with the women of the upper class (Glamann, 233; Chand huri, 280-3; Masson, if, 295). The fashion spread to lower classes, and initiated a dramatic increase in demand for cotton fabrics, despite the government prohibitions of the use of imported cottons which were brought about under pressure from the domestic industries of woollens and linen (prohibitions in France in 1098/1686, 1112/1700, and 1121/1709; in England in 1112/1700 and 1133/1720; cottons banned by the Church as "the manufactures of the Infidels", see Chaudhuri, ibid., and Masson, ii, 277-8). The French imports of coarse cotton cloths. from the Ottoman lands rose to about 3 million French livres in \$115/1703. The imported cotton fabrics dyed and "printed" in Marseilles and an important part of them re-exported to Spain and Italy (Masson, 198-9). Thus the Levant shared with India the boom in the production and export of cotton textiles to Europe. This boom reached its maximum in the period 1112-64/1700-50. With their superior quality, the Indian textiles, however, dominated western markets through the East India Companies of Holland and England, while Levantine products, cotton yarn and coarse fabrics, were chiefly imported into France. Peyssonel (Traits, i, 31), the French consul in Izmir and the Crimea in the mid-12th/18th century, found that the export of French textiles to the Levant was limited mainly by the successful competition of the native cotton manufactures. The French export of cottons to the Levant in 1204/1789 was only 42,000 livres' worth (Masson, ii, 495; then 3 French livres = f). Red cotton yarn from western Anatolia and Diyarbakir exported from Izmir always found a ready market in the West, due to its high quality in dyeing and its low price. It was exported in great quantities to the Netherlands (O'Heguerty, 204) and France.

By the end of the 12th/18th century, the annual cotten yarn production of Thessaly and Macedonia reached 20,000 bales, or about 2.5 million kg., half of it dyed (F. de Beaujour, cited by Svoronos, 248). The Austrian firm of Starrhemberg, established in Salonica in 1190/1776, became a spectacular success. By 1204/1789, it had opened several factories which produced cotton yarn in Serres and Larissa (Svoronos, 182-5). Importing cotton and cotton yarn mostly through Marseilles, Switzerland too developed a cotton textiles industry, and in 1274/1760 Swiss consulate was established in Salonica with the main purpose of promoting the cotton trade (Svoronos, 185, 252).

Cotton yarn and textiles from Egypt to Europe, i.e., France, Leghorn and Venice, consisted of only a small part of Egypt's total exports (Raymond, ii, 180). However, cotton textiles from Cairo, Mahallat al-Kubrā and Rosetta, called dimittes (Dimyaili?), agamy (Adjami), and mellaony (Makallawi), which were mostly exported to France, increased rapidly from 1133/2720. These exports reached their peak in the period 1143-32/1730-9 with an average of 609,362 livres, or 30-5% of total export. They then experienced a decline, to 291,708 livres in 1786-9 (the figures include exports of fabrics of flax, which made up one-third of the total in 1798). The decline was explained by the deterioration in quality, possibly a result of competition with western cottons

(Raymond, i, 230). England's share in the import of Egyptian tissues was less than 10% during the same period (Raymond, i, 174, 180-2). On the other hand, Egypt itself imported cotton fabrics from Syria, Izmir, Bursa and Istanbul. Syrian cottons or silk and cotton fabrics, such = Antaki, Nablust, kutnt, aludia, and Shāmi, were an important part (about 43 million paras by the end of the 12th/18th century) of the Egyptian imports from that country (Raymond, i. 100). Before the English cottons invaded the area, Caro the main emporium of Indian textiles inported via the Read Sea. The total value of the Indian, European, and Syrian cloths imported was estimated at 500 million paras. The growing imports had a disruptive effect on the domestic textile from crafts in Egypt as early as the turn of the rath/rath century (Raymond, I, 191, 193, 199).

European competition. It is generally accepted that the reversal of the roles in cotton manufacturing and export between East and West occurred in the period 1164-54/12750-70. After 1184/1270, England, France, Germany, Austria and Switzerland began to export their cotton textiles to the Levant markets in growing quantities. Already by the mid-18th century, Western governments, changing their policies

of prohibition, permitted the expansion and protection of their demestic cotton manufactures.

Note the first-place ranking of the British in the export of cotton goods atready at this time, and the dominance of the French woollens in the Levent market.

It is said that while the British cotton industries developed under the impact of Indian trade, the French developed under the Levantins one (Masson, ii, 434, ii. 2). From 1133/1720 onwards, in order to protect national industries and those of its colonies in the Antilles, the French government imposed a heavy duty (20 livres per quintal) on the cotton yarn imported from the Levant (Masson, ii, 201). Already by 1142/1729, the French noted with pride that French imitations of Indian cotton prints found an outlet in Istanbul and were expecting even I manufacture the white cotton cloths themselves, thereby reducing their import from the Levant and Holland (Masson, ii, 436, 436).

In the second half of the 18th century, of the great variety of imports from Germany (Leipzig) and Austria to the Ottoman Empire, cotton textiles, muslins, and the so-called indiennes, were at the top of the list, German cotton goods had quite . large market at Izmir (55-60,000 pieces annually) and Bursa (30,000 pieces) (C. Aubin's report, ed. A. Cunningham) English cotton products exported to Germany also reached the Balkans through the Leipzig fair. Along with Leipzig, Vienna was another important centre for the Ottoman trade. Here we find 268 Ottoman resident merchants by 1181/1767, including a number of Muslim Turks (a certain Molfa Huseyn owned six storehouses and Molia Hasan four). During the period 1164-1227/1750-1812, when Austrian-Ottoman trade showed great development, raw cotton and cotton yarn became the principal exports from the Serres area to Austria and Germany (V. Paskaleva, 49-56).

However, the Eastern cotton yarn still had the advantage of lower prices due to the cheaper food and lower wages in the Levant (Masson, II, 436-7). The cotton yarn imports from the Levant continued. By the 1195/1780s, while French cotton industries found markets, first in Spain and then Italy for their products, whose designs appealed to the taste of the populations there, the Muslim population of the Levant did not favour the imitations of the West. Western cotton industries would definitively conquer the Eastern markets only when they succeeded in solving the problem of price differential (by using machines) and when they imitated or created designs and colours which attracted an eastern clientials.

The introduction of dyeing methods from the Levant was a crucial factor contributing to the success of western cotton industries and exports. The Dutch and the French finally succeeded in learning the special technique known as Edirne dyeing. Consequently, Turkey's export of red cotton yarn was reduced (O'Heguerty, 204; Masson, ii, 439-40). This reversal of the situation was apparent in the rapid growth in raw cotton imports and the diminishing proportions of cotton tertiles and yarn from the Levant. Between xxx2/x700 and xa03/x788, the French imports of raw cotton increased ten times, representing 19% of the total imports from the Levant, while cotton yarn did not make the progress.

As has been seen above, change was a rather long process and one achieved in stages. For some time the Levant continued to export its oution cloths, now in a raw state, undyed; then mainly its cotton

yarn, especially those dyed red with alizari; and finally only its raw cotton. On the other hand, invasion of the Levantine markets by western products was realised only after the industrial revolution in England with its mass production of cheap and finer quality cotton yarns (the so-called twist and mule) and prints. The dramatic change occurred in the period 1194-1231/1780-1815, and led to a situation in which the Levant became totally dependent on the western cotton industries for the supply of cotton yarn and textiles and for the sale of its

British supremacy and impact of the industrial Revolution. It is to the cotton imported from the Levant that the first cotton industry in England owed its foundation. First, fustians, made with a cotton weft and a linen warp, were produced in Lancashire under Elizabeth I at some time before 994/1586. By the middle of the rith/27th century, the cotton industry was considered to be a well-established industry in England, although it depended upon regular import of raw cotton from the Levant, Izmir, Cyprus, Acre and Sidon (A. C. Wood, 74-5).

During the period ro91-1184/1680-1770, the Levagt suffered a decline in its exports of cotton and cotton goods to Britain. This was mainly due to the overall decline of the English trade in the Levant, as well in the English domestic policies against the use and manufacture of cotton goods (R. Davies, Davonshire Square, 29-31). Another factor, a more enduring one, was the competition of colonial supplies to England from the West Indies and India. After the mid-18th century, when British cotton industries were encouraged, the cotton trade experienced in revival from which western Anatolia emerged in the main sources of supply.

Cotton imported from the Levant was approximately 300 tons in the years ITII-13/1699-1701, 150 tons in the x233/1720s and 1143/1730s, and over 500 tons in the x164/1750s {Davies, op. cit., 1731. Also some Levant cotton was imported to England through the Netherlands (Wood, 160). In the x184/1770s, large cargoes is British ships from the Levant consisted of cotton and fruits. The "cotton boom" was responsible for the revival is the British trade in the Levant in the period after x194/1780, when the English industry made its tremendous advance (R. Davies, op. cit., 187, 241-2).

British cotton manufactures had to compete in the Levant and only with the Indian fine cotton textiles—muslins and calicos in particular—but also with Indian cotton yers. The Ottoman consumer did was at first favour the British imitations of Indian cottons, but price became a key factor, and by 1215/1800, he came to prefer the cheaper British manufactures (Aubin's report). For the manufacture of fine cottons, Indian yarn was imported into the Levant until 1800, when it was replaced by British "twist", a strong thread used mostly for the warp (Aubin). "Twist" invaded Ottoman markets as far in the cotton production centre of Diyarbakir via Trehizond, and Central European markets via Salonica (Aubin). The demand of the Istanbul weavers alone was estimated at 20,000 okkes and that of Izmir and its hinterland at 400-500,000 lbs. Also, British imitations of Indian muslins, widely used in turbans, veils, and headgear for women, superseded the Indian imports in the Levant. By 1227/1812, other more popular English cotton textiles, all of them imitations of Indian cottons, were printed calicoes (with a consumption estimate of 35-40,000 a year | Izmir), chints (Hindl Chint,

Persian and Turkish 60), shawls and "shirtlings", etc. (Aubin gives a long list in his report).

Cheap, durable, bright in colour, the English cotton goods thus enjoyed a "prodigious demand" over the Levant from Cairo to Istanbul. This was considered to be a trade of the "highest importance" for England (Isaac Moremer's report dated 1814, eited by Wood, 192-3). Although raw cotton imports from the Levant showed me great increase during the same period, their value was not significant when compared to that of the manufactured cotton goods exported to the Levant. Turkish cotton was only one-twelfth of the total imported by Britain.

Alter India, Germany too experienced losses at the Levant market for cottons in favour of British manufactures. During the Napoleonic Wars, the Irltish took advantage of the rising prices in Germany and the closure of Trieste and Fiume, principal transit ports for Austrian-German exports. Great Britain's interest in the Levant - an important market for British manufactured cotton goods grew particularly from 1241/1825, when the full impact of the Industrial Revolution was felt at home. Taking advantage of its role as a protector during the Egyptian crisis, Great Britain had the Ottoman government sign the commercial treaty of 1254/1838 which awarded Britain favourable conditions and turned the empire into an open market for its cotton industry (V. J. Puryear, International economics and diplomacy in the Near East, tepr. Archon Books, 1969, 107-30; F. E. Bailey, Brilish policy and the Turkish reform movement, Cambridge 1942, 39-178; Mübahat Kütükoğlu, Osmanlı-Ingiliz ihtisadi münasəbetleri, 1838-1850, Istanbul 1976). The principle of free trade wirtually introduced into Turkey before it was accepted in Great Britain (Puryear, 117). From r254/2838 to 1269/1852, British imports of cotton textiles tripled and those of cutton varn doubled, 63.9 to 183.8 million yards and 5.6 to 11.9 million lbs. respectively Kütükoğlu, 82, 86). The value of the British cottons imported to Turkey rose approximately from one thirty-eighth in (1241/1825 to one-ninth of the total production in \$272/1855 (Bailey, 86).

Ottoman-British Trade in 1269/1852 (official value in £)

Total imports to Great Britain	Total Imports to the Ottoman Emp.	
2, 252, 253	8,489, 100 (of this, textiles were over 3 million in 1850)

The Ottoman trade occupied third place in Great Britain's foreign trade in 1269/1890 (Bailey, 82-3). In the Ottoman Empire, the break-down occurred first in the cotton yarn production, which directly affected spinners, the poorest section of the population in gural and urban areas. In 1249/ Kala

1842 D. Housbart tells us / Turkey and its resources 148) that "their own varn being unequal, heavy in weaving and liable to break, the weavers prefer much the English yarn". Also, the first serious crisis in cotton loom industries appears to have occurred in the period 1241-6/1825-30 (Urguhart, 47-51; Ö. C. Sarc. in Ch. lasawi, Econ. history of the Middle East. 48-9). At a later date, in 1279/1862, another Englishman, Lewis Farley (The resources of Turkey, 50-60) observed that "Turkey is no longer a manufacturing country. The numerous and varied manufactures which formerly sufficed, not only for the consumption. of the empire, but also stocked the markets of the Levant, as well m those of several countries in Europe, have, in some instances, rapidly declined, and in others became altogether extinct ... The printed calicoes of Tokat . . . the muslim looms of Scutari and Timova [in Thessalv] which in 1812 numbered 2,000 were reduced in 1841 to 200 . . . Baghdad was once the centre of very flourishing trades, especially those of calico printing . . , Aleppo was still more famous, for its manufactures of gold thread, of cotton tissues, ... and pure cotton called nankeens gave occupations to more than 40,000 looms, of which, in the year 1856, there remained only 5,560 . . . now taste has changed. Cloth and every variety of cottons have supplanted silk. English muslins are preferred to those of India, and cashmere shawls were replaced by the Zebras of Glasgow and Manchester." He adds (61) that Great Britain "will continue to find Turkey increasing and profitable market for our merchandize."

An American observer (C. Hamilton, Among the Turks, New York 1877) tells us how, following the free trade granted by the treaties of 1254/1838, "five thousand weavers in Scutari were without amploy, and reduced to the most deplorable beggary. The fast colors and tirm material of Diarbekt disappeared, ... and Bursa towels came from Lyons and Manchester ... Thus, all the industries of Turkey have perished."

Apparently, all these figures given an simply rough estimates, sometimes grossly exaggerated. In Aleppo, for example, in the period before 1274/1846. only 1,000 looms with an annual output of half a million pieces mentioned in John MacGregor, Commercial statistics, 140; cl. Issawi, Econ. history of the Middle East, 221; also Viquesnel's more modest figures, IIId., 51, in a French report cited by Chevallier (Les tissus ikarés, 300), the total number of looms manufacturing cotton-silk textiles in Damascus and Aleppo was estimated = 25,000 for the year 1241/1225. The report dated 1261/1845 considered the ruin of native cotton boom industries in Syria to be the result of the growing imports of lowpriced cottons from Europe. English cotton yarn and prints headed the imports. However impressionistic, these Western reports demonstrate the dramatic disruption in Ottoman cotton industries by the mid-19th century. In the 1277/1860s, the first Turkish journalist (see thean Sungu, Yeni Osmanlilar, in Tansimal, i, 787) became the mouthplece of the population in their distress, and blamed the government's westernisation and free market policies as well as the shift in taste and fashion to Western products. for the depression.

In survey of the Ottoman economy made in 1332-5/2913-5 (Osmanlı sanayli, ed. G. Ökçun, Ankara 1970, 134; V. Eldem, Osmanlı imparatorluğunun intisadi sastları kahlında bir tethik, Ankara 1970, 76), it solon observed that 80 % of all cotton production (20,000 tons in 1335/1915) was exported

shroad, while imported cotton manufactures constituted the major part of the overall imports. By 1335/1015, modern cotton factories in the Ottoman lands numbered only nine (altogether \$2,000 looms and 68,500 spindles employing 3,024 workers), all of them making only cotton varn and coarse cotton textiles (ibid., 133; Eldem, 130-1). However, by the end of the 13th/10th century, Konya, Karaman, Antalya, Nigde, Aglasun, Tokat, Merzifon, Mar'ash, and Antep ("Avntab) were still mentioned in the important centres of cotton loom industries (Oppel, 425). At the turn of the rath/roth century, as m result of the disorders, a number of cotton weavers left Alappo for Egypt, 'Ayntab and Mar'ash, 'Ayntab made great progress in cotton manufactures, especially in red dved varn in the 1900s (Oppel, 528).

464

Some branches of the Middle Eastern loom industries, though adhering to the traditional techniques and types, resisted and survived the invasion of western machine-made cottons, thanks to the rural population's conservatism which favoured old-fashioned fabrics of the urban centres in invuries. In Turkey, aladia and kutal are still popular with the peasants who use them in clothing and furnishings. As in the past, in these fabrics the woof is cotton and the warp is silk for rather artificial silk).

Glazed and stiff, these fabrics still preserve traditional colourful designs and stripes (cf. Syrian aladia and butni manufactured today in Aleppo, see Chevallier, 308).
